Application:	Form I-924, Application for Regional Center under the Immigrant Investor Pilot Program
Applicant(s):	Century New York City Regional Center
Re:	Initial Regional Center Designation Century New York City Regional Center RCW1420251818/ID1420251818

This notice is in reference to the Form I-924, Application for Regional Center Under the Immigrant Investor Pilot Program that was filed by the applicant with the U.S. Citizenship and Immigration Services ("USCIS") on July 21, 2014. The Form I-924 application was filed to request approval of initial regional center designation under the Immigrant Investor Program. The Immigrant Investor Program was established under § 610 of the Department of Commerce, Justice and State, the Judiciary, and Related Agencies Appropriations Act of 1993 (Pub. L. 102-395, Oct. 6, 1992, 106 Stat. 1874).

I. Executive Summary of Adjudication

Effective the date of this notice, USCIS approves the Form I-924 request to designate Century New York City Regional Center as a qualifying participant in the Immigrant Investor Program.

II. Regional Center Designation

USCIS approves the applicant's request to focus, promote economic growth, and offer capital investment opportunities in the following geographic area and industry categories:

A. Geographic Area

State	Counties/Cities
New York	Queens, New York, Bronx County, Richmond County, Westchester County, and Nassau County

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the geographic area referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

B. Industry Categories

Industry Category	NAICS code
Nonresidential Building Construction	2362
Furniture and Home Furnishing Merchant Wholesalers	4232
Hotel and Motel (including Casino)	72251
Restaurants and Other Eating Places	72251
Lessors of Nonresidential Buildings (Except Miniwarehouses)	53112
Architectural, Engineering and Related Services	5413
Insurance Carriers	5241
Accounting Tax Preparation, Bookkeeping Services	5412
Legal Services	5411
Monetary Authorities and Depository Credit Intermediation	5222
Other miscellaneous professional and technical services	5419

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the industry categories referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

III. Job Creation

USCIS approves the geographic area and industry categories noted above based on the economic impact analysis presented and reviewed in conjunction with the adjudication of this regional center proposal.

This hypothetical project does not have the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998), and therefore, USCIS's approval of the hypothetical job creation estimates presented in the Form I-924 will not be accorded deference and may not be relied upon by an individual investor when filing the Form I-526. The business plan and job creation estimates will receive a de novo review by USCIS when an individual investor files Form I-526. Once an actual project is adjudicated upon the filing of the initial Form I-526, USCIS will give deference to subsequent Forms I-526 when the critical assumptions remain materially unchanged from the initially-approved Form I-526.

When filing Form I-526, it will be the responsibility of the individual investor to submit a comprehensive, detailed and credible business plan, showing by a preponderance of the evidence that his or her investment in the new commercial enterprise will create not fewer than 10 full-time positions. If prior to filing a form I-829, the job creation estimated in the business plan submitted by the individual investor materially changes or will not be realized, then it will be the responsibility of the EB-5 investor to notify USCIS of an agreed upon methodology to allocate job creation among eligible investors.

IV. Guidelines for Filing Form I-526 Petitions

Each individual petition, in order to demonstrate that it is affiliated with the Century New York City Regional Center in conjunction with addressing all the requirements for an individual immigrant investor petition, shall also contain the following:

1. A copy of this regional center approval notice and designation letter including all subsequent amendment approval letters (if applicable).

2. An economic impact analysis which reflects a job creation methodology required at 8 CFR § 204.6 (j)(4)(iii) and shows how the capital investment by an individual immigrant investor will create not fewer than ten (10) indirect jobs for each immigrant investor.

3. A comprehensive, detailed and credible business plan for an actual project that contains the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998).

4. Legally executed organizational documents of the commercial enterprise.

Note: The project reviewed with this Form I-924 application is a hypothetical project. Organizational and transactional documents associated with the new commercial enterprise (NCE) submitted with this Form I-924 have not been reviewed to determine compliance with program requirements since these documents will receive de novo review in subsequent filings (e.g., an amended Form I-924 application with a Form I-526 exemplar or the first Form I-526 petition filed by an investor under the regional center project).

V. Designee's Responsibilities in the Operations of the Regional Center

As provided in 8 CFR § 204.6 (m)(6), to ensure that the regional center continues to meet the requirements of section 610(a) of the Appropriations Act, a regional center must provide USCIS with updated information to demonstrate the regional center is continuing to promote economic growth, improved regional productivity, job creation, and increased domestic capital investment in the approved geographic area. Such information must be submitted to USCIS on an annual basis or as otherwise requested by USCIS. The applicant must monitor all investment activities under the sponsorship of the regional center and to maintain records in order to provide the information required on the Form I-924A Supplement to Form I-924. Form I-924A, Supplement to Form I-924 Application is available in the "Forms" section on the USCIS website at www.uscis.gov.

Regional centers that remain designated for participation in the Immigrant Investor Program as of September 30th of a calendar year are required to file Form I-924A Supplement in that year. The Form I-924A Supplement with the required supporting documentation must be filed on or before December 29th of the same calendar year.

The failure to timely file a Form I-924A Supplement for each fiscal year in which the regional center has been designated for participation in the Immigrant Investor Program will result in the issuance of an intent to terminate the participation of the regional center in the Immigrant Investor Program, which may ultimately result in the termination of the designation of the regional center.

The regional center designation is non-transferable.

VI. Legal Notice

This approval and designation of a Regional Center under the Immigrant Investor Program does not constitute or imply an endorsement or recommendation by USCIS, the United States Government or any instrumentality thereof, of the investment opportunities, projects or other business activities related to or undertaken by such Regional Center. Except as expressly set forth in this approval and designation, USCIS has not reviewed any information provided in connection with or otherwise related to the Regional Center for compliance with relevant securities laws or any other laws unrelated to eligibility for designation as a Regional Center. Accordingly USCIS makes no determination or representation whatsoever regarding the compliance of either the Regional Center or associated New Commercial Enterprises with such laws.

Each Regional Center designated by USCIS must monitor and oversee all investment offerings and activities associated with, through or under the sponsorship of the Regional Center. The failure of an associated New Commercial Enterprise to comply with all laws and regulations related to such investment offerings and activities may result in the issuance by USCIS of a notice of intent to terminate the Regional Center designation.

If the applicant has any questions concerning the regional center designation under the Immigrant Investor Program, please contact the USCIS by email at USCIS.ImmigrantInvestorProgram@uscis.dhs.gov.

Sincerely,

Nicholas Colucci
Chief, Immigrant Investor Program

Request for Evidence

Based upon a review of your petition and supporting documentation, U.S. Citizenship and Immigration Services (USCIS) has found that you have not established that you are eligible for the benefit you are seeking. In order to determine whether you are eligible for the benefit, USCIS requests that you submit additional evidence. The deficiencies in your petition and the evidence that USCIS is requesting are explained in the attached document.

(SEE ATTACHED)

If you reside within the United States, you must submit the requested evidence no later than 87 days from the date of this notice. If you reside outside of the United States, you must submit the requested evidence no later than 98 days from the date of this notice. USCIS is unable to grant additional time for responding to this request for evidence. *See* 8 C.F.R. § 103.2(b)(8)(iv).

You must submit all of the requested materials at one time. Submission of only some of the requested evidence will be considered a request for a decision on the record. *See* 8 CFR § 103.2(b)(11). If you do not respond by the deadline, USCIS may deny your petition as abandoned, may deny your petition based on the record, or may deny your petition for both reasons. *See* 8 CFR § 103.2(b)(13)(i).

If you reside inside the United States, your deadline for submitting a response is: Monday, June 15, 2015.

IMPORTANT: RETURN THIS ORIGINAL NOTICE ON TOP OF THE REQUESTED INFORMATION AND/OR EVIDENCE LISTED ON THE ATTACHED SHEET(S).

Keep a photocopy of this notice for your records. If you otherwise write to us about your case, please provide a copy of this notice.

You will be notified separately about any other applications or petitions you have filed.

Form I-924, Application for Regional Center Under the Immigrant Investor Pilot Program; Request for Evidence

A request for initial designation as a Regional Center under the Immigrant Investor Program ("Investor Program") or an amendment to an existing Regional Center designation, may involve:

1. A request for review of an exemplar Form I-526, Immigrant Petition by Alien Entrepreneur, prior to the filing of Form I-526 Petitions by individual alien entrepreneurs with USCIS and/or;
2. In the case of a Regional Center amendment request, a review of a new specific capital investment project where the Regional Center designation involved a review of an exemplar capital investment project.

It appears that you are requesting initial designation as a Regional Center under the Investor Program.

I. Procedural History and Regional Center Background

The proposed Regional Center entity, Century New York City Regional Center, ("CNYCRC"), was established on March 25, 2014 in New York, and is structured as an LLC. CNYCRC is requesting jurisdiction over the following geographic area:

State of	Counties
New York	Queens, New York, Bronx County, Richmond County, Westchester County, and Nassau County

CNYCRC plans to offer EB-5 capital investment opportunities in affiliated new commercial enterprises, organized as corporations, LLCs, LPs, etc., focusing on projects in the following industry categories:

Industry Category	NAICS Code
Commercial and Institutional Building Construction	236223
Furniture and Home Furnishing Merchant Wholesalers	4232
Restaurants and Other Eating Places	72251
Construction (Building & Site)	2362/23622
Food Services and drinking places	72251
Real Estate	53112/5313
Other government enterprises	921

Architectural, engineering and related services	5413
Insurance	5241
Accounting tax preparation, bookkeeping services	5412
Legal Services	5411
Monetary authorities and depository credit intermediation	5222

The capital investment projects will involve to job creating enterprises located within the proposed bounds of the Regional Center.

Based upon a review of the initial record of evidence, United States Citizenship and Immigration Services (USCIS) cannot conclude that the applicant has established eligibility for regional center designation. To assist the applicant in focusing on the deficiencies in the existing record, USCIS serves this Request for Evidence. The deficiencies of the current record are outlined below.

II. Evidentiary Requirements for Regional Center Proposals

8 CFR 204.6 (m)(3) describes the evidence that must be submitted in support of a Regional Center proposal. After review of your proposal, the following information, evidence and/or clarification is required. Note that in response to this notice, that it is helpful to provide a cover letter that acts as an executive summary, followed by a table of contents with sections that are tabbed at the bottom of the page.

1. Regional Center's Operational Plan (8 CFR 204.6(m)(3)(iii) and 8 CFR 204.6(m)(6)):

A Regional Center proposal should have at least two business plans. One for the Regional Center's Operational Plan and an actual or exemplar business plan for a project in each of the defined target industries in the proposal.

The business plan for the Regional Center contains language that is ambiguous and may not comply with the elgibility requirements of the EB-5 program. Specifically, page 6 states, "EB-5 investors will earn not earn any percentage of the interest income from lent through the Regional Center proportionate to their capital contribution." In addition, page 28 of the Confidential Private Offering memorandum, third paragraph, under the heading "Offering Proceeds," it is stated that the loan "will bear no interest.

Per 8 CFR 204.6(j)(2): *To show that the petitioner has invested or is actively in the process of investing the required amount of capital, the petition must be accompanied by evidence that the petitioner has placed the required amount of capital at risk for the purpose of generating a return on the capital placed at risk.*

Furthermore, The USCIS Administrative Appeals Office ("AAO") held that for the capital to be "at risk" there must be a risk of loss and a chance for gain. See *Matter of Izummi*, 22 I&N Dec. 169 (Assoc. Comm., 1998).

Based on the issues identified above, it appears that your proposed plan may prevent an investor from having their required capital considered "at risk". Please explain how the RC plans to rectify future proposals in order to address the deviation from policy described above.

Translations:

Any document containing a foreign language submitted to USCIS shall be accompanied by a full English translation that the translator has certified as complete and accurate, and by the translator's certification that he or she is competent to translate from the foreign language into English.

Copies:

Unless specifically required that an original document be filed with an application or petition, an ordinary legible photocopy may be submitted. Original documents submitted when not required will remain part of the record, even if the submission was not required.

III. Conclusion

USCIS has determined that the record submitted does not establish eligibility for the benefit sought. Accordingly, USCIS has requested evidence which addresses the issues outlined above. As required by regulation, the applicant must prove, by a preponderance of the evidence (that it is more likely than not), that the applicant is fully qualified for the benefit sought. Please note that USCIS will make a final decision based on the initial evidence submitted upon filing and after consideration of all additional evidence submitted in response to this request.

NOTES:
Any document submitted to the USCIS containing a foreign language, must be accompanied by a full English language translation that has been certified by the translator as complete and accurate, and that the translator is competent to translate from the foreign language into English. Submit clear and legible copies of all requested evidence. If clear and legible copies are not possible, submit the original documents. These originals will be returned, if requested.

Please provide an index of any submitted evidence and include corresponding tabs for each section of evidence.

UNITED STATES DEPARTMENT OF STATE
US CITIZENSHIP AND IMMIGRATION SERVICE

In the Matter of: }
Century New York City Regional Center } *Classification under* EB-5 Sec.
} 203 (b) (5)
}
}

RESPONSE TO THE REQUEST FOR EVIDENCE

The Petitioner, Century New York City Regional Center, LLC hereby, through counsel, responds to this Service Center's Request for Evidence ("RFE") (Notice Date: March 19, 2015; due date: June 15, 2015) as follows:

PRELIMINARY:

The petitioner is an application for the I-924 Application for Regional Center under the Immigrant Investor Pilot Program. The initial I-924 petition was submitted on July 15, 2014. The petitioner hereby seeks regional center designation with Four Points Flushing Hotel & Condominium Project as a "hypothetical" project. The petitioner hereby responds to this RFE notice:

On Page 3 of the RFE, it states that:

"The business plan for the Regional Center contains language that is ambiguous and may not comply with the eligibility requirements of the EB-5 program. Specifically, Page 6

states, "EB-5 investors will earn not earn any percentage of the interest income from lent through the Regional Center proportionate to their capital contribution." In addition, Page 28 of the Confidential Private Offering Memorandum, third paragraph, under the heading "Offering Proceeds," it is stated that the loan "will bear no interests."

Per 8 CFR 204.6(j)(2): To show that the petitioner has invested or is actively in the process of investing the required amount of capital, the petition must be accompanied by evidence that the petitioner has placed the required amount of capital at risk for the purpose of generating a return on the capital placed at risk.

Furthermore, the USCIS Administrative Appeals Office ("AAO") held that for the capital to be "at risk" there must be a risk of loss and a chance for gain. See *Matter of Izummi*, 22 I&N Dec. 169 (Assoc. Comm., 1998).

Based on the issues identified above, it appears that your proposed plan may prevent an investor from having their required capital considered "at risk". Please explain how the RC plans to rectify future proposals in order to address the deviation from policy described above."

Please be advised, the zero interest clause in the business plan and the Confidential Private Offering Memorandum was a clerical oversight. In the actual project, the petitioner intends to propose that EB-5 investors will earn [redacted] interest per annum on their investment.

(b)(4)

Corrections made: Page 6 of the business plan for the Regional Center, therefore, has been corrected to state that: *"EB-5 investors will earn the interest income <u>one percent (1%)/per annum</u> from capiotal lent through the Regional Center proportionate to their capital contribution."* On the third paragraph of Page 28 of the Confidential Private Offering memorandum, under "Offering Proceeds", it has been corrected to state that the

(b)(4)

loan "will bear [redacted] interest per annum." Please see the business plan for the Regional Center and the Confidential Private Offering Memorandum attached for your reference.

THE ADDITIONAL INFORMATION IS NOT A MATERIAL CHANGE

The petitioner shall be afforded an opportunity to cure "the deficiencies" at the RFE stage. The additional language and information is a mere correction of the clerical oversight and shall not be deemed a "material change" to the existing project.

The term "material change" means a "change in the meaning or language of a legal document, such as a contract, deed, lease, or commercial paper, that is made by one party to the document without the consent of the other after it has been signed or completed." *http://legalictionary.thefreedictionary.com/ Material + Changes.* It is the alteration of an instrument in such a way that materially changes it so that it no longer reflects the terms that the parties originally intended to serve as the basis of their legal obligation to each other. *Id.*

To be material, the change must affect an important part of the instrument and the rights of the parties to it. What constitutes a material change often varies according to context.[1] *See also* K.A. Adams, Fordham Journal of Corporate & Financial Law, Vol. 10, Issue 1 2004 Article 2, *A Legal Usage Analysis of "Material Adverse Change" Provisions.* According to Black's Law Dictionary, material can mean "of such a nature that knowledge

[1] According to 6 CFR 37.3 (Title 6 - Homeland Security; Chapter I - Department Of Homeland Security, Office Of The Secretary; Part 37 -Real Id Driver's Licenses And Identification Cards; Subpart A – General), Material change means "any change to the personally identifiable information of an individual as defined under this part. Notwithstanding the definition of personally identifiable information below, a change of address of principal residence does not constitute a material change."

of the item would affect a person's decision-making process." Another meaning of material is "significant," in other words "important enough to merit attention." The additional information and data sourcing has not changed the business plan or any rights of the parties.

Although the principle that a petition must be approvable when filed precludes a petitioner from making "material changes to a petition that has already been filed" to correct a fatal defect, it does not preclude correction or modifications that substantiate the essence of an original submission that was approvable as filed and supplemented in response to an RFE. Notably, *Matter of Izummi* recognized that certain amendments to a partnership agreement do not necessarily doom a petition or constitute a "material change" made "in an effort to make an apparently deficient petition conform to Service requirements." *Supra.* at 175-176. Indeed, amendments that conform the loan agreement to other sections of the agreement prepared and filed at the inception of the petition are permissible. *Id.*

To add the clarifying language and the sourcing data is a *de minimis* change, this by its nature does not alter the basic nature of the business plan. The correction does not relate to any fundamental operation of the business plan thus, it doesn't go to the heart of the agreement.

BURDEN OF PROOF

As stated earlier, the burden of proof in visa petition proceedings is the "preponderance of the evidence,"[2] unless there is a higher burden of proof standard in the statute, which

[2] *Matter of Soo Hoo, 11 I &N Dec. 151 (BIA 1965); Matter of Patel, 19* I&N Dec.774 (BIA 1988)
Matter of Martinez, 21 I&N Dec. 1035 (1997)

is not the case here. "Preponderance of the evidence" means "probably true"' or "more likely than not"[3].

The Board of Immigration Appeals (BIA) offered the following discussion of the definition of the term "preponderance of the evidence" (in reviewing the denial of an adjustment of status application under INA §245A)

> *The preponderance of the evidence standard may be best understood by contrasting it with other standards of proof.*
> *First, preponderance of the evidence is not evidence that must establish beyond a doubt that the applicant is eligible under section 245A of the Act. In other words, the director can still have doubts but, nevertheless, the applicant can establish eligibility. Second, preponderance of the evidence is not the clear, unequivocal, and convincing evidence applicable in deportation proceedings. See Woodby v. INS, (Service must prove by clear, unequivocal, and convincing evidence that the facts alleged as grounds for deportation are true). An alien does not have to prove by clear, unequivocal, and convincing evidence that he has established eligibility under section 245A of the Act. Preponderance of the evidence requires a lesser showing than these two standards. (Footnote omitted.)*

How much of a showing is sufficient to establish eligibility by a preponderance of the evidence turns upon the factual circumstances of each case. Nonetheless, when we consider that the purpose of evidence is to ascertain the truth, then we can make certain generalizations. For example, when something has to be proved beyond a reasonable doubt, the proof must demonstrate that something must be almost certainly true. And when something has to be proved by clear and convincing evidence, the proof must

[3] *See Woodby v. INS, 385 U.S. 276 (1966)*

demonstrate that it is highly probably true. However, when something is to be established by a preponderance of the evidence it is sufficient that the proof only establish that it is probably true.[4]

In Conclusion:

Considering the totality of all the evidences submitted, the petitioner US Access Florida Regional Center, LLC with Rapid Security Solutions Project as a "hypothetical" project is pursuant to 8 C.F.R. §204.6(m)(3) and EB-5 Adjudication Policy Memorandum, dated May 30, 2013, PM-602-0083 and shall be approved.

Dated: April 17, 2015
New York, New York

1.0 Executive Summary

Century New York City Regional Center, LLC ("CNYCRC") is a newly formed venture that is applying for approval as a Regional Center with a Hypothetical project with the UCSIS. The Regional Center, will serve as a lending entity that specializes in funding for development of various profitable projects within Targeted Employment Area (TEA). Loans disbursed by the Regional Center will be funded through EB-5 Investment and will result in sufficient direct and indirect employment to meet the requirements of the USCIS.

Century New York City Regional Center's initial project is Four Points Flushing Hotel ("Project") in New York City. The Project entails a new construction of a 210-roomed upscale, select-service hotel in Flushing Queens, one of the five boroughs of New York City. Four Points is a mid-scale hotel brand by Sheraton Hotels & Resorts offering a full-service hotel experience at a reasonable price.

Century New York City Regional Center's geographic boundaries include the following counties:

- Queens County
- Nassau County
- The Bronx County
- New York County
- Westchester County
- Kings County
- Richmond County

(b)(4)

The Regional Center's first project, Four Points Flushing Hotel, will be developed by Farrington Realty, LLC in Flushing, New York. The Flushing Hotel will create [redacted] jobs, including [redacted] jobs from direct construction employment and [redacted] jobs from indirect construction employment, [redacted] direct jobs from operation, [redacted] indirect jobs from operation.

(b)(4)

The Regional Center will actively market to foreign investors worldwide, with an emphasis on China, Southeast Asia, the Middle East, India and South America.

CNYCRC will be led by Mr. George Xu. He is the founder and the principle of the CNYCRC. Mr. Xu is also the founder and President of Century Development Group, a real estate development company. With over 16 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential,

hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

The Regional Center will raise a total of (b)(4) through the EB-5 program to fund Four Points Flushing Hotel, enabling the construction and operation of a Four Points hotel in Flushing New York City. A total (b)(4) of investors with an investment of $500,000 each plus costs and expenses will be solicited to finance these projects. Century New York City Regional Center will provide (b)(4) in financing to Four Points Flushing Hotel over a five (5) year period.

2.0 EB5 Program Details

2.1 Regional Center Contacts

Principals	George Xu georgexu88@yahoo.com 718.939.1060

Immigration Counsel	Mona Shah, Esq. Mona Shah & Associates 299 Broadway, Suite 1005 New York, N10007 212.233.7473 mona@mshahlaw.com

Econometrics/ Modeling	Bleakly Advisory Group Jr. Gary Mongeon 6000 Laske Forrest Drive, Suite 108 Atlanta, GA 30328 404.845.3500 gary@blagroup.com

2.2 Qualification for Regional Center Designation

Century New York City Regional Center has been developed with the following USCIS requirements in mind:

- Investors will be required to make an investment of at least $500,000 (or $1 million if the enterprise is not located in a designated TEA), plus [redacted] in administrative costs and fees that are used to pay marketing agents. (b)(4)
- Each investor's contribution to the capital expansion funds of the project will generate at least 10 direct and indirect jobs in the area
- Investors must be able to demonstrate the lawful source of their investment funds
- The investment must be received from the person seeking the visa from clearly identifiable funds
- Borrowed investment funds qualify as long as they are not secured by the assets of the target U.S. investment

2.3 Project Selection Strategy

All current and potential projects are based on direct and indirect job creation in the Regional Center focus area. Each project is required to provide a detailed job creation forecast based on a business plan specifying its employment needs, which are carefully reviewed and evaluated by EB-5 Management and a Board of Advisors prior to recommending the project to investors.

Throughout the life of the project, these direct jobs will be monitored by EB-5 Management, using the Regional Center's own tracking procedures and supplemented by the project's employment records. Indirect job creation is based on these new, direct jobs.

2.4 Organizational Structure

Century New York City Regional Center will be structured as a Limited Liability Company of which the Principal will serve as managing members. The Regional Center will form a new LLC to act as the investment and lending entity for each project. Each sponsored enterprise will be formed as a separate entity, which the Regional Center will act as the managing member.

2.5 Active vs. Passive Investment

The EB-5 regulations require involvement in management or policy making. The regulations deem a Member in an LLC that conforms to the Uniform Limited Liability Act as sufficiently engaged in the EB-5 enterprise in the form of "policy formulation". In addition, the Regional Center's structure grants the members the right, as a group, to oust the general partner for "cause" and to suggest or recommend issues of overall policy.

2.6 Company Privacy Policy

It is the Company policy of Century New York City Regional Center, LLC to protect the privacy of its investors. Therefore, the Company will not disclose the names of investors to those outside of the Limited Liability Company, unless required to do so by law. However, each investor has the legal right of access to names, contact information, and percentage of ownership of the other investors within the Regional Center.

2.7 Investment Returns and Investor Exit

(b)(4)

EB-5 investors will earn the interest income [redacted] per annum from capital lent through the Regional Center proportionate to their capital contribution. The primary exit strategy for this particular project LLC would be the repayment of the loan either through the operation and/or the refinancing of the project, with funds disbursed to the investing members in proportion to their capital contributions.

2.8 Application Process Steps

To become an immigrant investor in the EB-5 Regional Center Program, a potential investor will take the following steps:

Step 1:	Investors will be directed to Century New York City Regional Center, LLC through immigration consulting firms or through direct contact with Regional Center Principals at international conferences. Potential investors will be directed to Century New York City Regional Center, LLC and immigration counsel to discuss the required commitment of funds and required documentation to prove the investment and tracing of funds.
Step 2:	Once it has been determined that the Investor is an accredited investor, a full prospectus will be sent to interested investors, who can then investigate the financial viability of the investment. The investor will be required at this point to make the initial refundable deposit for a place on the investor list and to complete the initial application documents and escrow agreement. Deposits will be returned in the event of oversubscription or at the request of an investor pursuant to the Investor escrow agreement within 15 days of receipt.
Step 3:	The Regional Center will perform due diligence to verify sources of funds

	and investor qualification.
Step 4	The investor may retain independent legal counsel to act on his/her behalf. Documents to be filed with the USCIS and relevant documentation and application process will be filed by Century New York City Regional Center, LLC's counsel. The investor will then will receive copies of offering memorandum and LLC agreement.
Step 5: (b)(4)	The investor will pay balances of investment funds and administration fee [redacted] in fees and $500,000 Capital Investment). The investor will be receive interest payment [redacted] per annum on their investment funds.
Step 6:	The investor will sign all necessary application documents for USCIS submission.
Step 7:	Counsel will file I-526 Petition for Alien Entrepreneur with the USCIS. This petition requests USCIS to certify the applicant and the investment as eligible for EB-5 status.
Step 8:	Upon approval of the Petition, (a) if the investor is in the United States, he/she may apply for Adjustment of Status to Conditional Resident status. (b) If abroad, the investor must wait for notification from the National Visa center to prepare documents for the Immigrant Visa interview at the U.S. Consulate or Embassy in his/her home country. The purpose of the Adjustment of Status or Immigrant Visa interview is to ensure that the investor is not subject to grounds of exclusion, such as a criminal past, infectious diseases, or other grounds for exclusion by law.
Step 9:	Once issued conditional permanent resident status, the investor needs to wait 21 months to reconfirm that the full investment has been made and that 10 jobs were or are in the process of being created.
Step 10:	The investor will be able to file an application to remove the conditional resident status (Form I-829) between 21 to 24 months after Conditional Resident status is approved.

3.0 Initial Job Creating Enterprise: Summary

Century New York City Regional Center will begin by funding Four Points Flushing Hotel. Farrington Realty, LLC will be the job creating enterprise, conducting the development of the Four Points Flushing Hotel.

Farrington Realty, LLC proposed to construct a 210-roomed upscale, select-service hotel and condominium in Flushing Queens, one of the five boroughs of New York City. Four Points is a mid-scale hotel brand by Sheraton Hotels & Resorts offering a full-service hotel experience at a reasonable price. The construction and operation of the regional base of invested capital, the creation of new jobs, and the associated economic growth effects will be put into effect with the capital raised from immigrant investors through the EB-5 Program.

Under the leadership of Mr. George Xu, the company will develop proficiency in the every aspect of real estate development and will be dedicated to services in order to create a positive property management/owner/tenant relationship.

Based on the analysis of Empire State Development and New York State Department of Labor, the project is located at census tract 889.02 in Queens County, New York and qualified as a "Targeted Employment Area" (TEA).

4.0 Regional Center Industry and Geographic Scope

The Four Points Flushing Hotel under the Century New York City Regional Center, LLC will encompass the following industries:

Construction Hard Costs

- Construction (Building & Site) – 2362/23622
- Wholesale Trade (FF&E) – 42/4232
- Real Estate – 53112/5313

Financing & Soft Costs

- Other government enterprises – 921
- Architectural, engineering and related services – 5413
- Insurance - 5241
- Accounting tax preparation, bookkeeping services – 5412

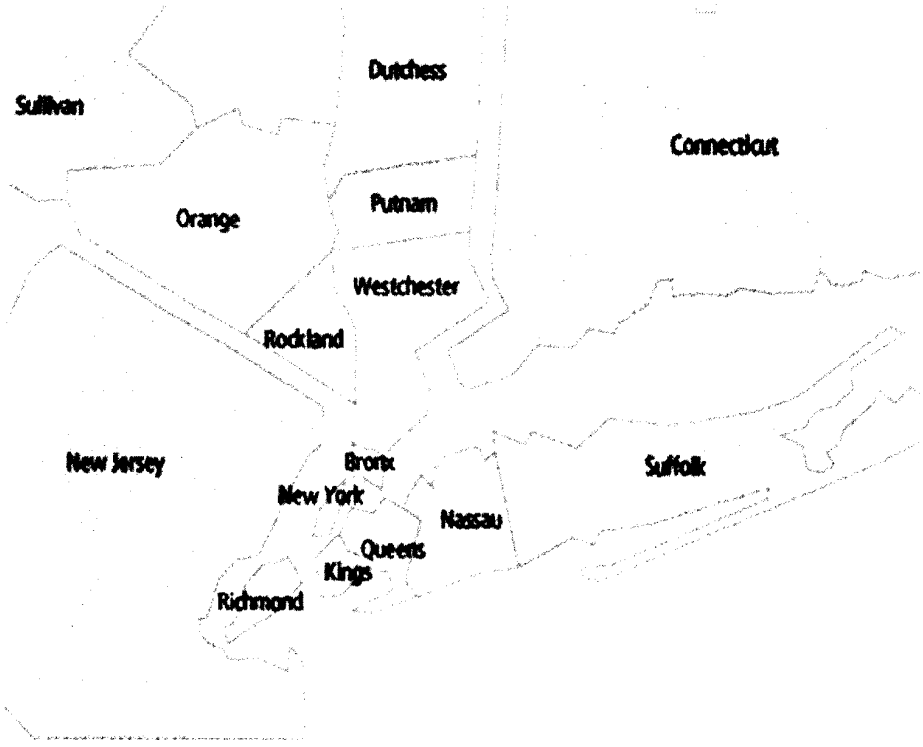
  Legal Services – 5411

  Monetary authorities and depository credit intermediation – 5222

  ther miscellaneous professional and technical services - 5419

- O
- Please note that the NAICS codes start at 2 digits. Industries with 4-digit codes are subsets of the larger 2-digit industry sector, 6 digit codes are subsets of the 4-digit codes. The Economic Impact Analysis ed RIMS II multipliers following the same system. So there are fewer RIMS codes than system, and the descriptors may be slightly different but generally matching the NAICIS er most circumstances, the first 4 digits of the RIMS II and NAICS industries are the same.

The Regional Center will serve the following counties in the State of New York:



The following table reflects the population of these counties, as reported by the U.S. Census Bureau.[1]

Borough & County	Population	
Manhattan	2000	1,537,195
	Growth	5.20%
	2012	1,617,090
The Bronx	2000	1,332,650
	Growth	5.69%
	2012	1,408,473
Brooklyn	2000	2,465,326
	Growth	4.07%
	2012	2,565,635
Queens	2000	2,229,379
	Growth	1.95%
	2012	2,272,771
	2000	443,728

[1] U.S. Census Bureau. Obtained at: http://www.census.gov/

Staten Island	Growth	6.08%
	2012	470,728
Nassau County	2000	1,334,544
	Growth	0.74%
	2011	1,344,436

5.0 Regional Center Marketing Strategy

Under 8 CFR 204.6(m)(3)(iii), Century New York City Regional Center understands that USCIS interprets the words "promotional efforts" to mean an advertising or marketing program planned by the sponsors of the Regional Center that is designated to attract immigrant investors to the Regional Center.

This Regional Center proposal contains a full description of the past, current and future promotional activities for the Regional Center. To date, there are no current activities and there have been no previous activities. Below is a budget for this activity as well as the statement of Tim Whitfield as to the source of those funds used to accomplish this necessary task.

(b)(4)

Total marketing costs are estimated to be about [redacted] per year. (Please see below):

ITEM	PLAN	COST
Website	Construction and maintenance—includes video overview for home page and ability to translate into various languages	[redacted]
Seminars	5 Seminars abroad	
Trade Shows	Attendance and booth at domestic and international trade shows	
Press Conference	Kick- off event with ethnic media	
Outreach to Referral community	Outreach to network of professionals to assist in referring investors.	
TOTAL		

(b)(4)

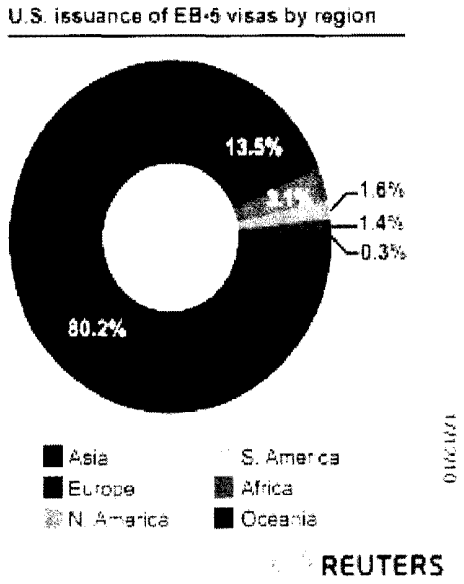
The Regional Center's role is to market each potential project to foreign investors and secure that investor's participation in the program over other potential investment possibilities, such as investment in other countries, investing in other entities in the US outside of the EB-5 structure, and

investing in other regional centers in the U.S. market. Century New York City Regional Center will develop a marketing message that addresses each of these potential investment opportunities, and the advantages the Regional Center has over each (see *5.2 Investment Advantages*). To reach potential investors, the Regional Center will deploy a dual marketing strategy that includes working with immigration consultants and registered brokers as well as creating a widespread campaign that includes attendance at conference, web-exposure, and other traditional advertising channels (see *5.3 Marketing Strategy*).

5.1 Market Focus

Century New York City Regional Center will target foreign investors in China and Southeast Asia, the Middle East, India, South America, and Europe. In the past several years, the popularity of the program with investors -- particularly investors from mainland China --has grown exponentially. In 2011, Chinese investors received the highest number of EB-5 visas. Two thousand four hundred and eight Chinese citizens received EB-5 visas in 2011.[2] By the end of September, 2012, mainland China accounted for 80% of EB-5 visa issued in the first three quarters of Fiscal Year 2012.[3] Investors from China, South Korea, Taiwan, Venezuela and Iran, these top five countries have accounted for 90% of the visas issued.

In the past several years, approximately 13.5% of investors come from Europe.[4] The following chart illustrates the number of EB-5 visas issued by region and the updated data from IIUSA by the end of September, 2012.



[2] Report of the Visa Office 2011published by U.S. Department of State. Source from IIUSA: http://iiusablog.org/wp-content/uploads/2012/10/IIUSA-FY2012-EB5-VISA-STATS-Source-DOS.pdf

[3] Report of the Visa Office 2011published by U.S. Department of State. Source from IIUSA: http://iiusablog.org/wp-content/uploads/2012/10/IIUSA-FY2012-EB5-VISA-STATS-Source-DOS.pdf

[4] "Overselling the American Dream." Thomson Reuters. December 2010. Obtained at: http://graphics.thomsonreuters.com/F/12/EB-5.pdf

FY 2012*	C5	T5	I5	R5	Total
China - Mainland born	90	108	5,923	3	6,124
South Korea	9	13	425	0	447
China - Taiwan born	3	4	141	0	148
Venezuela	0	7	102	0	109
Iran	2	2	77	0	81
Total All Countries	**159**	**164**	**7,312**	**6**	**7,641**
*October - September					

According to the initial results, in 2012 only the EB-5 industry supported 42,000+ American jobs, added $3.39+ billion in GDP and generated $712+ million in federal/state/local tax revenue (up from 33,000+ jobs, $2.6 billion in GDP, and $564+ million over the previous TWO years combined).

The statistics for I-526, I-829 and I-924 petitions are as follows:

Form	Receipts	Approvals	Denials	Approval Rate	Growth in Receipts from 2012
I-526	6,517	3,677	781	82.5%	7.9%
I-829	1,217	844	44	95.0%	70.9%
I-924	436	220	29	88.4%	81.7%

There are more than 1.3 million individuals residing in China with a combined wealth of $4.3 billion USD.[5] While a small segment of the country's overall population, the number of Chinese high-net-worth individuals surpasses that of France and the United Kingdom.[6] Impressively, the number of high net-worth individuals in the Asia-Pacific region wealth gained 12% in 2010 to $10.8 trillion.[7] Additionally, more than 13 million households make up China's upper middle class, who have incomes of between 100,000 and 200,000 RMB ($15,000 to $30,000).

After the United States, Japan and Germany retain the highest number of high net-worth individuals overall. Overall, Europe has the second-largest number of high net-worth individuals, whose combined wealth reaches $10.2 trillion. The following chart reflects the number of high net-worth individual by country.[8]

5.2 Investment Advantages

Century New York City Regional Center's marketing messages will be developed to address each of the key points listed below:

- The U.S. market has a number of benefits to the investor; marketing materials will be developed to highlight why the United States is a good choice, even (or especially) during a market downturn.
- The advantages of the EB-5 platform are clear; marketing materials will ensure that the investor is aware of these benefits over the typical business investor visas available on an independent basis.
- Informational materials will designed to focus on the benefits of this particular Regional Center (over other potential regional centers) and its focus on investing in projects that address the demands of high growth markets

Each of these points is explored in further detail below:

US Market and Industry Advantages

For many immigrants, pursuing the "American Dream" inspires people to believe that hard work leads to prosperity and social mobility in the United States. Many of these people grew up under the influence of US popular culture and, as such, aspire to the lifestyle. It is still considered to be the land of opportunity with an abundance of land and resources, where there is enough land and a vibrant economy to accommodate all its residents. An extremely important factor for immigrants is the

ability for their children to obtain a good education through the school systems and, in particular, to study at its well-known universities. The potential to work at market leading companies for higher salaries is also a significant factor.

EB-5 Advantages

There are currently 218 approved Regional Centers.[9] As illustrated on the following chart, a total of 3,706 EB-5 Visas were issued were issued in 2011.[10]

EB-5 Visa Statistics

	Total EB-5 Visas Issued
FY11 Q1 – Q3	3,706*
FY10	1,885
FY09	4,218
FY08	1,360
FY07	806
FY06	744

Between 2007 and 2011, the number of EB-5 visas issued nearly tripled. In this same time period, the number of regional centers operating in the United States grew from 11 to 218.

A potential immigrant investor seeking an EB-5 investor visa has certain advantages by applying through a regional center such as Century New York City Regional Center.

- The Regional Center program pools multiple investors together in one project, which means the project itself will be larger and financially more stable than one individual investing in a project alone.
- During the lifetime of the investment, the Regional Center remains in communication with each immigrant investor. All investors in the Regional Center receive periodic reports regarding the status of the investment, job creation data based on reports from Regional Center, the economy, and other relevant project information.
- One of the most important advantages for immigrant investors applying for an EB-5 investor visa through a regional center is that they may satisfy the program's job creation requirements by counting not only direct jobs created as a result of their investments, but also indirect jobs created in related industries as a result of the investment. Regional centers are able to calculate indirect job creation through the use of approved input-output

employment modeling systems.

Century New York City Regional Center, LLC Advantages

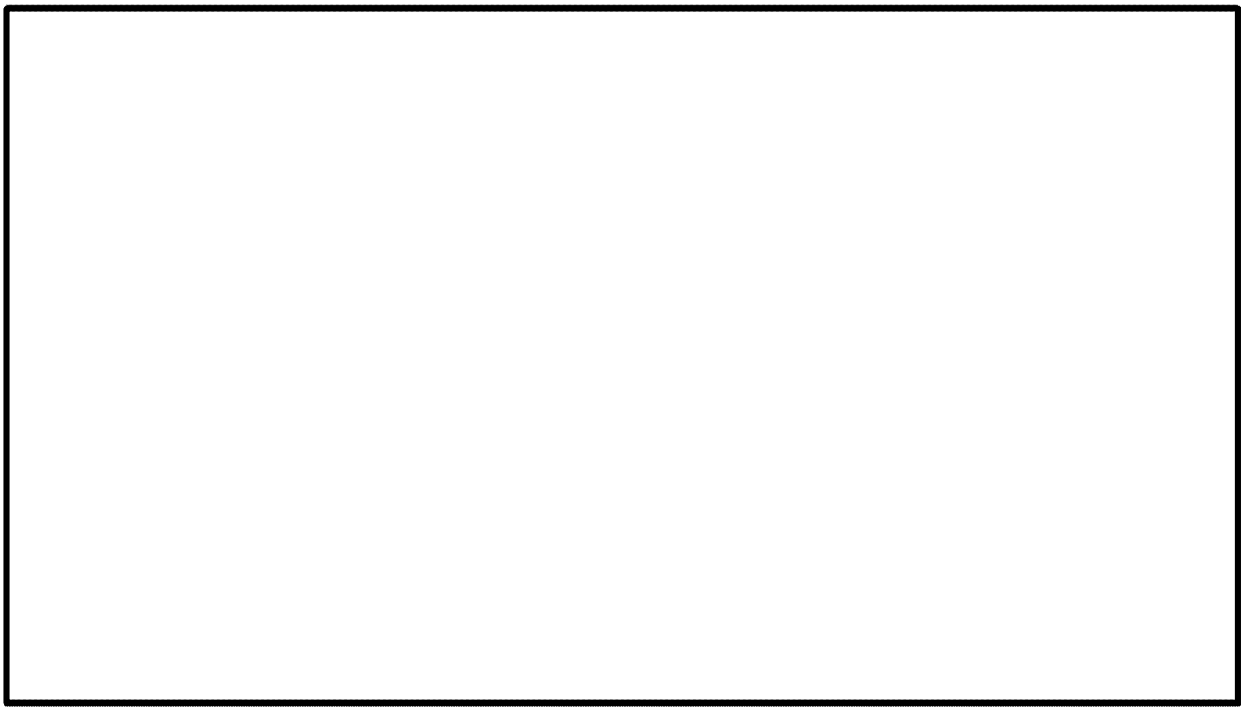
Century New York City Regional Center, LLC offers the following attractive qualities for investors, specifically with regard to its initial project, the Four Points Flushing Hotel project and advantages include:

- Close proximity to Manhattan, New York
- Proximity to Flushing Main Street, major commercial and residential areas with high concentrations of Chinese and Korean population
- Proximity to two major airports in New York City
- Four Points by Sheraton, a mid-scale hotel brand offering a full-service hotel experience at a sensible price
- Century Construction Group is an established developer is Flushing, NY
- 210-rooms restaurant and lounge with an indoor pool, a fitness center, a banquet hall, Large meeting space
- 17,000-square-foot community facility space
- Lobby workstation, guest laundry facilities, and a gift shop

5.3 Marketing Strategy

Once the regional center application is approved, CNYCRC will start its efforts to attract qualifying investors. Since investments in Century New York City Regional Center will likely constitute securities; CNYCRC will first analyze any proposed investor or advisor outreach to determine required compliance measures under U.S. Securities and Exchange Commission ("SEC") laws and regulations, as well as applicable foreign or state securities laws.

(b)(4)



6.0 Regional Center's Operational Plan- Recruitment and Due Diligence:

As per 8 CFR 204.6(m) and 8 CFR 204.6, CNYCRC will identify, assess and evaluate proposed investor projects and activities and enterprises.

6.1 Amount and Source of the Regional Center's Operating Capital:

Attached is a detailed statement from George Xu relating to the amount and the source of the capital that has been committed to the Regional Center. It is understood that USCIS has interpreted the words "amount and source of capital that has been committed to the Regional Center" to mean the capital sufficient to sustain the Regional Center distinct from immigrant investors' required capital investment in a new commercial enterprise with the Regional Center.

The detailed statement by George Xu on behalf of Century New York City Regional Center, LLC meets the regulatory requirement relating to the amount and source of the capital committed to the Regional Center as it includes:

- The exact amount of the funds that have been dedicated to the Regional Center to accomplish the goals of the Immigrant Investor Pilot Program;
- The source of funds; and
- Whether the amount is sufficient to sustain the Regional Center.

None of the capital sustaining the Regional Center will come from the immigrant investors' required threshold capital investment (as distinct from the new commercial enterprises' revenues). It is understood that this separation of funds is necessary to enable the alien entrepreneur to qualify for the EB-5 immigrant investor classification.

Century New York City Regional Center, LLC will offer quarterly reports and investor relations, which will be completed by the Principal. George Xu will be responsible for managing marketing relationships with the Regional Center's chosen immigration consulting firms as well as attending conferences on behalf of the Regional Center directly. Certain business processes, such as accounting and website maintenance will be outsourced to other service providers, who will be selected once Century New York City Regional Center receives Regional Center approval. The Regional Center will contract with companies like either World Check (A Thomson Reuters Company), Accuity, or another similar company, to screen potential investors, verify sources of funds, and ensure that funds are lawfully obtained. Details regarding the Regional Center's due diligence practices to ensure investors meet specified requirements as part of the EB5 program are detailed in the sections that follow.

6.2 Regional Center's Operation Plan – Recruitment and Due Diligence

Century New York City RC understands that, for any individual alien investor who will be solicited by a Regional Center to invest in requisite capital into a Regional Center commercial activity, it will be incumbent on the Regional Center to engage in a due diligence process to establish that all sources of capital can be fully explained and clearly shown to have been lawfully obtained.

Potential investors must meet the following criteria to be prequalified as accredited investors:

- Must have a valid passport
- Can be any nationality (except for U.S.)
- Have a net worth greater than $1Million
- Has no criminal record
- Availability of funds within 60 days
- Can identify legal source of funds
- Has maintain income greater than $200,000 in the last two years (or $300,000 for a couple)

The Regional Center has developed an "Investor Suitability Questionnaire" (see *Appendix*) that will be used to pre-screen prospective investors. The Regional Center will comply with the latest laws and regulations and will take the reasonable steps to verify the "accredited investor" status.

6.3 Investor Information Requirements

Potential investors will be required to provide the following (applicable) documents, as required by U.S. Immigration agencies:

- Complete passport for primary applicant and family members
- U.S. visa stamps and I-94 cards for all applicants
- Copy of marriage certificate
- Copies of birth certificates
- Resume/curriculum vitae
- Proof of lawful source of funds including but not limited to:
  - Bank/account statements
  - Employer letters
  - Foreign business registration records
  - Property deeds
  - Closing documents
  - Corporate and/or personal income tax records for the last five years
- Proof of net worth

- Wire transfer record and bank account statement showing transfer of funds to escrow account
- Business registration and incorporation documents for all entities owned

6.4 Sources of Funds

Under USCIS regulations, the investor must demonstrate that their assets were gained in a lawful manner. This requires the investor to prove their investment funds were obtained through lawful business, salary, investments, property sales, inheritance, gift, loan, or other lawful means.

Investors will be required to complete a series of forms providing extensive detail and evidence of verifiable and legal sources of funds for the EB-5 investment. Types of investment sources include:

- Bank Accounts (including Financial Institution Name, Account Number, and Balance).
- Earnings from Business Operations.
- Net Proceeds from the Sale of a Business.
- Net Proceeds from the Sale of Real Estate. Net proceeds from the Sale of Investments or Other Assets.
- Employment Earnings.
- Income or other Tax Refunds.
- Loans.
- Gifts. For gifts, in addition to providing the giver's information and type of entity, the investor must also provide the giver's source of the funds, again to establish the legitimacy of the gift's original source.
- Inheritance. For proceeds from inheritances, the investor must provide full information on the decedent, and indicate any contingencies associated with the inheritance, netting down to the amount to be used to fund the EB-5 investment. Again, the primary source of the decedent's funds must be identified, in order to establish the legitimacy of the original source of funds.
- Retirement Funds. If using retirement funds for the EB-5 investment, the investor is required to provide full information about the company/entity paying the retirement, including date hired, date terminated, and date retirement benefits began, including details of lump sum and periodic payments, and net amount used to fund the EB-5 investment.
- Support from a Parent/Relative/Guardian or Other Person. In addition to full information regarding the person providing the support, the dates/frequency and amounts of support payments, and term of the support agreement, the investor must provide information regarding any repayment obligation related to these support payments.
- Designee's Responsibilities Inherent in Conduct of Regional Center- Administrative Oversight: The regulations at 8 CFR 204.6(m)(6), require that an approved Regional Center in order to maintain the validity of its approval designation, must continue to meet the statutory requirements of the Immigrant Investor Pilot Program by serving the purpose of promoting economic growth, including increased export sales (where

applicable), improved regional productivity, job creation, and increased domestic capital investment.

CNYCRC will monitor all investment activities under the sponsorship of this Regional Center; CNYCRC will maintain records, data and information on a quarterly basis in order to report to USCIS upon request the following year to date information for each Federal Fiscal Year.

Century New York City Regional Center, LLC's role will be to monitor all investment activities under the sponsorship of the program, and to maintain records, data and information on a quarterly basis in order to report to USCIS upon request year-to-date for each Federal Fiscal Year, commencing with the current year as follows:

1. The principal official and point of contact of the Regional Center responsible for the normal operation, management and administration of the regional center.
2. How the Regional Center is administering its regional center and is actively engaged in supporting a due diligence screening of its alien investors' lawful source of capital and the alien investor's ability to fully invest the requisite amount of capital.
3. How the Regional Center is actively engaged in the evaluation, oversight and follow-up on any proposed commercial activities that will be utilized by alien investors in order to create direct and/or indirect jobs through qualifying EB-5 capital investments into commercial enterprises within the regional center.

6.5 Information Tracking

The Regional Center will maintain a tracking and reporting system in order to provide the following information on a quarterly basis to USCIS:

1. The name, date of birth, and alien registration number of each alien investor who makes an investment and files an EB-5 I-526 petition with USCIS, specifying whether the petition was approved, denied, or withdrawn by the petitioner.
2. The country of nationality of each alien investor who makes an investment and files an EB-5 petition with USCIS.
3. The US city and state of residence of each alien investor who makes an investment and files an EB-5 I-526 petition with USCIS.
4. The categories of business activity within the geographic boundaries of the regional center that have received the alien investors' capital, and in what amount.
5. The names and locations of each of the job creating commercial enterprises located within the geographical boundaries if the regional center has received alien investor capital.
6. The amounts of alien investor capital and the amounts of other domestic capital that has been invested together in each job creating commercial enterprise specified in item 8 above, distinguishing the separate totals for each.

7. The total aggregate number of approved EB-5 alien investor I-526 petitions per Federal Fiscal Year to date made through the regional center.
8. The total aggregate number of approved EB-5 alien investor I-829 petitions per Federal Fiscal Year to date through the regional center.
9. The total aggregate of EB-5 alien capital invested through the regional center for each Federal Fiscal Year to date since the approval and designation.
10. The combined total aggregate of "new" direct and/or indirect jobs created by EB-5 investors through the regional center for each Federal Fiscal Year to date since the approval and designation.
11. If applicable, the total aggregate of "preserved" jobs by EB-5 alien investors into troubled businesses through the regional center for each Federal Fiscal Year to date since the approval and designation.
12. If for any given Federal Fiscal Year the regional center does not have investors to report, then provide an explanation for the inactivity along with a specific plan which details timelines and steps to actively promote the regional center program, and recruit legitimate and viable alien investors.
13. Notification to USIS within 30 days of the occurrence any material change in the structure, operation, administration, focus, or activities relating to the regional center's basis for its most recent designation and/or reaffirmation by USCIS.
14. The total aggregate of EB-5 alien capital invested through the regional center for each Federal Fiscal Year.

6.6 Management Team

George Xu

George Xu is the founder and the principle of the CNYCRC. Mr. Xu is also the founder and President of Century Development Group, a real estate development company. With over 16 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential, hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

Qili Li

Qili Li, MD, FACOG, Principle of CNYCRC. In private practice for more than 14 years specializing in the field of Obstetrics and Gynecology in downtown Flushing, Queens County, New York City. Dr. Li attended the Sophie Davis School of Biomedical Education. She graduated with Magna Cum Laude

honor. She received her Medical Doctor degree from New York Medical College. She completed her internship and residency training in Obstetrics/Gynecology at North Shore University Hospital at Manhasset, New York. She is board certified in the specialty of Obstetrics/Gynecology. She is a fellow of the American College of Obstetrics/Gyneoclogy (ACOG). In recent years, like many of her colleagues, Dr. Li has expanded her interest/investment in real estate. She is currently involved in several real estate development projects ranging from high end condominium to hotel construction.

James Ho

James Ho, Vice President of CNYCRC, graduated from Polytechnic University majoring in Electrical Engineering and Computer Science. Mr. Ho has seven years of experience in computer programming and twelve years in securities trading and security related business. Currently he is involved in real estate development of three projects in New York City area. Mr. Ho's role in the CNYCRC is to provide oversight of operations, maintain cohesion between a project's developer, general contractor, law and accounting firms, and to ensure overall compliance.

Robert Chen

Robert Chen works for CNYCRC as the Vice President, who oversees the overall operations of the Regional Center. He's also in charge of due diligence and evaluating potential projects and determines business feasibilities. Prior to join CNYCRC, Mr. Chen has over 10 years' experience in senior manager position with FedEx. He has owned, managed, and operated companies in computer wholesale and repair business. Mr. Chen received his Bachelor of Science degree in Environmental Health Science from City University of New York.

David Pan

David Pan, Vice President of CNYCRC, has over 15 years of experience in fixed-income securities trading and risk management, having worked in various roles at Credit Suisse, Citigroup, Deutsche Bank and the hedge fund industry. Formerly a Director at Credit Suisse in the Strategic Risk Management division covering Residential Mortgage Backed Security (RMBS) business where he was instrumental in developing models and methodologies in assessing the firm's risk exposure to the mortgage security market. Prior to his Wall Street career, Mr. Pan spent 10 years as a senior software engineer responsible for the development of the state-of-the-art fixed-income security trading and analytics software systems. He graduated with a Bachelor's degree in Computer Science from Queens College, City University of New York.

Anthea Quan

Anthea Quan serves as the director of accounting controller for CNYCRC. She is responsible for the accounting, financial reporting, and audit functions. Also performs management of operating cash flow, financial analysis, obtaining financial for development projects and investor distribution. She is passionate about accounting and has experience working with a variety of small business. Ms. Quan

graduated from Yanbian University in China with a bachelor of mathematics. She is fluent in Chinese, English and Korean, resides in New York with her husband.

Tracy Law

Tracy Law is the director of project management of CNYCRC. Ms. Law is responsible for a full spectrum on operations to ensure that projects are done on time and on budget. Her constant communication with contractors and architects provides a strong network of relationships in the field. She is responsible for supervising and coordinating OS&E and FF&E. She is integral in bringing new hotels to opening. Ms. Law graduated with a Bachelor of Science degree in Accounting from Queens College, City College of New York.

Lynn Wei

Lynn Wei is the CNYCRC's director of marketing and business development. Ms. Wei is responsible for a full spectrum of business development initiatives including creating and overseeing international marketing strategies for all CNYCRC project offerings. She is also involved in managing client relations. Ms. Wei is also a senior business development associate at the Century Development Group. In this capacity, she focused on creating Request for Proposals and general marketing materials, as well as developing a customer analytical database, and implementing strategic marketing and communication initiatives. Ms. Wei graduated with a Master of Science degree in Economics from Brooklyn College, City University of New York, and a Bachelor of Administrative Degree in Marketing from Shanghai Finance University.

7.0 Legal Risk and Planning

7.1 LLC Creation

Century New York City Regional Center has been formed as a Limited Liability Company. A limited liability company (LLC) is a relatively new form of business organization that offers the best features of a corporation and a partnership. It provides the owners protection from personal liability for business debts in the same way a corporation does, but the IRS treats an LLC as a partnership for tax purposes. Income is taxed only once, as in a partnership, and an LLC has great flexibility in how it passes income and deductions to its members.

7.2 Document Review and Verification Policy

The Regional Center will hire an outside firm to screen potential investors and perform due diligence regarding sources of funds. The Regional Center is currently considering two firms, World Check (a Thomson Reuters Company) and Accuity.

7.3 Process Documentation and Legal Agreements

Forms and legal agreements can be found as an appendix to this document.

8.0 Regional Center Marketing and Operational Budget

Century New York City Regional Center has sufficient startup capital to cover operational expenses. As stated in the attached detailed statement from George Xu, $135,000 is budgeted for the administration and marketing of the Regional Center over 5 years, per the table on page 10 of this plan, is budgeted to market projects to immigrant investors.

Circular 230 Disclosure

Pursuant to U.S. Internal Revenue Service Circular 230, the statements set forth herein with respect to Federal Tax Issues, as defined below, were not intended nor written to be used, and such statements cannot be used by any taxpayer for the purpose of avoiding any penalties that may be imposed on the taxpayer under the U.S. Internal Revenue Code. Such statements were written to support the marketing of the LLC or matters addressed herein. It is possible that additional issues may exist that would affect the federal tax treatment of an investment in the LLC and the statements contained herein do not consider or provide any conclusions with respect to such additional issues. Each taxpayer should seek advice based on the taxpayer's particular circumstances from an independent tax advisor. A "Federal Tax Issue" is a question concerning the federal tax treatment of any item of income, gain, loss, deduction or credit, the existence or absence of a taxable transfer of property, or the value of property for purposes of any tax imposed by or pursuant to the U.S. Internal Revenue Code.

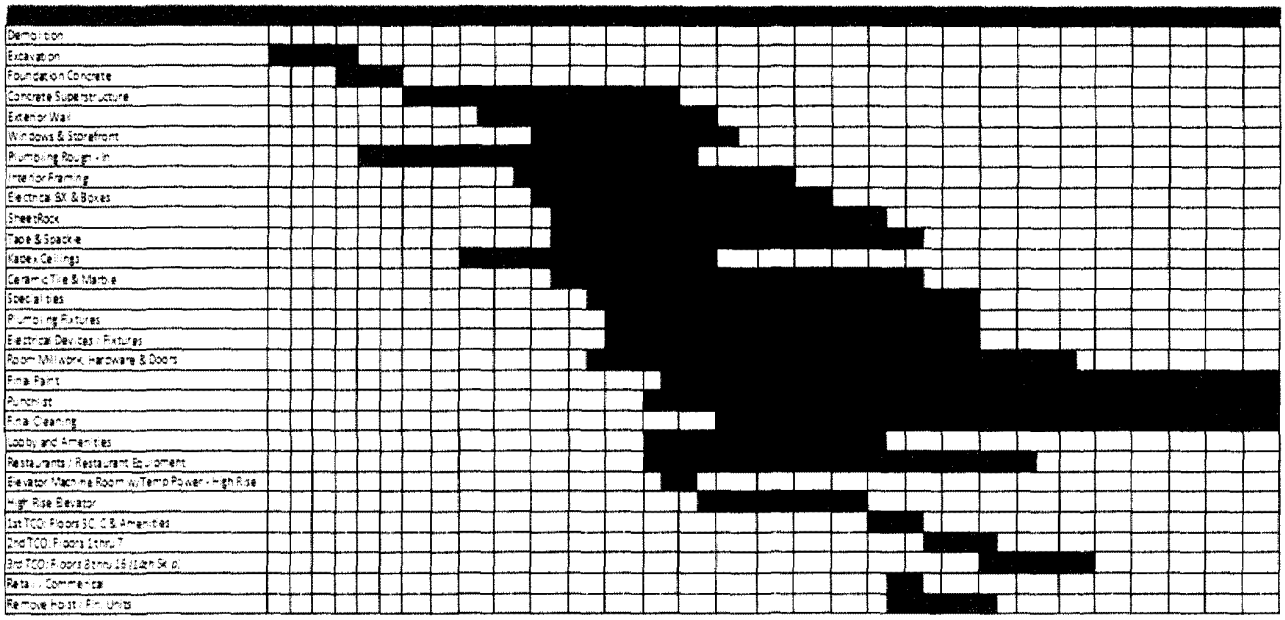
CONSTRUCTION OF THE PROJECT

The construction of the Four Points Flushing Hotel & Condominium project will take approximately 30 months to complete. The developer already has obtained the architectural designs, fabrications, excavations, and procurement and will apply for all necessary permit and licenses in place. The actual construction is expected to be completed in the near future. The timeline at provides the particulars of the various phases of the construction over a period of project months from the commencement of the construction. For example, the early months will consist of the excavation and necessary foundation work.

The construction of the Four Points Flushing Hotel project will take approximately 30-months to complete starting with excavation. The project location is currently demolished and is ready to do construction. The construction timeline is attached below.



The developer is scheduled to obtained all necessary permit and licenses in construction and development of the project. The actual construction is expected to start at the end of 2014, and it is anticipated to be completed by mid-2017. The timeline at provides the particulars of the various phases of the construction over a period of project months from the commencement of the construction. For example, the early months will consist of the excavation and necessary foundation work. The Shoring of Excavation is expected to take 4 months, the construction timeline describes that concrete will be poured into concrete slabs for the individual floors. At this time, the construction of the hotel has made considerable headway. The construction timeline above provides the particulars of multiple phases of the construction over a period of 30 months from the commencement of the construction.

CONSTRUCTION PERMITS AND LICENSES

In New York City the construction is "as of-right" development which complies with all applicable zoning regulations and does not require any discretionary action (special permit or variance) by the City Planning Commission or Board of Standards and Appeals for approval. Assuming that the project complies with all other Code and Zoning regulations, the NYC Department of Buildings Plan Examiner Plan Examiner will approve the Plans, further to the architect's construction detailed blueprints and renditions.

It is not necessary for the project to seek the additional approvals of the City Planning Commission, or of the Local Community Board, or of any other outside party of interest. If the project complies with the applicable Zoning Laws currently in force, the developer is entitled to build. Therefore building permits are only valid for a limited amount of time and the project will apply for the relevant permits prior to the commencement of the construction activities.

MANAGEMENT BIOGRAPHIES AND INTERRELATIONS

The following paragraphs set forth the Managing Member and Officers of the job creating entity Farrington Realty, LLC.

The amounts and percentage of Units beneficially owned are reported on the basis of regulations of the SEC governing the determination of beneficial ownership of securities. Under the rules of the SEC, a person is deemed to be a "beneficial owner" of a security if that person has or shares "voting power," which includes the power to vote or to direct the voting of such security, or "investment power," which includes the power to dispose of or to direct the disposition of such security. A person is also deemed to be a beneficial owner of any securities of which that person has a right to acquire beneficial ownership within 60 days. Under these rules, more than one person may be deemed a beneficial owner of the same securities and a person may be deemed a beneficial owner of securities as to which he has no economic interest.

MANAGEMENT BIOGRAPHIES

Mr. George Xu, CEO/Regional Center Principal

Mr. George Xu is the founder and the principal of the Century New York City Regional Center ("CNYCRC"). Mr. Xu is also the founder and President of Century Development Group, a real estate development company. With over 16 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential, hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

Qili Li, MD, Regional Center Principal

In private practice for more than 14 years specializing in the field of Obstetrics and Gynecology in downtown Flushing, Queens County, New York City. Dr. Li attended the Sophie Davis School of Biomedical Education were She graduated with Magna Cum Laude with honors. She received her Medical Doctor degree from New York Medical College. She completed her internship and residency training in Obstetrics/Gynecology at North Shore University Hospital at Manhasset, New York. She is board certified in the specialty of Obstetrics/Gynecology. She is a fellow of the American College of Obstetrics/Gyneoclogy (ACOG). In recent years, like many of her colleagues, Dr. Li has expanded her interest/investment in real estate. She is currently involved in several real estate development projects ranging from high end condominium to hotel construction.

James Ho, Vice President

Mr. James Ho graduated from Polytechnic University majoring in Electrical Engineering and Computer Science. Mr. Ho has seven years of experience in computer programming and twelve years in securities trading and security related business. Currently he is involved in real estate development of three projects in New York City area. Mr. Ho's role in the CNYCRC is to provide oversight of operations, maintain cohesion between a project's developer, general contractor, law and accounting firms, and to ensure overall compliance.

Robert Chen Vice President

Mr. Robert Chen oversees the overall operations of the Regional Center. He's also in charge of due diligence and evaluating potential projects and determines business feasibilities. Prior to join CNYCRC, Mr. Chen has

over 10 years' experience in senior manager position with FedEx. He has owned, managed and operated companies in computer wholesale and repair business. Mr. Chen received his Bachelor of Science degree in Environmental Health Science from City University of New York.

David Pan, Vice President

Mr. David Pan has over 15 years of experience in fixed-income securities trading and risk management, having worked in various roles at Credit Suisse, Citigroup, Deutsche Bank and the hedge fund industry. Formerly a Director at Credit Suisse in the Strategic Risk Management division covering Residential Mortgage Backed Security (RMBS) business where he was instrumental in developing models and methodologies in assessing the firm's risk exposure to the mortgage security market. Prior to his Wall Street career, Mr. Pan spent 10 years as a senior software engineer responsible for the development of the state-of-the-art fixed-income security trading and analytics software systems. He graduated with a Bachelor's degree in Computer Science from Queens College, City University of New York.

Anthea Quan, Accounting Controller

She is responsible for the accounting, financial reporting and audit functions. Also performs management of operating cash flow, financial analysis, obtaining financial for development projects and investor distribution. She is passionate about accounting and has experience working with a variety of small business. Ms. Quan graduated from Yanbian University in China with a bachelor of mathematics. She is fluent in Chinese, English and Korean, resides in New York with her husband.

Tracy Law, Director of Project Management

Ms. Tracy Law is responsible for a full spectrum on operations to ensure that projects are done on time and on budget. Her constant communication with contractors and architects provides a strong network of relationships in the field. She is responsible for supervising and coordinating OS&E and FF&E. She is integral in bringing new hotels to opening. Ms. Law graduated with a Bachelor of Science degree in Accounting from Queens College, City College of New York.

Lynn Wei, Director of Marketing and Business Development

Ms. Lynn Wei is responsible for a full spectrum of business development initiatives including creating and overseeing international marketing strategies for all CNYCRC project offerings. She is also involved in managing client relations. Ms. Wei is also a senior business development associate at the Century Development Group. In this capacity, she focused on creating Request for Proposals and general marketing materials, as well as developing a customer analytical database, and implementing strategic marketing and communication initiatives. Ms. Wei graduated with a Master of Science degree in Economics from Brooklyn College, City University of New York and a Bachelor of Administrative Degree in Marketing from Shanghai Finance University.

EB-5 IMMIGRATION DISCLOSURES AND RISK FACTORS

The U.S. Congress created the employment-based fifth preference ("**EB-5**") immigrant visa category in 1990 for immigrants who invest in and manage U.S. commercial enterprises that benefit the U.S. economy through what is labeled the "EB-5 Program." Each investment needs to create or save at least 10 full-time jobs for U.S. workers.

The minimum amount required to invest is $500,000, although that amount is reduced to $500,000 if the investment is made into a new commercial enterprise principally doing business in a high unemployment area or qualifying Targeted Employment Area (collectively defined as a "**Targeted Employment Area**" or "**TEA**"). This project is located in a Targeted Employment Area, thus the minimum capital investment remains $500,000.

A description of the requirements and processes of the EB-5 Program is based on information obtained by the LLC from third parties whom the LLC believes are reliable. However, there can be no assurance that such information is accurate or current, or that it includes all of the risks relating to U.S. immigration laws or to the EB-5 Program. See "Risk Factors," below.

Investors in this Offering who have subscribed for Interests with the intention of applying for U.S. permanent residence on account of investment in the LLC should be aware of certain risk factors relating to immigration to the United States generally, and to the EB-5 Program and its administration specifically. An Investor who is interested in purchasing Interests with the intention of obtaining first conditional, and thereafter permanent, residence is encouraged, along with his or her advisors, to make his or her own independent review of the EB-5 Program and the various immigration risk factors relating to the process in obtaining a conditional and permanent residency status to determine if an investment in the Interests is a suitable approach for him or her.

THE LLC MAKES NO REPRESENTATION OR WARRANTY OF ANY KIND CONCERNING WHETHER AN INVESTMENT IN THE LLC WILL MEET THE REQUIREMENTS OF THE EB-5 PROGRAM OR OTHER U.S. IMMIGRATION REQUIREMENTS. NO ASSURANCES CAN BE GIVEN THAT AN INVESTMENT IN THE LLC WILL RESULT IN AN IMMIGRANT INVESTOR RECEIVING AN EB-5 VISA OR CONDITIONAL OR PERMANENT RESIDENT STATUS.

General Immigration Risks. Congress and/or USCIS may change the law, regulations, or interpretations of the law, including the EB-5 Program, without notice and in a manner that may be detrimental to an Investor and/or the LLC. Investors who obtain conditional or permanent resident status must intend to make the United States their primary residence. The EB-5 Policy Memorandum was issued on May 30, 2013, which changes a significant amount of key definitions and criteria. Permanent residents who continue to live abroad risk revocation of their conditional or permanent residence status. The process of obtaining conditional and permanent resident status involves numerous factors and circumstances which are not within the control of the LLC, or the scope of this Memorandum. These include, but are not limited to, an immigrant Investor's particular personal history and characteristics, and quotas established by the United States government limiting the number of immigrant visas available to qualified individuals seeking conditional or permanent resident status under the EB-5 Program.

EB-5 Program Expiration. The expiration date for the EB-5 Program, is currently September 30, 2015. It is believed that the U.S. Congress will extend the EB-5 Program after that date; however, there can be no assurance that the EB-5 Program's term will be extended, or that applications submitted before the EB-5 Program's expiration will be adjudicated by the USCIS.

Use of Immigration Attorney and Processing Time. The filing of an I-526 Petition by an Investor with USCIS should be done by a qualified U.S. immigration attorney. As of the date of this document, the Manager has been advised that the USCIS is taking approximately eleven (11) months to approve (or deny) an I-526 Petition. It is impossible to predict USCIS processing times. Once approved, the case will either be forwarded to the U.S. State Department's National Visa Center and then to a U.S. Consulate selected by the Investor for processing, or, if the Investor is already in the U.S., the Investor may adjust his or her status to that of conditional permanent resident. Depending on which option the Investor chooses, it may take an additional six (6) months or longer for a U.S. Consulate to process the immigrant visa application, or for the USCIS to adjust an Investor's status, and issue a

conditional green card. Investors should not physically move to the United States until their immigrant visa has been issued.

Administrative Risk due to Changes in USCIS Policies. Processing times and USCIS' consideration and eventual approval of Investors' I-526 petitions could be negatively impacted by changes to USCIS' procedures or to its interpretation and implementation of current or future laws and regulations.

Mezzanine Lending Risk: Farrington EB-5 Capital, LLC provides mezzanine debt capital to Four Points Flushing Hotel & Condominium project. Mezzanine debt capital generally refers to that layer of financing between a company's senior debt and equity, filling the gap between the said capital. The EB-5 financing subordinates in priority of payment to senior debt, in this case, Northern Bank & Trust loan but senior in rank to owner's equity.

Jobs. USCIS requires proof that each investor's investment resulted in creating ten (10) jobs as part of the removal of conditions required for obtaining permanent residency status. The structure of the Offering is such that all jobs counted for purposes of Investors' immigration petitions must be created directly by the LLC. Based upon the Manager's estimates, the Manager believes that an investment in the Interests should satisfy the job creation requirement for the number of investors sought, specifically four hundred and two (402) jobs. See "Risk Factors", below.

The Manager estimates that the Project will create a maximum total of approximately four hundred and two (402) qualifying U.S. jobs, which is forty (40) per investor or ten percent (10%) more than the amount required. Each Investor in the LLC who will petition for permanent residency in the U.S. under the EB-5 Program based on an investment in this Offering must demonstrate that the Project created at least ten (10) U.S. jobs on account of that Investor's investment in order to qualify for permanent residency status under the EB-5 Program. The qualifying jobs created by the LLC's Investment of the Offering proceeds shall be allocated to the Investors on a first-in, first-out basis tied to the later date on which the following shall have occurred: (a) the LLC has accepted an Investor's subscription, or (b) the LLC has received in the project or in escrow such Investor's Capital Contribution and Administrative Fee. Accordingly, the first ten qualifying jobs that are created by the Project will be attributed to the first Investor who satisfies the requirements of clauses (a) and (b) of this paragraph, the second ten qualifying jobs that are created by the Project will be attributed to the second Investor who satisfies the requirements of clauses (a) and (b) of this paragraph, and so on until all qualifying jobs that are created by the Project have been allocated on a first-in, first-out basis to each Investor who satisfies the requirements of clauses (a) and (b) of this paragraph.

The Manager's job creation estimates are based upon the LLC's proposed activity and other circumstances of this Project. As stated above, the Manager's analysis estimates that the Project will create a likely maximum total of approximately seven hundred and thirty (730) U.S. jobs. However, there can be no assurance that this estimate, or the assumptions upon which it is based, is or are accurate, or that the actual number of direct employees will be close to the number predicted in such analysis. Depending upon any disparity actually realized, there may be insufficient employment to remove conditional visa status, resulting in a delay, or denial, of permanent residency for one or more Investors. Because the qualifying jobs created by the Investment shall be allocated to the Investors on a first-in, first-out basis tied to the date of Investors' subscriptions, as detailed in the paragraph immediately above, while the LLC believes that a sufficient number of qualifying jobs will be created by the Project for all Investors, if less than the number of direct, jobs estimated are actually created by the Project, the first-in, first-out method of allocating jobs will provide greater security for earlier subscribing Investors than for later subscribing Investors with respect to the removal of conditions required for obtaining permanent residency status.

Proving Lawful Source of Funds. As part of the I-526 Petition, an Investor must present to USCIS clear documentary evidence of the source of the funds invested, and that the funds belong to the Investor. Generally, the Investor can satisfy the source of funds requirement by submitting documents showing that he or she has a level of income from legal sources that would yield sufficient funds for the investment. USCIS generally requires copies of income tax returns to satisfy the source of funds requirement. For Investors who do not have such records, there may be other records that can be provided to USCIS by an Investor to demonstrate that the investment funds came from legal sources. USCIS may require proof of a more specific path of funds earned in individual cases. All such matters regarding the Investor's I-526 Petition should be discussed with his or her

immigration counsel. An Investor may be unable to present evidence that USCIS considers sufficient to carry the Investor's burden to show the legitimate source of the investment funds.

Policy Formulation. The EB-5 Program requires an Investor to participate in policy formulation or management position within the LLC. The LLC believes, but cannot guarantee, that as a Member in the LLC, each Investor is provided with the powers and duties under the Operating Agreement sufficient to meet the USCIS requirement that an Immigrant Investor is actively participating in policymaking or management of a new commercial enterprise.

At-Risk Investment. An Investor's investment must be and remain "at risk" to qualify for the EB-5 Program. As part of the green card application, an Investor must show evidence that he or she has placed the required amount of capital at risk for the purpose of generating a return on the capital placed at risk. The LLC believes that an investment in the Interests will place an Investor's investment in the LLC at risk, because as described herein there is no assurance that the business of the LLC will be able to return any Investor's investment in the Interests at any time, if ever. However, purchase of Interests does not guarantee conditional or permanent residency in the United States. Furthermore, Project conditions could arise under which transactions removing Investors' capital from active "at risk" use in the LLC could become commercially necessary. No assurance can be given that conditions to residency under the EB-5 Program will be removed.

EB-5 Visa Retrogression. Section 203(b)(5) of the Immigration and Nationality Act ("**INA**") allocates 10,000 immigrant visas per fiscal year to qualified individuals seeking lawful permanent resident status in the United States on the basis of their capital investment in a commercial enterprise qualifying under the EB-5 Program. To date, USCIS has issued less than 10,000 EB-5 visas per year for each year that it has issued EB-5 visas; however, recent trends have demonstrated that the number of EB-5 visas issued each year is on the rise. If all 10,000 EB-5 visas are issued in a single year, no further visas shall be issued until the commencement of the next fiscal year. Given the sharp increase in current visa issuance trends, especially investors from mainland China, there can be no assurance that the ceiling of 10,000 EB-5 visas per year will not be reached, and accordingly, no assurance that a visa shall be available for all Investors at the time of adjudication of their individual I-526 petitions. The investors' children close to 21-years-old may "age out" and application may be delayed when the investors wait for the priority date to become current.

Ceiling on EB-5 Visas, By Country. As stated above, there are approximately 10,000 U.S. visas reserved each year to the EB-5 immigrant visa category. Furthermore, within the overall EB-5 category, sub-categories exist as to the portion of the total number of visas allowable to immigrant investors from each foreign country, meaning that there is a ceiling on EB-5 visas for each country. The per country quota is 7% in each immigrant visa category. The U.S. Department of State ("**DOS**") has never yet issued the total 10,000 EB-5 visas in any year since the EB-5 category's creation in 1990. However, both the overall EB-5 Program and the Regional Center Program have experienced the significant increase in usage in recent months referred to above, that shows signs of accelerating rather than diminishing, and it is anticipated that the 10,000 number shall be fully used if not this year, then the next. If 10,000 visas are issued in any one or more years, or if more EB-5 investors qualify from a given country than is allowable under the annual per-country cap for that country, this could create a backlog in the EB-5 category. This means an investor from such country who otherwise qualifies for an EB-5 visa would not receive his/her conditional green card until additional visas become available in the following year. When the EB-5 applicants reach the ceiling of 10,000 visas, country limit may apply. EB-5 visa retrogression may occur. This could delay an investor's entry to the U.S. if he/she is engaged in consular processing or the filing of his /her adjustment of status application if he/she is already in the U.S. If visa backlogs delay an investor's receipt of a conditional green card, this could also delay the filing of his/her I-829 Petition, which in turn could negatively affect his/her ability to prove requisite job creation within the prescribed time frame and remove the conditions to permanent residency.

No Guarantee of Positive Adjudication of I-526, I-829, or I-485. Adjudication of all I-526 and I-829 petitions, along with all I-485 "Application to Register Permanent Residence or Adjust Status" ("**I-485**"), is within the sole and exclusive purview of USCIS. Although the Issuer's management believes that an investment in the Interests offered hereby should enable an Investor to qualify for a positive determination of his or her I-526 and I-485, and that a successful conclusion to said investment in full satisfaction of all requirements of the EB-5 Program ought

to qualify Investors for I-829 approval, there can be no guarantee that any Investor shall ultimately receive a positive adjudication of each, or any, of these petitions or applications.

Project Delays May Negatively Impact Immigration Process. Various delays caused by circumstances both within and without the control of the LLC, and/or their respective contract partners in the conduct and closing of this Offering and the execution of the Project thereafter may result in a delay in the commencement of the Project or in delays in the construction, sale, and operation of the Project as contemplated hereby. One or more of said delays, if incurred, could result in unavoidable delays in the creation, and proving, of necessary jobs. Such delays may impact the adjudication of Investor I-526s, I-485s, and I-829s in materially adverse ways.

Targeted Employment Area and Targeted Employment Area Designation. Demographic shifts could cause the loss of the "high unemployment area" designation affording Targeted Employment Area (TEA) status to the area where the Project is located. Although EB-5 Investors who subscribed in the Project when it was located in a Targeted Employment Area needed only invest $500,000 in the Project, if the Project's Targeted Employment Area status is lost during the course of the Offering, Investors who subscribe thereafter would need to invest $500,000 to qualify for the EB-5 Program. This project is located in Flushing, Queens County in the State of New York. The project location is qualified as Targeted Employment Area under the EB-5 Program.

* * * * *

Admissible to the U.S.: Foreign persons applying for a U.S. Green Card must demonstrate that they are admissible to the U.S. Section 212 of the Immigration and Nationality Act sets forth various grounds of inadmissibility, which may prevent an otherwise eligible applicant from receiving a green card or entering the U.S. Foreign individuals who are ineligible to receive a Green Card or to be admitted to the U.S. include, but are not limited to, an individual who (1) is determined to have a communicable disease of public health significance, which shall include infection with the etiologic agent for acquired immune deficiency syndrome; (2) is determined to have a physical or mental disorder and behavior associated with the disorder that may pose, or has posed, a threat to the property, safety, or welfare of the individual or others; (3) is determined to have had a physical or mental disorder and a history of behavior associated with the disorder, which behavior has posed a threat to the property, safety, or welfare of the individual or others, and which behavior is likely to recur or to lead to other harmful behavior; (4) is determined to be a drug abuser or addict; (5) has been convicted of committing, or who admits having committed, acts which constitute the essential elements of a crime involving moral turpitude (other than a purely political offense), or a violation of (or a conspiracy or attempt to violate) any law or regulation of a State, the United States, or a foreign country relating to a controlled substance; (6) has been convicted of 2 or more offenses (other than purely political offenses), regardless of whether the conviction was in a single trial or whether the offenses arose from a single scheme of misconduct and regardless of whether the offenses involved moral turpitude, for which the aggregate sentences to confinement were 5 years or more; (7) is or has been an illicit trafficker in any controlled substance or in any listed chemical (as defined in section 102 of the Controlled Substances Act (21 U.S.C. § 802), or is or has been a knowing aider, abettor, assister, conspirator, or colluder with others in the illicit trafficking in any such controlled or listed substance or chemical, or endeavored to do so; (8) is the spouse, son, or daughter of an alien inadmissible under clause (7) and has, within the previous 5 years, obtained any financial or other benefit from the illicit activity of that alien, and knew or reasonably should have known that the financial or other benefit was the product of such illicit activity; (9) is coming to the U.S. solely, principally, or incidentally to engage in prostitution, or has engaged in prostitution within 10 years of the date of application for a visa, admission, or adjustment of status; (10) directly or indirectly procures or attempts to procure, or (within 10 years of the date of application for a visa, admission, or adjustment of status) procured or attempted to procure or to import, prostitutes or persons for the purpose of prostitution, or receives or (within such 10 year period) received, in whole or in part, the proceeds of prostitution; (11) is coming to the United States to engage in any other unlawful commercialized vice, whether or not related to prostitution; (12) has committed in the U.S. a serious criminal offense, regardless of whether such offense was prosecuted as a result of diplomatic immunity; (13) is excludable from the U.S. on grounds relating to national security, related grounds, or terrorist activities; (14) is excludable from the U.S. on grounds relating to foreign policy; (15) is or has been a member of or affiliated with the Communist or any other totalitarian party or who has participated in Nazi prosecutions or genocide; (16) is likely to become a public charge at any time after entry; (17) by fraud or willfully misrepresenting a material fact, seeks to procure (or has sought to procure or has procured) a visa, other documentation, or admission into the U.S.; (18) illegally entered into the U.S.; or (19) has at any time knowingly encouraged, induced, assisted, abetted, or aided any other alien to enter or to try to enter the U.S. in violation of law.

D. Continuation, if needed, to provide information for additional management companies/agencies, regional center principals, agents, individuals or entities who are or will be involved in the management, oversight, and administration of the regional center.)

Please see attached counsel's project cover letter

Part 3. Information About the Regional Center *(Continued)*

Note: If extra space is needed to complete any item, attach a continuation sheet, indicate the item number, and provide the response.

1a. Describe the structure, ownership and control of the regional center entity.

The Regional Center is owned by Mr. George Xu. Please see the counsel's project cover letter and organizational chart and operating agreement

b. Date the Regional Center was established(mm/dd/yyyy): 03/25/2014

c. Organization Structure for the Regional Center:

- ☐ **1.** Agency of a U.S. State or Territory (identify) _____
- ☐ **2.** Corporation
- ☐ **3.** Partnership (including Limited Partnership)
- ☒ **4.** Limited Liability Company (LLC)
- ☐ **5.** Other (Explain) _____

2. Has this regional center's designation ever been formally terminated by USCIS, or has the regional center ever filed a Form I-924 or regional center proposal or amendment that was denied?

☒ No ☐ Yes - Attach a copy of the adverse decision, with an explanation, the date of decision, and case number, if any.

3. Describe the geographic area of the regional center. **Note:** This area must be contiguous. Provide a map of the geographic area.

Queens County, New York County, Bronx County, Richmond County, Westchester County and Nassau County

The map of the geographic area is attached in the Business Plan

4. Describe the regional center's administration, oversight, and management functions that are or will be in place to monitor all EB-5 capital investment activities and the allocation of the resulting jobs created or maintained under the sponsorship of the regional center.

Please see the counsel's cover letter and administrative exhibits

Part 3. Information About the Regional Center *(Continued)*

5. Describe the past, current, and future promotional activities for the regional center. Include a description of the budget for this activity, along with evidence of the funds committed to the regional center for promotional activities. Submit a plan of operation for the regional center that addresses how EB-5 investors will be recruited, the method(s) by which the capital investment opportunities will be offered to the investors, and how they will subscribe or commit to the investment interest.

Century New York City Regional Center has a comprehensive marketing plan in operation. Please see attached project cover letter and attachments for details.

6. Describe whether and how the regional center is engaged in supporting a due diligence screening of its alien investor's lawful source of capital and the alien investor's ability to fully invest the requisite amount of capital. Also, describe the regional center's prospective plans in this regard if they differ from past practice.

Century New York City Regional Center will support due diligence screening of its alien investors' lawful source of capital by requiring all aliens to fill out the Regional Center's Suitability Evaluation Form and to provide certified and notarized documentary evidence, containing official seal or consular legalization, of any loan or mortgage agreements, promissory notes, security agreements, foreign business registration records, corporate, partnership and personal tax returns.

7. Identify each industry that has or will be the focus of EB-5 capital investments sponsored through the regional center.

Industry Category Title: Construction NAICS Code for the Industry Category: 2 3 6 2 2 3	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes
Industry Category Title: Wholesale Trade NAICS Code for the Industry Category: 4 2 4 2 3 2	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes
Industry Category Title: Hotel and Motel NAICS Code for the Industry Category: 7 2 2 5 1	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes

Part 3. Information About the Regional Center *(Continued)*

8a. Describe and document the current and/or prospective structure of ownership and control of the commercial entity(s) in which the EB-5 alien investors have or will make their capital investments.

Please see Operating Agreement attached in the Exhibit

b. Date commercial enterprise established, if any (mm/dd/yyyy): 03/31/2014

c. Organization Structure for commercial enterprise:

- ☐ **1.** Corporation
- ☐ **2.** Partnership (including Limited Partnership)
- ☒ **3.** Limited Liability Company (LLC)
- ☐ **4.** Other (Explain) _____

d. Has or will the Regional Center or any of its principals or agents have an equity stake in the commercial enterprise?

☒ No ☐ Yes - Attach an explanation and documentation that outlines when and under what circumstances these remittances will be paid.

e. Has or will the Regional Center or any of its principals or agents receive fees, profits, surcharges, or other like remittances through EB-5 capital investment activities from this commercial enterprise, beyond the minimum capital investment threshold required of the EB-5 alien entrepreneurs?

☐ No ☒ Yes - Attach an explanation and documentation that outlines when and under what circumstances these remittances will be paid.

Part 4. Applicant Signature *Read the information on penalties in the instructions before completing this section. If someone helped you prepare this petition, he or she must compete* ***Part 5.***

I certify, under penalty of perjury under the laws of the United States of America, that this form and the evidence submitted with it are all true and correct. I authorize the release of any information from my records that U.S. Citizenship and Immigration Services needs to determine eligibility for the benefit being sought. I also certify that I have authority to act on behalf of the Regional Center.

Signature of Applicant	**Daytime Phone Number** *(Area/Country Codes)*	**Date** *(mm/dd/yyyy)*
	(718) 939-1060	07/02/2014
Printed Name of Applicant George Xu	**E-Mail Address** centurygroup88@yahoo.com	
Relationship to the Regional Center Entity (Managing Member, President, CEO, etc.) Owner of the Regional Center		

Part 5. Signature of Person Preparing This Form, If Other Than Above *(Sign Below)*

I declare that I prepared this application using information provided by someone with authority to act on behalf of the Regional Center, and the answers and information provided by the Regional Center.

Attorney or Representative: In the event of a Request for Evidence (RFE), may the USCIS contact you by Fax or E-mail? ☐ No ☒ Yes

REQUEST FOR REGIONAL CENTER DESIGNATION
ATTORNEY MEMORANDUM

The purpose of this memorandum is to assist the Service in navigating the annexed documents and exhibits that constitute the instant request for regional center designation with a hypothetical project.

Attached is a detailed exhibit list covering all the supporting documents; the exhibits have been tabbed for your reference.

I. Preliminary:

The petitioning regional center is named *Century New York City Regional Center*. The company was incorporated on March 25, 2014. Please see company formation documents, exhibited at **Exhibit 2.**

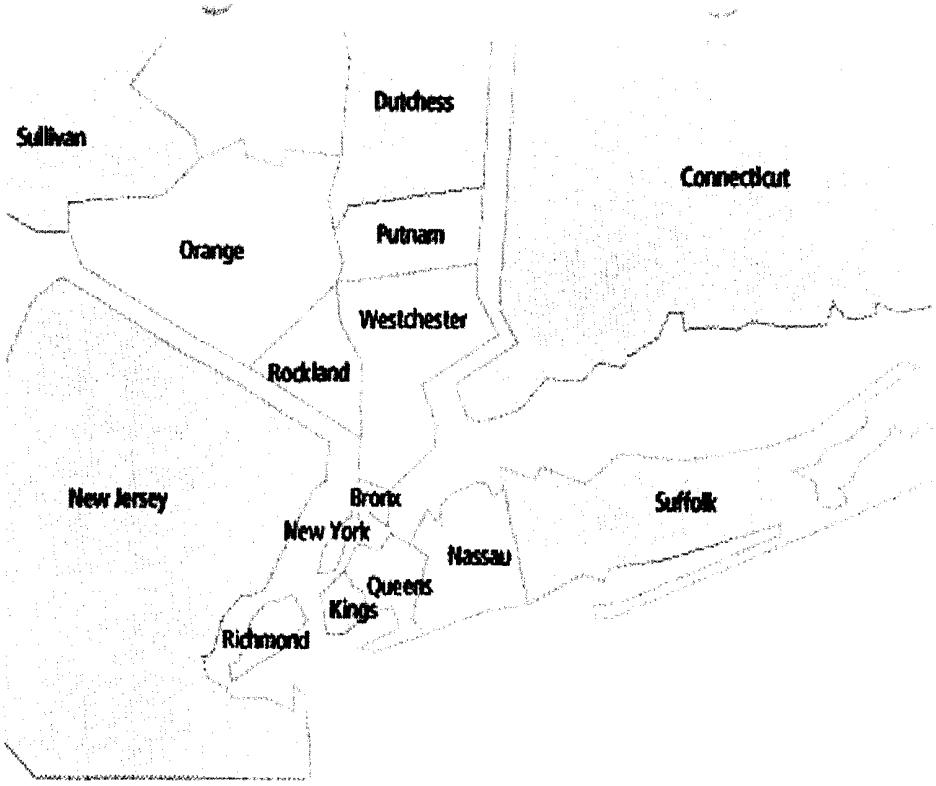
This request for RC designation is accompanied by a hypothetical project – a mix-use building which consists of 210-room hotel, 101 residential condominium units, retail spaces, community facilities and parking space hereinafter "Project". The RC petitioner seeks a preliminary determination of EB-5 compliance for the hypothetical project for use by the regional center, upon USCIS designation, for EB-5 capital investments.

II. Regional Center Geographical Region and TEA Designation

Attached at **Exhibit 2** is a business plan pertaining to the Regional Center. The business plan clearly describes how the regional center focuses on a geographical region of the United States.

The Project is located at 134-37 35th Avenue. Flushing, New York 11354. This is a designated targeted employment area (TEA), as per 8CFR 204.6 and thus qualified to accept an investment of $500,000.00. Please see attached **Exhibit 7**, TEA confirmation letters Issued by the Empire State Development.

The Project is located in Queens County of the State of New York. The RC requests the following seven (7) counties to be included in the RC's the geographic boundaries: Queens County, New York County, Bronx County, Richmond County, Westchester County, and Nassau County. Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment require is not required if investment opportunities arise outside the geographic area referenced.
Please see the map below for the geographic boundaries of the Regional Center.



III. Industry Sectors Requested

The petitioner is requesting the following industry sectors. Please see the North American Industry Classification System (NAICS) code listed below:

Farrington Realty, LLC developments will encompass the following industries:

North American Industry Classification System (NAICS) codes are listed as follows:

Construction Hard Costs

- Construction (Building & Site) – 2362/23622
- Wholesale Trade (FF&E) – 42/4232
- Real Estate – 53112/5313

Financing & Soft Costs

- Other government enterprises – 921
- Architectural, engineering and related services – 5413
- Insurance - 5241
- Accounting tax preparation, bookkeeping services – 5412
- Legal Services – 5411
- Monetary authorities and depository credit intermediation – 5222
- Other miscellaneous professional and technical services - 5419

IV. Brief Project Description

The Project, Century New York City Regional Center, LLC was established on March 31, 2014 and is based in Queens, New York. The Project will provide funding to construct and operate a mix-use building which consists of 210-room hotel, 101 residential condominium units, retail spaces, community facilities and parking space. The Project is (b)(4) looking to raise US[redacted] from [redacted] investors through EB5 investment.

Attached at **Exhibit 3** is a comprehensive business plan, compliant with *Matter of Ho*. The petitioner is seeking designation as a Regional Center with a hypothetical project. The business plan clearly describes how the project will promote economic growth through improved regional productivity, job creation, and increased domestic capital investment.

V. Promotion of Economic Growth

The New Commercial Enterprise (NCE) Farrington EB-5 Capital, LLC is seeking to raise (b)(4) US$[redacted] in investors' capital from [redacted] investors through the EB-5 Immigrant Investor Program for the expansion plan into the seven counties in the state of New York.

Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment require is not required if investment opportunities arise outside the geographic area referenced.

Under 8 CFR 204.6(g), the establishment of a new commercial enterprise may be used as the basis of a petition for classification as an alien entrepreneur by more than one investor, provided each petitioning investor has invested or is actively in the process of investing the required amount for the area in which the new commercial enterprise is principally doing business, and provided each individual investment results in the creation of at least ten (10) full-time positions for qualifying employees. The establishment of a new commercial enterprise may be used as the basis of a petition for classification as an alien entrepreneur even though there are several owners of the enterprise, including persons who are not seeking classification under Section 203(b)(5) of the Act and non-natural persons, both foreign and domestic, provided that the

source(s) of all capital invested is identified and all invested capital has been derived by lawful means.

(b)(4)

VI. Job Creation

Exhibited hereto at **Exhibit 5** is a *full* economic analysis by Dr. Gary Mongeon of Bleakly Advisory Group, LLC., dated July 09, 2014. According to the Economic Impact Report, the Flushing Hotel will create [redacted] jobs, including [redacted] jobs from direct construction employment and [redacted] jobs from indirect construction employment, [redacted] direct jobs from operation, [redacted] indirect jobs from operation.

(b)(4)

Century New York City Regional Center take note of recent USCIS guidance which states: that the full-time employment requirement excludes jobs that are intermittent, temporary, seasonal or transient in nature [1] seen as intermittent, temporary, seasonal and transient rather than permanent.

The Project has developed a five year strategic business plan to increase sales and market share. The method of obtaining the funding would be through EB-5 program. The alternative financing plan is to obtain a bridge loan. The financial banking criteria and federally defined underwriting guidelines will be applied in determining the rate of the mortgage loan.

The JCE plans to grow its business in multiple TEA markets in the State of New York. In addition, the company will augment its organic growth through a carefully designed program in the real estate development. The JCE will review each hotel project under the RC that is seeking funding focusing on job creation, development potential, financial stability and exit plan. The Four Points Hotel project meets the JCE's assessment standards after conducting full due diligence studies.

VII. Source of Capital

Amount and Source of the Regional Center's Operating Capital: Regional Center's Operational Plan (8 CFR 204.6(m) and 8 CFR 204.6):

[1] Spencer Enterprises v. U.S., 229 F.Supp.2d 1025 (E.D. Cal. 2001)

Please see attached **at Exhibit 2** Statement from the regional center owner Mr. George Xu relating to the Source of Funds. The promoters and members of Century New York City Regional Center have proven financial credentials, they have capitalized the Company. Century New York City Regional Center does not rely on the capital to be infused by the foreign investors to sustain the business activities of the Regional Center. None of the 'threshold foreign capital' will be used in the running of the Regional Center. The foreign capital to be brought by the foreign investor will be solely invested in the 'new commercial enterprise' only. The promoters/ members of Century New York City Regional Center have invested their capital in the regional center. They have the resources to invest as much capital into Century New York City Regional Center as needed to successfully meet all the financial obligations including marketing, advertising, traveling, administration among others. The members of Century New York City Regional Center have pledged not to use the threshold foreign investment to sustain the Regional Center.

EB-5 investors will only place their capital contribution at risk; they are not liable for the general affairs of the Project. EB-5 investors will not be required to make additional capital contributions to satisfy operating losses or capital shortfalls.

VIII. Investment Terms

Each EB-5 investor must execute the Private Placement Memorandum, the Operating Agreement, and the Subscription Agreement, all attached at **Exhibit 6.**

If the I-526 petition is denied or if the I-526 petition is approved but the EB-5 investor is denied at the consulate interview, Century New York City Regional Center will return the investor's capital contribution $500,000 and [redacted] administrative fee without interest. In addition, EB-5 Investors must pay an administrative fee of [redacted] which will be used to pay for a thorough review of the investor's personal questionnaire, background documents, commissions, finder's fees, to offset advertising costs and other administrative expenses. (b)(4)

The Subscription Agreement requires the investor to affirm that he or she is an accredited investor pursuant to Rule 506 of Regulation D under the Securities Act of

1933. By signing the Subscription Agreement, the EB-5 investor agrees to become a member pursuant to the particular LLC Operating Agreement and Subscription Agreement **Exhibit 6**. Immigrant investors may not file their I-526 petition until their cash investments are fully invested in the particular project. The investor deposits his investment capital directly to the account of the Project managing the particular project. EB-5 regulations and USCIS rulings require that the investment be at risk for at least five (5) years. However, the Project may, at its sole discretion, make distributions of profits and income during this time period.

IX. Regional Center's Operational Plan - Recruitment and Due Diligence:

Attached **at Exhibit 2** is the RC Business plan, containing the **proposed Administration & Due Diligence plan**, addressing how investors will be recruited and how the regional center will conduct its due diligence ensuring that all immigrant investor funds are lawfully obtained. The document shows that the Regional Center will require all investors to complete a confidential 'Investor Suitability Questionnaire' form, also attached **Exhibit 2** and if appropriate, satisfy the accredited investor rules, before being accepted into the EB-5 project. The document descriptively seeks information about the alien investor's personal information, education, employment history, financial history including bankruptcy, criminal or civil history, savings, loans, inheritance, gifts, business capital, net worth and other disclosures of admittance as mandated by USCIS.

Administrative Oversight:

Attached at **Exhibit 2** is a description of how Century New York City Regional Center will administer, oversee and manage the proposed regional center; identify qualified individual petitioners for specific investment opportunities; manage the flow of information to investors and their attorneys for the submission of I-526 and I-829 petitions filed through the regional center. Century New York City Regional Center takes the issue of due diligence screening of its alien investor's lawful source of capital very seriously.

The regional center will require the alien investor to prove that the funds come from a lawful source. The regional center will obtain documentary evidence of the source of

funds, such as any loan or mortgage agreement for which the petitioner is personally and primarily liable. Likewise, the regional center will scrutinize any foreign capital brought into the US through his business in his home country.

Additionally, the regional center will obtain evidence identifying any other source(s) of capital. The regional center will strictly follow the guidelines to obtain certified copies of any judgments or evidence of all pending governmental civil or criminal actions, governmental administrative proceedings, and any private civil actions (pending or otherwise) involving monetary judgments against the petitioner from any court in or outside the United States within the past fifteen years.

In Conclusion:

The documentary evidence submitted complies with the regulatory requirements for RC designation. Thank you for your consideration in this matter.

Respectfully Submitted:

Part I: Regional Center Business Plan

1.0 Executive Summary

Century New York City Regional Center, LLC ("CNYCRC") is a newly formed venture that is applying for approval as a Regional Center with a Hypothetical project with the UCSIS. The Regional Center, will serve as a lending entity that specializes in funding for development of various profitable projects within Targeted Employment Area (TEA). Loans disbursed by the Regional Center will be funded through EB-5 Investment and will result in sufficient direct and indirect employment to meet the requirements of the USCIS.

Century New York City Regional Center's initial project is Four Points Flushing Hotel ("Project") in New York City. The Project entails a new construction of a 210-roomed upscale, select-service hotel in Flushing Queens, one of the five boroughs of New York City. Four Points is a mid-scale hotel brand by Sheraton Hotels & Resorts offering a full-service hotel experience at a reasonable price.

Century New York City Regional Center's geographic boundaries include the following counties:

- Queens County
- Nassau County
- The Bronx County
- New York County
- Westchester County
- Kings County
- Richmond County

(b)(4)

The Regional Center's first project, Four Points Flushing Hotel, will be developed by Farrington Realty, LLC in Flushing, New York. The Flushing Hotel will create [redacted] jobs, including [redacted] jobs from direct construction employment and [redacted] jobs from indirect construction employment, [redacted] direct jobs from operation, [redacted] indirect jobs from operation.

(b)(4)

The Regional Center will actively market to foreign investors worldwide, with an emphasis on China, Southeast Asia, the Middle East, India and South America.

CNYCRC will be led by Mr. George Xu. He is the founder and the principle of the CNYCRC. Mr. Xu is also the founder and President of Century Development Group, a real estate development company. With over 16 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential,

hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

The Regional Center will raise a total o[(b)(4)] through the EB-5 program to fund Four Points Flushing Hotel, enabling the construction and operation of a Four Points hotel in Flushing New York City. A total [(b)(4)] of investors with an investment of $500,000 each plus costs and expenses will be solicited to finance these projects. Century New York City Regional Center will provide [(b)(4)] in financing to Four Points Flushing Hotel over a five (5) year period.

2.0 EB5 Program Details

2.1 Regional Center Contacts

Principals	George Xu georgexu88@yahoo.com 718.939.1060
Immigration Counsel	Mona Shah, Esq. Mona Shah & Associates 299 Broadway, Suite 1005 New York, N10007 212.233.7473 mona@mshahlaw.com

2.2 Qualification for Regional Center Designation

Century New York City Regional Center has been developed with the following USCIS requirements in mind:

- Investors will be required to make an investment of at least $500,000 (or $1 million if the enterprise is not located in a designated TEA), plus [redacted] n administrative costs and fees that are used to pay marketing agents. (b)(4)
- Each investor's contribution to the capital expansion funds of the project will generate at least 10 direct and indirect jobs in the area
- Investors must be able to demonstrate the lawful source of their investment funds
- The investment must be received from the person seeking the visa from clearly identifiable funds
- Borrowed investment funds qualify as long as they are not secured by the assets of the target U.S. investment

2.3 Project Selection Strategy

All current and potential projects are based on direct and indirect job creation in the Regional Center focus area. Each project is required to provide a detailed job creation forecast based on a business plan specifying its employment needs, which are carefully reviewed and evaluated by EB-5 Management and a Board of Advisors prior to recommending the project to investors.

Throughout the life of the project, these direct jobs will be monitored by EB-5 Management, using the Regional Center's own tracking procedures and supplemented by the project's employment records. Indirect job creation is based on these new, direct jobs.

2.4 Organizational Structure

Century New York City Regional Center will be structured as a Limited Liability Company of which the Principal will serve as managing members. The Regional Center will form a new LLC to act as the investment and lending entity for each project. Each sponsored enterprise will be formed as a separate entity, which the Regional Center will act as the managing member.

2.5 Active vs. Passive Investment

The EB-5 regulations require involvement in management or policy making. The regulations deem a Member in an LLC that conforms to the Uniform Limited Liability Act as sufficiently engaged in the EB-5 enterprise in the form of "policy formulation". In addition, the Regional Center's structure grants the members the right, as a group, to oust the general partner for "cause" and to suggest or recommend issues of overall policy.

2.6 Company Privacy Policy

It is the Company policy of Century New York City Regional Center, LLC to protect the privacy of its investors. Therefore, the Company will not disclose the names of investors to those outside of the Limited Liability Company, unless required to do so by law. However, each investor has the legal right of access to names, contact information, and percentage of ownership of the other investors within the Regional Center.

2.7 Investment Returns and Investor Exit

EB-5 investors will earn not earn any percentage of the interest income from lent through the Regional Center proportionate to their capital contribution. The primary exit strategy for this particular project LLC would be the repayment of the loan either through the operation and/or the refinancing of the project, with funds disbursed to the investing members in proportion to their capital contributions.

2.8 Application Process Steps

To become an immigrant investor in the EB-5 Regional Center Program, a potential investor will take the following steps:

Step 1:	Investors will be directed to Century New York City Regional Center, LLC through immigration consulting firms or through direct contact with Regional Center Principals at international conferences. Potential investors will be directed to Century New York City Regional Center, LLC and immigration counsel to discuss the required commitment of funds and required documentation to prove the investment and tracing of funds.
Step 2:	Once it has been determined that the Investor is an accredited investor, a full prospectus will be sent to interested investors, who can then investigate the financial viability of the investment. The investor will be required at this point to make the initial refundable deposit for a place on the investor list and to complete the initial application documents and escrow agreement. Deposits will be returned in the event of oversubscription or at the request of an investor pursuant to the Investor escrow agreement within 15 days of receipt.
Step 3:	The Regional Center will perform due diligence to verify sources of funds and investor qualification.
Step 4	The investor may retain independent legal counsel to act on his/her behalf. Documents to be filed with the USCIS and relevant documentation and application process will be filed by Century New York City Regional Center, LLC's counsel. The investor will then will receive copies of offering memorandum and LLC agreement.
Step 5:	The investor will pay balances of investment funds and administration fee [redacted] n fees and $500,000 Capital Investment).
(b)(4) Step 6:	The investor will sign all necessary application documents for USCIS

	submission.
Step 7:	Counsel will file I-526 Petition for Alien Entrepreneur with the USCIS. This petition requests USCIS to certify the applicant and the investment as eligible for EB-5 status.
Step 8:	Upon approval of the Petition, (a) if the investor is in the United States, he/she may apply for Adjustment of Status to Conditional Resident status. (b) If abroad, the investor must wait for notification from the National Visa center to prepare documents for the Immigrant Visa interview at the U.S. Consulate or Embassy in his/her home country. The purpose of the Adjustment of Status or Immigrant Visa interview is to ensure that the investor is not subject to grounds of exclusion, such as a criminal past, infectious diseases, or other grounds for exclusion by law.
Step 9:	Once issued conditional permanent resident status, the investor needs to wait 21 months to reconfirm that the full investment has been made and that 10 jobs were or are in the process of being created.
Step 10.	The investor will be able to file an application to remove the conditional resident status (Form I -829) between 21 to 24 months after Conditional Resident status is approved.

3.0 Initial Job Creating Enterprise: Summary

Century New York City Regional Center will begin by funding Four Points Flushing Hotel. Farrington Realty, LLC will be the job creating enterprise, conducting the development of the Four Points Flushing Hotel.

Farrington Realty, LLC proposed to construct a 210-roomed upscale, select-service hotel and condominium in Flushing Queens, one of the five boroughs of New York City. Four Points is a mid-scale hotel brand by Sheraton Hotels & Resorts offering a full-service hotel experience at a reasonable price. The construction and operation of the regional base of invested capital, the creation of new jobs, and the associated economic growth effects will be put into effect with the capital raised from immigrant investors through the EB-5 Program.

Under the leadership of Mr. George Xu, the company will develop proficiency in the every aspect of real estate development and will be dedicated to services in order to create a positive property management/owner/tenant relationship.

Based on the analysis of Empire State Development and New York State Department of Labor, the project is located at census tract 889.02 in Queens County, New York and qualified as a "Targeted Employment Area" (TEA).

4.0 Regional Center Industry and Geographic Scope

The Four Points Flushing Hotel under the Century New York City Regional Center, LLC will encompass the following industries:

Construction Hard Costs

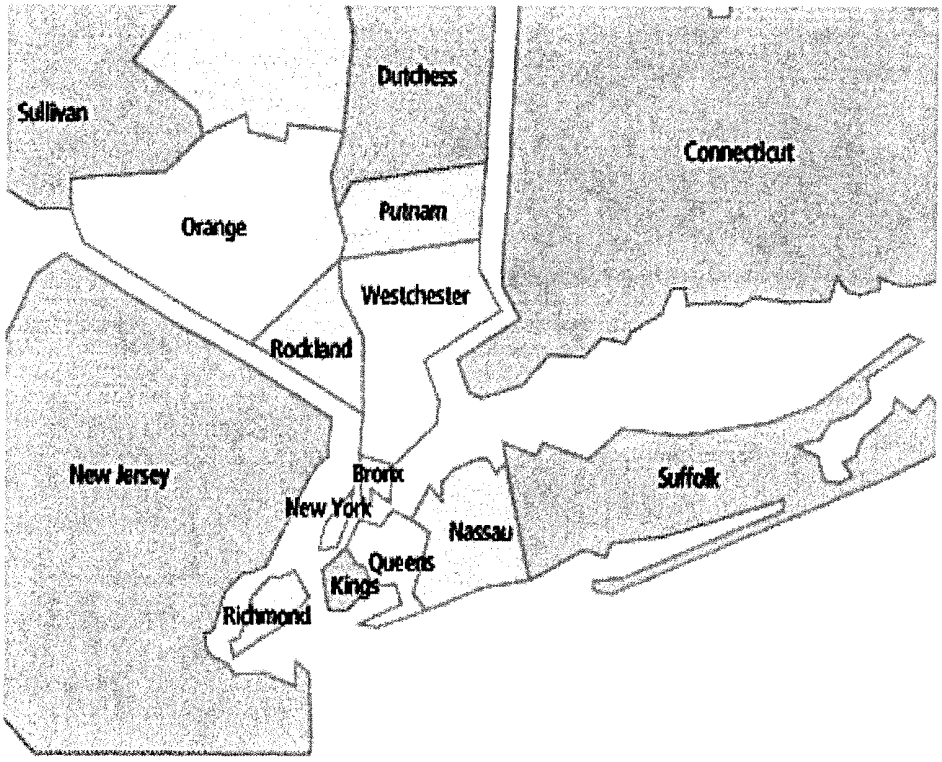
- Construction (Building & Site) – 2362/23622
- Wholesale Trade (FF&E) – 42/4232
- Real Estate – 53112/5313

Financing & Soft Costs

- Other government enterprises – 921
- Architectural, engineering and related services – 5413
- Insurance - 5241
- Accounting tax preparation, bookkeeping services – 5412
- Legal Services – 5411
- Monetary authorities and depository credit intermediation – 5222
- Other miscellaneous professional and technical services - 5419

Please note that the NAICS codes start at 2 digits. Industries with 4-digit codes are subsets of the larger 2-digit industry sector, 6 digit codes are subsets of the 4-digit codes. The Economic Impact Analysis used RIMS II multipliers following the same system. So there are fewer RIMS codes than the NAICS system, and the descriptors may be slightly different but generally matching the NAICIS titles. Under most circumstances, the first 4 digits of the RIMS II and NAICS industries are the same.

The Regional Center will serve the following counties in the State of New York:



The following table reflects the population of these counties, as reported by the U.S. Census Bureau.[1]

Borough & County	Population	
Manhattan	2000	1,537,195
	Growth	5.20%
	2012	1,617,090
The Bronx	2000	1,332,650
	Growth	5.69%
	2012	1,408,473
Brooklyn	2000	2,465,326
	Growth	4.07%
	2012	2,565,635
Queens	2000	2,229,379
	Growth	1.95%
	2012	2,272,771
Staten Island	2000	443,728

[1] U.S. Census Bureau. Obtained at: http://www.census.gov/

	Growth	6.08%
	2012	470,728
Nassau County	2000	1,334,544
	Growth	0.74%
	2011	1,344,436

5.0 Regional Center Marketing Strategy

Under 8 CFR 204.6(m)(3)(iii), Century New York City Regional Center understands that USCIS interprets the words "promotional efforts" to mean an advertising or marketing program planned by the sponsors of the Regional Center that is designated to attract immigrant investors to the Regional Center.

This Regional Center proposal contains a full description of the past, current and future promotional activities for the Regional Center. To date, there are no current activities and there have been no previous activities. Below is a budget for this activity as well as the statement of Tim Whitfield as to the source of those funds used to accomplish this necessary task.

(b)(4)

Total marketing costs are estimated to be about [redacted] per year. (Please see below):

ITEM	PLAN	COST
Website	Construction and maintenance—includes video overview for home page and ability to translate into various languages	
Seminars	5 Seminars abroad	
Trade Shows	Attendance and booth at domestic and international trade shows	
Press Conference	Kick- off event with ethnic media	
Outreach to Referral community	Outreach to network of professionals to assist in referring investors.	
TOTAL		

(b)(4)

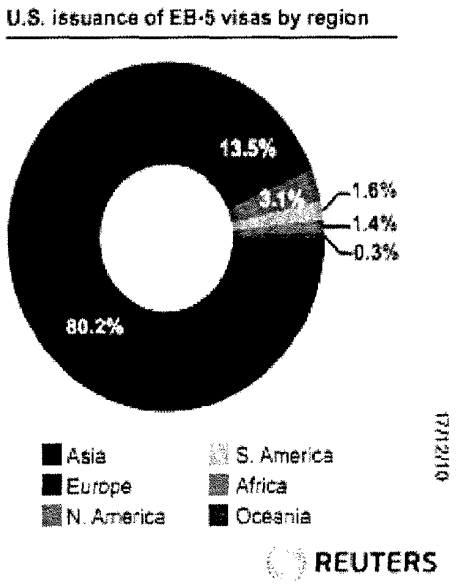
The Regional Center's role is to market each potential project to foreign investors and secure that investor's participation in the program over other potential investment possibilities, such as investment in other countries, investing in other entities in the US outside of the EB-5 structure,

and investing in other regional centers in the U.S. market. Century New York City Regional Center will develop a marketing message that addresses each of these potential investment opportunities, and the advantages the Regional Center has over each (see *5.2 Investment Advantages*). To reach potential investors, the Regional Center will deploy a dual marketing strategy that includes working with immigration consultants and registered brokers as well as creating a widespread campaign that includes attendance at conference, web-exposure, and other traditional advertising channels (see *5.3 Marketing Strategy*).

5.1 Market Focus

Century New York City Regional Center will target foreign investors in China and Southeast Asia, the Middle East, India, South America, and Europe. In the past several years, the popularity of the program with investors -- particularly investors from mainland China --has grown exponentially. In 2011, Chinese investors received the highest number of EB-5 visas. Two thousand four hundred and eight Chinese citizens received EB-5 visas in 2011.[2] By the end of September, 2012, mainland China accounted for 80% of EB-5 visa issued in the first three quarters of Fiscal Year 2012.[3] Investors from China, South Korea, Taiwan, Venezuela and Iran, these top five countries have accounted for 90% of the visas issued.

In the past several years, approximately 13.5% of investors come from Europe.[4] The following chart illustrates the number of EB-5 visas issued by region and the updated data from IIUSA by the end of September, 2012.



[2] Report of the Visa Office 2011published by U.S. Department of State. Source from IIUSA: http://iiusablog.org/wp-content/uploads/2012/10/IIUSA-FY2012-EB5-VISA-STATS-Source-DOS.pdf

[3] Report of the Visa Office 2011published by U.S. Department of State. Source from IIUSA: http://iiusablog.org/wp-content/uploads/2012/10/IIUSA-FY2012-EB5-VISA-STATS-Source-DOS.pdf

[4] "Overselling the American Dream." Thomson Reuters. December 2010. Obtained at: http://graphics.thomsonreuters.com/F/12/EB-5.pdf

FY 2012*	C5	T5	I5	R5	Total
China - Mainland born	90	108	5,923	3	6,124
South Korea	9	13	425	0	447
China - Taiwan born	3	4	141	0	148
Venezuela	0	7	102	0	109
Iran	2	2	77	0	81
Total All Countries	**159**	**164**	**7,312**	**6**	**7,641**
*October - September					

According to the initial results, in 2012 only the EB-5 industry supported 42,000+ American jobs, added $3.39+ billion in GDP and generated $712+ million in federal/state/local tax revenue (up from 33,000+ jobs, $2.6 billion in GDP, and $564+ million over the previous TWO years combined).

The statistics for I-526, I-829 and I-924 petitions are as follows:

Form	Receipts	Approvals	Denials	Approval Rate	Growth in Receipts from 2012
I-526	6,517	3,677	781	82.5%	7.9%
I-829	1,217	844	44	95.0%	70.9%
I-924	436	220	29	88.4%	81.7%

There are more than 1.3 million individuals residing in China with a combined wealth of $4.3 billion USD.[5] While a small segment of the country's overall population, the number of Chinese high-net-worth individuals surpasses that of France and the United Kingdom.[6] Impressively, the number of high net-worth individuals in the Asia-Pacific region wealth gained 12% in 2010 to $10.8 trillion.[7] Additionally, more than 13 million households make up China's upper middle class, who have incomes of between 100,000 and 200,000 RMB ($15,000 to $30,000).

After the United States, Japan and Germany retain the highest number of high net-worth individuals overall. Overall, Europe has the second-largest number of high net-worth individuals, whose combined wealth reaches $10.2 trillion. The following chart reflects the number of high net-worth individual by country.[8]

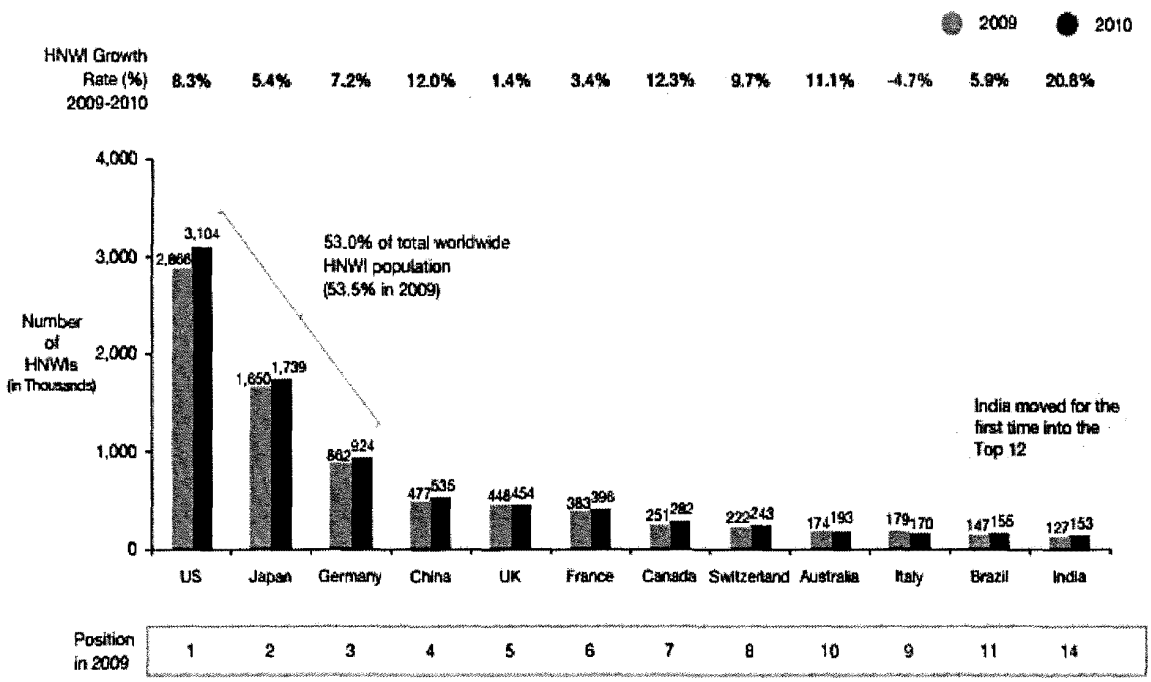
(in Thousands)



5.2 Investment Advantages

Century New York City Regional Center's marketing messages will be developed to address each of the key points listed below:

- The U.S. market has a number of benefits to the investor; marketing materials will be developed to highlight why the United States is a good choice, even (or especially) during a market downturn.
- The advantages of the EB-5 platform are clear; marketing materials will ensure that the investor is aware of these benefits over the typical business investor visas available on an independent basis.
- Informational materials will designed to focus on the benefits of this particular Regional Center (over other potential regional centers) and its focus on investing in projects that address the demands of high growth markets

Each of these points is explored in further detail below:

US Market and Industry Advantages

For many immigrants, pursuing the "American Dream" inspires people to believe that hard work leads to prosperity and social mobility in the United States. Many of these people grew up under the influence of US popular culture and, as such, aspire to the lifestyle. It is still considered to be the

land of opportunity with an abundance of land and resources, where there is enough land and a vibrant economy to accommodate all its residents. An extremely important factor for immigrants is the ability for their children to obtain a good education through the school systems and, in particular, to study at its well-known universities. The potential to work at market leading companies for higher salaries is also a significant factor.

EB-5 Advantages

There are currently 218 approved Regional Centers.[9] As illustrated on the following chart, a total of 3,706 EB-5 Visas were issued were issued in 2011.[10]

EB-5 Visa Statistics

	Total EB-5 Visas Issued
FY11 Q1 – Q3	3,706*
FY10	1,885
FY09	4,218
FY08	1,360
FY07	806
FY06	744

Between 2007 and 2011, the number of EB-5 visas issued nearly tripled. In this same time period, the number of regional centers operating in the United States grew from 11 to 218.

A potential immigrant investor seeking an EB-5 investor visa has certain advantages by applying through a regional center such as Century New York City Regional Center.

- The Regional Center program pools multiple investors together in one project, which means the project itself will be larger and financially more stable than one individual investing in a project alone.
- During the lifetime of the investment, the Regional Center remains in communication with each immigrant investor. All investors in the Regional Center receive periodic reports regarding the status of the investment, job creation data based on reports from Regional Center, the economy, and other relevant project information.
- One of the most important advantages for immigrant investors applying for an EB-5 investor visa through a regional center is that they may satisfy the program's job creation requirements by counting not only direct jobs created as a result of their investments, but

also indirect jobs created in related industries as a result of the investment. Regional centers are able to calculate indirect job creation through the use of approved input-output employment modeling systems.

Century New York City Regional Center, LLC Advantages

Century New York City Regional Center, LLC offers the following attractive qualities for investors, specifically with regard to its initial project, the Four Points Flushing Hotel project and advantages include:

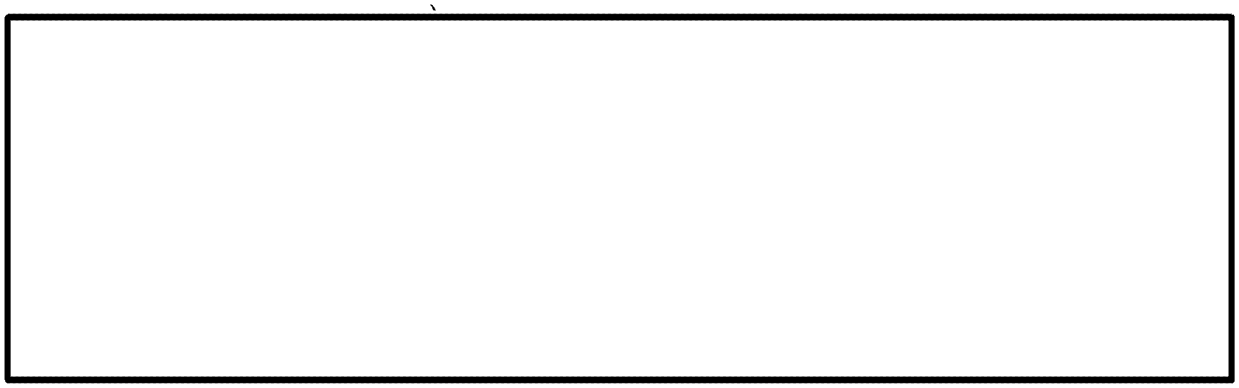
- Close proximity to Manhattan, New York
- Proximity to Flushing Main Street, major commercial and residential areas with high concentrations of Chinese and Korean population
- Proximity to two major airports in New York City
- Four Points by Sheraton, a mid-scale hotel brand offering a full-service hotel experience at a sensible price
- Century Construction Group is an established developer is Flushing, NY
- 210-rooms restaurant and lounge with an indoor pool, a fitness center, a banquet hall, Large meeting space
- 17,000-square-foot community facility space
- Lobby workstation, guest laundry facilities, and a gift shop

5.3 Marketing Strategy

Once the regional center application is approved, CNYCRC will start its efforts to attract qualifying investors. Since investments in Century New York City Regional Center will likely constitute securities; CNYCRC will first analyze any proposed investor or advisor outreach to determine required compliance measures under U.S. Securities and Exchange Commission ("SEC") laws and regulations, as well as applicable foreign or state securities laws.

(b)(4)

(b)(4)



6.0 Regional Center's Operational Plan- Recruitment and Due Diligence:

As per 8 CFR 204.6(m) and 8 CFR 204.6, CNYCRC will identify, assess and evaluate proposed investor projects and activities and enterprises.

6.1 Amount and Source of the Regional Center's Operating Capital:

Attached is a detailed statement from George Xu relating to the amount and the source of the capital that has been committed to the Regional Center. It is understood that USCIS has interpreted the words "amount and source of capital that has been committed to the Regional Center" to mean the capital sufficient to sustain the Regional Center distinct from immigrant investors' required capital investment in a new commercial enterprise with the Regional Center.

The detailed statement by George Xu on behalf of Century New York City Regional Center, LLC meets the regulatory requirement relating to the amount and source of the capital committed to the Regional Center as it includes:

- The exact amount of the funds that have been dedicated to the Regional Center to accomplish the goals of the Immigrant Investor Pilot Program;
- The source of funds; and
- Whether the amount is sufficient to sustain the Regional Center.

None of the capital sustaining the Regional Center will come from the immigrant investors' required threshold capital investment (as distinct from the new commercial enterprises' revenues). It is understood that this separation of funds is necessary to enable the alien entrepreneur to qualify for the EB-5 immigrant investor classification.

Century New York City Regional Center, LLC will offer quarterly reports and investor relations, which will be completed by the Principal. George Xu will be responsible for managing marketing relationships with the Regional Center's chosen immigration consulting firms as well as attending conferences on behalf of the Regional Center directly. Certain business processes, such as accounting and website maintenance will be outsourced to other service providers, who will be selected once Century New York City Regional Center receives Regional Center approval. The Regional Center will contract with companies like either World Check (A Thomson Reuters Company), Accuity, or another similar company, to screen potential investors, verify sources of

funds, and ensure that funds are lawfully obtained. Details regarding the Regional Center's due diligence practices to ensure investors meet specified requirements as part of the EB5 program are detailed in the sections that follow.

6.2 Regional Center's Operation Plan – Recruitment and Due Diligence

Century New York City RC understands that, for any individual alien investor who will be solicited by a Regional Center to invest in requisite capital into a Regional Center commercial activity, it will be incumbent on the Regional Center to engage in a due diligence process to establish that all sources of capital can be fully explained and clearly shown to have been lawfully obtained.

Potential investors must meet the following criteria to be prequalified as accredited investors:

- Must have a valid passport
- Can be any nationality (except for U.S.)
- Have a net worth greater than $1Million
- Has no criminal record
- Availability of funds within 60 days
- Can identify legal source of funds
- Has maintain income greater than $200,000 in the last two years (or $300,000 for a couple)

The Regional Center has developed an "Investor Suitability Questionnaire" (see *Appendix*) that will be used to pre-screen prospective investors. The Regional Center will comply with the latest laws and regulations and will take the reasonable steps to verify the "accredited investor" status.

6.3 Investor Information Requirements

Potential investors will be required to provide the following (applicable) documents, as required by U.S. Immigration agencies:

- Complete passport for primary applicant and family members
- U.S. visa stamps and I-94 cards for all applicants
- Copy of marriage certificate
- Copies of birth certificates
- Resume/curriculum vitae
- Proof of lawful source of funds including but not limited to:
  - Bank/account statements
  - Employer letters
  - Foreign business registration records

- Property deeds
- Closing documents
- Corporate and/or personal income tax records for the last five years

- Proof of net worth
- Wire transfer record and bank account statement showing transfer of funds to escrow account
- Business registration and incorporation documents for all entities owned

6.4 Sources of Funds

Under USCIS regulations, the investor must demonstrate that their assets were gained in a lawful manner. This requires the investor to prove their investment funds were obtained through lawful business, salary, investments, property sales, inheritance, gift, loan, or other lawful means.

Investors will be required to complete a series of forms providing extensive detail and evidence of verifiable and legal sources of funds for the EB-5 investment. Types of investment sources include:

- Bank Accounts (including Financial Institution Name, Account Number, and Balance).
- Earnings from Business Operations.
- Net Proceeds from the Sale of a Business.
- Net Proceeds from the Sale of Real Estate. Net proceeds from the Sale of Investments or Other Assets.
- Employment Earnings.
- Income or other Tax Refunds.
- Loans.
- Gifts. For gifts, in addition to providing the giver's information and type of entity, the investor must also provide the giver's source of the funds, again to establish the legitimacy of the gift's original source.
- Inheritance. For proceeds from inheritances, the investor must provide full information on the decedent, and indicate any contingencies associated with the inheritance, netting down to the amount to be used to fund the EB-5 investment. Again, the primary source of the decedent's funds must be identified, in order to establish the legitimacy of the original source of funds.
- Retirement Funds. If using retirement funds for the EB-5 investment, the investor is required to provide full information about the company/entity paying the retirement, including date hired, date terminated, and date retirement benefits began, including details of lump sum and periodic payments, and net amount used to fund the EB-5 investment.
- Support from a Parent/Relative/Guardian or Other Person. In addition to full information regarding the person providing the support, the dates/frequency and amounts of support payments, and term of the support agreement, the investor must provide information regarding any repayment obligation related to these support payments.

- Designee's Responsibilities Inherent in Conduct of Regional Center- Administrative Oversight: The regulations at 8 CFR 204.6(m)(6), require that an approved Regional Center in order to maintain the validity of its approval designation, must continue to meet the statutory requirements of the Immigrant Investor Pilot Program by serving the purpose of promoting economic growth, including increased export sales (where applicable), improved regional productivity, job creation, and increased domestic capital investment.

CNYCRC will monitor all investment activities under the sponsorship of this Regional Center; CNYCRC will maintain records, data and information on a quarterly basis in order to report to USCIS upon request the following year to date information for each Federal Fiscal Year.

Century New York City Regional Center, LLC's role will be to monitor all investment activities under the sponsorship of the program, and to maintain records, data and information on a quarterly basis in order to report to USCIS upon request year-to-date for each Federal Fiscal Year, commencing with the current year as follows:

1. The principal official and point of contact of the Regional Center responsible for the normal operation, management and administration of the regional center.
2. How the Regional Center is administering its regional center and is actively engaged in supporting a due diligence screening of its alien investors' lawful source of capital and the alien investor's ability to fully invest the requisite amount of capital.
3. How the Regional Center is actively engaged in the evaluation, oversight and follow-up on any proposed commercial activities that will be utilized by alien investors in order to create direct and/or indirect jobs through qualifying EB-5 capital investments into commercial enterprises within the regional center.

6.5 Information Tracking

The Regional Center will maintain a tracking and reporting system in order to provide the following information on a quarterly basis to USCIS:

1. The name, date of birth, and alien registration number of each alien investor who makes an investment and files an EB-5 I-526 petition with USCIS, specifying whether the petition was approved, denied, or withdrawn by the petitioner.
2. The country of nationality of each alien investor who makes an investment and files an EB-5 petition with USCIS.
3. The US city and state of residence of each alien investor who makes an investment and files an EB-5 I-526 petition with USCIS.
4. The categories of business activity within the geographic boundaries of the regional center that have received the alien investors' capital, and in what amount.

5. The names and locations of each of the job creating commercial enterprises located within the geographical boundaries if the regional center has received alien investor capital.
6. The amounts of alien investor capital and the amounts of other domestic capital that has been invested together in each job creating commercial enterprise specified in item 8 above, distinguishing the separate totals for each.
7. The total aggregate number of approved EB-5 alien investor I-526 petitions per Federal Fiscal Year to date made through the regional center.
8. The total aggregate number of approved EB-5 alien investor I-829 petitions per Federal Fiscal Year to date through the regional center.
9. The total aggregate of EB-5 alien capital invested through the regional center for each Federal Fiscal Year to date since the approval and designation.
10. The combined total aggregate of "new" direct and/or indirect jobs created by EB-5 investors through the regional center for each Federal Fiscal Year to date since the approval and designation.
11. If applicable, the total aggregate of "preserved" jobs by EB-5 alien investors into troubled businesses through the regional center for each Federal Fiscal Year to date since the approval and designation.
12. If for any given Federal Fiscal Year the regional center does not have investors to report, then provide an explanation for the inactivity along with a specific plan which details timelines and steps to actively promote the regional center program, and recruit legitimate and viable alien investors.
13. Notification to USIS within 30 days of the occurrence any material change in the structure, operation, administration, focus, or activities relating to the regional center's basis for its most recent designation and/or reaffirmation by USCIS.
14. The total aggregate of EB-5 alien capital invested through the regional center for each Federal Fiscal Year.

6.6 Management Team

George Xu

George Xu is the founder and the principle of the CNYCRC. Mr. Xu is also the founder and President of Century Development Group, a real estate development company. With over 16 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential, hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

Qili Li

Qili Li, MD, FACOG, Principle of CNYCRC. In private practice for more than 14 years specializing in the field of Obstetrics and Gynecology in downtown Flushing, Queens County, New York City. Dr. Li attended the Sophie Davis School of Biomedical Education. She graduated with Magna Cum Laude honor. She received her Medical Doctor degree from New York Medical College. She completed her internship and residency training in Obstetrics/Gynecology at North Shore University Hospital at Manhasset, New York. She is board certified in the specialty of Obstetrics/Gynecology. She is a fellow of the American College of Obstetrics/Gyneoclogy (ACOG). In recent years, like many of her colleagues, Dr. Li has expanded her interest/investment in real estate. She is currently involved in several real estate development projects ranging from high end condominium to hotel construction.

James Ho

James Ho, Vice President of CNYCRC, graduated from Polytechnic University majoring in Electrical Engineering and Computer Science. Mr. Ho has seven years of experience in computer programming and twelve years in securities trading and security related business. Currently he is involved in real estate development of three projects in New York City area. Mr. Ho's role in the CNYCRC is to provide oversight of operations, maintain cohesion between a project's developer, general contractor, law and accounting firms, and to ensure overall compliance.

Robert Chen

Robert Chen works for CNYCRC as the Vice President, who oversees the overall operations of the Regional Center. He's also in charge of due diligence and evaluating potential projects and determines business feasibilities. Prior to join CNYCRC, Mr. Chen has over 10 years' experience in senior manager position with FedEx. He has owned, managed, and operated companies in computer wholesale and repair business. Mr. Chen received his Bachelor of Science degree in Environmental Health Science from City University of New York.

David Pan

David Pan, Vice President of CNYCRC, has over 15 years of experience in fixed-income securities trading and risk management, having worked in various roles at Credit Suisse, Citigroup, Deutsche Bank and the hedge fund industry. Formerly a Director at Credit Suisse in the Strategic Risk Management division covering Residential Mortgage Backed Security (RMBS) business where he was instrumental in developing models and methodologies in assessing the firm's risk exposure to the mortgage security market. Prior to his Wall Street career, Mr. Pan spent 10 years as a senior software engineer responsible for the development of the state-of-the-art fixed-income security trading and analytics software systems. He graduated with a Bachelor's degree in Computer Science from Queens College, City University of New York.

Anthea Quan

Anthea Quan serves as the director of accounting controller for CNYCRC. She is responsible for the accounting, financial reporting, and audit functions. Also performs management of operating cash flow, financial analysis, obtaining financial for development projects and investor distribution. She is passionate about accounting and has experience working with a variety of small business. Ms. Quan graduated from Yanbian University in China with a bachelor of mathematics. She is fluent in Chinese, English and Korean, resides in New York with her husband.

Tracy Law

Tracy Law is the director of project management of CNYCRC. Ms. Law is responsible for a full spectrum on operations to ensure that projects are done on time and on budget. Her constant communication with contractors and architects provides a strong network of relationships in the field. She is responsible for supervising and coordinating OS&E and FF&E. She is integral in bringing new hotels to opening. Ms. Law graduated with a Bachelor of Science degree in Accounting from Queens College, City College of New York.

Lynn Wei

Lynn Wei is the CNYCRC's director of marketing and business development. Ms. Wei is responsible for a full spectrum of business development initiatives including creating and overseeing international marketing strategies for all CNYCRC project offerings. She is also involved in managing client relations. Ms. Wei is also a senior business development associate at the Century Development Group. In this capacity, she focused on creating Request for Proposals and general marketing materials, as well as developing a customer analytical database, and implementing strategic marketing and communication initiatives. Ms. Wei graduated with a Master of Science degree in Economics from Brooklyn College, City University of New York, and a Bachelor of Administrative Degree in Marketing from Shanghai Finance University.

7.0 Legal Risk and Planning

7.1 LLC Creation

Century New York City Regional Center has been formed as a Limited Liability Company. A limited liability company (LLC) is a relatively new form of business organization that offers the best features of a corporation and a partnership. It provides the owners protection from personal liability for business debts in the same way a corporation does, but the IRS treats an LLC as a partnership for tax purposes. Income is taxed only once, as in a partnership, and an LLC has great flexibility in how it passes income and deductions to its members.

7.2 Document Review and Verification Policy

The Regional Center will hire an outside firm to screen potential investors and perform due diligence regarding sources of funds. The Regional Center is currently considering two firms, World Check (a Thomson Reuters Company) and Accuity.

7.3 Process Documentation and Legal Agreements

Forms and legal agreements can be found as an appendix to this document.

8.0 Regional Center Marketing and Operational Budget

Century New York City Regional Center has sufficient startup capital to cover operational expenses. As stated in the attached detailed statement from George Xu, $135,000 is budgeted for the administration and marketing of the Regional Center over 5 years, per the table on page 10 of this plan, is budgeted to market projects to immigrant investors.

To Whom It May Concern:

Re: Statement of Regional Center Funding Commitment

Century New York City Regional Center is the incorporated company in the state of New York. The source of capital contributed to the Century New York City Regional Center is from the managing member's equity contribution. The Regional Center has not/ does not earn fees from immigrant investors' investment capital. The company's operating capital derives from the managing members' equity contribution. (b)(4)

The amount of capital I will contribute to the Regional Center is estimated to be [redacted] This is considered sufficient capital to sustain the Regional Center operation and marketing expenses and is distinct from the immigrant investors' required capital investment in a new commercial enterprise. None of the capital sustaining the Regional Center comes from immigrant investors' required threshold capital investment as distinct from the new commercial enterprises' revenues.

Sincerely,

George Xu

ADMINISTRATION & DUE DILLIGENCE OF:

THE Century New York City Regional Center, LLC

Below is an overview of Century New York City Regional Center LLC's (the "Regional Center") plans to administer, oversee, and manage all its investment activities, primarily to engage and support due diligence screening of its alien investor's lawful source of capital and the ability of the alien investor to fully invest the requisite amount of capital for EB5 purposes.

Lawful Source of Funds:

The Regional Center will require the alien investor to prove that the funds come from a lawful source. To show that the petitioner has invested, or is actively in the process of investing, capital obtained through lawful means, the Regional center will obtain documentary evidence of any loan or mortgage agreement, promissory note, security agreement, or other evidence of borrowing which is secured by assets of the petitioner, other than those of the new commercial enterprise, and for which the petitioner is personally and primarily liable.

If the alien investor is bringing the foreign capital through his business in home country, the Regional Center will seek:

i) Foreign business registration records;

(ii) Corporate, partnership (or any other entity in any form which has filed in any country or subdivision thereof any return described in this subpart), and personal tax returns including income, franchise, property (whether real, personal, or intangible), or any other tax returns of any kind filed within five years, with any taxing jurisdiction in or outside the United States by or on behalf of the petitioner;

Additionally, the Regional Center will obtain evidence identifying any other source(s) of capital. The Regional center will strictly follow the guidelines to obtain certified copies of any judgments or evidence of all pending governmental civil or criminal actions, governmental administrative proceedings, and any private civil actions (pending or otherwise) involving monetary judgments against the petitioner from any court in or outside the United States within the past fifteen years.

In its endeavor to conduct back ground checks and due-diligence on the source of funds of the alien investor:

(a) - The Regional Center has prepared a confidential '*Suitability Evaluation*' form, attached with this document. Every prospective investor will be required to submit the suitability form to the Regional Center before being accepted in the EB5 project. The document descriptively seeks information about the alien investor's personal information, education, employment history, financial history including bankruptcy, criminal or civil history, savings, loans, inheritance, gifts, business capital, net worth and other disclosures of admittance as mandated by USCIS. The Regional Center will ensure total compliance of its policies by obtaining evidentiary documents translated in English, if required, and notarized by the authorities in alien's home country.

(b) - The Regional Center may have its representatives in foreign countries for marketing the EB5 projects. These representatives will randomly verify the credentials of the alien investor by visiting the alien's employer or bank. These representatives and/or the staff at the Regional Center will establish the chain of legal source of funds in every single event.

(c) - Before accepting potential investors them into the Regional Center. The Regional Center will retain an internationally recognized investigative firm such as Kroll (http://www.kroll.com/services.ifai/) or Abraxas (http://www.abraxascorp.com/) to

provide a background check on all potential investors. The investigative firm will provide an assessment of the potential investor. This additional diligence will add to the success of the Regional Center. The following illustrate some of the actions that the investigative firm may take in providing their assessment, depending on what they advise:

- They examine the documents provided by applicants in an effort to identify any obvious or suspected forgeries, conflicting or dubious information.
- They may check and verify applicant identity, ID data and passport data with local police and registration authorities. This may include verifying kin relationships and working with local lawyers accredited law firms to obtain information.
- They may conduct searches of local corporate registries and contact regulatory bodies to check and verify business licenses and status of companies claimed by applicant. Copies of record discovered may be obtained.
- They may make discreet inquiries with local police, judicial and regulatory bodies concerning any criminal record of applicants.
- They may check ownership records of main assets claimed, such as real estate records.
- They may conduct telephone inquiries with named employers to check claimed of employment record.
- They may make inquiries with schools to check educational record and validity of diplomas.
- They may make inquiries with references, including bankers, legal counsel, accountants, auditors, where these are provided.

Such a background check, consisting of some or all of the foregoing measures or other prudent investigative techniques, will provide reasonable assurance that the investors are reputable and that they have a legitimate source of funds for their investment.

CENTURY NEW YORK CITY RC WILL MAINTAIN RECORDS FOR THE FOLLOWING:

1. The name, date of birth, and alien registration number of each alien investor who makes an investment and files an EB-5 Petition with USCIS, specifying whether the petition was approved, denied, or withdrawn by the petitioner. The Regional Center will also provide the country of nationality of each alien investor as well as the U.S. city and state of residence of each alien investor who makes an investment and files an EB-5 I-526 petition with USCIS. The Regional Center will require alien investors to provide copies of passports, employment and business documents, family certificates (birth / marriage), police certificates, and photographs.

2. How the Regional Center is actively engaged in the evaluation, oversight, and follow-up on any proposed commercial activities that will be utilized by alien investors in order to create direct and/or indirect jobs through qualifying EB-5 capital investments into commercial enterprises with the Regional Center;

3. The categories of business activity with the geographic boundaries of the Regional Center that have received the alien investors' capital and in what amount;

4. The names and locations of each job creating commercial enterprise located within the geographic boundaries of the Regional Center that has received alien investor capital;

5. The amounts of alien investor capital and the amounts of other domestic capital that has been invested together in each job creating commercial enterprise specified above, distinguishing the separate totals of each;

6. The total aggregate number of approved EB-5 alien investor I-526 petitions per federal fiscal year to date made through the Regional Center;

7. The total aggregate number of approved EB-5 alien investor I-829 petitions per federal fiscal year to date through the Regional Center;

8. The total aggregate of EB-5 alien capital invested through the Regional Center for each federal fiscal year to date since approval and designation of the Regional Center;

9. The combined total aggregate of "new" direct and/or indirect jobs created by EB-5 investors through the Regional Center for each federal fiscal year to date since approval and designation of the Regional Center;

10. If applicable, the total aggregate of "preserved" jobs by EB-5 alien investors into troubled businesses through the Regional Center for each federal fiscal year to date since approval and designation of the Regional Center;

11. If, for any given federal fiscal year, the Regional Center does not have investors to report, the Regional Center will then provide an explanation for the inactivity along with a specific plan which details timelines and steps to actively promote the Regional Center program, and recruit legitimate and viable alien investors;

12. The Regional Center will notify USCIS within 30 days of the occurrence of any material change in the structure, operation, administration, focus, or activities relating to the Regional Center's basis for its most recent designation and/or reaffirmation by USCIS;

13. The total aggregate of EB-5 alien capital invested through your regional center for each federal fiscal year.

Century New York City Regional Center, LLC
(REGIONAL CENTER)
MARKETING PLAN AND BUDGET FOR YEAR 1

Century New York City Regional Center, LLC ("RC") applies for regional center designation as a hypothetical project before the USCIS. The RC will start its efforts to attract qualifying investors once the designation is granted. Since investments in RC will likely constitute securities; the RC will first analyze any proposed investor or advisor outreach to determine required compliance measures under U.S. Securities and Exchange Commission (SEC) laws and regulations, as well as applicable foreign or state securities laws.

Where appropriate and legal, RC or its representatives will attend immigration trade shows in foreign countries and the United States, provide seminars or write articles to educate immigration lawyers and others about RC, and engage the services of qualified individuals to assist in outreach to investors and advisors.

RC will create an English-language website; the site will also be translated into various other languages.

Since the business of RC may involve the sale of securities, and since RC will sell securities in reliance upon the private placement exemption of federal securities laws and comparable exemptions contained in state and foreign laws, portions of the website will be password-protected and available only to potential purchasers or their advisors who meet certain legal qualifications. The public part of the website will focus on general information such as RC general investment activities and strategy and the background of the RC principals. The password-protected portions of the RC web site will likely contain a link to the current RC private placement memorandum, as well as additional sales materials and a subscription agreement. Total marketing costs are estimated to be about $135,000 per year. (Please see below):

ITEM	PLAN	COST (b)(4)
Website	Construction and maintenance—includes video overview for home page and ability to translate into various languages	
Seminars	5 Seminars abroad	
Trade Shows	Attendance and booth at domestic and international trade shows	
Press Conference	Kick- off event with ethnic media	
Outreach to Referral community	Outreach to network of professionals to assist in referring investors.	

CENTURY NEW YORK CITY REGIONAL CENTER, LLC
(REGIONAL CENTER)
OPERATION PLAN

Proposed Operation's Plan

Below is an overview of Century New York City Regional Center, LLC's (the "Regional Center") plans to administer, oversee, and manage all its investment activities, primarily to engage and support due diligence screening of its alien investor's lawful source of capital and the ability of the alien investor to fully invest the requisite amount of capital for EB5 purposes.

The Regional Center will require the alien investor to **prove that the funds come from a lawful source.** To show that the petitioner has invested, or is actively in the process of investing, capital obtained through lawful means, the Regional center will obtain documentary evidence of any loan or mortgage agreement, promissory note, security agreement, or other evidence of borrowing which is secured by assets of the petitioner, other than those of the new commercial enterprise, and for which the petitioner is personally and primarily liable. If the alien investor is bringing the foreign capital through his business in home country, the Regional center will seek:

i) Foreign business registration records;

(ii) Corporate, partnership (or any other entity in any form which has filed in any country or subdivision thereof any return described in this subpart), and personal tax returns including income, franchise, property (whether real, personal, or intangible), or any other tax returns of any kind filed within five years, with any taxing jurisdiction in or outside the United States by or on behalf of the petitioner;

Additionally, the Regional Center will obtain evidence identifying any other source(s) of capital. The Regional center will strictly follow the guidelines to obtain Certified copies of any judgments or evidence of all pending governmental civil or criminal actions, governmental administrative proceedings, and any private civil actions (pending or otherwise) involving monetary judgments against the petitioner from any court in or outside the United States within the past fifteen years.

In its endeavor to conduct back ground checks and due-diligence on the source of funds of the alien investor, the Regional Center has prepared a confidential 'Suitability Evaluation' form, attached with this letter. Every prospective investor will be required to submit the suitability form to the Regional Center before being accepted in our EB5 project. The document descriptively seeks information about the alien investor's personal information, education, employment history, financial history including bankruptcy, criminal or civil history, savings, loans, inheritance, gifts, business capital, net worth and other disclosures of admittance as mandated by USCIS. The Regional Center will ensure total compliance of its policies by obtaining evidentiary documents translated in English, if required, and notarized by the authorities in alien's home country.

The Regional Center may have its representatives in foreign countries for marketing the EB5 projects. These representatives will randomly verify the credentials of the alien investor by visiting the alien's employer or bank. These representatives and/or the staff at the Regional Center will establish the chain of legal source of funds in every single event.

The Regional Center also **plans to conduct a background check** of potential immigrant investors before accepting them into the Regional Center. The Regional Center will retain an internationally recognized investigative firm such as Kroll (http://www.kroll.com/services.ifai/) or Abraxas (http://www.abraxascorp.com/) to provide a background check on all potential investors. The investigative firm will provide an assessment of the potential investor. This additional diligence will add to the success of the Regional Center. The following illustrate some of the actions that the investigative firm may take in providing their assessment, depending on what they advise:

- They examine the documents provided by applicants in an effort to identify any obvious or suspected forgeries, conflicting or dubious information.
- They may check and verify applicant identity, ID data and passport data with local police and registration authorities. This may include verifying kin relationships and working with local lawyers accredited law firms to obtain information.
- They may conduct searches of local corporate registries and contact regulatory bodies to check and verify business licenses and status of companies claimed by applicant. Copies of record discovered may be obtained.

- They may make discreet inquiries with local police, judicial and regulatory bodies concerning any criminal record of applicants.
- They may check ownership records of main assets claimed, such as real estate records.
- They may conduct telephone inquiries with named employers to check claimed of employment record.
- They may make inquiries with schools to check educational record and validity of diplomas.
- They may make inquiries with references, including bankers, legal counsel, accountants, auditors, where these are provided.

Such a background check, consisting of some or all of the foregoing measures or other prudent investigative techniques, will provide reasonable assurance that the investors are reputable and that they have a legitimate source of funds for their investment.

An alien who is permanently ineligible for U.S. citizenship; or who departed the United States to evade military service in time or war.		
An alien who was previously ordered removed within the last 5 years or ordered removed a second within the last 20 years; who was previously unlawfully present and ordered removed within the last 10 years or ordered removed a second time within the last 20 years; who was convicted of an aggravated felony and ordered removed; who was previously unlawfully present in the United States for more than 180 days but less than one year who voluntarily departed within the last 3 years; or who was unlawfully present for more than one year or an aggregate of one year within the last 10 years.		
An alien who is coming to the United States to practice polygamy; who withholds custody of a U.S. citizen child outside the United States from a person granted legal custody by a U.S. court or intentionally assists another person to do so; who has voted in the United States in violation of any law or regulation; or who renounced U.S. citizenship to avoid taxation.		
An alien who is former exchange visitor who has not fulfilled the 2-year foreign residence requirement.		
An alien determined by the Attorney General to have knowingly made a frivolous application for asylum.		

An alien who has ordered, carried out or materially assisted in extrajudicial and political killings and other acts of violence against the Haitian people; who has directly or indirectly assisted or supported any of the groups in Colombia known as FARC, ELN, or AUC; who through abuse of a governmental or political position has converted for personal gain, confiscated or expropriated property in Cuba, a claim to which is owned by a national of the United States, has trafficked in such property or has been complicit in such conversion, has committed similar acts in another country, or is the spouse, minor child or agent of an alien who has committed such acts; who has been directly involved in the establishment or enforcement of population controls forcing a woman to undergo an abortion against her free choice or a man or a woman to undergo sterilization against his or her free choice; or who has disclosed or trafficked in confidential U.S. business information obtained in connection with U.S. participation in the Chemical Weapons Convention or is the spouse, minor child or agent or such a person.		
Have you ever been convicted of any offense or crime? (If yes, please explain in space provided below)		
Have you ever been refused admission to the United States at a port-of-entry? (If yes, please explain in space provided below)		
Have you ever applied for a Social Security Number (SSN)? (If yes, please provide the number in the space provided below)		
Do you want the Social Security Administration to assign you an SSN (and issue a card) or issue you a new card (if you have an SSN)?		
CONSENT TO DISCLOSURE: I authorize disclosure of information from this form to the Department of Homeland Security (DHS), the Social Security Administration (SSA), such other U.S. government agencies as may be required for the purpose of assigning me an SSN and issuing me a Social Security card, and I authorize the SSA to share my SSN with USCIS. The applicant's response does not limit or restrict the Government's ability to obtain his or her SSN, or other information on this form, for enforcement or other purposes as authorized by law. You must answer YES to this question in order to receive an SSN and/or card.		

ADDITIONAL INFORMATION REQUESTED:

HOW DID YOU HEAR ABOUT THE NEW YORK CITY IMMIGRATION FUND, REGIONAL CENTER AND OUR PROJECTS?

WERE YOU REFERRED TO US BY SOMEONE? _____ Yes _____ No

If YES, please provide Name and contact information for our files _____

PRIMARY APPLICANT'S NET WORTH:

Please complete all sections below to the best of your ability so that we can evaluate the best funds to be used for immigration purposes. Also please note where the funds originated from under source of funds, i.e. checking account $500,000 from sale of house; savings account $200,000 income from business.

Qualifying investors in the US on a non-immigrant visa need to be accredited investors. An accredited investor is a term defined by various security laws that describes investors permitted to invest in certain types of higher risk investments, limited partnerships, hedge funds and angel investor networks. In the US an individual is considered to be an accredited investor if he or she has a net worth of at least US$1 million or has made at least US$200,000 each year for the last two years (US$300,000 with spouse if married) and has the expectation to make the same amount in the current year.

Valid passport (copy of picture page) 3. National Identity card if available 4. Copy of current US visa (if inside the United States) 5. Copy of I-94 (if inside the United States) 6. Birth certificates for investor and all non-U.S. dependents (long form, naming both parents 7. Marriage certificates (if any)

The information above is accurate and has been completed to the best of my ability.

_____

SIGNATURE OF APPLICANT DATE (MM/DD/YY)

Century New York City Regional Center, LLC was formed to act as and perform all of the operations and functions of the regional center in accordance with the rules, regulations and guidelines promulgated from time to time by USCIS ("Regional Center"). As a Regional Center, Century New York City Regional Center perform the following duties: (1) It will seek appropriate investment opportunities, whether in the form of loans or ownership of equity, to be financed through the Program, (2) will seek financing for each investment in a Project, whether through the Program or otherwise, (3) in conjunction with each Project, will assist potential investors in making an investment in such Project, including submitting all required reports and information in order for investors to obtain an Investment Green Card (as such term is used by USCIS), and (4) will act as the manager or managing member of each Project.

The Company's Manager will make qualified investments in accordance with specific due diligence guidelines below:

- Investments that will procure jobs in the TEA Regional Center Areas pursuant to the USCIS EB5 program.
- Investments that will provide positive cash flow that can be recapitalized to facilitate an exit strategy for the Company to return their Initial Investment.
- Investments that shall pay interest to the Company throughout the duration of the Project through cash flows or through interest escrows.
- Investments that are securitized by equity or credit agreements.

Century New York City Regional Center (RC) plans to administer, oversee and manage all its investment activities, primarily to engage and support due diligence screening of its alien investor's lawful source of capital and the ability of the alien investor to fully invest the requisite amount of capital for EB-5 purposes.

Section V: Emplyment and Job Creation

- Construction and Operation Impacts.....50

Section VI: Management and Corporate Structure.....53

EXECUTIVE SUMMARY

The proposed Four Points Flushing Hotel & Condominium is seeking regional center designation as a hypothetical project. The plan is to construct and develop a mix-use buidling which consists of 210-room hotel, 101 residential condominium units, retail spaces, community facilities and parking spaces (the "Project") in Flushing, Queens, one of the five boroughs of New York City. The project is located at 134-37 35th Avenue in Flushing, New York, NY 11354. This area encompasses some of the most commercially active portions of downtown Flushing, including the majority of Chinese and Korean businesses. It is also a popular destination for Asian tourists.

Farrington EB-5 Capital, LLC will be the new commercial enterprise, (hereinafter the "NCE") a newly formed entity for the purpose of raising EB-5 investment capital. Farrington Realty, LLC is the job creating entity (hereinafter "JCE") owns and operates the project. The NCE will be managed by Mr. George Xu, the developer and owner of the Project. The business entity structure is outlined in the table below.

New Commercial Enterprise (NCE)	**Farrington EB-5 Capital, LLC**
Regional Center (RC)	**Century New York City Regional Center, LLC**
Job Creating Entity (JCE)	Farrington Realty, LLC

The Proposed Four Points Flushing EB-5 Project entails a new construction of a mixed-use building which consists of a 210-room hotel, 101 residential condominium units, retail spaces, community facilities and parking spaces in Flushing, Queens, one of the five boroughs of New York City. Four Points by Sheraton is a mid-scale hotel brand by Starwood Hotels & Resorts offering a full-service hotel experience at a reasonable price. The construction and operation of the regional base of invested capital, the creation of new jobs, and the associated economic growth effects will be put into effect with the capital raised from immigrant investors through the EB-5 Program.

The NCE is seeking to raise a maximum of [redacted] in investor capital from [redacted] EB-5 investors for the EB-5 Immigrant Investor Program (hereinafter "EB-5") for the Four Points Flushing Hotel & Condominium. According to the Economic Impact Report, the project will create [redacted] jobs, including [redacted] jobs from direct and indirect from construction employment, [redacted] direct jobs from operation, and [redacted] indirect jobs from operation.

LOCATION – TARGETED EMPLOYMENT AREA

The EB-5 investment within a targeted employment area is calculated at a ratio of $500,000 for every 10 jobs created. The maximum credited foreign investment the [redacted] jobs can support under the EB-5 Program is [redacted] capital raise. The Project is only seeking to raise [redacted] from the EB-5 Program.

The project is located at 134-37 35th Avenue in Flushing, New York, NY 11354. The location is in census tract 889.02 in Queens County, a designated Targeted Employment Area ("TEA") confirmed by the Empire State Development and New York State Department of Labor. Please see the TEA letters attached at **Exhibit 7.**

Thus the project is located in a TEA and shall have a minimum investment requirement by each member of $500,000 USD. Membership units for the EB-5 investors shall be sold at [redacted] USD, of which $500,000 USD shall be utilized towards the construction of the project and [redacted] USD shall go towards an Administrative Fee.

DEVELOPMENT COSTS:

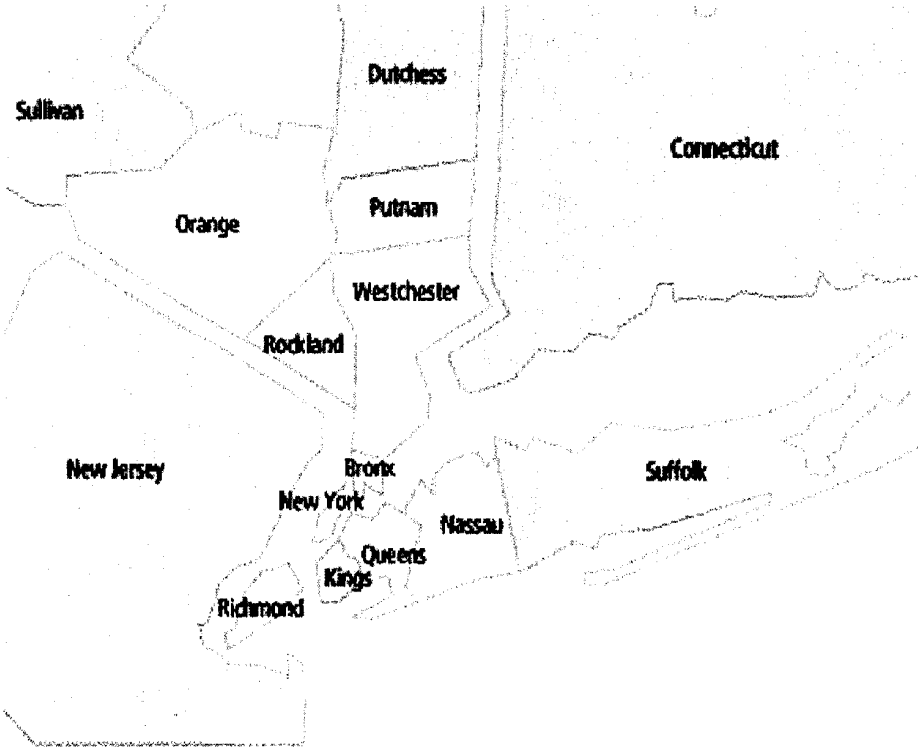
The total development cost is estimated at [redacted] consisting of hard construction costs approximately [redacted] soft costs [redacted] and other costs. The owner's equity is approximately [redacted] of the development costs. The maximum raise of EB-5 investment funds would be [redacted] The project developers are actively seeking traditional bank financing and other bridge financing as an alternative to EB-5 financing.

REGIONAL CENTER:

Farrington EB-5 Capital, LLC ("NCE") is managed by Century New York City Regional Center, LLC. The NCE was organized as a New York Limited Liability Company on March 31, 2014 with the primary business objective to raise EB-5 capital to fund real estate development projects such as the Four Points Flushing located at 134-37 35th Avenue in Flushing, New York, NY 11354. The project is owned by the project developer Farrington Realty, LLC where Mr. George Xu is the principal.

GEOGRAPHIC SCOPE:

The Four Points Flushing is located in Queens County. The RC requests the following seven (7) counties to be included in the RC's geographic boundaries: Queens County, New York County, Kings County, Bronx County, Richmond County, Westchester County and Nassau County. Please see the County map below.



Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment requirement is not required if investment opportunities arise outside the geographic area referenced above.

NAICS CODES:

The RC development project requests designation in the following industries based on the North America Industry Classification System **("NAICS")** Code:

Construction Hard Costs

- Construction (Building & Site) – 2362/23622
- Wholesale Trade (FF&E) – 42/4232
- Hotel and Motel (including Casino) – 72251
- Food Services and drinking places – 72251
- Real Estate – 53112/5313

Financing & Soft Costs

- Other government enterprises – 921
- Architectural, engineering and related services – 5413
- Insurance - 5241
- Accounting tax preparation, bookkeeping services – 5412
- Legal Services – 5411
- Monetary authorities and depository credit intermediation – 5222
- Other miscellaneous professional and technical services - 5419

SECTION I: THE BUSINESS:

OVERVIEW OF THE EB-5 PROJECT
DESCRIPTION OF THE BUSINESS; SERVICES & OBJECTIVES

FOUR POINTS FLUSHING HOTEL & CONDOMINIUM

The Proposed Four Points Flushing EB-5 Project entails a new construction of a mixed-use buidling which consists of a 210-room hotel, 101 residential condominium units, retail spaces, community facilities and parking spaces in Flushing, Queens, one of the five boroughs of New York City. Four Points by Sheraton is a mid-scale hotel brand by Starwood Hotels & Resorts offering a full-service hotel experience at a reasonable price.

The Four Points Hotel is located in the Flushing, Queens in New York City. The project site is located in the northwestern quadrant formed by the intersection of Farrington Street and 35th Avenue at 134-37 35th Avenue, Flushing, New York, 11354. The location is a targeted employment area ("TEA"). The proposed Four Points Hotel will feature 210 rooms, a restaurant and lounge, an indoor pool, a fitness center, a banquet hall, two meeting rooms, a ±17,000-square-foot community facility space, a lobby workstation, guest laundry facilities, and a gift shop. The community facility space is expected to be used by the community for recreation, sports, and/or cultural purposes and as additional meeting space for the hotel.

The Four Points Hotel will be further strengthened by the co-development condo units and retail spaces. The hotel will be operated by a prestigious management company—The Real Hospitality Group. The 15-story joint tower will feature 210 rooms dedicated to the Four Points on the second to seventh floor and 101 condo units on the eighth to fifteenth floor. The indoor pool will be shared between the hotel and the condos. Specific entities, such as the lobby, food and beverage outlets, meeting space, business center/lobby workstation and gift shop/market pantry will remain separate.

The joint tower is a part of a mixed-use development that will include ±10,000 square feet of commercial and retail space along 35th Avenue at the ground level. The commercial and retail spaces will be operated as separate entities.

PROJECT LOCATION AND TARGET EMPLOYMENT AREA

The project is located at 134-37 35th Avenue in Flushing, New York, NY 11354. The location is in census tract 889.02 in Queens County, a designated Targeted Employment Area ("TEA") confirmed by the Empire State Development and New York State Department of Labor. Please see the TEA letters attached at **Exhibit 7.**

Thus, the project is located in a TEA and shall have a minimum investment requirement by each member of $500,000 USD. Membership units for the EB-5 investors shall be sold at [redacted] USD, of which $500,000 USD shall be utilized towards the construction of the project and [redacted] USD shall go towards an Administrative Fee. The Project Location

The Flushing, Queens neighborhood surrounding the proposed property is characterized by a densely developed mixture of retail and commercial space that is proximate to an excellent public transportation and roadway network and two major airports, La Guardia Airport and New York JFK Airport. This area encompasses some of the most commercially active portions of downtown Flushing, including the majority of Chinese and Korean businesses located in Flushing.

The project is located one block from Main Street, in an area known as "Chinese Flushing." The majority of the area's banking institutions, department stores, and office spaces are located on or near Main Street. A majority of the buildings and businesses are owned and patronized by the Chinese residents of the area; therefore, the neighborhood presents a fairly homogenous Asian image. This area is a popular destination for Asian tourists who appreciate these somewhat familiar surroundings.

SECTION II: MARKET ANALYSIS

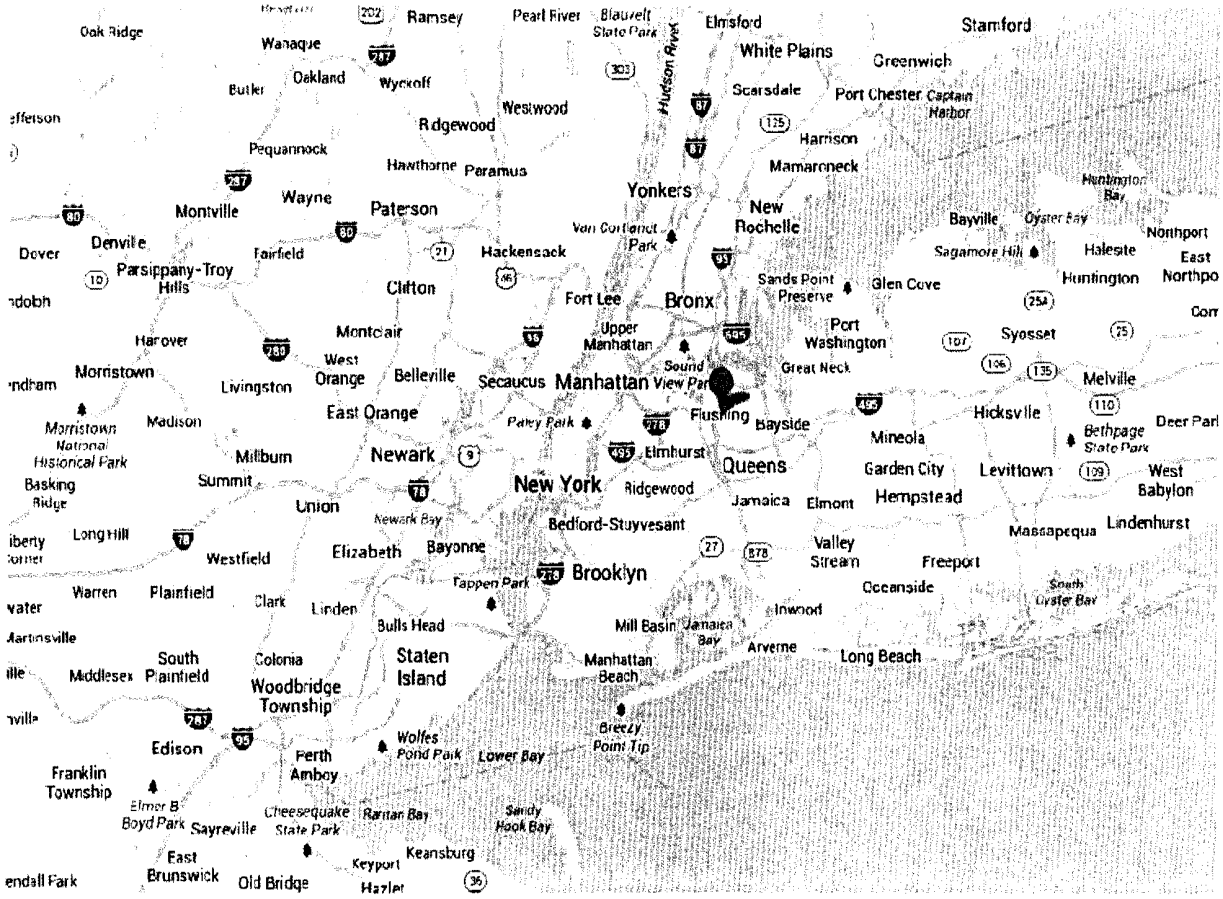
This section includes the analysis of the target market, perspective customers, market demand and analysis method, and the project's competitive advantages and highlights.

Source of the data: The market analysis is provided by HVS Consulting and Valuation Services ("HVS"). HVS is the world's premier hotel consulting and valuation firm, known for their impeccable worldwide reputation for credibility, excellence, and thoroughness. They provide full services and solutions on consulting and valuation; executive search; investment banking; asset management and strategic advisory; hotel management; convention, sports, and entertainment facilities consulting; design; shared ownership; parking; gaming; golf; sustainability; risk management; and property tax. HVS is the industry's primary source of hotel sales data, research, market studies, and educational information relating to the hospitality industry.

HVS was established in 1980 by Chairman and Founder Steve Rushmore, MAI, FRICS, CHA, and now directed by President and CEO Stephen Rushmore, Jr., MAI. HVS are members of:
MAI: Member of the Appraisal Institute
CHA: Certified Hotel Administrator
FRICS: Fellows of Royal Institution of Chartered Surveyors

LOCATION

The Project, Four Points Flushing Hotel & Condominium, is located in Flushing, New York. Located in the Flushing district of New York City's Queens Borough, the site is readily accessible to a variety of local, county, state, and interstate highways. Major interstates, such as Interstates 278, 495, and 95, connect Flushing to other major cities – New Haven, Connecticut; Philadelphia, Pennsylvania; and not mention its close proximity to Manhattan, New York. Manhattan, the commercial center of New York City, may be easily accomplished via the Long Island Expressway, the Grand Central Parkway, the New York City Subway, and the Long Island Rail Road. Guests will have access to the hotel through Farrington Street and 35th Avenue. The project's location is in a commercially active area in Flushing.



Map of Regional Access Routes

Aerial View of the Proposed Area

Renowned for its cultural attractions, entertainment, restaurants, and retail outlets, New York City is one of the most popular tourist destinations in the country. The city is recognized as an international commercial and cultural center. It is home to the United Nations, the Statue of Liberty, and the Empire State Building. The theaters in the Broadway district attract international attention. Lincoln Center (the home of the Metropolitan Opera, the New York Philharmonic, the New York City Ballet and Opera, and the Juilliard School) is among the world's most important centers for the performing arts. The Metropolitan Museum of Art, the Museum of Modern Art, the American Museum of Natural History, and a number of the city's other museums and galleries are internationally respected.

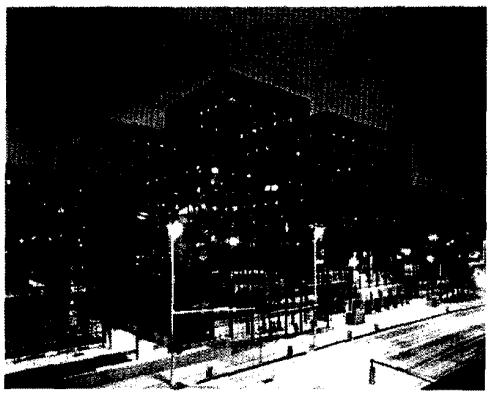
In the borough of Queens lies the Flushing Tennis Center, home of the U.S. Open; CitiField, home of the New York Mets baseball team; and Flushing Main Street, a vibrant, bustling district for shopping and restaurants. Brooklyn is also home to some of New York's most famous attractions including Coney Island, the Barclays Center, and the Brooklyn Academy of Music, as well as numerous shops and restaurants in the Williamsburg neighborhood. Directly to the north of midtown Manhattan lays Harlem, home to the world-famous Apollo Theatre as well as numerous renowned educational institutions including Columbia University and City College. Further north is the borough of the Bronx, home to Yankee Stadium, the venue for the New York Yankees baseball team, and numerous concerts and events; and the immensely popular Bronx Zoo.

Major Destinations & Attractions

New York City is one of the most popular and frequently visited destinations in the United States. A few of the major attractions include:

Times Square: a major intersection at the junction of Broadway and Seventh Avenue and stretching from West 42nd to West 47th Streets. It boasts attractions such as ABC's Times Square Studios, where Good Morning America is broadcast live, elaborate Toys "R" Us, Virgin Records, and Hershey's stores, as well as restaurants such as Ruby Foo's, the Bubba Gump

Shrimp Company, Planet Hollywood Restaurant and Bar and Carmine's along with a number of multiplex movie theaters. It has also attracted a number of large financial, publishing, and media firms to set up their headquarters in the area including Ernst and Young, Reuters, New York Times, Barclays, Morgan Stanley, among many others.

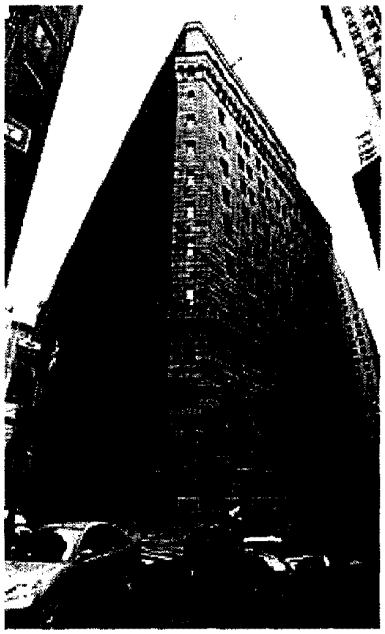


Jacob K. Javits Convention Center is a large convention center at Eleventh Avenue on the west side of Manhattan. The exhibit space is over 675,000 square feet. On October 16, 2006, a groundbreaking ceremony was held to start construction of an expansion.

New York Cruise Piers is a world-class ship port situated on West 52nd Street, and offers ideal facilities for cruise arrivals and departures. New York Cruise brings the most spectacular—often the fastest, biggest, and most luxurious—passenger ships to the West Side of Manhattan.

Lower (Downtown) Manhattan

The Financial District contains an assortment of businesses, ranging from small retail shops to chain-affiliated department stores to financial houses and educational buildings. The area is primarily commercial in character and is home to the New York and American Stock Exchanges, the WTC Site, and the World Financial Center.



In addition, several large corporations have their headquarters in the area, such as Goldman Sachs, The Bank of New York, Deutsche Bank, the Federal Reserve Bank of New York, and many more. The close proximity of high-grade office space and associated services makes the area an attractive location for lodging facilities.

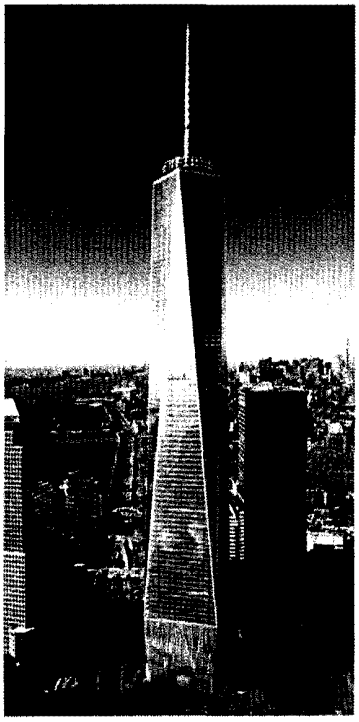
While modern-day business is the focus of Lower Manhattan, the market's historic representation makes the area unique. Among the historic attractions are Manhattan's oldest church, Trinity Church/St. Paul's Chapel, a national landmark built in 1766; Fraunces Tavern, which was built in 1719 and is the place where George Washington bade farewell to his officers; and the Federal Hall Memorial, the site where George Washington took the oath as America's first president.

Other points of interest in the Downtown area include the South Street Seaport, Battery Park, and the Federal Reserve Bank, to name a few. Access to the Statue of Liberty and Ellis Island is also provided from Battery Park, and represents some of the most important tourist attractions in New York City.

Lower Manhattan is expected to go through somewhat of a renaissance, fuelled by the redevelopment of the World Trade Center (WTC) site and the construction of a new transit station that will serve the transportation needs of Lower Manhattan.

World Trade Center Redevelopment

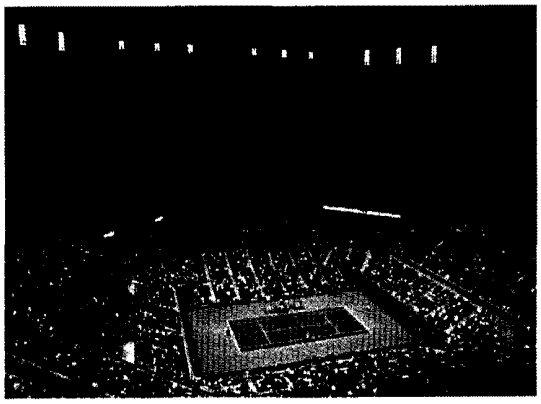
The WTC site now includes Tower 7, which was completed in May 2006 and developed by Silverstein Properties. Additional plans for the World Trade Center include the following. Please note that all data presented in relation to the WTC redevelopment has been sourced through the Lower Manhattan Development Corporation (LMDC).

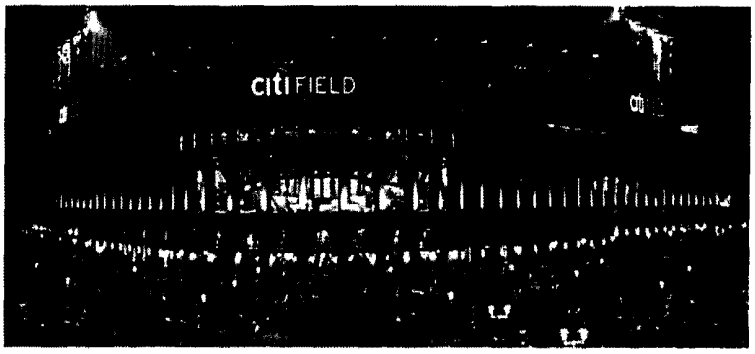


- Four new skyscrapers (1 WTC, Freedom Tower; Towers 2, 3, and 4)
- National September 11 Memorial & Museum at the World Trade Center
- World Trade Center Transportation Hub
- Retail Complex
- Performing Arts Center

<u>Attractions in Flushing, Queens</u>

In addition to the Flushing Tennis Center and CitiField, Queens also hosts Queens Zoo, Aqueduct Racetrack, Flushing Town Hall-Concert Hall, Queens Botanical Garden, Louis Armstrong House & Archives, and others.





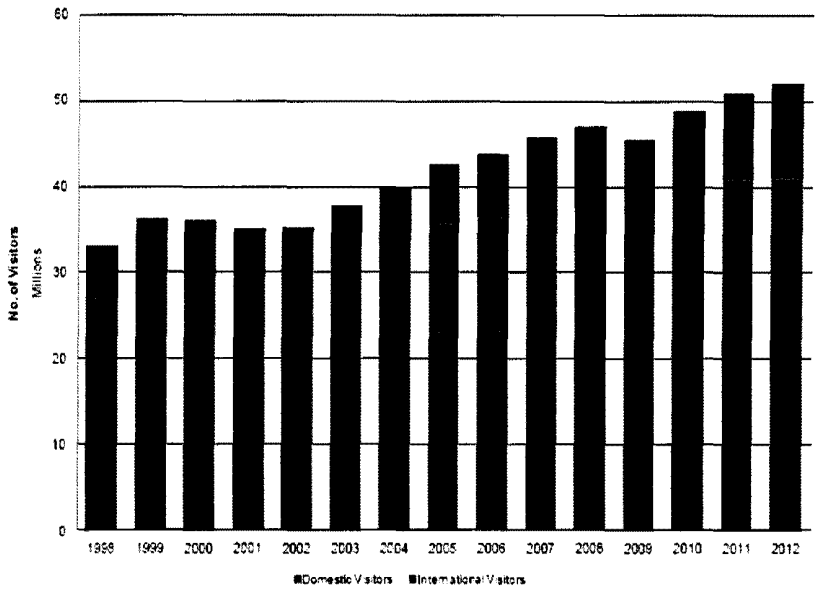
Queens is one of the most ethnically diverse communities in the U.S. The Borough of Queens is home to more than 34,500 businesses, ranging from small retail outlets to large manufacturing plants. The project area encompasses some of the most commercially active portions of downtown Flushing, including the majority of Chinese and Korean businesses located in Flushing. Located one block from Main Street, the major thoroughfare in Flushing, the hotel is in an area known as "Chinese Flushing." The majority of the area's banking institutions, department stores, and office spaces are located on or near Main Street. A majority of the buildings and businesses are owned and patronized by the Chinese residents of the area; therefore, the neighborhood presents a fairly homogenous Asian image. Consequently, this area is a popular destination for Asian tourists who appreciate these somewhat familiar surroundings.

MARKET DEMANDS AND ANALYSIS METHOD

In 2012, New York City estimated to have accommodated roughly 52 million visitors – a record level. New York City maintains its ranking as the number one U.S. destination for overseas travelers, hailing roughly 11 million from international markets.

According to most market observers, such record levels could not been realized without the expanded availability of hotel rooms in New York City. As illustrated in the graph below, the three highest tourism levels have all been recorded over the past three years – the period of highest availability.

FIGURE 5-4 NEW YORK CITY – HISTORICAL TOURISM LEVELS (NYC & COMPANY)



Source : NYC & Company

After a period of economic contraction, the market area has entered into a period of expansion and recovery following the Great Recession. HVS' market interviews and research revealed that although the area was affected by slowing business levels, a depressed housing market, and reduced levels of discretionary spending during the downturn, the market benefits from a well-established and diversified economy, which has aided in the recovery. The LaGuardia Airport and the close proximity to Manhattan has remained the cornerstones of this market, generating consistent demand throughout the year. Based on their market research, HVS are expecting market condition to continue improving in the near future.

Manhattan Lodging Market

Over the last 25 years, the Manhattan lodging market experienced minimal growth in supply, as a result of strong barriers to entry prevailing in that market. From 2004 through 2006, supply actually decreased due to the conversion of several hotels to condominiums. Since early-2009, the market has consistently registered strong increases in supply each month. From January 2009 to March 2013, supply increased by 19.8 percent.

As a result of the supply and demand dynamics, the market has been historically undersupplied. Over the last 25 years, average annual demand growth, at 2.1 percent, has outpaced corresponding growth in supply, at 1.7 percent. The Manhattan lodging market represents one of only five major markets among the top 25 in the U.S. to have maintained such a positive differential between supply and demand over the same period.

Periods of economic recovery and expansion are characterized by strong ADR growth. The Manhattan market experienced 27 consecutive months of double-digit increases in ADR from January 1997 to March 1999, and 46 consecutive months from November 2004 to August 2008. The market experienced the strongest ADR growth during the expansion period following the 2001 recession, which coincided with decreases in supply. As of March 2013 the market had experienced only one month of double-digit increase in ADR, in March 2011, at 10.1 percent. The significant amount of new supply that had entered the market since early 2009 did not have any effect on occupancy levels; however, the additional inventory limited the ability for hotel operators to push the average rate. Double-digit increases in ADR through 2015 are unlikely with a further anticipated increase in supply of approximately 15.0 percent over the same period.

Since 1987, RevPAR has increased at a healthy average annual rate of 4.2 percent. Periods of economic recovery and expansion are characterized by strong RevPAR growth. The Manhattan market experienced 57 consecutive months of double-digit increases in RevPAR from June 1994 to February 1999, and 53 consecutive months from May 2004 to September 2008. RevPAR percent change peaked in February 2005 at 22.2 percent. Percent change in RevPAR bottomed out at -27.3 percent in October 2009 as opposed to -24.4 percent in July 2002. However, RevPAR rebounded faster and stronger following the most recent recession than after the previous two contractions, primarily fueled by ADR gains.

As of March 2013 the market had experienced only 6 months of double-digit increase in RevPAR, from November 2010 to April 2011. Double-digit increases in RevPAR through 2015 are unlikely as occupancy is forecast to remain relatively stable, in the mid-80's, and ADR is anticipated to experience single-digit growth over the same period. As such, more moderate RevPAR growth is expected during these recovery and expansion periods than after the previous two economic recessions. A total of 89 new hotels opened in Manhattan between March 2008 and April 2013, adding 15,799 rooms to the market and representing growth of 23.7 percent over the February 2008 level. Approximately 75.0 percent of the new supply entered the market from March 2008 to December 2010. This addition is the largest increase in supply over the last 25 years.

The timing of the opening of the new supply coincided with the latest recession and the start of the recovery. Nevertheless, this large influx of new hotels had a minimal effect on the occupancy of the existing properties. As the economic recovery continues, HVS anticipates that the additional new supply will be absorbed into the market. Consequently, the Manhattan lodging

market is expected to remain undersupplied. Market-wide occupancy is expected to remain close to maximum-level capacity, in the mid-80 percent range, through 2015. New supply is expected to increase by approximately 15.0 percent by 2015. As a result, HVS forecasts moderate average rate growth over the next three years. From 2013 to 2015, HVS forecasts relatively modest increases in RevPAR, primarily driven by ADR growth. Overall, RevPAR is forecast to appropriately recover and surpass its pre-recession (2008) in 2014. Increases in supply are expected to be readily absorbed and thus are not anticipated to significantly affect the recovery. Reflective of such trends, the Manhattan lodging market seemingly remains poised for a strong recovery, irrespective of any forthcoming increases in supply.

Queens Lodging Market

Queens is one of the most ethnically diverse communities in the U.S. It has served as a bedroom community for Manhattan, but has also developed its own employment base. The two major airports, JFK International and LaGuardia, have played an important role in shaping the area's economy. The Borough of Queens is home to more than 34,500 businesses, ranging from small retail outlets to large manufacturing plants. No single company or industry is dominant, although health care, air transportation, and services are major sectors. Some of Queens' largest employers include Steinway & Sons, British Airways, St. John's University, and Citibank.
More than 59% of Queens's residents commute to Manhattan for work. Of the 41% of workers who remain in Queens for employment, 32% work in the services industry, 21% in retail, 15% in public utilities, 11% in manufacturing, 8% in government, 7% in construction, and 6% in FIRE (finance, insurance, and real estate).

Although Queens has never been a major center for office development, the retail sector has benefited from the area's concentration of residential developments. Downtown Jamaica, which is located north of the subject property, in central Queens, is one of the largest concentrations of retail space in New York City, attracting visitors from throughout the region, owing to the appealing prices offered by the local merchants. However, Queens still exports a disproportionate share of its retail spending to neighboring Manhattan and Nassau County.
While not as rich in tourist attractions as Manhattan, the Borough of Queens offers its own array of leisure-oriented sites.

The following table lists selected visitor attractions located in Queens.

FIGURE 5-1 SELECTED QUEENS VISITOR ATTRACTIONS

Attraction	Type	Location	Notes
Queens Botanical Garden	Garden	Flushing	Acres of plantlife including a Japanese Garden
Queens County Farm Museum	Museum	Floral Park	47 acres, including a historic farmhouse, as well as livestock and planting fields
New York Hall of Science	Museum	Queens	225-exhibit, hands-on science center
Louis Armstrong House & Archives	Museum	Flushing	Music, photos, films, instruments, awards
New York City Hall of Fame	Museum	Flushing	Recognizes those that contributed to NYC
The Queens Museum of Art	Museum	Queens	Art exhibits dating from 1850s to present
Isamu Noguchi Foundation, Inc	Museum	Sunnyside	Comprehensive collection of artwork by Isamu Noguchi
King Manor Museum	Museum	Flushing	Historic home in 11-acre park
Alley Pond Environmental Center, Inc	Nature	Douglaston	635 acres of woodlands, meadows, and fresh and salt water marshes
Flushing Town Hall-Concert Hall	Performing Arts	Flushing	340-seat concert hall
Queens Theater in the Park	Performing Arts	Flushing	476-seat theater, 99-seat experimental theater
Black Spectrum Theater	Performing Arts	Jamaica	Theater and films examining issues of concern to African-American youth
Colden Center for the Performing Arts	Performing Arts	Flushing	Auditorium with seating capacity of 2,127, and 489-seat concert hall
Thalia Spanish Theater	Performing Arts	Sunnyside	Produces Spanish zarzuela (operetta)
Shea Stadium	Sports	Flushing	Major League Baseball - home of New York Mets
Equestria, Aqueduct Racetrack	Sports	Queens	Horse race track with 1,600-seat restaurant
USTA National Tennis Center	Sports	Flushing	Home of U.S. Open
Jamaica Center for Arts and Learning, Inc	Visual Arts	Jamaica	Exhibits of local and national artists, workshops
Queens Zoo	Zoo	Flushing	11-acre zoo with North American wildlife

The Lodging Industry

In the lodging industry, price varies directly, but not proportionately, with demand and inversely, but not proportionately, with supply. Supply is measured by the number of guestrooms available, and demand is measured by the number of rooms occupied; the net effect of supply and demand toward equilibrium results in a prevailing price, or average rate. Smith Travel Research (STR) is an independent research firm that compiles and publishes data on the lodging industry, and this information is routinely used by typical hotel buyers. The 210-room Proposed Four Points Flushing will be located in Flushing, New York. The greater market surrounding the subject property offers a variety of lodging facilities. Of this larger supply set, the subject property competes with a smaller set of hotels based on various factors. These factors may include location, price point, product quality, length of stay (such as an extended-stay focus vs. non-extended-stay focus), room type (all-suite vs. standard), hotel age, or brand, among other factors.

HVS has reviewed these pertinent attributes and established a competitive set based upon this review. STR has compiled historical supply and demand data for a group of hotels considered applicable to this analysis for the proposed subject property. This information is presented in the following table, along with the market-wide occupancy, average rate, and rooms revenue per available room (RevPAR). RevPAR is calculated by multiplying occupancy by average rate and provides an indication of how well rooms revenue is being maximized. A review of the trends in occupancy, average rate, and RevPAR per day of the week over the past three fiscal years provides some insight into the impact that the current economic conditions have had on the competitive lodging market. Considering the subject market's historical performance and potential supply growth, HVS has stabilized the market-wide occupancy at approximately 76% in 2019, when all the proposed new supply is appropriately absorbed into the market.

FOUR POINTS FLUSHING HOTEL'S COMPETITIVE ADVANTAGES AND HIGHLIGHTS

Branding:

In April of 1995, Sheraton Hotels & Resorts introduced Four Points, a mid-scale hotel brand offering a full-service hotel experience at a sensible price. Four Points delivers the amenities and services that today's business and leisure travelers are seeking, with 112 locations (with 17,740 rooms) in North America as of December 31, 2012. The brand provides a comfortable, well-appointed room with a two-line telephone, a large desk for working or in-room dining, and comfortable seating. Four Points locations include a restaurant serving three meals a day, room

service, a fitness center, a swimming pool, meeting space, and on-site catering. In 2012, the Four Points brand in North America achieved an average occupancy level of 70.7%, an average rate of $111.48, and an average RevPAR of $78.76.

FIGURE 4-1 PROPOSED FACILITIES SUMMARY

Guestroom Configuration	Number of Units
King	110
Double/Double	89
ADA King	6
ADA Double/Double	5
Total	210

Food & Beverage Facilities	Seating Capacity
Restaurant, Bar & Lounge	176

Life-Safety Systems	Sprinklers, Smoke Detectors

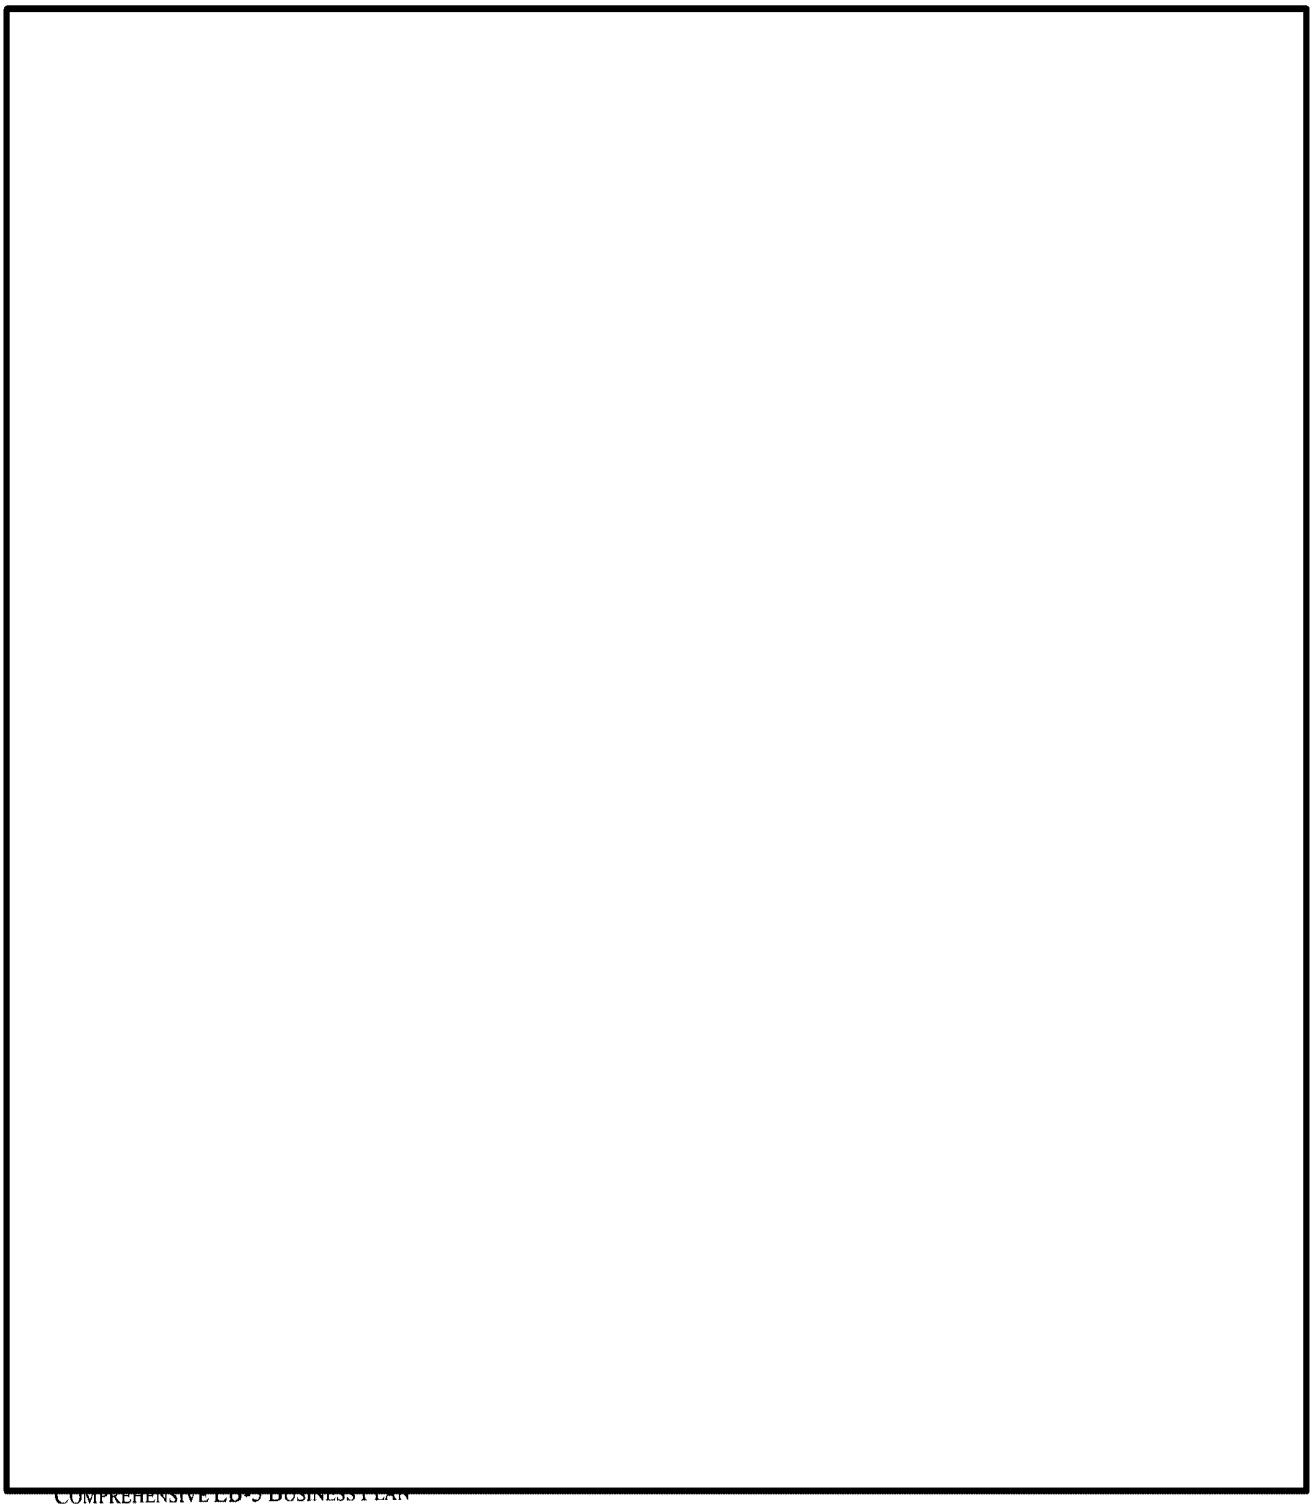
PROJECT HIGHLIGHTS:

- **Close proximity to Manhattan, New York**
- **Proximity to Flushing Main Street, major commercial and residential areas with high concentrations of Chinese and Korean population**
- **Proximity to two major airports in New York City**
- **Four Points by Sheraton, a mid-scale hotel brand offering a full-service hotel experience at a sensible price**
- **Century Construction Group is an established developer is Flushing, NY**
- **210-rooms restaurant and lounge with an indoor pool, a fitness center, a banquet hall, large meeting space**
- **17,000-square-foot community facility space**
- **Lobby workstation, guest laundry facilities, and a gift shop**

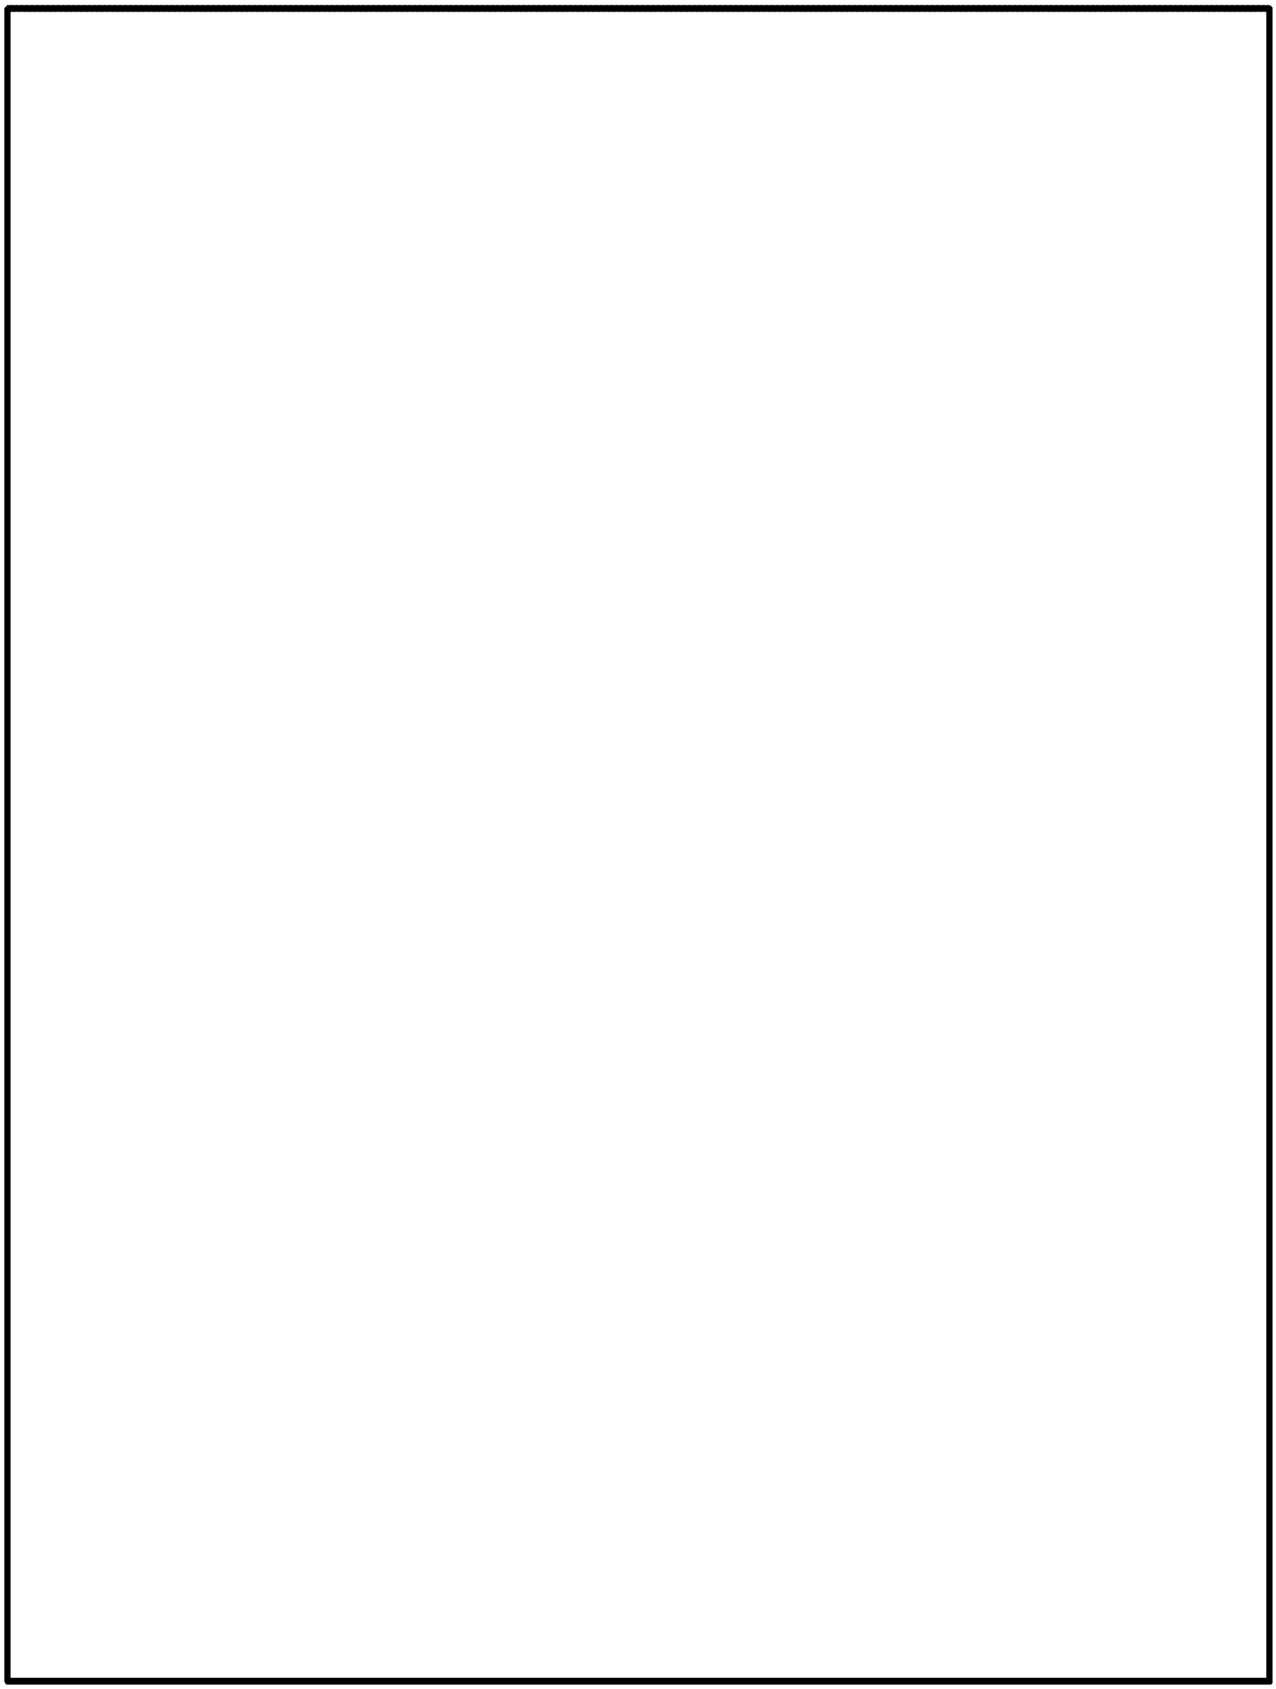
COMPETITORS : THEIR STRENGTH AND WEAKNESS

The following residential developments have been identified in the Flushing, NY area similar to Sheraton Four Points at Flushing's proposed plan. This section focus on their strength and weakness compared to the Sheraton Four Points at Flushing project.

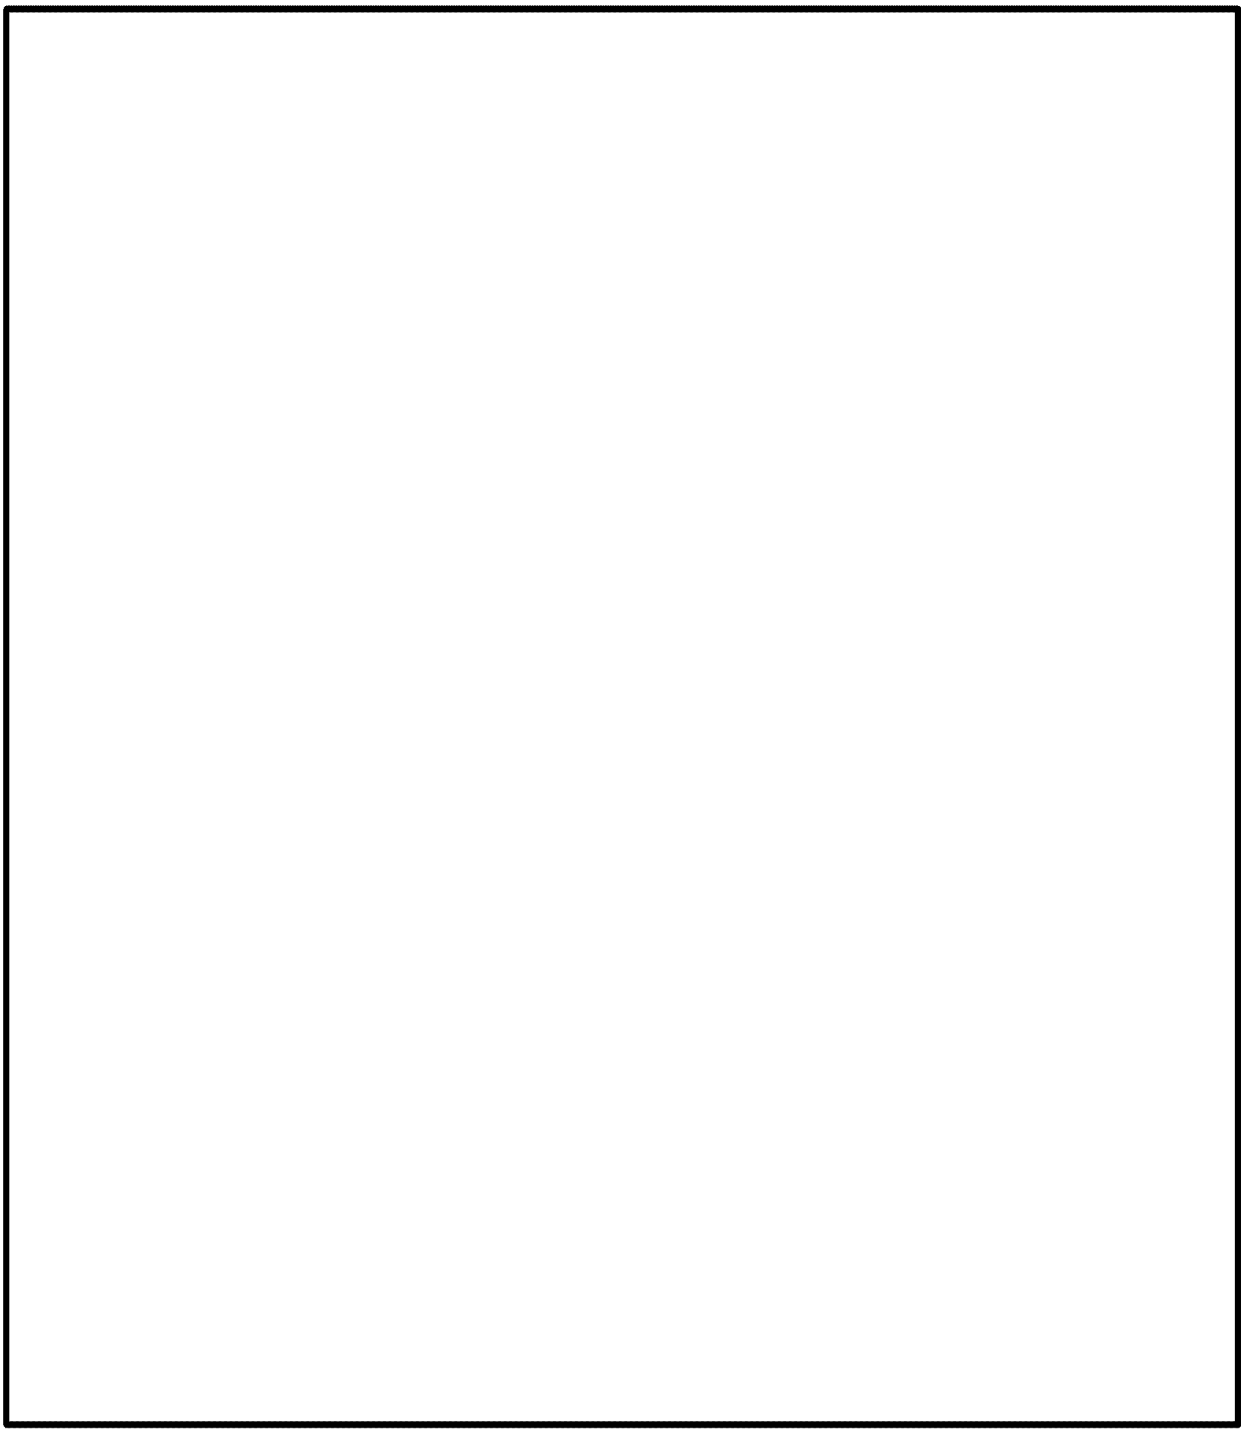
(b)(4)



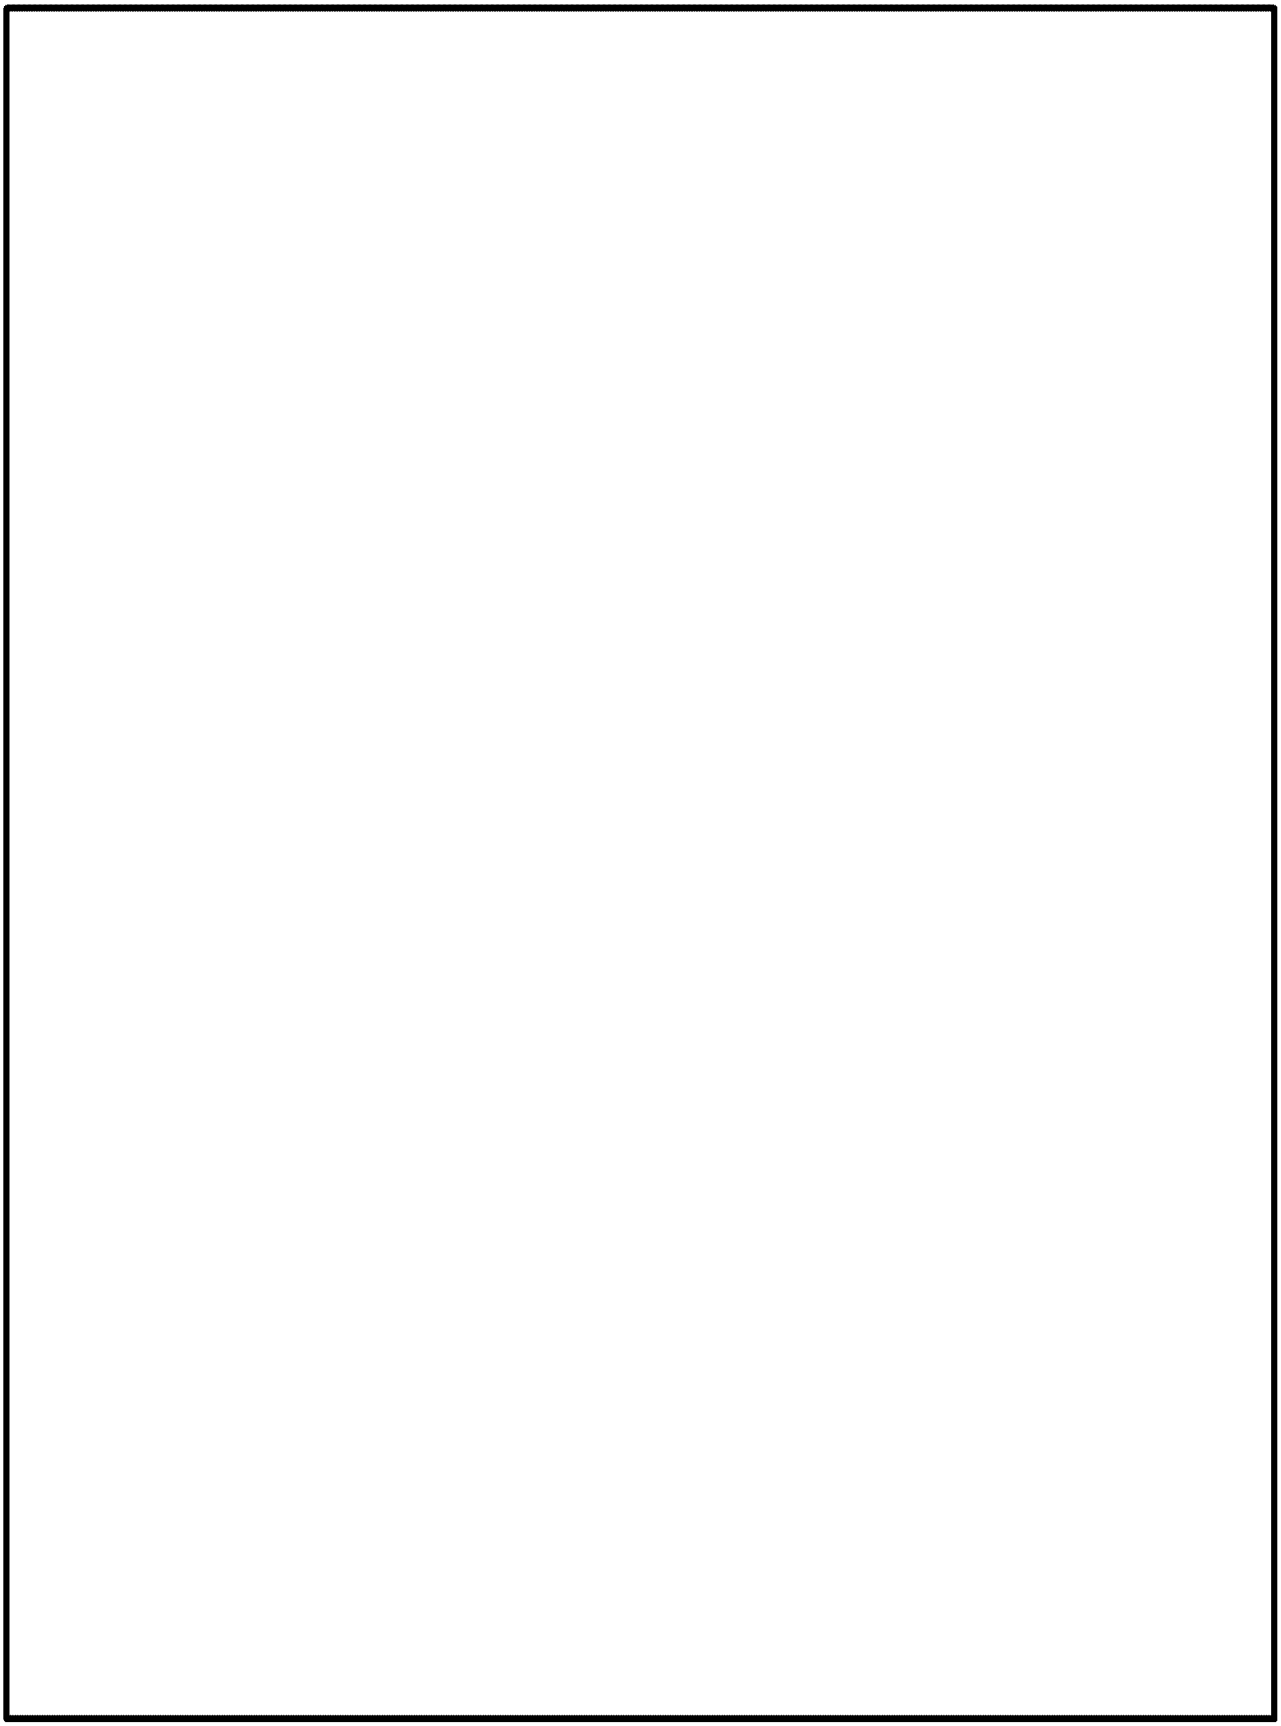
(b)(4)



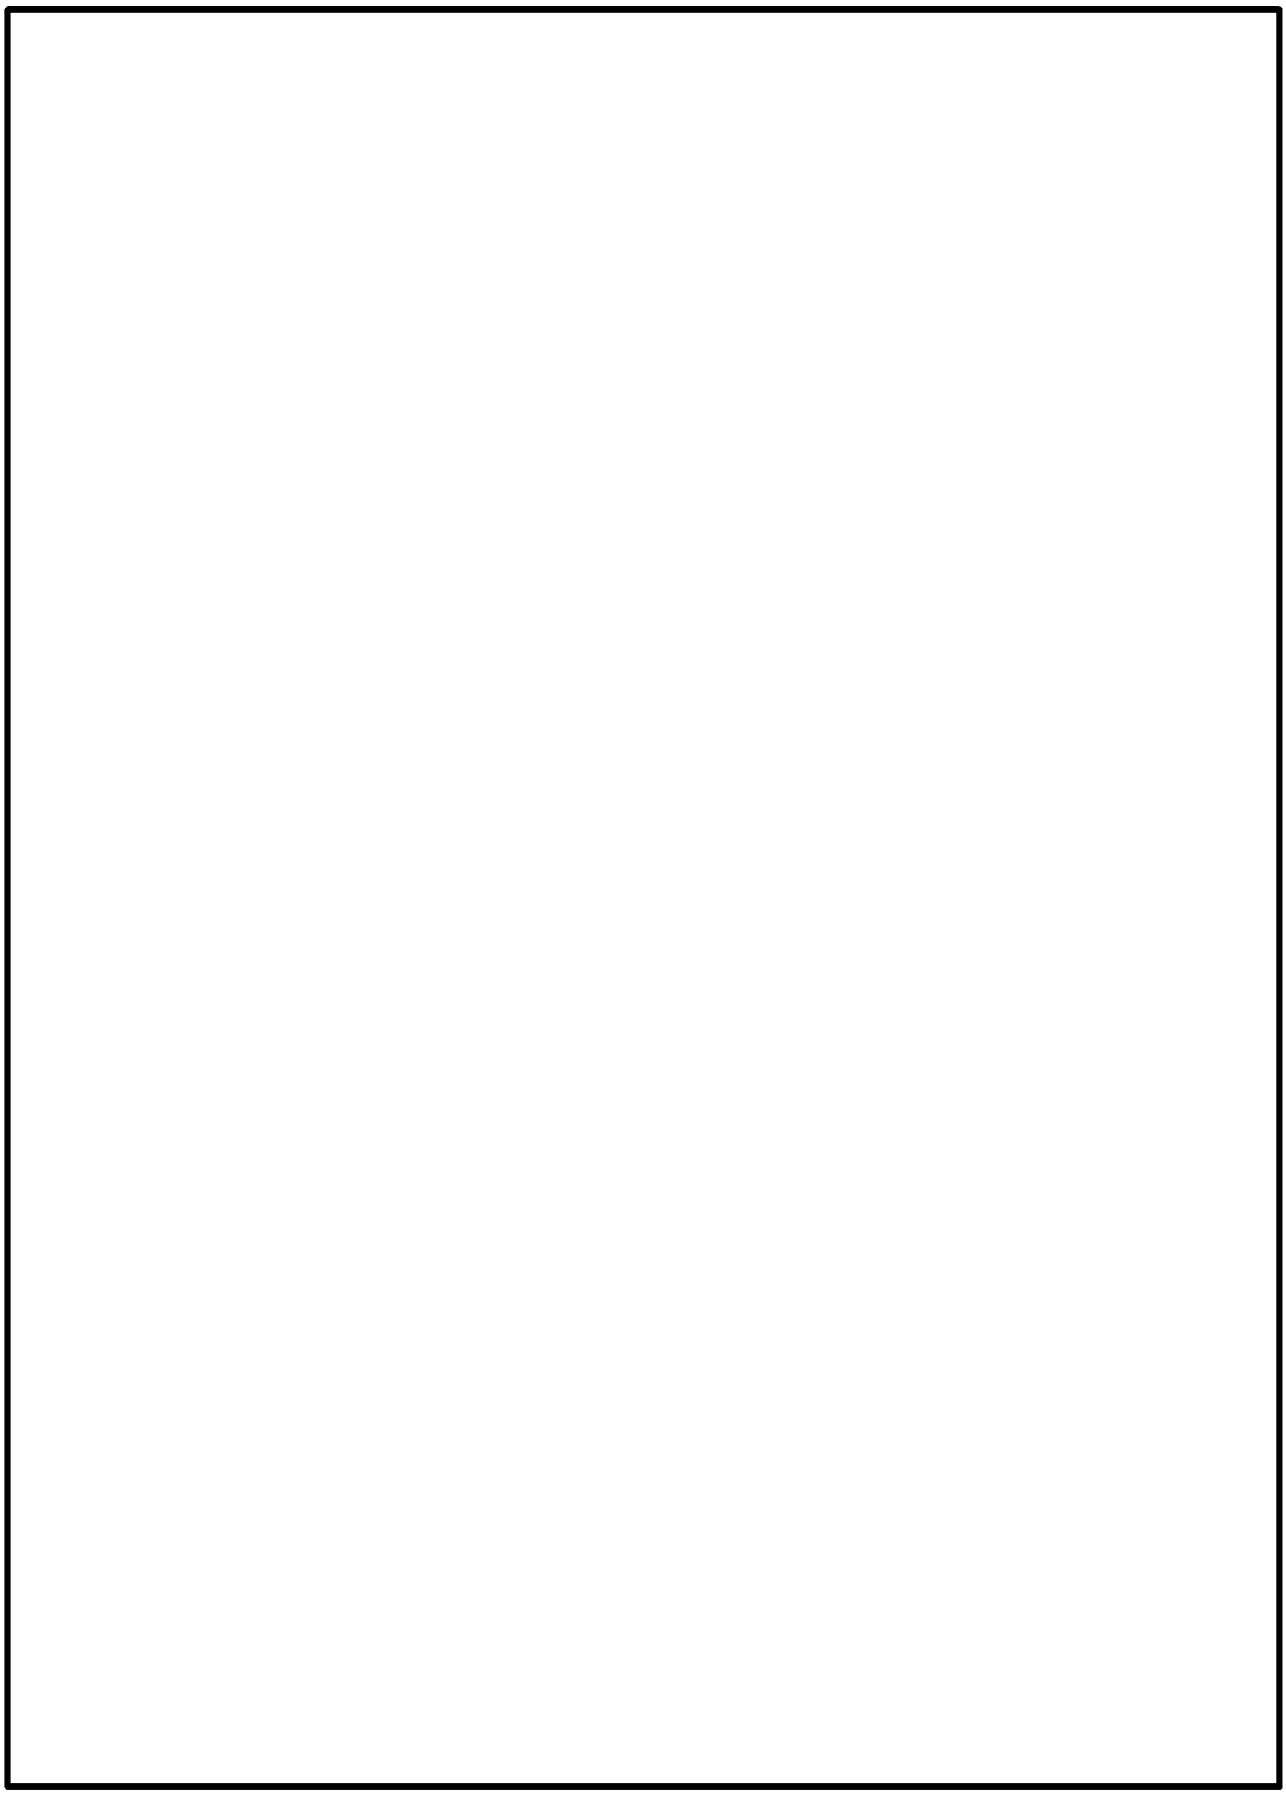
(b)(4)



(b)(4)

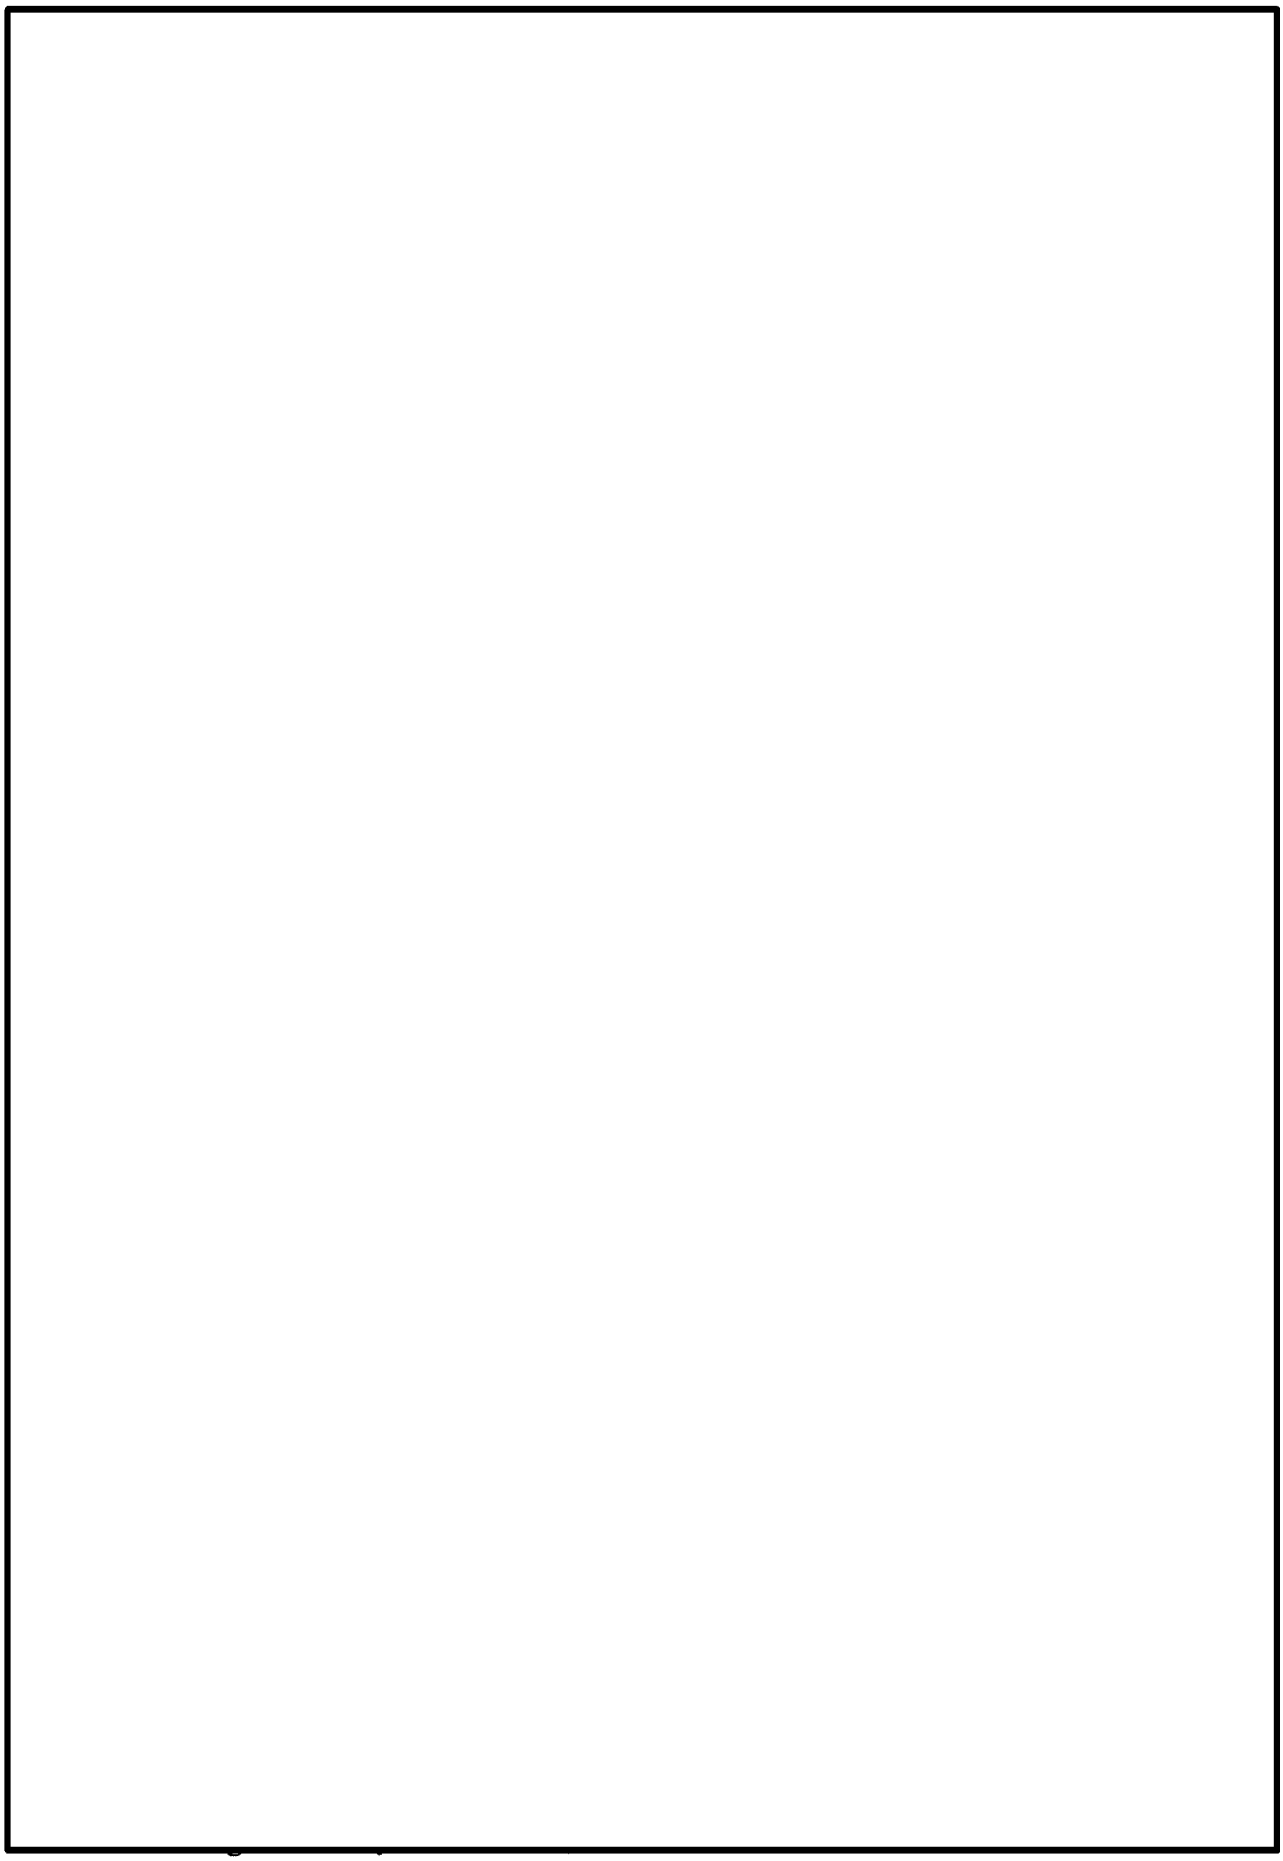


(b)(4)

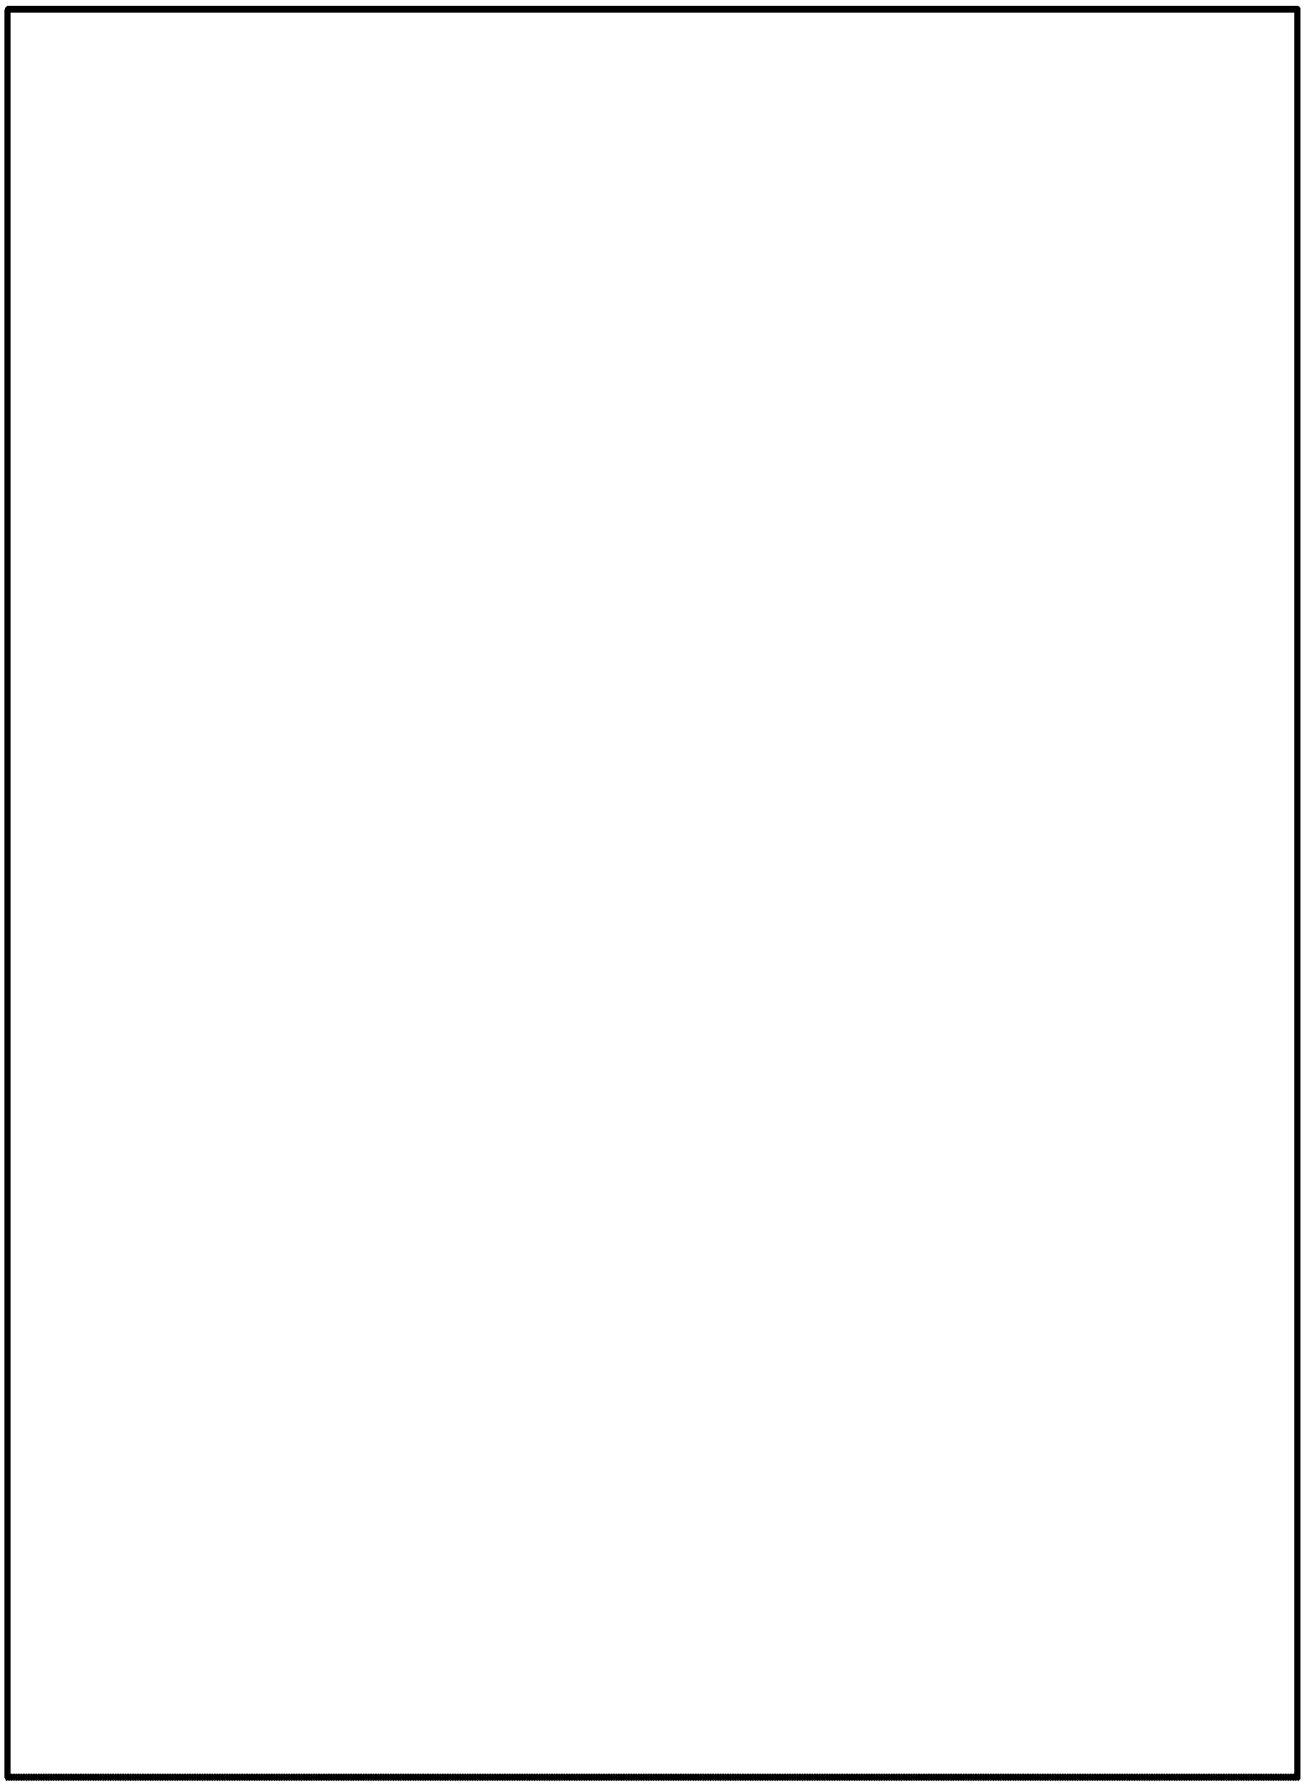


(b)(4)

(b)(4)



(b)(4)



(b)(4)

MARKETING STRATEGY

The Four Point Flushing Hotel & Condominium will offer a well-designed, functional layout of support areas and guestrooms and target at the midmarket. All typical and market-appropriate features and amenities appear to be included in the hotel's design. The building will be fully open and operational on the assumed opening date and will meet all local building codes and brand standards. The hotel staff will be adequately trained to allow for a successful opening and that pre-marketing efforts will have introduced the product to major local accounts at least six months in advance of the opening date.

The project principals own Century Construction Group, an established brand in Flushing, New York. It has successfully completed and marketed similar projects such as Marriot Fairfield Inn., Leavitt Manor Condominium, Farrington Estate, all located in Flushing. The project principals plan to expand its existing midmarket to reach more audience through the Four Points Flushing Hotel project.

The project plans to raise [redacted] from [redacted] EB-5 investors. The hypothetical regional center is expected to be approved within the next 6 months. Meanwhile, the project plans to conduct pre-marketing trips overseas in China and Asia.

(b)(4)

SECTION III: FINANCIAL

VIABILITY OF THE PROJECT; PROJECT FUNDING & CAPITALIZATION EXIT PLAN; INCOME PROJECTIONS & REASONABLE ANALYSIS METHODOLOGY

EXIT PLAN & PROJECT VIABILITY

The loan from Farrington EB-5 Capital, LLC will be paid off in full either through the residential condominium sales, refinancing of hotel, retails and community facility upon stabilization. The project will not be refinanced or sold prior to the adjudication of the I-829 petitions.

The project principal has extensive experience and is confident that the proceeds from either strategy should be more than sufficient to pay off the EB-5 investors in full. However, in the event the above strategy is insufficient to pay off the loan in full, the borrower shall cover the shortfall from its own operating cash flow, or risk foreclosure and loss of its ownership of the Project to the Partnership. This is not a redemption clause. The EB-5 capital is placed "at risk". The developer will make the best efforts that are economically feasible to repay the EB-5 investors.

USE OF CAPITAL

(b)(4)

The Four Point Flushing Hotel's development cost is estimated at [redacted] consisting of hard construction costs approximately [redacted] and [redacted] soft costs. For analysis purposes this equates to a total development budget of [redacted] for 354,000 SF of gross building area including parking decks. This budget includes hard costs, contingencies, financing, pre-opening and other soft costs, but excludes site acquisition.

The JCE Company intends to raise capital to cover the costs using both conventional financing and through business loans by means of a private placement offering to EB-5 investors.

Specifically, the NCE will raise a maximum of [redacted] in EB-5 capital, which will be loaned to the JCE. The Company plans to sell EB5 Membership Units, at $500,000 per unit, to qualified foreign investors seeking to obtain permanent residence in the United States through the EB-5 Visa Program. No additional capital contributions are required.

Contingency Plan:

As necessary, the Farrington Realty, LLC(JCE) may also provide a temporary short-term bridge financing or traditional bank financing through lenders in order to commence construction and create jobs in advance of EB-5 funding.

Sales, Cost, Income, and Investment Projections

(b)(4)

It is to be noted that the first year of operations does not reflect anticipated long-term performance of the hotel project. It only reflects the initial operations from the time the hotel first opens with little business, as it builds to full staffing complement, begins to work "the kinks" out of operations, gets marketing efforts underway and allows time for them to get traction, and builds the market image and place for the hotel. Based on operating history and market performance (with inflation adjustment), it is conservatively estimated that stabilization will occur in year 3 by 2017 with an annual occupancy of 72%. The term "stabilization" properly reflects the industry experience over most of the past century that after this initial ramp up, the hotel reaches a stabilized level that will be maintained during its 20 to 30 year economic lifespan.

FINANCIAL PROJECTIONS AND ANALYSIS METHODOLOGY

The financial projection data of the project is provided by independent studies HVS Group. In order to examine the job creation based on the projections, the following analysis methodologies

are considered: (1) reviewing Four Point Flushing's projected operational pro forma; (2) estimating the portion of that budget which would represent labor costs; (3) verifying the estimate for reasonableness by against the corresponding direct effects employment creation multipliers.

The Four Point Flushing's forecasted market share and occupancy levels are based upon its anticipated competitive position within the market, as quantified by its penetration rate. The penetration rate is the ratio of a property's market share to its fair share.

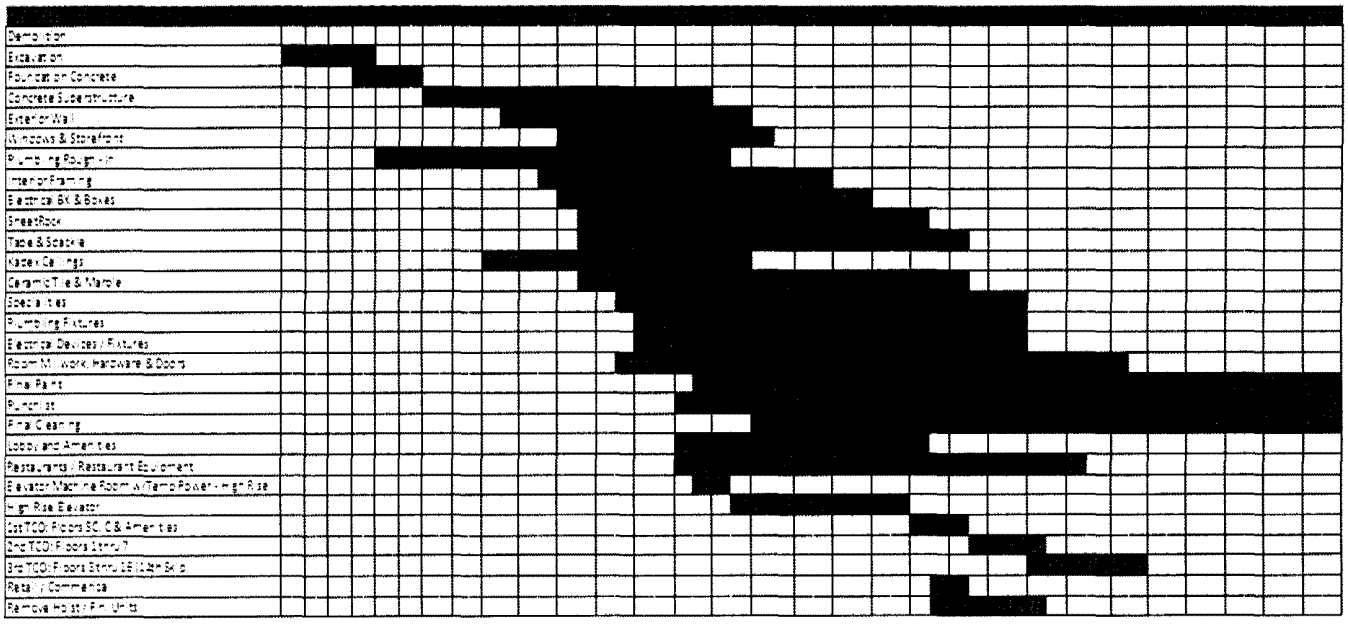
The projections, demand capture, and occupancy performance for the Four Point Flushing Hotel for these types of adjustments to market share within the defined competitive market. Consequently, the actual penetration factors applicable to the project and its competitors for each market segment in each projection year may vary from the penetration factors set out by the industry standards.

SECTION IV: CONSTRUCTION / PERMITS AND LICENSES

A. PARTICULARS OF THE CONSTRUCTION PHASES

Please refer to the timeline for the construction attached at **Exhibit 3.**
(Snap shot below)

This detailed construction timeline was produced by **Century Construction Group,** the General Contractors for the construction. The General Construction Verification Letter dated May 16, 2014 can be found at **Exhibit 3.**



Snapshot of the Construction Timeline

The construction of the Four Points Flushing Hotel & Condominium project will take approximately 30-months to complete. The submitted schedule at **Exhibit 3.** The project location is demolished in early 2014. The building is currently scheduled to start excavation soon.

The developer obtained all necessary permit and licenses in demolition, and is scheduled to obtain the permit and licenses for construction and development of the project. The actual

construction is expected to start at the end of 2014, and it is anticipated to be completed by mid-2017.

The timeline provides the particulars of the various phases of the construction over a period of project months from the commencement of the construction. For example, the early months will consist of the excavation and necessary foundation work. The Shoring of Excavation is expected to take 4 months, the construction timeline describes that concrete will be poured into concrete slabs for the individual floors. At this time, the construction of the hotel has made considerable headway. The construction timeline above provides the particulars of multiple phases of the construction over a period of 30 months from the commencement of the construction.

(b)(4)

The Four Points Flushing Hotel hard construction costs prepared by ***Century Construction Group*** have been estimated to be [redacted] and the estimated time to complete the construction will be within **30 months**.

(i) **Analysis Method of the Construction Timeline and Costs**

The construction timeline is estimated to be 30 months excluding the time to demolish the existing structure. The construction budget for the project is estimated at [redacted] The hotel (b)(4)
will include 210 guest rooms/suites, offering a restaurant, bar and lounge, an indoor pool, fitness center, conference rooms, and a 1,025 SF retail/gift shop space located in the lobby area. The construction of the Project will take approximately 30-months to complete. The construction budget was estimated by **Century Construction Group** This was based on their previous experience of projects similar in size and nature and scope. [1]

Century Construction Group has worked in the construction industry for twenty (20) years and have supervised, managed and/or constructed similar projects to Four Point Flushing Hotel & Condomium. Century's experience includes hospitality, commercial interior and residential projects, such as Marriot Fairfield Inn, Leavitt Manor Condominium, Whitestone Tower Condominium all located in Flushing.

(ii) **Mr. George Xu is an Expert in the Field.**

Mr. George Xu is also the owner of the Four Point Flushing Hotel & Condominium project and the owner of the proposed Century New York City Regional Center. He is the founder and President of Century Development Group, a real estate development company. With over 20 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential, hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Century New York City Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

Re: Four Points Sheraton / Luxury Condo Development
134-37 35th Avenue, Flushing NY 11354

Dear CSC EB-5 Unit Officer:

Century Construction Group was hired by Farrington Realty LLC as the general contractor on the above-referenced Project. I am the president of Century Construction Group and have worked in the construction industry for twenty years and have supervised, managed and/or constructed. My experience includes hospitality, commercial interior and residential projects. I have constructed similar projects to the proposed Four Points Sheraton in term of size, budgets and timeline. Such as Marriot Fairfield Inn, Leavitt Manor Condominium, Farrington Estate all located in Flushing. I have been asked by Farrington Realty, LLC to provide you with some information concerning the Project in connection with certain funding obtained by EB-5

(b)(4)

Century Construction Group has advised that construction estimate cost would be [redacted] The construction timeline is 30 months. This mixed used building consists of luxury condominium, hotel, commercial retail, community facility/medical offices, and parking garage. The Four Points Sheraton will provide 210 keys and 101 Luxury Condo. The project is scheduled to start in beginning of August 2014. I attest that the construction budgets and timeline are estimated based on established industry standards

Very Truly Yours,

George Xu
President

35-06 Leavitt St., Suite CF-A Flushing, NY 11354
Tel: (718) 939-1060 Fax: (718) 939-1036

(iii) **Satisfactory Compliance with *Matter of Ho*:**

Mr. George Xu has the appropriate qualifications that validate his position as an expert in the field, he is therefore in a position to be an authority on the construction budget and timeline.

In addition, George Xu's statement satisfactorily complies with the *Matter of Ho* in terms of comparison studies of the business described. On page 9 of the *Matter of Ho*, the submitted documents shall contain *"a comparison of competition's products."* And *"set forth the business' organizational structure and its personnel's experience*". The letter and professional profile includes Mr. George Xu's previous experience and construction timeline and the attached documentation for Century Construction Group verifies their ability to accurately assess the construction budget based on the comparison studies of similar projects in similar locations.

PERMITS AND LICENSES

In New York City the construction is "as of-right" development which complies with all applicable zoning regulations and does not require any discretionary action (special permit or variance) by the City Planning Commission or Board of Standards and Appeals for approval. Assuming that the project complies with all other Code and Zoning regulations, the NYC Department of Buildings Plan Examiner Plan Examiner will approve the Plans, further to the architect's construction detailed blueprints and renditions.

It is not necessary for the project to seek the additional approvals of the City Planning Commission, or of the Local Community Board, or of any other outside party of interest. If the project complies with the applicable Zoning Laws currently in force, the developer is entitled to build. Therefore building permits are only valid for a limited amount of time and the project will apply for the relevant permits prior to the commencement of the construction activities.

Below are **Sample Permits for Century Construction Group's Previous Projects.**

SECTION V: EMPLOYMENT AND JOB CREATION

(b)(4)

Based on the EB-5 Economic Impact Studies conducted by Bleakly Advisory Group, the Four Point Flushing Hotel will create [redacted] jobs, including [redacted] jobs from direct and indirect from construction employment, [redacted] direct jobs from operation, and [redacted] indirect jobs from operation. The project intends to raise [redacted] from [redacted] EB-5 investors.

The project is a mixed-use development. It is complex in terms of estimating its job creation effects. From permanent operations, impacts to final demand include the hotel, a real estate management entity that will lease commercial space, manage the condominium association and parking garage, plus the business operations of retail tenants. The issue of how the community center/space will be operated and whether income projections from that facility will be sufficient to support permanent employment are discussed in the Economic Impact Studies. In addition, the tenant-created employment is not included in the total calculation of the EB-5 capital raise.

The operational direct jobs are listed as follows:

Direct Employees from Hotel Operation			
	Position	Employees Needed	Weeks to Open
	Management		
1	General Manager		
2	Assistant General Manager		
3	Controller		
4	Assistant Controller		
5	Guest Service Manager		
6	Guest Service Supervisor		
7	Executive Housekeeper		
8	Housekeeping Supervisor		
9	Chief Engineer		
10	Director of Sales		
11	Sales Coordnator		
	Total		
	Position	Employees Needed	Days Paid Till Open
	Line Level		
1	Guest Service Agent		
2	Night Auditor		
3	Breakfast Attendant		
4	Room Attendant		
5	Houseman		
6	Maintencance Tech		
7	Parking Valets		
8	Food Service		
	Total		

(b)(4)

CONSTRUCTION AND OPERATION IMPACTS

Construction Impacts

Revised construction costs as provided by the Client are itemized. Please see the Economic Studies for details. Approximately 88% of the project's development budget can be claimed as having an economic impact to the Region. The adjustment was made by excluding debt service reserves, property taxes during construction and a portion of the estimated financing costs.

Annual Operations Impacts (b)(4)

Projected Year 3 operating revenues total [redacted] and represent an impact to final demand. It can be assumed that in the range of [redacted] of these annual operating costs for the hotel represent personnel/labor costs.

After adjusting for inflation (back to 2010), the resulting stabilized year impact to final demand totals [redacted] For purposes of using RIMS II, the studies separated food service operations from the hotel. Approximately [redacted] of this direct output was allocated to the "Hotels and Motels, including casino hotels" industry sector and the balance of [redacted] was allocated to food services and drinking places. In addition the project will generate income as a real estate investment from rents, operations of the proposed "community space" and management of the parking garage. We initially estimate that potential lease income at [redacted] when discounted to 2010$. As shown in the following table, inflation-adjusted stabilized year revenues support [redacted] jobs including direct, indirect and induced effects. This estimate is higher than previously estimated from the hotel alone.

To sum up, the Four Point Flushing Hotel will create [redacted] jobs, including [redacted] jobs from direct and indirect from construction employment, [redacted] direct jobs from operation, [redacted] indirect jobs from operation. The project intends to raise [redacted] from [redacted] EB-5 investors.

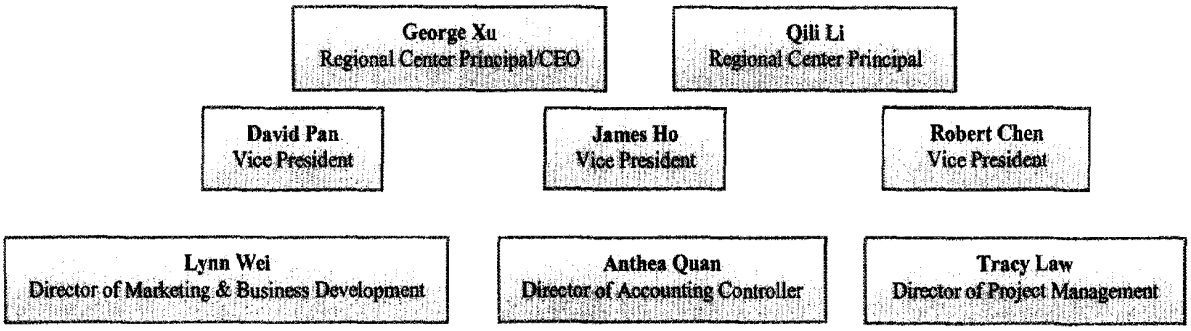
EB-5 Summary		
Direct Construction Employment	[redacted]	Construction period > 2 years allows direct jobs for construction hard costs
Indirect Construction Employment		Indirect effects across all industry sectors during the construction period
Direct Permanent (Net gain)		Direct FTE jobs from annual hotel operations at stabilized occupancy
Indirect Permanent (Net gain)		Indirect jobs supported by annual operations
Total		EB-5 credited jobs created (indirect construction + direct FTE + indirect employment + tenants)
Ratio of 10 Jobs		Units
pe		nvested (Assumes project is located in a Targeted Employment Area)
		Total Potential EB-5 Equity Capital

(b)(4)

SECTION VI: MANAGEMENT AND CORPORATE STRUCTURE

The business organizational structure and personnel experiences are as follows:

Business' organizational structure and its personnel's experience



George Xu, CEO/Regional Center Principal

Mr. George Xu is the founder and the principle of the Century New York City Regional Center ("CNYCRC"). Mr. Xu is also the founder and President of Century Development Group, a real estate development company. With over 16 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential, hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

Qili Li, MD, Regional Center Principal

In private practice for more than 14 years specializing in the field of Obstetrics and Gynecology in downtown Flushing, Queens County, New York City. Dr. Li attended the Sophie Davis School of Biomedical Education were She graduated with Magna Cum Laude with honors. She received her Medical Doctor degree from New York Medical College. She completed her internship and residency training in Obstetrics/Gynecology at North Shore University Hospital at Manhasset, New York. She is board certified in the specialty of Obstetrics/Gynecology. She is a fellow of the American College of Obstetrics/Gyneoclogy (ACOG). In recent years, like many of her colleagues, Dr. Li has expanded her interest/investment in real estate. She is currently involved in several real estate development projects ranging from high end condominium to hotel construction.

James Ho, Vice President

Mr. James Ho graduated from Polytechnic University majoring in Electrical Engineering and Computer Science. Mr. Ho has seven years of experience in computer programming and twelve years in securities trading and security related business. Currently he is involved in real estate development of three projects in New York City area. Mr. Ho's role in the CNYCRC is to provide oversight of operations, maintain cohesion between a project's developer, general contractor, law and accounting firms, and to ensure overall compliance.

Robert Chen, Vice President

Mr. Robert Chen oversees the overall operations of the Regional Center. He's also in charge of due diligence and evaluating potential projects and determines business feasibilities. Prior to join CNYCRC, Mr. Chen has over 10 years' experience in senior manager position with FedEx. He has owned, managed and operated companies in computer wholesale and repair business. Mr. Chen received his Bachelor of Science degree in Environmental Health Science from City University of New York.

David Pan, Vice President

Mr. David Pan has over 15 years of experience in fixed-income securities trading and risk management, having worked in various roles at Credit Suisse, Citigroup, Deutsche Bank and the hedge fund industry. Formerly a Director at Credit Suisse in the Strategic Risk Management division covering Residential Mortgage Backed Security (RMBS) business where he was instrumental in developing models and methodologies in assessing the firm's risk exposure to the mortgage security market. Prior to his Wall Street career, Mr. Pan spent 10 years as a senior software engineer responsible for the development of the state-of-the-art fixed-income security trading and analytics software systems. He graduated with a Bachelor's degree in Computer Science from Queens College, City University of New York.

Anthea Quan, Accounting Controller

She is responsible for the accounting, financial reporting and audit functions. Also performs management of operating cash flow, financial analysis, obtaining financial for development projects and investor distribution. She is passionate about accounting and has experience working with a variety of small business. Ms. Quan graduated from Yanbian University in China with a bachelor of mathematics. She is fluent in Chinese, English and Korean, resides in New York with her husband.

Tracy Law, Director of Project Management

Ms. Tracy Law is responsible for a full spectrum on operations to ensure that projects are done on time and on budget. Her constant communication with contractors and architects provides a strong network of relationships in the field. She is responsible for supervising and coordinating OS&E and FF&E. She is integral in bringing new hotels to opening. Ms. Law graduated with a Bachelor of Science degree in Accounting from Queens College, City College of New York.

Lynn Wei, Director of Marketing and Business Development

Ms. Lynn Wei is responsible for a full spectrum of business development initiatives including creating and overseeing international marketing strategies for all CNYCRC project offerings. She is also involved in managing client relations. Ms. Wei is also a senior business development associate at the Century Development Group. In this capacity, she focused on creating Request

for Proposals and general marketing materials, as well as developing a customer analytical database, and implementing strategic marketing and communication initiatives. Ms. Wei graduated with a Master of Science degree in Economics from Brooklyn College, City University of New York and a Bachelor of Administrative Degree in Marketing from Shanghai Finance University.

Re: Proposed Four Points Flushing
Flushing, New York
HVS Reference: 2013010447

Dear Mr. Xu:

Pursuant to your request, we herewith submit our self-contained appraisal report pertaining to the above-captioned proposed hotel. We have inspected the real estate and analyzed the market conditions in the Flushing, New York area. We have also reviewed the proposed improvements for this site. Our report was prepared in accordance with, and is subject to, the requirements of the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) and the Uniform Standards of Professional Appraisal Practice (USPAP), as provided by the Appraisal Foundation.

Based on our analysis, it is our opinion that the "as is" market value of the fee simple interest in the Proposed Four Points Flushing, as of June 14, 2013, is:

[redacted] (b)(4)

Based on our analysis, it is our opinion that the "when complete" prospective market value of the fee simple interest in the real and personal property of the Proposed Four Points Flushing, as of March 1, 2016, will be:

[redacted] (b)(4)

This value estimate equates to [redacted] per room.

We have also estimated the prospective market value of the subject property as of its projected date of stabilization. Based on our analysis, it is our opinion that the "when stabilized" prospective market value of the fee simple interest in the real and personal property of the Proposed Four Points Flushing, as of March 1, 2018, will be:

[redacted] (b)(4)

We have made no assumptions of hypothetical conditions in our report. The analysis is based on the extraordinary assumption that the described improvements have been completed as of the prospective "when complete" date of value. The reader should understand that the completed subject property does not yet, in fact, exist as of the date of appraisal. Our appraisal does not address unforeseeable events that could alter the proposed project and/or the market conditions reflected in the analyses; we assume that no significant changes, other than those anticipated and explained in this report, will take place between the date of inspection and date of prospective value. We have made no other extraordinary assumptions specific to this appraisal. However, several important general assumptions have been made that apply to this appraisal and our valuations of proposed hotels in general. These aspects are set forth in the Assumptions and Limiting Conditions chapter of this report.

We hereby certify that we have no undisclosed interest in the property, and our employment and compensation are not contingent upon our findings. This study is subject to the comments made throughout this report and to all assumptions and limiting conditions set forth herein.

Sincerely,
Hotel Appraisals, LLC

Qualifications

1. Summary of Salient Data and Conclusions

Project:	Proposed Four Points Flushing
Location:	134-37 35th Avenue Flushing, New York 11354
Interest Appraised:	Fee Simple
Highest and Best Use (as if vacant):	Transient lodging facility

LAND DESCRIPTION

Area:	±0.89 acres, or ±38,775 square feet
Zoning:	C2-2 IN R6 - Commercial District
Assessor's Parcel Number:	Block 4949, Lot 31
FEMA Flood Zone:	X

PROPOSED IMPROVEMENTS DESCRIPTION

Expected Opening Date:	March 1, 2016
Property Type:	Upscale, select-service lodging facility
Building Area:	±350,000 square feet (proposed Four Points and Element combined)
Guestrooms:	210
Number of Stories:	15 (Floors 3-7: Four Points; floors 8-15: element)
Food and Beverage Facilities:	A restaurant, bar and lounge
Meeting Space:	±3,820 square feet (1 banquet, 2 meeting rooms) and a ±17,000-square-foot community facility space
Additional Facilities:	An indoor pool, a fitness center, a lobby workstation, a gift shop, and a guest laundry room
Parking Spaces:	215-space parking garage

SUMMARY OF VALUE PARAMETERS

Number of Years to Stabilize:	Three (after opening)
Stabilized Year:	2018/19

(b)(4)

VALUE OPINIONS AS OF JUNE 14, 2013

Land Value:	
"As Is" Market Value:	

VALUE OPINIONS AS OF MARCH 1, 2016

Income Capitalization Approach:	
Sales Comparison Approach:	Not Applicable
Cost Approach:	
"When Complete" Prospective Market Value:	
Real and Personal Property:	The real and personal property value conclusions exclude any value attributable to intangibles. All value attributable to the intangible property has been removed with the assumed expense of a management fee and a franchise fee (if applicable) in the valuation process. As a result, our value conclusion pertains to the real and personal property components only.

VALUE OPINION AS OF MARCH 1, 2018

"When Stabilized" Prospective Market Value:	
Real and Personal Property:	The value conclusion pertains to the real and personal property components only.

ASSIGNMENT CONDITIONS

(b)(4)

Extraordinary Assumptions:	The analysis is based on the extraordinary assumption that the described improvements have been completed as of the prospective "when complete" date of value. The reader should understand that the completed subject property does not yet, in fact, exist as of the date of

	appraisal. Our appraisal does not address unforeseeable events that could alter the proposed project and/or the market conditions reflected in the analyses; we assume that no significant changes, other than those anticipated and explained in this report, will take place between the date of inspection and date of prospective value. We have made no other extraordinary assumptions specific to this appraisal. However, several important general assumptions have been made that apply to this appraisal and our valuations of proposed hotels in general. These aspects are set forth in the Assumptions and Limiting Conditions chapter of this report.
Hypothetical Conditions:	We have made no assumptions of hypothetical conditions in our report.

2. Nature of the Assignment

Subject of the Appraisal

The subject of the appraisal is the fee simple interest in a ±38,775-square-foot (±0.89-acre) parcel to be improved with an upscale, select-service lodging facility; the hotel will be associated with the Four Points by Sheraton brand, which is affiliated with Starwood Hotels & Resorts. The subject site is currently improved with a two-story commercial building that was previously used as a night club and a nail supply store. The building is currently vacant and is scheduled be demolished by the end of 2013.

The proposed Four Points is expected to open in March 2016 and will feature 210 rooms, a restaurant, bar, and lounge, an indoor pool, a fitness center, a banquet hall, two meeting rooms, a ±17,000-square-foot community facility space, a lobby workstation, guest laundry facilities, and a gift shop. The community facility space is expected to be used by the community for recreation, sports, or cultural purposes and as additional meeting space for the hotel.

The 210-room Four Points will be developed in conjunction with a 148-room element by Westin, as part of a dual-branded development. They will be operated by the same management company. The 15-story joint tower will feature 210 rooms dedicated to the Four Points on the third to seventh floor and 148 rooms dedicated to the element on the eighth to fifteenth floor. Some common spaces, such as the indoor pool, fitness center, community facility space and guest laundry facilities will be shared between the two properties. Specific entities, such as the lobby, food and beverage outlets, meeting space, business center/lobby workstation and gift shop/market pantry will remain separate.

The joint tower is a part of a mixed-use development that will include ±10,000 square feet of commercial and retail space along 35th Avenue at the ground level. According to the developer, the commercial and retail spaces will be operated as separate entities; therefore, these components have been excluded from this appraisal.

The proposed subject hotel will also feature all necessary back-of-the-house space. The civic address of the proposed Four Points is 134-37 35th Ave, Flushing, New York 11354.

Property Rights Appraised

The property rights appraised are the fee simple ownership of the land and improvements, including the furniture, fixtures, and equipment. The fee simple estate is defined as "absolute ownership unencumbered by any other interest or

estate, subject only to the limitations imposed by the governmental powers of taxation, eminent domain, police power, and escheat."[1]

The Proposed Four Points Flushing is appraised as an open and operating facility.

Pertinent Dates

The effective date of the "when complete" prospective market value opinion is March 1, 2016. The effective date of the "when stabilized" prospective market value conclusion is March 1, 2018. All projections are expressed in inflated dollars. The subject site was inspected by Rebecca Lee on June 14, 2013. The "as is" date of value is June 14, 2013. Roland de Milleret, MAI participated in the analysis and reviewed the findings, but did not personally inspect the property for the purposes of this appraisal; however, Roland de Milleret, MAI has inspected the property for a previous HVS assignment. (b)(4)

Ownership, Franchise, and Management Assumptions

The developer of the proposed subject property is Farrington Realty, LLC; the parent company of this owning partnership is Century Construction Group Corp, which is based in Flushing, New York. The subject site was last sold in June 2003; Farrington Realty, LLC has owned the site since 2003 and purchased it at this time from Smarkel, LLC for a reported price of [redacted] No other transfers of the property have reportedly occurred since 2003.

We assume that the proposed hotel will be operated by a third-party professional management company that is experienced in the operation of upscale, select-service hotels in this region. The management team has not been selected as of the date of this appraisal. We have assumed a market-appropriate total management fee o[redacted]f total revenues in our study.

The proposed subject property will reportedly operate under a franchise agreement with Four Points by Sheraton, which is affiliated with Starwood Hotels & Resorts; the terms of the franchise agreement has yet to be finalized. We have assumed that the owner will secure a license agreement that would reflect the terms as published in the company's Uniform Franchise Offering Circular (UFOC). As such, the Four Points by Sheraton franchise is reflected in our forecasts with a royalty fee of [redacted] of rooms revenue, and a marketing assessment of [redacted] of rooms revenue. Reservations fees are also due, and are included in the rooms expense line item of our forecast.

(b)(4)

Objective of the Appraisal

The objective of the appraisal is to develop an opinion of the subject property's "as is" market value, "when complete" prospective market value, and "when stabilized" prospective market value. The following definition of market value has

[1] Appraisal Institute, The Dictionary of Real Estate Appraisal, 5th ed. (Chicago Appraisal Institute, 2010).

been agreed upon by the agencies that regulate federal financial institutions in the United States:

> The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition are the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:
>
> 1. buyer and seller are typically motivated;
> 2. both parties are well informed or well advised, and acting in what they consider their own best interests;
> 3. a reasonable time is allowed for exposure in the open market;
> 4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
> 5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.[2]

"As is" market value is defined by the Appraisal Institute as follows:

> The estimate of the market value of real property in its current physical condition, use, and zoning as of the appraisal date.[3]

Prospective market value is defined by the Appraisal Institute as follows:

> A value opinion effective as of a specified future date.[4]

The prospective value opinion upon stabilization estimates the market value of a property upon reaching a stabilized level of operation. Operations are stabilized at that point in time when abnormalities in supply and demand or any additional transitory conditions cease to exist and the existing conditions are those expected to continue over the economic life of the property.

Intended Use of the Appraisal

This self-contained report is being prepared for use in the asset evaluation of the proposed subject property.

Identification of the Client and Intended User(s)

The client for this engagement is Farrington Realty, LLC. This report is intended for the addressee firm, and may not be distributed to or relied upon by other persons or entities.

Assignment Conditions

"Extraordinary Assumption" is defined in USPAP as follows:

> An assumption, directly related to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusions. Comment: Extraordinary assumptions presume as fact otherwise uncertain information about physical, legal, or economic characteristics of the subject property; or about conclusions external to the property, such as market conditions or trends; or about the integrity of the data used in an analysis.[5]

The analysis is based on the extraordinary assumption that the described improvements have been completed as of the prospective "when complete" date of value. The reader should understand that the completed subject property does not yet, in fact, exist as of the date of appraisal. Our appraisal does not address unforeseeable events that could alter the proposed project and/or the market conditions reflected in the analyses; we assume that no significant changes, other than those anticipated and explained in this report, will take place between the date of inspection and date of prospective value. We have made no other extraordinary assumptions specific to this appraisal. However, several important general assumptions have been made that apply to this appraisal and our valuations of proposed hotels in general. These aspects are set forth in the Assumptions and Limiting Conditions chapter of this report.

"Hypothetical Condition" is defined in USPAP as follows:

> That which is contrary to what exists but is supposed for the purpose of analysis. Comment: Hypothetical conditions assume conditions contrary to known facts about physical, legal, or economic characteristics of the subject property; or about conditions external to the property, such as market conditions or trends; or about the integrity of data used in an analysis.[6]

---

[5] Appraisal Institute, Uniform Standards of Professional Appraisal Practice, 2012 – 2013 ed.

[6] Appraisal Institute, Uniform Standards of Professional Appraisal Practice, 2012 – 2013 ed.

We have made no assumptions of hypothetical conditions in our report.

We have not made any jurisdictional exceptions to the Uniform Standards of Professional Appraisal Practice in our analysis or report.

Marketing and Exposure Periods

The concepts of marketing period and exposure period are similar and simply reflect different perspectives in time. Exposure period is defined as the estimated length of time that the property interest being appraised would have been offered on the market prior to the hypothetical consummation of a sale at its market value, as of the date of value. The exposure period reflects a retrospective opinion based on an analysis of past events and assumes a competitive and open market. Marketing period refers to the amount of time necessary to market the hotel subsequent to our date of value for it to sell for the appraised value, and thus is a prospective opinion.

Our opinion is that the exposure period for the proposed subject property, prior to our date of value, is estimated to be less than or equal to seven months, while the marketing period for the proposed subject property, subsequent to our date of value, is less than or equal to seven months. The marketing and sales process for hotels is extremely efficient. Brokers specializing in hotel transactions actively solicit potential buyers on an ongoing basis and maintain databases on hotel investor criteria. According to the brokers interviewed, the current period from when a property is listed to when the sale closes is typically six to nine months. Brokers are able to electronically produce marketing materials, elicit interest, schedule property tours, accept offers, and select a buyer in approximately 90 to 120 days. Following the execution of a purchase and sale agreement, the due diligence and closing period is typically 90 days.

Hotel properties are being actively sought after by investors. Since the economic downturn, funds have been established to pursue hotel acquisitions. Quality assets often solicit numerous bids, and for willing buyers and sellers, the marketing process has resulted in the timely closing of transactions. We are also aware that some potential sellers are not actively marketing their hotels at this time. Although these sellers may bring their assets to market during a more robust financing period, their current lack of participation in the process does not influence our opinion concerning the exposure period.

Published surveys report marketing time, not the exposure period. Marketing time is an opinion of the amount of time it might take to sell a property at the concluded market value level during the period immediately after the effective date of an appraisal. Currently, marketing time for luxury/upper-upscale properties, full-service hotels, and select-service hotels is averaging 8.0, 9.1, and 6.9 months, respectively, according to the PWC Real Estate Investor Survey - First Quarter

2013, published by PricewaterhouseCoopers. Overall marketing time is averaging 5.6 months for hotels, as reported by the Real Estate Research Corporation's Spring 2013 Real Estate Survey. The following table illustrates marketing periods reported in recent PWC Real Estate Investor Surveys.

FIGURE 2-1 MARKETING PERIODS (MONTHS)

Property Type	1st Quarter '13	3rd Quarter '12	Year Ago
Luxury/Upper-Upscale	2.0 to 20.0	2.0 to 20.0	2.0 to 20.0
Average	*8.00*	*7.80*	*8.00*
Full-Service	3.0 to 24.0	3.0 to 24.0	3.0 to 24.0
Average	*9.10*	*9.90*	*10.70*
Select-Service	2.0 to 12.0	2.0 to 12.0	2.0 to 12.0
Average	*6.90*	*6.80*	*7.10*
Limited-Service	2.0 to 12.0	2.0 to 12.0	2.0 to 12.0
Average	*7.70*	*7.60*	*8.30*

Source: PWC Real Estate Investor Survey - First Quarter 2013

Competency

Our qualifications are included as an addendum to this report. These qualifications reflect that we have the competence required to complete this engagement, in accordance with the competency provision of the Uniform Standards of Professional Appraisal Practice. Our knowledge and experience is appropriate for the complexity of this assignment.

Scope of Work

The methodology used to develop this appraisal is based on the market research and valuation techniques set forth in the textbooks authored by Hospitality Valuation Services for the American Institute of Real Estate Appraisers and the Appraisal Institute, entitled *The Valuation of Hotels and Motels,*[7] *Hotels, Motels and Restaurants: Valuations and Market Studies,*[8] *The Computerized Income Approach to Hotel/Motel Market Studies and Valuations,*[9] *Hotels and Motels: A Guide to*

[7] Stephen Rushmore, *The Valuation of Hotels and Motels.* (Chicago: American Institute of Real Estate Appraisers, 1978).

[8] Stephen Rushmore, *Hotels, Motels and Restaurants: Valuations and Market Studies.* (Chicago: American Institute of Real Estate Appraisers, 1983).

[9] Stephen Rushmore, *The Computerized Income Approach to Hotel/Motel Market Studies and Valuations.* (Chicago: American Institute of Real Estate Appraisers, 1990).

Market Analysis, Investment Analysis, and Valuations,[10] and *Hotels and Motels – Valuations and Market Studies.*[11]

1. All information was collected and analyzed by the staff of Hotel Appraisals, LLC. Information was supplied by the client and/or the property's development team.
2. The subject site has been evaluated from the viewpoint of its physical utility for the future operation of a hotel, as well as access, visibility, and other relevant factors.
3. The subject property's proposed improvements have been reviewed for their expected quality of construction, design, and layout efficiency.
4. The surrounding economic environment, on both an area and neighborhood level, has been reviewed to identify specific hostelry-related economic and demographic trends that may have an impact on future demand for hotels.
5. Dividing the market for hotel accommodations into individual segments defines specific market characteristics for the types of travelers expected to utilize the area's hotels. The factors investigated include purpose of visit, average length of stay, facilities and amenities required, seasonality, daily demand fluctuations, and price sensitivity.
6. An analysis of existing and proposed competition provides an indication of the current accommodated demand, along with market penetration and the degree of competitiveness. Unless noted otherwise, we have inspected the competitive lodging facilities summarized in this report.
7. Documentation for an occupancy and average rate projection is derived utilizing the build-up approach based on an analysis of lodging activity.
8. A detailed projection of income and expense made in accordance with the Uniform System of Accounts for the Lodging Industry sets forth the anticipated economic benefits of the subject property.

[10] Stephen Rushmore, Hotels and Motels: A Guide to Market Analysis, Investment Analysis, and Valuations (Chicago: Appraisal Institute, 1992).
[11] Stephen Rushmore and Erich Baum, *Hotels and Motels – Valuations and Market Studies.* (Chicago: Appraisal Institute, 2001).

9. The appraisal considers the following three approaches to value: cost, sales comparison, and income capitalization. We have investigated numerous improved sales in the market area and have spoken with buyers, sellers, brokers, property developers, and public officials. Because lodging facilities are income-producing properties that are normally bought and sold on the basis of capitalization of their anticipated stabilized earning power, the greatest weight is given to the value indicated by the income capitalization approach. We find that most hotel investors employ a similar procedure in formulating their purchase decisions, and thus the income capitalization approach most closely reflects the rationale of typical buyers.

The value conclusion of the appraisal is based on this investigation and analysis and is conveyed in this self-contained report. The analyses, opinions, and conclusions were developed based on, and this report has been prepared in conformance with, our interpretation of the guidelines and recommendations set forth in USPAP.

3. Description of the Site and Neighborhood

The suitability of the land for the operation of a lodging facility is an important consideration affecting the economic viability of a property and its overall value. Factors such as size, topography, access, visibility, and the availability of utilities have a direct impact on the desirability of a particular site.

The subject site is located in the Flushing district of New York City's Queens Borough. Municipal jurisdictions governing the property include Queens County, and the City and State of New York. The subject site is located in the northwestern quadrant formed by the intersection of Farrington Street and 35th Avenue. The civic address of the proposed hotel is 134-37 35th Avenue, Flushing, New York, 11354.

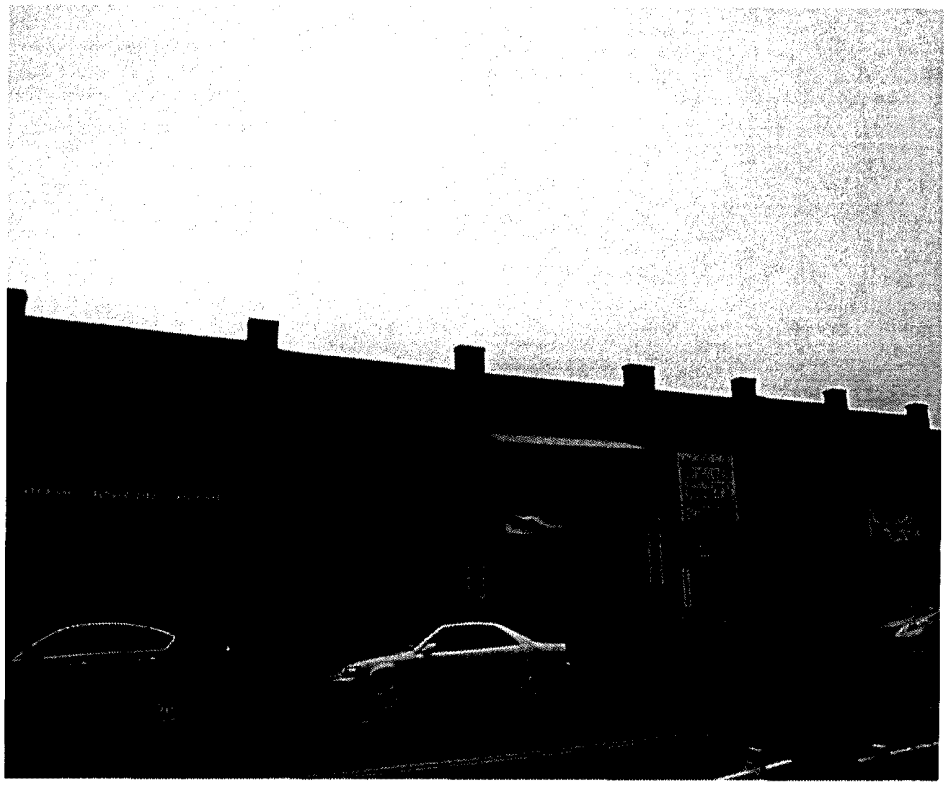
Physical Characteristics

The subject site measures ±0.89 acres, or ±38,775 square feet. The parcel's adjacent uses are set forth in the following table.

FIGURE 3-1 SUBJECT PARCEL'S ADJACENT USES

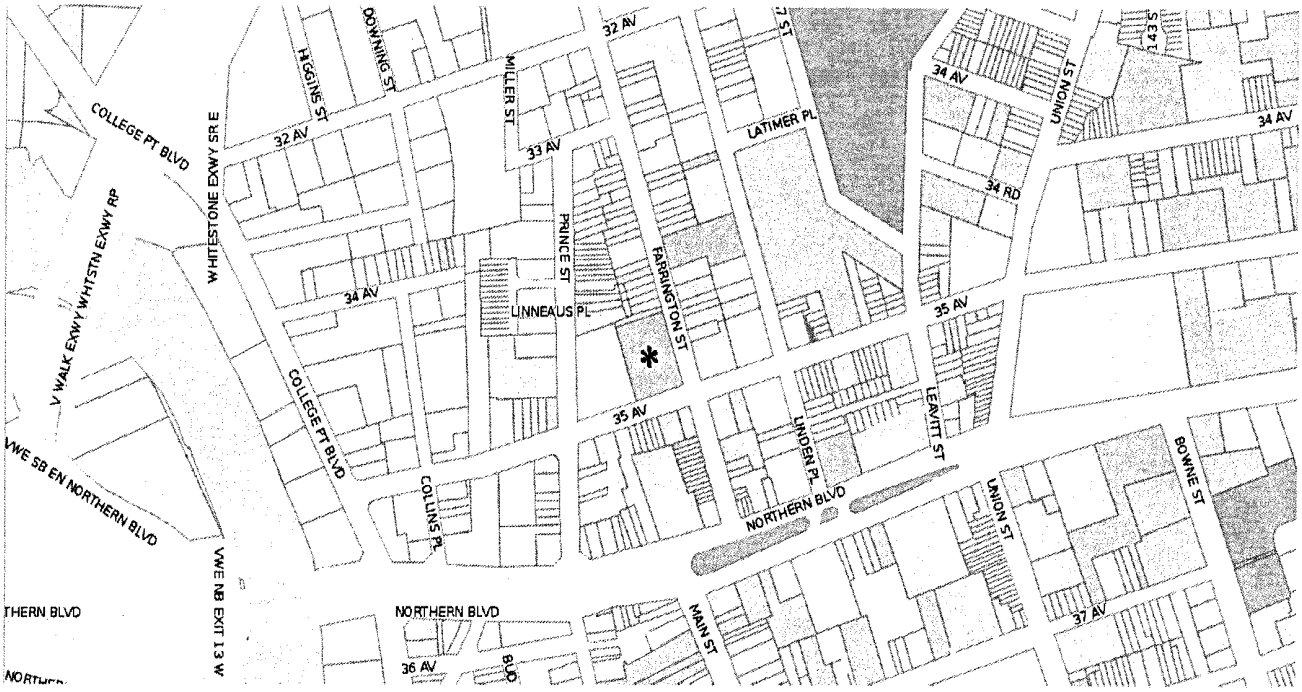
Direction	Adjacent Use
North	Farrington Street & 33rd Avenue
South	Farrington Street & Northern Boulevard
East	35th Avenue and Linden Place
West	35th Avenue and Prince Street

VIEW OF SUBJECT SITE



AERIAL PHOTOGRAPH

PARCEL MAP



VIEW FROM SITE TO THE NORTH

VIEW FROM SITE TO THE SOUTH

VIEW FROM SITE TO THE EAST

VIEW FROM SITE TO THE WEST

Primary vehicular access to the proposed subject property will be provided by Farrington Street and 35th Avenue. The topography of the parcel is generally flat, and the site's shape is rectangular.

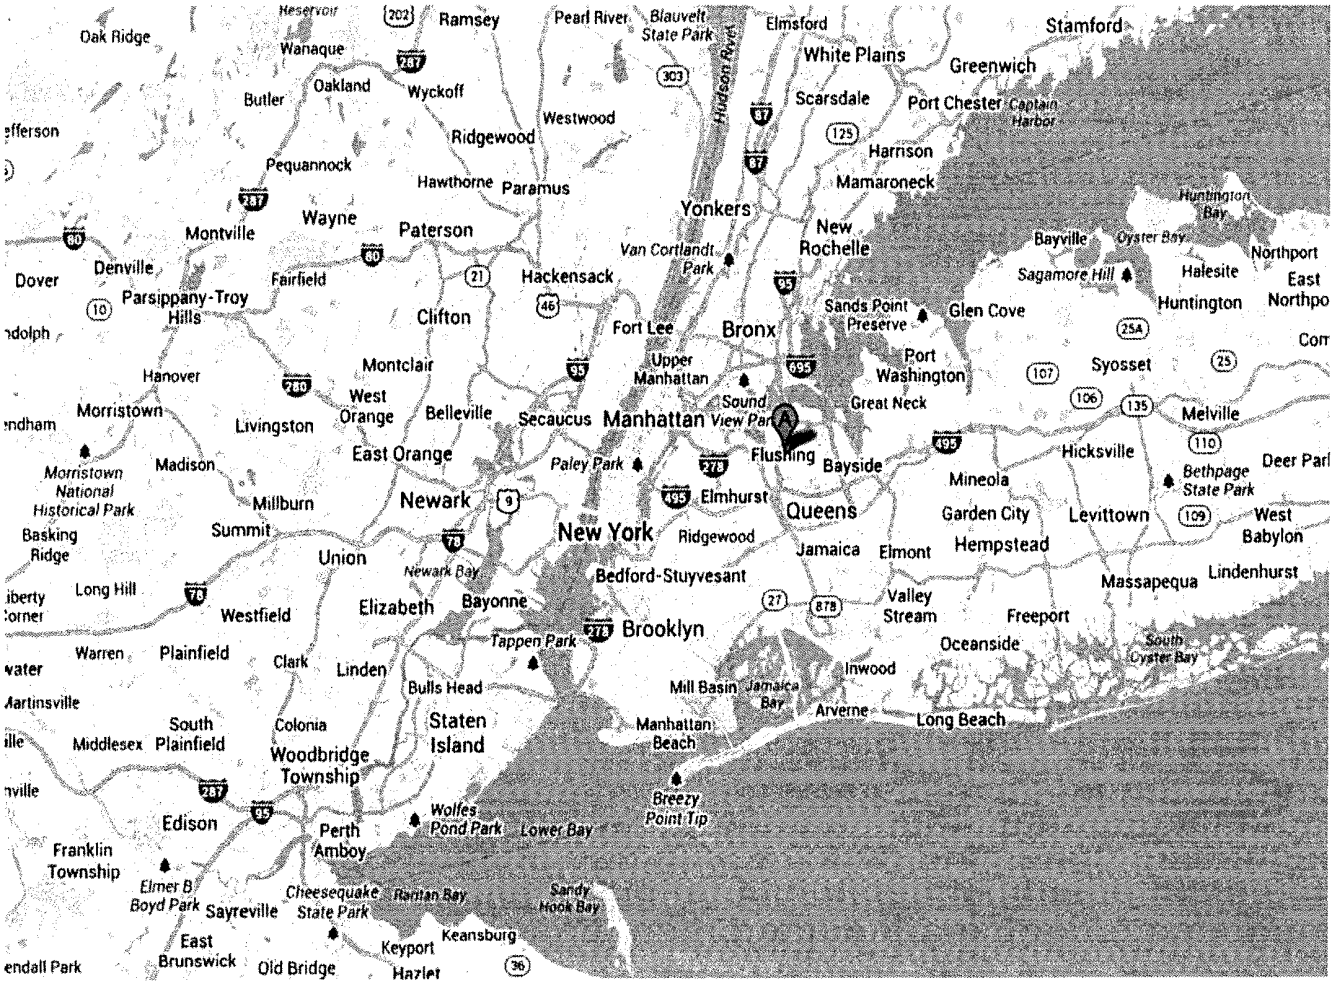
Site Utility

Upon completion of construction, the subject site will not contain any significant portion of undeveloped land that could be sold, entitled, and developed for alternate use. The site is expected to be fully developed with site or building improvements, which will contribute to the overall profitability of the hotel.

Access and Visibility

It is important to analyze the site in regard to ease of access with respect to regional and local transportation routes and demand generators. The subject site is readily accessible to a variety of local, county, state, and interstate highways.

MAP OF REGIONAL ACCESS ROUTES



Primary regional access through the area is provided by east/west Interstate 278, which begins just south of Elizabeth, New Jersey and crosses the five boroughs of New York. Interstate 495, the Belt Parkway/Southern State Parkway, and the Grand Central Parkway/Northern Parkway are other east/west thoroughfares extending from Manhattan east into Long Island. North/south Interstate 95, a major interstate highway, provides access to such cities as New Haven, Connecticut to the north and Philadelphia, Pennsylvania to the south. The subject market is served by a variety of additional local highways, which are illustrated on the map.

The subject site is readily accessible from Interstates 495 (the Long Island Expressway [LIE]), 678, and 295, Grand Central Parkway, and the State Route 25A (Northern Boulevard). The area's extensive network of local streets and highways, its location in a commercially active area of Flushing, and its proximity to LaGuardia Airport enhances the proposed subject property's ability to capture market demand.

Airport Access

Access to and from LaGuardia Airport is gained by Northern Boulevard, which intersects Grand Central Parkway approximately three miles west of the subject site. Travel time from LaGuardia Airport to the subject site is approximately ten minutes, depending on traffic conditions.

Neighborhood

The neighborhood surrounding a lodging facility often has an impact on a hotel's status, image, class, style of operation, and sometimes its ability to attract and properly serve a particular market segment. This section of the report investigates the subject neighborhood and evaluates any pertinent location factors that could affect its future occupancy, average rate, and overall profitability.

The neighborhood surrounding the proposed subject property is characterized by a densely developed mixture of retail and commercial space that is proximate to an excellent public transportation and roadway network and a major airport. The subject property's neighborhood is generally defined by 32nd Avenue to the north, College Point Boulevard to the west, Sanford Avenue to the south, and Parsons Boulevard to the east. This area encompasses some of the most commercially active portions of downtown Flushing, including the majority of Chinese and Korean businesses located in Flushing.

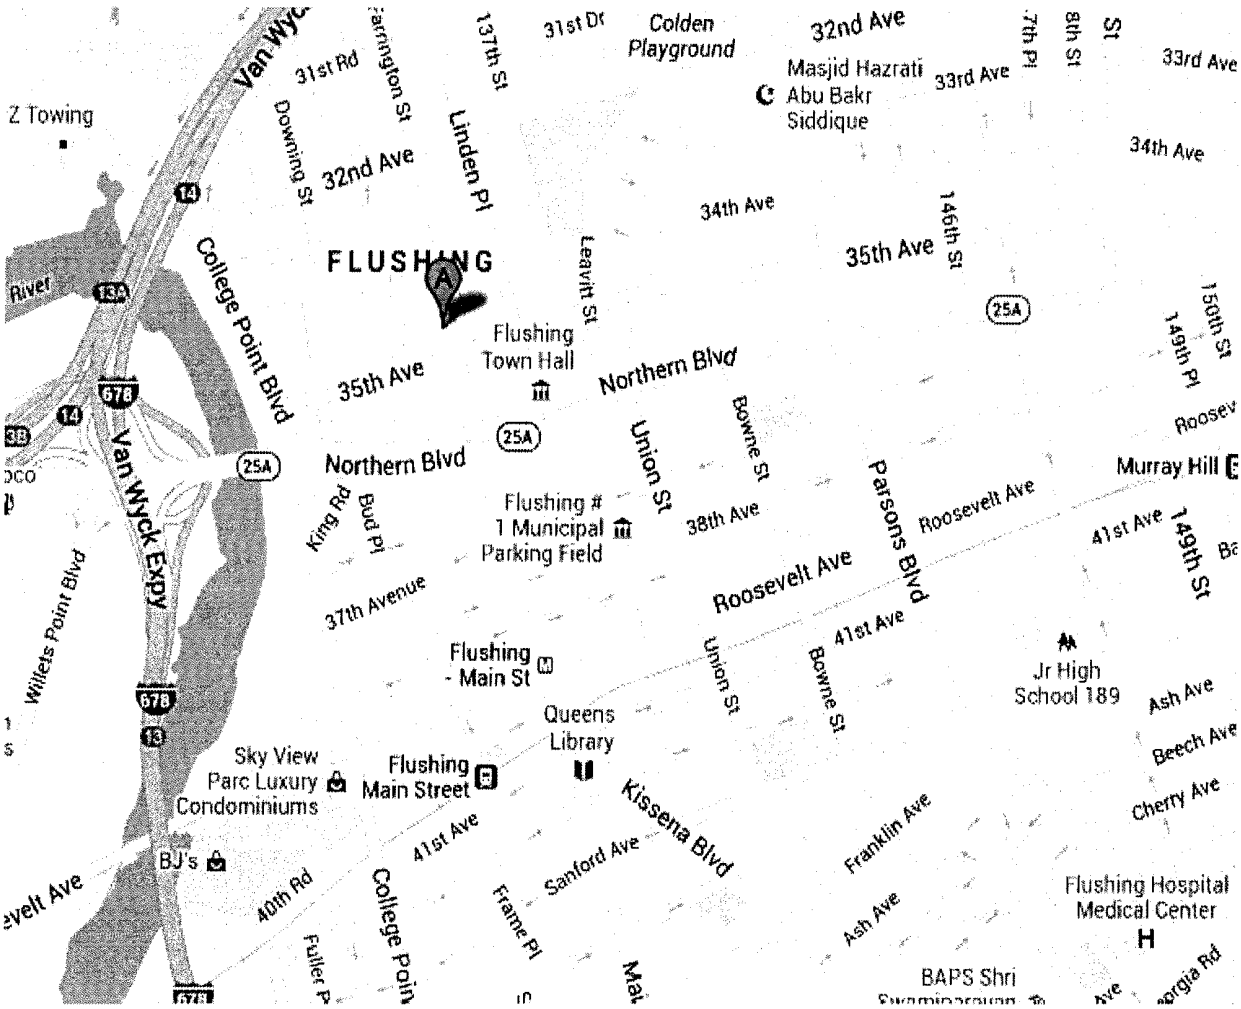
The subject property is located one block from Main Street, the major thoroughfare in Flushing, in an area known as "Chinese Flushing." The majority of the area's banking institutions, department stores, and office spaces are located on or near Main Street. A majority of the buildings and businesses are owned and patronized by the Chinese residents of the area; therefore, the neighborhood presents a fairly homogenous Asian image. Consequently, this area is a popular destination for Asian tourists who appreciate these somewhat familiar surroundings.

From the subject site, access to Manhattan, the commercial center of New York City, may be easily accomplished via the LIE and Grand Central Parkway. Alternatively, motorists may access Manhattan by traveling one block south from the site to westbound Northern Boulevard for roundly six miles and crossing the Queensboro Bridge (also known as the 59th Street Bridge). The proposed subject property benefits significantly from its proximity to the LIE and Grand Central Parkway.

The subject site is also surrounded by other accessible transportation offerings, including the New York City's subway system and the Long Island Rail Road, which are located on Main Street. The 7 Flushing Local and 7 Flushing Express are rapid transit services of the New York City Subway, providing local and express services along the full length of the IRT (Interboro Rapid Transit) Flushing Line. Moreover, Flushing Main Street is a station on the Port Washington Branch of the Long Island Rail Road, serving the neighborhood of Flushing, Queens. The station is located at Main Street and 41st Avenue, off Kissena Boulevard and is 9.5 miles (15.3 km) from Penn Station in Midtown Manhattan.

Overall, access to the subject site is considered to be very good. The proposed subject property's locational attributes are also considered good. The proposed hotel benefits from its proximity to the heavily trafficked Northern Boulevard and Main Street. Moreover, it benefits from relatively easy access to the 7 subway station, LIRR, LIE, and Grand Central Parkway. Considering its anticipated fifteen-story structure, the proposed subject property is also expected to benefit from good visibility attributes within its neighborhood.

MAP OF NEIGHBORHOOD



Overall, the supportive nature of the development in the immediate area is considered appropriate for and conducive to the operation of a hotel.

Utilities

The subject site will reportedly be served by all necessary utilities. We assume that these will be acquired from the most cost-effective providers within the local market.

Soil and Subsoil Conditions

Geological and soil reports were not provided to us or made available for our review during the preparation of this report. We are not qualified to evaluate soil conditions other than by a visual inspection of the surface; no extraordinary conditions were apparent.

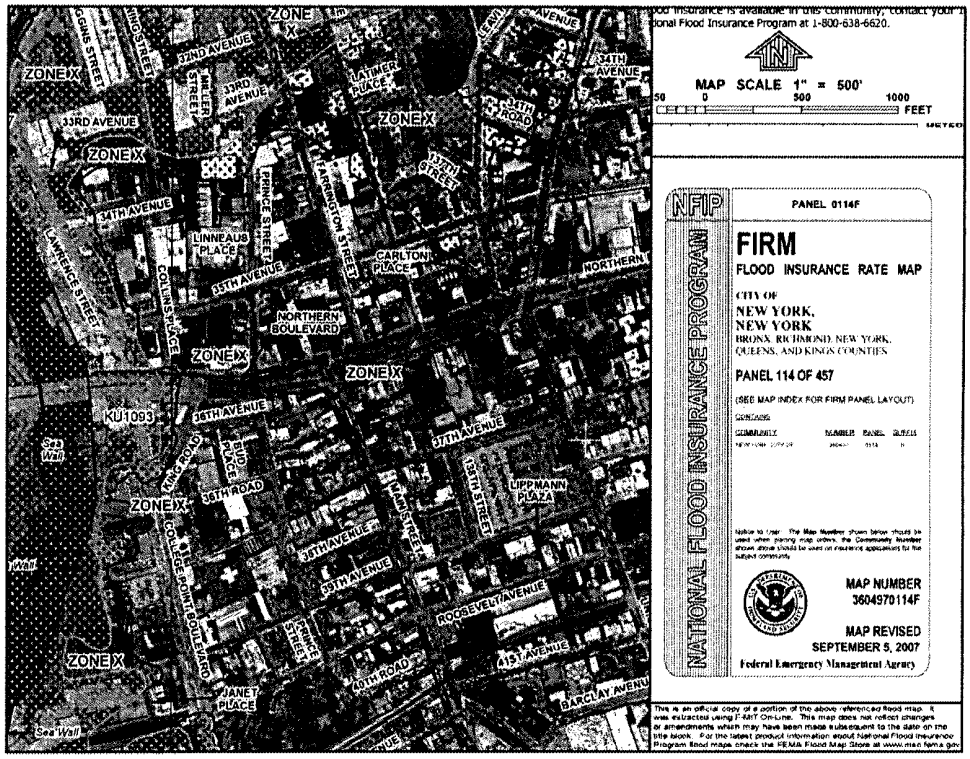
Nuisances and Hazards

We were not informed of any site-specific nuisances or hazards, and there were no visible signs of toxic ground contaminants at the time of our inspection. Because we are not experts in this field, we do not warrant the absence of hazardous waste and urge the reader to obtain an independent analysis of these factors.

Flood Zone

According to the Federal Emergency Management Agency map illustrated below, the subject site is located in flood zone X.

COPY OF FLOOD MAP AND COVER



The flood zone definition for the X designation is as follows: areas outside the 500-year flood plain; areas of the 500-year flood; areas of the 100-year flood with average depths of less than one foot or with drainage areas less than one square mile and areas protected by levees from the 100-year flood.

Zoning

According to the local planning office, the subject property is zoned as follows: ***C2-2 IN R6 - Commercial District.*** This zoning designation allows for most commercial uses, including hotels, offices, and retail. We assume that all necessary permits and approvals will be secured (including the appropriate liquor license if applicable) and that the subject property will be constructed in accordance with

local zoning ordinances, building codes, and all other applicable regulations. Our zoning analysis should be verified before any physical changes are made to the site.

Easements and Encroachments

We are not aware of any easements attached to the property that would significantly affect the utility of the site or marketability of this project.

Conclusion

We have analyzed the issues of size, topography, access, visibility, and the availability of utilities. Advantages of the site include its central location within the Downtown Flushing area, as well as its proximity to LaGuardia International Airport, John F. Kennedy International Airport and Manhattan. No significant disadvantages were noted. As such, the site is considered to be appropriate for hotel use.

4. Description of the Proposed Project

The quality of a lodging facility's physical improvements has a direct influence on marketability, attainable occupancy, and average room rate. The design and functionality of the structure can also affect operating efficiency and overall profitability. This section investigates the subject property's proposed physical improvements and personal property in an effort to determine how they are expected to contribute to attainable cash flows.

Project Overview

The Proposed Four Points Flushing will be an upscale, select-service lodging facility containing 210 rentable units. The subject site is currently improved with a two-story commercial building that was previously used as a night club and a nail supply store. The building is currently vacant and is scheduled be demolished by the end of 2013.

The proposed Four Points is expected to open in March 2016 and will feature 210 rooms, a restaurant and lounge, an indoor pool, a fitness center, a banquet hall, two meeting rooms, a ±17,000-square-foot community facility space, a lobby workstation, guest laundry facilities, and a gift shop. The community facility space is expected to be used by the community for recreation, sports, or cultural purposes and as additional meeting space for the hotel.

The 210-room Four Points will be developed in conjunction with a 148-room element by Westin, as part of a dual-branded development. They will be operated by the same management company. The 15-story joint tower will feature 210 rooms dedicated to the Four Points on the third to seventh floor and 130 rooms dedicated to the element on the eighth to fifteenth floor. Some common spaces, such as the indoor pool, fitness center, ±17,000-square-foot community facility space and guest laundry facilities will be shared between the two properties. Specific entities, such as the lobby, food and beverage outlets, meeting space, business center/lobby workstation and gift shop/market pantry will remain separate.

The joint tower is a part of a mixed-use development that will include ±10,000 square feet of commercial and retail space along 35th Avenue at the ground level. According to the developer, the commercial and retail spaces will be operated as separate entities; therefore, these components have been excluded from this appraisal.

Brand Overview

In April of 1995, Sheraton Hotels & Resorts introduced Four Points, a mid-scale hotel brand offering a full-service hotel experience at a sensible price. Four Points delivers the amenities and services that today's business and leisure travelers are seeking, with 112 locations (with 17,740 rooms) in North America as of December 31, 2012. The brand provides a comfortable, well-appointed room with a two-line telephone, a large desk for working or in-room dining, and comfortable seating. Four Points locations include a restaurant serving three meals a day, room service, a fitness center, a swimming pool, meeting space, and on-site catering. In 2012, the Four Points brand in North America achieved an average occupancy level of 70.7%, an average rate of $111.48, and an average RevPAR of $78.76.

RENDERING OF PROPOSED HOTEL

Summary of the Facilities

Based on information provided by the proposed subject property's development representatives, the following table summarizes the facilities that will be available at the proposed subject property.

FIGURE 4-1 PROPOSED FACILITIES SUMMARY

Guestroom Configuration	Number of Units
King	110
Double/Double	89
ADA King	6
ADA Double/Double	5
Total	210

Food & Beverage Facilities	Seating Capacity
Restaurant, Bar & Lounge	176

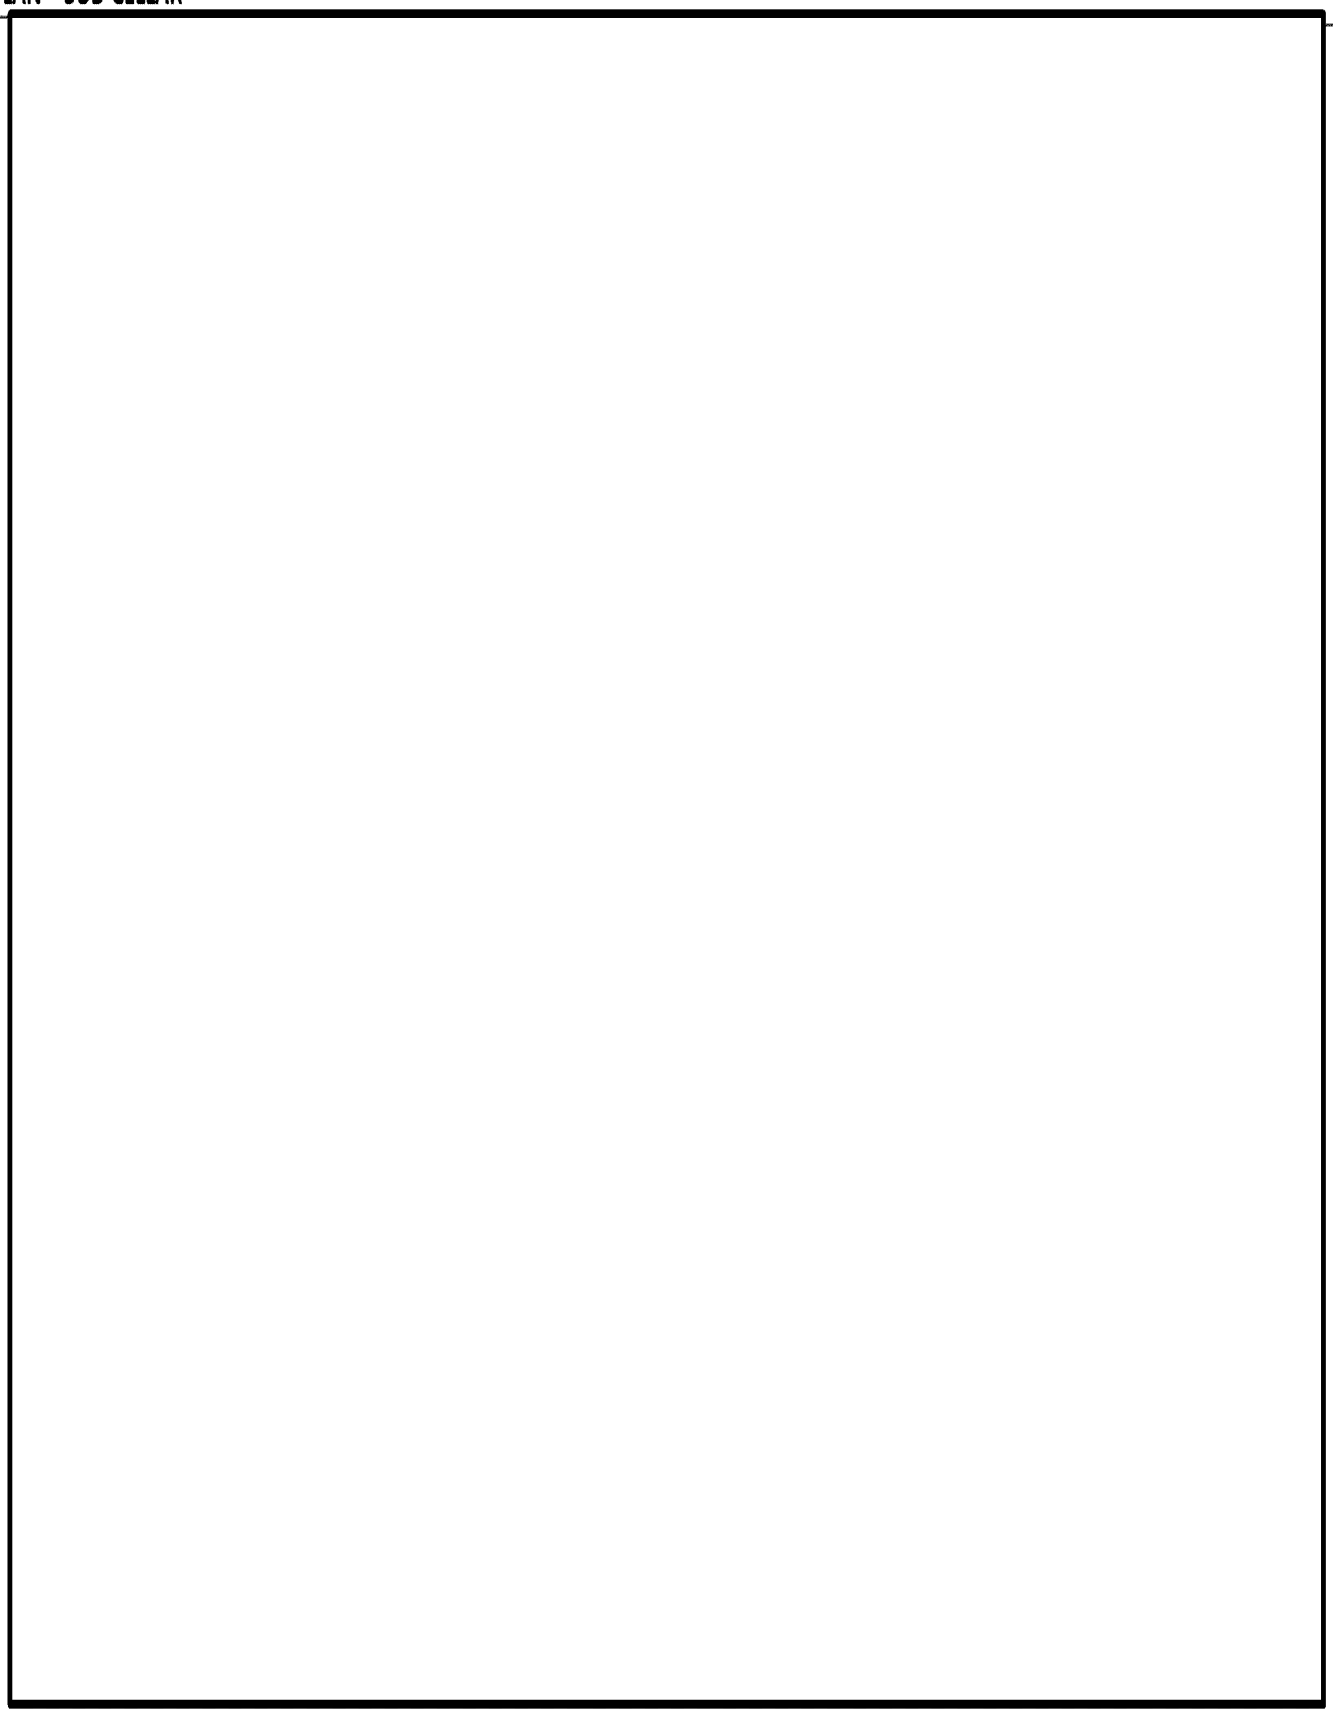
Indoor Meeting & Banquet Facilities	Square Footage
Community Facility	17,000
Banquet Hall	2,800
Meeting Room	590
Boardroom	430
Total	20,820

Amenities & Services	
Indoor Swimming Pool	Fitness Room
Guest Laundry Facility	Lobby Workstation
Vending Areas	Gift Shop

Infrastructure	
Parking Spaces	215
Elevators	2 Guest
Life-Safety Systems	Sprinklers, Smoke Detectors

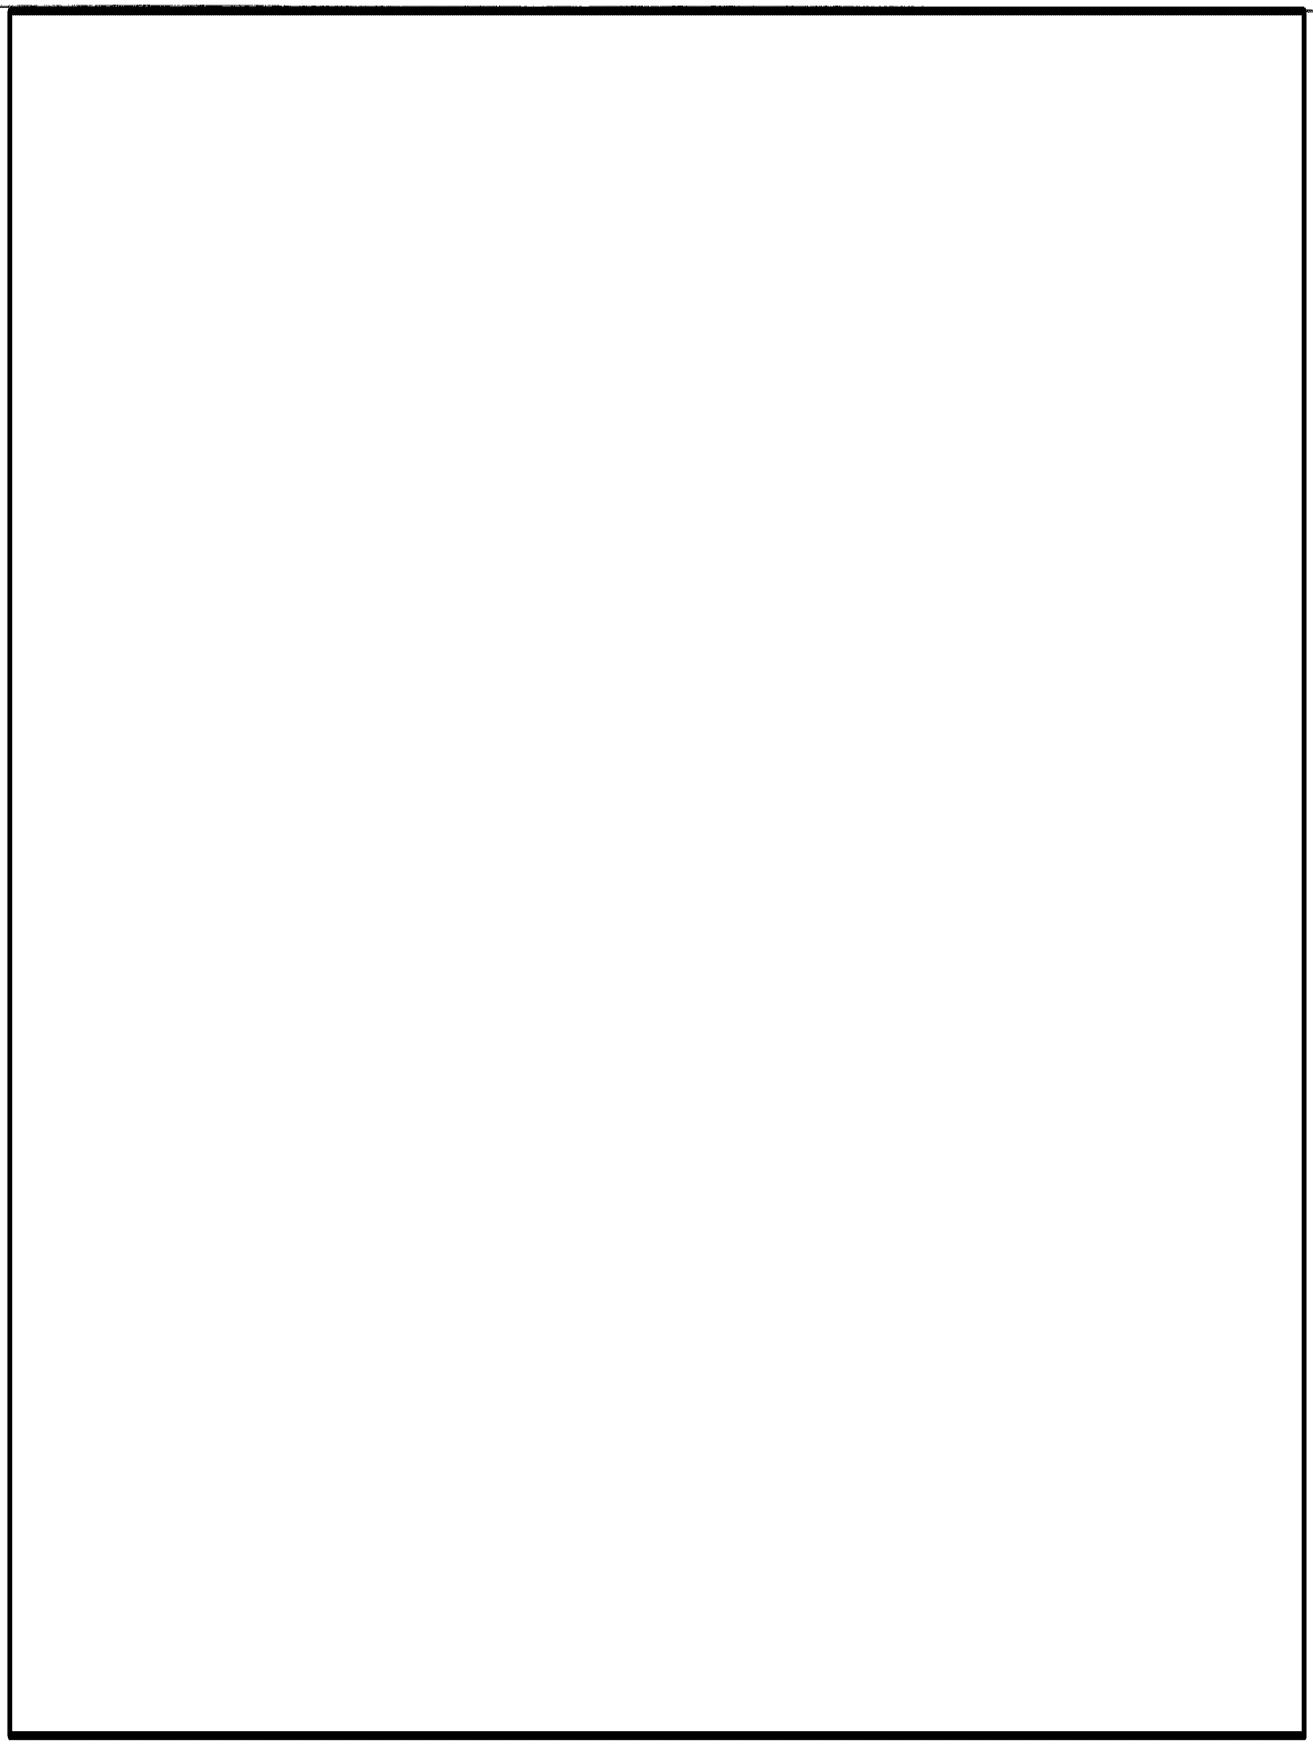
(b)(4)

FLOOR PLAN – SUB-CELLAR

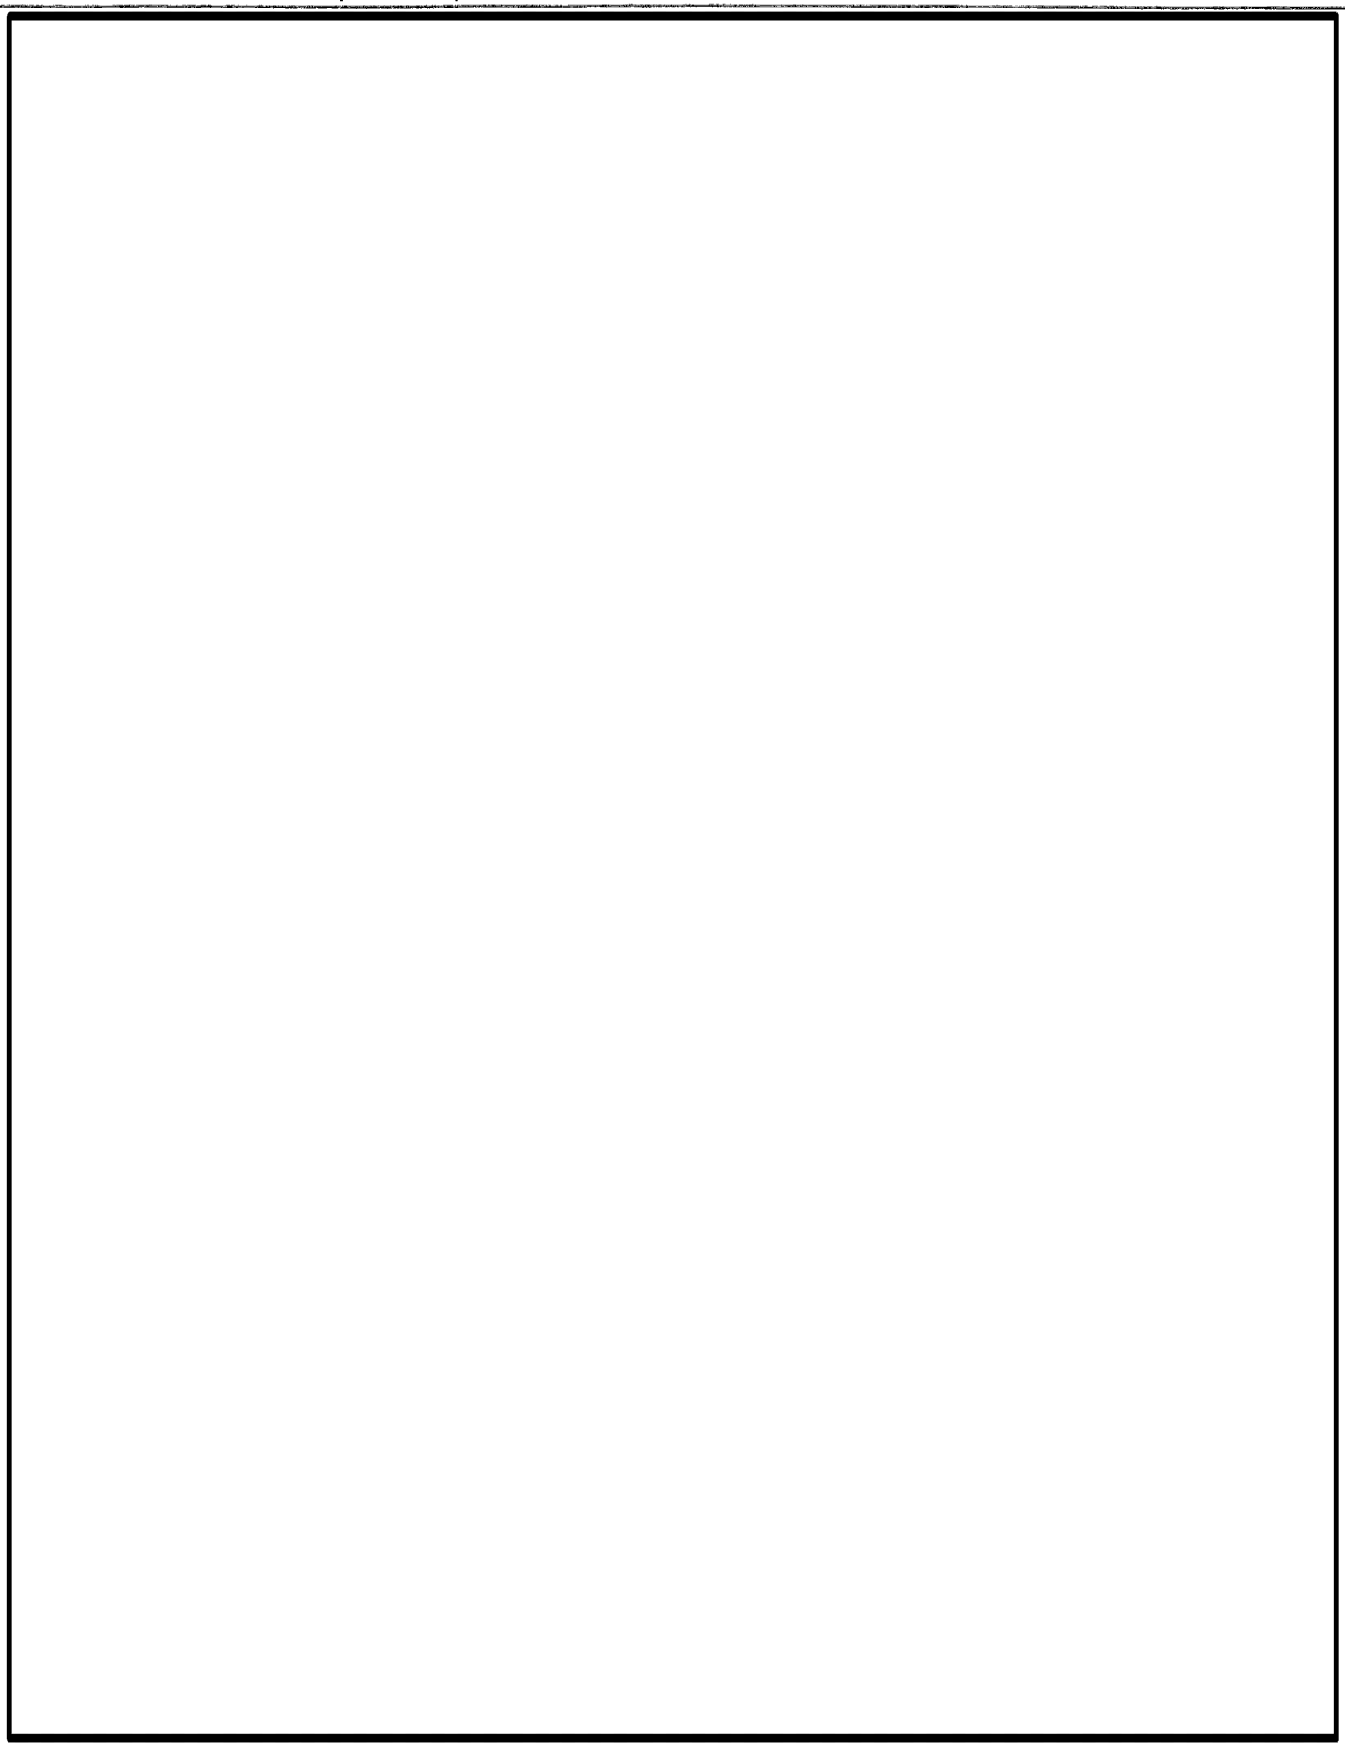


(b)(4)

FLOOR PLAN – CELLAR LEVEL



FLOOR PLAN – GUESTROOM FLOOR PLAN (FLOORS 3-7)



Conclusion

Overall, the subject property should offer a well-designed, functional layout of support areas and guestrooms. All typical and market-appropriate features and amenities appear to be included in the hotel's design. We assume that the building will be fully open and operational on the assumed opening date and will meet all local building codes and brand standards. Furthermore, we assume that the hotel staff will be adequately trained to allow for a successful opening and that pre-marketing efforts will have introduced the product to major local accounts at least six months in advance of the opening date.

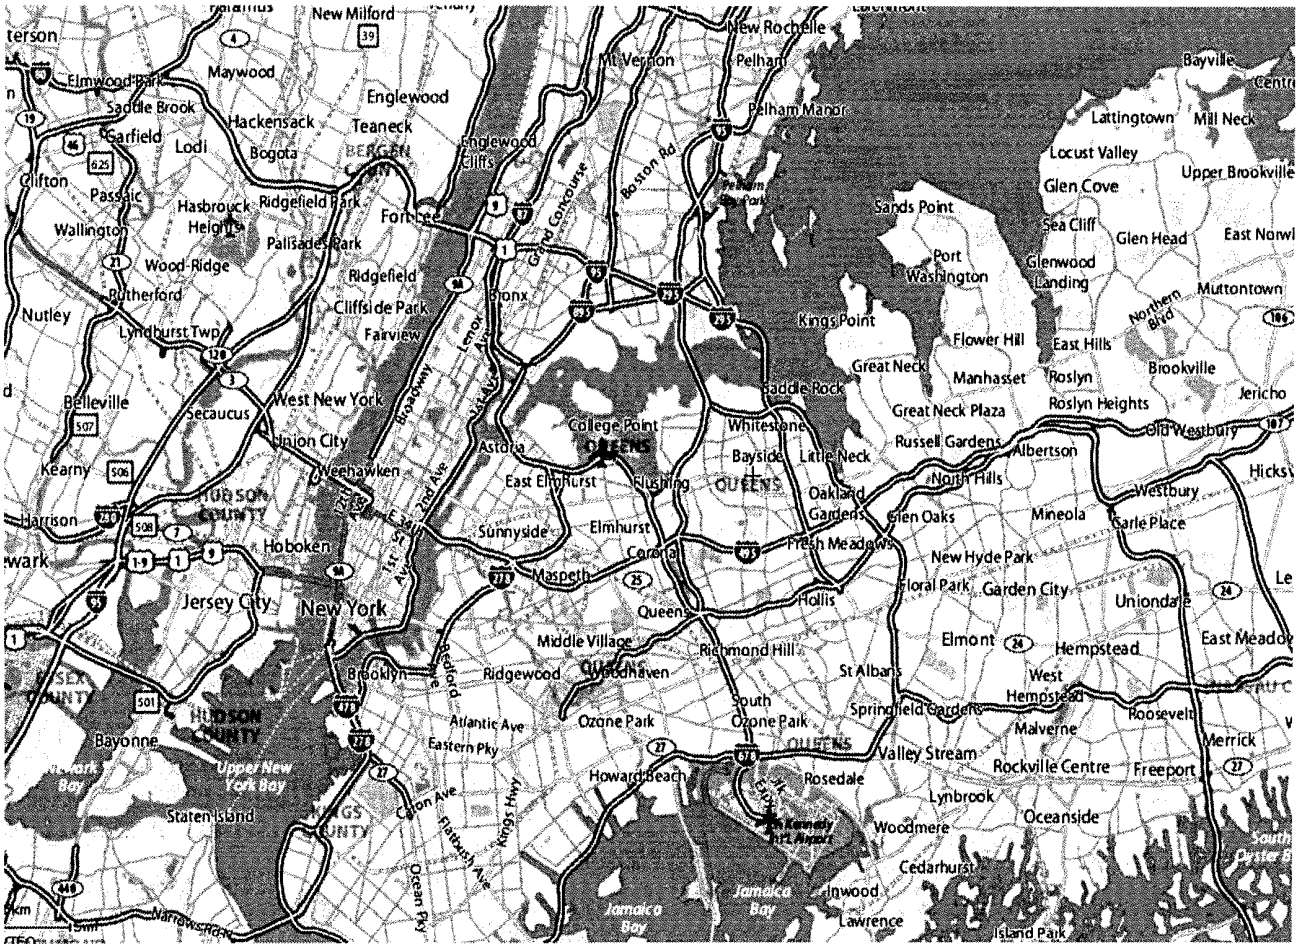
5. Market Area Analysis

The economic vitality of the market area and neighborhood surrounding the subject site is an important consideration in forecasting lodging demand and future income potential. Economic and demographic trends that reflect the amount of visitation provide a basis from which to project lodging demand. The purpose of the market area analysis is to review available economic and demographic data to determine whether the local market will undergo economic growth, stabilize, or decline. In addition to predicting the direction of the economy, the rate of change must be quantified. These trends are then correlated based on their propensity to reflect variations in lodging demand, with the objective of forecasting the amount of growth or decline in visitation by individual market segment (e.g., commercial, meeting and group, and leisure).

Market Area Definition

The market area for a lodging facility is the geographical region where the sources of transient visitation (demand) and the competitive supply are located. The subject property's primary market area is the Borough of Queens, and in a wider sense, New York City as a whole. For statistical purposes, the subject property's market area can be defined by its Metropolitan Statistical Area (MSA): New York-Northern New Jersey-Long Island, NY-NJ-PA MSA. The MSA is the most standard definition used in comparative studies of metropolitan areas. The federal government defines an MSA as a large population nucleus, which together with adjacent counties, has a higher degree of social integration. The subject property's MSA includes 17 counties whose economies are inextricably interconnected: the five boroughs of New York City; Nassau and Suffolk Counties on Long Island; Rockland and Westchester Counties in New York State; and the New Jersey Counties of Bergen, Passaic, Essex, Hudson, Middlesex, Morris, Somerset, and Union. The five counties (or boroughs) within New York City are Bronx County, Kings County (Brooklyn), Queens County, Richmond County (Staten Island), and New York County (Manhattan). Manhattan is also divided into various unofficial communities and areas. The following exhibit illustrates the market area.

MAP OF MARKET AREA



New York City Overview

New York City is recognized as an international commercial and cultural center, and with more than eight million residents, it is one of the most populous cities in the nation and one of the largest in the world.

Renowned for its cultural attractions, entertainment, restaurants, and retail outlets, New York City is one of the most popular tourist destinations in the country. It is home to the United Nations, the Statue of Liberty, and the Empire State Building. The theaters in the Broadway district attract international attention. Lincoln Center (the home of the Metropolitan Opera, the New York Philharmonic, the New York City Ballet and Opera, and the Juilliard School) is among the world's most important centers for the performing arts. The Metropolitan Museum of Art, the Museum of Modern Art, the American Museum of

Natural History, and a number of the City's other museums and galleries are internationally respected.

As the site of Wall Street, New York is the nation's financial and business capital. Manhattan's central business district contains the greatest concentration of commercial activity in the United States. New York is the home of the NASDAQ, American, and New York Stock Exchanges (NYSE), as well as a majority of the nation's investment bankers and brokers and many of the largest commercial banking institutions. In addition to financial institutions, New York City is a major center for a variety of industries, such as fashion, textiles and garments, advertising, publishing and communications, jewelry, design, and technology.

New York City is a major national and international center of commerce and culture, employing an estimated four million. It remains the financial capital of the United States, and the city's economy still relies heavily on the health of the financial sector.

The Borough of Manhattan forms the central political, financial, and cultural core of New York City and is the economic growth engine of the region. As noted previously, the City's other four boroughs are the Bronx, Brooklyn, Queens, and Staten Island. All five boroughs are well connected with one another and the region thanks to an extensive mass transit system and infrastructure network.

New York City Economic Profile

New York City is an international center for business and commerce, and workers commute from points as far as 100 miles from Manhattan. The city boasts a diverse economic base, which helps minimizing the impact of cyclical economic downturns engendered from any one particular sector.

New York City houses the headquarters of several of the nation's major commercial and investment banks. Additionally, numerous foreign banks and their subsidiaries, international advertising firms, communications and entertainment giants and publishing conglomerates have a major presence in the city. Prominent domestic firms such as Goldman Sachs, Morgan Stanley, Citigroup, and Credit Suisse are headquartered in the city, and almost every major foreign financial institution, including UBS, HSBC, Barclays, Nomura Securities, and Deutsche Bank, maintain a significant Manhattan presence. New York City is also a hub for the insurance industry, housing five of the country's ten largest insurance companies. Three of the "Big Four" accounting firms, as well as six of the top ten U.S. law firms, are headquartered in Manhattan.

New York City is home to Broadway, Lincoln Center, Carnegie Hall, Radio City Music Hall, and a variety of live performance theaters. All major TV networks – ABC, NBC, FOX, and CBS – are headquartered in the city, as well as global

entertainment giants such as Viacom, Sony, and Bertelsmann. Three of the "Big Five" music recording companies are headquartered in New York. Other media/entertainment companies in the city include Time Warner, HMV, and Virgin Records. The city is also home to numerous publishing companies. Several book, magazine, and newspaper publishing companies are headquartered in New York City, including Random House, Knopf, Simon & Schuster, Condé Nast, Hachette Filipacchi, Dow Jones, and The New York Times Company.

New York agencies and branch offices of firms such as Young & Rubicam and Burson Marsteller dominate the list of the world's ten largest advertising and public relations agencies.

New York City's economy benefits greatly from the breadth of its corporate headquarters and related services industry. The city has acted as the nation's foremost commercial center due to the synergy created by the large concentration of corporations and service firms, which complement primary goods producers.

Overview of the Borough of Queens

The 210-room proposed Four Points will be located in Flushing, within New York City's Queens Borough. The Borough of Queens (Queens County) is bounded to the north and northwest by the East River, to the east by Long Island's Nassau County, to the south by the Atlantic Ocean, and to the southwest by Brooklyn. Queens County encompasses ±71,780 acres of land, representing 34.9% of the total area of New York City.

Queens is one of the most ethnically diverse communities in the U.S. It has served as a bedroom community for Manhattan, but has also developed its own employment base. The two major airports, JFK International and LaGuardia, have played an important role in shaping the area's economy. The Borough of Queens is home to more than 34,500 businesses, ranging from small retail outlets to large manufacturing plants. No single company or industry is dominant, although health care, air transportation, and services are major sectors. Some of Queens' largest employers include Steinway & Sons, British Airways, St. John's University, and Citibank.

More than 59% of Queens's residents commute to Manhattan for work. Of the 41% of workers who remain in Queens for employment, 32% work in the services industry, 21% in retail, 15% in public utilities, 11% in manufacturing, 8% in government, 7% in construction, and 6% in FIRE (finance, insurance, and real estate).

Although Queens has never been a major center for office development, the retail sector has benefited from the area's concentration of residential developments. Downtown Jamaica, which is located north of the subject property, in central

Queens, is one of the largest concentrations of retail space in New York City, attracting visitors from throughout the region, owing to the appealing prices offered by the local merchants. However, Queens still exports a disproportionate share of its retail spending to neighboring Manhattan and Nassau County.

While not as rich in tourist attractions as Manhattan, the Borough of Queens offers its own array of leisure-oriented sites. The following table lists selected visitor attractions located in Queens.

FIGURE 5-1 SELECTED QUEENS VISITOR ATTRACTIONS

Attraction	Type	Location	Notes
Queens Botanical Garden	Garden	Flushing	Acres of plantlife, including a Japanese Garden
Queens County Farm Museum	Museum	Floral Park	47 acres, including a historic farmhouse, as well as livestock and planting fields
New York Hall of Science	Museum	Queens	225-exhibit, hands-on science center
Louis Armstrong House & Archives	Museum	Flushing	Music, photos, films, instruments, awards
New York City Hall of Fame	Museum	Flushing	Recognizes those that contributed to NYC
The Queens Museum of Art	Museum	Queens	Art exhibits dating from 1880s to present
Isamu Noguchi Foundation, Inc.	Museum	Sunnyside	Comprehensive collection of artwork by Isamu Noguchi
King Manor Museum	Museum	Flushing	Historic home in 11-acre park
Alley Pond Environmental Center, Inc.	Nature	Douglaston	635 acres of woodlands, meadows, and fresh and salt water marshes
Flushing Town Hall-Concert Hall	Performing Arts	Flushing	340-seat concert hall
Queens Theater in the Park	Performing Arts	Flushing	476-seat theater, 99-seat experimental theater
Black Spectrum Theater	Performing Arts	Jamaica	Theater and films examining issues of concern to African-American youth
Colden Center for the Performing Arts	Performing Arts	Flushing	Auditorium with seating capacity of 2,127, and 489-seat concert hall
Thalia Spanish Theater	Performing Arts	Sunnyside	Produces Spanish zarzuela (operetta)
Shea Stadium	Sports	Flushing	Major League Baseball - home of New York Mets
Equestris, Aqueduct Racetrack	Sports	Queens	Horse race track with 1,500-seat restaurant
USTA National Tennis Center	Sports	Flushing	Home of U.S. Open
Jamaica Center for Arts and Learning, Inc.	Visual Arts	Jamaica	Exhibits of local and national artists, workshops
Queens Zoo	Zoo	Flushing	11-acre zoo with North American wildlife

Unemployment Statistics

The following table presents historical unemployment rates for the subject property's market area.

FIGURE 5-2 UNEMPLOYMENT STATISTICS

Year	County	NY-NJ-CT-PA MSA	State	U.S.
2003	7.4 %	6.6 %	6.4 %	6.0 %
2004	6.3	5.7	5.8	5.5
2005	5.2	4.9	5.0	5.1
2006	4.5	4.6	4.6	4.6
2007	4.4	4.4	4.6	4.6
2008	4.9	5.3	5.4	5.8
2009	8.3	8.6	8.4	9.3
2010	8.7	9.0	8.6	9.6
2011	8.1	8.6	8.3	8.9
2012	8.3	8.8	8.5	8.1
Recent Month - Mar				
2012	8.5 %	8.8 %	8.7 %	8.2 %
2013	7.7	8.1	8.1	7.6

* Letters shown next to data points (if any) reflect revised population controls and/or model re-estimation implemented by the BLS.

Source: U.S. Bureau of Labor Statistics

The unemployment rate for the U.S. fluctuated within the narrow range of 4.6% to 6.0% in the period spanning from 2003 to 2007. The recession and financial crisis in 2007 and 2008 resulted in heightened unemployment rates from 2008 through 2010. Job growth resumed in 2010, generating a decline in the unemployment rate from 2011 through early 2013. In March of 2013, the national unemployment rate declined to 7.6%, the lowest level recorded since December of 2008, a positive trend that reflects steady progress by the U.S. economy.

Locally, the unemployment rate was 8.3% in 2012; for this same area in 2013, the most recent month's unemployment rate was registered at 7.7%, versus 8.5% for the same month in 2012. Since 2003, the unemployment rate in the local MSA market has been declining year-over-year recording a record low in 2007 with 4.4%. In 2008, as the nationwide recession impacted the local market, unemployment rate increased to 5.3% in 2008, 8.6% in 2009 and a record high of 9.0% in 2010. As the national and local economy stabilized, the unemployed rate decreased to 8.6% in 2011. The recent year-to-data show a decrease in unemployment rate compared to the same period in 2012. We expect the local market to continue to strengthen in the near term as the city continues its

revitalization efforts. More than 59% of Queens's residents commute to Manhattan for work, where local employment has been strong. Our interviews with economic development officials reflect a promising outlook for the area.

Office Space Statistics

Trends in occupied office space are typically among the most reliable indicators of lodging demand, as firms that occupy office space often exhibit a strong propensity to attract commercial visitors. Thus, trends that cause changes in vacancy rates or in the amount of occupied office space may have a proportional impact on commercial lodging demand and a less direct effect on meeting demand. The following table details office space statistics for the pertinent market area.

FIGURE 5-3 OFFICE SPACE STATISTICS

	Queens Office Market						
Year	Available Office Space	% Chg	Occupied Office Space	% Chg	Vacancy Rate	Asking Lease Rate	% Chg
2007	11,278,000		10,274,258		8.9	26.79	
2008	11,278,000	0.0 %	10,443,428	1.6 %	7.4	26.70	-0.3 %
2009	11,278,000	0.0	10,274,258	-1.6	8.9	26.34	-1.3
2010	11,278,000	0.0	10,420,872	1.4	7.6	26.25	-0.3
2011	11,278,000	0.0	10,477,262	0.5	7.1	26.59	1.3
2012	11,278,000	0.0	10,432,150	-0.4	7.5	27.26	2.5

Source: REIS Office Market Performance Monitor, 4Q 2012

The office market in Queens remained relatively stable over the period 2007 to 2012, with approximately 11.3 million square feet of inventory and vacancy rates remaining below 10%. The impact of the recession on this market was minimal, as is evident in the average asking lease rate, which decreased by $0.54 from 2007 to 2010, and has since increased by just over $1.00. Most of the office space in Queens comprises older, smaller buildings. Approximately 85% of the inventory was built before 1990, and 57% was built before 1970. The average building size is 148,000 square feet, but the median is only 50,000.

Tourism

New York City is one of the most popular and frequently visited destinations in the United States. In 2012, New York City is estimated to have accommodated roughly 52 million visitors – a record level. Of the overall visitation figure, roughly 11 million hailed from international markets, maintaining the City's rank as the number one U.S. destination for overseas travelers. The City also maintained its status as the number one destination in tourism spending in the U.S. with approximately $36.90 billion spent. Given such performance, Mayor Bloomberg has now set sights on 55 million by 2015.

According to most market observers, such record levels could not been realized without the expanded availability of hotel rooms in New York City. In fact, as illustrated by the tourism data in the following, the three highest tourism levels have all been recorded over the past three years – the period of highest availability of inventory in the market.

FIGURE 5-4 NEW YORK CITY – HISTORICAL TOURISM LEVELS (NYC & COMPANY)

Airports

The New York City area is served by three major airports: John F. Kennedy (JFK) International, LaGuardia (LGA), and Newark Liberty International (EWR). The following table presents a summary of historical passenger activity at these facilities.

FIGURE 5-5 PASSENGER STATISTICS – REGION'S THREE MAJOR AIRPORTS

	LaGuardia Airport		JFK Intl. Airport		Newark Liberty Intl. Airport		All Three Airports	
Year	Total Passengers	Percentage Change	Total Passengers	Percentage Change	Total Passengers	Percentage Change	Total Passengers	Percentage Change

Source: Port Authority of New York and New Jersey

As detailed, after incurring overall passenger activity declines in 2008 and 2009 due to the impact of the latest recession, statistics have improved since 2010. Overall passenger count rebounded by roughly 2% in each - 2010 and 2011. In 2012, overall passenger count for the area increased at a stronger rate of 3.3%.

JFK Expansion

JFK airport is currently under expansion. In 2010, the Port Authority approved a plan to demolish Terminal 3 and construct a new state-of-the-art terminal to replace aging Terminal 4. The $1.2-billion project commenced in 2011 and the first phase of this project was completed in May 2013. Terminal 4 is occupied by Delta Air Lines and the opening of the first phase includes an expanded security area with 16 lanes, improved check-in areas, a centralized security checkpoint, a new 24,000 square-foot Sky Club, an improved baggage handling system, as well as improved Customs and Border Protection baggage claim and re-check facilities. Phase two of the Terminal 4 redevelopment plan will include an additional 11 gates on Terminal 4's Concourse B and is expected to be completed in summer 2015. Currently Terminal 4 hosts 30 international and domestic airlines with an

annual passenger volume of nearly 11 million. By 2014, passenger volume is expected to increase to 15 million.

Woods & Poole Economic and Demographic Review

In addition to the data outlined earlier in this section, we have provided a summary of economic and demographic statistics compiled by Woods & Poole Economics, Inc., a well-regarded forecasting service based in Washington, DC. In addition to information for the Borough of Manhattan (New York County), statistics are also provided for the New York-Northern New Jersey-Long Island, NY-NJ-PA Metropolitan Statistical Area (MSA). The MSA consists of New York City's five boroughs and the New York Counties of Nassau, Putnam, Rockland, Suffolk and Westchester; the New Jersey Counties of Bergen, Essex, Hudson, Hunterdon, Middlesex, Monmouth, Morris, Ocean, Passaic, Somerset, Sussex, and Union; and Pike County, Pennsylvania. Data for the State of New York and the nation as a whole are also provided.

These figures are set forth in the following table. All dollar amounts have been adjusted for inflation by Woods & Poole, and thus they reflect real change. We note that the percent changes indicated in the following table are based on unrounded figures; consequently, they may not calculate exactly. Historical and projected employment for the MSA is summarized in the second table.

FIGURE 5-6 ECONOMIC AND DEMOGRAPHIC DATA FOR THE SUBJECT PROPERTY'S MARKET AREA

Market Area Conclusion

This section discussed a wide variety of economic indicators for the pertinent market area. After a period of economic contraction, the market area has entered into a period of expansion and recovery following the Great Recession. Our market interviews and research revealed that although the area was affected by slowing business levels, a depressed housing market, and reduced levels of discretionary spending during the downturn, the market benefits from a well-established and diversified economy, which has aided in the recovery. The LaGuardia Airport and the close proximity to Manhattan has remained the cornerstones of this market; generating consistent demand throughout the year. Based on our market research, we are expecting market condition continue to improve in the near future.

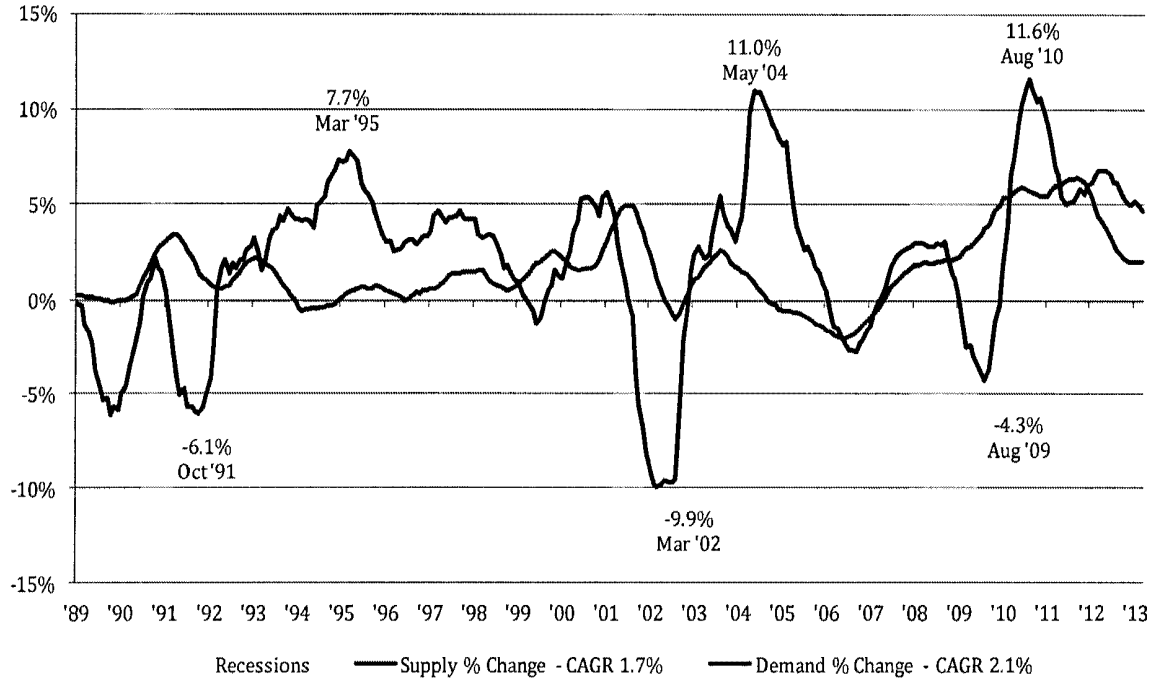
6. Overview of Manhattan Lodging Market

Historical Trends

This section provides an analysis of long-term historical performance for the Manhattan lodging market, from January 1987 to March 2013, and illustrates how the Manhattan lodging market has fluctuated with business cycles. This period covers the last three recessions. The contractions in the early 1990's and the one in 2001 each lasted eight months. The latest recession lasted 18 months, which makes it the longest of any recession since World War II.

The following graph provides the dynamics between supply and demand in Manhattan from January 1989 to March 2013. The graph illustrates percent changes in supply and demand (12-month moving average). Periods of recessions are indicated in yellow.

FIGURE 6-1 LONG-TERM SUPPLY AND DEMAND PERCENT CHANGES – 12-MONTH MOVING AVERAGE



Source: HVS, STR Global, and National Bureau of Economic Research

Demand decreased essentially during times of recessions. The minor decline in demand in 2006 was primarily due to the fact that in the winter of 2005, an art exhibit in central park known as "The Gates", attracted an additional 1.0 to 1.5 million additional tourists to Manhattan during a period considered to be the low season. As no comparable event was held during the winter of 2006, demand returned to normal levels. In addition, the conversion of several hotels to condominiums during this period further contributed to the decline in demand. Decreases in demand are typically short-lived (between 12 to 16 months) and followed by steep increases.

It is interesting to note that during the most recent recession, which was the longest recession since World War II, demand did not decrease as much as during the previous two recessions in spite of a large influx of new supply during this period. Percent change in demand bottomed out at -4.3 percent in August 2009 compared to -9.9 percent in March 2002 and -6.1 percent in October 1991. Following the latest recession, demand experienced the strongest rebound. In August of 2010, the Manhattan market registered the strongest year-over-year growth in demand over the last 25 years, at 11.6 percent.

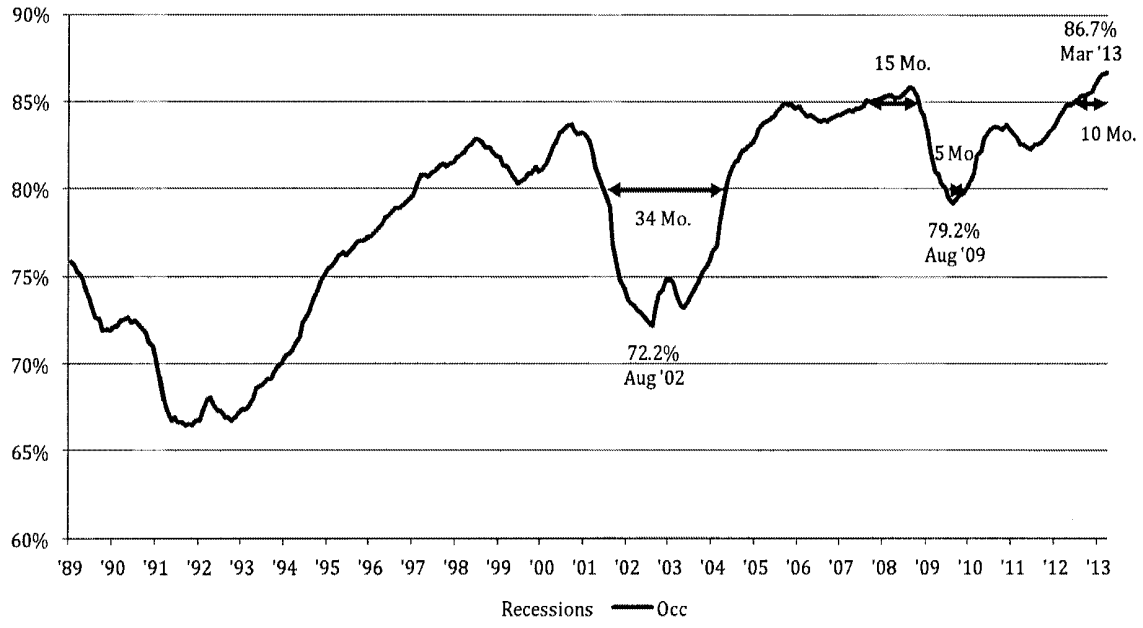
Manhattan boasts of a diverse and expansive economic base, in that, the area not only benefits from its standing as the world's financial capital, but also remains a prominent leisure destination. Such attributes translate into very strong lodging demand fundamentals for the area.

Over the last 25 years, the Manhattan lodging market experienced minimal growth in supply, as a result of strong barriers to entry prevailing in that market. From 2004 through 2006, supply actually decreased due to the conversion of several hotels to condominiums. Since early-2009, the market has consistently registered strong increases in supply each month. From January 2009 to March 2013, supply increased by 19.8 percent.

As a result of the supply and demand dynamics, the market has been historically undersupplied. Over the last 25 years, average annual demand growth, at 2.1 percent, has outpaced corresponding growth in supply, at 1.7 percent. The Manhattan lodging market represents one of only five major markets among the top 25 in the U.S. to have maintained such a positive differential between supply and demand over the same period.

The preceding supply and demand dynamics have translated into strong historical occupancy levels, as indicated by the long-term trend shown in the following graph.

FIGURE 6-2 LONG-TERM OCCUPANCY LEVELS – 12-MONTH MOVING AVERAGE

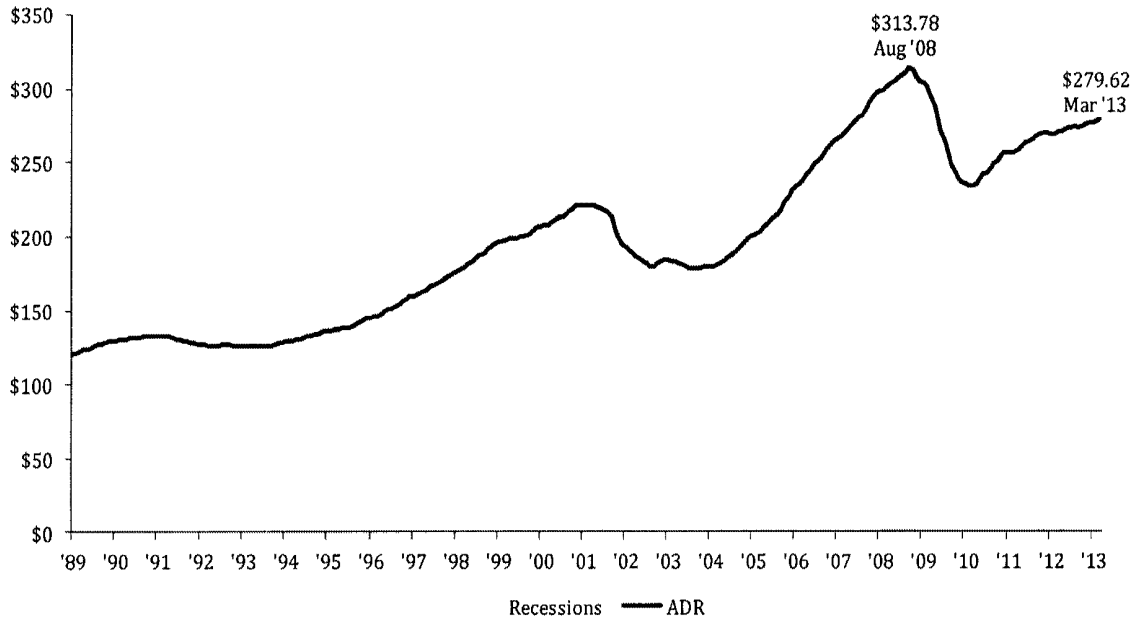


Source: HVS, STR Global, and National Bureau of Economic Research

The preceding graph illustrates the volatility in occupancy, particularly during the first two recession periods. Occupancy remained in the mid-80's from 2005 through 2008 (close to maximum-level capacity). Following the latest recession, occupancy levels remained healthy compared to those achieved after the 2001 recession, despite the largest increase in supply to date. Occupancy dipped below the 80-percent threshold for only five consecutive months in 2009, while occupancy remained in the low- to mid-70's levels from July 2001 to April 2004 (34 months). During the expansion period following the 2001 recession, occupancy remained above 85.0 percent for 15 consecutive months. As of March 2013, the occupancy had remained above 85.0 percent for 10 consecutive months, culminating at an all-time-high of 86.7 percent.

The supply and demand dynamics have also translated into strong historical ADR and RevPAR levels, as indicated by the following two graphs.

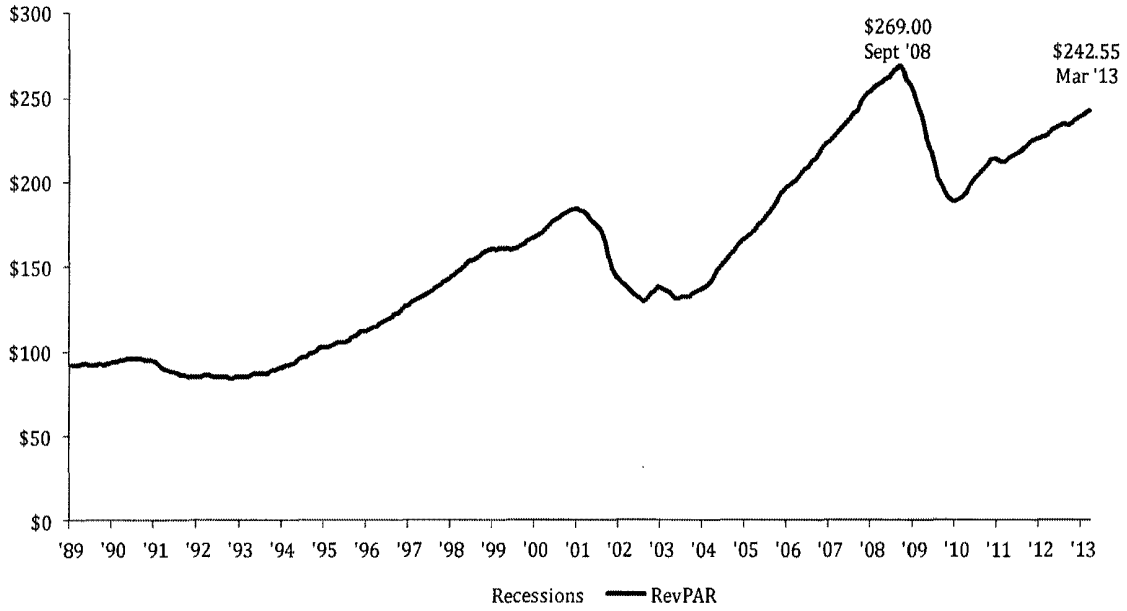
FIGURE 6-3 LONG-TERM ADR LEVELS – 12-MONTH MOVING AVERAGE



Source: HVS, STR Global, and National Bureau of Economic Research

As of March 2013, average rate was approximately 11.0 percent below August 2008 peak level.

FIGURE 6-4 LONG-TERM REVPAR LEVELS – 12-MONTH MOVING AVERAGE

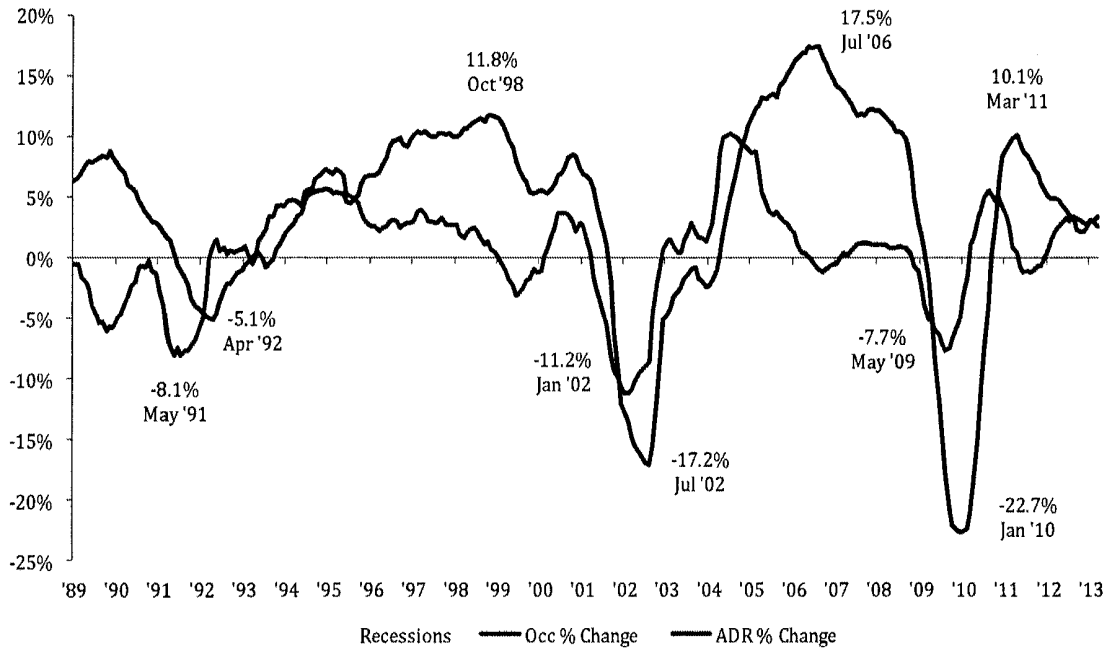


Source: HVS, STR Global, and National Bureau of Economic Research

As of March 2013, RevPAR was roughly 10.0 percent below September 2008 peak level. ADR and RevPAR have increased significantly since 1989, particularly during the expansion period following the 2001 recession. Each trough is at a higher level than that of the previous recession; the same applies to each peak.

The following graph illustrates percent changes in occupancy and ADR (12-month moving average) from January 1989 to March 2013.

FIGURE 6-5 LONG-TERM OCCUPANCY AND ADR PERCENT CHANGES – 12-MONTH MOVING AVERAGE



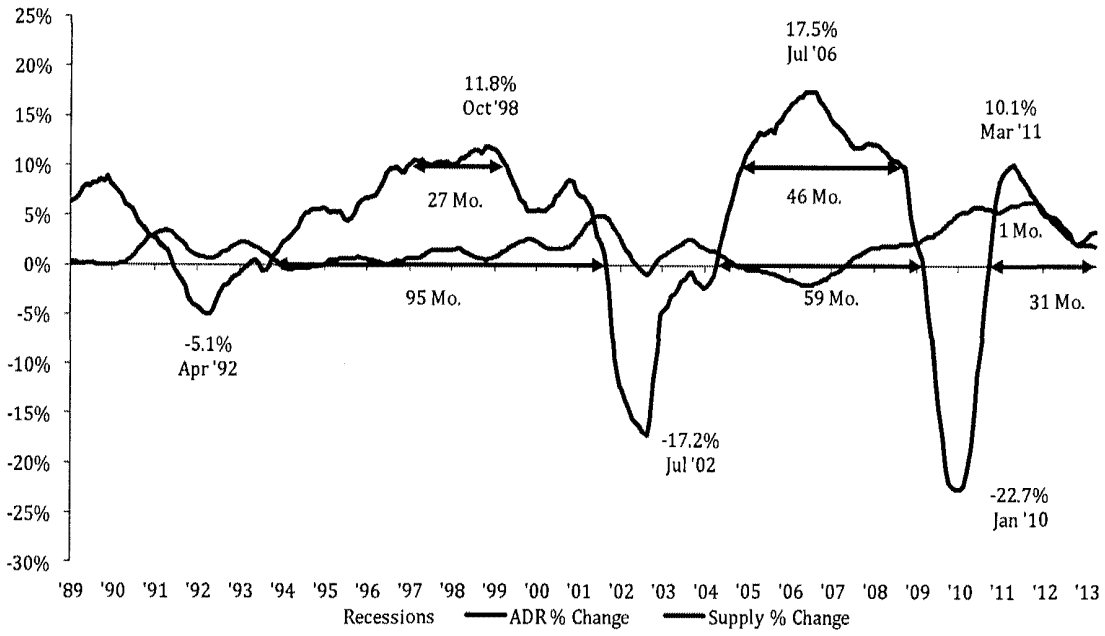
Source: HVS, STR Global, and National Bureau of Economic Research

The preceding graph highlights the high volatility of the Manhattan lodging market, particularly that of the ADR. It is interesting to note that ADR volatility has increased greatly over time, which can most likely by the growing use of services offered by STR Global or third-party websites such as Expedia. The timely availability of lodging data has created a higher level of transparency in the market. Local operators can react faster to shifts in ADR strategies utilized by their competitors and adjust their rates accordingly. In June of 2002, the market experienced a dramatic drop in ADR of 17.2 percent; however, four years later, ADR surged by a comparable magnitude, at 17.5 percent.

Strong occupancy levels during and following the last recession were largely accomplished at the expense of sizeable decreases in ADR. Percent change in ADR bottomed out at -22.7 percent in January 2010 as opposed to -17.2 percent in August 2002. However, ADR rebounded faster and stronger following the most recent recession than after the previous two contractions.

The following graph illustrates percent changes in supply and ADR (12-month moving average) from January 1989 to March 2013.

FIGURE 6-6 LONG-TERM SUPPLY AND ADR PERCENT CHANGES – 12-MONTH MOVING AVERAGE

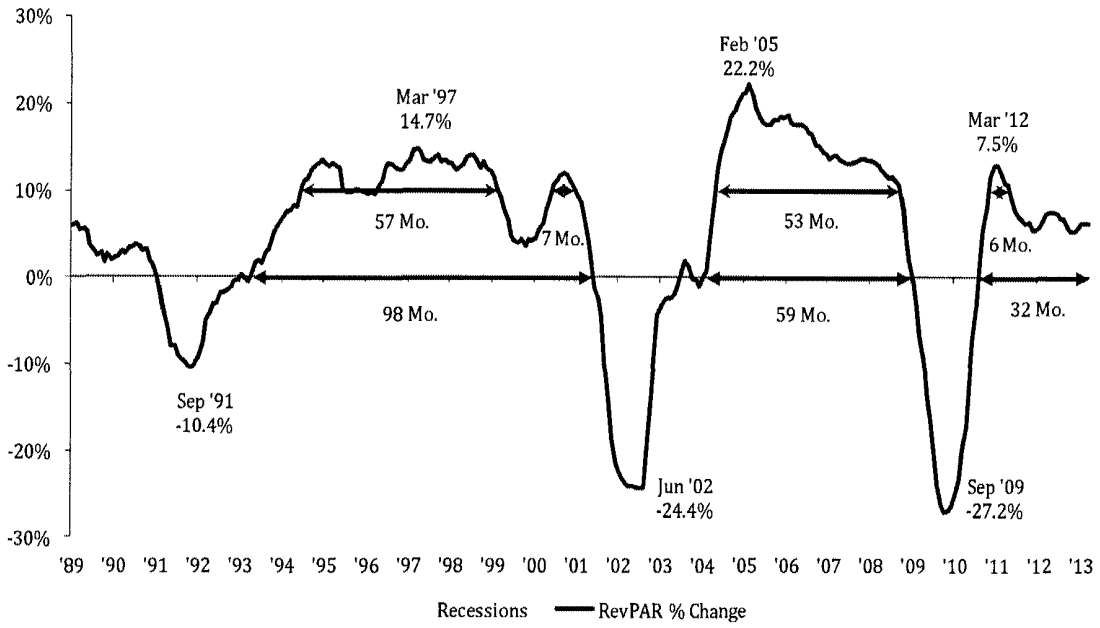


Source: HVS, STR Global, and National Bureau of Economic Research

Periods of economic recovery and expansion are characterized by strong ADR growth. The Manhattan market experienced 27 consecutive months of double-digit increases in ADR from January 1997 to March 1999, and 46 consecutive months from November 2004 to August 2008. The market experienced the strongest ADR growth during the expansion period following the 2001 recession, which coincided with decreases in supply. As of March 2013 the market had experienced only one month of double-digit increase in ADR, in March 2011, at 10.1 percent. The significant amount of new supply that had entered the market since early 2009 did not have any effect on occupancy levels; however, the additional inventory limited the ability for hotel operators to push the average rate. Double-digit increases in ADR through 2015 are unlikely with a further anticipated increase in supply of approximately 15.0 percent over the same period.

The following graph illustrates long-term RevPAR percent changes from January 1989 to March 2013 (12-month moving average).

FIGURE 6-7 LONG-TERM REVPAR PERCEN CHANGES – 12-MONTH MOVING AVERAGE



Source: HVS, STR Global, and National Bureau of Economic Research

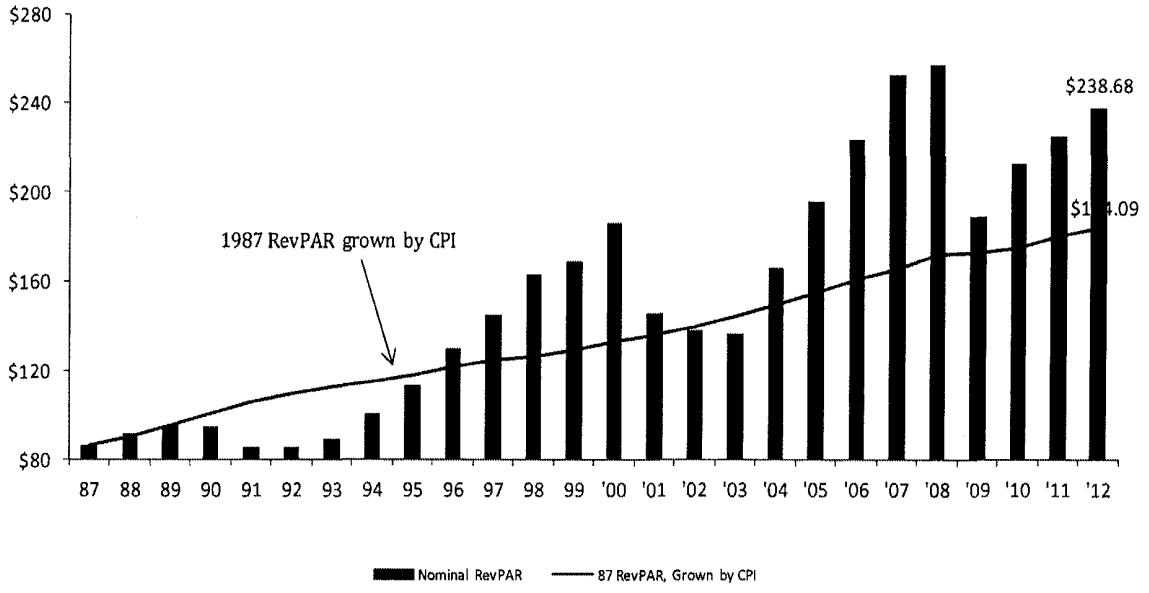
The preceding graph highlights the high RevPAR volatility of the Manhattan lodging market. However, since 1987, RevPAR has increased at a healthy average annual rate of 4.2 percent. Periods of economic recovery and expansion are characterized by strong RevPAR growth. The Manhattan market experienced 57 consecutive months of double-digit increases in RevPAR from June 1994 to February 1999, and 53 consecutive months from May 2004 to September 2008. RevPAR percent change peaked in February 2005 at 22.2 percent. Percent change in RevPAR bottomed out at -27.3 percent in October 2009 as opposed to -24.4 percent in July 2002. However, RevPAR rebounded faster and stronger following the most recent recession than after the previous two contractions, primarily fueled by ADR gains.

As of March 2013 the market had experienced only 6 months of double-digit increase in RevPAR, from November 2010 to April 2011. Double-digit increases in RevPAR through 2015 are unlikely as occupancy is forecast to remain relatively stable, in the mid-80's, and ADR is anticipated to experience single-digit growth over the same period. As such, more moderate RevPAR growth is expected during these recovery and expansion periods than after the previous two economic recessions.

The following table illustrates the effect of the latest recession and the start of the expansion on the Manhattan lodging market on a monthly basis (year over year).

The following table compares the 1987 RevPAR, grown by CPI annually, to the nominal RevPAR.

FIGURE 6-8 1987 REVPAR INCREASED BY CPI ANNUALLY



Source: HVS, STR Global

During the recession of the early 1990s, nominal RevPAR collapsed below the CPI-adjusted 1987 RevPAR for six consecutive years. Thereafter, nominal RevPAR registered strong growth until the 2001 recession arrived. Nominal RevPAR was consistent with CPI-adjusted 1987 RevPAR in 2002, and fell below it in 2003. During the recovery and expansion periods that followed, nominal RevPAR experienced much more robust growth than that witnessed during the previous cycle. Thus, nominal RevPAR remained well above CPI-adjusted 1987 RevPAR for five consecutive years before peaking at a level 50.0 percent above that of the CPI-adjusted 1987 RevPAR in 2008. Despite the effect of the latest recession and a hefty influx of new supply, nominal RevPAR remained at a level 10.0 percent above that of the CPI-adjusted 1987 RevPAR in 2009, highlighting the inherent strength of the Manhattan lodging market. In 2010, nominal RevPAR increased strongly, as the economic recovery was under way. Nominal RevPAR further increased in 2011

Secondary Competitors

We have also reviewed other area lodging facilities to determine whether any may compete with the proposed subject property on a secondary basis. The room count of each secondary competitor has been weighted based on its assumed degree of competitiveness the future with the proposed subject property. By assigning degrees of competitiveness, we can assess how the proposed subject property and its future competitors may react to various changes in the market, including new supply, changes to demand generators, and renovations or franchise changes of existing supply. The following table sets forth the pertinent operating characteristics of the secondary competitors.

FIGURE 7-15 SECONDARY COMPETITORS – OPERATING PERFORMANCE

Property	(b)(4)	Number of Rooms	Est. Segmentation				Total Competitive Level	Estimated 2010				Estimated 2011				Estimated 2012			
			Commercial	Group	Leisure	Contract		Weighted Annual Room Count	Occ.	Average Rate	RevPAR	Weighted Annual Room Count	Occ.	Average Rate	RevPAR	Weighted Annual Room Count	Occ.	Average Rate	RevPAR

(b)(4)

We have identified five hotels that are expected to compete with the proposed subject property on a secondary level. [redacted]

Supply Changes

It is important to consider any new hotels that may have an impact on the proposed subject property's operating performance. Based upon our research and inspection, new supply considered in our analysis is presented in the following table.

FIGURE 7-16 NEW SUPPLY

Proposed Property	Number of Rooms	Total Competitive Level	Estimated Opening Date	Development Stage	Address

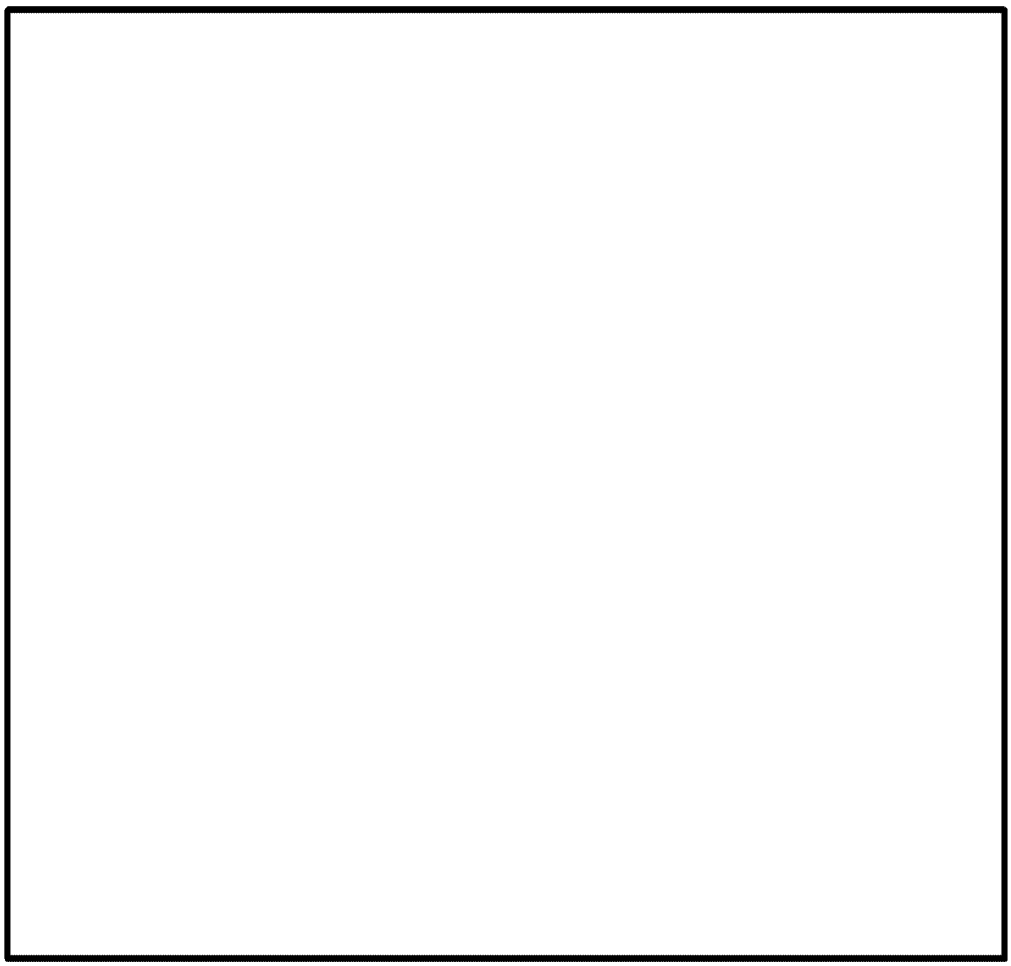
(b)(4)



Supply Conclusion

We have identified various properties that are expected to be competitive to some degree with the proposed subject property. We have also investigated potential increases in competitive supply in this Flushing submarket. The Proposed Four Points Flushing should enter a dynamic market of varying product types and price points. Next, we will present our forecast for demand change, using the historical supply data presented as a starting point.

DEMAND

The following table presents the most recent trends for the subject hotel market as tracked by HVS. These data pertain to the competitors discussed previously in this section; performance results are estimated, rounded for the competition, and in some cases weighted if there are secondary competitors present. In this respect, the information in the table differs from the previously presented STR data and is consistent with the supply and demand analysis developed for this report.

FIGURE 7-17 HISTORICAL MARKET TRENDS

Demand Analysis Using Market Segmentation

For the purpose of demand analysis, the overall market is divided into individual segments based on the nature of travel. Based on our fieldwork, area analysis, and knowledge of the local lodging market, we estimate the 2012 distribution of accommodated-room-night demand as follows.

FIGURE 7-18 ACCOMMODATED ROOM NIGHT DEMAND

Market Segment	Marketwide Accommodated Demand	Marketwide Percentage of Total
Commercial	286,982	51 %
Group	77,993	14
Leisure	194,225	35
Total	**559,199**	**100 %**

The market's demand mix comprises commercial demand, with this segment representing roughly 51% of the accommodated room nights in this Flushing submarket. The Group comprises 14% of the total, with Leisure at 35%.

Using the distribution of accommodated hotel demand as a starting point, we will analyze the characteristics of each market segment in an effort to determine future trends in room-night demand.

Commercial Segment

Commercial demand consists mainly of individual businesspeople passing through the subject market or visiting area businesses, in addition to high-volume corporate accounts generated by local firms. Brand loyalty (particularly frequent-traveler programs), as well as location and convenience with respect to businesses and amenities, influence lodging choices in this segment. Companies typically

designate hotels as "preferred" accommodations in return for more favorable rates, which are discounted in proportion to the number of room nights produced by a commercial client. Commercial demand is strongest Monday through Thursday nights, declines significantly on Friday and Saturday, and increases somewhat on Sunday night. It is relatively constant throughout the year, with marginal declines in late December and during other holiday periods. Commercial demand in the anticipated subject market is generated by a wide variety of businesses located in Manhattan and Queens, as well as a number of local businesses in the Flushing area.

Group Segment

In the limited-service sector, group demand is most commonly generated by groups that require ten or more room nights, but need little to no meeting space within the hotel. Examples of these groups include family reunions, sports teams, and bus tours. In some markets, limited-service hotels may also accommodate demand from groups or individuals attending events at the local convention center or at one of the larger convention hotels in the area.

Leisure Segment

Leisure demand consists of individuals and families spending time in an area or passing through en route to other destinations. Travel purposes include sightseeing, recreation, or visiting friends and relatives. Leisure demand also includes room nights booked through Internet sites such as Expedia, hotels.com, and Priceline; however, leisure may not be the purpose of the stay. This demand may also include business travelers and group and convention attendees who use these channels to take advantage of any discounts that may be available on these sites. Leisure demand is strongest Friday and Saturday nights and all week during holiday periods and the summer months. These peak periods represent the inverse of commercial visitation trends, underscoring the stabilizing effect of capturing weekend and summer tourist travel. Future leisure demand is related to the overall economic health of the region and the nation. Trends showing changes in state and regional unemployment and disposable personal income correlate strongly with leisure travel levels. Leisure demand in the subject property's market is generated by the sites and attractions described earlier in this report, including the USTA National Tennis Center at Flushing Meadows where the U.S. Open tennis tournament is held annually; and Citi Field, home to the New York Mets baseball team. During the week of the U.S. Open in early September, significant leisure demand is brought to the region.

Conclusion

The purpose of segmenting the lodging market is to define each major type of demand, identify customer characteristics, and estimate future growth trends. Starting with an analysis of the local area, three segments were defined as representing the subject property's lodging market. Various types of economic and demographic data were then evaluated to determine their propensity to reflect

changes in hotel demand. Based on this procedure, we forecast the following average annual compounded market-segment growth rates.

FIGURE 7-19 AVERAGE ANNUAL COMPOUNDED MARKET SEGMENT GROWTH RATES

	Annual Growth Rate						
Market Segment	**2013**	**2014**	**2015**	**2016**	**2017**	**2018**	**2019**
Commercial	11.0 %	1.0 %	10.0 %	15.0 %	10.0 %	2.0 %	0.5 %
Group	5.0	2.0	6.0	8.0	5.0	0.5	0.5
Leisure	7.0	3.0	8.0	14.0	9.0	1.0	0.5
Base Demand Growth	**8.8 %**	**1.8 %**	**8.8 %**	**13.7 %**	**9.0 %**	**1.5 %**	**0.5 %**

Accommodated Demand and Market-wide Occupancy

Based upon a review of the market dynamics in the subject property's competitive environment, we have forecast growth rates for each market segment. Using the calculated potential demand for the market, we have determined market-wide accommodated demand based on the inherent limitations of demand fluctuations and other factors in the market area.

The following table details our projection of lodging demand growth for the subject market, including the total number of occupied room nights and any residual unaccommodated demand in the market.

Marketwide Occupancy									

Considering the subject market's historical performance and potential supply growth, we have stabilized the marketwide occupancy at approximately 76% in 2019, when all the proposed new supply is appropriately absorbed into the market.

8. Projection of Occupancy and Average Rate

Along with average rate results, the occupancy levels achieved by a hotel are the foundation of the property's financial performance and market value. Most of a lodging facility's other revenue sources (such as food, beverages, other operated departments, and rentals and other income) are driven by the number of guests, and many expense levels vary with occupancy. To a certain degree, occupancy attainment can be manipulated by management. For example, hotel operators may choose to lower rates in an effort to maximize occupancy. Our forecasts reflect an operating strategy that we believe would be implemented by a typical, professional hotel management team to achieve an optimal mix of occupancy and average rate.

Penetration Rate Analysis

The subject property's forecasted market share and occupancy levels are based upon its anticipated competitive position within the market, as quantified by its penetration rate. The penetration rate is the ratio of a property's market share to its fair share. A complete discussion of the concept of penetration is presented in the addenda.

Historical Penetration Rates by Market Segment

In the following table, the penetration rates attained by the primary competitors and the aggregate secondary competitors are set forth for each segment for the base year.

FIGURE 8-1 HISTORICAL PENETRATION RATES

The proposed subject hotel is anticipated to feature an attractive, select-service product serving the downtown Flushing and LaGuardia Airport market. Based on our consideration of the proposed hotel's anticipated product quality and our review of the competitive hotels' historical performance, we have selected a stabilized occupancy level of 76% for the proposed subject property in the third projection year – 2018. The stabilized occupancy is intended to reflect the anticipated results of the property over its remaining economic life, given all changes in the life cycle of the hotel. Thus, the stabilized occupancy excludes from consideration any abnormal relationship between supply and demand, as well as

any nonrecurring conditions that may result in unusually high or low occupancies. Although the subject property may operate at occupancies above this stabilized level, we believe it equally possible for new competition and temporary economic downturns to force the occupancy below this selected point of stability.

Average Rate Analysis

One of the most important considerations in estimating the value of a lodging facility is a supportable forecast of its attainable average rate, which is more formally defined as the average rate per occupied room. Average rate can be calculated by dividing the total rooms revenue achieved during a specified period by the number of rooms sold during the same period. The projected average rate and the anticipated occupancy percentage are used to forecast rooms revenue, which in turn provides the basis for estimating most other income and expense categories.

Competitive Position

Although the average rate analysis presented here follows the occupancy projection, these two statistics are highly correlated; in reality, one cannot project occupancy without making specific assumptions regarding average rate. This relationship is best illustrated by revenue per available room (RevPAR), which reflects a property's ability to maximize rooms revenue. The following table summarizes the historical average rate and the RevPAR of the subject property's future primary competitors.

FIGURE 8-4 BASE-YEAR AVERAGE RATE AND REVPAR OF THE COMPETITORS

9. Highest and Best Use

The concept of highest and best use is a fundamental element in the determination of value of real property, either as if vacant or as improved. Highest and best use is defined as follows:

> The reasonably probable and legal use of vacant land or an improved property that is physically possible, appropriately supported, financially feasible, and that results in the highest value. The four criteria the highest and best use must meet are legal permissibility, physical possibility, financial feasibility, and maximum productivity. Alternatively, the probable use of land or improved property—specific with respect to the user and timing of the use—that is adequately supported and results in the highest present value.[12]

The concept of highest and best use is the premise upon which value is based and is a product of competitive forces in the marketplace. The principle of balance holds that real property value is created and sustained when contrasting, opposing, or interacting elements are in a state of equilibrium. This principle applies to relationships among various property components as well as the relationship between the costs of production and the property's productivity. The point of economic balance is achieved when the combination of land and building is optimal (i.e., when no marginal benefit or utility is achieved by adding another unit of capital). The law of increasing returns holds that larger amounts of the agents of production produce greater net income up to a certain point, after which the law of diminishing returns is applied.

As Vacant

Land value is derived from potential use rather than actual use. The highest and best use is that which generates the greatest return to the land. An analysis as to the highest and best use of the land should be made first and may be influenced by many factors. In estimating highest and best use, there are four stages of analysis:

1. Legally permissible use. What uses are permitted by zoning, deed restrictions, lease encumbrances, or any other legally binding codes, restrictions, or interests?

[12] Appraisal Institute, The Dictionary of Real Estate Appraisal, 5th ed. (Chicago: Appraisal Institute, 2010).

As detailed in the zoning section of this report, the subject site is located in a commercially zoned district that allows for hotel, office, and retail uses, among other uses.

2. Physically possible use. What uses of the site are physically possible?

   The subject site is large enough to support most smaller-scale commercial developments, certainly a hotel, office, or strip retail development defined under legal uses permitted. The topography is appropriate and access is adequate for these types of developments.

3. Financially feasible use. Which possible and permissible uses will produce a net return to the owner of the site?

   Given the attributes of the site, uses that would be financially feasible include retail and hotel.

4. Maximally productive use. Among the feasible uses, which use will produce the highest net return or the highest present worth?

   Given the attributes of the site and the multi-story capability of hotel use, the maximally productive use would be for a hotel.

As Vacant Conclusion

In consideration of the foregoing factors influencing development in the immediate area, it is the appraisers' opinion that the highest and best use of the subject site, as vacant, is for the development of a transient lodging facility.

Ideal Improvement

The ideal improvement for the subject site is therefore as a transient lodging facility with the amenities appropriate to operate competitively in this market.

As Improved

After determining the highest and best use of the land and the ideal improvement, an analysis should be made regarding the differences between the current improvements and the ideal improvement. These differences then form the basis for estimating deterioration and obsolescence in this report.

It is our opinion that the subject improvements should be constructed as to allow the site to conform with its ideal improvement.

10. Approaches to Value

In appraising real estate for market value, three approaches to value are considered: income capitalization, cost, and sales comparison. Basic summaries of each approach are provided as follows; please refer to the introduction of each respective chapter for additional description.

Income Capitalization Approach

The income capitalization approach analyzes a property's ability to generate financial returns as an investment. The appraisal estimates a property's operating cash flow, and the result is utilized in a direct capitalization technique and a discounted-cash-flow analysis. The income capitalization approach is often selected as the preferred valuation method for operating properties because it most closely reflects the investment rationale of knowledgeable buyers.

Sales Comparison Approach

The sales comparison approach estimates the value of a property by comparing it to similar properties sold on the open market. To obtain a supportable estimate of value, the sales price of a comparable property must be adjusted to reflect any dissimilarity between it and the property being appraised. The sales comparison approach is most useful in the case of simple forms of real estate such as vacant land and single-family homes, where the properties are homogeneous and the adjustments are few and relatively simple to compute. In the case of complex investments such as hotels, where the adjustments are numerous and more difficult to quantify, the sales comparison approach loses much of its reliability.

Cost Approach

The cost approach estimates market value by computing the current cost of replacing the property and subtracting any depreciation resulting from deterioration and obsolescence. The value of the land is then added to the depreciated value.

The cost approach is most reliable for estimating the value of new properties; therefore, this approach is somewhat applicable for this project given its proposed nature.

Reconciliation

The final step in the valuation process is the reconciliation and correlation of the value indications. Factors that are considered in assessing the reliability of each approach include the purpose of the appraisal, the nature of the subject property, and the reliability of the data used. In the reconciliation, the applicability and supportability of each approach are considered and the range of value indications is examined. The most significant weight is given to the approach that produces the most reliable solution and most closely reflects the criteria used by typical

investors. Moreover, given the proposed nature of this project, the cost approach is also applicable to some extent.

11. Income Capitalization Approach

The income capitalization approach is based on the principle that the value of a property is indicated by its net return, or what is known as the present worth of future benefits. The future benefits of income-producing properties, such as hotels, are net income before debt service and depreciation (as estimated by a forecast of income and expense) and any anticipated reversionary proceeds from a sale. These future benefits can be converted into an indication of market value through a capitalization process and discounted cash flow analysis.

Methodology

Using the income capitalization approach, the proposed subject property has been valued by analyzing the local market for transient accommodations, examining future competition, and developing a forecast of income and expense that reflects anticipated income trends and cost components through a stabilized year of operation.

The forecast of income and expense is expressed in current dollars for each year. The stabilized year is intended to reflect the anticipated operating results of the property over its remaining economic life, given any or all applicable stages of build-up, plateau, and decline in the life cycle of the hotel. Thus, income and expense estimates from the stabilized year forward exclude from consideration any abnormal relationship between supply and demand, as well as any nonrecurring conditions that may result in unusual revenues or expenses. The stabilized year's net income is then extended into an eleven-year forecast of income and expense by applying the assumed underlying inflation rate to each revenue and expense item from the stabilized year forward, unless otherwise noted.

The eleven-year forecast of net income forms the basis of a mortgage-equity and discounted-cash-flow analysis, where ten years of net income and a reversion derived from the capitalized eleventh year's net income are discounted back to the date of value and summed to derive an estimate of market value. The ten-year period reflects the typical holding period of large real estate assets such as hotels. In addition, the ten-year period provides for the stabilization of income streams and comparison of yields with alternate types of real estate. The forecasted income streams reflect the future benefits of owning specific rights in income-producing real estate.

Because the value is unknown but the loan-to-value ratio and market rates of return can be estimated, the value is computed by way of a linear algebraic equation. The algebraic equation that solves for the total property value using a ten-year mortgage-equity technique was developed by Suzanne R. Mellen, CRE, MAI, FRICS, ISHC, Managing Director of the San Francisco office of HVS. A complete discussion of the technique is presented in her article entitled "Simultaneous Valuation: A New Technique."[13]

Comparable Operating Statements

In order to project future income and expense for the proposed subject property, we have included a sample of individual comparable operating statements from our database of hotel statistics. All financial data are presented according to the three most common measures of industry performance: ratio to sales (RTS), amounts per available room (PAR), and amounts per occupied room night (POR). These historical income and expense statements will be used as benchmarks in our forthcoming forecast of income and expense.

[13] Suzanne Mellen, "Simultaneous Valuation: A New Technique," *Appraisal Journal*. April (1983).

Fixed and Variable Component Analysis

HVS uses a fixed and variable component model to project a lodging facility's revenue and expense levels. This model is based on the premise that hotel revenues and expenses have one component that is fixed and another that varies directly with occupancy and facility usage. A projection can be made by taking a known level of revenue or expense and calculating its fixed and variable components. The fixed component is then increased in tandem with the underlying rate of inflation, while the variable component is adjusted for a specific measure of volume such as total revenue.

The actual forecast is derived by adjusting each year's revenue and expense by the amount fixed (the fixed expense multiplied by the inflated base-year amount) plus the variable amount (the variable expense multiplied by the inflated base-year amount) multiplied by the ratio of the projection year's occupancy to the base-year occupancy (in the case of departmental revenue and expense) or the ratio of the projection year's revenue to the base year's revenue (in the case of undistributed operating expenses). Fixed expenses remain fixed, increasing only with inflation. Our discussion of the revenue and expense forecast in this report is based upon the output derived from the fixed and variable model. This forecast of revenue and expense is accomplished through a systematic approach, following the format of the *Uniform System of Accounts for the Lodging Industry*. Each category of revenue and expense is estimated separately and combined at the end in the final statement of income and expense.

Inflation Assumption

A general rate of inflation must be established that will be applied to most revenue and expense categories. The following table shows inflation estimates made by economists at some noted institutions and corporations.

FIGURE 11-4 INFLATION ESTIMATES

	Actual Inflation for 2012:	1.7 %				

Source: wsj.com, January 21, 2013

As the preceding table indicates, the financial analysts who were surveyed in January of 2013 anticipated inflation rates ranging from 1.0% to 3.6% (on an annualized basis) for December 2013; the average of these data points was 2.0%. The same group expects a slightly higher annualized 2.2% inflation rate for June 2014. These rates are lower than the inflation rate averages for December 2014 and June 2015, shown at 2.3% and 2.4%, respectively.

As a further check on these inflation projections, we have reviewed historical increases in the Consumer Price Index (CPI-U). Because the value of real estate is predicated on cash flows over a relatively long period, inflation should be considered from a long-term perspective.

FIGURE 11-5 NATIONAL CONSUMER PRICE INDEX (ALL URBAN CONSUMERS)

Year	National Consumer Price Index	Percent Change from Previous Year
2002	179.9	—
2003	184.0	2.3 %
2004	188.9	2.7
2005	195.3	3.4
2006	201.6	3.2

2012	229.6	2.1
Average Annual Compounded Change		
2002 - 2012:		2.5 %
2007 - 2012:		2.1

Source: Bureau of Labor Statistics

Between 2002 and 2012, the national CPI increased at an average annual compounded rate of 2.5%; from 2007 to 2012, the CPI rose by a slightly lower average annual compounded rate of 2.1%. In 2012, the CPI rose by 2.1%, a decrease from the level of 3.1% recorded in 2011.

In consideration of the most recent trends, the projections set forth previously, and our assessment of probable property appreciation levels, we have applied underlying inflation rates of 2.5%, 2.5%, and 3.0% thereafter for each respective year following the base year of 2012. This stabilized inflation rate takes into account normal, recurring inflation cycles. Inflation is likely to fluctuate above and

below this level during the projection period. Any exceptions to the application of the assumed underlying inflation rate are discussed in our write-up of individual income and expense items.

Summary of Projections

Based on an analysis that will be detailed throughout this section, we have formulated a forecast of income and expense. The following table presents a detailed forecast through the third projection year, including amounts per available room and per occupied room. The second table illustrates our ten-year forecast of income and expense, presented with a lesser degree of detail. The forecasts pertain to years that begin on March 1, 2016, expressed in inflated dollars for each year.

For the purposes of our analysis, we have assumed that the tax rate will increase at an average annual compounded rate of 1.0% throughout the projection period.

Comparable Tax Assessments and Subject Property Positioning

Because the objective of assessed value is to maintain a specific value relationship among all properties in a taxing jurisdiction, assessments of comparable hotels should be evaluated to estimate the proposed subject property's future assessed

value. We have reviewed the historical assessment levels of several comparable hotels. This information is summarized in the following table.

FIGURE 11-10 ASSESSED VALUE OF COMPARABLE HOTELS

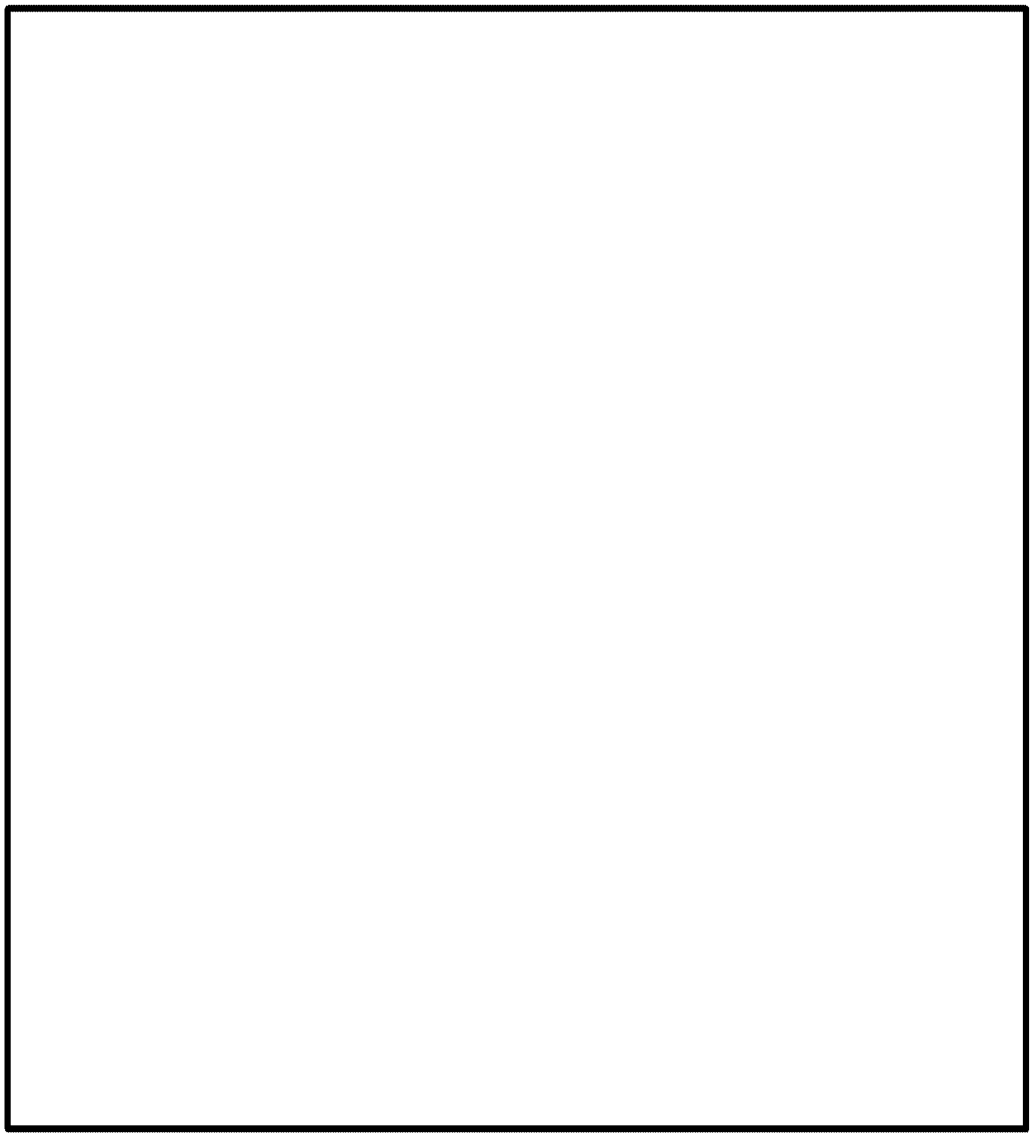

FIGURE 11-12 AVERAGE MORTGAGE INTEREST RATES AND AVERAGE-A CORPORATE BOND YIELDS

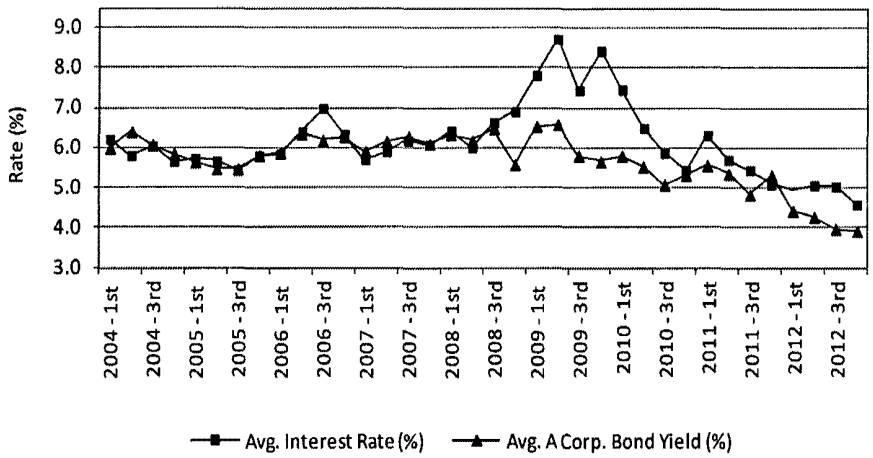

Sources: American Council of Life Insurance, Moody's Bond Record, HVS

The relationship between hotel interest rates and the yields from the average-A corporate bond can be detailed through a regression analysis, which is expressed as follows.

$$Y = 0.92403200\,X + 1.10402500$$

Where: Y = Estimated Hotel Mortgage Interest Rate
X = Current Average-A Corporate Bond Yield
(Coefficient of correlation is 93%)

The June 12, 2013, average yield on average-A corporate bonds, as reported by Moody's Investors Service, was 4.53%. When used in the previously presented equation, a factor of 4.53 produces an estimated hotel/motel interest rate of 5.29% (rounded).

Yields on U.S. treasuries and average-A corporate bonds remain at record low levels, providing a very favorable financing environment. Interest rates for single hotel assets are currently ranging from 4.0% to 6.5%, depending on the type of debt, loan-to-value ratio, and the quality of the asset and its market.

In addition to the mortgage interest rate estimate derived from this regression analysis, HVS constantly monitors the terms of hotel mortgage loans made by our institutional lending clients. Fixed-rate debt is being priced at roughly 200 to 500 basis points over the corresponding yield on treasury notes. As of June 12, 2013, the yield on the ten-year T-bill was 2.1%, indicating an interest rate range from 4.1% to 7.1%. Hotel mortgages are currently being offered at record low rates due to the low interest rate environment being maintained by the Federal Reserve. At present, we find that lenders who are active in the market are using loan-to-value ratios of 50% to 75% and amortization periods of 20 to 30 years.

Based on our analysis of the current lodging industry mortgage market and adjustments for specific factors, such as the proposed property's location and conditions in the Flushing hotel market, it is our opinion that a 5.50% interest, 25-year amortization mortgage with a 0.073690 constant is appropriate for the proposed subject property. In the mortgage-equity analysis, we have applied a loan-to-value ratio of 65%, which is reasonable to expect based on this interest rate and current parameters.

Equity Component

The remaining capital required for a hotel investment generally comes from the equity investor. The rate of return that an equity investor expects over a ten-year holding period is known as the equity yield. Unlike the equity dividend, which is a short-term rate of return, the equity yield specifically considers a long-term holding period (generally ten years), annual inflation- adjusted cash flows, property appreciation, mortgage amortization, and proceeds from a sale at the end of the holding period. To establish an appropriate equity yield rate, we have used two sources of data: past appraisals and investor interviews.

Hotel Sales – Each appraisal performed by HVS uses a mortgage-equity approach in which income is projected and then discounted to a current value at rates reflecting the cost of debt and equity capital. In the case of hotels that were sold near the date of our valuation, we were able to derive the equity yield rate and unlevered discount rate by inserting the ten-year projection, total investment (purchase price and estimated capital expenditure and/or PIP) and debt assumptions into a valuation model and solving for the equity yield. The overall capitalization rates for the historical income and projected first-year income are based on the sales price "as is." The following table shows a representative sample of hotels that were sold on or about the time that we appraised them, along with the derived equity return and discount rates based on the purchase price and our forecast.

Source: HVS

Investor Interviews - During the course of our work, we continuously monitor investor equity-yield requirements through discussions with hotel investors and brokers. While equity still looks to yield high returns for the risk of hotel investment, the low yield environment, coupled with increased competition for quality assets, has placed downward pressure on equity yield returns. We find that

equity yield rates currently range from a low in the low to mid-teens for high-quality, institutional-grade assets in markets with high barriers to entry to the upper teens for quality assets in more typical markets; equity yield rates tend to near or exceed 20% for aging assets with functional obsolescence and/or other challenging property- or market-related issues. Equity return requirements also vary with an investment's level of leverage. Higher loan-to-value ratios are becoming more prevalent, allowing for increased equity returns.

The following table summarizes the range of equity yields indicated by hotel sales and investor interviews. We note that there tends to be a lag between the sales data and current market conditions, and thus, the full effect of the change in the economy and capital markets may not yet be reflected.

FIGURE 11-15 SUMMARY OF EQUITY YIELD OR INTERNAL RATE OF RETURN REQUIREMENTS

Source	Data Point Range	Average
HVS Hotel Sales - Full-Service & Luxury	12% - 21.1%	16.70%
HVS Hotel Sales - Select Upscale and Upper Midscale	13% - 24.1%	18.20%
HVS Hotel Sales - Budget/Economy	16.7% - 26.2%	20.72%
HVS Investor Interviews	12% - 22%	

Based on the assumed 65% loan-to-value ratio, the risk inherent in achieving the projected income stream, and the age, condition, and anticipated market position of the subject property, it is our opinion that an equity investor is likely to require an equity yield rate of 17.0%. The lack of attainable yields on alternate investments has continued to put downward pressure on equity yield rates, despite the desire of investors to yield higher returns. Competition for quality assets is increasing amongst all hotel asset types. These influences are keeping equity yields from increasing significantly. Equity return requirements remain elevated for the more challenged hotel assets.

Terminal Capitalization Rate

Inherent in this valuation process is the assumption of a sale at the end of the ten-year holding period. The estimated reversionary sale price as of that date is calculated by capitalizing the projected eleventh-year net income by an overall terminal capitalization rate. An allocation for the selling expenses is deducted from this sale price, and the net proceeds to the equity interest (also known as the equity residual) are calculated by deducting the outstanding mortgage balance from the reversion.

We have reviewed several recent investor surveys. The following chart summarizes the averages presented for terminal capitalization rates in various investor surveys during the past decade. Note that survey data lag the market and do not necessarily reflect the most current market conditions.

FIGURE 11-16 HISTORICAL TRENDS OF TERMINAL CAPITALIZATION RATES

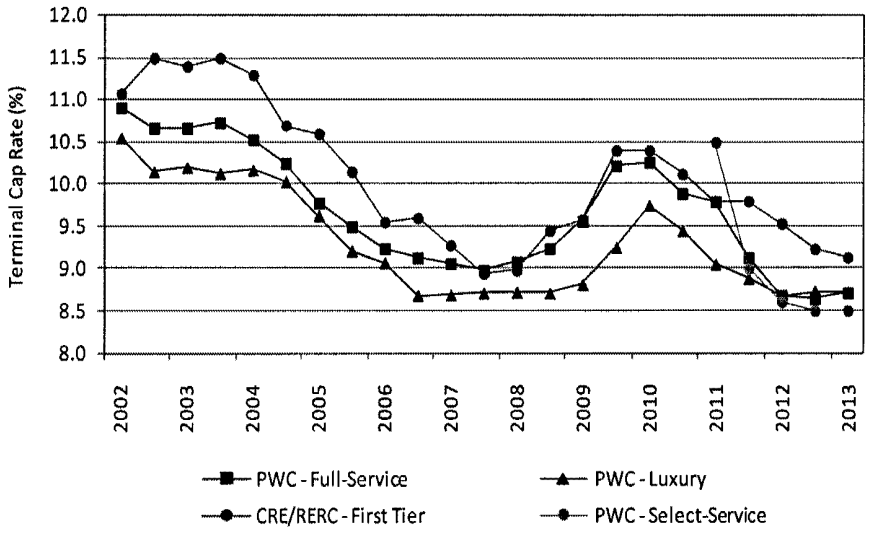

FIGURE 11-17 TERMINAL CAPITALIZATION RATES DERIVED FROM INVESTOR SURVEYS

Source	Data Point Range	Average
PWC Real Estate Investor Survey - 1st Quarter 2013		
Select-Service Hotels	5.0% - 12.0%	8.50%
Full-Service Hotels	6.0% - 12.0%	8.71%
Luxury Hotels	6.0% - 12.0%	8.72%
CRE/RERC Real Estate Report - Spring 2013		
First Tier Hotels	6.8% - 12.0%	9.15%

For purposes of this analysis, we have applied a terminal capitalization rate of 8.0%. Our final position for the terminal capitalization rate reflects the current market for hotel investments. In tandem with overall lower return expectations, terminal capitalization rates for quality hotel assets in markets with high barriers

to entry have returned to their 2005 to 2007 lows, while terminal capitalization rates for older assets or for those suffering from functional obsolescence and/or weak market conditions remain elevated, reflecting the market's recognition that certain assets have less opportunity for significant appreciation.

Mortgage-Equity Method – Value Opinion

The valuation of the mortgage and equity components is accomplished using an algebraic equation that calculates the exact amount of debt and equity that the hotel will be able to support based on the anticipated cash flow (as estimated by the forecast of income and expense) and the specific return requirements demanded by the mortgage lender (interest) and the equity investor (equity yield). Thus, the anticipated net income (before debt service and depreciation) is allocated to the mortgage and equity components based on market rates of return and loan-to-value ratios. The total of the mortgage component and the equity component equals the value of the property. Using this method of the income capitalization approach with the variables set forth, we estimate the value of the fee simple interest in the subject property, as of March 1, 2016, to be [redacted] (b)(4)

Mathematical Proof of Value

The value is mathematically proven by confirming that the market-derived yields are met for the lender and equity participant during the projection period. Using the assumed financial structure set forth in the previous calculations, market value can be allocated between the debt and equity as follows.

Mortgage Component (65%)	[redacted]	(b)(4)
Equity Component (35%)		
Total		

The annual debt service is calculated by multiplying the mortgage component by the mortgage constant.

Mortgage Component	[redacted]	(b)(4)
Mortgage Constant		
Annual Debt Service		

The eleven-year forecast of net income and ten-year forecast of net income to equity are presented in the following table.

FIGURE 11-18 ELEVEN-YEAR FORECAST OF NET INCOME AND TEN-YEAR FORECAST OF NET INCOME TO EQUITY

Year	Net Income Before Debt Service	Less: Debt Service	Net Income to Equity	Debt Coverage Ratio	Cash-on-Cash Return
2016/17					
2017/18					
2018/19					
2019/20					
2020/21					
2021/22					
2022/23					
2023/24					
2024/25					
2025/26					
2026/27					

(b)(4)

Our debt-coverage ratio falls within the range of 1.3 to 1.7, reflecting the debt-coverage ratios required in the current market. The net proceeds to equity upon sale of the property were determined by deducting sales expenses (brokerage and legal fees) and the outstanding mortgage balance.

The equity residual at the end of the tenth year is calculated by deducting brokerage and legal fees and the mortgage balance from the reversionary value. The reversionary value is calculated as the eleventh year's net income capitalized by the terminal capitalization rate. The calculation is shown as follows.

Reversionary Value		
Less:		
Brokerage and Legal Fees	(b)(4)	
Mortgage Balance		
Net Sale Proceeds to Equity		

(b)(4)

The discount rate (before debt service), the yield to the lender, and the yield to the equity position have been calculated by computer with the following results.

FIGURE 11-19 TOTAL PROPERTY VALUE AND INTERNAL RATES OF RETURN

Position	Value	Projected Yield (Internal Rate of Return) Over Holding Period
Total Property		
Mortgage		
Equity		

(b)(4)

Note: Whereas the mortgage constant and value are calculated on the basis of monthly mortgage payments, the mortgage yield in this proof assumes single annual payments. As a result, the proof's derived yield may be slightly less than that actually input.

The position of the total property yield or unlevered discount rate reflects the increasing availability and low cost of both debt and equity capital. During the 2008/09 downturn, equity yields increased, reflecting the elevated level of the perceived risk of the hospitality sector and the uncertainty concerning the length and depth of the recession; debt was expensive and difficult to obtain. However, toward the end of the first quarter of 2010, increased acquisition activity by lodging REITs and the selective return of lenders to the marketplace began to place downward pressure on overall rates of return. Unlevered discount rates continued to decline throughout 2010 as market activity increased and, as of the first quarter of 2011, had returned to the lows witnessed during the 2006 to early 2007 period. The activity by aggressive lodging REITs in 2010 and the first half of 2011 served to fuel the market. In the summer of 2011, the stock market decline resulting from the debt crisis in the U.S. and Europe caused most REITs to cease their acquisition activity, providing private equity firms an opportunity to enter the market at somewhat less aggressive rates. By mid-year 2012, REITs had returned to the market in both an acquisition and disposition mode. Yield-hungry investors are continuing to compete for quality assets, as many owners continue to hold back from putting their properties on the market in anticipation of continued improvement in asset performance. Offsetting these factors is the increasing amount of leverage being offered to borrowers, which is creating upward pressure on equity yield requirements. As of late spring 2013, lenders are very active, with capital available from numerous sources. We continue to interview hotel investors to assess the movement in yield rates and their impact on value.

The following tables demonstrate that the property receives its anticipated yields, proving that the value is correct based on the assumptions used in this approach.

Derived Capitalization Rates

The following chart summarizes the averages presented for overall capitalization rates in various investor surveys during the past decade.

FIGURE 11-22 HISTORICAL TRENDS OF OVERALL CAPITALIZATION RATES

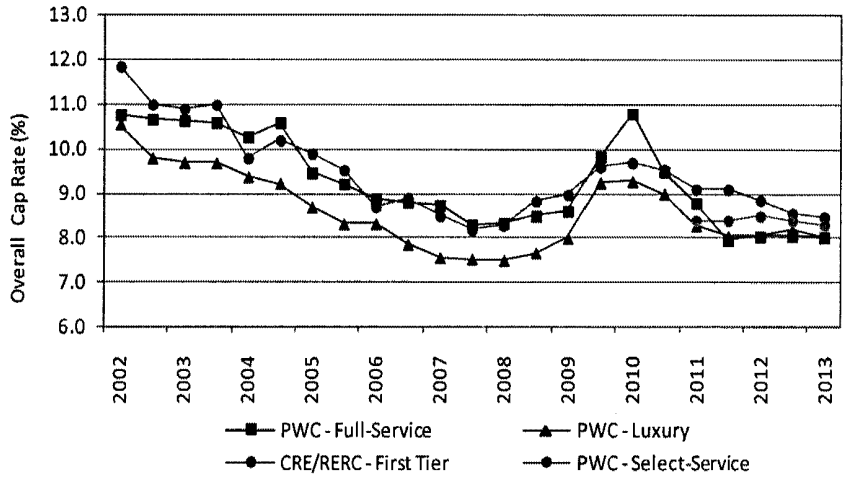

FIGURE 11-23 OVERALL CAPITALIZATION RATES DERIVED FROM SALES AND INVESTOR SURVEYS

Source	Data Point Range	Average
HVS Hotel Sales - Full-Service & Luxury	1.5% - 11.7%	6.00%
HVS Hotel Sales - Select Upscale and Upper Midscale	2% - 14.2%	7.40%
PWC Real Estate Investor Survey - 1st Quarter 2013		
Select-Service Hotels	5.0% - 12.0%	8.30%
Full-Service Hotels	6.0% - 10.0%	8.02%
Luxury Hotels	6.0% - 10.0%	8.03%
CRE/RERC Real Estate Report - Spring 2013		
First Tier Hotels	6.0% - 11.5%	8.45%

We note that the averages illustrated in the previous table are derived from wide arrays of data points, and a range of reasonableness extends both lower and higher than the indicated data points. The following table reflects the capitalization rates for the proposed subject property that have been derived based on our estimate of market value via the discounted-cash-flow analysis. Note that the stabilized year's net income has been deflated to first-year dollars.

FIGURE 11-24 DERIVED CAPITALIZATION RATES

Year	Net Operating Income	Derived Capitalization Rate
Forecast 2016/17	$3,724,000	7.9 %
Deflated Stabilized (2016/17) Dollars	3,785,000	8.0

The derived capitalization rates are considered appropriate for a proposed lodging facility such as the Proposed Four Points Flushing. The derived capitalization rates that are based on the forecasted net operating income fall in line with acceptable returns for a hotel of this caliber. We note that these capitalization rates reflect the expectation of continued improvement in profitability over the initial years of the forecast. Investors are acquiring assets at low "going-in" capitalization rates with the anticipation of a future upside as the economy continues to grow. As RevPAR and net income levels recover, direct capitalization rates can be expected to return to levels that are more typical.

Discounted Cash Flow Analysis – "When Complete"

The process of converting the projected income stream into an estimate of value via the discounted-cash-flow method is described as follows.

1. An appropriate discount rate is selected to apply to the projected net income before debt service. This rate reflects the "free and clear" internal rate of return to an all-cash purchaser or a blended rate of debt and equity return requirements. The discount rate takes into consideration the degree of perceived risk, anticipated inflation, market attitudes, and rates of return on other investment alternatives, as well as the availability and cost of financing. The discount rate is chosen by reviewing sales transactions and investor surveys and interviewing market participants.
2. A reversionary value reflecting the sales price of the property at the end of the ten-year holding period is calculated by capitalizing the eleventh-year net income by the terminal capitalization rate and deducting typical brokerage and legal fees.
3. Each year's forecasted net income before debt service and depreciation and the reversionary sales proceeds at the end of the ten-year holding period are converted to a present value by multiplying the cash flow by the chosen discount rate for that year in the forecast. The sum of the discounted cash flows equates to the value of the subject property.

The following chart summarizes the averages presented for discount rates in various investor surveys during the past decade.

FIGURE 11-25 HISTORICAL TRENDS OF DISCOUNT RATES

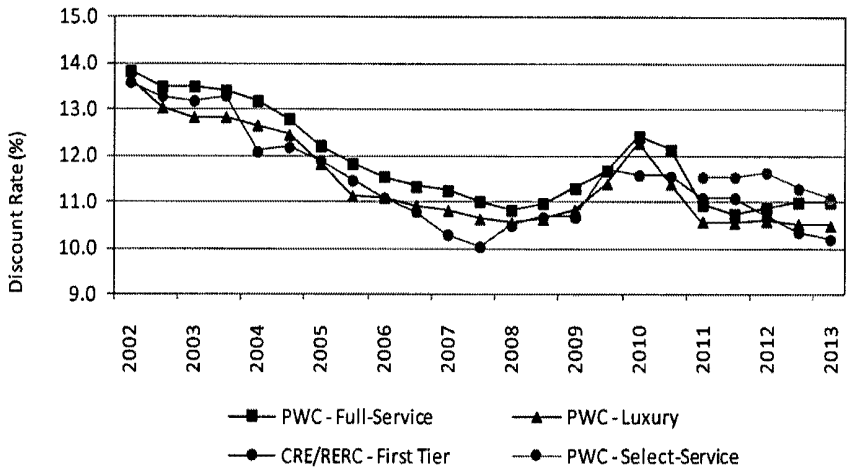

FIGURE 11-26 OVERALL DISCOUNT RATES DERIVED FROM SALES AND INVESTOR SURVEYS

Source	Data Point Range	Average
HVS Hotel Sales - Full-Service & Luxury	9% - 13.7%	11.10%
HVS Hotel Sales - Select Upscale and Upper Midscale	9.5% - 14.1%	11.50%
PWC Real Estate Investor Survey - 1st Quarter 2013		
Select-Service Hotels	9.0% - 15.0%	11.10%
Full-Service Hotels	9.5% - 13.0%	11.00%
Luxury Hotels	9.0% - 13.0%	10.50%
CRE/RERC Real Estate Report - Spring 2013		
First Tier Hotels	7.5% - 13.5%	10.33%

We note that the averages illustrated in the previous table are derived from wide arrays of data points, and a range of reasonableness extends both lower and higher than the indicated data points. Based on our review of these surveys, sales transactions (see total property yields shown in the table titled *Sample of Hotels Sold*), and interviewing market participants, we have selected a discount rate of 10.50% for our analysis. Similar to the developed total property yield, our selected discount rate considers the current market for hotel investments, as well as the characteristics of the property and market.

Executive Summary

The subject of this economic impact analysis (EIA) is a proposed [redacted] select service hotel and mixed-use development to be located in Flushing, Queens in New York City (the Project). This analysis was prepared by Bleakly Advisory Group, Inc. (BAG) Farrington EB-5 Capital, LLC (the Client), under subcontract to Mona Shah & Associates, PLLC. Source data relied upon for this EIA was obtained from an "EB-5 Business Plan" for the Four Points Flushing Hotel & Condominium prepared on behalf of Farrington EB-5 Capital, LLC.

The Project's economic impacts were measured for the seven New York counties located within the New York-Northern New Jersey-Long Island, NY-NJ-PA Metropolitan Statistical Area (the Region) using RIMS II. The specific purpose of the report is to serve as a "job creation study" following guidelines established by the United States Citizenship and Immigration Services (USCIS) under the EB-5 Regional Center Program. Therefore, the analysis focuses on quantifying the EB-5-recognized/eligible job creation effects from both the Project's (temporary) construction and (permanent) annual operations.

The following points highlight the analysis findings and conclusions:

- Development of the proposed project will result in a [redacted] increase in net direct output to the region's economy from construction spending (inflation adjusted to 2010$). The duration of construction is expected to be 30 months.

- Resulting total output generated by the construction investment on the region's economy, including multiplier effects, approaches [redacted] That output would support [redacted] in total earnings across all industries, including direct effects, and support a total of [redacted] jobs. The investment is estimated to raise household earnings by an average of [redacted] per job. Because the construction period is more than 2 years, "direct" construction jobs associated with this Project are counted for EB-5 purposes. BAG estimates that investment in the project would support [redacted] direct construction jobs plus [redacted] indirect and induced jobs during the construction period.

- The hotel market study and financial analysis appearing in the Business Plan indicates that the proposed hotel will reach stabilized operations within the third year of start-up and generate [redacted] in annual gross sales. Combined with ancillary parking,

commercial leasing and management of the residential condominiums, stabilized year revenues from all project components totals [redacted]

- BAG estimated that roughly 90% of stabilized gross sales would be a net direct impact to the region's economy. These adjustments reduced the Project's effective (stabilized year) output to the region's economy to [redacted] when inflation adjusted to 2010$.

- The net change in final demand method generates a total regional gain in annual output of nearly [redacted] across all industries. The investment is projected to increase household earnings throughout the region by [redacted] including payrolls to employees of the facilities. The project supports a total of [redacted] jobs from permanent operations, including multiplier effects. Average earnings across all industries approach [redacted] per job in 2010$.

- BAG concluded that of the [redacted] total in-region jobs supported by stabilized operations, 110 provides a reasonable estimate of verifiable direct FTE employment while the balance of [redacted] jobs represents the Project's indirect and induced employment effects. This conclusion is consistent with hotel staffing and payroll projections contained in the Business Plan. Direct FTE job creation represents [redacted] of the Project's total estimated employment impact on the region's economy from annual operations.

- The Project is located within an area that qualifies as a State-designated "Targeted Employment Area" (TEA). As such, EB-5 supportable investment is calculated at a ratio of $500,000 for every 10 jobs created. The maximum credited foreign investment for this project under the EB-5 Program is based upon the sum of the calculated direct and indirect construction employment [redacted] jobs), direct permanent employment to be offered by the proposed facility, [redacted] FTE positions) plus the indirect permanent employment [redacted] indirect/ induced jobs) supported by those direct jobs.

Divided by the ratio of $500,000 per 10 jobs created, the resulting total of [redacted] jobs supports a maximum EB-5 investment o[redacted]

(b)(4)

Project Introduction

This report summarizes the estimated direct and indirect job creation effects associated with the construction and operation of a proposed mixed-use development to be located in Flushing, NY, which is part of the Borough of Queens and New York City. This proposed development will be anchored by an upscale select service hotel and accompanied by residential condominiums, retail units available for lease, a multi-purpose "community center" which may be operated as a corporate and/or special events facility, and a commercial parking garage (the Project). This analysis has been prepared by Bleakly Advisory Group, Inc. (BAG) on behalf of the Farrington EB-5 Capital, LLC, under subcontract to Monah Shah & Associates, PLLC (the Client).

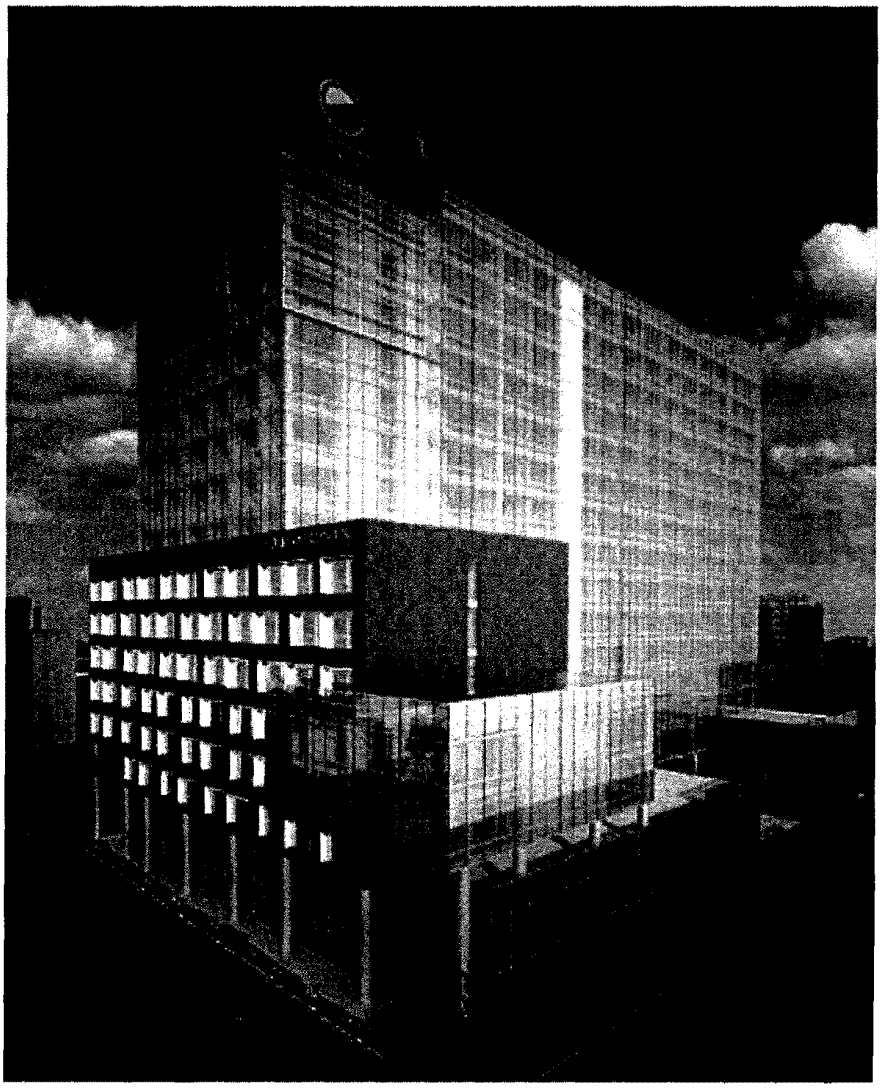

Figure 1: Project Rendering

The Project has been proposed for a 42,000 SF site located at the intersection of Farrington Street and 35th Avenue, with the address of 134-37 35th Avenue in Flushing, NY. This project site lies within a desirable commercial corridor in downtown Flushing, which is noted for its concentration of Chinese and Korean businesses and is a popular destination for Asian tourists. In addition to being located within a vibrant commercial location, the Project site is accessible to public transportation, the City's major airports, professional sports venues including CitiField and the site of the US Tennis Open, plus a number of other New York City tourism destinations and cultural attractions.

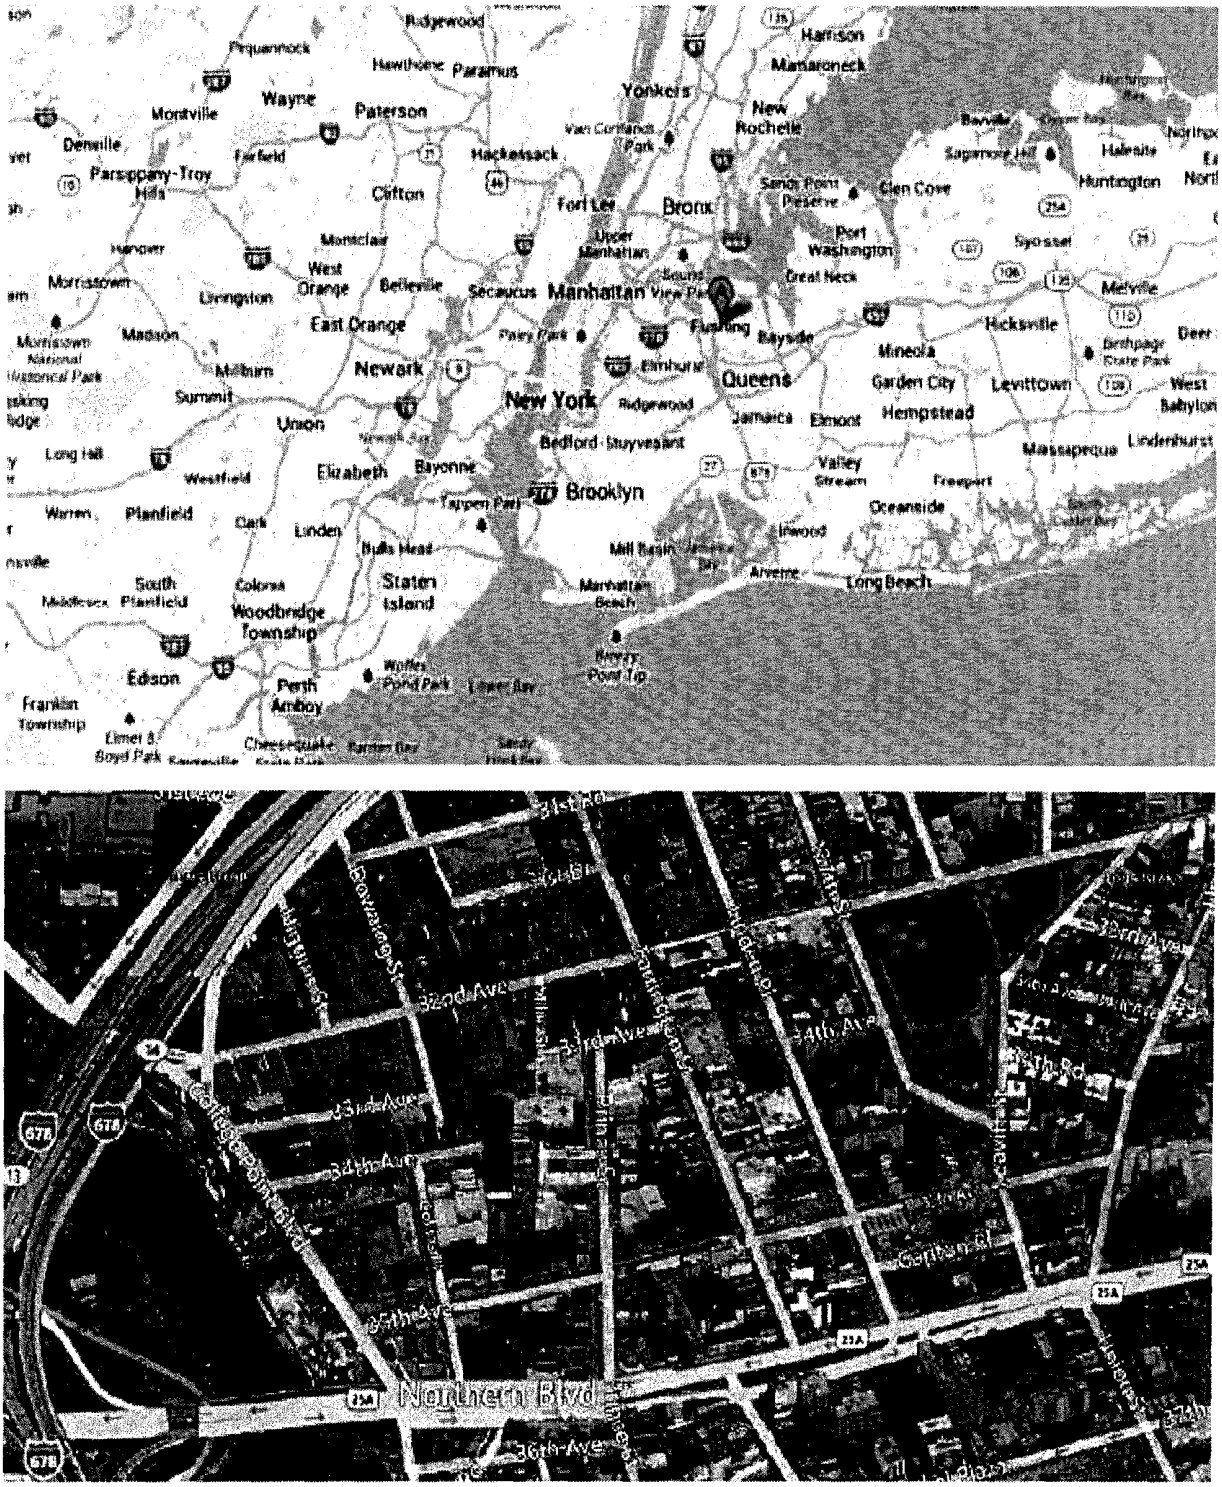

Figure 2: Project Location and Neighborhood Setting

The Project is planned to be 15 stories tall with 4 floors of parking below street level. The mixed-use complex is anticipated to take 30 months to construct at a cost $68.8 million and will consist of the following components:

- A 210-key hotel operated as a "Four Points" brand under the Sheraton Hotels & Resorts flag and designed to Sheraton's standards. The hotel will offer a restaurant, bar and lounge, an indoor pool, fitness center, conference rooms and a 1,025 SF retail/gift shop space located in the lobby area.

- The project will offer 9 additional commercial spaces available for lease at street level, offering approximately 9,920 SF of net leasable floor area for retail and restaurant tenants.

- Above the lobby the floor plans show three large community/meeting rooms totaling 14,300 SF plus circulation/support space and access to a large outdoor terrace above street level. The floor plan does not show any dedicated kitchen space to support these large meeting rooms/event space, so it is assumed that food services would be provided either by the hotel kitchen or by outside caterers.

- The plans show 101 residential condominiums above the hotel, consisting primarily of 2-bedroom units. Condominiums are supported by a rooftop terrace, a dedicated fitness room and a common area meeting room at ground level.

- The property will include a 279-space parking garage to support the residences, the hotel, commercial tenants and the general public. This garage will be centrally managed and operated as a profit center.

The Client commissioned a hotel market study and appraisal report which was prepared by HVS Consulting and Valuation Services ("HVS") to determine whether the local hotel market was sufficiently under-served and commanded sufficient room rates to support the Project.[1] At the time the market study was prepared, the Flushing hotel sub-market consisted of nearly 2,400 rooms with a collective occupancy rate approaching 80%. Market research findings are summarized in the Business Plan and conclude that demand growth in the market is sufficient to accommodate the proposed hotel, plus additional planned supply growth through 2017, while continuing to sustain a 76% market wide occupancy rate. At this time the Client has not conducted similar market studies for the proposed residential condominiums, the comparatively small retail component or the commercial parking garage. However, the attributes of the location and surrounding business district strongly indicate that the market can easily absorb the Project without negatively impacting existing residential pricing, existing businesses sales or vacancy rates in surrounding real estate. Economic impacts associated with the Project should therefore represent a net gain to the region as opposed to a transfer of economic activity from existing businesses.

[1] Self-Contained Appraisal Report - Proposed Four Points Flushing 134-37 35th Avenue, Flushing, NY; HVS Consulting and Valuation Services, Division of Hotel Appraisals, LLC, dated July 26, 2013.

Methodology

The purpose of this report is to calculate the Project's direct and indirect job creation effects in accordance with guidelines established under the Immigrant Investor Program, administered by U.S. Citizenship and Immigration Services (USCIS) office of the Department of Homeland Security. This USCIS program, also known as "EB-5," was created by Congress in 1990 to stimulate the U.S. economy through job creation and capital investment by foreign investors. USCIS has adopted certain rules for qualifying job creation under the EB-5 program, pertaining to the construction and operation of projects seeking foreign investment. The program requires submission of an economic impact analysis (EIA) to document qualifying EB-5 job creation and resulting supportable immigrant investment.

The developer of the proposed Four Points Flushing Hotel is seeking regional center designation as a hypothetical project, consisting of the components described above. Our understanding is that Farrington EB-5 Capital, LLC will become the new commercial enterprise (NCE) - a newly formed entity for the purpose of raising EB-5 investment capital. Farrington Realty, LLC will be the job creating entity (JCE) and function as the owner/operator of the Project. The JCE will "create" jobs through the operations of the hotel, the ongoing management of the residential condominiums, the management and leasing of commercial/retail space and the operation of the parking garage. While future commercial tenants can also be expected to create jobs through their own business operations, the nature of these tenant businesses is an unknown at this time. Therefore, this analysis does not attempt to estimate or claim tenant based employment for EB-5 job creation.

This EIA relies upon information supplied by the Client as part of the Project's "Four Points Flushing Hotel & Condominium Comprehensive EB-5 Business Plan," prepared by Farrington EB-5 Capital, LLC and dated July 2014 (the Business Plan). BAG also reviewed the hotel market study/appraisal and collected additional information by interviewing the Client. Estimates of the Project's direct effects, including construction costs and pro forma revenue/expense projections were also provided by the Client.[2] If there are any inconsistencies in descriptive information provided in this EIA in comparison to the Business Plan, those differences should be minor and are unintentional.

BAG has prepared economic impact estimates for the Project's construction and operation using the Regional Input Output Modeling System (RIMS II) developed by the U.S. Department of

[2] All documentation relied upon for this EIA is assumed to have been provided to USCIS under separate cover.

Commerce, Bureau of Economic Analysis. For both construction and operations, BAG selected the seven New York counties located within the New York-Northern New Jersey-Long Island, NY-NJ-PA Metropolitan Statistical Area as the primary economic impact area for the Project (the Region). By using RIMS II multipliers for these seven counties, our measurement of indirect employment effects is limited to jobs supported inside that metropolitan region. This methodology does not capture additional indirect employment which may be created elsewhere in New York, other nearby states or the U.S. as a whole. All multipliers used in the analysis were taken from "RIMS II Multipliers (2002/2010) Table 1.5 Total Multipliers for Output, Earnings, Employment and Value Added by Detailed Industry (Type II)."[3]

During the early phases of project planning, it can sometimes be difficult to make with a high degree of precision the types of calculations required of the RIMS II model. BAG has attempted to appropriately adjust for the specialized nature of this mixed-use project by isolating only the portion of the total investment which can be reasonably allocated as an impact to the Region's economy. These adjustments have been made within the limits of available information and are explained in the section of the EIA which addresses employment impacts from construction. While extensive third-party analysis has been conducted for the proposed hotel, significantly less background data has been generated for the other project components. For those components, BAG has constructed reasonable pro forma projections. These projections may or may not change as the Project proceeds to financing and construction.

In summary, BAG relied upon business plan information provided by the Client, supplemented by our general industry knowledge. We have chosen to be conservative wherever possible to avoid over-estimating job impacts and resulting supportable EB-5 investment. The methodology and calculations used to derive the construction and permanent employment estimates are presented in the following sections.

[3] A pdf copy of Table 1.5 can be provided upon request if needed to verify the RIMS II multipliers for specific industry sectors used in the analysis.

Economic Impacts from Construction

Overview

The treatment of construction-related job creation and the meaning of "full-time" or "permanent" positions (pertaining to both construction and annual operations) under the EB-5 Program have evolved over time and guidance related to the adjudication of this issue was released in a memorandum issued in December of 2009.[4] Our interpretation of that memorandum, based on the excerpts below, is that "construction jobs" associated with the development of the Project meet the definition of direct, permanent positions because the Project's construction will take 30 months and thus exceeds the minimum two-year threshold to be counted as direct, permanent jobs.

> "Historically, construction jobs have not been counted toward job creation because they are seen as intermittent, temporary, seasonal and transient rather than permanent. USCIS, however, now interprets that direct construction jobs may now count as permanent jobs if they:
> - Are created by the petitioner's investment; and
> - Are expected to last at least two years, inclusive of when the petitioner's Form I-829 is filed."

The following paragraph, which appears in that same section of the USCIS memorandum, goes on to distinguish between direct, full-time jobs and the calculation of indirect and induced jobs which result from a capital (construction) investment made by a commercial enterprise. BAG interprets this paragraph to mean that a substantial portion of a project's construction and start-up costs can be measured for indirect/induced effects using the RIMS II model and the resulting number of indirect/induced jobs associated with such an investment would also qualify for EB-5 purposes.

> "Economic input/output (I/O) models, such as RIMS II or IMPLAN, used to evaluate the calculation of the number of indirect jobs (including induced jobs) created through a commercial enterprise affiliated with a regional center do not distinguish between full-time and part-time jobs. In other words, the job creation results of the multipliers in the economic I/O models do not distinguish between the full-time and part-time nature of the positions. Therefore, the number of indirect jobs quantified through the I/O model analysis will be considered to be full-time and qualifying for EB-5

[4] Neufeld, Donald, "Adjudication of EB-5 Regional Center Proposals and Affiliated Form I-526 and Form I-829 Petitions; Adjudicators Field Manual (AFM) Update to Chapters 22.4 and 25.2 (AD09-38)," December 11, 2009, p 14.

> purposes. Accordingly, determinations regarding whether jobs qualify as "full-time" *are only relevant to the analysis of direct jobs created by a commercial enterprise claiming the creation of direct jobs* as a result of the EB-5 capital investment"
>
> (Sec.3.iii, page 14 - emphasis added)

Twice in the above paragraph, USCIS specifically ties the use of I/O models to calculating "indirect jobs." However, when RIMS II (or other I/O) multipliers are applied to a given capital investment, the resulting outputs also include direct jobs supported by that capital spending, along with the investment's indirect and induced effects. Also, the following statement which specifically justifies the use of I/O models to measure indirect construction impacts, i.e. *"I/O models do not distinguish between the full-time and part-time nature of the positions. Therefore, the number of indirect jobs quantified through the I/O model analysis will be considered to be full-time and qualifying for EB-5 purposes"* would apply to all jobs calculated by the I/O model, including direct jobs and not just the indirect and induced jobs. USCIS further states that *"determinations regarding whether jobs qualify as "full-time" are only relevant to the analysis of direct jobs created by a commercial enterprise claiming the creation of direct jobs" (Emphasis added).* BAG interprets this statement to mean that the calculation of jobs using an I/O model is not dependent on the duration or phasing of the investment and that resulting employment estimates can be assumed to be full-time and qualifying for EB-5 purposes. In other words, employment impacts quantified using RIMS II should be calculated based on the total dollar value of the investment and not be divided by the number of months or years the investment will occur. It is also not necessary to speculate on the nature of construction labor or the distribution of full-or part-time workers which may be employed by a project that is still several months away from executing a construction contract.

Based on the above, it is reasonable to interpret USCIS' definition of "construction jobs" (whether direct or indirect) to mean construction workers employed on site during a project's development phase. It is less clear whether the term "construction jobs" also applies to architects, engineers, planners, lenders, insurers, attorneys, manufacturers, wholesalers, equipment suppliers or other service providers whose jobs are supported by investments in commercial or residential construction. USCIS comments received in response to earlier EIAs suggests that for purposes of estimating indirect jobs, USCIS defines "construction jobs" to mean all jobs supported in all industries that may be positively impacted by an investment in new construction or rehabilitation as measured using an I/O model. For projects claiming direct construction jobs, the guidance is less clear.

BAG's interprets the above references to mean that for purposes of calculating indirect jobs resulting from a construction investment using RIMS II, eligible indirect effects or inputs can be broadly defined. In addition to site development and building construction, it is reasonable to include engineering and other soft costs, FF&E, permitting fees and other related investments necessary to make the resulting business operational. For construction projects with a duration of more than two years and eligible to claim direct jobs, spending used for purposes of calculating those direct jobs should probably be limited to on-site hard costs only.

Two methods can be used to estimate direct and indirect employment effects using RIMS II Multipliers, (1) "impacts based on changes in final demand" and (2) "impacts based on changes in (direct) employment and earnings." The first method drives employment estimates based on output, i.e. total construction spending and/or annual sales, while the second is based on initial changes in direct job creation and earnings (payrolls). These methods should theoretically produce the same answer using RIMS II, provided that the inputs are 100% accurate.

BAG concluded that estimating impacts based on changes in final demand is more accurate in this case because the Client has prepared development cost estimates for the facility. At this time, much less information is available with which to estimate the percentage of the development budget which will be spent on labor or the number of direct jobs or earnings (payrolls) that are included within the Project's total development budget. The lack of such information renders the employment and earnings method less accurate and more difficult to use. BAG has therefore relied on the "changes in final demand" method for estimating employment effects during the construction period.

(b)(4)

Calculation of Construction Employment Effects

Total development costs for the Project are itemized Table 1 on the next page. Direct development and construction costs are projected to total just over [redacted] and include land acquisition, site work, construction of buildings and parking structures, financing, permitting, contingencies and other soft costs. These costs were provided by the Client and are assumed to be in 2013/14 dollars. The project is expected to include approximately 353,100 SF (gross), including 287,650 SF of enclosed building space (hotel, residential, retail and common area/circulation) and a 279-space parking garage totaling 84,100 SF. The hotel component totals 88,900 SF and accounts for an estimated [redacted] of the Project's cost. The residential condominiums will occupy 100,900 SF and cost an estimated [redacted] to build. The 13,850 SF (gross) commercial components and 16,800 SF "community facility" are expected to cost [redacted] and the parking garage is projected to cost [redacted] Total Project costs,

(b)(4)

including structured parking, average roughly $239 per square foot of enclosed floor area and $195/gross SF including structured parking.

In order to isolate and estimate the Project's indirect economic impact to the region during the construction phase, BAG first considered whether or not 100% of the development costs included in Table 1 could be reasonably claimed as having a direct effect on the Region's

economy. In its documentation of the RIMS II model, the BEA states that "RIMS II multipliers are based on the average relationships between the inputs and outputs produced in a local economy." Among the RIMS II Model's assumptions are (1) firms have no supply constraints, (2) industries can increase their demand for inputs and labor as needed to meet additional demand and (3) firms will purchase inputs from other firms in the region before using imports. Because averages do not always apply to a particular case study, the BEA acknowledges that "the employment multiplier for a region can vary when local information is used to improve the accuracy of the multipliers because the model's assumptions do not hold." The BEA therefore "encourages analysts to carefully evaluate how closely these assumptions apply to their projects and to consider collecting additional information specific to their project to adjust their results."[5]

An illustrative example used by the BEA to show the need for "local adjustments" cited construction of a medical facility that required "specialized inputs and workers not found in the local area." In that particular example "local firms cannot supply additional inputs and a percentage of the resulting construction-related jobs would be supplied from outside the region." In that case the BEA concluded that "the actual multiplier of resulting in-region jobs per $1 million of new construction investment would be less than indicated by RIMS II."

Rather than adjust the multipliers directly, the most straightforward method to adjust for "local information" is to deduct reasonable shares of a total construction costs which are not likely to be supplied from within the region being analyzed. In an urban environment like New York City it is unlikely that the market lacks "specialized inputs and workers" but it is possible that some of those specialized inputs and workers could be supplied by companies located in bordering states which are not located within the RIMS II region used for this analysis. The above BEA example therefore has some parallel to the proposed project and BAG determined that it is necessary to deduct a portion of the Project's development budget prior to calculating its employment effects

Based on a review costs appearing in Table 1, BAG proceeded to deduct portions of FF&E, property taxes, development fees, construction interest costs, working capital and budgeted contingencies to remove the share of total construction costs which are not likely to be supplied from within the region. These adjustments lowered that portion of the project's development budget that would impact the Region's economy by approximately [redacted] or 11.6%. The (b)(4) deductions were based primarily on judgment, given that greater accuracy could only be achieved by interviewing every potential supplier to determine the percentage of that supplier's

[5] www.bea.gov/regional/rims/rimsii/illustrative tables.aspx

product or service that was produced within the region – followed by independently verifying the suppliers' reported information. Given the fact that no contracts have been issued for the Project, that level of verification is not possible.

(b)(4)

The remaining expenditures totaling [redacted] were then used as the starting point for estimating indirect job creation effects from the Project's construction. (These costs appear in Table 2.) We also allocated roughly 25% of FF&E spending as an impact to the region's economy and distributed that spending to the wholesale trade sector. This percentage was considered reasonable and sufficient to capture in-region spending on distribution costs, wholesale mark-ups, installation costs or components that might be manufactured in-region. The remaining industry allocations can be imputed by comparing Tables 1 and 2. Resulting indirect industry earnings from the facility's development were modeled as a one-time/one year estimate.

The next step in the methodology involved allocating the [redacted] in development costs to the relevant industry sectors that can be measured using the RIMS II model. The resulting industry distribution of spending impacts is also shown in Table 2. In making these allocations, BAG distributed the used portion of the contingency cost line items proportionally among relevant industry sectors.

Total Indirect Construction Impacts [3]:			

Sources: Farrington Realty, LLC; HVS Consulting & Valuation Services and Bleakly Advisory Group, Inc.

(b)(4)

The costs appearing in Table 2 were then inflation adjusted (discounted) to 2010 levels before applying the RIMS II multipliers. This adjustment was based on the "New York CPI" (All Urban Consumers) and totaled -4.87%. This further reduced the impact from construction spending to [redacted] which is shown in the "Total Costs" column of Table 3.

Because the duration of construction is expected to exceed two years, it is not necessary to adjust the final demand employment multipliers to remove the effects of direct jobs which are embedded within the construction industry multiplier. To be conservative, for the remaining 9 industry sectors BAG adjusted the final demand employment multipliers to remove the effects of direct jobs that are embedded within those multipliers. To remove direct effects, USCIS has approved methodologies that adjust final demand employment multipliers by a ratio of indirect to direct jobs, calculated using the direct effects employment multiplier. These adjustments are reflected in the "Adjusted Employment Final Demand" column appearing in Table 3. The calculation used to make the adjustments is also described in footnote #3 of the table.

The total construction impacts of this investment are calculated in Table 3. Using the change in final demand method, BAG allocated the estimated [redacted] of "in- region" purchases (in 2010$) among the affected industry sectors and multiplied the direct effects by the respective industries' associated RIMS II multipliers for the region. Resulting total output generated by the investment, including multiplier effects, is estimated to be [redacted] According to RIMS II, that output would support [redacted] in total earnings across all industries, including direct effects.

Multiplying the estimated total regional output by the final demand employment multipliers supports a total of [redacted] jobs, including (both) direct and indirect jobs in the construction sector (top row) and indirect effects (only) in the remaining industry sectors. Our analysis of the multipliers indicates that roughly 40% of the Project's total employment effects in the construction industry sector would be indirect/induced [redacted] jobs) and the balance of [redacted] jobs would be directly supported by construction spending. Therefore, of the [redacted] total jobs calculated in Table 3, BAG estimates that 326 are direct and the remaining [redacted] are indirect.

Total Indirect Construction Impacts [3]:												

NOTES:

[1] BAG allocated development costs itemized in Table 1 to the most applicable detailed industry sectors recognized in the RIMS II model. Less than 100% of the development budget is used in estimating direct employment impacts from development of the proposed facility.

[2] Final Demand Multipliers are used for industries which are most closely associated with cost categories used in the development budget. Contingency budgets are spread proportionally to other line items.

[3] In order to isolate "indirect" construction impacts which are eligible for consideration under the EB-5 Program, the final demand employment multiplier is adjusted downward by the ratio of the indirect portion of the direct effects employment multiplier. For the construction industry the "adjusted" final demand employment multiplier was calculated as

Sources: Farrington Realty, LLC; HVS Consulting & Valuation Services and Bleakly Advisory Group, Inc.

(b)(4)

Although project spending is spread across 10 industry sectors shown in Table 3, it is important to note that (b)(4) jobs or 96% of those impacts are directly attributed to spending on construction hard costs. Among the jobs supported by spending on other costs, the largest beneficiaries are the real estate sector, the architectural and engineering industry, the wholesale trade sector which benefits from investment in hotel FF&E and governmental enterprises which benefit from the receipt of one-time permitting and impact fees. Employment impacts across all sectors other than construction are very modest.

It should also be emphasized that Table 3 applies an available RIMS II methodology to estimate the indirect economic impacts associated with a capital investment in a new commercial enterprise. The methodology used should not be interpreted to mean that the regional center is seeking "new industry categories" for all industries which may benefit from in-region purchases associated with investments made during the Project's construction.

Economic Impacts from Permanent Operations

Overview

The following calculations of permanent employment effects from the Project are influenced by USCIS' interpretation of what constitutes a "permanent" job for EB-5 purposes. The Project can be expected to create/impact permanent employment in three ways: (a) through the operations of the proposed hotel, (b) through the facility's management as a real estate investment, i.e. commercial leasing and operation of the parking garage; and (c) through employment supported by the residential condominium association budget.

As indicated below, the USCIS definition of eligible direct full-time permanent employment includes payroll employees only and does not extend to jobs created by independent contractors. In addition, USCIS only credits "full time" employment for EB-5 job creation purposes.

> "[The classification of full-time employment should meet] the regulatory definitions of employee and full-time employment at 8 CFR 204.6(e). Thus, direct jobs must still be filled by qualifying employees and not by independent contractors. Positions filled by independent contractors are not qualifying direct jobs and may only be credited for EB-5 job creation purposes in petitions involving commercial enterprises that are affiliated with a regional center. In addition, multiple part-time positions may not be

> combined to create one full-time position, unless those part-time jobs can be shown to be part of a job-sharing arrangement."
>
> (Sec.3.iii, page 15)

In this case, BAG interprets the meaning of "independent contractors" to mean purchased business services, such as landscapers, laundry services, etc. – which are more accurately measured as indirect effects using the RIMS II multipliers. At this still early phase of planning, it is difficult to determine the extent to which the hotel and property management company will hire internal staff versus contract for services or how payrolls will be distributed among full- and part-time positions. The Project's development team understands that full-time employment means 35 hours or more per week and the intent at this time is to fill the majority of staffing requirements with full-time positions. This will be validated at the time of I-829 approval. At this time, the use of full-time equivalent positions (FTE's) provides a realistic estimation of direct employment estimates for analysis purposes using RIMS II, given that the Project's intent is to use full-time staffing to the extent feasible. The following direct employment forecasts therefore represent FTE's.

BAG used the following steps to forecast economic impacts from annual operations: (1) reviewing the Client's operating pro forma; (2) estimating the portion of that budget which would reasonably represent labor costs; (3) reviewing the Client's staffing estimates and payroll spending and (4) checking the resulting outputs for reasonableness. These steps are explained in the following sections.

Forecasted Hotel Operations

Information contained in the Business Plan provided by the Client is presented in Table 4, which provides a five year operating pro forma for the hotel. Assuming a late 2014 or early 2015 groundbreaking and a 30-month construction schedule, the development could be expected to open in 2018.

Sources: HVS Consulting & Valuation Services Division of Hotel Appraisals, LLC

New hotels typically require 2 years to reach stabilized occupancy, which can be seen from the anticipated revenue increases over the first three years of the operating pro forma. BAG therefore assumed Year 3 as the stabilized year. Table 4 shows effective gross stabilized year revenues of just under [redacted] total departmental and undistributed operating expenses of [redacted] other management expenses and fees of [redacted] and a remaining excess cash reserve of [redacted] which we assume would be used at least in part as a reserve fund for capital replacement. The remaining margin of nearly [redacted] would be used for debt service payments, taxes, payments to equity investors and additional depreciation/replacement reserves. Also indicated in the pro forma, roughly 92% or [redacted] of total forecasted hotel revenues are expected to be generated by rooms [redacted] from rentals and other hotel operations, leaving a balance of [redacted] generated by the food & beverage operations.

Forecasted Ancillary Operations

The Client has developed less third-party information regarding the other mixed-use project components and sources of job creation, but is very knowledgeable of the local market and confident in the basic underlying inputs for projecting revenues from parking, commercial rents and condominium association fees. BAG used these insights to construct estimates of parking, condominium association and retail leasing revenues/expenses when fully occupied. These are necessarily hypothetical but are realistic and consistent with the inputs provided. Each of these components is summarized below. All estimates are made in 2014$.

Parking

Estimated stabilized year parking revenues and expenses are presented in Table 5. The Client indicated that the parking garage should be expected to generate minimum monthly revenues of [redacted] space. To test this estimate, BAG constructed a simple pro forma using a template developed by AmerPark, a nationally recognized parking development and management company. Using very reasonable assumptions concerning utilization rates and fees, the facility could be expected to generate revenues of nearly [redacted] space/month by the stabilized year. Operating expenses are estimated at [redacted] of revenues or roughly [redacted] year, with [redacted] of costs dedicated to payroll.

Retail Leasing

A representative retail operating pro forma is presented in Table 6 on the next page. The Client indicated that prevailing retail and restaurant rents in downtown Flushing are in the range of $40/SF NNN and that the Project should be capable of equaling or exceeding those rents. Relying upon this estimate, BAG constructed a simple retail pro forma using typical operating pass through expenses. We also started rents at $38/SF to be conservative and reached $40 effective rents by the stabilized year. The pro forma also assumes that 9 of 10 planned commercial spaces totaling 9,918 SF will be leased. The remaining retail space shown in the project plans is assumed to be dedicated to the hotel and all resulting revenues/ expenses would be retained by and are already included in the hotel pro forma.

In addition it is assumed that the planned 16,800 SF community facility space would be rented for meetings, special events and other purposes to generate additional income. BAG included a

modest allowance under the assumption that the facility could attract 100 to 150 events per year. Including this event space, by year 3 the project is shown to generate [redacted] in total leasing income including CAM and other pass through charges. Assuming that the leasing operation is managed internally, staffing would be funded through a percentage of applicable pass through charges, plus EBIDTA that is not dedicated to debt service.

Residential Condominiums

Finally, a representative stabilized year condominium association operating budget is presented in Table 7. The Client indicated that the residential condominium fees of [redacted] per unit per month are reasonable for the location and the fact that the condominium is connected to the hotel and could access hotel services. Relying upon this estimate, BAG constructed a simple stabilized year operating statement for management of the condominium. The statement shows total revenues just over [redacted] with a modest [redacted] margin over expenses. Based on the range of services to be offered, it is estimated that roughly [redacted] of expenses would be payroll related.

Combined Operations

The combined operating revenues of these components approach [redacted] and are obviously sufficient to support a sizeable payroll and produce a significant direct impact to final demand. Total stabilized year revenues are summarized in Table 8. After considering different alternatives, BAG decided to isolate the hotel's food & beverage revenues/expenses and assign the resulting economic impacts to the "food service and drinking places" sector. The hotel's rooms and other revenues were attributed to the lodging industry sector. (Assigning 100% of impacts to the "hotels and motels" sector would have produced marginally different results.) The remaining activities were attributed to the real estate industry sector.

Table 8: Summary Stabilized Year Revenues

TOTAL OUTPUT:	

Sources: HVS Consulting & Valuation Services & Bleakly Advisory Group, Inc.

After considering these factors, BAG decided to deduct roughly [redacted] of the Project's stabilized year gross revenues as an "adjustment" to the final demand employment multiplier, under the assumption that a portion of the forecasted EBITDA is likely to be distributed to out-of-region and foreign sources/investors and therefore not benefit the region's economy. The resulting adjustments allocate the remaining gross revenues as a direct-effect impact to the region's economy. The adjustments discussed above reduced the Project's total stabilized year direct output to [redacted]

Based upon the strong market analysis findings, BAG found no reason to further adjust the Project's output to account for competitive impacts (i.e. removal of market share from existing in-region businesses), as those effects are assumed to be negligible. The resulting economic impact calculations appear in Table 9. The net change in final demand methodology was used, similar to the method used to estimate construction-related employment, except that there was no effort to remove the direct effects portion of any of the multipliers. Pro forma operating forecasts in Tables 4 through 7 represent 2014 constant dollar estimates. BAG therefore applied an inflation adjustment to convert stabilized year revenues back to 2010 dollars, similar to construction costs, which lowered the number to [redacted] The direct effects were assigned to the hotels and motels, including casino hotels; food services and drinking places and real estate sectors. The resulting calculations appear in Table 9.

Table 9: Estimated Direct and Indirect Permanent Employment Effects (CPI Adjusted)
Four Points Sheraton/Luxury Condo Development, Flushing, NY

Industry Sector	RIMS II Industry Code	Associated NAICS Codes	Direct	Final Demand Multipliers	Economic Impacts
				Employment	Employment
Hotels and motels, including casino hotels	7211A0	72251			
Food services and drinking places	722000	72251			
Real Estate	531000	53112, 531			
Total Impacts:					

Sources: HVS Consulting & Valuation Services Division of Hotel Appraisals, LLC and Bleakly Advisory Group, Inc.

Conclusion: Permanent Employment Effects

In summary, using the net change in final demand method BAG estimates that the mixed-use Project will directly add nearly [redacted] to the region's annual output (in 2010$), based on projected annual operations. The net change in final demand method generates a total regional gain in annual output across all industries of more than [redacted] The investment is also projected to increase household earnings throughout the region by [redacted] This method produces a total regional employment impact of [redacted] jobs from stabilized operations including direct, indirect and induced jobs. This equates to average earnings of roughly [redacted] per job in 2010$.

Estimate of Direct Jobs

The next step in the methodology involved estimating that portion of the total employment impact of [redacted] total jobs, which would represent full-time equivalent positions (FTE's) directly hired by the Project and subject to validation at the time of I-829 approval. Direct employment estimates for the hotel are addressed first, followed by the other project components.

Staffing estimates for the hotel appear in the business plan and were calculated by the hotel market consultant. These estimates are based upon comparable select service hotels of similar size and operating characteristics, located in major U.S. cities. Based on the experience of comparable hotels, the analyst estimated the need for 91 positions, as detailed in Table 10. BAG estimates that as EB-5 qualifying FTE jobs, 91 positions would require a payroll of nearly [redacted] (Direct salaries only - payroll expenses and fringe benefits are excluded.) A projected direct payroll of this size would represent roughly [redacted] of total stabilized year expenses as calculated in Table 4 and appears to be reasonable. A staffing level of 91 positions with a [redacted] payroll represents an average annual gross wage of [redacted] per position and also appears reasonable.

Table 10: Estimated Hotel Staffing
Four Points Sheraton/Luxury Condo Development, Flushing, NY

Direct Employees from Hotel Operation			
	Position	Employees Needed	Weeks to Open
	Management		
1	General Manager	1	26
2	Assistant General Manager	1	8
3	Controller	1	4
4	Assistant Controller	1	4
5	Guest Service Manager	1	6
6	Guest Service Supervisor	4	3
7	Executive Housekeeper	1	8
8	Housekeeping Supervisor	4	6
9	Chief Engineer	1	8
10	Director of Sales	1	26
11	Sales Coordnator	2	4
	Total	18	
	Position	Employees Needed	Days Paid Till Open
	Line Level		
1	Guest Service Agent	12	15
2	Night Auditor	4	15
3	Breakfast Attendant	6	15
4	Room Attendant	36	20
5	Houseman	10	20
6	Maintencance Tech	6	20
7	Parking Valets	3	15
8	Food Service	14	15
	Total	91	

To further verify this direct job estimate BAG examined the respective RIMS II direct effects employment multipliers for the hotel and motel (1.55) food services (1.30) sectors. Dividing the employment outputs in Table 8 (which (b)(4) were calculated using the final demand method) by these multipliers indicates that [redacted] of the [redacted] total jobs would be direct, very similar to the estimate of 91FTE employees presented in Table 10. This finding also suggests that the number of EB-5 eligible hotel positions is reasonably estimated. Based on this information, BAG concluded that 90 jobs provide a reasonable estimate of verifiable direct hotel/food service employment on an FTE basis.

Direct employment associated with the remaining components is expected to be modest by comparison. It is also more difficult to estimate because the future operating characteristics of these entities are still conceptual. The direct effects employment multiplier for real estate industry sector is 1.33. Applying this multiplier to the employment outputs in Table 9 means that [redacted] total jobs would be direct. Estimated combined stabilized revenues to the JCE from the operation of the parking, commercial leasing and condominium associations approaches [redacted] based on the calculations in Tables 5 through 7. Combined stabilized year expenses in those same tables are calculated at more than [redacted] including component labor costs of roughly [redacted] Divided by [redacted] positions this represents an average labor cost of [redacted] per job and appears reasonable.

BAG therefore concludes that the Project's operations would directly support from payroll, [redacted] full-time equivalent employees, including hotel administrative, food service and housekeeping; leasing management, property maintenance, condominium staff and parking personnel. ***For the purposes of this analysis, BAG assumes that all of these FTE positions would satisfy the USCIS criteria for qualifying direct jobs.*** Direct job creation represents [redacted] of the project's total estimated employment impacts on the regional economy from annual operations.

Excluded Employment Effects

In addition to the impacts estimated above, third parties can be expected to employ workers to staff the retail stores and restaurants that will occupy leased space. BAG conservatively estimates that programmed commercial space could directly house [redacted] workers on site using typical employment densities for urban retail and restaurant users in the market. Assuming that this space would attract a representative mix of industry tenants, those businesses could be expected to support [redacted] total jobs including direct, indirect and induced effects. USCIS has established stringent requirements for counting jobs created by tenant businesses and there is insufficient project information available at this time to identify specific tenant prospects, or to adequately document their employment effects. Therefore, the Client has decided not to seek credit for additional job creation effects from tenants and BAG has excluded the calculation of such impacts for EB-5 purposes.

(b)(4)

(b)(4)

Estimated EB-5 Supportable Investment

According to information provided in the Business Plan, the Project qualifies as being located within is a State-designated "Targeted Employment Area" (TEA). As such, EB-5 supportable investment is calculated at a ratio of $500,000 for every 10 jobs created. The maximum credited foreign investment for this project under the EB-5 Program in this case is based upon the sum of the calculated direct on site construction employment [redacted] jobs), the indirect employment in other industries supported by that construction investment [redacted] jobs), the direct permanent employment to be offered by the proposed hotel and ancillary mixed use components (110 FTE positions supported by stabilized operations), and the indirect permanent employment [redacted] indirect/induced jobs) supported by those direct jobs. That resulting total of 730 jobs is then divided by the ratio of $500,000 per 10 jobs created.

Therefore, based upon the preceding analysis BAG estimates that the Project would support a maximum EB-5 investment of [redacted] allocated as follows.

EB-5 Summary		
Direct Construction Employment	[redacted]	Construction period > 2 years allows direct jobs for construction hard costs
Indirect Construction Employment		Indirect effects across all industry sectors during the construction period
Direct Permanent (Net gain)		Direct FTE jobs from annual hotel operations at stabilized occupancy
Indirect Permanent (Net gain)		Indirect jobs supported by annual operations
T		EB-5 credited jobs created (indirect construction + direct FTE + indirect employment + tenants)
Ratio of 10 J		Units
		nvested (Assumes project is located in a Targeted Employment Area)
		Total Potential EB-5 Equity Capital

(b)(4)

Appendix: Explanation of RIMS II Multipliers

The following explanatory notes apply to the multipliers used in the above Tables.

1. Multipliers used to measure indirect economic impacts from the Regional Input-Output Modeling System (RIMS II), Regional Product Division, Bureau of Economic Analysis for the State of Georgia. Multipliers are based on the 1997 Benchmark IO Table for the Nation and 2008 regional data. Economic impacts to the remainder of the U.S. are excluded.

2. Final Demand Multiplier - Output: Represents the total dollar change in output that occurs in all industries for each additional dollar of direct output delivered to final demand by the project.

3. Final Demand Multiplier -Earnings: Represents the total dollar change in earnings of households employed by all industries in the region for each additional dollar of output delivered to final demand by the project.

4. Final Demand Multiplier – Employment: Represents the total change in number of jobs that occurs in all industries for each additional $1 million dollars of output delivered to final demand by the project. Because the employment multipliers are based on 2008 data, the output delivered to final demand is in 2008 dollars.

5. Direct Effect Multiplier – Earnings: Represents the total dollar change in earnings of households employed by all industries in the region for each additional dollar of earnings paid directly to households employed by the project.

6. Direct Effect Multiplier – Employment: Represents the total change in the number of jobs in all industries in the region for each additional job created directly by the project.

Economic Impact Analysis

Evaluating the economic impacts of proposed development projects or potential investments is becoming an increasingly common practice. This is due to the increasing number of public private partnerships which often require significant public investment in parallel with private equity and debt financing for a project. Economic impact analysis allows the public sector to gauge the long range benefits to their community from a particular investment and provides a basis for seeking public support for the investment or project. Bleakly Advisory Group, Inc. is widely recognized for its expertise in analyzing economic impacts. Recent economic impact analyses we have prepared include:

- **EB-5 Economic Impact Analysis under the USCIS Foreign Immigrant Investor Program**— BAG has prepared several economic impact analyses on behalf of Regional Centers seeking foreign investment under the EB-5 program. BAG's analyses have involved a variety of proposed projects including hotels, retail and mixed-use developments, assisted living/memory care facilities, manufacturing enterprises, energy facilities and other proposals.

- **Bulloch County Business Park Master Plan at Interstate 16/GA 301**— BAG prepared an economic impact analysis of a proposed technology-oriented business park located along the I-16 Corridor in Bulloch County, Georgia.

- **Economic Impacts Associated with the Long-Term Implementation of a Development Company's U.S. Real Estate Portfolio**— BAG has been providing ongoing advisory services to a Canadian development company with significant real estate holdings in the States of Georgia, Texas, North Carolina and Maryland. A recent assignment involved estimating the long-term economic impacts resulting from the build-out of those holdings upon the host Metro-Area economies.

- **Economic Impact Analysis of Atlanta's proposed Multi-Modal Passenger Terminal and GreenLine Plan**— BAG prepared a detailed economic impact analysis of the proposed construction and operation of a multi-modal transit hub to be located in the Railroad Gulch Area of Downtown Atlanta. The scope of the economic analysis included real estate impacts from redevelopment within an area surrounding the proposed terminal; impacts of constructing the terminal and associated transit infrastructure; impacts from annual spending on operation of the transit network; and economic impacts of annual user benefits (time and travel cost savings) for transit system users, regional commuters and truck freight. The analysis was prepared for Central Atlanta Progress, Inc., and the Georgia Department of Transportation.

- **Analysis of the Economic Impacts of Lake Lanier on Georgia's Economy**— BAG assisted the 1071 Coalition, an association of property and business owners near Lake Lanier, in analyzing the economic impacts of a prolonged drought and a dramatic resulting drop in lake levels during 2007-2008. The analysis focused on lake-dependent businesses and the local economies of communities surrounding Lake Lanier, as well as economic impacts to State of Georgia. Local/state economic impacts resulting from falling water levels at Lake Lanier were also compared to benefits of water releases to downstream economies in Georgia, Alabama and Florida, located within the Apalachicola-Chattahoochee-Flint (ACF) Rivers Basin.

- **Foxhall Sporting Club and Resort Hotel, Exhibition Center and Convention Center Economic Impact Analysis**— BAG assisted the developers of the Foxhall Sporting Club and Resort in Douglas County, Georgia to evaluate the economic impacts of a proposed Westin Hotel and related conference/exhibition facilities on the economy of Douglas County.

Relevant Projects

Economic Impact Analysis

- **Freshfields Hotel Economic Impacts on Charleston County, South Carolina**— BAG assisted the development team of a proposed hotel on Kiawah Island in assessing the economic and fiscal impacts of the hotel's construction and operation on Charleston County.

  Economic Impacts of NewTown Macon Programs on Macon, GA— BAG evaluated the resulting economic impacts from ten proposed program initiatives for NewTown Macon, Inc., on the City of Macon, GA. The analysis was used to help prioritize the organization's strategic plan for the City.

- **Economic and Fiscal Impacts of a Proposed Full Service Hotel on the City of College Park, GA**— BAG forecast the economic and fiscal impacts resulting from the development of a 400-room hotel that was proposed for a site located adjacent to the Georgia International Convention Center near the Hartsfield-Jackson International Airport. The purpose of the analysis was to support the developer's request from the local Development Authority to contribute a small portion of publicly owned land to the hotel site and to provide bond financing for the project. BAG calculated the resulting direct revenues to the Development Authority and the broader positive fiscal impacts on the City of College Park. BAG also compared the proposed hotel use to other likely development scenarios for the same property.

- **Analysis of the High Street Mixed Use Development on Dunwoody Georgia**— BAG quantified the economic impacts resulting from the creation of a major proposed mixed use development within the Perimeter Center area of Dunwoody, Georgia.

- **Economic Impact Analysis of Economic Development Strategies for Newton County, GA**— In the process of preparing an economic development strategy for Newton County, BAG quantified the likely economic impacts resulting from the successful implementation of several of the Plan's proposed projects/implementation tasks. Impacts were measured in terms of general economic (jobs) benefits and resulting fiscal impacts (changes in local tax revenues) to the County.

- **Analysis of the Regent Square Mixed Use Project, Houston Texas**— BAG assisted the developers of a large infill mixed use project in downtown Houston assess it economic impacts to Houston and Tarrant County.

- **Economic Impact Analysis of a Proposed Lifestyle Retail Center in Henry County, GA**— BAG assisted a developer in preparing an analysis of the economic impacts of a proposed lifestyle retail center on the economy of Henry County, Georgia.

- **Economic Impact Analysis of a Mixed Use Commercial Development, Franklin, Tennessee**— BAG assisted the developer of a major mixed use development assess the economic impacts of the project to the City of Franklin, Tennessee. Franklin is a suburb of Nashville. The project included over 1 million SF of office a 400,000 SF of retail space, 600 multifamily units and a major hotel.

- **Assessment of the Economic Impacts of a Resort Hotel in Charleston, S.C.**— we prepared an economic impact analysis for a 120 room resort hotel and surrounding retail uses on the coast in Charleston, S.C.

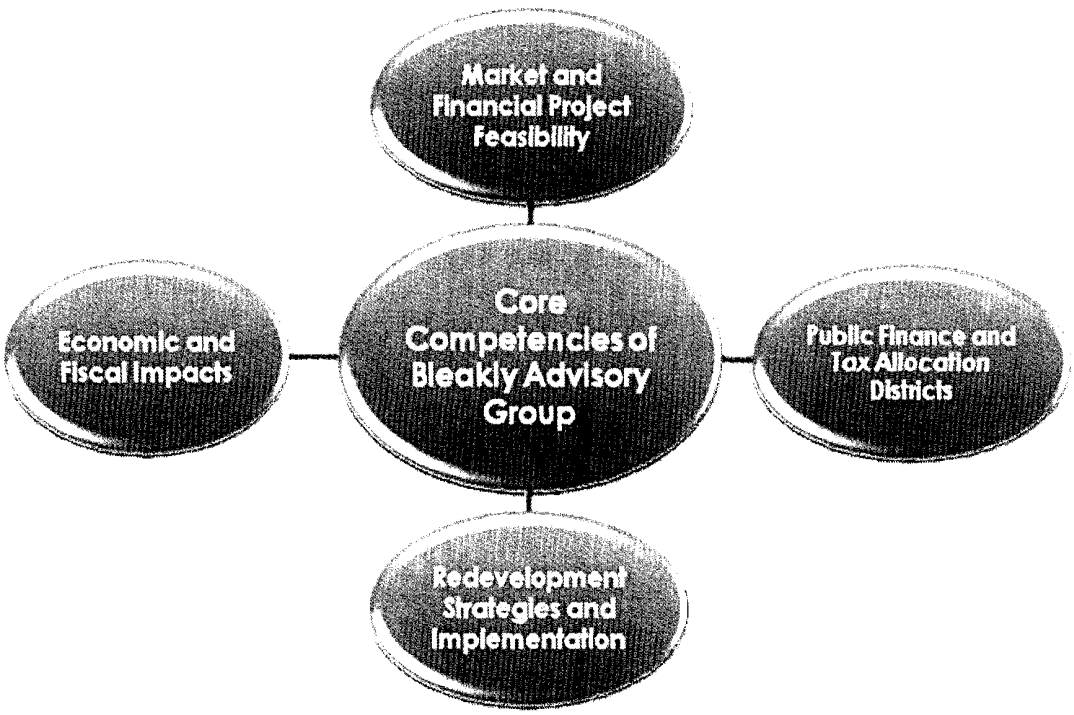
BLEAKLY ADVISORY GROUP
FIRM OVERVIEW

Bleakly Advisory Group is a specialized real estate and economic advisory firm based in Atlanta, Georgia. The firm provides advice to developers, governments and non-profit organizations in dealing with a wide range of real estate related issues. Our work is based on extensive experience not only in **conceptualizing** but **implementing** major development projects. Our approach, while innovative, is grounded in hands-on experience gained from actual public/private sector development.



In today's increasingly complex and competitive development environment, the need for specialized advice which can enhance project success has never been greater. **Bleakly Advisory Group** provides its clients with useful insights and fresh perspectives on real estate issues quickly, efficiently and discretely. Our goal is to help our clients maximize the benefits from their real estate related activities by providing the following advisory services:

PUBLIC FINANCING/TAX ALLOCATION DISTRICTS

As public private partnerships become increasingly common, we assist our clients in creating public financing plans and strategies to support complex projects. We have extensive experience in:

- Evaluating development feasibility and various public financing options to support a potential project
- Establishing Tax Allocation Districts for governments and developers seeking to use this powerful public incentive in Georgia
- Assisting developers with successful applications to obtain TAD funding from existing districts
- Helping development teams evaluate the potential impact of TAD and other public financing techniques on the financial feasibility of their projects.

REDEVELOPMENT: STRATEGIES AND IMPLEMENTATION

Moving a project from planning to development is far from an automatic process—particularly when either new land uses or large-scale development is involved. **Bleakly Advisory Group** is highly experienced in translating proposed projects into actual bricks and mortar by assisting our clients in completing the steps necessary to attract private investment to a project. In this critical portion of the development cycle we can assist you in a number of ways:

- Creating an innovative redevelopment strategy grounded in "real world" market conditions and the unique potential of a given community
- Developing an implementation workplan that provides the "roadmap" necessary to take the plan through to construction
- Structuring key intergovernmental agreements
- Securing needed incentives
- Organizing pre-development project management
- Negotiating site control
- Assisting in developer solicitation, selection and negotiation
- Providing on-going project monitoring to make certain redevelopment goals are being achieved

RESULTS

Bleakly Advisory Group's breadth of knowledge about real estate and the development process is grounded in the experience gained over hundreds of projects performed nationwide. Over the past six years the principals of **Bleakly Advisory Group** were responsible for acquiring over $20 million in land, securing more than $30 million in grants and financial support for over $600 million in new development projects. On behalf of our clients we have obtained more than $35 million in TAD assistance to support redevelopment projects in Georgia.

RECENT CLIENTS

Since our inception in late 2001, **Bleakly Advisory Group** has served a broad range of clients in the private and public sector as well as a number of special development entities. This breadth of experience gives our firm an unmatched understanding of our client's objectives from a real estate transaction. Presented below is a sample of the recent clients of our firm.

Private Sector

SUMMARY OF OFFERING TERMS

The following is only a summary of certain of the information contained in this Memorandum, and is qualified in its entirety by reference to the more detailed discussions contained in this Memorandum below, as well as to the Exhibits hereto (all of which are incorporated fully herein by this reference). In the case of any conflict between the summary, below, and the more detailed discussion in the body of the Memorandum, the latter shall control. Similarly, this Memorandum, its exhibits, and certain other documents related thereto have been initially written in the English language; in the event of any conflict between the original English versions and any translations into other languages, the former shall control.

The proposed plan is to construct and develop a Four Points Flushing Hotel & Condominium (the "Project") in New York City.

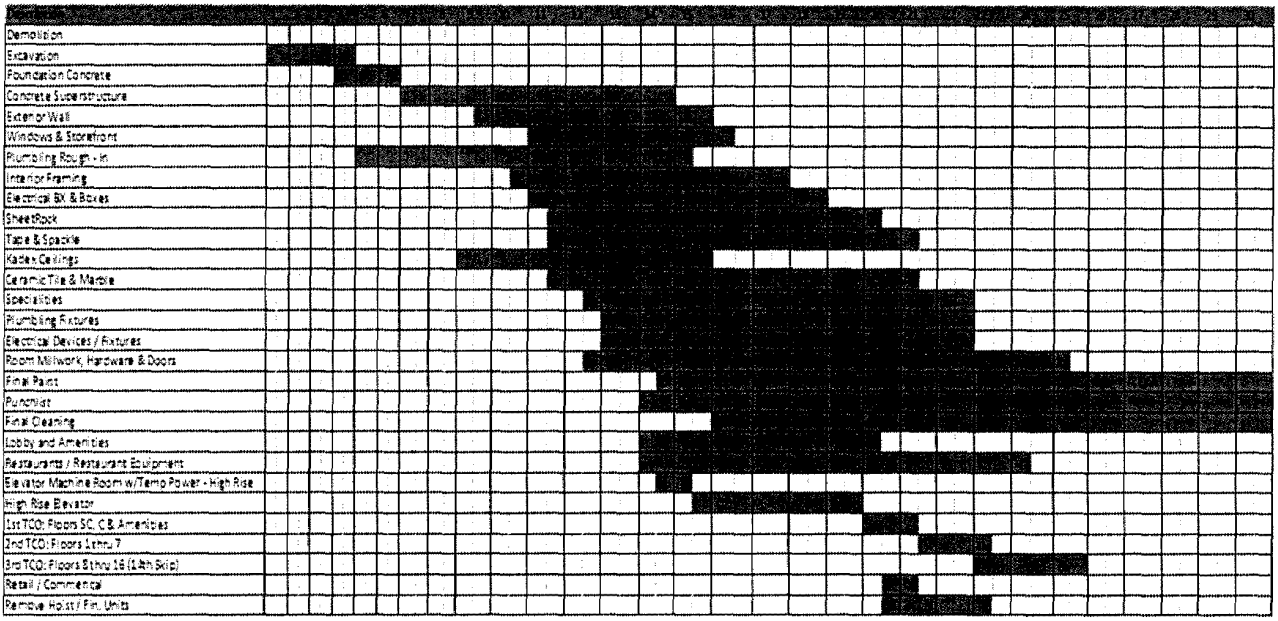
CONSTRUCTION OF THE PROJECT

The construction of the Four Points Flushing Hotel & Condominium project will take approximately 30 months to complete. The developer already has obtained the architectural designs, fabrications, excavations, and procurement and will apply for all necessary permit and licenses in place. The actual construction is expected to be completed in the near future. The timeline at provides the particulars of the various phases of the construction over a period of project months from the commencement of the construction. For example, the early months will consist of the excavation and necessary foundation work.

The construction of the Four Points Flushing Hotel project will take approximately 30-months to complete starting with excavation. The project location is currently demolished and is ready to do construction. The construction timeline is attached below.



The developer is scheduled to obtained all necessary permit and licenses in construction and development of the project. The actual construction is expected to start at the end of 2014, and it is anticipated to be completed by mid-2017. The timeline at provides the particulars of the various phases of the construction over a period of project months from the commencement of the construction. For example, the early months will consist of the excavation and necessary foundation work. The Shoring of Excavation is expected to take 4 months, the construction timeline describes that concrete will be poured into concrete slabs for the individual floors. At this time, the construction of the hotel has made considerable headway. The construction timeline above provides the particulars of multiple phases of the construction over a period of 30 months from the commencement of the construction.

CONSTRUCTION PERMITS AND LICENSES

In New York City the construction is "as of-right" development which complies with all applicable zoning regulations and does not require any discretionary action (special permit or variance) by the City Planning Commission or Board of Standards and Appeals for approval. Assuming that the project complies with all other Code and Zoning regulations, the NYC Department of Buildings Plan Examiner Plan Examiner will approve the Plans, further to the architect's construction detailed blueprints and renditions.

It is not necessary for the project to seek the additional approvals of the City Planning Commission, or of the Local Community Board, or of any other outside party of interest. If the project complies with the applicable Zoning Laws currently in force, the developer is entitled to build. Therefore building permits are only valid for a limited amount of time and the project will apply for the relevant permits prior to the commencement of the construction activities.

* * * * *

MANAGEMENT BIOGRAPHIES AND INTERRELATIONS

The following paragraphs set forth the Managing Member and Officers of the job creating entity Farrington Realty, LLC.

The amounts and percentage of Units beneficially owned are reported on the basis of regulations of the SEC governing the determination of beneficial ownership of securities. Under the rules of the SEC, a person is deemed to be a "beneficial owner" of a security if that person has or shares "voting power," which includes the power to vote or to direct the voting of such security, or "investment power," which includes the power to dispose of or to direct the disposition of such security. A person is also deemed to be a beneficial owner of any securities of which that person has a right to acquire beneficial ownership within 60 days. Under these rules, more than one person may be deemed a beneficial owner of the same securities and a person may be deemed a beneficial owner of securities as to which he has no economic interest.

MANAGEMENT BIOGRAPHIES

Mr. George Xu, CEO/Regional Center Principal

Mr. George Xu is the founder and the principal of the Century New York City Regional Center ("CNYCRC"). Mr. Xu is also the founder and President of Century Development Group, a real estate development company. With over 16 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential, hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

Qili Li, MD, Regional Center Principal

In private practice for more than 14 years specializing in the field of Obstetrics and Gynecology in downtown Flushing, Queens County, New York City. Dr. Li attended the Sophie Davis School of Biomedical Education were She graduated with Magna Cum Laude with honors. She received her Medical Doctor degree from New York Medical College. She completed her internship and residency training in Obstetrics/Gynecology at North Shore University Hospital at Manhasset, New York. She is board certified in the specialty of Obstetrics/Gynecology. She is a fellow of the American College of Obstetrics/Gyneoclogy (ACOG). In recent years, like many of her colleagues, Dr. Li has expanded her interest/investment in real estate. She is currently involved in several real estate development projects ranging from high end condominium to hotel construction.

James Ho, Vice President

Mr. James Ho graduated from Polytechnic University majoring in Electrical Engineering and Computer Science. Mr. Ho has seven years of experience in computer programming and twelve years in securities trading and security related business. Currently he is involved in real estate development of three projects in New York City area. Mr. Ho's role in the CNYCRC is to provide oversight of operations, maintain cohesion between a project's developer, general contractor, law and accounting firms, and to ensure overall compliance.

Robert Chen Vice President

Mr. Robert Chen oversees the overall operations of the Regional Center. He's also in charge of due diligence and evaluating potential projects and determines business feasibilities. Prior to join CNYCRC, Mr. Chen has

over 10 years' experience in senior manager position with FedEx. He has owned, managed and operated companies in computer wholesale and repair business. Mr. Chen received his Bachelor of Science degree in Environmental Health Science from City University of New York.

David Pan, Vice President

Mr. David Pan has over 15 years of experience in fixed-income securities trading and risk management, having worked in various roles at Credit Suisse, Citigroup, Deutsche Bank and the hedge fund industry. Formerly a Director at Credit Suisse in the Strategic Risk Management division covering Residential Mortgage Backed Security (RMBS) business where he was instrumental in developing models and methodologies in assessing the firm's risk exposure to the mortgage security market. Prior to his Wall Street career, Mr. Pan spent 10 years as a senior software engineer responsible for the development of the state-of-the-art fixed-income security trading and analytics software systems. He graduated with a Bachelor's degree in Computer Science from Queens College, City University of New York.

Anthea Quan, Accounting Controller

She is responsible for the accounting, financial reporting and audit functions. Also performs management of operating cash flow, financial analysis, obtaining financial for development projects and investor distribution. She is passionate about accounting and has experience working with a variety of small business. Ms. Quan graduated from Yanbian University in China with a bachelor of mathematics. She is fluent in Chinese, English and Korean, resides in New York with her husband.

Tracy Law, Director of Project Management

Ms. Tracy Law is responsible for a full spectrum on operations to ensure that projects are done on time and on budget. Her constant communication with contractors and architects provides a strong network of relationships in the field. She is responsible for supervising and coordinating OS&E and FF&E. She is integral in bringing new hotels to opening. Ms. Law graduated with a Bachelor of Science degree in Accounting from Queens College, City College of New York.

Lynn Wei, Director of Marketing and Business Development

Ms. Lynn Wei is responsible for a full spectrum of business development initiatives including creating and overseeing international marketing strategies for all CNYCRC project offerings. She is also involved in managing client relations. Ms. Wei is also a senior business development associate at the Century Development Group. In this capacity, she focused on creating Request for Proposals and general marketing materials, as well as developing a customer analytical database, and implementing strategic marketing and communication initiatives. Ms. Wei graduated with a Master of Science degree in Economics from Brooklyn College, City University of New York and a Bachelor of Administrative Degree in Marketing from Shanghai Finance University.

EB-5 IMMIGRATION DISCLOSURES AND RISK FACTORS

The U.S. Congress created the employment-based fifth preference (**"EB-5"**) immigrant visa category in 1990 for immigrants who invest in and manage U.S. commercial enterprises that benefit the U.S. economy through what is labeled the "EB-5 Program." Each investment needs to create or save at least 10 full-time jobs for U.S. workers.

The minimum amount required to invest is $500,000, although that amount is reduced to $500,000 if the investment is made into a new commercial enterprise principally doing business in a high unemployment area or qualifying Targeted Employment Area (collectively defined as a "**Targeted Employment Area**" or "**TEA**"). This project is located in a Targeted Employment Area, thus the minimum capital investment remains $500,000.

A description of the requirements and processes of the EB-5 Program is based on information obtained by the LLC from third parties whom the LLC believes are reliable. However, there can be no assurance that such information is accurate or current, or that it includes all of the risks relating to U.S. immigration laws or to the EB-5 Program. See "Risk Factors," below.

Investors in this Offering who have subscribed for Interests with the intention of applying for U.S. permanent residence on account of investment in the LLC should be aware of certain risk factors relating to immigration to the United States generally, and to the EB-5 Program and its administration specifically. An Investor who is interested in purchasing Interests with the intention of obtaining first conditional, and thereafter permanent, residence is encouraged, along with his or her advisors, to make his or her own independent review of the EB-5 Program and the various immigration risk factors relating to the process in obtaining a conditional and permanent residency status to determine if an investment in the Interests is a suitable approach for him or her.

THE LLC MAKES NO REPRESENTATION OR WARRANTY OF ANY KIND CONCERNING WHETHER AN INVESTMENT IN THE LLC WILL MEET THE REQUIREMENTS OF THE EB-5 PROGRAM OR OTHER U.S. IMMIGRATION REQUIREMENTS. NO ASSURANCES CAN BE GIVEN THAT AN INVESTMENT IN THE LLC WILL RESULT IN AN IMMIGRANT INVESTOR RECEIVING AN EB-5 VISA OR CONDITIONAL OR PERMANENT RESIDENT STATUS.

General Immigration Risks. Congress and/or USCIS may change the law, regulations, or interpretations of the law, including the EB-5 Program, without notice and in a manner that may be detrimental to an Investor and/or the LLC. Investors who obtain conditional or permanent resident status must intend to make the United States their primary residence. The EB-5 Policy Memorandum was issued on May 30, 2013, which changes a significant amount of key definitions and criteria. Permanent residents who continue to live abroad risk revocation of their conditional or permanent residence status. The process of obtaining conditional and permanent resident status involves numerous factors and circumstances which are not within the control of the LLC, or the scope of this Memorandum. These include, but are not limited to, an immigrant Investor's particular personal history and characteristics, and quotas established by the United States government limiting the number of immigrant visas available to qualified individuals seeking conditional or permanent resident status under the EB-5 Program.

EB-5 Program Expiration. The expiration date for the EB-5 Program, is currently September 30, 2015. It is believed that the U.S. Congress will extend the EB-5 Program after that date; however, there can be no assurance that the EB-5 Program's term will be extended, or that applications submitted before the EB-5 Program's expiration will be adjudicated by the USCIS.

Use of Immigration Attorney and Processing Time. The filing of an I-526 Petition by an Investor with USCIS should be done by a qualified U.S. immigration attorney. As of the date of this document, the Manager has been advised that the USCIS is taking approximately eleven (11) months to approve (or deny) an I-526 Petition. It is impossible to predict USCIS processing times. Once approved, the case will either be forwarded to the U.S. State Department's National Visa Center and then to a U.S. Consulate selected by the Investor for processing,

or, if the Investor is already in the U.S., the Investor may adjust his or her status to that of conditional permanent resident. Depending on which option the Investor chooses, it may take an additional six (6) months or longer for a U.S. Consulate to process the immigrant visa application, or for the USCIS to adjust an Investor's status, and issue a conditional green card. Investors should not physically move to the United States until their immigrant visa has been issued.

Administrative Risk due to Changes in USCIS Policies. Processing times and USCIS' consideration and eventual approval of Investors' I-526 petitions could be negatively impacted by changes to USCIS' procedures or to its interpretation and implementation of current or future laws and regulations.

Mezzanine Lending Risk: Farrington EB-5 Capital, LLC provides mezzanine debt capital to Four Points Flushing Hotel & Condominium project. Mezzanine debt capital generally refers to that layer of financing between a company's senior debt and equity, filling the gap between the said capital. The EB-5 financing subordinates in priority of payment to senior debt, in this case, Northern Bank & Trust loan but senior in rank to owner's equity.

Jobs. USCIS requires proof that each investor's investment resulted in creating ten (10) jobs as part of the removal of conditions required for obtaining permanent residency status. The structure of the Offering is such that all jobs counted for purposes of Investors' immigration petitions must be created directly by the LLC. Based upon the Manager's estimates, the Manager believes that an investment in the Interests should satisfy the job creation requirement for the number of investors sought, specifically four hundred and two (402) jobs. See "Risk Factors", below.

The Manager estimates that the Project will create a maximum total of approximately four hundred and two (402) qualifying U.S. jobs, which is forty (40) per investor or ten percent (10%) more than the amount required. Each Investor in the LLC who will petition for permanent residency in the U.S. under the EB-5 Program based on an investment in this Offering must demonstrate that the Project created at least ten (10) U.S. jobs on account of that Investor's investment in order to qualify for permanent residency status under the EB-5 Program. The qualifying jobs created by the LLC's Investment of the Offering proceeds shall be allocated to the Investors on a first-in, first-out basis tied to the later date on which the following shall have occurred: (a) the LLC has accepted an Investor's subscription, or (b) the LLC has received in the project or in escrow such Investor's Capital Contribution and Administrative Fee. Accordingly, the first ten qualifying jobs that are created by the Project will be attributed to the first Investor who satisfies the requirements of clauses (a) and (b) of this paragraph, the second ten qualifying jobs that are created by the Project will be attributed to the second Investor who satisfies the requirements of clauses (a) and (b) of this paragraph, and so on until all qualifying jobs that are created by the Project have been allocated on a first-in, first-out basis to each Investor who satisfies the requirements of clauses (a) and (b) of this paragraph.

The Manager's job creation estimates are based upon the LLC's proposed activity and other circumstances of this Project. As stated above, the Manager's analysis estimates that the Project will create a likely maximum total of approximately seven hundred and thirty (730) U.S. jobs. However, there can be no assurance that this estimate, or the assumptions upon which it is based, is or are accurate, or that the actual number of direct employees will be close to the number predicted in such analysis. Depending upon any disparity actually realized, there may be insufficient employment to remove conditional visa status, resulting in a delay, or denial, of permanent residency for one or more Investors. Because the qualifying jobs created by the Investment shall be allocated to the Investors on a first-in, first-out basis tied to the date of Investors' subscriptions, as detailed in the paragraph immediately above, while the LLC believes that a sufficient number of qualifying jobs will be created by the Project for all Investors, if less than the number of direct, jobs estimated are actually created by the Project, the first-in, first-out method of allocating jobs will provide greater security for earlier subscribing Investors than for later subscribing Investors with respect to the removal of conditions required for obtaining permanent residency status.

Proving Lawful Source of Funds. As part of the I-526 Petition, an Investor must present to USCIS clear documentary evidence of the source of the funds invested, and that the funds belong to the Investor. Generally, the Investor can satisfy the source of funds requirement by submitting documents showing that he or she has a

level of income from legal sources that would yield sufficient funds for the investment. USCIS generally requires copies of income tax returns to satisfy the source of funds requirement. For Investors who do not have such records, there may be other records that can be provided to USCIS by an Investor to demonstrate that the investment funds came from legal sources. USCIS may require proof of a more specific path of funds earned in individual cases. All such matters regarding the Investor's I-526 Petition should be discussed with his or her immigration counsel. An Investor may be unable to present evidence that USCIS considers sufficient to carry the Investor's burden to show the legitimate source of the investment funds.

Policy Formulation. The EB-5 Program requires an Investor to participate in policy formulation or management position within the LLC. The LLC believes, but cannot guarantee, that as a Member in the LLC, each Investor is provided with the powers and duties under the Operating Agreement sufficient to meet the USCIS requirement that an Immigrant Investor is actively participating in policymaking or management of a new commercial enterprise.

At-Risk Investment. An Investor's investment must be and remain "at risk" to qualify for the EB-5 Program. As part of the green card application, an Investor must show evidence that he or she has placed the required amount of capital at risk for the purpose of generating a return on the capital placed at risk. The LLC believes that an investment in the Interests will place an Investor's investment in the LLC at risk, because as described herein there is no assurance that the business of the LLC will be able to return any Investor's investment in the Interests at any time, if ever. However, purchase of Interests does not guarantee conditional or permanent residency in the United States. Furthermore, Project conditions could arise under which transactions removing Investors' capital from active "at risk" use in the LLC could become commercially necessary. No assurance can be given that conditions to residency under the EB-5 Program will be removed.

EB-5 Visa Retrogression. Section 203(b)(5) of the Immigration and Nationality Act ("**INA**") allocates 10,000 immigrant visas per fiscal year to qualified individuals seeking lawful permanent resident status in the United States on the basis of their capital investment in a commercial enterprise qualifying under the EB-5 Program. To date, USCIS has issued less than 10,000 EB-5 visas per year for each year that it has issued EB-5 visas; however, recent trends have demonstrated that the number of EB-5 visas issued each year is on the rise. If all 10,000 EB-5 visas are issued in a single year, no further visas shall be issued until the commencement of the next fiscal year. Given the sharp increase in current visa issuance trends, especially investors from mainland China, there can be no assurance that the ceiling of 10,000 EB-5 visas per year will not be reached, and accordingly, no assurance that a visa shall be available for all Investors at the time of adjudication of their individual I-526 petitions. The investors' children close to 21-years-old may "age out" and application may be delayed when the investors wait for the priority date to become current.

Ceiling on EB-5 Visas, By Country. As stated above, there are approximately 10,000 U.S. visas reserved each year to the EB-5 immigrant visa category. Furthermore, within the overall EB-5 category, sub-categories exist as to the portion of the total number of visas allowable to immigrant investors from each foreign country, meaning that there is a ceiling on EB-5 visas for each country. The per country quota is 7% in each immigrant visa category. The U.S. Department of State ("**DOS**") has never yet issued the total 10,000 EB-5 visas in any year since the EB-5 category's creation in 1990. However, both the overall EB-5 Program and the Regional Center Program have experienced the significant increase in usage in recent months referred to above, that shows signs of accelerating rather than diminishing, and it is anticipated that the 10,000 number shall be fully used if not this year, then the next. If 10,000 visas are issued in any one or more years, or if more EB-5 investors qualify from a given country than is allowable under the annual per-country cap for that country, this could create a backlog in the EB-5 category. This means an investor from such country who otherwise qualifies for an EB-5 visa would not receive his/her conditional green card until additional visas become available in the following year. When the EB-5 applicants reach the ceiling of 10,000 visas, country limit may apply. EB-5 visa retrogression may occur. This could delay an investor's entry to the U.S. if he/she is engaged in consular processing or the filing of his /her adjustment of status application if he/she is already in the U.S. If visa backlogs delay an investor's receipt of a conditional green card, this could also delay the filing of his/her I-829 Petition, which in turn could negatively affect his/her ability to prove requisite job creation within the prescribed time frame and remove the conditions to permanent residency.

No Guarantee of Positive Adjudication of I-526, I-829, or I-485. Adjudication of all I-526 and I-829 petitions, along with all I-485 "Application to Register Permanent Residence or Adjust Status" ("**I-485**"), is within the sole and exclusive purview of USCIS. Although the Issuer's management believes that an investment in the Interests offered hereby should enable an Investor to qualify for a positive determination of his or her I-526 and I-485, and that a successful conclusion to said investment in full satisfaction of all requirements of the EB-5 Program ought to qualify Investors for I-829 approval, there can be no guarantee that any Investor shall ultimately receive a positive adjudication of each, or any, of these petitions or applications.

Project Delays May Negatively Impact Immigration Process. Various delays caused by circumstances both within and without the control of the LLC, and/or their respective contract partners in the conduct and closing of this Offering and the execution of the Project thereafter may result in a delay in the commencement of the Project or in delays in the construction, sale, and operation of the Project as contemplated hereby. One or more of said delays, if incurred, could result in unavoidable delays in the creation, and proving, of necessary jobs. Such delays may impact the adjudication of Investor I-526s, I-485s, and I-829s in materially adverse ways.

Targeted Employment Area and Targeted Employment Area Designation. Demographic shifts could cause the loss of the "high unemployment area" designation affording Targeted Employment Area (TEA) status to the area where the Project is located. Although EB-5 Investors who subscribed in the Project when it was located in a Targeted Employment Area needed only invest $500,000 in the Project, if the Project's Targeted Employment Area status is lost during the course of the Offering, Investors who subscribe thereafter would need to invest $500,000 to qualify for the EB-5 Program. This project is located in Flushing, Queens County in the State of New York. The project location is qualified as Targeted Employment Area under the EB-5 Program.

* * * * *

Admissible to the U.S.: Foreign persons applying for a U.S. Green Card must demonstrate that they are admissible to the U.S. Section 212 of the Immigration and Nationality Act sets forth various grounds of inadmissibility, which may prevent an otherwise eligible applicant from receiving a green card or entering the U.S. Foreign individuals who are ineligible to receive a Green Card or to be admitted to the U.S. include, but are not limited to, an individual who (1) is determined to have a communicable disease of public health significance, which shall include infection with the etiologic agent for acquired immune deficiency syndrome; (2) is determined to have a physical or mental disorder and behavior associated with the disorder that may pose, or has posed, a threat to the property, safety, or welfare of the individual or others; (3) is determined to have had a physical or mental disorder and a history of behavior associated with the disorder, which behavior has posed a threat to the property, safety, or welfare of the individual or others, and which behavior is likely to recur or to lead to other harmful behavior; (4) is determined to be a drug abuser or addict; (5) has been convicted of committing, or who admits having committed, acts which constitute the essential elements of a crime involving moral turpitude (other than a purely political offense), or a violation of (or a conspiracy or attempt to violate) any law or regulation of a State, the United States, or a foreign country relating to a controlled substance; (6) has been convicted of 2 or more offenses (other than purely political offenses), regardless of whether the conviction was in a single trial or whether the offenses arose from a single scheme of misconduct and regardless of whether the offenses involved moral turpitude, for which the aggregate sentences to confinement were 5 years or more; (7) is or has been an illicit trafficker in any controlled substance or in any listed chemical (as defined in section 102 of the Controlled Substances Act (21 U.S.C. § 802), or is or has been a knowing aider, abettor, assister, conspirator, or colluder with others in the illicit trafficking in any such controlled or listed substance or chemical, or endeavored to do so; (8) is the spouse, son, or daughter of an alien inadmissible under clause (7) and has, within the previous 5 years, obtained any financial or other benefit from the illicit activity of that alien, and knew or reasonably should have known that the financial or other benefit was the product of such illicit activity; (9) is coming to the U.S. solely, principally, or incidentally to engage in prostitution, or has engaged in prostitution within 10 years of the date of application for a visa, admission, or adjustment of status; (10) directly or indirectly procures or attempts to procure, or (within 10 years of the date of application for a visa, admission, or adjustment of status) procured or attempted to procure or to import, prostitutes or persons for the purpose of prostitution, or receives or (within such 10 year period) received, in whole or in part, the proceeds of prostitution; (11) is coming to the United States to engage in any other unlawful commercialized vice, whether or not related to prostitution; (12) has committed in the U.S. a serious criminal offense, regardless of whether such offense was prosecuted as a result of diplomatic immunity; (13) is excludable from the U.S. on grounds relating to national security, related grounds, or terrorist activities; (14) is excludable from the U.S. on grounds relating to foreign policy; (15) is or has been a member of or affiliated with the Communist or any other totalitarian party or who has participated in Nazi prosecutions or genocide; (16) is likely to become a public charge at any time after entry; (17) by fraud or willfully misrepresenting a material fact, seeks to procure (or has sought to procure or has procured) a visa, other documentation, or admission into the U.S.; (18) illegally entered into the U.S.; or (19) has at any time knowingly encouraged, induced, assisted, abetted, or aided any other alien to enter or to try to enter the U.S. in violation of law.

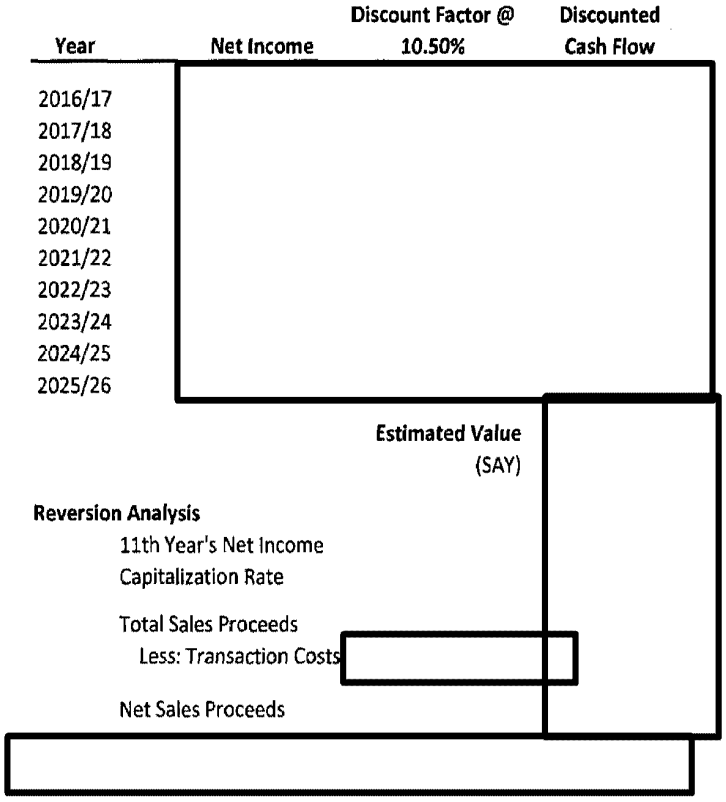
Utilizing the discount rate set forth, the discounted-cash-flow procedure is summarized as follows.

FIGURE 11-27 DISCOUNTED CASH FLOW ANALYSIS – WHEN COMPLETE

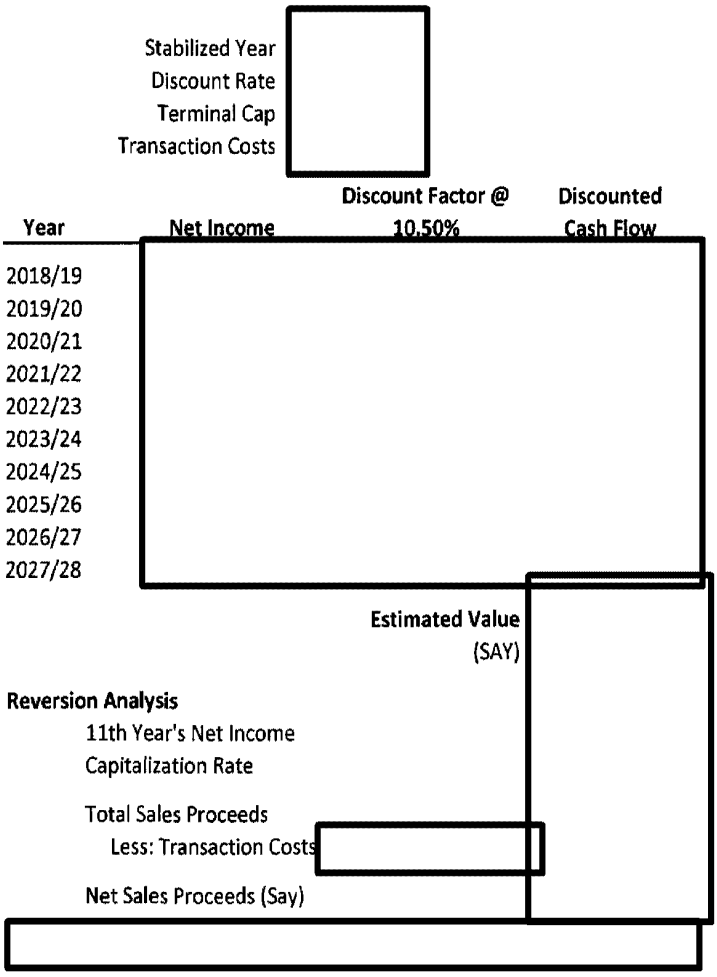


Discounted Cash Flow Analysis – "When Stabilized"

The preceding valuation process was repeated using the projected cash flows beginning as of the stabilized year. An adjustment, if applicable, is applied to the discount rate to reflect potential changes in the investment climate by the date of stabilization. The discounted cash flow procedure is summarized as follows.

(b)(4)

FIGURE 11-28 DISCOUNTED CASH FLOW ANALYSIS—STABILIZED VALUE



Based on this procedure, it is our opinion that the prospective market value of the subject property, as of March 1, 2018, will be

Conclusion

Using the income capitalization approach, the proposed subject property was valued by a mortgage-equity analysis, a straightforward discounted-cash-flow analysis, and a direct capitalization technique. Based on our review of each method and their inherent strengths and weaknesses, as well as investor attitudes and methodologies, we have reconciled the "when complete" prospective value indication via the income capitalization approach to Furthermore, it is our opinion that the "when stabilized" value is

(b)(4)

12. Sales Comparison Approach

The sales comparison approach is based on the principle of substitution, which defines a property's value as the cost of acquiring an equally desirable substitute (assuming that no costly delay is incurred in making the substitution). Thus, the sales comparison approach can be used to form an opinion of a property's market value from the price at which equally desirable properties have sold, or for which they can be purchased, on the open market.

Hotel Investment Market Overview

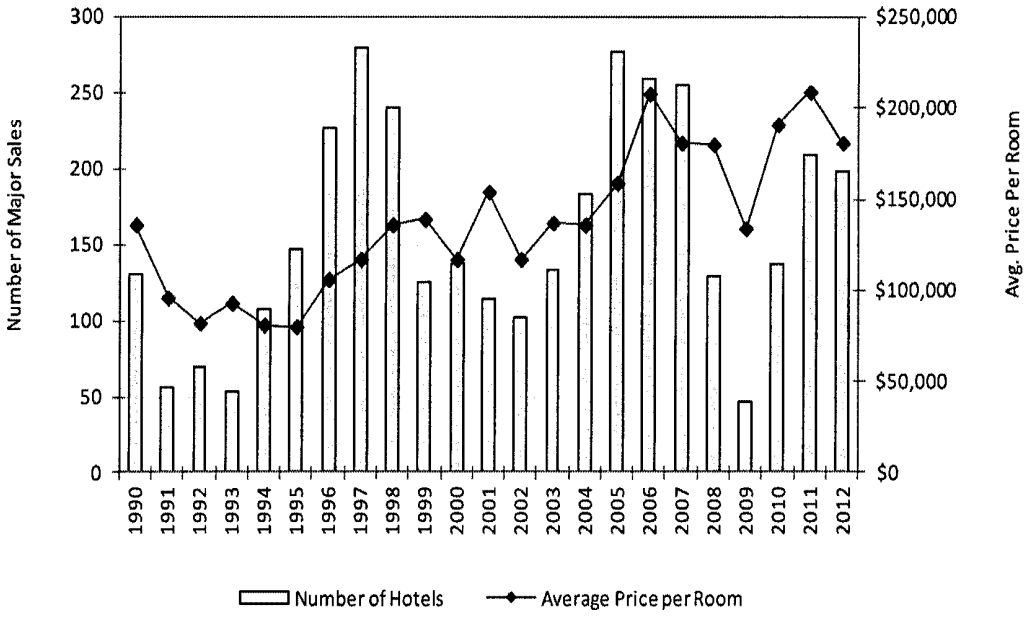
The following overview of the hotel investment market during recent industry investment cycles provides a context for the sales comparison approach.

The volume of hotel transactions and the price paid for individual assets are influenced by two principal factors: the availability of capital and the performance of the lodging sector as a whole. When high levels of leverage are available on favorable terms and the industry is performing well, investors are attracted to the market, and both prices and the number of transactions increase. These market conditions often induce sellers to put their properties on the market, further fueling the pace of transaction activity. Conversely, when the availability of capital declines and interest rates increase, both the pace of activity and pricing levels decrease. When these capital conditions coincide with a downturn in industry performance, the transaction market drops off significantly. In these market conditions, sellers are typically unwilling to put their properties on the market, electing to wait until market conditions improve. The impact of these influences results in a cyclical investment market, recording peaks and valleys in response to changes in the capital markets and the economy.

The following graph sets forth the number of major transactions (defined as those with a purchase price in excess of $10 million) and the average price per room over the period 1990 to 2012.[15]

[15] HVS, Major U.S. Transactions Survey, updated annually and available for purchase at www.hvs.com/bookstore

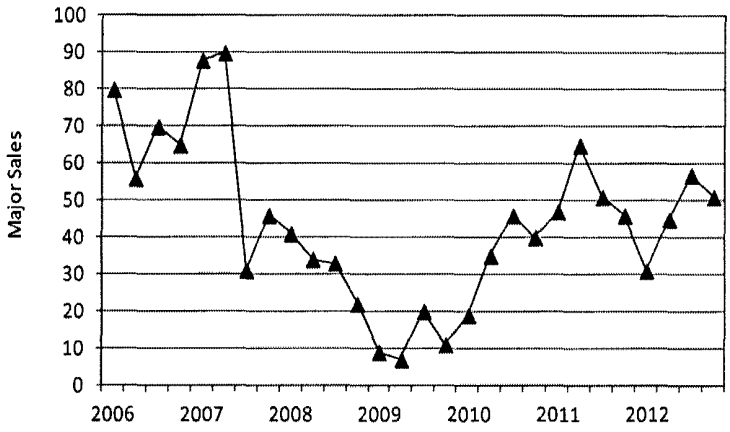
FIGURE 12-1 U.S. HOTEL TRANSACTIONS BY YEAR (SALES ABOVE $10M)



Source: HVS

The cyclical nature of the hospitality investment market is evident in the sales data for the past 20 years. The recession of the early 1990s and concurrent S&L crisis combined to cause three successive years of limited transaction activity; furthermore, values per room decreased during this period as well. Strong industry performance, coupled with the widespread availability of both debt and equity capital, supported peak levels of investment activity and higher prices per room in the mid- to late 1990s. Increasing caution in the capital markets, combined with the 2000/01 recession, led to a downturn in investment activity that extended from 1999 through 2003. The market began to recover in 2004, and then peak levels of activity were recorded in regard to both the number of transactions and the average price per room from 2005 through mid-year 2007. The trend in these years reflects the aggressive attitude of both debt and equity capital, combined with strong performance by the lodging industry as whole. The transaction market has been extremely volatile since 2005, as evidenced by the following chart, which shows the number of transactions by quarter.

FIGURE 12-2 U.S. HOTEL TRANSACTIONS BY QUARTER (SALES ABOVE $10M)



Source: HVS

Following peak levels of activity in the first half of 2007, transaction activity slowed dramatically beginning in July of that year when the ratings agencies raised concerns about underwriting standards for CMBS debt issuance. Although the lodging industry continued to perform strongly throughout 2007, the decline in CMBS lending put the brakes on hotel sales activity in the latter half of 2007. The stalled hotel transaction market continued through 2008, as evidenced by the over 50% decline in the number of transactions. The slowing economy and weakening hotel fundamentals, coupled with higher capital costs, contributed to a lower average price per room. In 2009, the transaction market came to a virtual standstill, with fewer transactions recorded than in any of the previous 19 years. The unavailability of mortgage capital and the limited inventory of quality assets for sale were the principal causes of the dramatic drop in transaction activity; weak performance by the industry as a whole also discouraged investment in the sector.

Lodging industry performance bottomed out in the fourth quarter of 2009, with demand growth turning positive in early 2010. With a recovery in fundamentals underway, transaction activity began to recover in 2010, fueled in large part by aggressive acquisition programs on the part of newly formed and existing REITs and investment funds. Mortgage capital became increasingly available in the latter half of the year, including both on-book loans and renewed CMBS lending programs. The dramatic improvements in the performance of the lodging industry, combined with widespread optimism concerning the outlook for the sector, have

also contributed to the resurgence of interest in hospitality investments. These trends are evident in the data for 2010, which indicate that the number of transactions tripled the total recorded in 2009, and the average price per room increased by over 43%. It should be noted, however, that the average price per key is greatly impacted by the kinds of hotels being sold. In 2010, the lodging REITs pursued high-quality assets in gateway cities that commanded very high prices per room, a factor that led to the high average price per key that year. This trend continued through the first half of 2011; however, with the volatility of the stock market in August of 2011 and the decline in lodging REIT share prices, transaction activity slowed significantly in the second half of the year.

The trends that emerged in 2010 continued to influence transaction activity in 2011. Transaction activity in the first half of 2011 increased significantly from the levels recorded in 2010, but then moderated in the latter half of the year due to the uncertainty caused by the debt crisis in the U.S. and Europe. As of early 2013, the market is once again re-energized; equity interest in the sector remains strong, and debt is increasingly available. Loan-to-value ratios are rising and interest rates have declined to new historic lows. These factors, combined with continued strong industry fundamentals, are expected to attract more investors and sellers to the market as the year progresses. The REITs are again in acquisition and disposition mode, although their activity has moderated from their levels in 2010/11. Market participants expect transaction activity to continue to increase over the course of 2013, as improved market conditions encourage owners to sell their assets. Notably, a majority of the investment activity in the current cycle to date has been focused on institutional-grade assets encompassing both full-service and well-branded select-service properties in strong markets, particularly in gateway cities. Assets lacking these attributes are now also benefitting from positive economic trends. As the cycle evolves, investor interest is expected to broaden outside the premier sectors and markets. Nevertheless, some hotels, particularly aging assets and/or those in need of unfunded capital improvements, will continue to be challenged.

The improvements in market conditions since 2010 have resulted in increased sales transaction activity reflective of investor expectations in a normalized market. Thus, we have tried to focus on sales transactions from 2011 to the present, if adequate comparable data are available. Sales from prior years may be pertinent if there has been sparse activity in the subject property's product type since the 2008/09 economic downturn. Capitalization rates derived from the historical income of the sales vary widely, depending upon when the sale occurred and how a hotel was performing at the time of sale. Given these factors, we have researched and relied upon the most relevant comparable sales data in our appraisal of the subject property, although adjustments for changes in capital

market conditions may be warranted, depending on the date and particular attributes of the transaction.

Sales History of Subject

The developer of the proposed subject property is Farrington Realty, LLC; the parent company of this owning partnership is Century Construction Group Corp, which is based in Flushing, New York. The subject site was last sold in June 2003; Farrington Realty, LLC has owned the site since 2003 and purchased it at this time from Smarkel, LLC for a reported price of $4,300,000. No other transfers of the property have reportedly occurred since 2003.

Comparable Sales

To present our selection of comparable sales, we conducted a comprehensive search for transactions of hotels that bear comparison to the proposed subject property in one or more key areas. When possible, we gave priority to transactions occurring in the same state or region as the subject property. We also considered factors such as operational and physical similarities to the proposed subject property, including brand affiliation and revenue-generating aspects. We have primarily focused on transactions that occurred within the last three years because of changes in market conditions since that time. As illustrated below, very few transactions have occurred in the outer boroughs of New York City over the last few years.

13. Cost Approach

The cost approach reflects a set of procedures through which a value indication is derived for the fee simple interest in a property by estimating the current cost to construct a reproduction of, or replacement for, the existing structure; deducting accrued depreciation from the reproduction or replacement cost; and adding the estimated land value plus an entrepreneurial profit. Adjustments may then be made to the indicated fee simple value of the subject property to reflect the value of the property interest being appraised.

Because the subject property is proposed, the cost approach has some applicability. In this report section, we will estimate the development cost of the improvements, estimate the market value of the site, and add an entrepreneurial profit incentive to arrive at the total cost new to develop the subject property. The total cost new to build the facility is often used by hotel buyers as a benchmark against the income and sales indications – particularly for new hotels.

Land Valuation

Land value may be estimated in a variety of ways including the sales comparison approach and the allocation, extraction, or ground rent capitalization methods. For the majority of hostelry properties, the two primary methods used are the sales comparison approach and the ground-lease capitalization approach.

Over the past 15 years, hotels and resorts have routinely been constructed on leased land. While the lease terms differ somewhat from property to property, the basis for the rental calculation is often tied to a percentage of revenue formula. Using the forecasted revenues for the proposed subject property and applying a typical hotel ground-lease rental formula, the appraiser is able to determine the hotel's economic rental (i.e., the income attributed to the land). The land value can then be estimated by capitalizing the hypothetical ground rent. The self-adjusting aspect of this approach is a key element to its reliability.

Our analysis of these ground-lease rental formulas indicates that economic ground rents for hotels such as the proposed subject property typically range from approximately 5.0% to 8.0% of rooms revenue. Hotels with a significant amount of land relative to the property's room count, hotels in resort areas, or hotels in land-sparse downtown markets may command higher ground rent.

(b)(4)

Based on the revenue projections set forth for the proposed subject property as part of this appraisal, the following table shows how the economic ground rent has been calculated. Note that the stabilized revenue level has been deflated back to 2013 dollars.

Deflated Stabilized Rooms Revenue	
Rental Percentage	
Economic Ground Rent	

Rent generated from an unsubordinated ground lease represents a low-risk flow of income. Because the tenant improvements typically amount to more than five times the value of the land, the risk of default is almost nonexistent. For hotel ground leases where rent is tied to revenue, the property owner is also protected from the adverse effects of inflation. Based on these minimal risk factors and the current cost of long-term capital, it is our opinion that the appropriate ground rent overall capitalization rate would be as indicated in the following table because of the aforementioned low level of risk.

Applying the indicated capitalization rate to the proposed subject property's economic ground rent results in the following estimate of land value.

Economic Ground Rent / Capitalization Rate	=	

This conclusion has been rounded to in the remainder of our analysis.

Development Cost

As a basis for estimating the developmental costs, we have used information provided by the developer. We note that a detailed construction budget was not available for our review. However, based on the development costs of comparable hotels in New York City, the construction costs provided by the developer appears to be reasonable.

Based on the preceding analysis, we estimate the development cost of the subject property as follows.

(b)(4)

(b)(4)

FIGURE 13-1 DEVELOPMENT COST SUMMARY

Item	Cost per Room	Cost
Hard & Soft Costs		
Furniture, Fixtures, & Equipment		
Land		
Total Development Cost		

Allocation of Developer's Profit

Developer's profit represents the entrepreneurial incentive anticipated by hotel developers to induce the construction of a new hotel project. Given the influence of economic conditions on the hotel industry, developer's profit has not always been in evidence. If the economic value of a new hotel does not exceed the development cost, indicating that developers will not earn any profit from their efforts, it is unlikely that the project will be completed because the financial incentive is not present.

We have made a developer's profit estimate as a component of the total development cost, which is illustrated in the following table.

FIGURE 13-2 ENTREPRENEURIAL INCENTIVE ESTIMATE

Item	Profit Percentage	Cost	Developer's Profit
Hard & Soft Costs			
Furniture, Fixtures, & Equipment			
Land Value			
Total Developer's Incentive			

Conclusion

In the estimation of the total development cost for the proposed subject property, the costs of several components of the total property were quantified based on information provided by the developer. The land value was estimated by the ground lease approach. The following table summarizes our estimate of the total development cost of the subject property.

(b)(4)

(b)(4)

This estimate has been rounded to [redacted]. Due to the hotel's proposed status, this value estimate is considered applicable to our appraisal analysis, to some extent.

(b)(4)

14. Reconciliation of Value Indications

The reconciliation, which is the last step in the appraisal process, involves summarizing and correlating the data and procedures employed throughout the analysis. The final value conclusion is arrived at after reviewing the estimates indicated by the income capitalization, sales comparison, and cost approaches. The relative significance, applicability, and defensibility of each indicated value are considered, and the greatest weight is given to that approach deemed most appropriate for the property being appraised.

The purpose of this report is to estimate the market value of the fee simple interest in the subject property; our appraisal involves a careful analysis of the property itself and the economic, demographic, political, physical, and environmental factors that influence real estate values.

Income Capitalization Approach

To estimate the subject property's value via the income capitalization approach, we have analyzed the local market for transient accommodations, examined the competitive environment, projected occupancy and average rate levels, and developed a forecast of income and expense that reflects anticipated income trends and cost components through a stabilized year of operation. The subject property's projected net income before debt service was allocated to the mortgage and equity components based on market rates of return and loan-to-value ratios. Through a discounted cash flow and income capitalization procedure, the value of each component was calculated; the total of the mortgage and equity components equates to the value of the property.

Our nationwide experience indicates that the procedures used in estimating market value by the income capitalization approach are comparable to those employed by the hotel investors who constitute the marketplace. For this reason, we believe that the income capitalization approach produces the most supportable value estimate, and it is given the greatest weight in our final estimate of the subject property's market value.

Sales Comparison Approach

The sales comparison approach uses actual sales of similar properties to provide an indication of the subject property's value. Although we have investigated a number of sales in an attempt to develop a range of value indications, several adjustments are necessary to render these sales prices applicable to the subject property. The adjustments, which tend to be subjective, diminish the reliability of the sales comparison approach; furthermore, typical hotel investors employ a sales comparison procedure only to establish broad value parameters.

(b)(4)

Due to the lack of recent comparable hotel sales, we have deemed the sales comparison approach inapplicable for the valuation of the proposed subject property.

Cost Approach

As discussed in the Cost Approach chapter, this methodology is applicable for this property to some extent, has been considered in our reconciliation process. We have estimated the value of the subject property via the cost approach at [redacted]

Value Conclusion

Careful consideration has been given to the strengths and weaknesses of the three approaches to value discussed above. In recognition of the purpose of this appraisal, we have given primary weight to the value indicated by the income capitalization approach.

Based on our analysis, it is our opinion that the "as is" market value of the fee simple interest in the Proposed Four Points Flushing, as of June 14, 2013, is:

[redacted]

Based on our analysis, it is our opinion that the "when complete" prospective market value of the fee simple interest in the real and personal property of the Proposed Four Points Flushing, as of March 1, 2016, will be:

[redacted]

This value estimate equates to [redacted] per room.

We have also estimated the prospective market value of the subject property as of its projected date of stabilization. Based on our analysis, it is our opinion that the "when stabilized" prospective market value of the fee simple interest in the real and personal property of the Proposed Four Points Flushing, as of March 1, 2018, will be:

[redacted]

The estimates of market value include the land, the improvements, and the furniture, fixtures, and equipment. The appraisal assumes that the hotel is open and operational.

(b)(4)

We have made no assumptions of hypothetical conditions in our report. The analysis is based on the extraordinary assumption that the described improvements have been completed as of the prospective "when complete" date of value. The reader should understand that the completed subject property does not yet, in fact, exist as of the date of appraisal. Our appraisal does not address unforeseeable events that could alter the proposed project and/or the market conditions reflected in the analyses; we assume that no significant changes, other than those anticipated and explained in this report, will take place between the date of inspection and date of prospective value. We have made no other extraordinary assumptions specific to the subject site. However, several important general assumptions have been made that apply to this appraisal and our valuations of proposed hotels in general. These aspects are set forth in the Assumptions and Limiting Conditions chapter of this report.

Allocation of Value

USPAP requires the appraiser to "identify any personal property, trade fixtures, or intangible items that are not real property but are included in the appraisal" and "to analyze the effect on value of such non-real property items."[16] The estimates of prospective market value include the land, improvements, and personal property. The appraisal assumes that the hotel is open and operational at this time.

Hotels comprise three primary components: the real property (land and improvements), personal property, and intangible property. Real property is "the interests, benefits, and rights inherent in the ownership of real estate (land and improvements."[17] Personal property is defined as "identifiable tangible objects that are considered by the general public as being 'personal' – for example, furnishings, artwork, antiques, gems and jewelry, collectibles, machinery and equipment; all tangible property that is not classified as real estate."[18]

The personal property consists of the furniture, fixtures, and equipment (FF&E) and the inventories in place at the subject property as of the date of value. Personal property is an integral part of a transient lodging facility. The allocation of a portion of the overall hotel's value to the personal property is not explicitly considered by hotel investors in making their pricing decisions. Lodging facilities are usually sold with their personal property in place. In accordance with the Uniform Standards of Professional Appraisal Practice (USPAP), the appraisers have delineated the market value of the subject hotel's personal property.

[16] The Appraisal Foundation, Uniform Standards of Professional Appraisal Practice, 2012-2013 ed. (Washington: The Appraisal Foundation, 2012).

[17] Ibid.

[18] Ibid.

USPAP defines intangible property as "nonphysical assets, including but not limited to franchises, trademarks, patents, copyrights, goodwill, equities, securities, and contracts as distinguished from physical assets such as facilities and equipment."[19] All value attributable to the intangible property has been removed with the assumed expense of a management fee and a franchise fee in the valuation process.

Our concluded opinions of the subject hotel's market value include the value of the real property (land and improvements) and the value of the personal property only.

(b)(4)

16. Certification

The undersigned hereby certify that, to the best of our knowledge and belief:

1. the statements of fact presented in this report are true and correct;
2. the reported analyses, opinions, and conclusions are limited only by the reported assumptions and limiting conditions, and are our personal, impartial, and unbiased professional analyses, opinions, and conclusions;
3. we have no present or prospective interest in the property that is the subject of this report and no personal interest with respect to the parties involved;
4. we have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment;
5. our engagement in this assignment was not contingent upon developing or reporting predetermined results;
6. our compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal;
7. our analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice;
8. Rebecca Lee personally inspected the property described in this report; Roland de Milleret, MAI participated in the analysis and reviewed the findings, but did not personally inspect the property for the purposes of this appraisal; however, Roland de Milleret, MAI has inspected the property for a previous HVS assignment;
9. Rebecca Lee provided significant real property appraisal assistance to Roland de Milleret, MAI, and that no one other than those listed above and the undersigned prepared the analyses, conclusions, and opinions concerning the real estate that are set forth in this appraisal report; Rebecca Lee and Roland de Milleret, MAI have performed a market study on this property within the past three years;

10. the reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute;

11. the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives; and

12. as of the date of this report, Roland de Milleret, MAI has completed the requirements of the continuing education program of the Appraisal Institute.

Penetration Explanation

Let us illustrate the penetration adjustment with an example.

A market has three existing hotels with the following operating statistics:

BASE-YEAR OCCUPANCY AND PENETRATION LEVELS

Property	Number of Rooms	Fair Share	Commercial	Meeting and Group	Leisure	Occupancy	Penetration
Hotel A	100	23.5 %	60 %	20 %	20 %	75.0 %	100.8 %
Hotel B	125	29.4	70	10	20	65.0	87.4
Hotel C	200	47.1	30	60	10	80.0	107.5
Totals/Average	**425**	**100.0 %**	**47 %**	**38 %**	**15 %**	**74.4 %**	**100.0 %**

Based upon each hotel's room count, market segmentation, and annual occupancy, the annual number of room nights accommodated in the market from each market segment can be quantified, as set forth below.

MARKET-WIDE ROOM NIGHT DEMAND

Market Segment	Annual Room Night Demand	Percentage of Total
Commercial	54,704	47.4 %
Meeting and Group	43,481	37.7
Leisure	17,246	14.9
Total	**115,431**	**100.0 %**

The following discussion will be based upon an analysis of the commercial market segment. The same methodology is applied for each market segment to derive an estimate of a hotel's overall occupancy. The table below sets forth the commercial demand accommodated by each hotel. Each hotel's commercial penetration factor is computed by:

1) calculating the hotel's market share % of commercial demand (commercial room nights accommodated by subject hotel divided by total commercial room nights accommodated by all hotels) and

2) dividing the hotel's commercial market share % by the hotel's fair share %.

The following table sets forth each hotel's fair share, commercial market share, and commercial penetration factor.

COMMERCIAL SEGMENT PENETRATION FACTORS

Property	Number of Rooms	Fair Share	Commercial Capture	Commercial Market Share	Commercial Penetration
Hotel A	100	23.5 %	16,425	30.0 %	127.6 %
Hotel B	125	29.4	20,759	37.9	129.0
Hotel C	200	47.1	17,520	32.0	68.1
Totals/Average	**425**	**100.0 %**	**54,704**	**100.0 %**	**100.0 %**

If a new 100-room hotel enters the market, the fair share of each hotel changes because of the new denominator, which has increased by the 100 rooms that have been added to the market.

COMMERCIAL SEGMENT FAIR SHARE

Property	Number of Rooms	Fair Share
Hotel A	100	19.0 %
Hotel B	125	23.8
Hotel C	200	38.1
New Hotel	100	19.0
Total	**525**	**100.0 %**

The new hotel's penetration factor is projected for its first year of operation. It is estimated that the hotel will capture (penetrate) only 85% of its fair share as it establishes itself in the market. The new hotel's market share and room night capture can be calculated based upon the hotel's estimated penetration factor. When the market share of the existing hotels and that of the new hotel are added up, they no longer equal 100% because of the new hotel's entry into the market. The market share of each hotel must be adjusted to reflect the change in the denominator that comprises the sum of each hotel's market share.

This adjustment can be mathematically calculated by dividing each hotel's market share percentages by the new denominator of 97.1%. The resulting calculations reflect each hotel's new adjusted market share. The sum of the adjusted market shares equals 100%, indicating that the adjustment has been successfully completed. Once the market shares have been calculated, the penetration factors can be recalculated (adjusted market share divided by fair share) to derive the adjusted penetration factors based upon the new hotel's entry into the market. Note that each existing hotel's penetration factor actually increases because the new hotel is capturing (penetrating) less than its fair share of demand.

COMMERCIAL SEGMENT PROJECTIONS (YEAR 1)

Property	Number of Rooms	Fair Share	Hist./Proj. Penetration Factor	Hist./Proj. Market Share	Adjusted Market Share	Adjusted Penetration Factor	Projected Capture
Hotel A	100	19.0 %	127.6 %	24.3 %	25.0 %	131.4 %	13,688
Hotel B	125	23.8	129.0	30.7	31.6	132.8	17,299
Hotel C	200	38.1	68.1	25.9	26.7	70.1	14,600
New Hotel	100	19.0	85.0	16.2	16.7	87.5	9,117
Totals/Average	**525**	**100.0 %**		**97.1 %**	**100.0 %**		**54,704**

In its second year of operation, the new hotel is projected to penetrate above its fair share of demand. A penetration rate of 130% has been chosen, as the new hotel is expected to perform at a level commensurate with Hotel A and Hotel B in this market segment. The same calculations are performed to adjust market share and penetration factors. Note that now the penetration factors of the existing hotels decline below their original penetration rates because of the new hotel's above-market penetration. Also, note that after the market share adjustment, the new hotel retains a penetration rate commensurate with Hotel A and Hotel B, though the penetration rates of all three hotels have declined by approximately nine percentage points because of the reapportionment of demand.

Once the market shares of each hotel have been adjusted to reflect the entry of the new hotel into the market, the commercial room nights captured by each hotel may be projected by multiplying the hotel's market share percentage by the total commercial room-night demand. This calculation is shown below.

COMMERCIAL SEGMENT PROJECTIONS (YEAR 2)

Property	Number of Rooms	Fair Share	Hist./Proj. Penetration Factor	Hist./Proj. Market Share	Adjusted Market Share	Adjusted Penetration Factor	Projected Capture
Hotel A	100	19.0 %	131.4 %	25.0 %	23.1 %	121.5 %	12,662
Hotel B	125	23.8	132.8	31.6	29.3	122.9	16,004
Hotel C	200	38.1	70.1	26.7	24.7	64.8	13,507
New Hotel	100	19.0	130.0	24.8	22.9	120.3	12,531
Totals/Average	**525**	**100.0 %**		**108.1 %**	**100.0 %**		**54,704**

Explanation of the Simultaneous Valuation Formula

The algebraic equation known as the simultaneous valuation formula, which solves for the total property value using a ten-year mortgage and equity technique, was developed by Suzanne R. Mellen, CRE, MAI, FRICS, ISHC, Managing Director of the San Francisco office of HVS. A complete discussion of the technique is presented in her article entitled "Simultaneous Valuation: A New Technique."[20]

The process of solving for the value of the mortgage and equity components begins by deducting the annual debt service from the projected income before debt service, leaving the net income to equity for each year. The net income as of the eleventh year is capitalized into a reversionary value using the terminal capitalization rate. The equity residual, which is the total reversionary value less the mortgage balance at that point in time and less any brokerage and legal costs associated with the sale, is discounted to the date of value at the equity yield rate. The net income to equity for each projection year is also discounted back to the date of value. The sum of these discounted values equals the value of the equity component. Because the equity component comprises a specific percentage of the total value, the value of the mortgage and the total property can be computed easily. This process can be expressed in two algebraic equations that set forth the mathematical relationships between the known and unknown variables using the following symbols.

[20]Suzanne R. Mellen. "Simultaneous Valuation: A New Technique," *Appraisal Journal*, April, 1983.

NI	=	Net income available for debt service
V	=	Value
M	=	Loan-to-value ratio
f	=	Annual debt service constant
n	=	Number of years in the projection period
d_e	=	Annual cash available to equity
d_r	=	Residual equity value
b	=	Brokerage and legal cost percentage
P	=	Fraction of the loan paid off during the projection period
f_p	=	Annual constant required to amortize the entire loan during the projection period
R_r	=	Overall terminal capitalization rate that is applied to net income to calculate the total property reversion (sales price at the end of the projection period)
$1/S^n$	=	Present worth of $1 factor (discount factor) at the equity yield rate

Using these symbols, the following formulas can be used to express some of the components of this mortgage and equity valuation process.

Debt Service – A property's debt service is calculated by first determining the mortgage amount that equals the total value (V) multiplied by the loan-to-value ratio (M). Debt service is derived by multiplying the mortgage amount by the annual debt service constant (f). The following formula represents debt service.

$$f \times M \times V = \text{Debt Service}$$

Net Income to Equity (Equity Dividend) – The net income to equity (d_e) is the property's net income before debt service (NI) less debt service. The following formula represents the net income to equity.

$$NI - (f \times M \times V) = d_e$$

Reversionary Value – The value of the hotel at the end of the tenth year is calculated by dividing the eleventh-year net income before debt service (NI^{11}) by the terminal capitalization rate (R_r). The following formula represents the property's tenth-year reversionary value.

$$(NI^{11}/R_r) = \text{Reversionary Value}$$

Brokerage and Legal Costs – When a hotel is sold, certain costs are associated with the transaction. Normally, the broker is paid a commission and the attorney collects legal fees. In the case of hotel transactions, brokerage and legal costs typically range from 1% to 4% of the sales price. Because these expenses reduce the proceeds to the seller, they are usually deducted from the reversionary value in the mortgage and equity valuation process. Brokerage and legal costs (b), expressed as a percentage of reversionary value (NI^{11}/R_r), are calculated by application of the following formula.

$$b\ (NI^{11}/R_r) = \text{Brokerage and Legal Costs}$$

Ending Mortgage Balance – The mortgage balance at the end of the tenth year must be deducted from the total reversionary value (debt and equity) in order to determine the equity residual. The formula used to determine the fraction of the loan remaining (expressed as a percentage of the original loan balance) at any point in time (P) takes the annual debt service constant of the loan over the entire amortization period (f) less the mortgage interest rate (i), and divides it by the annual constant required to amortize the entire loan during the ten-year projection period (f_p) less the mortgage interest rate. The following formula represents the fraction of the loan paid off (P).

$$(f - i)/(f_p - i) = P$$

If the fraction of the loan paid off (expressed as a percentage of the initial loan balance) is P, then the remaining loan percentage is expressed as 1 - P. The ending mortgage balance is the fraction of the remaining loan (1 - P) multiplied by the initial loan amount (M x V). The following formula represents the ending mortgage balance.

$$(1 - P) \times M \times V$$

Equity Residual Value – The value of the equity upon the sale at the end of the projection period (d_r) is the reversionary value less the brokerage and legal costs and the ending mortgage balance. The following formula represents the equity residual value.

$$(NI^{11}/R_r) - (b\ (NI^{11}/R_r) - ((1 - P) \times M \times V) = d_r$$

Annual Cash Flow to Equity – The annual cash flow to equity consists of the equity dividend for each projection year plus the equity residual at the end of the tenth year. The following formula represents the annual cash flow to equity.

$$NI^1 - (f \times M \times V) = d_e^1$$

$$NI^2 - (f \times M \times V) = d_e^2$$

$$NI^{10} - (f \times M \times V) = d_e^{10}$$

$$(NI^{11}/R_r) - (b\,(NI^{11}/R_r) - ((1 - P) \times M \times V) = d_r$$

Value of the Equity – If the initial mortgage amount is calculated by multiplying the loan-to-value ratio (M) by the property value (V), then the equity value is one minus the loan-to-value ratio multiplied by the property value. The following formula represents the value of the equity.

$$(1 - M)\,V$$

Discounting the Cash Flow to Equity to the Present Value – The cash flow to equity in each projection year is discounted to the present value at the equity yield rate ($1/S^n$). The sum of these cash flows is the value of the equity (1 - M) V. The following formula represents the calculation of equity as the sum of the discounted cash flows.

$$(d_e^1 \times 1/S^1) + (d_e^2 \times 1/S^2) + \ldots + (d_e^{10} \times 1/S^{10}) + (d_r \times 1/S^{10}) = (1 - M)\,V$$

Combining the Equations: Annual Cash Flow to Equity and Discounting the Cash Flow to Equity to the Present Value – The last step is to arrive at one overall equation that shows that the annual cash flow to equity plus the yearly discounting to the present value equals the value of the equity.

$$((NI^1 - (f \times M \times V))\ 1/S^1) + ((NI^2 - (f \times M \times V))\ 1/S^2) + \ldots$$

$$((NI^{10} - (f \times M \times V))\ 1/S^{10}) +$$

$$(((NI^{11}/R_r) - (b\,(NI^{11}/R_r)) - ((1 - P) \times M \times V))\ 1/S^{10}) = (1 - M)\,V$$

Because the only unknown in this equation is the property's value (V), it can be solved readily.

Ten-Year Projection of Income and Expense – Because the fixed and variable forecast of income and expense is carried out only to the stabilized year, it is necessary to continue the projection to the eleventh year. In most cases, net income before debt service beyond the stabilized year is projected at an assumed inflation rate. By increasing a property's revenue and expenses at the same rate of inflation, net income remains constant as a percentage of total revenue, and the dollar amount escalates at the annual inflation rate. The ten-year forecast of

income and expense illustrates the subject property's net income, which is assumed to increase by 3.0% annually subsequent to the hotel's stabilized year of operation.

The following values are assigned to the variable components for the purposes of this valuation.

SUMMARY OF KNOWN VARIABLES

Annual Net Income	NI	See Ten-Year Forecast
Loan-To-Value Ratio	M	65 %
Interest Rate	*i*	5.50 %
Debt Service Constant	f	0.073690
Equity Yield	Ye	17.0 %
Transaction Costs	b	2.0 %
Annual Constant Required to Amortize the Loan in Ten Years	fp	0.130232
Terminal Capitalization Rate	Rr	8.0 %

The following table illustrates the present worth of a $1 factor at the 17.0% equity yield rate.

PRESENT WORTH OF $1 FACTOR AT THE EQUITY YIELD RATE

Year Ending	Present Worth of $1 Factor at 17.0%
2016/17	0.854688
2017/18	0.730492
2018/19	0.624343
2019/20	0.533619
2020/21	0.456078
2021/22	0.389804
2022/23	0.333161
2023/24	0.284749
2024/25	0.243372
2025/26	0.208007

Using these known variables, the following intermediary calculations must be made before applying the simultaneous valuation formula. The fraction of the loan paid off during the projection period is calculated as follows.

P = (0.07369 - 0.0550) / (0.13023 - 0.0550) = 0.248440

The annual debt service is calculated as f x M x V.

(f x M x V)= 0.07369 x 0.65 x V = (0.0479)V

Inserting the known variables into the hotel valuation formula produces the following.

(3,724,000 - 0.04790 V) x 0.8547 +
(3,968,000 - 0.04790 V) x 0.73051 +
(3,996,000 - 0.04790 V) x 0.62437 +
(4,055,000 - 0.04790 V) x 0.53365 +
(4,152,000 - 0.04790 V) x 0.45611 +
(4,276,000 - 0.04790 V) x 0.38984 +
(4,405,000 - 0.04790 V) x 0.3332 +
(4,536,000 - 0.04790 V) x 0.28478 +
(4,672,000 - 0.04790 V) x 0.2434 +
(4,812,000 - 0.04790 V) x 0.20804 +

(((4,956,000 / 0.080) - (0.020 x (4,956,000 / 0.080)) -

((1 - 0.248440) x 0.7 x V)) x 0.208037) = (1 - 0.65)V

Like terms are combined as follows.

$31,829,157 - 0.324771V = (1 - 0.65)V
$31,829,157 = 0.67477V
V = $31,829,157 / 0.67477
V = $47,170,320

Total Property Value as Indicated by the Income Capitalization Approach (Say) = $47,200,000

About HVS

HVS is the world's leading consulting and services organization focused on the hotel, restaurant, shared ownership, gaming, and leisure industries. Established in 1980, the company offers a comprehensive scope of services and specialized industry expertise to help you enhance the economic returns and value of your hospitality assets.

Because hotels represent both real property and operating businesses, the founding partners of HVS decided to develop the first comprehensive valuation methodology for appraising these specialized assets. Their initial textbook on this topic entitled, The Valuation of Hotels and Motels, published by the Appraisal Institute, created the industry standard for valuing hotels and is now used by virtually every appraiser around the world. HVS continues to be at the forefront of hotel valuation methodology, having published six textbooks and hundreds of articles on this subject, which are used in appraisal courses and seminars and at leading hotel schools such as Lausanne, IMHI, and Cornell. HVS associates are constantly called upon to teach this methodology to hotel owners, lenders, and operators and to participate at industry conferences. HVS principals literally 'wrote the book' on hotel valuation, which significantly enhances the credibility and reliability of our conclusions.

Over the past three decades, HVS has expanded both its range of services and its geographical boundaries. The company's global reach, through a network of 30 offices staffed by 400 seasoned industry professionals, gives you access to an unparalleled range of complementary services for the hospitality industry:

Consulting & Valuation
Investment Banking
Asset Management & Advisory
Hotel Management
Hotel Parking Consulting
Executive Search
Food & Beverage Services
Gaming Services
Property Tax Services
Convention, Sports & Entertainment Facilities
Interior Design
Sales & Marketing Services
Shared Ownership Services
Golf Services
Eco Services
Risk Management

Our clients include prominent hotel owners, lending institutions, international hotel companies, management entities, governmental agencies, and law and accounting firms from North America, Europe, Asia, Latin America, and the Caribbean. HVS principals are regarded as the leading professionals in their respective regions of the globe. We are client driven, entrepreneurial, and dedicated to providing the best advice and services in a timely and cost-efficient manner. HVS employees continue to be industry leaders, consistently generating a wide variety of articles, studies, and publications on all aspects of the hospitality industry.

HVS is the industry's primary source of hotel ownership data. Our 2,000+ assignments each year keep us at the forefront of trends and knowledge regarding information on financial operating results, management contracts, franchise agreements, compensation programs, financing structures, and transactions. With access to our industry intelligence and data, you will have the most timely information and the best tools available to make critical decisions about your hospitality assets.

For further information regarding our expertise and specifics about our services, please visit www.hvs.com.

communities. The scope of these analyses included forecasting growth in property tax base, population, municipal revenues, expenditures, capital investment needs, debt service, resulting property tax rates and annual tax burden on homeowners.

- Budget Forecasting: Developed a long-range budget forecasting model and consulted with the Plymouth MA Finance Department to update and maintain the forecasts over a three-year period. Prepared a 20-year sales tax forecasting model for Ontario County, NY as part of a strategic plan to increase sales tax revenue growth. Prepared a visitor forecasting and business planning model to assist the Jekyll Island Authority in evaluating options for increasing revenues and financing improvements to the Jekyll Island State Park.

- Development in resort locations: Forecasted impacts on construction industry employment and the overall economic and fiscal impacts of alternative growth management scenarios for the island of Nantucket, MA. Provided financial advisory services in the negotiation of commercial ground leases for the Jekyll Island Authority.

Targeted Employment Area (TEA) Confirmation Letters:

Issued by the Empire State Development

Project Location:

- Four Points Flushing Hotel is located at 134-37 35th Avenue. Flushing, New York 11354
- The area is composed of census tract 889.02 in Queens County and is certified as a Targeted Employment Area (TEA)

Empire State Development

March 26, 2014

Mr. Yi Song, Esq.
Mona Shah & Associates
299 Broadway, Suite 1005
New York, New York 10007

Dear Mr. Song:

Attached is a letter from Mr. Joseph Nardone, of the New York State Department of Labor, identifying an area including census tract 889.02 in Queens County. Based on 2013 annual average labor force data, the Department of Labor has determined that this area meets the minimum threshold of unemployment to qualify as a Targeted Employment Area.

Based on the Labor Department's determination, I am able to certify that the area described in the attached letter qualifies as a Targeted Employment Area.

Census tract 889.02, in Queens County, contains 134-37 35th Avenue, Flushing, New York 11354.

Please feel free to contact me if you have any questions.

Sincerely,

Ms. Kay Alison Wilkie
Director for International Policy

cc: Joseph Nardone, DOL

Peter M. Rivera, *Commissioner*

March 25, 2014

Kay Alison Wilkie
Director for International Policy
Division of Business Advocacy and Research
Empire State Development | NYS Department of Economic Development
625 Broadway
Albany, NY 12245

Dear Ms. Wilkie:

The 2013 average unemployment rate for census tract 889.02 in Queens County that contains the address, 134-37 35th Avenue, Flushing, NY 11354, as you requested is 10.5 percent. The current minimum threshold to qualify as a Targeted Employment Area is 11.1 percent.

For your consideration, we developed an alternative area composed of census tracts 863, 865, 867, and 889.02 in Queens County with an annual average unemployment rate of 11.7 percent.

These data were estimated using census share methodology as stipulated by the U.S. Bureau of Labor Statistics in LAUS Technical Memorandum No. S-05-21. Census2000 tract boundaries, Census2000 household-only labor force data, and 2013 annual average Local Area Unemployment Statistics (LAUS) data were used in this estimate.

Please feel free to contact me if you have any questions.

Sincerely,

Joseph Nardone

Notice Date March 19, 2015	Page 1 of 4	Beneficiary

PETITIONER
George Xu
c/o Mona Shah and Associates
299 Broadway, Suite 1005
New York, NY 10007

Request for Evidence

Based upon a review of your petition and supporting documentation, U.S. Citizenship and Immigration Services (USCIS) has found that you have not established that you are eligible for the benefit you are seeking. In order to determine whether you are eligible for the benefit, USCIS requests that you submit additional evidence. The deficiencies in your petition and the evidence that USCIS is requesting are explained in the attached document.

(SEE ATTACHED)

If you reside within the United States, you must submit the requested evidence no later than 87 days from the date of this notice. If you reside outside of the United States, you must submit the requested evidence no later than 98 days from the date of this notice. USCIS is unable to grant additional time for responding to this request for evidence. *See* 8 C.F.R. § 103.2(b)(8)(iv).

You must submit all of the requested materials at one time. Submission of only some of the requested evidence will be considered a request for a decision on the record. *See* 8 CFR § 103.2(b)(11). If you do not respond by the deadline, USCIS may deny your petition as abandoned, may deny your petition based on the record, or may deny your petition for both reasons. *See* 8 CFR § 103.2(b)(13)(i).

If you reside inside the United States, your deadline for submitting a response is: Monday, June 15, 2015.

IMPORTANT: RETURN THIS ORIGINAL NOTICE ON TOP OF THE REQUESTED INFORMATION AND/OR EVIDENCE LISTED ON THE ATTACHED SHEET(S).

Keep a photocopy of this notice for your records. If you otherwise write to us about your case, please provide a copy of this notice.

You will be notified separately about any other applications or petitions you have filed.

Send your response to this address:

U.S. Citizenship and Immigration Services
Immigrant Investor Program Office
131 M Street, NE
Mailstop 2235
Washington, DC 20529

A copy of this notice was sent to:

Mehreen Shah
299 Broadway, Suite 1005
New York, NY 20007

Form I-924, Application for Regional Center Under the Immigrant Investor Pilot Program; Request for Evidence

A request for initial designation as a Regional Center under the Immigrant Investor Program ("Investor Program") or an amendment to an existing Regional Center designation, may involve:

1. A request for review of an exemplar Form I-526, Immigrant Petition by Alien Entrepreneur, prior to the filing of Form I-526 Petitions by individual alien entrepreneurs with USCIS and/or;
2. In the case of a Regional Center amendment request, a review of a new specific capital investment project where the Regional Center designation involved a review of an exemplar capital investment project.

It appears that you are requesting initial designation as a Regional Center under the Investor Program.

I. Procedural History and Regional Center Background

The proposed Regional Center entity, Century New York City Regional Center, ("CNYCRC"), was established on March 25, 2014 in New York, and is structured as an LLC. CNYCRC is requesting jurisdiction over the following geographic area:

State of	Counties
New York	Queens, New York, Bronx County, Richmond County, Westchester County, and Nassau County

CNYCRC plans to offer EB-5 capital investment opportunities in affiliated new commercial enterprises, organized as corporations, LLCs, LPs, etc., focusing on projects in the following industry categories:

Industry Category	NAICS Code
Commercial and Institutional Building Construction	236223
Furniture and Home Furnishing Merchant Wholesalers	4232
Restaurants and Other Eating Places	72251
Construction (Building & Site)	2362/23622
Food Services and drinking places	72251
Real Estate	53112/5313
Other government enterprises	921

Architectural, engineering and related services	5413
Insurance	5241
Accounting tax preparation, bookkeeping services	5412
Legal Services	5411
Monetary authorities and depository credit intermediation	5222

The capital investment projects will involve to job creating enterprises located within the proposed bounds of the Regional Center.

Based upon a review of the initial record of evidence, United States Citizenship and Immigration Services (USCIS) cannot conclude that the applicant has established eligibility for regional center designation. To assist the applicant in focusing on the deficiencies in the existing record, USCIS serves this Request for Evidence. The deficiencies of the current record are outlined below.

II. Evidentiary Requirements for Regional Center Proposals

8 CFR 204.6 (m)(3) describes the evidence that must be submitted in support of a Regional Center proposal. After review of your proposal, the following information, evidence and/or clarification is required. Note that in response to this notice, that it is helpful to provide a cover letter that acts as an executive summary, followed by a table of contents with sections that are tabbed at the bottom of the page.

1. Regional Center's Operational Plan (8 CFR 204.6(m)(3)(iii) and 8 CFR 204.6(m)(6)):

A Regional Center proposal should have at least two business plans. One for the Regional Center's Operational Plan and an actual or exemplar business plan for a project in each of the defined target industries in the proposal.

The business plan for the Regional Center contains language that is ambiguous and may not comply with the elgibility requirements of the EB-5 program. Specifically, page 6 states, "EB-5 investors will earn not earn any percentage of the interest income from lent through the Regional Center proportionate to their capital contribution." In addition, page 28 of the Confidential Private Offering memorandum, third paragraph, under the heading "Offering Proceeds," it is stated that the loan "will bear no interest.

Per 8 CFR 204.6(j)(2): *To show that the petitioner has invested or is actively in the process of investing the required amount of capital, the petition must be accompanied by evidence that the petitioner has placed the required amount of capital at risk for the purpose of generating a return on the capital placed at risk.*

Furthermore, The USCIS Administrative Appeals Office ("AAO") held that for the capital to be "at risk" there must be a risk of loss and a chance for gain. See *Matter of Izummi,* 22 I&N Dec. 169 (Assoc. Comm., 1998).

Based on the issues identified above, it appears that your proposed plan may prevent an investor from having their required capital considered "at risk". Please explain how the RC plans to rectify future proposals in order to address the deviation from policy described above.

Translations:

Any document containing a foreign language submitted to USCIS shall be accompanied by a full English translation that the translator has certified as complete and accurate, and by the translator's certification that he or she is competent to translate from the foreign language into English.

Copies:

Unless specifically required that an original document be filed with an application or petition, an ordinary legible photocopy may be submitted. Original documents submitted when not required will remain part of the record, even if the submission was not required.

III. Conclusion

USCIS has determined that the record submitted does not establish eligibility for the benefit sought. Accordingly, USCIS has requested evidence which addresses the issues outlined above. As required by regulation, the applicant must prove, by a preponderance of the evidence (that it is more likely than not), that the applicant is fully qualified for the benefit sought. Please note that USCIS will make a final decision based on the initial evidence submitted upon filing and after consideration of all additional evidence submitted in response to this request.

NOTES:
Any document submitted to the USCIS containing a foreign language, must be accompanied by a full English language translation that has been certified by the translator as complete and accurate, and that the translator is competent to translate from the foreign language into English. Submit clear and legible copies of all requested evidence. If clear and legible copies are not possible, submit the original documents. These originals will be returned, if requested.

Please provide an index of any submitted evidence and include corresponding tabs for each section of evidence.

EXECUTIVE SUMMARY

The proposed Four Points Flushing Hotel & Condominium is seeking regional center designation as a hypothetical project. The plan is to construct and develop a mix-use buidling which consists of 210-room hotel, 101 residential condominium units, retail spaces, community facilities and parking spaces (the "Project") in Flushing, Queens, one of the five boroughs of New York City. The project is located at 134-37 35th Avenue in Flushing, New York, NY 11354. This area encompasses some of the most commercially active portions of downtown Flushing, including the majority of Chinese and Korean businesses. It is also a popular destination for Asian tourists.

Farrington EB-5 Capital, LLC will be the new commercial enterprise, (hereinafter the "NCE") a newly formed entity for the purpose of raising EB-5 investment capital. Farrington Realty, LLC is the job creating entity (hereinafter "JCE") owns and operates the project. The NCE will be managed by Mr. George Xu, the developer and owner of the Project. The business entity structure is outlined in the table below.

New Commercial Enterprise (NCE)	Farrington EB-5 Capital, LLC
Regional Center (RC)	Century New York City Regional Center, LLC
Job Creating Entity (JCE)	Farrington Realty, LLC

The Proposed Four Points Flushing EB-5 Project entails a new construction of a mixed-use building which consists of a 210-room hotel, 101 residential condominium units, retail spaces, community facilities and parking spaces in Flushing, Queens, one of the five boroughs of New York City. Four Points by Sheraton is a mid-scale hotel brand by Starwood Hotels & Resorts offering a full-service hotel experience at a reasonable price. The construction and operation of the regional base of invested capital, the creation of new jobs, and the associated economic growth effects will be put into effect with the capital raised from immigrant investors through the EB-5 Program.

(b)(4)

The NCE is seeking to raise a maximum of [redacted] in investor capital from 70 EB-5 investors for the EB-5 Immigrant Investor Program (hereinafter "EB-5") for the Four Points Flushing Hotel & Condominium. According to the Economic Impact Report, the project will create [redacted] jobs, including [redacted] jobs from direct and indirect from construction employment, [redacted] direct jobs from operation, and [redacted] indirect jobs from operation.

LOCATION – TARGETED EMPLOYMENT AREA

The EB-5 investment within a targeted employment area is calculated at a ratio of $500,000 for every 10 jobs created. The maximum credited foreign investment the [redacted] jobs can support under the EB-5 Program is [redacted] capital raise. The Project is only seeking to raise [redacted] from the EB-5 Program.

The project is located at 134-37 35th Avenue in Flushing, New York, NY 11354. The location is in census tract 889.02 in Queens County, a designated Targeted Employment Area ("TEA") confirmed by the Empire State Development and New York State Department of Labor. Please see the TEA letters attached at **Exhibit 7.**

Thus the project is located in a TEA and shall have a minimum investment requirement by each member of $500,000 USD. Membership units for the EB-5 investors shall be sold at [redacted] USD, of which $500,000 USD shall be utilized towards the construction of the project and [redacted] USD shall go towards an Administrative Fee.

DEVELOPMENT COSTS:

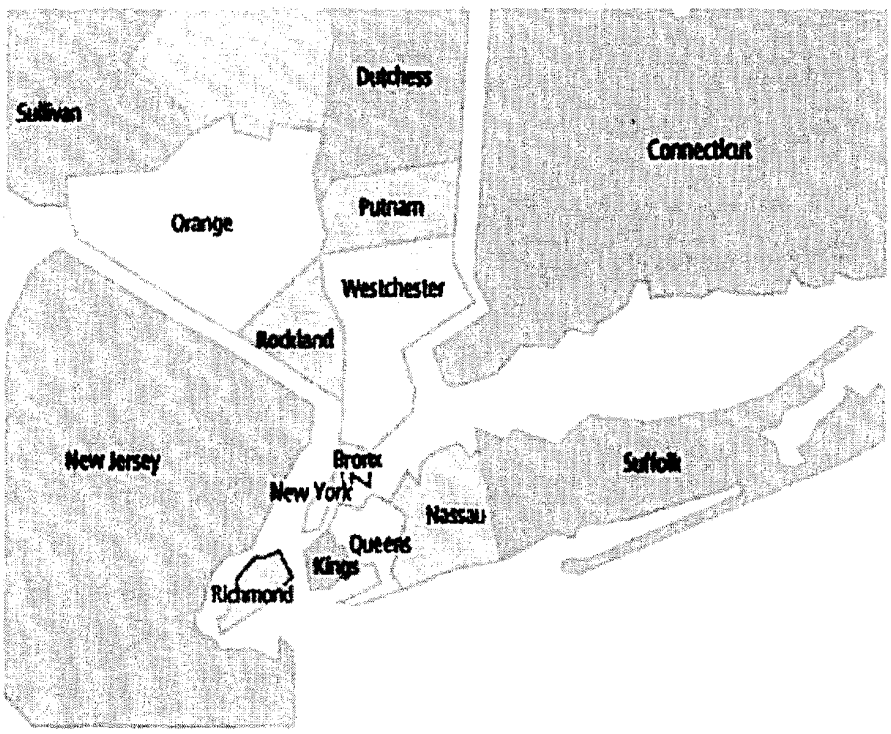
The total development cost is estimated at [redacted] consisting of hard construction costs approximately [redacted] soft costs [redacted] and other costs. The owner's equity is approximately 30% of the development costs. The maximum raise of EB-5 investment funds would be [redacted] The project developers are actively seeking traditional bank financing and other bridge financing as an alternative to EB-5 financing.

REGIONAL CENTER:

Farrington EB-5 Capital, LLC ("NCE") is managed by Century New York City Regional Center, LLC. The NCE was organized as a New York Limited Liability Company on March 31, 2014 with the primary business objective to raise EB-5 capital to fund real estate development projects such as the Four Points Flushing located at 134-37 35th Avenue in Flushing, New York, NY 11354. The project is owned by the project developer Farrington Realty, LLC where Mr. George Xu is the principal.

GEOGRAPHIC SCOPE:

The Four Points Flushing is located in Queens County. The RC requests the following seven (7) counties to be included in the RC's geographic boundaries: Queens County, New York County, Kings County, Bronx County, Richmond County, Westchester County and Nassau County. Please see the County map below.



Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment requirement is not required if investment opportunities arise outside the geographic area referenced above.

NAICS CODES:

The RC development project requests designation in the following industries based on the North America Industry Classification System ("**NAICS**") Code:

Construction Hard Costs

- Construction (Building & Site) – 2362/23622
- Wholesale Trade (FF&E) – 42/4232
- Hotel and Motel (including Casino) – 72251
- Food Services and drinking places – 72251
- Real Estate – 53112/5313

Financing & Soft Costs

- Other government enterprises – 921
- Architectural, engineering and related services – 5413
- Insurance - 5241
- Accounting tax preparation, bookkeeping services – 5412
- Legal Services – 5411
- Monetary authorities and depository credit intermediation – 5222
- Other miscellaneous professional and technical services - 5419

The joint tower is a part of a mixed-use development that will include ±10,000 square feet of commercial and retail space along 35th Avenue at the ground level. The commercial and retail spaces will be operated as separate entities.

PROJECT LOCATION AND TARGET EMPLOYMENT AREA

The project is located at 134-37 35th Avenue in Flushing, New York, NY 11354. The location is in census tract 889.02 in Queens County, a designated Targeted Employment Area ("TEA") confirmed by the Empire State Development and New York State Department of Labor. Please see the TEA letters attached at Exhibit 7.

Thus, the project is located in a TEA and shall have a minimum investment requirement by each member of $500,000 USD. Membership units for the EB-5 investors shall be sold at [redacted] USD, of which $500,000 USD shall be utilized towards the construction of the project and [redacted] USD shall go towards an Administrative Fee. (b)(4)

SECTION II: MARKET ANALYSIS

This section includes the analysis of the target market, perspective customers, market demand and analysis method, and the project's competitive advantages and highlights.

Source of the data: The market analysis is provided by HVS Consulting and Valuation Services ("HVS"). HVS is the world's premier hotel consulting and valuation firm, known for their impeccable worldwide reputation for credibility, excellence, and thoroughness. They provide full services and solutions on consulting and valuation; executive search; investment banking; asset management and strategic advisory; hotel management; convention, sports, and entertainment facilities consulting; design; shared ownership; parking; gaming; golf; sustainability; risk management; and property tax. HVS is the industry's primary source of hotel sales data, research, market studies, and educational information relating to the hospitality industry.

HVS was established in 1980 by Chairman and Founder Steve Rushmore, MAI, FRICS, CHA, and now directed by President and CEO Stephen Rushmore, Jr., MAI. HVS are members of:
MAI: Member of the Appraisal Institute
CHA: Certified Hotel Administrator
FRICS: Fellows of Royal Institution of Chartered Surveyors

LOCATION

The Project, Four Points Flushing Hotel & Condominium, is located in Flushing, New York. Located in the Flushing district of New York City's Queens Borough, the site is readily accessible to a variety of local, county, state, and interstate highways. Major interstates, such as Interstates 278, 495, and 95, connect Flushing to other major cities – New Haven, Connecticut; Philadelphia, Pennsylvania; and not mention its close proximity to Manhattan, New York. Manhattan, the commercial center of New York City, may be easily accomplished via the Long Island Expressway, the Grand Central Parkway, the New York City Subway, and the Long Island Rail Road. Guests will have access to the hotel through Farrington Street and 35th Avenue. The project's location is in a commercially active area in Flushing.

market is expected to remain undersupplied. Market-wide occupancy is expected to remain close to maximum-level capacity, in the mid-80 percent range, through 2015. New supply is expected to increase by approximately 15.0 percent by 2015. As a result, HVS forecasts moderate average rate growth over the next three years. From 2013 to 2015, HVS forecasts relatively modest increases in RevPAR, primarily driven by ADR growth. Overall, RevPAR is forecast to appropriately recover and surpass its pre-recession (2008) in 2014. Increases in supply are expected to be readily absorbed and thus are not anticipated to significantly affect the recovery. Reflective of such trends, the Manhattan lodging market seemingly remains poised for a strong recovery, irrespective of any forthcoming increases in supply.

Queens Lodging Market

Queens is one of the most ethnically diverse communities in the U.S. It has served as a bedroom community for Manhattan, but has also developed its own employment base. The two major airports, JFK International and LaGuardia, have played an important role in shaping the area's economy. The Borough of Queens is home to more than 34,500 businesses, ranging from small retail outlets to large manufacturing plants. No single company or industry is dominant, although health care, air transportation, and services are major sectors. Some of Queens' largest employers include Steinway & Sons, British Airways, St. John's University, and Citibank.
More than 59% of Queens's residents commute to Manhattan for work. Of the 41% of workers who remain in Queens for employment, 32% work in the services industry, 21% in retail, 15% in public utilities, 11% in manufacturing, 8% in government, 7% in construction, and 6% in FIRE (finance, insurance, and real estate).

Although Queens has never been a major center for office development, the retail sector has benefited from the area's concentration of residential developments. Downtown Jamaica, which is located north of the subject property, in central Queens, is one of the largest concentrations of retail space in New York City, attracting visitors from throughout the region, owing to the appealing prices offered by the local merchants. However, Queens still exports a disproportionate share of its retail spending to neighboring Manhattan and Nassau County.
While not as rich in tourist attractions as Manhattan, the Borough of Queens offers its own array of leisure-oriented sites.

The following table lists selected visitor attractions located in Queens.

FIGURE 5-1 SELECTED QUEENS VISITOR ATTRACTIONS

Attraction	Type	Location	Notes
Queens Botanical Garden	Garden	Flushing	Acres of plantlife, including a Japanese Garden
Queens County Farm Museum	Museum	Floral Park	47 acres, including a historic farmhouse, as well as livestock and planting fields
New York Hall of Science	Museum	Queens	225-exhibit, hands-on science center
Louis Armstrong House & Archives	Museum	Flushing	Music, photos, films, instruments, awards
New York City Hall of Fame	Museum	Flushing	Recognizes those that contributed to NYC
The Queens Museum of Art	Museum	Queens	Art exhibits dating from 1800s to present
Isamu Noguchi Foundation, Inc	Museum	Sunnyside	Comprehensive collection of artwork by Isamu Noguchi
King Manor Museum	Museum	Flushing	Historic home in 11-acre park
Alley Pond Environmental Center, Inc	Nature	Douglaston	635 acres of woodlands, meadows, and fresh and salt water marshes
Flushing Town Hall-Concert Hall	Performing Arts	Flushing	340-seat concert hall
Queens Theater in the Park	Performing Arts	Flushing	478-seat theater, 99-seat experimental theater
Black Spectrum Theater	Performing Arts	Jamaica	Theater and films examining issues of concern to African-American youth
Colden Center for the Performing Arts	Performing Arts	Flushing	Auditorium with seating capacity of 2,127 and 429-seat concert hall
Thalia Spanish Theater	Performing Arts	Sunnyside	Produces Spanish zarzuela (operetta)
Shea Stadium	Sports	Flushing	Major League Baseball - home of New York Mets
Equestrian, Aqueduct Racetrack	Sports	Queens	Horse race track with 1,600-seat restaurant
USTA National Tennis Center	Sports	Flushing	Home of U.S. Open
Jamaica Center for Arts and Learning, Inc	Visual Arts	Jamaica	Exhibits of local and national artists, workshops
Queens Zoo	Zoo	Flushing	11-acre zoo with North American wildlife

PROJECT HIGHLIGHTS:

- **Close proximity to Manhattan, New York**
- **Proximity to Flushing Main Street, major commercial and residential areas with high concentrations of Chinese and Korean population**
- **Proximity to two major airports in New York City**
- **Four Points by Sheraton, a mid-scale hotel brand offering a full-service hotel experience at a sensible price**
- **Century Construction Group is an established developer is Flushing, NY**
- **210-rooms restaurant and lounge with an indoor pool, a fitness center, a banquet hall, large meeting space**
- **17,000-square-foot community facility space**
- **Lobby workstation, guest laundry facilities, and a gift shop**

Ramada Flushing is a newly built hotel in 2014. It offers onsite fitness room, business center with fax, copy and printer service, and car parking in a garage for a nominal charge. It offers free continental breakfast daily and free Wi-Fi Internet access throughout the hotel. Select top floor accommodations for stunning Manhattan skyline views. All guest rooms and suites feature desk, iron, ironing board, coffee maker, hair dryer, dataport, pay movies, and flat screen HDTV. This Queens hotel is 100% smoke-free. The hotel features a business center and conference rooms. A standard comfort room rate is $151/night.

MARKETING STRATEGY

The Four Point Flushing Hotel & Condominium will offer a well-designed, functional layout of support areas and guestrooms and target at the midmarket. All typical and market-appropriate features and amenities appear to be included in the hotel's design. The building will be fully open and operational on the assumed opening date and will meet all local building codes and brand standards. The hotel staff will be adequately trained to allow for a successful opening and that pre-marketing efforts will have introduced the product to major local accounts at least six months in advance of the opening date.

The project principals own Century Construction Group, an established brand in Flushing, New York. It has successfully completed and marketed similar projects such as Marriot Fairfield Inn., Leavitt Manor Condominium, Farrington Estate, all located in Flushing. The project principals plan to expand its existing midmarket to reach more audience through the Four Points Flushing Hotel project.

The project plans to raise (b)(4) from [redacted] EB-5 investors. The hypothetical regional center is expected to be approved within the next 6 months. Meanwhile, the project plans to conduct pre-marketing trips overseas in China and Asia.

SECTION III: FINANCIAL
VIABILITY OF THE PROJECT; PROJECT FUNDING & CAPITALIZATION EXIT PLAN; INCOME PROJECTIONS & REASONABLE ANALYSIS METHODOLOGY

EXIT PLAN & PROJECT VIABILITY

The loan from Farrington EB-5 Capital, LLC will be paid off in full either through the residential condominium sales, refinancing of hotel, retails and community facility upon stabilization. The project will not be refinanced or sold prior to the adjudication of the I-829 petitions.

The project principal has extensive experience and is confident that the proceeds from either strategy should be more than sufficient to pay off the EB-5 investors in full. However, in the event the above strategy is insufficient to pay off the loan in full, the borrower shall cover the shortfall from its own operating cash flow, or risk foreclosure and loss of its ownership of the Project to the Partnership. This is not a redemption clause. The EB-5 capital is placed "at risk". The developer will make the best efforts that are economically feasible to repay the EB-5 investors.

USE OF CAPITAL

The Four Point Flushing Hotel's development cost is estimated at (b)(4) consisting of hard construction costs approximately (b)(4) and (b)(4) soft costs. For analysis purposes this equates to a total development budget of $195/SF for 354,000 SF of gross building area including parking decks. This budget includes hard costs, contingencies, financing, pre-opening and other soft costs, but excludes site acquisition.

The JCE Company intends to raise capital to cover the costs using both conventional financing and through business loans by means of a private placement offering to EB-5 investors.

(b)(4)

Specifically, the NCE will raise a maximum of [redacted] in EB-5 capital, which will be loaned to the JCE. The Company plans to sell EB5 Membership Units, at $500,000 per unit, to qualified foreign investors seeking to obtain permanent residence in the United States through the EB-5 Visa Program. No additional capital contributions are required.

Contingency Plan:

As necessary, the Farrington Realty, LLC(JCE) may also provide a temporary short-term bridge financing or traditional bank financing through lenders in order to commence construction and create jobs in advance of EB-5 funding.

Attached below is the Forecasted Occupancy Rate of the Four Point Flushing Hotel:

Market Share				
Marketwide Occupancy				
Total Penetration				

(b)(4)

It is to be noted that the first year of operations does not reflect anticipated long-term performance of the hotel project. It only reflects the initial operations from the time the hotel first opens with little business, as it builds to full staffing complement, begins to work "the kinks" out of operations, gets marketing efforts underway and allows time for them to get traction, and builds the market image and place for the hotel. Based on operating history and market performance (with inflation adjustment), it is conservatively estimated that stabilization will occur in year 3 by 2017 with an annual occupancy of 72%. The term "stabilization" properly reflects the industry experience over most of the past century that after this initial ramp up, the hotel reaches a stabilized level that will be maintained during its 20 to 30 year economic lifespan.

FINANCIAL PROJECTIONS AND ANALYSIS METHODOLOGY

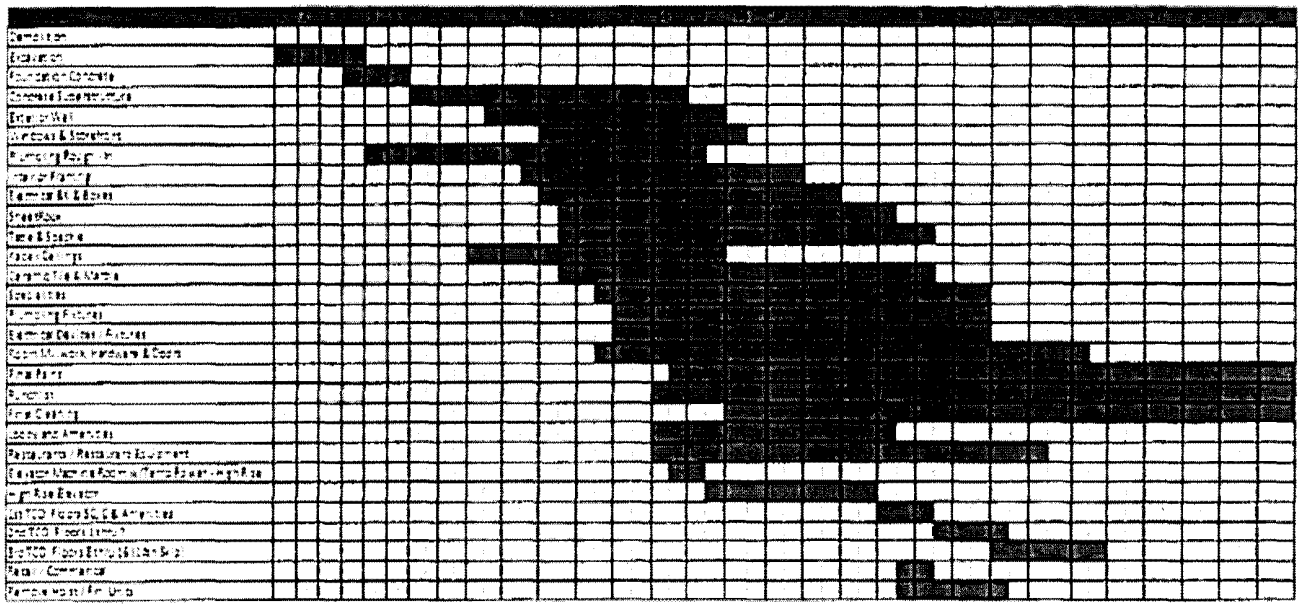
The financial projection data of the project is provided by independent studies HVS Group. In order to examine the job creation based on the projections, the following analysis methodologies

SECTION IV: CONSTRUCTION / PERMITS AND LICENSES

A. PARTICULARS OF THE CONSTRUCTION PHASES

Please refer to the timeline for the construction attached at **Exhibit 3.**
(Snap shot below)

This detailed construction timeline was produced by **Century Construction Group,** the General Contractors for the construction. The General Construction Verification Letter dated May 16, 2014 can be found at **Exhibit 3.**



Snapshot of the Construction Timeline

The construction of the Four Points Flushing Hotel & Condominium project will take approximately 30-months to complete. The submitted schedule at **Exhibit 3.** The project location is demolished in early 2014. The building is currently scheduled to start excavation soon.

The developer obtained all necessary permit and licenses in demolition, and is scheduled to obtain the permit and licenses for construction and development of the project. The actual

construction is expected to start at the end of 2014, and it is anticipated to be completed by mid-2017.

The timeline provides the particulars of the various phases of the construction over a period of project months from the commencement of the construction. For example, the early months will consist of the excavation and necessary foundation work. The Shoring of Excavation is expected to take 4 months, the construction timeline describes that concrete will be poured into concrete slabs for the individual floors. At this time, the construction of the hotel has made considerable headway. The construction timeline above provides the particulars of multiple phases of the construction over a period of 30 months from the commencement of the construction.

The Four Points Flushing Hotel hard construction costs prepared by ***Century Construction Group*** have been estimated to be [redacted] and the estimated time to complete the construction will be within **30 months**.

(b)(4)

(i) **Analysis Method of the Construction Timeline and Costs**

The construction timeline is estimated to be 30 months excluding the time to demolish the existing structure. The construction budget for the project is estimated at [redacted] The hotel (b)(4)
will include 210 guest rooms/suites, offering a restaurant, bar and lounge, an indoor pool, fitness center, conference rooms, and a 1,025 SF retail/gift shop space located in the lobby area. The construction of the Project will take approximately 30-months to complete. The construction budget was estimated by **Century Construction Group** This was based on their previous experience of projects similar in size and nature and scope. [1]

Century Construction Group has worked in the construction industry for twenty (20) years and have supervised, managed and/or constructed similar projects to Four Point Flushing Hotel & Condomium. Century's experience includes hospitality, commercial interior and residential projects, such as Marriot Fairfield Inn, Leavitt Manor Condominium, Whitestone Tower Condominium all located in Flushing.

(ii) **Mr. George Xu is an Expert in the Field.**

Mr. George Xu is also the owner of the Four Point Flushing Hotel & Condominium project and the owner of the proposed Century New York City Regional Center. He is the founder and President of Century Development Group, a real estate development company. With over 20 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential, hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Century New York City Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

Re: Four Points Sheraton / Luxury Condo Development
134-37 35th Avenue, Flushing NY 11354

Dear CSC EB-5 Unit Officer:

Century Construction Group was hired by Farrington Realty LLC as the general contractor on the above-referenced Project. I am the president of Century Construction Group and have worked in the construction industry for twenty years and have supervised, managed and/or constructed. My experience includes hospitality, commercial interior and residential projects. I have constructed similar projects to the proposed Four Points Sheraton in term of size, budgets and timeline. Such as Marriot Fairfield Inn, Leavitt Manor Condominium, Farrington Estate all located in Flushing. I have been asked by Farrington Realty, LLC to provide you with some information concerning the Project in connection with certain funding obtained by EB-5.

Century Construction Group has advised that construction estimate cost would be [redacted] (b)(4) The construction timeline is 30 months. This mixed used building consists of luxury condominium, hotel, commercial retail, community facility/medical offices, and parking garage. The Four Points Sheraton will provide 210 keys and 101 Luxury Condo. The project is scheduled to start in beginning of August 2014. I attest that the construction budgets and timeline are estimated based on established industry standards

Very Truly Yours,

George Xu
President

35-06 Leavitt St., Suite CF-A Flushing, NY 11354
Tel: (718) 939 1060 Fax: (718) 939 1036

(iii) **Satisfactory Compliance with *Matter of Ho*:**

Mr. George Xu has the appropriate qualifications that validate his position as an expert in the field, he is therefore in a position to be an authority on the construction budget and timeline.

In addition, George Xu's statement satisfactorily complies with the *Matter of Ho* in terms of comparison studies of the business described. On page 9 of the *Matter of Ho*, the submitted documents shall contain *"a comparison of competition's products."* And *"set forth the business' organizational structure and its personnel's experience"*. The letter and professional profile includes Mr. George Xu's previous experience and construction timeline and the attached documentation for Century Construction Group verifies their ability to accurately assess the construction budget based on the comparison studies of similar projects in similar locations.

PERMITS AND LICENSES

In New York City the construction is "as of-right" development which complies with all applicable zoning regulations and does not require any discretionary action (special permit or variance) by the City Planning Commission or Board of Standards and Appeals for approval. Assuming that the project complies with all other Code and Zoning regulations, the NYC Department of Buildings Plan Examiner Plan Examiner will approve the Plans, further to the architect's construction detailed blueprints and renditions.

It is not necessary for the project to seek the additional approvals of the City Planning Commission, or of the Local Community Board, or of any other outside party of interest. If the project complies with the applicable Zoning Laws currently in force, the developer is entitled to build. Therefore building permits are only valid for a limited amount of time and the project will apply for the relevant permits prior to the commencement of the construction activities.

SECTION V: EMPLOYMENT AND JOB CREATION

(b)(4)

Based on the EB-5 Economic Impact Studies conducted by Bleakly Advisory Group, the Four Point Flushing Hotel will create [redacted] jobs, including [redacted] jobs from direct and indirect from construction employment, [redacted] direct jobs from operation, and [redacted] indirect jobs from operation. The project intends to raise [redacted] from [redacted] EB-5 investors.

(b)(4)

The project is a mixed-use development. It is complex in terms of estimating its job creation effects. From permanent operations, impacts to final demand include the hotel, a real estate management entity that will lease commercial space, manage the condominium association and parking garage, plus the business operations of retail tenants. The issue of how the community center/space will be operated and whether income projections from that facility will be sufficient to support permanent employment are discussed in the Economic Impact Studies. In addition, the tenant-created employment is not included in the total calculation of the EB-5 capital raise.

The operational direct jobs are listed as follows:

Direct Employees from Hotel Operation			
	Position	Employees Needed	Weeks to Open
	Management		
1	General Manager	1	26
2	Assistant General Manager	1	8
3	Controller	1	4
4	Assistant Controller	1	4
5	Guest Service Manager	1	6
6	Guest Service Supervisor	4	3
7	Executive Housekeeper	1	8
8	Housekeeping Supervisor	4	6
9	Chief Engineer	1	8
10	Director of Sales	1	26
11	Sales Coordnator	2	4
	Total	18	
	Position	Employees Needed	Days Paid Till Open
	Line Level		
1	Guest Service Agent	12	15
2	Night Auditor	4	15
3	Breakfast Attendant	6	15
4	Room Attendant	36	20
5	Houseman	10	20
6	Maintencance Tech	6	20
7	Parking Valets	3	15
8	Food Service	14	15
	Total	91	

CONSTRUCTION AND OPERATION IMPACTS

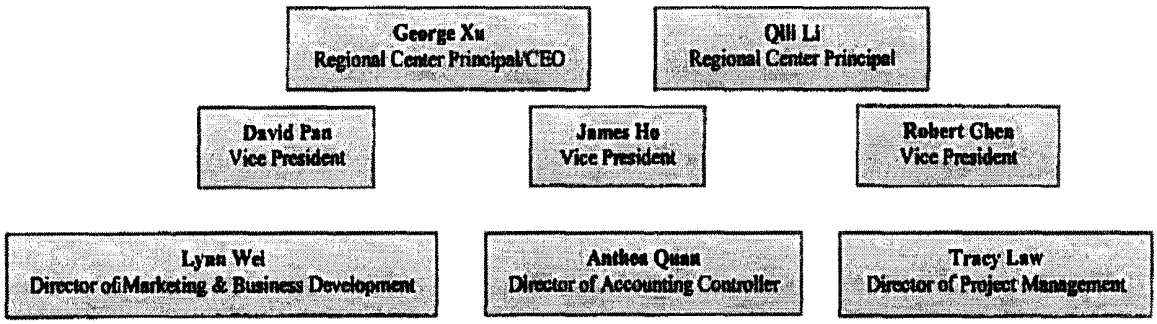
Construction Impacts

Revised construction costs as provided by the Client are itemized. Please see the Economic Studies for details. Approximately 88% of the project's development budget can be claimed as having an economic impact to the Region. The adjustment was made by excluding debt service reserves, property taxes during construction and a portion of the estimated financing costs.

SECTION VI: MANAGEMENT AND CORPORATE STRUCTURE

The business organizational structure and personnel experiences are as follows:

Business' organizational structure and its personnel's experience



George Xu, CEO/Regional Center Principal

Mr. George Xu is the founder and the principle of the Century New York City Regional Center ("CNYCRC"). Mr. Xu is also the founder and President of Century Development Group, a real estate development company. With over 16 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential, hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

Specialists in Hotel Consulting and Appraisal Worldwide

July 26, 2013

Mr. George Xu
Farrington Realty, LLC
35-06 Leavitt Street, Unit CFA
Flushing, New York 11354

Re: Proposed Four Points Flushing
Flushing, New York
HVS Reference: 2013010447

Dear Mr. Xu:

Pursuant to your request, we herewith submit our self-contained appraisal report pertaining to the above-captioned proposed hotel. We have inspected the real estate and analyzed the market conditions in the Flushing, New York area. We have also reviewed the proposed improvements for this site. Our report was prepared in accordance with, and is subject to, the requirements of the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) and the Uniform Standards of Professional Appraisal Practice (USPAP), as provided by the Appraisal Foundation.

Based on our analysis, it is our opinion that the "as is" market value of the fee simple interest in the Proposed Four Points Flushing, as of June 14, 2013, is:

[redacted] (b)(4)

Based on our analysis, it is our opinion that the "when complete" prospective market value of the fee simple interest in the real and personal property of the Proposed Four Points Flushing, as of March 1, 2016, will be:

[redacted] (b)(4)

This value estimate equates to [redacted] per room.

We have also estimated the prospective market value of the subject property as of its projected date of stabilization. Based on our analysis, it is our opinion that the "when stabilized" prospective market value of the fee simple interest in the real and personal property of the Proposed Four Points Flushing, as of March 1, 2018, will be:

[redacted] (b)(4)

We have made no assumptions of hypothetical conditions in our report. The analysis is based on the extraordinary assumption that the described improvements have been completed as of the prospective "when complete" date of value. The reader should understand that the completed subject property does not yet, in fact, exist as of the date of appraisal. Our appraisal does not address unforeseeable events that could alter the proposed project and/or the market conditions reflected in the analyses; we assume that no significant changes, other than those anticipated and explained in this report, will take place between the date of inspection and date of prospective value. We have made no other extraordinary assumptions specific to this appraisal. However, several important general assumptions have been made that apply to this appraisal and our valuations of proposed hotels in general. These aspects are set forth in the Assumptions and Limiting Conditions chapter of this report.

We hereby certify that we have no undisclosed interest in the property, and our employment and compensation are not contingent upon our findings. This study is subject to the comments made throughout this report and to all assumptions and limiting conditions set forth herein.

Sincerely,
Hotel Appraisals, LLC

Economic Impact Analysis for the Proposed Four Points Sheraton/Farrington Luxury Condominium Development

Flushing, New York

Updated: July 2014

Prepared For

Farrington EB-5 Capital, LLC
134-37 35th Avenue
Flushing, New York

Prepared By

Bleakly Advisory Group

6000 Lake Forrest Drive, Suite 108
Atlanta, Georgia 30328

Executive Summary (b)(4)

The subject of this economic impact analysis (EIA) is a proposed [redacted] select service hotel and mixed-use development to be located in Flushing, Queens in New York City (the Project). This analysis was prepared by Bleakly Advisory Group, Inc. (BAG) Farrington EB-5 Capital, LLC (the Client), under subcontract to Mona Shah & Associates, PLLC. Source data relied upon for this EIA was obtained from an "EB-5 Business Plan" for the Four Points Flushing Hotel & Condominium prepared on behalf of Farrington EB-5 Capital, LLC.

The Project's economic impacts were measured for the seven New York counties located within the New York-Northern New Jersey-Long Island, NY-NJ-PA Metropolitan Statistical Area (the Region) using RIMS II. The specific purpose of the report is to serve as a "job creation study" following guidelines established by the United States Citizenship and Immigration Services (USCIS) under the EB-5 Regional Center Program. Therefore, the analysis focuses on quantifying the EB-5-recognized/eligible job creation effects from both the Project's (temporary) construction and (permanent) annual operations.

The following points highlight the analysis findings and conclusions:

- Development of the proposed project will result in a [redacted] increase in net direct output to the region's economy from construction spending (inflation adjusted to 2010$). The duration of construction is expected to be 30 months.

- Resulting total output generated by the construction investment on the region's economy, including multiplier effects, approaches [redacted] That output would support [redacted] in total earnings across all industries, including direct effects, and support a total o[redacted] jobs. The investment is estimated to raise household earnings by an average o[redacted] per job. Because the construction period is more than 2 years, "direct" construction jobs associated with this Project are counted for EB-5 purposes. BAG estimates that investment in the project would suppor[redacted] direct construction jobs plus [redacted] indirect and induced jobs during the construction period.

- The hotel market study and financial analysis appearing in the Business Plan indicates that the proposed hotel will reach stabilized operations within the third year of start-up and generate [redacted] in annual gross sales. Combined with ancillary parking,

(b)(4)

commercial leasing and management of the residential condominiums, stabilized year revenues from all project components totals [redacted]

- BAG estimated that roughly 90% of stabilized gross sales would be a net direct impact to the region's economy. These adjustments reduced the Project's effective (stabilized year) output to the region's economy to [redacted] when inflation adjusted to 2010$.

- The net change in final demand method generates a total regional gain in annual output of nearly [redacted] across all industries. The investment is projected to increase household earnings throughout the region by [redacted] including payrolls to employees of the facilities. The project supports a total of [redacted] obs from permanent operations, including multiplier effects. Average earnings across all industries approach [redacted] per job in 2010$.

- BAG concluded that of the [redacted] otal in-region jobs supported by stabilized operations, [redacted] rovides a reasonable estimate of verifiable direct FTE employment while the balance of [redacted] obs represents the Project's indirect and induced employment effects. This conclusion is consistent with hotel staffing and payroll projections contained in the Business Plan. Direct FTE job creation represents 68% of the Project's total estimated employment impact on the region's economy from annual operations.

- The Project is located within an area that qualifies as a State-designated "Targeted Employment Area" (TEA). As such, EB-5 supportable investment is calculated at a ratio of $500,000 for every 10 jobs created. The maximum credited foreign investment for this project under the EB-5 Program is based upon the sum of the calculated direct and indirect construction employment [redacted] obs), direct permanent employment to be offered by the proposed facility, [redacted] FTE positions) plus the indirect permanent employment [redacted] indirect/ induced jobs) supported by those direct jobs.

Divided by the ratio of $500,000 per 10 jobs created, the resulting total o[redacted] obs supports a maximum EB-5 investment o[redacted]

(b)(4)

including structured parking, average roughly $239 per square foot of enclosed floor area and $195/gross SF including structured parking.

Sources: Farrington Realty, LLC; HVS Consulting & Valuation Services and Bleakly Advisory Group, Inc.

In order to isolate and estimate the Project's indirect economic impact to the region during the construction phase, BAG first considered whether or not 100% of the development costs included in Table 1 could be reasonably claimed as having a direct effect on the Region's

product or service that was produced within the region – followed by independently verifying the suppliers' reported information. Given the fact that no contracts have been issued for the Project, that level of verification is not possible.

The remaining expenditures totaling [redacted] were then used as the starting point for estimating indirect job creation effects from the Project's construction. (These costs appear in Table 2.) We also allocated roughly 25% of FF&E spending as an impact to the region's economy and distributed that spending to the wholesale trade sector. This percentage was considered reasonable and sufficient to capture in-region spending on distribution costs, wholesale mark-ups, installation costs or components that might be manufactured in-region. The remaining industry allocations can be imputed by comparing Tables 1 and 2. Resulting indirect industry earnings from the facility's development were modeled as a one-time/one year estimate.

The next step in the methodology involved allocating the [redacted] in development costs to the relevant industry sectors that can be measured using the RIMS II model. The resulting industry distribution of spending impacts is also shown in Table 2. In making these allocations, BAG distributed the used portion of the contingency cost line items proportionally among relevant industry sectors.

Table 2: Estimated Industry Distribution of Facility Construction Spending
Four Points Sheraton/Luxury Condo Development, Flushing, NY

Subtotal: Financing & Soft Costs:			
Total Indirect Construction Impacts [3]:			

Sources: Farrington Realty, LLC; HVS Consulting & Valuation Services and Bleakly Advisory Group, Inc.

The costs appearing in Table 2 were then inflation adjusted (discounted) to 2010 levels before applying the RIMS II multipliers. This adjustment was based on the "New York CPI" (All Urban Consumers) and totaled -4.87%. This further reduced the impact from construction spending to [redacted] which is shown in the "Total Costs" column of Table 3.

Because the duration of construction is expected to exceed two years, it is not necessary to adjust the final demand employment multipliers to remove the effects of direct jobs which are embedded within the construction industry multiplier. To be conservative, for the remaining 9 industry sectors BAG adjusted the final demand employment multipliers to remove the effects of direct jobs that are embedded within those multipliers. To remove direct effects, USCIS has approved methodologies that adjust final demand employment multipliers by a ratio of indirect to direct jobs, calculated using the direct effects employment multiplier. These adjustments are reflected in the "Adjusted Employment Final Demand" column appearing in Table 3. The calculation used to make the adjustments is also described in footnote #3 of the table.

The total construction impacts of this investment are calculated in Table 3. Using the change in final demand method, BAG allocated the estimated [redacted] of "in- region" purchases (in 2010$) among the affected industry sectors and multiplied the direct effects by the respective industries' associated RIMS II multipliers for the region. Resulting total output generated by the investment, including multiplier effects, is estimated to be [redacted] According to RIMS II, that output would suppor [redacted] in total earnings across all industries, including direct effects.

Multiplying the estimated total regional output by the final demand employment multipliers supports a total of [redacted] jobs, including (both) direct and indirect jobs in the construction sector (top row) and indirect effects (only) in the remaining industry sectors. Our analysis of the multipliers indicates that roughly 40% of the Project's total employment effects in the construction industry sector would be indirect/induced [redacted] jobs) and the balance of [redacted] jobs would be directly supported by construction spending. Therefore, of the [redacted] total jobs calculated in Table 3, BAG estimates that [redacted] are direct and the remaining [redacted] are indirect.

Retail Leasing (b)(4)

A representative retail operating pro forma is presented in Table 6 on the next page. The Client indicated that prevailing retail and restaurant rents in downtown Flushing are in the range of $40/SF NNN and that the Project should be capable of equaling or exceeding those rents. Relying upon this estimate, BAG constructed a simple retail pro forma using typical operating pass through expenses. We also started rents at $38/SF to be conservative and reached $40 effective rents by the stabilized year. The pro forma also assumes that 9 of 10 planned commercial spaces totaling 9,918 SF will be leased. The remaining retail space shown in the project plans is assumed to be dedicated to the hotel and all resulting revenues/ expenses would be retained by and are already included in the hotel pro forma.

Table 6: Annual Operating Income & Expense

(b)(4)

In addition it is assumed that the planned 16,800 SF community facility space would be rented for meetings, special events and other purposes to generate additional income. BAG included a

modest allowance under the assumption that the facility could attract 100 to 150 events per year. Including this event space, by year 3 the project is shown to generate [redacted] in total leasing income including CAM and other pass through charges. Assuming that the leasing operation is managed internally, staffing would be funded through a percentage of applicable pass through charges, plus EBIDTA that is not dedicated to debt service.

Residential Condominiums

Finally, a representative stabilized year condominium association operating budget is presented in Table 7. The Client indicated that the residential condominium fees of [redacted] per unit per month are reasonable for the location and the fact that the condominium is connected to the hotel and could access hotel services. Relying upon this estimate, BAG constructed a simple stabilized year operating statement for management of the condominium. The statement shows total revenues just over [redacted] with a modest 4% margin over expenses. Based on the range of services to be offered, it is estimated that roughly 62% of expenses would be payroll related.

Table 7: Annual Operating Income & Expense

Combined Operations

The combined operating revenues of these components approach [redacted] and are obviously sufficient to support a sizeable payroll and produce a significant direct impact to final demand. Total stabilized year revenues are summarized in Table 8. After considering different alternatives, BAG decided to isolate the hotel's food & beverage revenues/expenses and assign the resulting economic impacts to the "food service and drinking places" sector. The hotel's rooms and other revenues were attributed to the lodging industry sector. (Assigning 100% of impacts to the "hotels and motels" sector would have produced marginally different results.) The remaining activities were attributed to the real estate industry sector.

Table 8: Summary Stabilized Year Revenues

Stabilized Year Summary	Stabilized Year Revenues
Gross Rooms Revenues	[redacted]
Other Hotel Operations	
Restaurant/Food & Beverage	
Parking Garage	
Commercial Leasing	
Residential Condominium Management	
TOTAL OUTPUT:	

Sources: HVS Consulting & Valuation Services & Bleakly Advisory Group, Inc.

After considering these factors, BAG decided to deduct roughly [redacted] of the Project's stabilized year gross revenues as an "adjustment" to the final demand employment multiplier, under the assumption that a portion of the forecasted EBITDA is likely to be distributed to out-of-region and foreign sources/investors and therefore not benefit the region's economy. The resulting adjustments allocate the remaining gross revenues as a direct-effect impact to the region's economy. The adjustments discussed above reduced the Project's total stabilized year direct output to [redacted]

Based upon the strong market analysis findings, BAG found no reason to further adjust the Project's output to account for competitive impacts (i.e. removal of market share from existing in-region businesses), as those effects are assumed to be negligible. The resulting economic impact calculations appear in Table 9. The net change in final demand methodology was used, similar to the method used to estimate construction-related employment, except that there was no effort to remove the direct effects portion of any of the multipliers. Pro forma operating forecasts in Tables 4 through 7 represent 2014 constant dollar estimates. BAG therefore applied an inflation adjustment to convert stabilized year revenues back to 2010 dollars, similar to construction costs, which lowered the number to [redacted] The direct effects were assigned to the hotels and motels, including casino hotels; food services and drinking places and real estate sectors. The resulting calculations appear in Table 9.

Table 9: Estimated Direct and Indirect Permanent Employment Effects (CPI Adjusted)
Four Points Sheraton/Luxury Condo Development, Flushing, NY

Industry Sector	RIMS II Industry Code	Associated NAICS Codes	Direct Output	Final Demand Multipliers			Economic Impacts		
				Output ($)	Earnings ($)	Employment (Jobs)	Output ($)	Earnings ($)	Employment (Jobs)
Hotels and motels, including casino hotels									
Food services and drinking places									
Real Estate									
Total Impacts:									

Sources: HVS Consulting & Valuation Services Division of Hotel Appraisals, LLC and Bleakly Advisory Group, Inc.

Conclusion: Permanent Employment Effects

In summary, using the net change in final demand method BAG estimates that the mixed-use Project will directly add nearly [redacted] to the region's annual output (in 2010$), based on projected annual operations. The net change in final demand method generates a total regional gain in annual output across all industries of more than [redacted] The investment is also projected to increase household earnings throughout the region by [redacted] This method produces a total regional employment impact of [redacted] jobs from stabilized operations including direct, indirect and induced jobs. This equates to average earnings of roughly [redacted] per job in 2010$.

Estimate of Direct Jobs

The next step in the methodology involved estimating that portion of the total employment impact of [redacted] total jobs, which would represent full-time equivalent positions (FTE's) directly hired by the Project and subject to validation at the time of I-829 approval. Direct employment estimates for the hotel are addressed first, followed by the other project components.

Staffing estimates for the hotel appear in the business plan and were calculated by the hotel market consultant. These estimates are based upon comparable select service hotels of similar size and operating characteristics, located in major U.S. cities. Based on the experience of comparable hotels, the analyst estimated the need for 91 positions, as detailed in Table 10. BAG estimates that as EB-5 qualifying FTE jobs, 91 positions would require a payroll of nearly [redacted] (Direct salaries only - payroll expenses and fringe benefits are excluded.) A projected direct payroll of this size would represent roughly 40% of total stabilized year expenses as calculated in Table 4 and appears to be reasonable. A staffing level of 91 positions with a [redacted] payroll represents an average annual gross wage of [redacted] per position and also appears reasonable.

Table 10: Estimated Hotel Staffing

11	Sales Coordnator	2	4
	Total	18	
	Position	Employees Needed	Days Paid Till Open
	Line Level		
1	Guest Service Agent	12	15
2	Night Auditor	4	15
3	Breakfast Attendant	6	15
4	Room Attendant	36	20
5	Houseman	10	20
6	Maintencance Tech	6	20
7	Parking Valets	3	15
8	Food Service	14	15
	Total	91	

To further verify this direct job estimate BAG examined the respective RIMS II direct effects employment multipliers for the hotel and motel (1.55) food services (1.30) sectors. Dividing the employment outputs in Table 8 (which were calculated using the final demand method) by these multipliers indicates that 89 of the [redacted] (b)(4) total jobs would be direct, very similar to the estimate of 91FTE employees presented in Table 10. This finding also suggests that the number of EB-5 eligible hotel positions is reasonably estimated. Based on this information, BAG concluded that 90 jobs provide a reasonable estimate of verifiable direct hotel/food service employment on an FTE basis.

Estimated EB-5 Supportable Investment

According to information provided in the Business Plan, the Project qualifies as being located within is a State-designated "Targeted Employment Area" (TEA). As such, EB-5 supportable investment is calculated at a ratio of $500,000 for every 10 jobs created. The maximum credited foreign investment for this project under the EB-5 Program in this case is based upon the sum of the calculated direct on site construction employment [redacted] jobs), the indirect employment in other industries supported by that construction investment [redacted] jobs), the direct permanent employment to be offered by the proposed hotel and ancillary mixed use components [redacted] FTE positions supported by stabilized operations), and the indirect permanent employment [redacted] indirect/induced jobs) supported by those direct jobs. That resulting total of [redacted] jobs is then divided by the ratio of $500,000 per 10 jobs created.

Therefore, based upon the preceding analysis BAG estimates that the Project would support a maximum EB-5 investment of [redacted] allocated as follows.

EB-5 Summary		
Direct Construction Employment	[redacted]	Construction period > 2 years allows direct jobs for construction hard costs
Indirect Construction Employment		Indirect effects across all industry sectors during the construction period
Direct Permanent (Net gain)		Direct FTE jobs from annual hotel operations at stabilized occupancy
Indirect Permanent (Net gain)		Indirect jobs supported by annual operations
Total		EB-5 credited jobs created (indirect construction + direct FTE + indirect employment + tenants)
Ratio of 10 Jobs per		Units invested (Assumes project is located in a Targeted Employment Area)
=		Total Potential EB-5 Equity Capital

NOTES:

[1] BAG allocated development costs itemized in Table 1 to the most applicable detailed industry sectors recognized in the RIMS II model. Less than 100% of the development budget is used in estimating direct employment impacts from development of the proposed facility.

[2] Final Demand Multipliers are used for industries which are most closely associated with cost categories used in the development budget. Contingency budgets are spread proportionally to other line items.

[3] In order to isolate "indirect" construction impacts which are eligible for consideration under the EB-5 Program, the final demand employment multiplier is adjusted downward by the ratio of the indirect portion of the direct effects employment multiplier. For the construction industry the "adjusted" final demand employment multiplier was calculated as

March 25, 2014

Kay Alison Wilkie
Director for International Policy
Division of Business Advocacy and Research
Empire State Development | NYS Department of Economic Development
625 Broadway
Albany, NY 12245

Dear Ms. Wilkie:

The 2013 average unemployment rate for census tract 889.02 in Queens County that contains the address, 134-37 35th Avenue, Flushing, NY 11354, as you requested is 10.5 percent. The current minimum threshold to qualify as a Targeted Employment Area is 11.1 percent.

For your consideration, we developed an alternative area composed of census tracts 863, 865, 867, and 889.02 in Queens County with an annual average unemployment rate of 11.7 percent.

These data were estimated using census share methodology as stipulated by the U.S. Bureau of Labor Statistics in LAUS Technical Memorandum No. S-05-21. Census2000 tract boundaries, Census2000 household-only labor force data, and 2013 annual average Local Area Unemployment Statistics (LAUS) data were used in this estimate.

Please feel free to contact me if you have any questions.

Sincerely,

Joseph Nardone

Form I-797 (1/00)

Please see additional information on the back.

Form I-924, Application for Regional Center Under the Immigrant Investor Pilot Program; Request for Evidence

A request for initial designation as a Regional Center under the Immigrant Investor Program ("Investor Program") or an amendment to an existing Regional Center designation, may involve:

1. A request for review of an exemplar Form I-526, Immigrant Petition by Alien Entrepreneur, prior to the filing of Form I-526 Petitions by individual alien entrepreneurs with USCIS and/or;
2. In the case of a Regional Center amendment request, a review of a new specific capital investment project where the Regional Center designation involved a review of an exemplar capital investment project.

It appears that you are requesting an amendment to your Regional Center designation to include a review of a specific investment project and/or a review of an exemplar Form I-526 Petition.

I. Procedural History and Regional Center Background

The Regional Center entity, Century New York City ("CNYC") Regional Center was established on 3/24/2014 in New York, and is structured as a LLC. CNYC was initially approved for designation in the Pilot Program on 5/14/2015. Based on the initial designation and any subsequently approved designation amendments, CNYC has jurisdiction over the following geographic area:

State	County	Approval Date
New York	New York	5/14/2015
	Queens	
	Bronx	
	Richmond	
	Westchester	
	Nassau	

CNYC has or plans to offer EB-5 capital investment opportunities in affiliated new commercial enterprises, organized as LLCs, focusing on projects in the following approved industry categories:

Industry Category	NAICS	Approval Date
Nonresidential Building Construction	2362	5/14/2015
Furniture and Home Furnishing Merchant Wholesalers	4232	
Monetary Authorities and Depository Credit Intermediation	5222	
Insurance Carriers	5241	
Lessors of Nonresidential Buildings (Except Miniwarehouses)	53112	
Legal Services	5411	
Accounting, Tax Preparation, and Bookkeeping Services	5412	
Architectural, Engineering, and Related Services	5413	
Other Miscellaneous Professional and Technical Services	5419	

Hotel and Motel (including Casinos)	7211	
Restaurants and Other Eating Places	722	

The capital investment projects have or will involve a combination of an equity investment and loan to job creating enterprises located within the proposed bounds of the Regional Center.

CNYC is now requesting to modify its Regional Center designation as follows:

CNYC has submitted for review a project amendment to include an actual project and an exemplar Form I-526 for the Four Points Flushing Hotel & Condominium project, which is a mixed-use building consisting of the following components:

- 210-room hotel branded Four Points by Sheraton
- 100 residential condominium units
- 10 retail stores
- 279-space parking garage
- Community facility

Based upon a review of the initial record of evidence, United States Citizenship and Immigration Services (USCIS) cannot conclude that the applicant has established eligibility to amend its regional center designation. To assist the applicant in focusing on the deficiencies in the existing record, USCIS serves this Request for Evidence. The deficiencies of the current record are outlined below.

II. Evidentiary Requirements for Regional Center Proposals

8 CFR 204.6 (m)(3) describes the evidence that must be submitted in support of a Regional Center proposal. After review of your proposal, the following information, evidence and/or clarification is required. Note that in response to this notice it is helpful to provide a cover letter that acts as an executive summary, followed by a table of contents with sections that are tabbed at the bottom of the page.

1. Administrative Oversight (8 CFR 204.6(m)(6)):

A promotional video[1] publicly available on Youtube.com and accessed on August 18, 2016 asserts USCIS has approved 60 EB-5 investment slots for the Farrington Tower Project and also promises prospective investors the project would purposely undersubscribe the project to maintain a job creation buffer.

The figures cited in the promotional video appear consistent with the contents of the amendment currently under adjudication, but which has not yet been approved. Other materials submitted in the record but have not yet been approved include the economic impact analysis job creation estimates and the offering documents that detail the subscription target of 60 investors. Furthermore, the job creation buffer is not noted in the offering documents submitted with the amendment.

Any representation that USCIS approved the amendment currently under adjudication is false. Incumbent upon regional centers is the responsibility for management and oversight. To the extent that misleading promotional material has been distributed within your regional center's network of attorneys, recruiters,

[1] https://www.youtube.com/watch?v=2UJBBRgB_6o

finders or other related entities, please remove it from circulation and correct this misinformation in the marketplace immediately.

As you may know, deceptive acts or practices and false advertisements may violate Federal laws governing unfair trade and false advertisements. See 15 U.S.C. §§ 45 and 52. IPO may refer regional centers and related commercial enterprises to the Federal Trade Commission or Securities and Exchange Commission for further action as necessary.

2. Regional Center Request for Approval of an Actual Project Supported by an Exemplar I-526 Petition

Project – 8 CFR 204.6(j) and Matter of Ho

8 CFR 204.6(j)(4) requires evidence that the new commercial enterprise (NCE) will create at least 10 full-time positions per EB-5 investor. Pursuant to 8 C.F.R. § 204.6(j)(4)(i)(B), if the employment-creation requirement has not been satisfied prior to filing the I-526 petition, the petitioner must submit a "comprehensive business plan." To be considered "comprehensive," a business plan must be sufficiently detailed to permit the USCIS to reasonably conclude that the NCE has the potential to meet the job-creation requirements. In Matter of Ho, 22 I. & N. Dec. 206 (Assoc. Comm'r, 1998), the Administrative Appeals Office held that a "comprehensive business plan as contemplated by the regulations should contain, at a minimum, a description of the business, its products and/or services, and its objectives." Elaborating on the contents of an acceptable business plan, the decision states the following:

> The plan should contain a market analysis, including the names of competing businesses and their relative strengths and weaknesses, a comparison of the competition's products and pricing structures, and a description of the target market/prospective customers of the new commercial enterprise. The plan should list the required permits and licenses obtained. If applicable, it should describe the manufacturing or production process, the materials required, and the supply sources. The plan should detail any contracts executed for the supply of materials and/or the distribution of products. It should discuss the marketing strategy of the business, including pricing, advertising, and servicing. The plan should set forth the business's organizational structure and its personnel's experience. It should explain the business's staffing requirements and contain a timetable for hiring, as well as job descriptions for all positions. It should contain sales, cost, and income projections and detail the bases therefor. Most importantly, the business plan must be credible. Matter of Ho, 22 I. & N. Dec. 206 at 213 (Assoc. Comm'r, 1998)

NYMRC is seeking approval for an actual project with an exemplar I-526 petition. An actual project is a project that the applicant feels certain will meet established EB-5 eligibility requirements outlined in 8 CFR 204.6(j) and Matter of Ho, 22 I. & N. Dec. 206, (Assoc. Comm'r 1998). Generally, this would be a project that has advanced to the stage where work may begin immediately upon approval of the project.

Upon reviewing the business plan, USCIS finds that the evidence in the record does not establish that the business plan is Matter of Ho compliant. The record does not include sufficient evidence that, taken together, reaches the minimum preponderance of evidence requirement for approving this project based on the information provided. Specifically, USCIS has noted the following deficiencies:

(b)(4)

1. The business plan states that up to [redacted] of the total project cost will be funded by a loan from Cathay Bank but insufficient documentation was provided in the record to confirm that these funds have been committed to the project. The record includes an Indicative Term Sheet dated 9/16/2014 that is for discussion purposes only. Please provide evidence that these funds have been secured. Acceptable evidence includes executed loan agreements or other legally binding documents.

2. The business plan states that the land costs will be approximately [redacted] but this valuation is not supported by either data in the record or in the public domain. The Appraisal Report prepared by HVS dated 7/26/2013 states that the "as is" market value of the land was [redacted] on 6/14/2013. Additionally, the New York City Property website[2] shows a market value o[redacted] for 2016/17. Please provide evidence that supports the proposed valuation or otherwise explains these discrepancies.

3. The business plan states that the hotel will be branded a Four Points by Sheraton but the Confidential Private Offering Memorandum, dated August 15, 2015, states that "As of the date of this memorandum, the Project has not been fully approved by Sheraton for use of the Four Seasons[3] franchise. There can be no assurance that Sheraton will ultimately approve the Borrower's request for the Four Seasons franchise designation. If the Borrower is not approved, it may seek an alternative franchise or no franchise at all." Since the job creation estimates for the operation of the hotel are based on projected annual revenue figures derived from average daily rate of comparable mid-scale hotels, securing a franchise agreement from Four Points or a comparable hotel chain is crucial for validating the estimate of total job creation for this project. Please provide evidence that a franchise agreement has been obtained.

III. Conclusion

USCIS has determined that the record submitted does not establish eligibility for the benefit sought. Accordingly, USCIS has requested evidence which addresses the issues outlined above. As required by regulation, the applicant must prove, by a preponderance of the evidence (that it is more likely than not), that the applicant is fully qualified for the benefit sought. Please note that USCIS will make a final decision based on the initial evidence submitted upon filing and after consideration of all additional evidence submitted in response to this request.

NOTES:

Any document submitted to the USCIS containing a foreign language, must be accompanied by a full English language translation that has been certified by the translator as complete and accurate, and that the translator is competent to translate from the foreign language into English. Submit clear and legible copies of all requested evidence. If clear and legible copies are not possible, submit the original documents. These originals will be returned, if requested.

Please provide an index of any submitted evidence and include corresponding tabs for each section of evidence.

---

[2] http://nycprop.nyc.gov/nycproperty/nynav/jsp/selectbbl.jsp

[3] USCIS assumes that references to the luxury Four Seasons brand in the Offering Memorandum are typos and were meant to refer to the mid-scale Four Points chain owned by Starwood Resorts & Hotels.

Part 3. Information About the Regional Center (Continued)

B. Name of Managing Company/Agency: Century New York City Regional Center, LLC

Street Address/P.O. Box: 35-06 Leavitt Street, Suite CF-A

City: Flushing	State: NY	Zip Code: 11354
Web site address:	Fax Number (include area code): (509) 965-8535	Telephone Number (include area code): (509) 965-4240

C. Name of Other Agent: Mona Shah & Associates

Street Address/P.O. Box: 299 Broadway, Suite 1005

City: New York	State: NY	Zip Code: 10007
Web site address: www.mshahlaw.com	Fax Number (include area code): (212) 233-4877	Telephone Number (include area code): (212) 233-7473

D. Continuation, if needed, to provide information for additional management companies/agencies, regional center principals, agents, individuals or entities who are or will be involved in the management, oversight, and administration of the regional center.)

Please see attached Counsel's project cover letter.

Part 3. Information About the Regional Center (Continued)

Note: If extra space is needed to complete any item, attach a continuation sheet, indicate the item number, and provide the response.

1a. Describe the structure, ownership and control of the regional center entity.

The Regional Center will be managed by the Founder and Principle, George Xu; Principle, Qili Li; Vice President, David Pan; Vide President, James Ho; Vice President, Robert Chen; Director of Marketing & Business Development, Lynn Wei; Director of Account Controller, Anthea Quan; and the Director of Project Management, Tracy Law. Please see attached Counsel's project cover letter and organizational chart.

b. Date the Regional Center was established(mm/dd/yyyy): 03/24/2014

c. Organization Structure for the Regional Center:

- ☐ **1.** Agency of a U.S. State or Territory (identify) _____
- ☐ **2.** Corporation
- ☐ **3.** Partnership (including Limited Partnership)
- ☒ **4.** Limited Liability Company (LLC)
- ☐ **5.** Other (Explain) _____

2. Has this regional center's designation ever been formally terminated by USCIS, or has the regional center ever filed a Form I-924 or regional center proposal or amendment that was denied?

☒ No ☐ Yes - Attach a copy of the adverse decision, with an explanation, the date of decision, and case number, if any.

3. Describe the geographic area of the regional center. **Note:** This area must be contiguous. Provide a map of the geographic area.

Geographic area of the regional center includes the New York counties of Queens County, New York County, Bronx County, Richmond County, Westchester County and Nassau County.

The map of the geographic area is attached in the Business Plan.

4. Describe the regional center's administration, oversight, and management functions that are or will be in place to monitor all EB-5 capital investment activities and the allocation of the resulting jobs created or maintained under the sponsorship of the regional center.

Please see counsel's cover letter and administrative exhibits.

Part 3. Information About the Regional Center (Continued)

5. Describe the past, current, and future promotional activities for the regional center. Include a description of the budget for this activity, along with evidence of the funds committed to the regional center for promotional activities. Submit a plan of operation for the regional center that addresses how EB-5 investors will be recruited, the methods by which the capital investment opportunities will be offered to the investors, and how they will subscribe or commit to the investment interest.

Century New York City Regional Center has a comprehensive marketing plan in operation. Please see attached project cover letter and attachments for details.

6. Describe whether and how the regional center is engaged in supporting a due diligence screening of its alien investor's lawful source of capital and the alien investor's ability to fully invest the requisite amount of capital. Also, describe the regional center's prospective plans in this regard if they differ from past practice.

Century New York City Regional Center will support due diligence screening of its foreign investors' lawful source of capital by requiring all investors to complete the Regional Center's Suitability Evaluation Form and to provide certified and notarized documentary evidence, containing official seal or consular legalization, of any loan or mortgage agreements, promissory notes, security agreements, foreign business registration records, corporate, partnership, and personal tax returns.

7. Identify each industry that has or will be the focus of EB-5 capital investments sponsored through the regional center.

Industry Category Title: Residential Building Construction NAICS Code for the Industry Category: 2 3 6 1 _ _	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes
Industry Category Title: Nonresidential Building Construction NAICS Code for the Industry Category: 2 3 6 2 _ _	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes
Industry Category Title: Furniture and Home Furnishing Mercha NAICS Code for the Industry Category: 4 2 3 2 _ _	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes

Part 3. Information About the Regional Center (Continued)

8a. Describe and document the current and/or prospective structure of ownership and control of the commercial entities in which the EB-5 alien investors have or will make their capital investments.

Please see the Operating Agreement attached in the Exhibits.

b. Date commercial enterprise established, if any (mm/dd/yyyy): 03/31/2014

c. Organization Structure for commercial enterprise:

- ☐ **1.** Corporation
- ☐ **2.** Partnership (including Limited Partnership)
- ☒ **3.** Limited Liability Company (LLC)
- ☐ **4.** Other (Explain) _____

d. Has or will the Regional Center or any of its principals or agents have an equity stake in the commercial enterprise?

☒ No ☐ Yes - Attach an explanation and documentation that outlines when and under what circumstances these remittances will be paid.

e. Has or will the Regional Center or any of its principals or agents receive fees, profits, surcharges, or other like remittances through EB-5 capital investment activities from this commercial enterprise, beyond the minimum capital investment threshold required of the EB-5 alien entrepreneurs?

☐ No ☒ Yes - Attach an explanation and documentation that outlines when and under what circumstances these remittances will be paid.

Part 4. Applicant Signature

Read the information on penalties in the instructions before completing this section. If someone helped you prepare this petition, he or she must compete **Part 5.**

I certify, under penalty of perjury under the laws of the United States of America, that this form and the evidence submitted with it are all true and correct. I authorize the release of any information from my records that U.S. Citizenship and Immigration Services needs to determine eligibility for the benefit being sought. I also certify that I have authority to act on behalf of the Regional Center.

Application:	Form I-924, Application for Regional Center under the Immigrant Investor Pilot Program
Applicant(s):	Century New York City Regional Center
Re:	Initial Regional Center Designation Century New York City Regional Center RCW1420251818/ID1420251818

This notice is in reference to the Form I-924, Application for Regional Center Under the Immigrant Investor Pilot Program that was filed by the applicant with the U.S. Citizenship and Immigration Services ("USCIS") on July 21, 2014. The Form I-924 application was filed to request approval of initial regional center designation under the Immigrant Investor Program. The Immigrant Investor Program was established under § 610 of the Department of Commerce, Justice and State, the Judiciary, and Related Agencies Appropriations Act of 1993 (Pub. L. 102-395, Oct. 6, 1992, 106 Stat. 1874).

I. Executive Summary of Adjudication

Effective the date of this notice, USCIS approves the Form I-924 request to designate Century New York City Regional Center as a qualifying participant in the Immigrant Investor Program.

II. Regional Center Designation

USCIS approves the applicant's request to focus, promote economic growth, and offer capital investment opportunities in the following geographic area and industry categories:

A. Geographic Area

State	Counties/Cities
New York	Queens, New York, Bronx County, Richmond County, Westchester County, and Nassau County

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the geographic area referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

B. Industry Categories

Industry Category	NAICS code
Nonresidential Building Construction	2362
Furniture and Home Furnishing Merchant Wholesalers	4232
Hotel and Motel (including Casino)	72251
Restaurants and Other Eating Places	72251
Lessors of Nonresidential Buildings (Except Miniwarehouses)	53112
Architectural, Engineering and Related Services	5413
Insurance Carriers	5241
Accounting Tax Preparation, Bookkeeping Services	5412
Legal Services	5411
Monetary Authorities and Depository Credit Intermediation	5222
Other miscellaneous professional and technical services	5419

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the industry categories referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

III. Job Creation

USCIS approves the geographic area and industry categories noted above based on the economic impact analysis presented and reviewed in conjunction with the adjudication of
oposal.

ect does not have the factual details necessary to be in compliance
described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998),
s approval of the hypothetical job creation estimates presented in the
accorded deference and may not be relied upon by an individual
ie Form I-526. The business plan and job creation estimates will
ew by USCIS when an individual investor files Form I-526. Once an
icated upon the filing of the initial Form I-526, USCIS will give
nt Forms I-526 when the critical assumptions remain materially
unchanged from the initially-approved Form I-526.

When filing Form I-526, it will be the responsibility of the individual investor to submit a comprehensive, detailed and credible business plan, showing by a preponderance of the evidence that his or her investment in the new commercial enterprise will create not fewer than 10 full-time positions. If prior to filing a form I-829, the job creation estimated in the business plan submitted by the individual investor materially changes or will not be realized, then it will be the responsibility of the EB-5 investor to notify USCIS of an agreed upon methodology to allocate job creation among eligible investors.

IV. Guidelines for Filing Form I-526 Petitions

Each individual petition, in order to demonstrate that it is affiliated with the Century New York City Regional Center in conjunction with addressing all the requirements for an individual immigrant investor petition, shall also contain the following:

1. A copy of this regional center approval notice and designation letter including all subsequent amendment approval letters (if applicable).

2. An economic impact analysis which reflects a job creation methodology required at 8 CFR § 204.6 (j)(4)(iii) and shows how the capital investment by an individual immigrant investor will create not fewer than ten (10) indirect jobs for each immigrant investor.

3. A comprehensive, detailed and credible business plan for an actual project that contains the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998).

4. Legally executed organizational documents of the commercial enterprise.

Note: The project reviewed with this Form I-924 application is a hypothetical project. Organizational and transactional documents associated with the new commercial enterprise (NCE) submitted with this Form I-924 have not been reviewed to determine compliance with program requirements since these documents will receive de novo review in subsequent filings (e.g., an amended Form I-924 application with a Form I-526 exemplar or the first Form I-526 petition filed by an investor under the regional center project).

V. Designee's Responsibilities in the Operations of the Regional Center

As provided in 8 CFR § 204.6 (m)(6), to ensure that the regional center continues to meet the requirements of section 610(a) of the Appropriations Act, a regional center must provide USCIS with updated information to demonstrate the regional center is continuing to promote economic growth, improved regional productivity, job creation, and increased domestic capital investment in the approved geographic area. Such information must be submitted to USCIS on an annual basis or as otherwise requested by USCIS. The applicant must monitor all investment activities under the sponsorship of the regional center and to maintain records in order to provide the information required on the Form I-924A Supplement to Form I-924. Form I-924A, Supplement to Form I-924 Application is available in the "Forms" section on the USCIS website at www.uscis.gov.

Regional centers that remain designated for participation in the Immigrant Investor Program as of September 30th of a calendar year are required to file Form I-924A Supplement in that year. The Form I-924A Supplement with the required supporting documentation must be filed on or before December 29th of the same calendar year.

The failure to timely file a Form I-924A Supplement for each fiscal year in which the regional center has been designated for participation in the Immigrant Investor Program will result in the issuance of an intent to terminate the participation of the regional center in the Immigrant Investor Program, which may ultimately result in the termination of the designation of the regional center.

The regional center designation is non-transferable.

VI. Legal Notice

This approval and designation of a Regional Center under the Immigrant Investor Program does not constitute or imply an endorsement or recommendation by USCIS, the United States Government or any instrumentality thereof, of the investment opportunities, projects or other business activities related to or undertaken by such Regional Center. Except as expressly set forth in this approval and designation, USCIS has not reviewed any information provided in connection with or otherwise related to the Regional Center for compliance with relevant securities laws or any other laws unrelated to eligibility for designation as a Regional Center. Accordingly USCIS makes no determination or representation whatsoever regarding the compliance of either the Regional Center or associated New Commercial Enterprises with such laws.

Each Regional Center designated by USCIS must monitor and oversee all investment offerings and activities associated with, through or under the sponsorship of the Regional Center. The failure of an associated New Commercial Enterprise to comply with all laws and regulations related to such investment offerings and activities may result in the issuance by USCIS of a notice of intent to terminate the Regional Center designation.

If the applicant has any questions concerning the regional center designation under the Immigrant Investor Program, please contact the USCIS by email at USCIS.ImmigrantInvestorProgram@uscis.dhs.gov.

Sincerely,

Nicholas Colucci
Chief, Immigrant Investor Program

This letter and the annexed supporting documentation constitute a request for the approval of an exemplar Form I-526, filed in accordance with 8 CFR 204.6., in order for

USCIS to determine if the documentation is EB-5 compliant and thus facilitate adjudication of an actual but identical Form I-526 petition, if the evidence of record otherwise establishes EB-5 eligibility.

Attached is a detailed exhibit list covering all the supporting documents; the exhibits have been tabbed for your reference.

I. Preliminary:

The petitioning regional center is named *Century New York City Regional Center*. The company was incorporated on March 25, 2014. Please see company formation documents, exhibited at **Exhibit 2.**

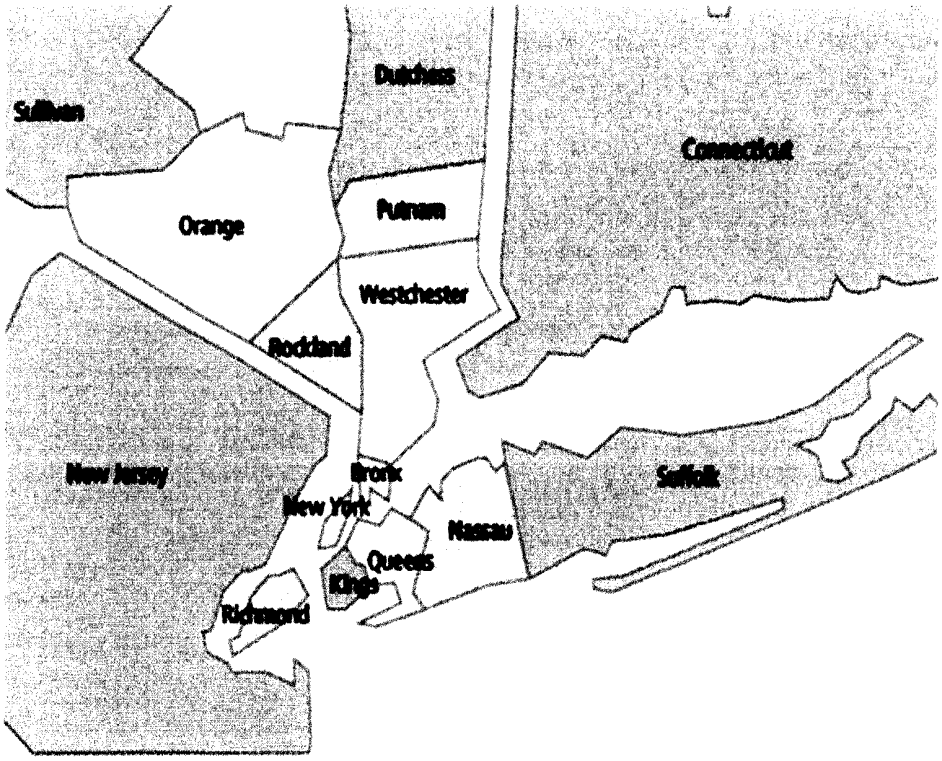
The Century New York City Regional Center, LLC (hereafter "CNYC") seeks approval of an exemplar Form I-526, filed in accordance with 8 CFR 204.6., in order for USCIS to determine if the documentation is EB-5 compliant and thus facilitate adjudication of an actual but identical Form I-526 petition, if the evidence of record otherwise establishes EB-5 eligibility.

II. Prior Approval

CNYC was approved on March 14, 2015. Please see approval letter **at Exhibit 1.**

III. Regional Center Geographical Region and TEA Designation

The geographical area for CNYC has not changed. It continues to comprise the New York counties of Queens County, New York County, Bronx County, Richmond County, Westchester County and Nassau County. Below is a map of the geographical area.



The Project is located at 134-37 35th Avenue. Flushing, New York 11354. This is a designated targeted employment area (TEA), as per 8CFR 204.6 and thus qualified to accept an investment of $500,000.00. Please see attached **Exhibit 7**, TEA confirmation letter issued by the Empire State Development.

III. Industry Sectors Requested

The industry sectors have not changed. Please see the North American Industry Classification System (NAICS) code listed below:

Farrington Realty, LLC developments continue to encompass the following industries:

North American Industry Classification System (NAICS) codes are listed as follows:

Construction Hard Costs

- Construction (Building & Site) – 2362/23622
- Wholesale Trade (FF&E) – 42/4232
- Real Estate – 53112/5313

(b)(4)

Financing & Soft Costs

- Other government enterprises – 921
- Architectural, engineering and related services – 5413
- Insurance - 5241
- Accounting tax preparation, bookkeeping services – 5412
- Legal Services – 5411
- Monetary authorities and depository credit intermediation – 5222
- Other miscellaneous professional and technical services – 5419

IV. Brief Project Description

The Project will provide funding to construct and operate a mix-use building which consists of 210-room hotel, 100 residential condominium units, retail spaces, community facilities and parking space. The Project is looking to raise US [redacted] from [redacted] investors through EB5 investment.

Attached at **Exhibit 3** is a comprehensive business plan, compliant with *Matter of Ho.* CNYC is seeking approval of an exemplar Form I-526, filed in accordance with 8 CFR 204.6., in order for USCIS to determine if the documentation is EB-5 compliant and thus facilitate adjudication of an actual but identical Form I-526 petition, if the evidence of record otherwise establishes EB-5 eligibility. The business plan clearly describes how the project will promote economic growth through improved regional productivity, job creation, and increased domestic capital investment.

V. Promotion of Economic Growth

The New Commercial Enterprise (NCE) Farrington EB-5 Capital, LLC is seeking to raise US[redacted] in investors' capital from [redacted] investors through the EB-5 Immigrant Investor Program for the expansion plan into the seven counties in the state of New York.

Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment is not required if investment opportunities arise outside the geographic area referenced.

(b)(4)

Under 8 CFR 204.6(g), the establishment of a new commercial enterprise may be used as the basis of a petition for classification as an alien entrepreneur by more than one investor, provided each petitioning investor has invested or is actively in the process of investing the required amount for the area in which the new commercial enterprise is principally doing business, and provided each individual investment results in the creation of at least ten (10) full-time positions for qualifying employees. The establishment of a new commercial enterprise may be used as the basis of a petition for classification as an alien entrepreneur even though there are several owners of the enterprise, including persons who are not seeking classification under Section 203(b)(5) of the Act and non-natural persons, both foreign and domestic, provided that the source(s) of all capital invested is identified and all invested capital has been derived by lawful means.

VI. Job Creation (b)(4)

Exhibited hereto at **Exhibit 5** is a *full* economic analysis by Dr. Michael K. Evans of Evans, Carroll & Associates, Inc, dated July 24, 2015. According to the Economic Impact Report, the Flushing Hotel will create [redacted] jobs, including [redacted] jobs from direct and indirect from construction [redacted] direct and indirect jobs from operation, and [redacted] direct and indirect jobs from rental income.

(b)(4)

Century New York City Regional Center take note of recent USCIS guidance which states: that the full-time employment requirement excludes jobs that are intermittent, temporary, seasonal or transient in nature [1] seen as intermittent, temporary, seasonal and transient rather than permanent.

The Project has developed a five year strategic business plan to increase sales and market share. The method of obtaining the funding would be through EB-5 program. The alternative financing plan is to obtain a bridge loan. The financial banking criteria and federally defined underwriting guidelines will be applied in determining the rate of the mortgage loan.

[1] Spencer Enterprises v. U.S., 229 F.Supp.2d 1025 (E.D. Cal. 2001)

The JCE will augment its organic growth through a carefully designed program in the real estate development. The JCE will review each hotel project under the RC that is seeking funding focusing on job creation, development potential, financial stability and exit plan. The Four Points Hotel project meets the JCE's assessment standards after conducting full due diligence studies.

VII. Source of Capital

Amount and Source of the Regional Center's Operating Capital: Regional Center's Operational Plan (8 CFR 204.6(m) and 8 CFR 204.6):

Please see attached **at Exhibit 2** Statement from the regional center owner Mr. George Xu relating to the Source of Funds. The promoters and members of Century New York City Regional Center have proven financial credentials, they have capitalized the Company. Century New York City Regional Center does not rely on the capital to be infused by the foreign investors to sustain the business activities of the Regional Center. None of the 'threshold foreign capital' will be used in the running of the Regional Center. The foreign capital to be brought by the foreign investor will be solely invested in the 'new commercial enterprise' only. The promoters/ members of Century New York City Regional Center have invested their capital in the regional center. They have the resources to invest as much capital into Century New York City Regional Center as needed to successfully meet all the financial obligations including marketing, advertising, traveling, administration among others. The members of Century New York City Regional Center have pledged not to use the threshold foreign investment to sustain the Regional Center.

EB-5 investors will only place their capital contribution at risk; they are not liable for the general affairs of the Project. EB-5 investors will not be required to make additional capital contributions to satisfy operating losses or capital shortfalls.

VIII. Investment Terms

Each EB-5 investor must execute the Private Placement Memorandum, the Operating Agreement, and the Subscription Agreement, all attached at **Exhibit 6.**

If the I-526 petition is denied or if the I-526 petition is approved but the EB-5 investor is denied at the consulate interview, Century New York City Regional Center will return the investor's capital contribution $500,000 and [redacted] (b)(4) administrative fee without interest. In addition, EB-5 Investors must pay an administrative fee of [redacted] (b)(4) which will be used to pay for a thorough review of the investor's personal questionnaire, background documents, commissions, finder's fees, to offset advertising costs and other administrative expenses.

The Subscription Agreement requires the investor to affirm that he or she is an accredited investor pursuant to Rule 506 of Regulation D under the Securities Act of 1933. By signing the Subscription Agreement, the EB-5 investor agrees to become a member pursuant to the particular LLC Operating Agreement and Subscription Agreement **Exhibit 6**. Immigrant investors may not file their I-526 petition until their cash investments are fully invested in the particular project. The investor deposits his investment capital directly to the account of the Project managing the particular project. EB-5 regulations and USCIS rulings require that the investment be at risk for at least five (5) years. However, the Project may, at its sole discretion, make distributions of profits and income during this time period.

IX. Regional Center's Operational Plan - Recruitment and Due Diligence:

Attached **at Exhibit 2** is the RC Business plan, containing the **Administration & Due Diligence plan**, addressing how investors will be recruited and how the regional center will conduct its due diligence ensuring that all immigrant investor funds are lawfully obtained. The document shows that the Regional Center will require all investors to complete a confidential 'Investor Suitability Questionnaire' form, also attached **Exhibit 2** and if appropriate, satisfy the accredited investor rules, before being accepted into the EB-5 project. The document descriptively seeks information about the alien investor's personal information, education, employment history, financial history including bankruptcy, criminal or civil history, savings, loans, inheritance, gifts, business capital, net worth and other disclosures of admittance as mandated by USCIS.

Administrative Oversight:

Attached at **Exhibit 2** is a description of how Century New York City Regional Center will administer, oversee and manage the proposed regional center; identify qualified individual petitioners for specific investment opportunities; manage the flow of information to investors and their attorneys for the submission of I-526 and I-829 petitions filed through the regional center. Century New York City Regional Center takes the issue of due diligence screening of its alien investor's lawful source of capital very seriously.

The regional center will require the alien investor to prove that the funds come from a lawful source. The regional center will obtain documentary evidence of the source of funds, such as any loan or mortgage agreement for which the petitioner is personally and primarily liable. Likewise, the regional center will scrutinize any foreign capital brought into the US through his business in his home country.

Additionally, the regional center will obtain evidence identifying any other source(s) of capital. The regional center will strictly follow the guidelines to obtain certified copies of any judgments or evidence of all pending governmental civil or criminal actions, governmental administrative proceedings, and any private civil actions (pending or otherwise) involving monetary judgments against the petitioner from any court in or outside the United States within the past fifteen years.

In Conclusion:

The documentary evidence submitted complies with the regulatory requirements for approval of an exemplar Form I-526. Thank you for your consideration in this matter.

Respectfully Submitted:

CERTIFICATION

I, ____Kevin Loyst_____, am a Professional Engineer licensed in the State of New York. I have primary direct responsibility for implementation of the remedial action for the Farrington Realty, LLC Site, OER Project #14HAN384Q.

I, _____Stephanie Davis_____ am a Qualified Environmental Professional as defined in §43-140. I have primary direct responsibility for implementation of the remedial action for the Farrington Realty, LLC Site, OER Project #14HAN384Q.

I certify that this Remedial Action Plan (RAP) has a plan for handling, transport and disposal of soil, fill, fluids and other materials removed from the property in accordance with applicable City, State and Federal laws and regulations. Importation of all soil, fill and other material from off-Site will be in accordance with all applicable City, State and Federal laws and requirements. This RAP has provisions to control nuisances during the remediation and all invasive work, including dust and odor suppression.

Remedial Closure Report Certification

The following certification will appear in front of the Executive Summary of the Remedial Closure Report. The certification will include the following statements:

I, _____, am currently a professional engineer licensed by the State of New York. I had primary direct responsibility for implementation of the remedial program for the 134-37 35th Avenue Site 14EHAN384Q.

I, _____, am a qualified Environmental Professional. I had primary direct responsibility for implementation remedial program for the 134-37 35th Avenue Site 14EHAN384Q.

I certify that the OER-approved Remedial Action Plan dated _____ was implemented and that all requirements in those documents have been substantively complied with. I certify that contaminated soil, fill, liquids or other material from the property were taken to facilities licensed to accept this material in full compliance with applicable laws and regulations.

5.0 SCHEDULE

The table below presents a schedule for the proposed remedial action and reporting. If the schedule for remediation and development activities changes, it will be updated and submitted to OER. Currently, a 28 week remediation period is anticipated.

Schedule Milestone	Weeks from Remedial Action Start	Duration (weeks)
OER Approval of RAP	0	-
Mobilization	2	2
Remedial Construction	4	24
Demobilization	28	2
Submit Remedial Closure Report	30	4

Phenol	108-95-2	0.33 [b]
Pyrene [f]	129-00-0	100

Notes:

All soil cleanup objectives (SCOs) are in parts per million (ppm).

[a] The SCOs for unrestricted use were capped at a maximum value of 100 ppm. See Technical Support Document (TSD), section 9.3.

[b] For constituents where the calculated SCO was lower than the contract required quantitation limit (CRQL), the CRQL is used as the Track 1 SCO value.

[c] For constituents where the calculated SCO was lower than the rural soil background concentration, as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 1 SCO value for this use of the site.

[d] SCO is the sum of endosulfan I, endosulfan II and endosulfan sulfate.

[e] The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO.

[f] Protection of ecological resources SCOs were not developed for contaminants identified in Table 375-6.8(b) with "NS". Where such contaminants appear in Table 375-6.8(a), the applicant may be required by the Department to calculate a protection of ecological resources SCO according to the TSD.

SOIL/MATERIALS MANAGEMENT PLAN

1.1 Soil Screening Methods

Visual, olfactory and PID soil screening and assessment will be performed under the supervision of a Qualified Environmental Professional and will be reported in the Remedial Closure Report (RCR). Soil screening will be performed during invasive work performed during the remedy and development phases prior to issuance of the Notice of Satisfaction.

1.2 Stockpile Methods

Excavated soil from suspected areas of contamination (e.g., hot spots, USTs, drains, etc.) will be stockpiled separately and will be segregated from clean soil and construction materials. Stockpiles will be used only when necessary and will be removed as soon as practicable. While stockpiles are in place, they will be inspected daily, and before and after every storm event. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by OER. Excavated soils will be stockpiled on, at minimum, double layers of 8-mil minimum sheeting, will be kept covered at all times with appropriately anchored plastic tarps, and will be routinely inspected. Broken or ripped tarps will be promptly replaced.

All stockpile activities will be compliant with applicable laws and regulations. Soil stockpile areas will be appropriately graded to control run-off in accordance with applicable laws and regulations. Stockpiles of excavated soils and other materials shall be located at least of 50 feet from the property boundaries, where possible. Hay bales or equivalent will surround soil stockpiles except for areas where access by equipment is required. Silt fencing and hay bales will be used as needed near catch basins, surface waters and other discharge points.

1.3 Characterization of Excavated Materials

Soil/fill or other excavated media that is transported off-Site for disposal will be sampled in a manner required by the receiving facility, and in compliance with applicable laws and regulations. Soils proposed for reuse on-Site will be managed as defined in this plan.

1.4 Materials Excavation, Load-Out and Departure

The PE/QEP overseeing the remedial action will:

- oversee remedial work and the excavation and load-out of excavated material;
- ensure that there is a party responsible for the safe execution of invasive and other work performed under this work plan;
- ensure that Site development activities and development-related grading cuts will not interfere with, or otherwise impair or compromise the remedial activities proposed in this RAP;
- ensure that the presence of utilities and easements on the Site has been investigated and that any identified risks from work proposed under this plan are properly addressed by appropriate parties;
- ensure that all loaded outbound trucks are inspected and cleaned if necessary before leaving the Site;
- ensure that all egress points for truck and equipment transport from the Site will be kept clean of Site-derived materials during Site remediation.

Locations where vehicles exit the Site shall be inspected daily for evidence of soil tracking off premises. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to Site-derived materials.

Open and uncontrolled mechanical processing of historical fill and contaminated soil on-Site will not be performed without prior OER approval.

1.5 Off-Site Materials Transport

Loaded vehicles leaving the Site will comply with all applicable materials transportation requirements (including appropriate covering, manifests, and placards) in accordance with applicable laws and regulations, including use of licensed haulers in accordance with 6 NYCRR Part 364. If loads contain wet material capable of causing leakage from trucks, truck liners will be used. Queuing of trucks will be performed on-Site, when possible in order to minimize off Site disturbance. Off-Site queuing will be minimized.

Outbound truck transport routes are in Section 3.8 of the RAP. This routing takes into account the following factors: (a) limiting transport through residential areas and past sensitive

sites; (b) use of mapped truck routes; (c) minimizing off-Site queuing of trucks entering the facility; (d) limiting total distance to major highways; (e) promoting safety in access to highways; and (f) overall safety in transport. To the extent possible, all trucks loaded with Site materials will travel from the Site using these truck routes. Trucks will not stop or idle in the neighborhood after leaving the project Site.

1.6 Materials Disposal Off-Site

The following documentation will be established and reported by the PE/QEP for each disposal destination used in this project to document that the disposal of regulated material exported from the Site conforms with applicable laws and regulations: (1) a letter from the PE/QEP or Applicant to each disposal facility describing the material to be disposed and requesting written acceptance of the material. This letter will state that material to be disposed is regulated material generated at an environmental remediation Site in New York under a governmental remediation program. The letter will provide the project identity and the name and phone number of the PE/QEP or Applicant. The letter will include as an attachment a summary of all chemical data for the material being transported; and (2) a letter from each disposal facility stating it is in receipt of the correspondence (1, above) and is approved to accept the material. These documents will be included in the RCR.

The RCR will include an itemized account of the destination of all material removed from the Site during this remedial action. Documentation associated with disposal of all material will include records and approvals for receipt of the material. This information will be presented in the RCR.

All impacted soil/fill or other waste excavated and removed from the Site will be managed as regulated material and will be disposed in accordance with applicable laws and regulations. Historic fill and contaminated soils taken off-Site will be handled as solid waste and will not be disposed at a Part 360-16 Registration Facility (also known as a Soil Recycling Facility).

Waste characterization will be performed for off-Site disposal in a manner required by the receiving facility and in conformance with its applicable permits. Waste characterization sampling and analytical methods, sampling frequency, analytical results and QA/QC will be reported in the RCR. A manifest system for off-Site transportation of exported materials will be

employed. Manifest information will be reported in the RCR. Hazardous wastes derived from on-Site will be stored, transported, and disposed of in compliance with applicable laws and regulations.

1.7 Demarcation

After completion of hotspot removal and any other invasive remedial activities, and prior to backfilling, the top of the residual soil/fill will be defined by one of three methods: (1) placement of a demarcation layer. The demarcation layer will consist of geosynthetic fencing or equivalent material to be placed on the surface of residual soil/fill to provide an observable reference layer. A description or map of the approximate depth of the demarcation layer will be provided in the RCR; or (2) a land survey of the top elevation of residual soil/fill before the placement of cover soils, pavement and associated sub-soils, or other materials or structures or, (3) all materials beneath the approved cover will be considered impacted and subject to site management after the remedy is complete. Demarcation may be established by one or any combination of these three methods. As appropriate, a map showing the method of demarcation for the Site and all associated documentation will be presented in the RCR. This demarcation will constitute the top of the site management horizon.

1.8 Import of Backfill Soil from Off-Site Sources

This Section presents the requirements for imported fill materials to be used below the cover layer and within the clean soil cover layer. All imported soils will meet OER-approved backfill and cover soil quality objectives for this Site. The backfill and cover soil quality objectives are listed in the RAP.

A process will be established to evaluate sources of backfill and cover soil to be imported to the Site, and will include an examination of source location, current and historical use(s), and any applicable documentation. Material from industrial sites, spill sites, environmental remediation sites or other potentially contaminated sites will not be imported to the Site.

The following potential sources may be used pending attainment of backfill and cover soil quality objectives:

- Clean soil from construction projects at non-industrial sites in compliance with applicable laws and regulations;
- Clean soil from roadway or other transportation-related projects in compliance with applicable laws and regulations;
- Clean recycled concrete aggregate (RCA) from facilities permitted or registered by the regulations of NYS DEC.

All materials received for import to the Site will be approved by a PE/QEP and will be in compliance with provisions in this RAP. The RCR will report the source of the fill, evidence that an inspection was performed on the source, chemical sampling results, frequency of testing, and a Site map indicating the locations where backfill or soil cover was placed.

Source Screening and Testing

Inspection of imported fill material will include visual, olfactory and PID screening for evidence of contamination. Materials imported to the Site will be subject to inspection, as follows:

- Trucks with imported fill material will be in compliance with applicable laws and regulations and will enter the Site at designated locations;
- The PE/QEP is responsible to ensure that every truck load of imported material is inspected for evidence of contamination; and
- Fill material will be free of solid waste including pavement materials, debris, stumps, roots, and other organic matter, as well as ashes, oil, perishables or foreign matter.

Composite samples of imported material will be taken at a minimum frequency of one sample for every 500 cubic yards of material. Once it is determined that the fill material meets imported backfill or cover soil chemical requirements and is non-hazardous, and lacks petroleum contamination, the material will be loaded onto trucks for delivery to the Site.

Recycled concrete aggregate (RCA) will be imported from facilities permitted or registered by NYSDEC. Facilities will be identified in the RCR. A PE/QEP is responsible to ensure that the facility is compliant with 6NYCRR Part 360 registration and permitting requirements for the

period of acquisition of RCA. RCA imported from compliant facilities will not require additional testing, unless required by NYSDEC under its terms for operation of the facility. RCA imported to the Site must be derived from recognizable and uncontaminated concrete. RCA material is not acceptable for, and will not be used as cover material.

1.9 Fluids Management

All liquids to be removed from the Site, including dewatering fluids, will be handled, transported and disposed in accordance with applicable laws and regulations. Liquids discharged into the New York City sewer system will receive prior approval by New York City Department of Environmental Protection (NYC DEP). The NYC DEP regulates discharges to the New York City sewers under Title 15, Rules of the City of New York Chapter 19. Discharge to the New York City sewer system will require an authorization and sampling data demonstrating that the groundwater meets the City's discharge criteria. The dewatering fluid will be pretreated as necessary to meet the NYC DEP discharge criteria. If discharge to the City sewer system is not appropriate, the dewatering fluids will be managed by transportation and disposal at an off-Site treatment facility.

Discharge of water generated during remedial construction to surface waters (i.e. a stream or river) is prohibited without a SPDES permit issued by New York State Department of Environmental Conservation.

1.10 Storm-water Pollution Prevention

Applicable laws and regulations pertaining to storm-water pollution prevention will be addressed during the remedial program. Erosion and sediment control measures identified in this RAP (silt fences and barriers, and hay bale checks) will be installed around the entire perimeter of the remedial construction area and inspected once a week and after every storm event to ensure that they are operating appropriately. Discharge locations will be inspected to determine whether erosion control measures are effective in preventing significant impacts to receptors. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by OER. All necessary repairs shall be made immediately. Accumulated sediments will be removed as required to keep the barrier and hay bale check functional. Undercutting or erosion of the silt fence anchor will be repaired immediately with appropriate backfill materials.

Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering.

1.11 Contingency Plan

This contingency plan is developed for the remedial construction to address the discovery of unknown structures or contaminated media during excavation. Identification of unknown contamination source areas during invasive Site work will be promptly communicated to OER's Project Manager. Petroleum spills will be reported to the NYS DEC Spill Hotline. These findings will be included in the daily report. If previously unidentified contaminant sources are found during on-Site remedial excavation or development-related excavation, sampling will be performed on contaminated source material and surrounding soils and reported to OER. Chemical analytical testing will be performed for Full List volatiles and semi-volatiles, pesticides/PCBs, and TAL metals, as appropriate.

1.12 Odor, Dust and Nuisance Control

Odor Control

All necessary means will be employed to prevent on- and off-Site odor nuisances. At a minimum, procedures will include: (a) limiting the area of open excavations; (b) shrouding open excavations with tarps and other covers; and (c) use of foams to cover exposed odorous soils. If odors develop and cannot otherwise be controlled, additional means to eliminate odor nuisances will include: (d) direct load-out of soils to trucks for off-Site disposal; and (e) use of chemical odorants in spray or misting systems.

This odor control plan is capable of controlling emissions of nuisance odors. If nuisance odors are identified, work will be halted and the source of odors will be identified and corrected. Work will not resume until all nuisance odors have been abated. OER will be notified of all odor complaint events. Implementation of all odor controls, including halt of work, will be the responsibility of the PE/QEP's certifying the RCR.

Dust Control

Dust management during invasive on-Site work will include, at a minimum:

- Use of a dedicated water spray methodology for roads, excavation areas and stockpiles.

- Use of properly anchored tarps to cover stockpiles.
- Exercise extra care during dry and high-wind periods.
- Use of gravel or recycled concrete aggregate on egress and other roadways to provide a clean and dust-free road surface.

This dust control plan is capable of controlling emissions of dust. If nuisance dust emissions are identified, work will be halted and the source of dusts will be identified and corrected. Work will not resume until all nuisance dust emissions have been abated. OER will be notified of all dust complaint events. Implementation of all dust controls, including halt of work, will be the responsibility of the PE/QEP's responsible for certifying the Remedial Closure Report.

Other Nuisances

Noise control will be exercised during the remedial program. All remedial work will conform, at a minimum, to NYC noise control standards.

Rodent control will be provided, during Site clearing and grubbing, and during the remedial program, as necessary, to prevent nuisances.

1.13 Import of Clean Cover

All imported soil will be uncontaminated, clean soil that meets the lesser of the appropriate NYSDEC 6 NYCRR Part 375-6.8(a) Unrestricted Use SCOs and the NYSDEC 6 NYCRR Part 375-6.8 groundwater protection SCOs.

The imported uncontaminated, clean soil cover will be from an approved source/facility and will be evaluated by the PE/QEP to ensure:

1) That a segregated stockpile is properly maintained at the source and will not be comingled with any other material prior to importing and grading the clean soil material at the Site;
2) That the material does not include any solid waste, including construction and demolition material, as it's prohibited;

3) That screening for evidence of contamination by visual, olfactory and PID soil screening practices prior to testing at the source as well as upon importing to the Site for grading is completed; and

4) That a maximum five-part composite sample will be collected from the segregated stockpile at the source at a minimum frequency of one sample per 250 cubic yards and analyzed for the following Full List parameters:

- VOCs by EPA Method 8260C (rev. 2006)
- SVOCs by EPA Method 8270D (rev. 2007)
- Pesticides by EPA Method 8081B (rev. 2000)
- PCBs by EPA Method 8082A (rev. 2000)
- TAL Metals by EPA Method 6010C (rev. 2007)

Upon receipt of the segregated stockpile analytical results collected at the source, a Clean Soil Sampling Report will be submitted to OER for review/approval prior to importing. The report will include the following:

1) Summary of number of samples collected and analyzed, tabulated data and comparison to the selected Site Use SCOs;

2) Analytical data sheets and chain of custody documentation;

3) Summary of number of tons of cubic yards;

4) An affidavit from the source/facility on company letterhead stating that the segregated stockpile has been properly maintained at the source and complies with the requirements listed above; and

5) A copy of source/facility NYSDEC permit;

The following documentation will be presented in the Final Remedial Closure Report:

1) Copies of purchase invoices;

2) Truck transportation slips from the source to the Site;

3) Confirmation of the number of tons and cubic yards of OER approved clean soil cover material imported and graded at the site on top of highly visible demarcation barrier; and

4) Site plan depicting all areas where the OER approved clean soil cover has been placed.

A Materials Safety Data Sheets

SECTION 1.0
INTRODUCTION

This Construction Health and Safety Plan (CHASP) has been written for compliance with "OSHA Hazardous Waste Operations Standards (29 CFR 1910.120)", the guidance documents, "Standard Operating Safety Guidelines (Office of Solid Waste and Emergency Response, 1988)" and the "Occupational Safety and Health Guidance Manual for Hazardous Waste Activities" (U.S. Department of Health and Human Services, 1985).

1.1 Scope and Applicability of the CHASP

This CHASP is designed to be applicable to location(s) where the excavation of soil/fill will be performed at the Site. Dewatering is not anticipated at this time and is, therefore, not included herein. This CHASP may also be modified or amended to meet specific needs of the work proposed. This CHASP will detail the Site safety procedures, Site background, and safety monitoring. Contractors will be required to adopt this CHASP in full. A Health and Safety Officer (HSO) will be present at the Site to inspect the implementation of the CHASP. However, it is the sole responsibility of the contractor(s) to comply with the CHASP.

The CHASP has been formulated as a guide to complement professional judgment and experience. The appropriateness of the information presented should always be evaluated with respect to unforeseen Site conditions which may arise.

1.2 Site Work Zone and Visitors

The Site work zone (a.k.a. exclusion zone) during excavation activities will be a 30-foot radius about the work location. This work zone may be extended if, in the judgment of the health and safety officer (HSO), Site conditions warrant a larger work zone.

No visitors will be permitted within the work zone without the consent of the HSO. All visitors will be required to be familiar with, and comply with, the CHASP. The HSO will deny access to those whose presence within the work zone is unnecessary or those who are deemed by the HSO to be in non-compliance with the CHASP.

All Site workers, including the contractors, who may directly contact Site soil will be required to have 40-hour hazardous material training (eight-hour refresher courses annually), respirator fit test certification if respirators are to be used, and medical surveillance as required in 29 CFR 1910.120.

The HSO will also give an on-Site health and safety discussion to all Site personnel, including the contractors, prior to initiating Site work involving soil. Workers not in attendance during the health and safety talk will be required to have the discussion with the HSO prior to entering the work zone.

Emergency telephone numbers and directions to the nearest hospital are found in Table 1.2.1.

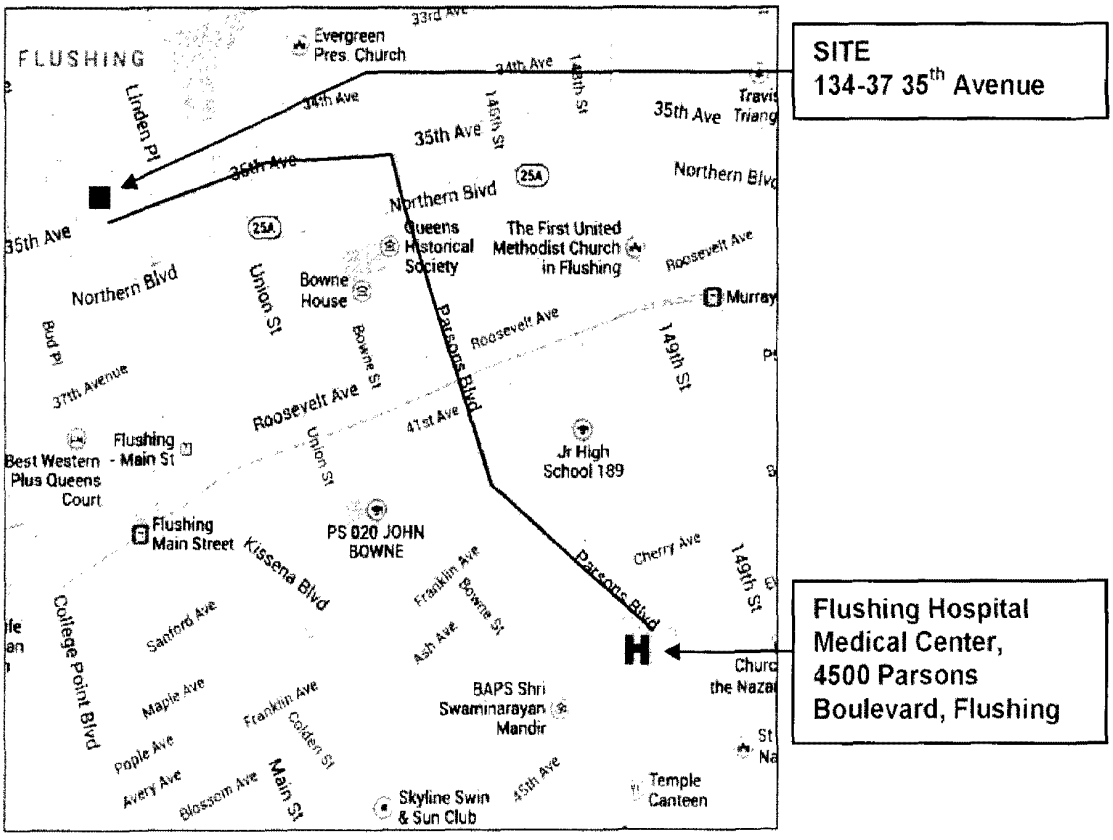
Ben Cancemi, Project Manager and Health and Safety Officer	Cell #	
Stephanie Davis, Project Coordinator, QA/QC Officer	Cell #	
George Holmes, Alternate Health & Safety Officer	Cell #	

Directions to Flushing Hospital Medical Center (718-670-5495)

Turn left from the south side of the Site and head east on 35th Avenue about one-half mile to Parsons Boulevard. Turn right onto Parsons Boulevard and continue south approximately three-quarters of a mile. Flushing Hospital Medical Center will be on the right.



SECTION 2.0
KEY PERSONNEL AND RESPONSIBILITIES

The FPM project manager for this project will be Ben Cancemi. The FPM project field staff will include John Bukoski and George Holmes. Contractor personnel may also be on Site. The senior FPM staff member on Site will act as HSO and will report to the project manager. In the event that an FPM HSO is not present, an alternate qualified HSO will be appointed. Contractor personnel will be provided with health and safety information by the HSO and will be expected to follow this CHASP.

SECTION 3.0
SITE BACKGROUND

3.1 Site History and Known Chemical Constituents at the Site

The Site is comprised of an undeveloped property located at 134-37 35th Avenue, Flushing, New York. The Site is approximately 39,000 square feet in size. The Site was formerly utilized as a bus facility, a New York City Department of Sanitation (NYCDOS) garage, theater, restaurant, bar, store, and parking garage. Soil/fill is present at the Site and is impacted with semivolatile organic compounds (SVOCs). Although no significantly-elevated levels were detected, concentrations of several SVOCs were noted to exceed Track 1 and/or Track 2 SCOs.

SECTION 4.0
TASK/OPERATION HEALTH AND SAFETY ANALYSIS

This section will present health and safety analyses for the excavation of soil/fill.

4.1 Safety Analysis

Excavation of soil/fill and petroleum-contaminated soils will be performed by a contractor with oversight by FPM and/or the Site Supervisor. Excavation will involve the use of heavy equipment. Safety concerns will include risk of injury due to being struck by equipment, being trapped between moving equipment parts, being struck by dropped materials, and hearing damage due to equipment noise. Site personnel will take precautions against these risks when working in the vicinity of heavy equipment by being aware of equipment locations and movement, by wearing steel-toed boots and hard hats, and by using hearing protection, if necessary. Site personnel who have not previously worked in the vicinity of heavy equipment will be paired with an experienced person for at least one day to familiarize themselves with heavy equipment operations and safety procedures.

A calibrated photoionization detector (PID) will be used to monitor VOCs in the worker's breathing zone during excavation of petroleum-contaminated soils. Although previous onsite monitoring during intrusive activities has not indicated the presence of significant VOCs, steady-state PID readings greater than 10 ppm in the worker's breathing zone will require upgrading to Level C personal protective equipment. Steady-state readings, for this purpose, will be defined as readings between 10 and 20 parts per million (ppm) above background for a minimum of ten seconds. Readings will be obtained at points around and in proximity to the excavation area. These points will define the worker's breathing zone. Level C personal protection will include full-face air-purifying respirators with dust and organic vapor cartridges (personal protective equipment will be described in greater detail in Section 7.0). All FPM personnel and contractors within the potential to require respiratory protection must be properly trained and fit tested prior to donning respirators.

Upon encountering PID levels greater than 20 ppm above background in the worker's breathing zone, work will stop until the source of vapors is abated and readings are less than 20 ppm above background. If, at any time, PID readings exceed steady-state levels greater than 50 ppm above background, or any conditions exist which the HSO determines will require Level B personal protective equipment, all work at the Site will cease immediately and all personnel will evacuate the work zone. Evacuation will occur in the upwind direction if discernable. Level B conditions are not anticipated to be encountered; however, if level B conditions arise, no Site work will be performed by FPM or contractors and a complete evaluation of the operation will be performed and this CHASP will be modified.

All personnel who may directly contact soil will be required to wear chemical-resistant gloves (such as butyl or nitrile) when the potential for dermal contact with the soil is possible. Dermal contact with soils will be avoided.

Hard hats and steel-toe, steel-shank safety boots will be required when work is performed in the vicinity of heavy equipment (drill rigs, backhoes, etc.).

4.2 Other Safety Considerations

4.2.1 Noise

During excavation operations or any other operation that may generate potentially harmful levels of noise, the HSO will monitor noise levels with a Realistic[tm] hand-held sound level meter. Noise levels will be monitored in decibels (dBs) in the A-weighted, slow-response mode. Noise level readings that exceed the 29 CFR 1910.95 permissible noise exposure limits will require hearing protection (see Table 4.2.1.1 for permissible noise exposures).

Hearing protection will be available to all Site workers. The hearing protection will consist of foam, expansion-fit earplugs (or other approvable hearing protection) with an Environmental Protection Agency noise reduction rating of at least 29 dB. Hearing protection must alleviate worker exposure to noise to an eight-hour time-weighted average of 85 dB or below. In the event that the hearing protection is inadequate, work will cease until a higher level of hearing protection can be incorporated.

TABLE 4.2.1.1
PERMISSIBLE NOISE EXPOSURES*

Duration Per Day Hours	Sound Level dBA Slow Response
8	90
6	92
4	95
3	97
2	100
1.5	102
1	105
0.5	110
0.25	115

Notes:

When the daily noise exposure is composed of two or more periods of noise exposure of different levels, their combined effect should be considered, rather than the individual effect of each. If the sum of the following fractions: $C_1/T_1+C_2/T_2$ C_6/T_6 exceeds unity, then, the mixed exposure should be considered to exceed the limit value. Cn indicates the total time of exposure at a specified noise level, and Tn indicates the total time of exposure permitted at that level.

Exposure to impulsive or impact noise should not exceed 140 dB peak sound pressure level.

*Standards derived from 29 CFR 1910.95

4.2.2 Slip/Trip/Fall Preventative Measures

To reduce the potential for slipping, tripping, or falling, the work zone will be kept clear of unnecessary equipment. All Site workers will be required to wear work boots with adequate tread to reduce the potential for slipping (work boots must be leather or chemical-resistant and contain steel toes and steel shanks).

4.2.3 Insects and Ticks

Insect and tick problems are expected to be minimal. Potential insect problems include, but are not limited to, bees, wasps, and hornets. Prior to commencement of work, each work area will be surveyed for nests and hives to reduce the possibility of disturbing these insects. In addition, each Site worker will be asked to disclose any allergies related to insect stings or bites. The worker will be requested to keep his or her anti-allergy medicine on Site.

Tick species native to Long Island consist of the pinhead-sized deer tick and the much-larger dog tick. Due to a paucity of suitable habitat, ticks are not anticipated to be present at this site.

4.2.4 Heat/Cold Stress

Heat stress may become a concern, especially if protective clothing is donned which will decrease natural ventilation. To assist in reducing heat stress the following measures will be taken:

- An adequate supply of water or other liquids will be brought on Site. To prevent dehydration, personnel will be encouraged to drink generous amounts of water even if not thirsty.

- A shady rest area will be designated (such as beneath the trees in the northeast corner of the property) to provide shelter during sunny days.

- In hot weather, workers wearing protective clothing may be rotated.

Indications of heat stress range from mild (fatigue, irritability, anxiety, decreased concentration, dexterity or movement) to fatal. Medical help will be obtained for serious conditions. Heat-related problems are:

- Heat rash: caused by continuous exposure to heat and humid air and aggravated by chafing clothes. Decreases ability to tolerate heat as well as being a nuisance.

- Heat cramps: caused by profuse perspiration with inadequate fluid intake and chemical replacement (especially salts). Signs: muscle spasm and pain in the extremities and abdomen.

- Heat exhaustion: caused by increased stress on various organs to meet increased demands to cool the body. Signs: shallow breathing; pale, cool, moist skin; profuse sweating; dizziness and lassitude.

- Heat stroke: the most severe form of heat stress. Can be fatal. Medical help must be obtained immediately. Body must be cooled immediately to prevent severe injury and/or death. Signs: red, hot, dry skin; no perspiration; nausea; dizziness and confusion; strong, rapid pulse; coma.

Cold exposure is a concern if work is conducted during cold weather or marginally cold weather during precipitation periods or moderate to high wind velocity periods. To assist in reducing cold exposure the following measures will be taken:

All personnel will be required to wear adequate and appropriate clothing. This will include head gear to prevent the high percentage loss of heat that occurs in this area (thermal liners for hard hats if hard hats are required).

- Provide a readily available warm shelter near each work zone.
- Carefully schedule work and rest periods to account for the current temperature and wind velocity conditions.
- Monitor work patterns and physical condition of workers and rotate personnel, as necessary.

Indications of cold exposure range from shivering, dizziness, numbness, confusion, weakness, impaired judgement, impaired vision to drowsiness. Medical help will be obtained for serious conditions if they occur. Cold exposure-related problems are:

- Frost bite: Ice crystal formation in body tissues. The restricted blood flow to the injured part results in local tissue destruction.
- Hypothermia: Severe exposure to cold temperature resulting in the body losing heat at a rate faster than the body can generate heat. The stages of hypothermia are shivering, apathy, loss of consciousness, decreasing pulse rate and breathing rate and death.

4.2.5 Potential Electrical Hazards

Potential electric hazards consist primarily of underground and overhead power lines. Potential underground electrical hazards will be minimized by having a utility markout performed for the Site prior to any intrusive work. In addition, available as-built Site blueprints and owner knowledge will be used to avoid contact with subsurface utility lines or structures. Overhead electrical hazards will be evaluated by visually observing the work location prior to performing operations which have the potential to contact overhead utilities. No work shall be performed in close proximity to overhead utilities.

4.2.6 The Buddy System

All activities in contaminated or potentially contaminated areas will be conducted by pairing off the Site workers in groups of two (or three if necessary). Each person (buddy) will be able to:

- Provide his or her partner with assistance.
- Observe his or her partner for signs of chemical or heat exposure.
- Periodically check the integrity of his or her partner's protective clothing.
- Notify the HSO or others if emergency help is needed.

The buddy system will be instituted at the beginning of each workday. If new workers arrive on Site, a buddy will be chosen prior to the new worker entering the work zone.

4.2.7 Site Communications

Two sets of communication systems will be established at the Site: internal communication among personnel on-Site, and external communication between on-Site and off-Site personnel.

Internal communication will be used to:

- Alert team members to emergencies.
- Pass along safety information such as heat stress check, protective clothing check, etc.
- Communicate changes in the work to be accomplished.
- Maintain Site control.

An external communication system between on-Site and off-Site personnel will be established to:

- Coordinate emergency response
- Report to the Project Manager
- Maintain contact with essential off-Site personnel

A field telephone will be available at all times in the HSO's vehicle. In addition, the nearest stationary phone will be identified prior to the commencement of Site operations and this location will be relayed to all Site workers.

4.2.8 General Safe Work Practices

Standing orders applicable during Site operations are as follows:

- No smoking, eating, drinking, or application of cosmetics in the work zone.
- No matches or lighters in the work zone.
- All Site workers will enter/exit work zone through the Site access point.
- Any signs of unusual conditions will require reporting the information to the HSO, who will take appropriate action.
- Loose fitting clothing or loose long hair will be prohibited in the work zone during drilling operations.
- A signal person will direct the backing of work vehicles.
- Equipment operators will be instructed to check equipment for abnormalities such as oozing liquids, frayed cables, unusual odors, etc.

SECTION 5.0
PERSONNEL TRAINING REQUIREMENTS

All FPM personnel and contractor personnel will receive adequate training prior to entering the Site. FPM and contractor's personnel with the potential to contact Site soil will, at a minimum, have completed OSHA-approved, 40-hour hazardous materials Site safety training and OSHA-approved, eight-hour safety refresher course within one year prior to commencing field work. The HSO will have received the OSHA-approved, eight-hour course on managing hazardous waste operations. In addition, each worker must have a minimum of three days field experience under the direct supervision of a trained, experienced supervisor.

Prior to Site fieldwork, the HSO will conduct an in-house review of the project with respect to health and safety with all FPM personnel who will be involved with fieldwork at the Site. The review will include discussions of signs and symptoms of chemical exposure and heat stress that indicate potential medical emergencies presented in Table 5.1. In addition, review of personal protective equipment will be conducted, to include the proper use of air-purifying respirators.

TABLE 5.1
SIGNS AND SYMPTOMS OF EXPOSURE TO CHEMICALS

Type of Hazard	Signs and Symptoms	
Chemical Hazard	Behavioral changes Breathing difficulties Changes in complexion of skin color Confusion Coordination difficulties Coughing Depression Dermatitis Dilated Pupils Dizziness Euphoria Fatigue and/or weakness Flushed face and/or neck Insomnia Irregular heartbeat Irritability	Irritation of eyes, nose, respiratory tract, skin or throat Headache Lacrimation Light-Headedness Muscle Fatigue Nausea Nervousness Numbness in limbs Paresthesia Sleepiness Tingling Tremors Vertigo Visual disturbance Vomiting
Heat Exhaustion	Clammy skin Confusion Dizziness Fainting Fatigue Heat rash	Light-headedness Nausea Profuse sweating Slurred speech Weak pulse
Heat Stroke (may be fatal)	Confusion Convulsions Hot skin, high temperature (yet may feel chilled)	Incoherent speech Staggering gait

SECTION 6.0
MEDICAL SURVEILLANCE PROGRAM

All workers at the Site with the potential to contact Site soil must participate in a medical surveillance program in accordance with 29 CFR 1910.120. A medical examination and consultation must have been performed within the last twelve months to be eligible for Site work.

The content of the examination and consultation will include a medical and work history with special emphasis on symptoms related to the handling of hazardous substances, health hazards, and fitness for duty including the ability to wear required personal protective equipment under conditions (i.e., temperature extremes) that may be expected at the work Site. All medical examinations and procedures shall be performed by, or under the supervision of, a licensed physician.

The physician shall furnish a written opinion containing:

- The results of the medical examination and tests.
- The physician's opinion as to whether the employee has any detected medical conditions that would place the worker at increased risk of material impairment of the employee's health from work in hazardous waste operations.
- The physician's recommended limitations upon the worker assigned to the work.
- A statement that the worker has been informed by the physician of the results of the medical examination and any further examination or treatment.

An accurate record of the medical surveillance will be retained. The record will consist of at least the following information:

- The name and social security number of the employee.
- Physician's written opinions, recommended limitations, and results of examinations and tests.
- Any worker medical complaints related to exposure to hazardous substances.

SECTION 7.0
PERSONAL PROTECTIVE EQUIPMENT

7.1 General Considerations

The two basic objectives of the personal protective equipment (PPE) are to protect the wearer from safety and health hazards, and to prevent the wearer from incorrect use and/or malfunction of the PPE.

Potential Site hazards were discussed previously in Section 4.0. The duration of Site activities for individual workers is estimated to be several days. All work is expected to be performed during daylight hours and workdays, in general, are expected to be eight to ten hours in duration. Any work performed beyond daylight hours will require the permission of the HSO. This decision will be based on the adequacy of artificial illumination and the type and necessity of the task being performed.

Personal protection levels for the Site activities, based on past investigations, are anticipated to be Level D with the possibility of upgrading to Level C. The equipment included for each level of protection is provided as follows:

Level C Protection

Personnel protective equipment:

- Air-purifying respirator, full-face
- Chemical-resistant clothing includes: Tyvek^{tm} (spunbonded olefin fibers) for particulate and limited splash protection or Saranex^{tm} (plastic film-laminated Tyvek) for permeation resistance to solvents.
- Coveralls*, or
- Long cotton underwear*
- Gloves (outer), chemical-resistant
- Gloves (inner), chemical-resistant
- Boots (outer), leather or chemical-resistant, steel toe and shank.
- Boot covers (outer), chemical-resistant (disposable)*
- Hard hat (face shield)*
- Escape mask*
- 2-way radio communications (intrinsically safe)*

(*) optional

Criteria for Selection of Level C Protection

Meeting all of these criteria permits use of Level C Protection:

- Oxygen concentrations are not less than 19.5% by volume.
- Measured air concentrations of identified substances will be reduced by the respirator below the substance's threshold limit value (TLV).
- Atmospheric contaminants, liquid splashes, or other direct contact will not adversely affect any body area left unprotected by chemical-resistant clothing.
- Job functions do not require self-contained breathing apparatus.
- Direct readings are below 50 ppm on the PID.

Level D Protection

Personnel protective equipment:

- Coveralls
- Gloves
- Boots/shoes, leather or chemical-resistant, steel toe and shank.
- Safety glasses or chemical splash goggles*
- Hard hat (face shield*)
- Escape mask*

(*) optional

Criteria for Selection of Level D Protection

Meeting any of these criteria allows use of Level D Protection:

- No contaminant levels above 5 ppm organic vapors and dusty conditions are present.
- Work functions preclude splashes, immersion, or the reasonable potential for unexpected inhalation of any chemicals above the TLV.

Additional Considerations for Selecting Levels of Protection

Other factors which will be considered in selecting the appropriate level of protection are heat and physical stress. The use of protective clothing and respirators increases physical stress, in particular, heat stress on the wearer. Chemical protective clothing greatly reduces natural ventilation and diminishes the body's ability to regulate its temperature. Even in moderate ambient temperatures, the diminished capacity of the body to dissipate heat can result in one or more heat-related problems.

All chemical protective garments can be a contributing factor to heat stress. Greater susceptibility to heat stress occurs when protective clothing requires the use of a tightly fitted hood against the respirator face piece, or when gloves or boots are taped to the suit. As more body area is covered, less cooling takes place, increasing the probability of heat stress.

Wearing protective equipment also increases the risk of accidents. It is heavy, cumbersome, decreases dexterity, agility, interferes with vision, and is fatiguing to wear. These factors all increase physical stress and the potential for accidents. In particular, the necessity of selecting a level of protection will be balanced against the increased probability of heat stress and accidents.

7.2 Donning and Doffing Ensembles

Donning an Ensemble

A routine will be established and practiced periodically for donning a Level C ensemble. Assistance may be provided for donning and doffing since these operations are difficult to perform alone.

Table 7.2.1 lists sample procedures for donning a Level C ensemble. These procedures should be modified depending on the particular type of suit and/or when extra gloves and/or boots are used.

Doffing an Ensemble

Exact procedures for removing Level C ensembles must be established and followed to prevent contaminant migration from the work area and transfer of contaminants to the wearer's body, the doffing assistant, and others.

Doffing procedures are provided in Table 7.2.2. These procedures should be performed only after decontamination of the suited worker. They require a suitably attired assistant. Throughout the procedures, both worker and assistant should avoid any direct contact with the outside surface of the suit.

7.3 Respirator Fit Testing

The fit or integrity of the facepiece-to-face seal of a respirator affects its performance. Most facepieces fit only a certain percentage of the population; thus each facepiece must be tested on the potential wearer in order to ensure a tight seal. Facial features such as scars, hollow temples, very prominent cheekbones, deep skin creases, dentures or missing teeth, and the chewing of gum and tobacco may interfere with the respirator-to-face seal. A respirator shall not be worn when such conditions prevent a good seal. The worker's diligence in observing these factors shall be evaluated by periodic checks. Fit testing will comply with 29 CFR 1910.1025 regulations.

7.4 Inspection

The PPE inspection program will entail five different inspections:

- Inspection and operational testing of equipment received from the factory or distributor.
- Inspection of equipment as it is issued to workers.
- Inspection after use.

TABLE 7.2.1
SAMPLE DONNING PROCEDURES

1. Inspect the clothing and respiratory equipment before donning (see Inspection in subsection 7.4).

2. Adjust hard hat or headpiece if worn, to fit user's head.

3. Standing or sitting, step into the legs of the suit; ensure proper placement of the feet within the suit; then gather the suit around the waist.

4. Put on chemical-resistant safety boots over the feet of the suit. Tape the leg cuff over the tops of the boots.

5. Don the respirator and adjust it to be secure, but comfortable.

6. Perform negative and positive respirator facepiece seal test procedures.

   - To conduct a negative-pressure test, close the inlet part with the palm of the hand or squeeze the breathing tube so it does not pass air, and gently inhale for about 10 seconds. Any inward rushing of air indicates a poor fit. Note that a leaking facepiece may be drawn tightly to the face to form a good seal, giving a false indication of adequate fit.

   - To conduct a positive-pressure test, gently exhale while covering the exhalation valve to ensure that a positive pressure can be built up. Failure to build a positive pressure indicates a poor fit.

7. Depending on type of suit:

   - Put on inner gloves (surgical gloves).

   - Additional overgloves, worn over attached suit gloves, may be donned later.

8. Put on hard hat

9. Have assistant observe the wearer for a period of time to ensure that the wearer is comfortable, psychologically stable, and that the equipment is functioning properly.

TABLE 7.2.2
DOFFING PROCEDURES

1. Remove any extraneous or disposable clothing, boot covers, outer gloves, and tape.

2. Remove respirator by loosening straps and pulling straps over the top of the head and move mask away from head. Do not pull mask over the top of the head.

3. Remove arms, one at a time, from suit, avoiding any contact between the outside surface of the suit and wearer's body and lay the suit out flat behind the wearer. Leave internal gloves on, if any.

4. Sitting, if possible, remove both legs from the suit.

5. After suit is removed, remove internal gloves by rolling them off the hand, inside out.

- Periodic inspection of stored equipment.

- Periodic inspection when a question arises concerning the appropriateness of the selected equipment, or when problems with similar equipment arise.

The inspection checklist is provided in Table 7.4.1.

TABLE 7.4.1
PPE INSPECTION CHECKLIST

CLOTHING

Before use:

- Determine that the clothing material is correct for the specified task at hand.
- Visually inspect for:
  - imperfect seams
  - non-uniform coatings
  - tears
  - malfunctioning closures
- Hold up to light and check for pinholes.
- Flex product:
  - Observe for cracks
  - Observe for other signs of shelf deterioration
  -
- If the product has been used previously, inspect inside and out for signs of chemical attack:
  - discoloration
  - swelling
  - stiffness

TABLE 7.4.1 (CONTINUED)
PPE INSPECTION CHECKLIST

- If the product has been used previously, inspect inside and out for signs of chemical attack:
  - discoloration
  - swelling
  - stiffness

During the work task, periodically inspect for:

- Evidence of chemical attack such as discoloration, swelling, stiffening, and softening. Keep in mind, however, that chemical permeation can occur without any visible effects.
- Closure failure
- Tears
- Punctures
- Seam discontinuities

GLOVES

Before use:

- Pressurize glove to check for pinholes. Either blow into glove, then roll gauntlet toward fingers or inflate glove and hold under water. In either case, no air should escape.

AIR-PURIFYING RESPIRATORS

- Inspect air-purifying respirators:
  - before each use to be sure they have been adequately cleaned
- Check material conditions for:
  - signs of pliability
  - signs of deterioration
  - signs of distortion
- Examine cartridges to ensure that:
  - they are the proper type for the intended use
  - the expiration date has not been passed
  - they have not been opened or used previously
- Check faceshields and lenses for:
  - cracks
  - crazing
  - fogginess
- Air purifying respirators will be stored individually in re-sealable plastic bags.

7.5 Storage

Clothing and respirators will be stored properly to prevent damage or malfunction due to exposure to dust, moisture, sunlight, damaging chemicals, extreme temperatures, and impact. Storage procedures are as follows:

Clothing:

- Potentially contaminated clothing will be stored in an area separate from street clothing.
- Potentially contaminated clothing will be stored in a well-ventilated area, with good air flow around each item, if possible.
- Different types and material of clothing and gloves will be stored separately to prevent issuing the wrong material by mistake.
- Protective clothing will be folded or hung in accordance with manufacturer's recommendations.

Respirators:

- Air-purifying respirators should be dismantled, washed, and placed in sealed plastic bags.

7.6 Maintenance

Specialized maintenance will be performed only by the factory or an authorized repair person. Routine maintenance, such as cleaning, will be performed by the personnel to whom the equipment is assigned. Respirators will be cleaned at the end of each day with alcohol pads or, preferably, by washing with warm soapy water.

7.7 Decontamination Methods

All personnel, clothing, equipment, and samples leaving the contaminated (work zone) area of the Site must be decontaminated to remove any harmful chemicals that may have adhered to them. Decontamination methods either (1) physically remove contaminants (2) inactivate contaminants by chemical detoxification or disinfection/sterilization, or (3) remove contaminants by a combination of both physical and chemical means. In many cases, gross contamination can be removed by physical means involving dislodging/displacement, rinsing, wiping off, and evaporation. Contaminants that can be removed by physical means include dust, vapors, and volatile liquids. All reusable equipment will be decontaminated by rinsing in a bath of detergent and water (respirators, gloves to be reused). Monitoring equipment will be decontaminated by wiping with paper towels and water.

The effectiveness of the decontamination will be evaluated near the beginning of Site activities and will be modified if determined to be ineffective. Visual observation will be used for this purpose. The HSO will inspect decontaminated materials for discoloration, stains, corrosive effects, visible dirt, or other signs of possible residual contamination.

All disposable PPE will be discarded following use. All used PPE to be discarded will be placed in an appropriate receptacle for disposal.

SECTION 8.0
DECONTAMINATION PROCEDURES FOR SAMPLING AND EXCAVATION EQUIPMENT

All non-dedicated sampling equipment shall be decontaminated prior to, and following, use at each sampling location. Decontamination procedures shall consist of the following:

1. Scrub equipment in a bath of low-phosphate detergent and potable water.

2. Potable water rinse.

3. Air dry.

4. Aluminum foil wrap, shiny side out, for transport.

Personal protective equipment decontamination has been discussed in Subsection 7.7.

All excavation equipment that has contacted Site soil will be decontaminated prior to leaving the Site. Decontamination of this equipment will consist of physically removing adhering soil using hand tools followed by rinsing the equipment with potable water. Decontamination will be performed in the immediate vicinity of the work area so that the removed soil and rinseate will be discharged in the area from which it originated.

SECTION 9.0
CALIBRATION PROCEDURES, FREQUENCIES, AND MAINTENANCE

This section will present the calibration procedures, frequencies, and maintenance for the health and safety field monitoring instruments. The use of the monitoring equipment is presented as follows (the manufacturer's owner's manuals for all equipment used will be present at the Site):

1. Photovac MicroTIP - this instrument is a photoionization detector (PID) that measures the concentration of airborne ionizable gases and vapors. The MicroTIP does not distinguish between individual compounds and will not read methane. The calibration will be performed using ambient air to "zero" the instrument and a 95 ppm cylinder of isobutylene to calibrate the span. The calibration will be performed as follows:

   a. Connect the supplied regulator to the Span Gas cylinder. Hand-tighten the fittings.

   b. Open the valve on the gas bag by turning the valve stem fully counter clockwise.

   c. Attach the gas bag adapter nut to the regulator. Hand-tighten the fittings.

   d. Turn the regulator knob counter clockwise about half turn to start the flow of gas.

   e. Fill the gas bag about half full and then close the regulator fully clockwise to turn off the flow of gas.

   f. Disconnect the bag from the adapter and empty it. Flush the bag a few times with the Span Gas and then fill it.

   g. Close the gas bag by turning the valve clockwise.

   h. Press SETUP and select the desired Cal Memory with arrow keys and press ENTER. Press EXIT to leave Setup.

   i. Press CAL and expose MicroTIP to ambient air. Press ENTER and MicroTIP sets its zero point.

   j. MicroTIP then asks for the Span Gas concentration. Enter the Known Span Gas concentration and then connect the Span Gas bag adapter to the inlet.

   k. Press ENTER and MicroTIP sets its sensitivity.

   l. When MicroTIP's display reverts to normal, MicroTIP is calibrated and ready for use. Remove the Span Gas bag from the inlet.

The instrument will be calibrated prior to the commencement of each day's work. The instrument will be charged overnight prior to each day's work.

SECTION 10.0
EMERGENCY RESPONSE PLAN

This section will present the Emergency Response Plan (ERP) for the Site. Pre-emergency planning will consist of reviewing the ERP with all workers at the Site prior to initiation of work.

Personnel Roles

It is anticipated that during excavation activities at the Site, in general, several persons will be on the Site: the HSO and contractors. Should an emergency situation arise at the Site, the HSO will assume control and decision-making. The HSO will also resolve all disputes concerning health and safety requirements and precautions. The HSO will also:

- Be authorized to seek and purchase supplies as necessary.
- Have control over activities of everyone entering the Site.

The HSO will communicate with off-Site personnel, including the Project Manager, to evaluate data and assist in the decision-making process. Phone numbers for the fire department, police, ambulance, poison control center, NYC Department of Environmental Protection, and NYS Department of Environmental Conservation Spill Response Department are listed in Table 1.2.1 of this document. The hospital that will be utilized during an emergency will be Manhattan Medical. The directions to the hospital, along with the hospital's emergency room phone number are presented in Table 1.2.1. Copies of Table 1.2.1 will be available at the Site and will be placed in vehicles of personnel involved in soil activities at the Site.

Response Follow-Up

Following an emergency, or incident, a detailed report will be generated by the HSO. All equipment will be restored to pre-emergency conditions. The CHASP will be reviewed following an emergency to determine if it provides adequate information to assist in dealing with the emergency. The CHASP may be revised to incorporate additional information as needed.

Emergency Recognition and Prevention

Before daily work assignments begin, each day a brief on-Site meeting will be held by the HSO to address health and safety issues related to the day's work. Prior to initiation of work, a detailed on-Site health and safety meeting will be held to review all potential hazards, contingencies, and safety measures.

Safe Distances and Places of Refuge

The main potential cause of work zone evacuation is a significant vapor release. Vapor release evacuation will be discussed prior to subsurface activities at the Site and in general will be in the upwind direction. Wind direction will be monitored at each work location and all workers will be notified of the direction of evacuation prior to commencement of work. Safe distances will be discussed at each location and determined by the HSO. The PID will be used to determine if workers have evacuated a sufficient distance.

At all times, vehicles which may be utilized in an emergency for transport to the hospital (or other destination) will have clear access to leave the Site. The HSO will assure that an emergency vehicle does not become blocked-in by other vehicles.

Site Security and Control

The HSO will control entry of personnel into the work zone. No unnecessary persons shall be permitted in the work zone.

Decontamination Procedures During Emergencies

In the event of a medical emergency, decontamination will be performed if it does not interfere with essential treatment. Decontamination will be performed by washing, rinsing, and/or cutting off protective clothing and equipment.

If decontamination cannot be performed, the victim will be wrapped in plastic to reduce contamination to other personnel. Emergency and off-Site medical personnel will be alerted to the potential contamination.

Emergency Medical Treatment and First Aid

Medical emergencies will be treated, in general, by medical experts by transporting the victim to the nearby hospital. A first aid kit will be present on Site for minor medical treatment.

MATERIAL SAFETY DATA SHEET

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

MATHESON TRI-GAS, INC.
150 Allen Road Suite 302
Basking Ridge, New Jersey 07920
Information: 1-800-416-2505

Emergency Contact:
CHEMTREC 1-800-424-9300
Calls Originating Outside the US:
703-527-3887 (Collect Calls Accepted)

SUBSTANCE: TRICHLOROETHYLENE

TRADE NAMES/SYNONYMS:
MTG MSDS 199; ACETYLENE TRICHLORIDE; ETHYLENE TRICHLORIDE; 1-CHLORO-2,2-DICHLOROETHYLENE; 1,1-DICHLORO-2-CHLOROETHYLENE; TCE; ETHINYL TRICHLORIDE; TRICHLOROETHENE; 1,1,2-TRICHLOROETHYLENE; 1,1,2-TRICHLOROETHENE; UN 1710; RCRA U228; C2HCl3; MAT23850; RTECS KX4550000

CHEMICAL FAMILY: halogenated, alkenes

CREATION DATE: Jan 24 1989
REVISION DATE: Dec 11 2008

2. COMPOSITION, INFORMATION ON INGREDIENTS

COMPONENT: TRICHLOROETHYLENE
CAS NUMBER: 79-01-6
PERCENTAGE: >99

COMPONENT: INHIBITORS
CAS NUMBER: Not assigned.
PERCENTAGE: <0.1

COMPONENT: AMINES
CAS NUMBER: Not assigned.
PERCENTAGE: <0.1

3. HAZARDS IDENTIFICATION

NFPA RATINGS (SCALE 0-4): HEALTH=2 FIRE=1 REACTIVITY=0

EMERGENCY OVERVIEW:

COLOR: colorless
PHYSICAL FORM: liquid
ODOR: sweet odor
MAJOR HEALTH HAZARDS: respiratory tract irritation, skin irritation, eye irritation, central nervous system depression, allergic reactions, cancer hazard (in humans)
PHYSICAL HAZARDS: May polymerize. Containers may rupture or explode. May decompose on contact with air, light, moisture, heat or storage and use above room temperature. Releases toxic, corrosive, flammable or explosive gases.

POTENTIAL HEALTH EFFECTS:
INHALATION:
SHORT TERM EXPOSURE: irritation, changes in blood pressure, nausea, vomiting, stomach pain, difficulty breathing, irregular heartbeat, headache, drowsiness, dizziness, disorientation, mood swings, tremors, loss of coordination, visual disturbances, bluish skin color, lung congestion, kidney damage, liver damage, unconsciousness, coma
LONG TERM EXPOSURE: same as effects reported in short term exposure, loss of appetite, weight loss, blood disorders, brain damage, cancer
SKIN CONTACT:
SHORT TERM EXPOSURE: irritation, allergic reactions
LONG TERM EXPOSURE: irritation, allergic reactions, nausea, loss of appetite, weight loss, difficulty breathing, headache, drowsiness, dizziness, joint pain, loss of coordination, visual disturbances, paralysis
EYE CONTACT:
SHORT TERM EXPOSURE: irritation (possibly severe), blurred vision
LONG TERM EXPOSURE: irritation (possibly severe), eye damage
INGESTION:
SHORT TERM EXPOSURE: same as effects reported in short term inhalation
LONG TERM EXPOSURE: same as effects reported in long term inhalation

4. FIRST AID MEASURES

INHALATION: If adverse effects occur, remove to uncontaminated area. Give artificial respiration if not breathing. Get immediate medical attention.

SKIN CONTACT: Wash skin with soap and water for at least 15 minutes while removing contaminated clothing and shoes. Get medical attention, if needed. Thoroughly clean and dry contaminated clothing and shoes before reuse.

EYE CONTACT: Flush eyes with plenty of water for at least 15 minutes. Then get immediate medical attention.

INGESTION: If vomiting occurs, keep head lower than hips to help prevent aspiration. If person is unconscious, turn head to side. Get medical attention immediately.

NOTE TO PHYSICIAN: For ingestion, consider gastric lavage. Consider oxygen.

5. FIRE FIGHTING MEASURES

FIRE AND EXPLOSION HAZARDS: Slight fire hazard.

EXTINGUISHING MEDIA: carbon dioxide, regular dry chemical

Large fires: Use regular foam or flood with fine water spray.

FIRE FIGHTING: Cool containers with water spray until well after the fire is out. Stay away from the ends of tanks. For tank, rail car or tank truck, evacuation radius: 800 meters (1/2 mile).

FLASH POINT: No data available.
LOWER FLAMMABLE LIMIT: 7.8% @ 100 C
UPPER FLAMMABLE LIMIT: 52% @ 100 C
AUTOIGNITION: 770 F (410 C)

6. ACCIDENTAL RELEASE MEASURES

AIR RELEASE:
Reduce vapors with water spray. Collect runoff for disposal as potential hazardous waste.

SOIL RELEASE:
Dig holding area such as lagoon, pond or pit for containment. Dike for later disposal. Absorb with sand or other non-combustible material.

WATER RELEASE:
Absorb with activated carbon. Remove trapped material with suction hoses. Collect spilled material using mechanical equipment. Subject to California Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65). Keep out of water supplies and sewers.

OCCUPATIONAL RELEASE:
Avoid heat, flames, sparks and other sources of ignition. Stop leak if possible without personal risk. Small liquid spills: Absorb with sand or other non-combustible material. Large spills: Dike for later disposal. Remove sources of ignition. Keep unnecessary people away, isolate hazard area and deny entry. Notify Local Emergency Planning Committee and State Emergency Response Commission for release greater than or equal to RQ (U.S. SARA Section 304). If release occurs in the U.S. and is reportable under CERCLA Section 103, notify the National Response Center at (800)424-8802 (USA) or (202)426-2675 (USA).

7. HANDLING AND STORAGE

STORAGE: Store and handle in accordance with all current regulations and standards. Store in a cool, dry place. Store in a well-ventilated area. Avoid heat, flames, sparks and other sources of ignition. Keep separated from incompatible substances.

8. EXPOSURE CONTROLS, PERSONAL PROTECTION

EXPOSURE LIMITS:
TRICHLOROETHYLENE:
100 ppm OSHA TWA
200 ppm OSHA ceiling
300 ppm OSHA peak (5 minutes in any 2 hours)
50 ppm (269 mg/m3) OSHA TWA (vacated by 58 FR 35338, June 30, 1993)
200 ppm (1070 mg/m3) OSHA STEL (vacated by 58 FR 35338, June 30, 1993)
10 ppm ACGIH TWA
25 ppm ACGIH STEL
25 ppm NIOSH TWA 10 hour(s)
2 ppm NIOSH ceiling 60 minute(s) (used as halogenated anesthetic gas)

VENTILATION: Provide local exhaust ventilation system. Ensure compliance with applicable exposure limits.

EYE PROTECTION: Wear splash resistant safety goggles. Provide an emergency eye wash fountain and quick drench shower in the immediate work area.

CLOTHING: Wear appropriate chemical resistant clothing.

GLOVES: Wear appropriate chemical resistant gloves.

RESPIRATOR: The following respirators and maximum use concentrations are drawn from NIOSH and/or OSHA.
At any detectable concentration -
Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode.
Any supplied-air respirator with a full facepiece that is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in pressure-demand or other positive-pressure mode.
Escape -
Any air-purifying full-facepiece respirator (gas mask) with a chin-style, front-mounted or back-mounted organic vapor canister.
Any appropriate escape-type, self-contained breathing apparatus.
For Unknown Concentrations or Immediately Dangerous to Life or Health -
Any supplied-air respirator with a full facepiece that is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in pressure-demand or other positive-pressure mode.
Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode.

9. PHYSICAL AND CHEMICAL PROPERTIES

PHYSICAL STATE: liquid
COLOR: colorless
ODOR: sweet odor
MOLECULAR WEIGHT: 131.39
MOLECULAR FORMULA: Cl-C-H-C-Cl2
BOILING POINT: 189 F (87 C)
FREEZING POINT: -99 F (-73 C)
VAPOR PRESSURE: 58 mmHg @ 20 C
VAPOR DENSITY (air=1): 4.53
SPECIFIC GRAVITY (water=1): 1.4642
WATER SOLUBILITY: 0.1%
PH: Not available
VOLATILITY: Not available
ODOR THRESHOLD: 21 ppm
EVAPORATION RATE: 0.69 (carbon tetrachloride=1)
COEFFICIENT OF WATER/OIL DISTRIBUTION: Not available
SOLVENT SOLUBILITY:
Soluble: alcohol, ether, acetone, chloroform, benzene, vegetable oils

10. STABILITY AND REACTIVITY

REACTIVITY: May decompose on contact with air, light, moisture, heat or storage and use above room temperature. Releases toxic, corrosive, flammable or explosive gases.

CONDITIONS TO AVOID: Avoid heat, flames, sparks and other sources of ignition. Containers may rupture or explode if exposed to heat.

INCOMPATIBILITIES: bases, metals, combustible materials, oxidizing materials

HAZARDOUS DECOMPOSITION:
Thermal decomposition products: phosgene, halogenated compounds, oxides of carbon

POLYMERIZATION: May polymerize. Avoid contact with heat or light and monitor inhibitor content.

11. TOXICOLOGICAL INFORMATION

TRICHLOROETHYLENE:
IRRITATION DATA: 2 mg/24 hour(s) skin-rabbit severe; 20 mg/24 hour(s) eyes-rabbit moderate
TOXICITY DATA: 140700 mg/m3/1 hour(s) inhalation-rat LC50; >20 gm/kg skin-rabbit LD50; 4920 mg/kg oral-rat LD50
CARCINOGEN STATUS: NTP: Anticipated Human Carcinogen; IARC: Human Limited Evidence,

Animal Sufficient Evidence, Group 2A; ACGIH: A2 -Suspected Human Carcinogen
LOCAL EFFECTS:
Irritant: inhalation, skin, eye
ACUTE TOXICITY LEVEL:
Moderately Toxic: ingestion
Slightly Toxic: inhalation
Relatively Non-toxic: dermal absorption
TARGET ORGANS: immune system (sensitizer), central nervous system
MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE: heart problems
TUMORIGENIC DATA: Available.
MUTAGENIC DATA: Available.
REPRODUCTIVE EFFECTS DATA: Available.
ADDITIONAL DATA: May cross the placenta. Stimulants such as epinephrine may induce ventricular fibrillation.

12. ECOLOGICAL INFORMATION

ECOTOXICITY DATA:
FISH TOXICITY: 3100 ug/L 96 hour(s) LC50 (Mortality) Flagfish (Jordanella floridae)

INVERTEBRATE TOXICITY: 1700 ug/L 7 hour(s) EC50 (Regeneration) Flatworm (Dugesia japonica)

OTHER TOXICITY: 45000 ug/L 48 week(s) LC50 (Mortality) Clawed toad (Xenopus laevis)

FATE AND TRANSPORT:
BIOCONCENTRATION: 17 ug/L 1-14 hour(s) BCF (Residue) Bluegill (Lepomis macrochirus) 8.23 ug/L

13. DISPOSAL CONSIDERATIONS

Subject to disposal regulations: U.S. EPA 40 CFR 262. Hazardous Waste Number(s): U228. Hazardous Waste Number(s): D040. Dispose of in accordance with U.S. EPA 40 CFR 262 for concentrations at or above the Regulatory level. Regulatory level- 0.5 mg/L. Dispose in accordance with all applicable regulations.

14. TRANSPORT INFORMATION

U.S. DOT 49 CFR 172.101:
PROPER SHIPPING NAME: Trichloroethylene
ID NUMBER: UN1710
HAZARD CLASS OR DIVISION: 6.1
PACKING GROUP: III
LABELING REQUIREMENTS: 6.1

CANADIAN TRANSPORTATION OF DANGEROUS GOODS:
SHIPPING NAME: Trichloroethylene
UN NUMBER: UN1710
CLASS: 6.1
PACKING GROUP/CATEGORY: III

15. REGULATORY INFORMATION

U.S. REGULATIONS:
CERCLA SECTIONS 102a/103 HAZARDOUS SUBSTANCES (40 CFR 302.4):
TRICHLOROETHYLENE: 100 LBS RQ

SARA TITLE III SECTION 302 EXTREMELY HAZARDOUS SUBSTANCES (40 CFR 355 Subpart B): Not regulated.

SARA TITLE III SECTION 304 EXTREMELY HAZARDOUS SUBSTANCES (40 CFR 355 Subpart C): Not regulated.

SARA TITLE III SARA SECTIONS 311/312 HAZARDOUS CATEGORIES (40 CFR 370 Subparts B and C):
ACUTE: Yes
CHRONIC: Yes
FIRE: No
REACTIVE: No
SUDDEN RELEASE: No

SARA TITLE III SECTION 313 (40 CFR 372.65):
TRICHLOROETHYLENE

OSHA PROCESS SAFETY (29 CFR 1910.119): Not regulated.

STATE REGULATIONS:
California Proposition 65:
Known to the state of California to cause the following:
TRICHLOROETHYLENE
Cancer (Apr 01, 1988)

CANADIAN REGULATIONS:
WHMIS CLASSIFICATION: D2

NATIONAL INVENTORY STATUS:
U.S. INVENTORY (TSCA): Listed on inventory.

TSCA 12(b) EXPORT NOTIFICATION: Not listed.

CANADA INVENTORY (DSL/NDSL): Not determined.

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Tetrachloroethylene	127-18-4	100

Toxicological Data on Ingredients: Tetrachloroethylene: ORAL (LD50): Acute: 2629 mg/kg [Rat]. DERMAL (LD): Acute: >3228 mg/kg [Rabbit]. MIST(LC50): Acute: 34200 mg/m 8 hours [Rat]. VAPOR (LC50): Acute: 5200 ppm 4 hours [Mouse].

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of skin contact (irritant), of inhalation. Slightly hazardous in case of skin contact (permeator), of eye contact (irritant), of ingestion.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH. Classified 2A (Probable for human.) by IARC, 2 (anticipated carcinogen) by NTP. MUTAGENIC EFFECTS: Mutagenic for bacteria and/or yeast. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to kidneys, liver, peripheral nervous system, respiratory tract, skin, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact:
In case of contact, immediately flush skin with plenty of water. Cover the irritated skin with an emollient. Remove contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention.

Serious Skin Contact:
Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek medical attention.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention if symptoms appear.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention if symptoms appear.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: Non-flammable.

Auto-Ignition Temperature: Not applicable.

Flash Points: Not applicable.

Flammable Limits: Not applicable.

Products of Combustion: Not available.

Fire Hazards in Presence of Various Substances: Not applicable.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions: Not applicable.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Absorb with an inert material and put the spilled material in an appropriate waste disposal.

Large Spill:
Absorb with an inert material and put the spilled material in an appropriate waste disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Do not ingest. Do not breathe gas/fumes/ vapor/spray. Avoid contact with skin. Wear suitable protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents, metals, acids, alkalis.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value.

Personal Protection:
Safety glasses. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 25 (ppm) from OSHA (PEL) [United States] TWA: 25 STEL: 100 (ppm) from ACGIH (TLV) [United States] TWA: 170 (mg/m3) from OSHA (PEL) [United States] Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Liquid.

Odor: Ethereal.

Taste: Not available.

Molecular Weight: 165.83 g/mole

Color: Clear Colorless.

pH (1% soln/water): Not available.

Boiling Point: 121.3°C (250.3°F)

Melting Point: -22.3°C (-8.1°F)

Critical Temperature: 347.1°C (656.8°F)

Specific Gravity: 1.6227 (Water = 1)

Vapor Pressure: 1.7 kPa (@ 20°C)

Vapor Density: 5.7 (Air = 1)

Volatility: Not available.

Odor Threshold: 5 - 50 ppm

Water/Oil Dist. Coeff.: The product is more soluble in oil; log(oil/water) = 3.4

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility:
Miscible with alcohol, ether, chloroform, benzene, hexane. It dissolves in most of the fixed and volatile oils. Solubility in water: 0.015 g/100 ml @ 25 deg. C It slowly decomposes in water to yield Trichloroacetic and Hydrochloric acids.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials

Incompatibility with various substances: Reactive with oxidizing agents, metals, acids, alkalis.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Oxidized by strong oxidizing agents. Incompatible with sodium hydroxide, finely divided or powdered metals such as zinc, aluminum, magnesium, potassium, chemically active metals such as lithium, beryllium , barium. Protect from light.

Special Remarks on Corrosivity: Slowly corrodes aluminum, iron, and zinc.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Eye contact. Inhalation. Ingestion.

Toxicity to Animals:
WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 2629 mg/kg [Rat]. Acute dermal toxicity (LD50): >3228 mg/kg [Rabbit]. Acute toxicity of the vapor (LC50): 5200 4 hours [Mouse].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH. Classified 2A (Probable for human.) by IARC, 2 (Some evidence.) by NTP. MUTAGENIC EFFECTS: Mutagenic for bacteria and/or yeast. May cause damage to the following organs: kidneys, liver, peripheral nervous system, upper respiratory tract, skin, central nervous system (CNS).

Other Toxic Effects on Humans:
Hazardous in case of skin contact (irritant), of inhalation. Slightly hazardous in case of skin contact (permeator), of ingestion.

Special Remarks on Toxicity to Animals:
Lowest Publishe Lethal Dose/Conc: LDL [Rabbit] - Route: Oral; Dose: 5000 mg/kg LDL [Dog] - Route: Oral; Dose: 4000 mg/kg LDL [Cat] - Route: Oral; Dose: 4000 mg/kg

Special Remarks on Chronic Effects on Humans:
May cause adverse reproductive effects and birth defects(teratogenic). May affect genetic material (mutagenic). May cause cancer.

Special Remarks on other Toxic Effects on Humans:
Acute Potential Health Effects: Skin: Causes skin irritation with possible dermal blistering or burns. Symtoms may include redness, itching, pain, and possible dermal blistering or burns. It may be absorbed through the skin with possible systemic effects. A single prolonged skin exposure is not likely to result in the material being absorbed in harmful amounts. Eyes: Contact causes transient eye irritation, lacrimation. Vapors cause eye/conjunctival irritation. Symptoms may include redness and pain. Inhalation: The main route to occupational exposure is by inhalation since it is readily absorbed through the lungs. It causes respiratory tract irritation, . It can affect behavior/central nervous system (CNS depressant and anesthesia ranging from slight inebriation to death, vertigo, somnolence, anxiety, headache, excitement, hallucinations, muscle incoordination, dizziness, lightheadness, disorentiation, seizures, enotional instability, stupor, coma). It may cause pulmonary edema Ingestion: It can cause nausea, vomiting, anorexia, diarrhea, bloody stool. It may affect the liver, urinary system (proteinuria, hematuria, renal failure, renal tubular disorder), heart (arrhythmias). It may affect behavior/central nervous system with symptoms similar to that of inhalation. Chronic Potential Health Effects: Skin: Prolonged or repeated skin contact may result in excessive drying of the skin, and irritation. Ingestion/Inhalation: Chronic exposure can affect the liver(hepatitis,fatty liver degeneration), kidneys, spleen, and heart (irregular heartbeat/arrhythmias, cardiomyopathy, abnormal EEG), brain, behavior/ central nervous system/peripheral nervous system (impaired memory, numbness of extremeties, peripheral neuropathy and other

Section 12: Ecological Information

Ecotoxicity:
Ecotoxicity in water (LC50): 18.4 mg/l 96 hours [Fish (Fatthead Minnow)]. 18 mg/l 48 hours [Daphnia (daphnia)]. 5 mg/l 96 hours [Fish (Rainbow Trout)]. 13 mg/l 96 hours [Fish (Bluegill sunfish)].

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The product itself and its products of degradation are not toxic.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : Tetrachloroethylene UNNA: 1897 PG: III

Special Provisions for Transport: Marine Pollutant

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Tetrachloroethylene California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Tetrachloroethylene Connecticut hazardous material survey.: Tetrachloroethylene Illinois toxic substances disclosure to employee act: Tetrachloroethylene Illinois chemical safety act: Tetrachloroethylene New York release reporting list: Tetrachloroethylene Rhode Island RTK hazardous substances: Tetrachloroethylene Pennsylvania RTK: Tetrachloroethylene Minnesota: Tetrachloroethylene Michigan critical material: Tetrachloroethylene Massachusetts RTK: Tetrachloroethylene Massachusetts spill list: Tetrachloroethylene New Jersey: Tetrachloroethylene New Jersey spill list: Tetrachloroethylene Louisiana spill reporting: Tetrachloroethylene California Director's List of Hazardous Substances: Tetrachloroethylene TSCA 8(b) inventory: Tetrachloroethylene TSCA 8(d) H and S data reporting: Tetrachloroethylene: Effective date: 6/1/87; Sunset date: 6/1/97 SARA 313 toxic chemical notification and release reporting: Tetrachloroethylene CERCLA: Hazardous substances.: Tetrachloroethylene: 100 lbs. (45.36 kg)

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada):
CLASS D-1B: Material causing immediate and serious toxic effects (TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R40- Possible risks of irreversible effects. R51/53- Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment. S23- Do not breathe gas/fumes/vapour/spray S26- In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S37- Wear suitable gloves. S61- Avoid release to the environment. Refer to special instructions/Safety data sheets.

HMIS (U.S.A.):

Health Hazard: 2

Fire Hazard: 0

Polycyclic Aromatic Hydrocarbons (PAHs)

What are PAHs?

Short for polycyclic aromatic hydrocarbons, PAHs describe chemicals that are often found together in groups of two or more. PAHs are found naturally in the environment but they can also be man-made. In their purest form, PAHs are solid and range in appearance from colorless to white or pale yellow-green. PAHs are created when products like coal, oil, gas, and garbage are burned but the burning process is not complete. Although PAHs can exist in over 100 different combinations, the National Waste Minimization Program defines this group using the Toxic Release Inventory reporting category for polycyclic aromatic compounds.

Chemicals included in this category, by name and CAS number, are:

1. Benzo(a)anthracene, 56-55-3
2. Benzo(a)phenanthrene (chrysene), 218-01-9
3. Benzo(a)pyrene, 50-32-8
4. Benzo(b)fluoranthene, 205-99-2
5. Benzo(j)fluoranthene, 205-82-3
6. Benzo(k)fluoranthene, 207-08-9
7. Benzo(j,k)fluorene (fluoranthene), 206-44-0
8. Benzo(r,s,t)pentaphene, 189-55-9
9. Dibenz(a,h)acridine, 226-36-8
10. Dibenz(a,j)acridine, 224-42-0
11. Dibenzo(a,h)anthracene, 53-70-3
12. Dibenzo(a,e)fluoranthene, 5385-75-1
13. Dibenzo(a,e)pyrene, 192-65-4
14. Dibenzo(a,h)pyrene, 189-64-0
15. Dibenzo(a,l)pyrene, 191-30-0
16. 7H-Dibenzo(c,g)carbazole, 194-59-2
17. 7,12-Dimethylbenz(a)anthracene, 57-97-6
18. Indeno(1,2,3-cd)pyrene 193-39-5
19. 3-Methylcholanthrene, 56-49-5
20. 5-Methylchrysene, 3697-24-3
21. 1-Nitropyrene, 5522-43-0

It should be noted that some PAHs are listed individually on EPA's Priority Chemical list. They are:

1. Acenaphthene, 83-32-9
2. Acenaphtylene, 208-96-8
3. Anthracene, 120-12-7
4. Benzo(g,h,i)perylene, 191-24-2
5. Fluorene, 86-73-7
6. Phenanthrene, 85-01-8
7. Pyrene, 129-00-0

Why are PAHs bad actors?

PAHs are a concern because they are persistent. Because they do not burn very easily, they can stay in the environment for long periods of time. Individual PAHs vary in behavior. Some can turn into a vapor in the air very easily. Most do not break down easily in the water.

What are PAHs used for?

Most PAHs are used to conduct research. However, some PAHs are used to make dyes, plastics, and pesticides. Some are even used in medicines.

How can PAHs enter and leave your body?

One of the most common ways PAHs can enter the body is through breathing contaminated air. PAHs get into your lungs when you breathe them. If you live near a hazardous waste site where PAHs are disposed, you are likely to breathe PAHs. If you eat or drink food and water contaminated with PAHs, you could be

exposed. Exposure to PAHs can also occur if your skin contacts PAH-contaminated soil or products like heavy oils, coal tar, roofing tar, or creosote. Creosote is an oily liquid found in coal tar and is used to preserve wood. Once in your body, PAHs can spread and target fat tissues. Target organs include the kidneys and liver. However, PAHs will leave your body through urine and feces in a matter of days.

How can you be exposed to PAHs?

You can be exposed to PAHs in the environment, in your home, and in the workplace. Because PAHs exist naturally in the environment and are man-made, you can be exposed in a number of ways. Fumes from vehicle exhaust, coal, coal tar, asphalt, wildfires, agricultural burning and hazardous waste sites are all sources of exposure.

You could be exposed to PAHs by breathing cigarette and tobacco smoke, eating foods grown in contaminated soil, or by eating meat or other food that you grilled. Grilling and charring food actually increases the amount of PAHs in the food.

If you work in a plant that makes coal tar, asphalt and aluminum, or that burns trash, you can be exposed to PAHs. You can also be exposed if you work in a facility that uses petroleum or coal, or where wood, corn, and oil are burned.

How can PAHs affect your health?

A number of PAHs have caused tumors in laboratory animals that were exposed to PAHs through their food, from breathing contaminated air, and when it was applied to their skin. When pregnant mice ate high doses of a PAH (benzo(a)pyrene) they experienced reproductive problems. In addition, the offspring of the pregnant mice showed birth defects and a decrease in their body weight. Other effects include damage to the skin, body fluids, and the immune system. However, these effects have not been seen in humans.

Is there a medical test to determine if you have been exposed to PAHs?

There is a test that can measure the presence of PAH in your urine. This test can only tell you if you have been exposed; but it can't reveal how harmful the effects of the exposure will be. This test would have to be performed in a laboratory that has special equipment to detect the PAHs. Another test currently being developed will be able to measure PAHs in your body tissue and blood.

What are the medical treatments in cases of exposure?

Most exposures to PAHs happen every day at very low levels in the air we breathe and the foods we eat. Treatment for a short-term exposure is unlikely. Contact your doctor if you experience symptoms of PAHs poisoning.

What levels of exposure have resulted in harmful health effects?

There is no information available from studies on humans to tell what effects can result from being exposed to individual PAHs at certain levels. However, breathing PAHs and skin contact seem to be associated with cancer in humans. Animal studies showed that mice exposed to 308 parts per million (ppm) of PAHs (specifically benzo (a) pyrene) in food for 10 days (short term exposure) caused birth defects. Mice exposed to 923 ppm of benzo (a) pyrene in food for months caused problems in the liver and blood.

Where can I get more information?

Contact your state health or environmental department, or:

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Lead	7439-92-1	100

Toxicological Data on Ingredients: Lead LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects: Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:
Slightly hazardous in case of skin contact (permeator). CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to blood, kidneys, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Non-flammable in presence of open flames and sparks, of shocks, of heat.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: When heated to decomposition it emits highly toxic fumes of lead.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.05 (mg/m3) from ACGIH (TLV) [United States] TWA: 0.05 (mg/m3) from OSHA (PEL) [United States] TWA: 0.03 (mg/m3) from NIOSH [United States] TWA: 0.05 (mg/m3) [Canada]Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Metal solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 207.21 g/mole

Color: Bluish-white. Silvery. Gray

pH (1% soln/water): Not applicable.

Boiling Point: 1740°C (3164°F)

Melting Point: 327.43°C (621.4°F)

Critical Temperature: Not available.

Specific Gravity: 11.3 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials, excess heat

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Can react vigorously with oxidizing materials. Incompatible with sodium carbide, chlorine trifluoride, trioxane + hydrogen peroxide, ammonium nitrate, sodium azide, disodium acetylide, sodium acetylide, hot concentrated nitric acid, hot concentrated hydrochloric acid, hot concentrated sulfuric acid, zirconium.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. May cause damage to the following organs: blood, kidneys, central nervous system (CNS).

Other Toxic Effects on Humans: Slightly hazardous in case of skin contact (irritant), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans:
Acute Potential: Skin: Lead metal granules or dust: May cause skin irritation by mechanical action. Lead metal foil, shot or sheets: Not likely to cause skin irritation Eyes: Lead metal granules or dust: Can irritate eyes by mechanical action. Lead metal foil, shot or sheets: No hazard. Will not cause eye irritation. Inhalation: In an industrial setting, exposure to lead mainly occurs from inhalation of dust or fumes. Lead dust or fumes: Can irritate the upper respiratory tract (nose, throat) as well as the bronchi and lungsby mechanical action. Lead dust can be absorbed through the respiratory system. However, inhaled lead does not accumulate in the lungs. All of an inhaled dose is eventually abssorbed or transferred to the gastrointestinal tract. Inhalation effects of exposure to fumes or dust of inorganic lead may not develop quickly. Symptoms may include metallic taste, chest pain, decreased physical fitness, fatigue, sleep disturbance, headache, irritability, reduces memory, mood and personality changes, aching bones and muscles, constipation, abdominal pains, decreasing appetite. Inhalation of large amounts may lead to ataxia, deliriuim, convulsions/seizures, coma, and death. Lead metal foil, shot, or sheets: Not an inhalation hazard unless metal is heated. If metal is heated, fumes will be released. Inhalation of these fumes may cause "fume metal fever", which is characterized by flu-like symptoms. Symptoms may include metallic taste, fever, nausea, vomiting, chills, cough, weakness, chest pain, generalized muscle pain/aches, and increased white blood cell count. Ingestion: Lead metal granules or dust: The symptoms of lead poisoning include abdominal pain or cramps (lead cholic), spasms, nausea, vomiting, headache, muscle weakness, hallucinations, distorted perceptions, "lead line" on the gums, metallic taste, loss of appetite, insomnia, dizziness and other symptoms similar to that of inhalation. Acute poisoning may result in high lead levels in the blood and urine, shock, coma and death in extreme cases. Lead metal foil, shot or sheets: Not an ingestion hazard for usual industrial handling.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are less toxic than the product itself.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (female) which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (male) which would require a warning under the statute: Lead California prop. 65 (no significant risk level): Lead: 0.0005 mg/day (value) California prop. 65: This product contains the following ingredients for which the State of California has found to cause birth defects which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Lead Connecticut hazardous material survey.: Lead Illinois toxic substances disclosure to employee act: Lead Illinois chemical safety act: Lead New York release reporting list: Lead Rhode Island RTK hazardous substances: Lead Pennsylvania RTK: Lead

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada): CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R20/22- Harmful by inhalation and if swallowed. R33- Danger of cumulative effects. R61- May cause harm to the unborn child. R62- Possible risk of impaired fertility. S36/37- Wear suitable protective clothing and gloves. S44- If you feel unwell, seek medical advice (show the label when possible). S53- Avoid exposure - obtain special instructions before use.

HMIS (U.S.A.):

Health Hazard: 1

Fire Hazard: 0

Reactivity: 0

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 1

Flammability: 0

Reactivity: 0

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Safety glasses.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

MATERIAL SAFETY DATA SHEET

Gasoline, All Grades **MSDS No. 9950**

EMERGENCY OVERVIEW

DANGER!

EXTREMELY FLAMMABLE - EYE AND MUCOUS MEMBRANE IRRITANT - EFFECTS CENTRAL NERVOUS SYSTEM - HARMFUL OR FATAL IF SWALLOWED - ASPIRATION HAZARD

NFPA 704 (Section 16)

High fire hazard. Keep away from heat, spark, open flame, and other ignition sources.

If ingested, do NOT induce vomiting, as this may cause chemical pneumonia (fluid in the lungs). Contact may cause eye, skin and mucous membrane irritation. Harmful if absorbed through the skin. Avoid prolonged breathing of vapors or mists. Inhalation may cause irritation, anesthetic effects (dizziness, nausea, headache, intoxication), and respiratory system effects.

Long-term exposure may cause effects to specific organs, such as to the liver, kidneys, blood, nervous system, and skin. Contains benzene, which can cause blood disease, including anemia and leukemia.

1. CHEMICAL PRODUCT and COMPANY INFORMATION

Hess Corporation
1 Hess Plaza
Woodbridge, NJ 07095-0961

EMERGENCY TELEPHONE NUMBER (24 hrs):	**CHEMTREC (800)424-9300**
COMPANY CONTACT (business hours):	Corporate Safety (732)750-6000
MSDS (Environment, Health, Safety) Internet Website	www.hess.com

SYNONYMS: Hess Conventional (Oxygenated and Non-oxygenated) Gasoline; Reformulated Gasoline (RFG); Reformulated Gasoline Blendstock for Oxygenate Blending (RBOB); Unleaded Motor or Automotive Gasoline

See Section 16 for abbreviations and acronyms.

2. COMPOSITION and INFORMATION ON INGREDIENTS *

INGREDIENT NAME (CAS No.)	CONCENTRATION PERCENT BY WEIGHT
Gasoline (86290-81-5)	100
Benzene (71-43-2)	0.1 - 4.9 (0.1 - 1.3 reformulated gasoline)
n-Butane (106-97-8)	< 10
Ethyl Alcohol (Ethanol) (64-17-5)	0 - 10
Ethyl benzene (100-41-4)	< 3
n-Hexane (110-54-3)	0.5 to 4
Methyl-tertiary butyl ether (MTBE) (1634-04-4)	0 to 15.0
Tertiary-amyl methyl ether (TAME) (994-05-8)	0 to 17.2
Toluene (108-88-3)	1 - 25
1,2,4- Trimethylbenzene (95-63-6)	< 6
Xylene, mixed isomers (1330-20-7)	1 - 15

A complex blend of petroleum-derived normal and branched-chain alkane, cycloalkane, alkene, and aromatic hydrocarbons. May contain antioxidant and multifunctional additives. Non-oxygenated Conventional Gasoline and RBOB do not have oxygenates (Ethanol or MTBE and/or TAME).

Oxygenated Conventional and Reformulated Gasoline will have oxygenates for octane enhancement or as legally required.

3. HAZARDS IDENTIFICATION

EYES
Moderate irritant. Contact with liquid or vapor may cause irritation.

SKIN
Practically non-toxic if absorbed following acute (single) exposure. May cause skin irritation with prolonged or repeated contact. Liquid may be absorbed through the skin in toxic amounts if large areas of skin are exposed repeatedly.

INGESTION
The major health threat of ingestion occurs from the danger of aspiration (breathing) of liquid drops into the lungs, particularly from vomiting. Aspiration may result in chemical pneumonia (fluid in the lungs), severe lung damage, respiratory failure and even death.

Ingestion may cause gastrointestinal disturbances, including irritation, nausea, vomiting and diarrhea, and central nervous system (brain) effects similar to alcohol intoxication. In severe cases, tremors, convulsions, loss of consciousness, coma, respiratory arrest, and death may occur.

INHALATION
Excessive exposure may cause irritations to the nose, throat, lungs and respiratory tract. Central nervous system (brain) effects may include headache, dizziness, loss of balance and coordination, unconsciousness, coma, respiratory failure, and death.

WARNING: the burning of any hydrocarbon as a fuel in an area without adequate ventilation may result in hazardous levels of combustion products, including carbon monoxide, and inadequate oxygen levels, which may cause unconsciousness, suffocation, and death.

CHRONIC EFFECTS and CARCINOGENICITY
Contains benzene, a regulated human carcinogen. Benzene has the potential to cause anemia and other blood diseases, including leukemia, after repeated and prolonged exposure. Exposure to light hydrocarbons in the same boiling range as this product has been associated in animal studies with systemic toxicity. See also Section 11 - Toxicological Information.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE
Irritation from skin exposure may aggravate existing open wounds, skin disorders, and dermatitis (rash). Chronic respiratory disease, liver or kidney dysfunction, or pre-existing central nervous system disorders may be aggravated by exposure.

4. FIRST AID MEASURES

EYES
In case of contact with eyes, immediately flush with clean, low-pressure water for at least 15 min. Hold eyelids open to ensure adequate flushing. Seek medical attention.

SKIN
Remove contaminated clothing. Wash contaminated areas thoroughly with soap and water or waterless hand cleanser. Obtain medical attention if irritation or redness develops.

INGESTION

DO NOT INDUCE VOMITING. Do not give liquids. Obtain immediate medical attention. If spontaneous vomiting occurs, lean victim forward to reduce the risk of aspiration. Small amounts of material which enter the mouth should be rinsed out until the taste is dissipated.

INHALATION
Remove person to fresh air. If person is not breathing, ensure an open airway and provide artificial respiration. If necessary, provide additional oxygen once breathing is restored if trained to do so. Seek medical attention immediately.

5. FIRE FIGHTING MEASURES

FLAMMABLE PROPERTIES:

FLASH POINT:	-45 °F (-43°C)
AUTOIGNITION TEMPERATURE:	highly variable; > 530 °F (>280 °C)
OSHA/NFPA FLAMMABILITY CLASS:	1A (flammable liquid)
LOWER EXPLOSIVE LIMIT (%):	1.4%
UPPER EXPLOSIVE LIMIT (%):	7.6%

FIRE AND EXPLOSION HAZARDS
Vapors may be ignited rapidly when exposed to heat, spark, open flame or other source of ignition. Flowing product may be ignited by self-generated static electricity. When mixed with air and exposed to an ignition source, flammable vapors can burn in the open or explode in confined spaces. Being heavier than air, vapors may travel long distances to an ignition source and flash back. Runoff to sewer may cause fire or explosion hazard.

EXTINGUISHING MEDIA
SMALL FIRES: Any extinguisher suitable for Class B fires, dry chemical, CO2, water spray, fire fighting foam, or Halon.

LARGE FIRES: Water spray, fog or fire fighting foam. Water may be ineffective for fighting the fire, but may be used to cool fire-exposed containers.

During certain times of the year and/or in certain geographical locations, gasoline may contain MTBE and/or TAME. Firefighting foam suitable for polar solvents is recommended for fuel with greater than 10% oxygenate concentration - refer to NFPA 11 "Low Expansion Foam - 1994 Edition."

FIRE FIGHTING INSTRUCTIONS
Small fires in the incipient (beginning) stage may typically be extinguished using handheld portable fire extinguishers and other fire fighting equipment.

Firefighting activities that may result in potential exposure to high heat, smoke or toxic by-products of combustion should require NIOSH/MSHA- approved pressure-demand self-contained breathing apparatus with full facepiece and full protective clothing.

Isolate area around container involved in fire. Cool tanks, shells, and containers exposed to fire and excessive heat with water. For massive fires the use of unmanned hose holders or monitor nozzles may be advantageous to further minimize personnel exposure. Major fires may require withdrawal, allowing the tank to burn. Large storage tank fires typically require specially trained personnel and equipment to extinguish the fire, often including the need for properly applied fire fighting foam.

See Section 16 for the NFPA 704 Hazard Rating.

6. ACCIDENTAL RELEASE MEASURES

ACTIVATE FACILITY SPILL CONTINGENCY or EMERGENCY PLAN.

Evacuate nonessential personnel and remove or secure all ignition sources. Consider wind direction; stay upwind and uphill, if possible. Evaluate the direction of product travel, diking, sewers, etc. to confirm spill areas. Spills may infiltrate subsurface soil and groundwater; professional assistance may be necessary to determine the extent of subsurface impact.

Carefully contain and stop the source of the spill, if safe to do so. Protect bodies of water by diking, absorbents, or absorbent boom, if possible. Do not flush down sewer or drainage systems, unless system is designed and permitted to handle such material. The use of fire fighting foam may be useful in certain situations to reduce vapors. The proper use of water spray may effectively disperse product vapors or the liquid itself, preventing contact with ignition sources or areas/equipment that require protection.

Take up with sand or other oil absorbing materials. Carefully shovel, scoop or sweep up into a waste container for reclamation or disposal - caution, flammable vapors may accumulate in closed containers. Response and clean-up crews must be properly trained and must utilize proper protective equipment (see Section 8).

7. HANDLING and STORAGE

HANDLING PRECAUTIONS

******USE ONLY AS A MOTOR FUEL******
******DO NOT SIPHON BY MOUTH******

Handle as a flammable liquid. Keep away from heat, sparks, and open flame! Electrical equipment should be approved for classified area. Bond and ground containers during product transfer to reduce the possibility of static-initiated fire or explosion.

Special slow load procedures for "switch loading" must be followed to avoid the static ignition hazard that can exist when higher flash point material (such as fuel oil) is loaded into tanks previously containing low flash point products (such as this product) - see API Publication 2003, "Protection Against Ignitions Arising Out Of Static, Lightning and Stray Currents.

STORAGE PRECAUTIONS

Keep away from flame, sparks, excessive temperatures and open flame. Use approved vented containers. Keep containers closed and clearly labeled. Empty product containers or vessels may contain explosive vapors. Do not pressurize, cut, heat, weld or expose such containers to sources of ignition.

Store in a well-ventilated area. This storage area should comply with NFPA 30 "Flammable and Combustible Liquid Code". Avoid storage near incompatible materials. The cleaning of tanks previously containing this product should follow API Recommended Practice (RP) 2013 "Cleaning Mobile Tanks In Flammable and Combustible Liquid Service" and API RP 2015 "Cleaning Petroleum Storage Tanks".

WORK/HYGIENIC PRACTICES

Emergency eye wash capability should be available in the near proximity to operations presenting a potential splash exposure. Use good personal hygiene practices. Avoid repeated and/or prolonged skin exposure. Wash hands before eating, drinking, smoking, or using toilet facilities. Do not use as a cleaning solvent on the skin. Do not use solvents or harsh abrasive skin cleaners for washing this product from exposed skin areas. Waterless hand cleaners are effective. Promptly remove contaminated clothing and launder before reuse. Use care when laundering to prevent the formation of flammable vapors which could ignite via washer or dryer. Consider the need to discard contaminated leather shoes and gloves.

8. EXPOSURE CONTROLS and PERSONAL PROTECTION

EXPOSURE LIMITS

Component (CAS No.)	Source	TWA (ppm)	STEL (ppm)	Exposure Limits Note
Gasoline (86290-81-5)	ACGIH	300	500	A3
Benzene (71-43-2)	OSHA	1	5	Carcinogen
	ACGIH	0.5	2.5	A1, skin
	USCG	1	5	
n-Butane (106-97-8)	ACGIH	1000	--	Aliphatic Hydrocarbon Gases Alkane (C1-C4)
Ethyl Alcohol (ethanol) (64-17-5)	OSHA	1000	--	
	ACGIH	1000	--	A4
Ethyl benzene (100-41-4)	OSHA	100	--	
	ACGIH	100	125	A3
n-Hexane (110-54-3)	OSHA	500	--	
	ACGIH	50	--	Skin
Methyl-tertiary butyl ether [MTBE] (1634-04-4)	ACGIH	50		A3
Tertiary-amyl methyl ether [TAME] (994-05-8)				None established
Toluene (108-88-3)	OSHA	200		Ceiling: 300 ppm; Peak: 500 ppm (10 min.)
	ACGIH	20	--	A4
1,2,4- Trimethylbenzene (95-63-6)	ACGIH	25	--	
Xylene, mixed isomers (1330-20-7)	OSHA	100	--	
	ACGIH	100	150	A4

ENGINEERING CONTROLS

Use adequate ventilation to keep vapor concentrations of this product below occupational exposure and flammability limits, particularly in confined spaces.

EYE/FACE PROTECTION

Safety glasses or goggles are recommended where there is a possibility of splashing or spraying.

SKIN PROTECTION

Gloves constructed of nitrile or neoprene are recommended. Chemical protective clothing such as that made of of E.I. DuPont Tychem ®, products or equivalent is recommended based on degree of exposure.

Note: The resistance of specific material may vary from product to product as well as with degree of exposure. Consult manufacturer specifications for further information.

RESPIRATORY PROTECTION

A NIOSH-approved air-purifying respirator with organic vapor cartridges or canister may be permissible under certain circumstances where airborne concentrations are or may be expected to exceed exposure limits or for odor or irritation. Protection provided by air-purifying respirators is limited. Refer to OSHA 29 CFR 1910.134, NIOSH Respirator Decision Logic, and the manufacturer for additional guidance on respiratory protection selection and limitations.

Use a positive pressure, air-supplied respirator if there is a potential for uncontrolled release, exposure levels are not known, in oxygen-deficient atmospheres, or any other circumstance where an air-purifying respirator may not provide adequate protection.

9. PHYSICAL and CHEMICAL PROPERTIES

APPEARANCE

A translucent, straw-colored or light yellow liquid

ODOR
A strong, characteristic aromatic hydrocarbon odor. Oxygenated gasoline with MTBE and/or TAME may have a sweet, ether-like odor and is detectable at a lower concentration than non-oxygenated gasoline.

ODOR THRESHOLD

	Odor Detection	Odor Recognition
Non-oxygenated gasoline:	0.5 - 0.6 ppm	0.8 - 1.1 ppm
Gasoline with 15% MTBE:	0.2 - 0.3 ppm	0.4 - 0.7 ppm
Gasoline with 15% TAME:	0.1 ppm	0.2 ppm

BASIC PHYSICAL PROPERTIES

BOILING RANGE:	85 to 437 °F (39 to 200 °C)
VAPOR PRESSURE:	6.4 - 15 RVP @ 100 °F (38 °C) (275-475 mm Hg @ 68 °F (20 °C)
VAPOR DENSITY (air = 1):	AP 3 to 4
SPECIFIC GRAVITY (H_2O = 1):	0.70 – 0.78
EVAPORATION RATE:	10-11 (n-butyl acetate = 1)
PERCENT VOLATILES:	100 %
SOLUBILITY (H_2O):	Non-oxygenated gasoline - negligible (< 0.1% @ 77 °F). Gasoline with 15% MTBE - slight (0.1 - 3% @ 77 °F); ethanol is readily soluble in water

10. STABILITY and REACTIVITY)
STABILITY: Stable. Hazardous polymerization will not occur.

CONDITIONS TO AVOID
Avoid high temperatures, open flames, sparks, welding, smoking and other ignition sources

INCOMPATIBLE MATERIALS
Keep away from strong oxidizers.

HAZARDOUS DECOMPOSITION PRODUCTS
Carbon monoxide, carbon dioxide and non-combusted hydrocarbons (smoke). Contact with nitric and sulfuric acids will form nitrocresols that can decompose violently.

11. TOXICOLOGICAL PROPERTIES
ACUTE TOXICITY
Acute Dermal LD50 (rabbits): > 5 ml/kg
Acute Oral LD50 (rat): 18.75 ml/kg
Primary dermal irritation (rabbits): slightly irritating
Draize eye irritation (rabbits): non-irritating
Guinea pig sensitization: negative

CHRONIC EFFECTS AND CARCINOGENICITY
Carcinogenicity: OSHA: NO IARC: YES - 2B NTP: NO ACGIH: YES (A3)

IARC has determined that gasoline and gasoline exhaust are possibly carcinogenic in humans. Inhalation exposure to completely vaporized unleaded gasoline caused kidney cancers in male rats and liver tumors in female mice. The U.S. EPA has determined that the male kidney tumors are species-specific and are irrelevant for human health risk assessment. The significance of the tumors seen in female mice is not known. Exposure to light hydrocarbons in the same boiling range as this product has been associated in animal studies with effects to the central and peripheral nervous systems, liver, and kidneys. The significance of these animal models to predict similar human response to gasoline is uncertain.

This product contains benzene. Human health studies indicate that prolonged and/or repeated overexposure to benzene may cause damage to the blood-forming system (particularly bone marrow), and serious blood disorders such as aplastic anemia and leukemia. Benzene is listed as a human carcinogen by the NTP, IARC, OSHA and ACGIH.

This product may contain methyl tertiary butyl ether (MTBE): animal and human health effects studies indicate that MTBE may cause eye, skin, and respiratory tract irritation, central nervous system depression and neurotoxicity. MTBE is classified as an animal carcinogen (A3) by the ACGIH.

12. ECOLOGICAL INFORMATION

Keep out of sewers, drainage areas and waterways. Report spills and releases, as applicable, under Federal and State regulations. If released, oxygenates such as ethers and alcohols will be expected to exhibit fairly high mobility in soil, and therefore may leach into groundwater. The API (www.api.org) provides a number of useful references addressing petroleum and oxygenate contamination of groundwater.

13. DISPOSAL CONSIDERATIONS

Consult federal, state and local waste regulations to determine appropriate disposal options.

14. TRANSPORTATION INFORMATION

DOT PROPER SHIPPING NAME:	Gasoline
DOT HAZARD CLASS and PACKING GROUP:	3, PG II
DOT IDENTIFICATION NUMBER:	UN 1203
DOT SHIPPING LABEL:	FLAMMABLE LIQUID

PLACARD:

15. REGULATORY INFORMATION

U.S. FEDERAL, STATE, and LOCAL REGULATORY INFORMATION

This product and its constituents listed herein are on the EPA TSCA Inventory. Any spill or uncontrolled release of this product, including any substantial threat of release, may be subject to federal, state and/or local reporting requirements. This product and/or its constituents may also be subject to other federal, state, or local regulations; consult those regulations applicable to your facility/operation.

CLEAN WATER ACT (OIL SPILLS)

Any spill or release of this product to "navigable waters" (essentially any surface water, including certain wetlands) or adjoining shorelines sufficient to cause a visible sheen or deposit of a sludge or emulsion must be reported immediately to the National Response Center (1-800-424-8802) as required by U.S. Federal Law. Also contact appropriate state and local regulatory agencies as required.

CERCLA SECTION 103 and SARA SECTION 304 (RELEASE TO THE ENVIRONMENT)

The CERCLA definition of hazardous substances contains a "petroleum exclusion" clause which exempts crude oil, refined, and unrefined petroleum products and any indigenous components of such. However, other federal reporting requirements (e.g., SARA Section 304 as well as the Clean Water Act if the spill occurs on navigable waters) may still apply.

SARA SECTION 311/312 - HAZARD CLASSES

ACUTE HEALTH	CHRONIC HEALTH	FIRE	SUDDEN RELEASE OF PRESSURE	REACTIVE
X	X	X	--	--

SARA SECTION 313 - SUPPLIER NOTIFICATION

This product contains the following toxic chemicals subject to the reporting requirements of section 313 of the Emergency Planning and Community Right-To-Know Act (EPCRA) of 1986 and of 40 CFR 372:

INGREDIENT NAME (CAS NUMBER)	CONCENTRATION WT. PERCENT
Benzene (71-43-2)	0.1 to 4.9 (0.1 to 1.3 for reformulated gasoline)
Ethyl benzene (100-41-4)	< 3

n-Hexane (110-54-3)	0.5 to 4
Methyl-tertiary butyl ether (MTBE) (1634-04-4)	0 to 15.0
Toluene (108-88-3)	1 to 15
1,2,4- Trimethylbenzene (95-63-6)	< 6
Xylene, mixed isomers (1330-20-7)	1 to 15

US EPA guidance documents (www.epa.gov/tri) for reporting Persistent Bioaccumulating Toxics (PBTs) indicate this product may contain the following deminimis levels of toxic chemicals subject to Section 313 reporting:

INGREDIENT NAME (CAS NUMBER)	CONCENTRATION - Parts per million (ppm) by weight
Polycyclic aromatic compounds (PACs)	17
Benzo (g,h,i) perylene (191-24-2)	2.55
Lead (7439-92-1)	0.079

CALIFORNIA PROPOSITION 65 LIST OF CHEMICALS

This product contains the following chemicals that are included on the Proposition 65 "List of Chemicals" required by the California Safe Drinking Water and Toxic Enforcement Act of 1986:

INGREDIENT NAME (CAS NUMBER)	Date Listed
Benzene	2/27/1987
Ethyl benzene	6/11/2004
Toluene	1/1/1991

CANADIAN REGULATORY INFORMATION (WHMIS)

Class B, Division 2 (Flammable Liquid)
Class D, Division 2A (Very toxic by other means) and Class D, Division 2B (Toxic by other means)

PREPRUFE® 300R & 160R

Pre-applied waterproofing membranes that bond integrally to poured concrete for use below slabs or behind basement walls on confined sites

Description

Preprufe® 300R & 160R membranes are unique composite sheets comprising a thick HDPE film, an aggressive pressure sensitive adhesive and a weather resistant protective coating.

Unlike conventional non-adhering membranes, which are vulnerable to water ingress tracking between the unbonded membrane and structure, the unique Preprufe bond to concrete prevents ingress or migration of water around the structure.

The Preprufe R System includes:

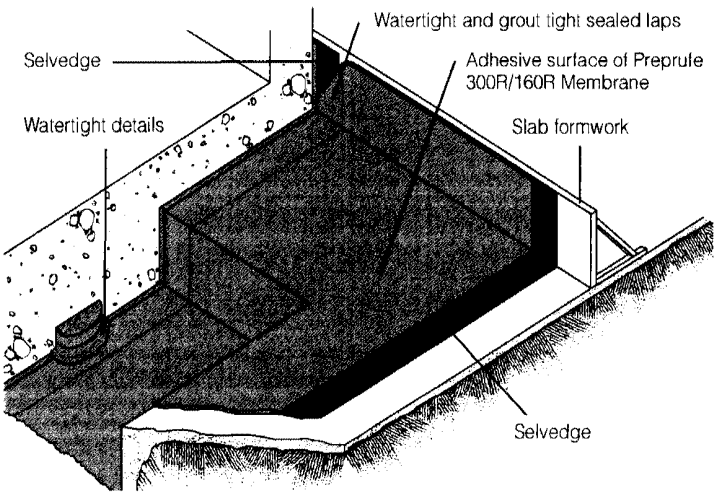
- **Preprufe 300R**—heavy-duty grade for use below slabs and on rafts (i.e. mud slabs). Designed to accept the placing of heavy reinforcement using conventional concrete spacers.
- **Preprufe 160R**—thinner grade for blindside, zero property line applications against soil retention systems.
- **Preprufe Tape LT**—for covering cut edges, roll ends, penetrations and detailing (temperatures between 25°F (-4°C) and 86°F (+30°C)).
- **Preprufe Tape HC**—as above for use in Hot Climates (minimum 50°F (10°C)).
- **Bituthene® Liquid Membrane**—for sealing around penetrations, etc.
- **Adcor™ ES**—waterstop for joints in concrete walls and floors
- **Preprufe Tieback Covers**—preformed cover for soil retention wall tieback heads
- **Preprufe Preformed Corners**—preformed inside and outside corners

Preprufe 300R & 160R membranes are applied either horizontally to smooth prepared concrete, carton forms or well rolled and compacted earth or crushed stone substrate; or vertically to permanent formwork or adjoining structures. Concrete is then cast directly against the adhesive side of the membranes. The specially developed Preprufe adhesive layers work together to form a continuous and integral seal to the structure.

Preprufe can be returned up the inside face of slab formwork but is not recommended for conventional twin-sided formwork on walls, etc. Use Bituthene self-adhesive membrane or Procor® fluid applied membrane to walls after removal of formwork for a fully bonded system to all structural surfaces.

Advantages

- **Forms a unique continuous adhesive bond to concrete poured against it**—prevents water migration and makes it unaffected by ground settlement beneath slabs
- **Fully-adhered watertight laps** and detailing
- **Provides a barrier to water, moisture and gas**—physically isolates the structure from the surrounding ground
- **BBA Certified** for basement Grades 2, 3, & 4 to BS 8102:1990
- **Zero permeance** to moisture
- **Solar reflective**—reduced temperature gain
- **Simple and quick to install**—requiring no priming or fillets
- **Can be applied to permanent formwork**—allows maximum use of confined sites
- **Self protecting**—can be trafficked immediately after application and ready for immediate placing of reinforcement
- **Unaffected by wet conditions**—cannot activate prematurely
- **Inherently waterproof, non-reactive system:**
  - not reliant on confining pressures or hydration
  - unaffected by freeze/thaw, wet/dry cycling
- **Chemical resistant**—effective in most types of soils and waters, protects structure from salt or sulphate attack



Drawings are for illustration purposes only.
Please refer to graceconstruction.com for specific application details.

Installation

The most current application instructions, detail drawings and technical letters can be viewed at graceconstruction.com. For other technical information contact your local Grace representative.

Preprufe 300R & 160R membranes are supplied in rolls 4 ft (1.2 m) wide, with a selvedge on one side to provide self-adhered laps for continuity between rolls. The rolls of Preprufe Membrane and Preprufe Tape are interwound with a disposable plastic release liner which must be removed before placing reinforcement and concrete.

Substrate Preparation

All surfaces—It is essential to create a sound and solid substrate to eliminate movement during the concrete pour. Substrates must be regular and smooth with no gaps or voids greater than 0.5 in. (12 mm). Grout around all penetrations such as utility conduits, etc. for stability (see Figure 1).

Horizontal—The substrate must be free of loose aggregate and sharp protrusions. Avoid curved or rounded substrates. When installing over earth or crushed stone, ensure substrate is well compacted to avoid displacement of substrate due to traffic or concrete pour. The surface does not need to be dry, but standing water must be removed.

Vertical—Use concrete, plywood, insulation or other approved facing to sheet piling to provide support to the membrane. Board systems such as timber lagging must be close butted to provide support and not more than 0.5 in. (12 mm) out of alignment.

Membrane Installation

Preprufe can be applied at temperatures of 25°F (-4°C) or above. When installing Preprufe in cold or marginal weather conditions 55°F (<13°C) the use of Preprufe Tape LT is recommended at all laps and detailing. Preprufe Tape LT should be applied to clean, dry surfaces and the release liner must be removed immediately after application. Alternatively, Preprufe Low Temperature (LT) is available for low temperature condition applications. Refer to Preprufe LT data sheet for more information.

Horizontal substrates—Place the membrane HDPE film side to the substrate with the clear plastic release liner facing towards the concrete pour. End laps should be staggered to avoid a build up of layers. Leave plastic release liner in position until overlap procedure is completed (see Figure 2).

Accurately position succeeding sheets to overlap the previous sheet 3 in. (75 mm) along the marked selvedge. Ensure the underside of the succeeding sheet is clean, dry and free from contamination before attempting to overlap. Peel back the plastic release liner from between the overlaps as the two layers are bonded together. Ensure a continuous bond is achieved without creases and roll firmly with a heavy roller. Completely remove the plastic liner to expose the protective coating. Any initial tack will quickly disappear.

Refer to Grace Tech Letter 15 for information on suitable rebar chairs for Preprufe.

Vertical substrates—Mechanically fasten the membrane vertically using fasteners appropriate to the substrate with the the clear plastic release liner facing towards the concrete pour. The membrane may be installed in any convenient length. Fastening can be made through the selvedge using a small and low profile head fastener so that the membrane lays flat and allows firmly rolled overlaps. Immediately remove the plastic release liner.

Ensure the underside of the succeeding sheet is clean, dry and free from contamination before attempting to overlap. Roll firmly to ensure a watertight seal.

Roll ends and cut edges—Overlap all roll ends and cut edges by a minimum 3 in. (75 mm) and ensure the area is clean and free from contamination, wiping with a damp cloth if necessary. Allow to dry and apply Preprufe Tape LT (or HC in hot climates) centered over the lap edges and roll firmly (see Figure 3). Immediately remove printed plastic release liner from the tape.

Details

Refer to Preprufe Field Application Manual, Section V Application Instructions or visit graceconstruction.com. This manual gives comprehensive guidance and standard details.

Membrane Repair

Inspect the membrane before installation of reinforcement steel, formwork and final placement of concrete. The membrane can be easily cleaned by power washing if required. Repair damage by wiping the area with a damp cloth to ensure the area is clean and free from dust, and allow to dry. Repair small punctures (0.5 in. (12 mm) or less) and slices by applying Preprufe Tape centered over the damaged area and roll firmly. Remove the release liner from the tape. Repair holes and large punctures by applying a patch of Preprufe membrane, which extends 6 in. (150 mm) beyond the damaged area. Seal all edges of the patch with Preprufe Tape, remove the release liner from the tape and roll firmly. Any areas of damaged adhesive should be covered with Preprufe Tape. Remove printed plastic release liner from tape. Where exposed selvedge has lost adhesion or laps have not been sealed, ensure the area is clean and dry and cover with fresh Preprufe Tape, rolling firmly. Alternatively, use a hot air gun or similar to activate adhesive and firmly roll lap to achieve continuity.

Pouring of Concrete

Ensure the plastic release liner is removed from all areas of Preprufe membrane and tape.

It is recommended that concrete be poured within 56 days (42 days in hot climates) of application of the membrane. Following proper ACI guidelines, concrete must be placed carefully and consolidated properly to avoid damage to the membrane. Never use a sharp object to consolidate the concrete.

Removal of Formwork

Preprufe membranes can be applied to removable formwork, such as slab perimeters, elevator and lift pits, etc. Once the concrete is poured the formwork must remain in place until the concrete has gained sufficient compressive strength to develop the surface bond. Preprufe membranes are not recommended for conventional twin-sided wall forming systems.

A minimum concrete compressive strength of 1500 psi (10 N/mm^2) is recommended prior to stripping formwork supporting Preprufe membranes. Premature stripping may result in displacement of the membrane and/or spalling of the concrete.

Refer to Grace Tech Letter 17 for information on removal of formwork for Preprufe.

Physical Properties

Property	Typical Value 300R	Typical Value 160R	Test Method
Color	white	white	
Thickness	0.046 in. (1.2 mm)	0.032 in. (0.8 mm)	ASTM D3767
Lateral Water Migration Resistance	Pass at 231 ft (71 m) of hydrostatic head pressure	Pass at 231 ft (71 m) of hydrostatic head pressure	ASTM D5385, modified[1]
Low temperature flexibility	Unaffected at -20°F (-29°C)	Unaffected at -20°F (-29°C)	ASTM D1970
Resistance to hydrostatic head	231 ft (71 m)	231 ft (71 m)	ASTM D5385, modified[2]
Elongation	500%	500%	ASTM D412, modified[3]
Tensile strength, film	4000 psi (27.6 MPa)	4000 psi (27.6 MPa)	ASTM D412
Crack cycling at -9.4°F (-23°C), 100 cycles	Unaffected, Pass	Unaffected, Pass	ASTM C836
Puncture resistance	221 lbs (990 N)	100 lbs (445 N)	ASTM E154
Peel adhesion to concrete	5 lbs/in. (880 N/m)	5 lbs/in. (880 N/m)	ASTM D903, modified[4]
Lap peel adhesion	5 lbs/in. (880 N/m)	5 lbs/in. (880 N/m)	ASTM D1876, modified[5]
Permeance to water vapor transmission	0.01 perms (0.6 ng/(Pa x s x m²))	0.01 perms (0.6 ng/(Pa x s x m²))	ASTM E96, method B
Water absorption	0.5%	0.5%	ASTM D570

Footnotes:

1. Lateral water migration resistance is tested by casting concrete against membrane with a hole and subjecting the membrane to hydrostatic head pressure with water. The test measures the resistance of lateral water migration between the concrete and the membrane.
2. Hydrostatic head tests of Preprufe Membranes are performed by casting concrete against the membrane with a lap. Before the concrete cures, a 0.125 in. (3 mm) spacer is inserted perpendicular to the membrane to create a gap. The cured block is placed in a chamber where water is introduced to the membrane surface up to the head indicated.
3. Elongation of membrane is run at a rate of 2 in. (50 mm) per minute.
4. Concrete is cast against the protective coating surface of the membrane and allowed to properly dry (7 days minimum). Peel adhesion of membrane to concrete is measured at a rate of 2 in. (50 mm) per minute at room temperature.
5. The test is conducted 15 minutes after the lap is formed (per Grace published recommendations) and run at a rate of 2 in. (50 mm) per minute.

Specification Clauses

Preprufe 300R or 160R shall be applied with its adhesive face presented to receive fresh concrete to which it will integrally bond. Only Grace Construction Products approved membranes shall be bonded to Preprufe 300R/160R. All Preprufe 300R/160R system materials shall be supplied by Grace Construction Products, and applied strictly in accordance with their instructions. Specimen performance and formatted clauses are also available.

NOTE: Use Preprufe Tape to tie-in Procor with Preprufe.

Health and Safety

Refer to relevant Material Safety data sheet. Complete rolls should be handled by a minimum of two persons.

Table 19-2
Noise Exposure Guidelines For Use in City Environmental Impact Review[1]

Receptor Type	Time Period	Acceptable General External Exposure	Airport[3] Exposure	Marginally Acceptable General External Exposure	Airport[3] Exposure	Marginally Unacceptable General External Exposure	Airport[3] Exposure	Clearly Unacceptable General External Exposure	Airport[3] Exposure
1. Outdoor area requiring serenity and quiet[2]		$L_{10} \leq 55$ dBA	$L_{dn} \leq 60$ dBA		$60 < L_{dn} \leq 65$ dBA		(i) $65 < L_{dn} \leq 70$ dBA, (ii) $70 \leq L_{dn}$		$L_{dn} \leq 75$ dBA
2. Hospital, nursing home		$L_{10} \leq 55$ dBA		$55 < L_{10} \leq 65$ dBA		$65 < L_{10} \leq 80$ dBA		$L_{10} > 80$ dBA	
3. Residence, residential hotel, or motel	(7 AM to 10 PM)	$L_{10} \leq 65$ dBA		$65 < L_{10} \leq 70$ dBA		$70 < L_{10} \leq 80$ dBA		$L_{10} > 80$ dBA	
	(10 PM to 7 AM)	$L_{10} \leq 55$ dBA		$55 < L_{10} \leq 70$ dBA		$70 < L_{10} \leq 80$ dBA		$L_{10} > 80$ dBA	
4. School, museum, library, court, house of worship, transient hotel or motel, public meeting room, auditorium, out-patient public health facility		Same as Residential Day (7 AM-10 PM)		Same as Residential Day (7 AM-10 PM)		Same as Residential Day (7 AM-10 PM)		Same as Residential Day (7 AM-10 PM)	
5. Commercial or office		Same as Residential Day (7 AM-10 PM)		Same as Residential Day (7 AM-10 PM)		Same as Residential Day (7 AM-10 PM)		Same as Residential Day (7 AM-10 PM)	
6. Industrial, public areas only[4]	Note 4	Note 4		Note 4		Note 4		Note 4	

Notes:

(i) In addition, any new activity shall not increase the ambient noise level by 3 dB(A) or more.

[1] Measurements and projections of noise exposures are to be made at appropriate heights above site boundaries as given by American National Standards Institute (ANSI) Standards; all values are for the worst hour in the time period.

[2] Tracts of land where serenity and quiet are extraordinarily important and serve as important public need, and where the preservation of these qualities is essential for the area to serve its intended purpose. Such areas could include amphitheaters, particular parks or portions of parks, or open spaces dedicated or recognized by appropriate local officials for activities requiring special qualities of serenity and quiet. Examples are grounds for ambulatory hospital patients and patients and residents of sanitariums and nursing homes.

[3] One may use the FAA-approved L_{dn} contours supplied by the Port Authority, or the noise contours may be computed from the federally approved INM Computer Model using flight data supplied by the Port Authority of New York and New Jersey.

[4] External Noise Exposure standards for industrial areas of sounds produced by industrial operations other than operating motor vehicles or other transportation facilities are spelled out in the New York City Zoning Resolution, Sections 42-20 and 42-21. The referenced standards apply to M1, M2, and M3 manufacturing districts and to adjoining residence districts (performance standards are octave band standards).

Sources: New York City Department of Environmental Protection (adopted policy 1983).

421. MOBILE SOURCES

421.1. Vehicular Noise

The impact assessments for vehicular noise compare the proposed project $L_{eq(1)}$ noise levels at receptors potentially affected by the project to those calculated for the No-Action condition. If the No-Action levels are less than 60 dB(A) $L_{eq(1)}$ and the analysis period is not at nighttime, an increase of 5 dB(A) $L_{eq(1)}$ or more in the future with the project would be considered a significant impact. In order for the 5 dB(A) threshold to be valid, the resultant With-Action condition noise level would have to be equal to or less than 65 dB(A). If the No-Action noise level is equal to or greater than 62 dB(A) $L_{eq(1)}$, or if the analysis period is a nighttime analysis period, the incremental significant impact threshold would be 3 dB(A) $L_{eq(1)}$. If the No-Action noise level is 61 dB(A) $L_{eq(1)}$, the maximum incremental increase would be 4 dB(A), since an increase higher than this would result in a noise level higher than the 65 dB(A) $L_{eq(1)}$ threshold and be considered significant.

WARNING: These printed materials may be out of date.
Please ensure you have the current version that can be found on www.nyc.gov/oec.

If the proposed project would introduce a sensitive receptor, With-Action noise levels in dB(A) $L_{10(1)}$ would be compared to the values contained in the Noise Exposure Guidelines. If these noise levels would exceed the marginally acceptable levels, a significant impact would occur unless the building design as proposed provides a composite building attenuation that would be sufficient to reduce these levels to an acceptable interior noise level. These values are shown in Table 19-3. The applicant should demonstrate that sufficient attenuation is provided in the form of composite building attenuation calculations based upon the Outdoor Indoor Transmission Class (OITC) values of individual major window/wall/ventilation components, unless a federal funding source, as defined in Subsection 723 of this chapter, requires usage of a different single number rating, such as the Sound Transmission Class (STC) rating, to calculate the noise levels and attenuation values.

Table 19-3
Required Attenuation Values To Achieve Acceptable Interior Noise Levels

	Marginally Unacceptable				Clearly Unacceptable
Noise level with proposed project	$70<L_{10}\leq73$	$73<L_{10}\leq76$	$76<L_{10}\leq78$	$78<L_{10}\leq80$	$80<L_{10}$
Attenuation[A]	(I) 28 dB(A)	(II) 31 dB(A)	(III) 33 dB(A)	(IV) 35 dB(A)	$36 + (L_{10} - 80)$[B] dB(A)

Note: [A] The above composite window-wall attenuation values are for residential dwellings and community facility development. Commercial office spaces and meeting rooms would be 5 dB(A) less in each category. All of the above categories require a closed window situation and hence an alternate means of ventilation.
[B] Required attenuation values increase by 1 dB(A) increments for L_{10} values greater than 80 dBA.
Source: New York City Department of Environmental Protection

421.2. *Aircraft Noise*

If the proposed project would create an aircraft facility (heliport or airport), cause a change in flight paths or flight frequency at an aircraft facility, or be subject to aircraft noise, the impact criteria discussed in Sections 410 and 420 apply. If these levels in dB(A) $L_{dn(V)}$ exceed the marginally acceptable level, a significant impact would occur, unless the building design as proposed provides a composite building attenuation that would be sufficient to reduce these levels to an acceptable interior noise level. In the case of significantly impacted buildings, design measures should be implemented that achieve the levels of composite building attenuation provided in Table 19-3. The applicant should demonstrate that sufficient attenuation is provided in the form of composite building attenuation calculations based upon the OITC values of individual major window/wall/ventilation components, unless a federal funding source, as defined in Subsection 723 of this chapter, requires usage of a different single number rating, such as the STC rating, to calculate the noise levels and attenuation values.

421.3. *Train Noise*

If the proposed project would create a rail facility, cause a change in frequency of trains along the rail facility, or be subject to rail noise, the impact criteria discussed in Sections 410 and 420 apply. If these levels in dB(A) $L_{dn(1)}$ exceed the marginally acceptable level, a significant impact would occur, unless the building design as proposed provides a composite building attenuation that would be sufficient to reduce these levels to an acceptable interior noise level. In the case of significantly impacted buildings, design measures should be implemented that achieve the levels of composite building attenuation provided in Table 19-3. The applicant should demonstrate that sufficient attenuation is provided in the form of composite building attenuation calculations based upon the OITC values of individual major window/wall/ventilation components, unless a federal funding source, as defined in Subsection 723 of this chapter, requires usage of a different single number rating, such as the STC rating, to calculate the noise levels and attenuation values.

(212) 720-3423

Name, Description and Location of Proposal

134-03 35th Street (aka New Millenium/Prince Street)

The applicant, C & G Empire Realty LLC, is proposing a zoning map amendment on a portion of Block 4949 (Lots 31, 46, and 8900) from a M1-1 zoning district to a R6 zoning district with a C2-2 commercial overlay. The subject area is located in the Downtown Flushing neighborhood in Queens Community District 7 north of Northern Boulevard and east of College Point Boulevard. The proposed rezoning area is on the north side 35th Avenue between Prince and Farrington Streets. The proposed action would serve to extend an adjacent R6/C2-2 zoning district that exist along the south side of 35th Avenue to include the proposed rezoning area.

The proposed action would facilitate a proposal by the applicant to redevelop a 43,146 square-foot property located at 134-03 35th Street (Block 4949, Lot 46) that is currently developed with a two-story, approximately 30,438 square-foot structure occupied by a wholesale appliance and plumbing supply company, accessory office space, and three retail stores. The applicant intends to redevelop the site as a 11-story mixed use building with a total floor area of 125,570 square feet (2.91 FAR) that contains 100 residential dwelling units (87,780 square feet), 17,640 square feet of commercial space, and community facility space of 20,150 square feet that includes a community center (14,000 square feet). The proposed project would also provide 189 subsurface and surface parking spaces with access from 35th Street for the residential subsurface parking garage (170 spaces) and from Prince Street for the non-residential surface parking area (19 spaces). To ensure a conservative analysis, the environmental review considers a projected development on the same site with 100 dwelling units, 17,640 square feet of commercial space, and 48,014 square feet of community facility space for a total floor area of approximately 153,434 square feet (3.56 FAR).

In addition, the proposed action could facilitate development on a second site, not owned by the applicant, located at 134-37 35th Street (Block 4949, Lot 31) and currently developed with a a one-story, approximately 36,960 square-foot former warehouse occupied by a restaurant,

Amanda M. Burden, FAICP, *Chair*
22 Reade Street, New York, N.Y. 10007-1216
(212) 720-3200 FAX (212) 720-3219
http://www.nyc.gov/planning

nightclub, and accessory offices. Under the proposed action, the site could potentially be redeveloped as a 11-story mixed-use building of approximately 172,480 square feet (4.10 FAR) containing approximately 110 residential dwelling units (96,480 square feet), approximately 38,000 square feet of ground floor retail and commercial office space, approximately 38,000 square feet of second floor community facility medical office space, and approximately 344 accessory garage parking spaces in the building's cellar and sub-cellar levels.

Lot 8900, located north of and adjacent to Lot 31, would not be developed in the future as it would continue to serve as a right-of-way providing access to the adjacent lots 31 and 46. It was assumed for the purpose of this environmental review that the development rights pertaining to lot 8900 would be transferred to lot 31 as illustrated above. The analysis year for the proposed action is 2011.

As noted above, the rezoning area is presently zoned as a M1-1 district that permits light industrial uses at a maximum floor area ratio (FAR) of 1.0. The proposed action would rezone the area to a residential R6 zoning district with C2-2 commercial overlay that would permit mixed use buildings at a maximum FAR of 4.80. Building heights for R6 zoning districts are governed by the sky exposure plane. However, as this location is along the flight path for the LaGuardia Airport, buildings would be limited to no more than 115 feet in height. Also in R6 districts, parking is required at a rate of seven spaces for every ten dwelling units and open space has to be provided at a ratio between 27.5 to 37.5 percent.

The surrounding area is presently zoned M1-1 or M2-1 to the north and west of the proposed rezoning area. To the south beyond the adjacent R6/C2-2 district and south of Northern Boulevard are C4-3 and C4-2 districts. And to the east is a residential R6 district. At the current time, the properties adjacent to the proposed rezoning area to the north include a three-story walk up apartment building and a recently constructed three-story building containing two commercial uses (office and storage). Further to the north and west are one- and two-story warehouses, auto repair garages, and several small one- and two-story office and commercial buildings. It also includes several residential buildings including several three-story apartment buildings, two-story residences and row houses, and an eight-story condominium building. The area to the south of the site is predominantly developed with residential uses including two- and three-story residential and mixed-use buildings (ground floor retail space) and a four-story apartment building directly across 35th Avenue from the site. The area also includes several one- and two-story commercial buildings, a church and day care center, and a few one- and two-story warehouses. Four-story apartment buildings are located directly across the street from the proposed rezoning area to the east, as is the seven-story Flushing International Hotel and several retail stores along 35th Avenue.

To avoid any potential significant adverse impacts, an (E) designation (E-246) would be mapped as part of the proposed rezoning. The applicant's site (Block 4949, Lot 46) would receive an (E) designation for air quality and noise. The non-applicant site (Block 4949, Lot 31) would receive an (E) designation for hazardous materials, air quality and noise. In addition the lot that is presently serving as a right-of-way (Block 4949, Lot 8900) would receive an (E) designation for hazardous materials.

Development of a site with an (E) designation for hazardous materials would require that a Phase I Environmental Site Assessment in accordance with the American Society of Testing Materials

(ASTM) E1527-05 be conducted, and if necessary, a sampling and remediation protocol be developed and implemented to the satisfaction of New York City Department of Environmental Protection (DEP) prior to issuance of a building permit (pursuant to Section 11-15 of the City's Zoning Resolution). Such designation would eliminate the potential for significant adverse impacts from hazardous materials due to implementation of the proposed project.

The text of the (E) designation for hazardous materials for the properties identified below is as follows:

Block 4949, Lots 31 and 8900

Task 1

The fee owner(s) of the lot(s) restricted by this (E) designation will be required to prepare a scope of work for any soil, gas, or groundwater sampling and testing needed to determine if contamination exists, the extent of the contamination, and to what extent remediation may be required. The scope of work will include all relevant supporting documentation, including site plans and sampling locations. This scope of work will be submitted to DEP for review and approval prior to implementation. It will be reviewed to ensure that an adequate number of samples will be collected and that appropriate parameters are selected for laboratory analysis.

No sampling program may begin until written approval of a work plan and sampling protocol is received from DEP. The number and location of sample sites should be selected to adequately characterize the type and extent of the contamination, and the condition of the remainder of the site. The characterization should be complete enough to determine what remediation strategy (if any) is necessary after review of the sampling data. Guidelines and criteria for choosing sampling sites and performing sampling will be provided by DEP upon request.

Task 2

A written report with findings and a summary of the data must be presented to DEP after completion of the testing phase and laboratory analysis for review and approval. After receiving such test results, a determination will be provided by DEP if the results indicate that remediation is necessary.

If DEP determines that no remediation is necessary, written notice shall be given by DEP.

If remediation is necessary according to test results, a proposed remediation plan must be submitted to DEP for review and approval. The fee owner(s) of the lot(s) restricted by this (E) designation must perform such remediation as determined necessary by DEP. After completing the remediation, the fee owner(s) of the lot restricted by this (E) designation should provide proof that the work has been satisfactorily completed.

A DEP-approved construction-related health and safety plan would be implemented during excavation and construction activities to protect workers and the community from potentially significant adverse impacts associated with contaminated soil

and/or groundwater. This Plan would be submitted to DEP for review and approval prior to implementation.

The (E) designation for air quality would preclude the potential for significant adverse air quality impacts related to heating and hot water systems (HVAC) emissions. The text of the (E) designation for air quality for the properties identified below is as follows:

Block 4949, Lot 31

Any new residential and/or commercial development on the above-referenced property must use natural gas for HVAC systems or, if fuel oil No.4/2 is used, ensure that the heating, ventilating and air conditioning stack(s) are located at least 37 feet from the lot lines facing Prince Street and 35th Avenue, to avoid any potential significant adverse air quality impacts.

Block 4949, Lot 46

Any new residential and/or commercial development on the above-referenced property must use natural gas exclusively as the type of fuel for HVAC systems, to avoid any potential significant adverse air quality impacts.

The (E) designation for noise would preclude the potential for significant adverse impacts related to high levels of ambient noise associated with traffic along 35th Avenue. The text of the (E) designation for certain noise attenuation requirements for the properties identified below is as follows:

Block 4949, Lots 31 and 46

In order to ensure an acceptable interior noise environment, future residential/community facility/commercial uses must provide a closed window condition with a minimum of 30 dBA window/wall attenuation in order to maintain an interior noise level of 45 dBA. In order to maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, central air conditioning or air conditioning sleeves containing air conditioners.

Statement of No Significant Effect:

The Environmental Assessment and Review Division of the Department of City Planning, on behalf of the City Planning Commission, has completed its technical review of the Environmental Assessment Statement, dated January 21, 2009, prepared in connection with the ULURP Application (No. 030223 ZMQ). The City Planning Commission has determined that the proposed actions will have no significant effect on the quality of the environment, once it is modified as follows:

1. The applicant agrees via a restrictive declaration to conduct a Phase II Environmental Site Assessment (Phase II) in accordance with the sampling protocol approved by New York City Department of Environmental Protection (DEP).

The applicant further agrees to perform any necessary remediation of the subject property if hazardous materials are found as the result of the Phase II. The applicant would prepare a Remedial Action Plan, including a sampling protocol and a health and safety plan, for DEP for approval. Remediation measures would be undertaken pursuant to the approved remediation plan.

The restrictive declaration also restricts the applicant from submitting any permit applications to the New York City Department of Buildings (DOB) that would allow for soil disturbance on the subject property until such time that DEP provides the necessary written notice to DOB.

2. The applicant agrees via a restrictive declaration to conduct archaeological identification, investigation and mitigation in accordance with the *CEQR Technical Manual* and New York City Landmarks Preservation Commission (LPC) Guidelines for Archaeological Work in New York City.

   The restrictive declaration also restricts the applicant from submitting any permit applications to the DOB that would allow for soil disturbance on the subject property until such time that LPC provides the necessary written notice to DOB.

Supporting Statement:

The above determination is based on an environmental assessment which finds that:

1. Existing land and environmental records for the subject property were reviewed by DEP's Bureau of Environmental Planning and Assessment, and pursuant to a letter dated February 28, 2005, subsurface investigation of soil and groundwater was recommended by DEP due to the potential presence of hazardous materials on the site as a result of past and present on-site land uses. As such, the applicant has entered into a restrictive declaration which requires that a Phase II Environmental Site Assessment (Phase II) be conducted in accordance with the approved sampling protocol.

   Further, if warranted by the Phase II, the applicant would conduct any necessary site remediation in accordance with a Remedial Action Plan reviewed and approved by DEP. The restrictive declaration is binding upon the property's successors and assigns. The declaration serves as a mechanism to assure the potential for hazardous material contamination that may exist in the sub-surface soils and groundwater on the project site would be properly characterized prior to any site disturbance (i.e., site grading, excavation, demolition, or building construction). The restrictive declaration was prepared in a form acceptable to the DEP and the restrictive declaration was executed on July 3, 2006. Pursuant to a letter from the DEP dated September 14, 2006, the DEP is in receipt of a signed copy of a DEP-approved restrictive declaration with proof of recording for the site.

   Furthermore, as stated in the letter of February 28, 2005, DEP stipulated that the applicant would be required to conduct a building hazardous material survey of lead-based paint, PCBs, and asbestos in areas where construction, demolition, and/or renovation would occur on the subject property.

   Consequently, no significant adverse impacts related to hazardous materials will occur.

2. A previous application for the proposed development site requested a determination from LPC as to whether the subject site contains any historical, architectural, or archaeological significance. By letter dated December 31, 2002, LPC determined that the subject site may be archaeologically significant and that further testing would be required in order to determine if the site contains remains from Native American burials and occupation as well as from circa 1859 residential occupation. As such, the applicant has entered into a restrictive declaration which requires that prescribed archaeological work be conducted in accordance with in accordance with the *CEQR Technical Manual* and LPC Guidelines for Archaeological Work in New York City.

   The restrictive declaration is binding upon the property's successors and assigns. The declaration serves as a mechanism to assure that archaeological testing be conducted and that any necessary mitigation measures be undertaken prior to any site disturbance (i.e., site grading, excavation, demolition, or building construction). The restrictive declaration was prepared in a form acceptable to the LPC and the restrictive declaration was executed on May 10, 2006 and recorded with the City's Department of Finance on August 30, 2006.

   Consequently, no significant adverse impacts to archaeological resources will occur.

3. No other significant adverse effects on the environment which would require an Environmental Impact Statement are foreseeable.

It is fully agreed and understood that if the foregoing conditions, modification, and alterations are not fully incorporated into the proposed actions, this Conditional Negative Declaration shall become null and void. In such event, the applicant shall be required to prepare a Draft Environmental Impact Statement before proceeding further with said proposal.

134-03 35th Street (aka New Millenium/Prince Street)
CEQR No. 04DCP013Q

This Conditional Negative Declaration has been prepared in accordance with Article 8 of the Environmental Conservation Law 6NYCRR part 617.

I, the Undersigned, as the applicant or authorized representative for this proposal, hereby affix my signature in acceptance of the above conditions to the proposed actions.

Re: 35th Avenue Farrington Street Hotel Development
134-37 35th Avenue, Block 4949, Lot(s) #31, #30, OER Project# 14EHAN384Q
DOB Job# 420892323

Dear Mr. Bertini:

As the developer/owner of the above referenced project, Farrington Realty, LLC is aware of the remedial actions as presented in the Remedial Action Plan (RAP) for Noise and Air Quality dated March 23, 2015 as prepared and certified by Raymond Chan, R.A., our project Architect, Raymond Chan Architect, P.C.

It is agreed that any changes to the RAP must be submitted and approved by OER before being implemented.

We have considered the cost of these remedial actions and commit to installing the required elements as specified in the above referenced documents and agree to bring into compliance any construction which is found not to comply with the proposed remedial actions.

Please contact me if you have any questions regarding to this commitment.

George Xu

Appendix D

Installation Report for Air Quality and Noise – Certification and Guidance

An Installation Report (IR) will be submitted to OER following implementation of the remedial action defined in this RAP. The IR will document that the remedial work required under this RAP has been completed and has been performed in compliance with this plan. The IR will include:

Air Quality E-Designation

1. Letter stamped with a P.E. or R.A. seal certifying the completion of the installation of the HVAC system and/or boilers, as per the commitments specified in the Notice to Proceed and approved RAP. The letter must specify the system and/or units' manufacturer, model, type of fuel's usage and where required, the location of the stack (e.g., distance from lot line, height above street level). In addition, the letter should include a brief description of the project (e.g., number of floors, building height, number of units/rooms, total square footage, etc.). If requesting a Notice of No Objection for a Temporary Certificate of Occupancy, the letter must specify the reasons for requesting it, the areas of the building for which the installations have and have not been completed, the floors and/or the residential units which will be covered by the TCO. Please use a table listing the apartments to be included and excluded from the TCO request, by floor. Note: Notice of No Objection requests for TCO applications are for large scale development projects (only) and are issued by OER on a case by case basis.
2. Signed and stamped gas riser diagram or plan showing the location of the fuel tank (highlighted), marked "AS-BUILT".
3. Signed and stamped plans, marked "AS-BUILT", showing the location of the stack (highlighted) and the distances (highlighted) from each edge of the building (ONLY IF REQUIRED BY E-DESIGNATION).
4. Pictures of natural gas meter, tank where present, line connection to the HVAC system or boiler(s), HVAC system or boiler(s), stack.

Noise E-Designation

1. Letter stamped with a P.E. or R.A. seal certifying the completion of the installation of all the windows and alternate means of ventilation's components, as per the commitments specified in the Notice to Proceed and approved RAP. The letter must specify the windows' manufacturer, model, and glazing composition (e.g., ¼-inch glass, ½-inch air space, ¼-inch glass), and the alternate means of ventilation's manufacturer and model. In addition, the letter should include a brief description of the project (e.g., number of floors, building height, number of units/rooms, total square footage, etc.). If requesting a Notice of No Objection for a Temporary Certificate of Occupancy, the letter must specify the reasons for requesting it, the areas of the building for which the installations have and have not been completed, the floors and/or the residential units which will be covered by the TCO. Please use a table listing the apartments to be included and excluded from the TCO request, by floor. Note: Notice of No Objection requests for TCO applications are

for large scale development projects (only) and are issued by OER on a case by case basis.

2. Signed and stamped elevations, marked as "AS-BUILT", showing the locations of the different windows and glazing as described in the approved RAP
3. Signed and stamped plans, marked as "AS-BUILT", showing the locations of the alternate means of ventilation (AMV) as described in the approved RAP
4. Pictures (maximum of two 4" X 6" or larger photos per page) of each façade of the building, installed windows (interior and exterior) and alternate means of ventilation (interior and exterior).

Installation Report Certification

The following certification will appear in front of the Executive Summary of the Installation Report. The certification will include the following statements:

I, name, am currently a registered professional engineer/ registered architect licensed by the State of New York. I had primary direct responsibility for implementation of the remedial program for the Site name Site (NYC Block xxxx and Lot(s) xxx).

I certify that the Site description presented in this Installation Report is identical to the Site description and associated amendments presented in the Notice to Proceed issued by DEP/OER to the NYC DOB on date.

I certify that the OER-approved Remedial Action Plan dated month, day, year and Stipulations in the Decision Document dated month, day, year were implemented and that all requirements in those documents have been complied with.

I certify that the remedial activities were observed by qualified professionals under my supervision and that the remediation requirements set forth in the Remedial Action Plan have been achieved.

I certify that all information and statements in this certification are true. I understand that a false statement made herein is punishable as Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law.

Appendix E

Gas Riser Diagram

For Plumbing Gas Riser Diagram, see Dwg. P-040.

Appendix F

Fuel Lines and Tanks

For plan showing Fuel Lines and Tanks, see Dwg. M-020.

Appendix G

Stack Location Plan

N/A

Appendix H

Window Schedules and Specifications

1. Window Schedules, see dwg. A-900 through A-909

2. Window Manufacturer, Model & Specifications
   A. Crystal Window- Series 8000: brochure;
   B. Crystal Window- Casement Window- Series 8000: specifications;
   C. Crystal Window- Fixed Window- Series 8100: specifications and detail;
   D. Crystal Window- Sliding Door- 1240 Series: brochure, specifications and detail;
   E. Gamco- Balcony Door- BD-325 Series: brochure, specifications and detail;
   F. Gamco- Curtain Wall System- CW250 Series: brochure, specifications and detail;
   G. Tubelite- Storefront & Doors- TU24000 Series: brochure: specifications and detail

3. The Brick Industry Association, technical notes on Brick Construction, &
   Section detail on metal panel on concrete block

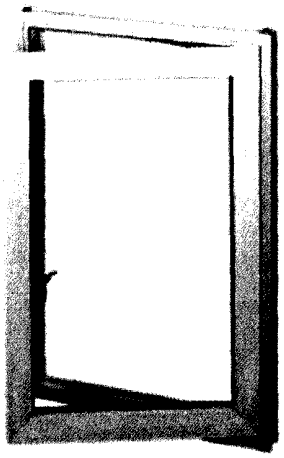
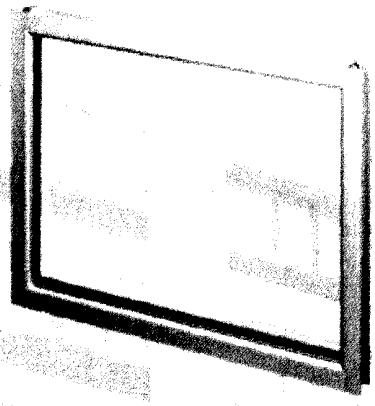
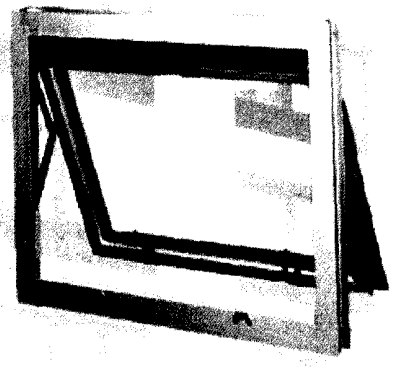
Series 8000

Heavy Commercial Projected Aluminum Windows

8000 HEAVY COMMERICAL PROJECTED ALUMINUM WINDOW







Standard & Optional Features

- 2-1/4" Frame Depth
- Heavy-Duty Extrusion: 0.125
- 1" Insulating Glass
- Double Bulb Sash Weather-stripping
- Between Glass Blinds (Option)
- Heavy-Duty Locking Handles / Keepers
- Four-Bar HS/SS Friction Hinges (Project In / Out)
- Horizontal Mull Continuous Head & Sill
- Vertical Mull Continuous Jamb
- Patented Dual Arm Operator & Crank (Casement)
- 2" Face Flange / Casement Fin (Optional Frame)
- Full Screens With Access Doors (Project Out)
- Colors: Bronze, White & Special (Option)
- Finishes: Powercoat, Anodized & Kynar (Option)

Styles

- Casement Swing-Out
- Project-In
- Project-Out
- Picture / Fixed
- Architectural Shapes
- Stacked Units

SERIES 8000 AW-PG90-C CASEMENT OUTSWING WINDOW

SECTION 08 51 13
ALUMINUM WINDOWS

PART 1 - GENERAL

1.1 SCOPE OF WORK

A. Furnish and install aluminum windows as shown in bid drawings and as per specifications stipulated in this section.

B. Factory-installed glass & glazing

1.2 ITEMS FURNISHED BUT NOT INSTALLED *(Enter description and quantity of items such as extra sash, screens, glass units, hardware, etc. for attic stock)*

1.3 ITEMS INSTALLED BUT NOT FURNISHED *(Enter description and quantity of items such as air conditioners, louvers, duct work to be installed in locations as directed by Architect)*

1.4 RELATED SECTIONS

A. Section 07 90 00 - Joint Protection.

B. Section 08 41 00 - Entrances and Storefronts.

C. Section 08 70 00 - Hardware.

1.6 SUBMITTALS

A. Submit administrative requirements under provisions of Section 01 30 00.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Shop Drawings:
1. Elevation for each style window specified indicating its size, glazing type, muntin type and design.
2. Manufacturer's head, jamb and sill details and section views for each window type specified.

D. Schedules:
1. Provide a window schedule indicating the type, size, color, , and operation of each unit specified. Coordinate with window mark types found in the Contract Drawings.

E. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

F. Verification Samples: For each finish product specified, samples may be subsequently installed on the project.

G. Test Reports: Submit certified independent testing agency reports indicating window units meet or exceed specified performance requirements.

SERIES 8000 AW-PG90-C CASEMENT OUTSWING WINDOW

1.7 SYSTEM DESCRIPTION

A. Operation: CASEMENT OUTSWING

B. AAMA Rating: AW-PG90-C when tested according to AAMA/WDMA/CSA 101/I.S.2/A440-08 at the gateway size of 36" x 60"

C. Construction: 2 1/4 inch frame depth. Wall thickness: 0.125" frame/sill; 0.125" sash. Factory finished extruded aluminum frame and sash members with integral structural polyurethane thermal break.

D. Glazing: 1 inch insulating glass; back bedded with dual-sided adhesive butyl tape on the frame from the interior, and secured with snap-in round or square glazing beads and wedge gaskets.

1.8 HARDWARE:

A. Sash Locks: Two (or one, when window height <24") sash lock handle assemblies shall be installed

B. Hinges: Four bar HS/SS friction hinges are located at pivot end of the top and bottom rail.

C. Roto type operator assembly shall be located mid-span of interior sill leg.

1.9 WEATHERSTRIPPING:

A. Sash: Two rows of ¼" diameter hollow bulb gasket shall be used around the sash perimeter to minimize air infiltration.

B. Securely stake and join at corners. Provide drainage to exterior as necessary.

1.10 PERFORMANCE REQUIREMENTS

A. Air, Water and Structural Performance Requirements:

When tested in accordance with cited test procedures, windows shall meet or exceed the following performance criteria, as well as those indicated in AAMA 101 and 101/I.S.2/A440-08 for performance grade of unit specified unless otherwise noted herein.

1. Air Test Performance Requirements:
   a. Performance: Air infiltration maximum 0.10 cfm per square foot at 6.2 psf pressure differential when tested in accordance with ASTM E283 for sliding sealed products.
2. Water Test Performance Requirements:
   a. No uncontrolled water leakage at 12 psf static pressure differential when tested in accordance with ASTM E331 and ASTM E547.
3. Structural Test Performance Requirements:
   a. Uniform Load Deflection Test
      1) No deflection of any unsupported span L of test unit (framing rails, muntins, mullions, etc.) in excess of L/175 at both a positive and negative load of design test pressure when tested in accordance with ASTM E330.
      2) Structural reinforcing that is not standard on units being furnished is not allowed.
   b. Uniform Load Structural Test:
      1) Unit to be tested at 1.5 x design test pressure, both positive and negative, acting normal to plane of wall in accordance with ASTM E330.
      2) No glass breakage; permanent damage to fasteners, hardware parts, or

anchors; damage to make windows inoperable; or permanent deformation of any main frame or ventilator member in excess of 0.2% of its clear span.

B. Forced Entry Resistance Test: ASTM F 588, Type and Grade as indicated for each Product.

C. Thermal Performance Requirements

1. Perform thermal computer simulation in accordance with the configuration specified in NFRC 100.
2. Computed Thermal Transmittance (U-Value) shall not exceed 0.51 BTU/hr/sq.ft./°F for the whole window assembly.
3. Computed Solar Heat Gain Coefficient (SHGC) shall not exceed 0.31 for the whole window assembly.

1.11 QUALITY ASSURANCE

A. Manufacturer Qualifications: All windows specified in this section shall be supplied by a manufacturer which has been fabricating/manufacturing commercial grade aluminum windows of similar quality and performance for a minimum of ten (10) years.

B. Installer Qualifications: All products listed in this section are to be installed by a single installer with a minimum of five (5) years demonstrated experience in installing windows of the same type and scope as specified, preferably AAMA certified installers.

C. Provide test reports from AAMA accredited laboratory certifying that window units are found to be in compliance with AAMA/WDMA/CSA 101/I.S.2/A440-08 and performance standards listed above.
1. Test reports shall be accompanied by the window manufacturer's letter of certification stating that the tested window meets or exceeds criteria for the appropriate AAMA/WDMA/CSA 101/I.S.2/A440 test.

1.12 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation in accordance with manufacturer's recommendations.

B. Protect units against damage from the elements, construction activities and other hazards before, during, and after installation.

1.13 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.14 WARRANTY

A. *Refer to Crystal Window & Door Systems, Ltd. standard warranty.*

B. Optional Extended Warranty (contact your Crystal sales representative).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: **Crystal Window & Door Systems, Ltd.**, which is located at: 31-10 Whitestone Expressway, Flushing, NY 11354; Tel: 718. 961.7300; Tel: 800. 472.9988; Fax:

718.460.4594; Web: www.crystalwindows.com

B. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00.

2.2 Aluminum:

A. Extruded aluminum prime billet 6063-T5 or 6063-T6 alloy for primary components; 6063-T5, 6063-T6, or 6061-T6 for structural components; all meeting the requirements of ASTM B221.

B. Aluminum sheet alloy 5005 H 32 (for anodic finish), meeting the requirements of ÅSTM B209 or alloy 3003 H 14 (for painted or unfinished sheet).

2.3 Thermal Barrier:

A. Structural Thermal Barrier:
1. Structural thermal barrier shall consist of poured-in-place polyurethane polymer that shall transfer shear during bending and provide composite action between frame components.

B. Non Structural Thermal Barriers:
1. Non structural thermal barriers are used only in conjunction with structural thermal barriers. The purpose of non structural thermal barriers is to enhance thermal performance of the primary structural thermal barriers (polyamide struts) by inhibiting heat transfer through thermal radiation and convection. Non structural thermal barriers shall not be used as primary load carrying members.
2. Rigid non structural thermal barriers shall be constructed of extruded polyvinylchloride (PVC).

2.4 GLASS

A. Glazing Materials:
1. Vertical Glazing: For glass surfaces sloped 15 degrees or less from vertical. Design glass to resist design wind pressure based on glass type factors for short-duration load.
2. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.
3. Strength: Where float glass is indicated, provide annealed float glass. Where fully tempered glass is indicated, provide Kind FT heat-treated float glass.
4. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated.
   a. U-Factors: Total-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as BTU/sq.ft x h x deg F (W/sq. m x K).
   b. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
   c. Visible Reflectance: Center-of-glazing values, according to NFRC 300.
5. Float Glass: ÅSTM C 1036, Type 1, Quality-Q3, Class 1 (clear) unless otherwise indicated.
6. Coated Glass: ASTM C 1376, Type 1, Quality-Q3, Class 1 (clear) unless otherwise indicated, of kind and condition indicated.
7. Laminated Glass: ÅSTM C 1172, Type 1, Quality-Q3, Class 1 (clear) unless otherwise indicated, of kind and condition indicated.

B. Insulating Glass Units:
1. Factory-assemble units consisting of sealed lites of glass separated by a PPG Intercept Spacer system consisting of a one-piece, metallic, U-channel design that creates an effective thermal barrier to help reduce conducted heat loss through the window.
2. Insulating glass units shall be sealed with an integral dessicant matrix and a butyl sealant extruded around the entire perimeter of the spacer to achieve a seal. The sealant applied

is to be Dual Seal Equivalent (DSE). Interspace to be filled with air or argon gas as required by thermal computer simulation.

3. Insulating Glass Types: Low-E coated, insulating glass units.
   a. Overall Unit Thickness: 1" (25.4mm)
   b. Thickness of Each Glass Lite: 3/32" , 1/8" or 1/4 inch
   c. Outdoor Lite: Class 1 (Clear) float glass, or fully tempered float glass.
   d. Interspace Content: Air or Argon Gas.
   e. Indoor Lite: Class 1 (Clear) float glass, or fully tempered float glass.
   f. Low-E Coating: Sputtered on second or third surface.
   g. Glass Winter Night time U-Value: 0.27 maximum.
   h. Solar Heat Gain Coefficient: 0.46 maximum.
   i. Provide safety glazing labeling, if necessary.

2.5 WINDOW ACCESSORIES

Provide the following accessories as specified in the contract drawings. Finish to match window frames or as selected by the Architect:

A. Wrap Around Panning

B. Preset Panning

C. Snap Trim/Clips

D. Expanders

E. Receptors

F. Subsills and Subsill Anchors

G. Mullions and Mullion Covers

H. Exterior Sills

I. Interior Stools

J. Muntins

2.6 FINISHES

A. Conforming to AAMA 2604-05 specification, finish on all extruded aluminum shall consist of zero or near-zero VOC, organic POWDER COAT with a baked on super-durable thermosetting polyester resin, electro-statically applied on five-stage pre-treated aluminum surface. Equivalent to 50% Kynar polyvinylidene fluoride liquid paint finishes. Powder coat material to be as manufactured by Sherwin Williams or PPG Powder Coatings.

B. Color to be selected from Manufacturer's Standard Color Chart (or custom-matched as required by project Architect/Owner).

2.7 Insect Screens:

A. Screen frames shall consist of tubular extruded aluminum profiles with finish to match window frames.

B. Fiberglass mesh (18 X 16) with PVC spline.

2.8 Steel components including attachment fasteners shall be 300 series stainless steel except as noted.

2.9 Thermoplastic or thermo-set plastic caps, housings and other components shall be injection-molded nylon, extruded PVC, or other suitable compound.

2.10 Sealants:

1. Sealants shall comply with applicable provisions of AAMA 800 and/or Federal Specifications FS-TT-001 and 002 Series.
2. Frame joinery sealants shall be suitable for application specified and as tested and approved by window manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

3.4 ANCHORAGE

A. Anchor window units and/or assemblies sufficiently to maintain permanent positions when subjected to normal thermal movement, specified building movement and specified wind loads.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Final operating adjustment shall be made after glazing work is complete. Operating sash and ventilator shall operate smoothly and shall be weathertight when in locked position

C. Touch-up, repair or replace damaged products before Substantial Completion.

3.6 DISPOSAL OF DEBRIS

A.Remove all garbage off site and legally dispose of existing windows and debris generated from the installation of the new windows.

3.7 OPTIONAL FIELD TESTING

A. At the discretion and expense of Owner or Owner's representative, perform on-site testing of installed units in conformance with AAMA 502 - Voluntary Specification for Field Testing of Windows and Sliding Glass Doors. Conduct air and water infiltration testing with the window manufacturer, contractor, and owner present.

B. An AAMA accredited lab will be hired by the owner to perform the required testing.

3.8 ADJUSTMENT AND CLEAN UP

A. Adjust all products, sash, vents, and hardware after installation, as necessary to provide proper operation and a weather tight installation

B. Remove any labels and dirt from the window.

1.6 SUBMITTALS

A. Submit administrative requirements under provisions of Section 01 30 00.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Shop Drawings:
1. Elevation for each style window specified indicating its size, glazing type, muntin type and design.
2. Manufacturer's head, jamb and sill details and section views for each window type specified.

D. Schedules:
1. Provide a window schedule indicating the type, size, color, , and operation of each unit specified. Coordinate with window mark types found in the Contract Drawings.

E. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

F. Verification Samples: For each finish product specified, samples may be subsequently installed on the project.

G. Test Reports: Submit certified independent testing agency reports indicating window units meet or exceed specified performance requirements.

1.7 SYSTEM DESCRIPTION

A. Operation: FIXED

B. AAMA Rating: AWPG85-FW when tested according to AAMA/WDMA/CSA 101/I.S.2/A440-08 at the gateway size of 60" x 99"

C. Construction: 3 1/4 inch frame depth. Wall thickness: 0.125"/0.125" frame/sill. Factory finished extruded aluminum frame and sash members with integral structural polyurethane thermal break.

D. Glazing: 1 inch insulating glass; set on double-sided adhesive glazing foam tape on the frame glazing leg, and secured in the interior with snap-in glazing beads and bulb gaskets.

1.8 HARDWARE: (None)

1.9 WEATHERSTRIPPING:

A. Compression type bulb gasket on the interior glazing bead.

1.10 PERFORMANCE REQUIREMENTS

A. Air, Water and Structural Performance Requirements:

When tested in accordance with cited test procedures, windows shall meet or exceed the following performance criteria, as well as those indicated in AAMA 101 and 101/I.S.2/A440-08 for performance grade of unit specified unless otherwise noted herein.

1. Air Test Performance Requirements:
   a. Performance: Air infiltration maximum 0.10 cfm per square foot at 6.2 psf pressure differential when tested in accordance with ASTM E283 for sliding sealed products.
2. Water Test Performance Requirements:
   a. No uncontrolled water leakage at 12 psf static pressure differential when tested in accordance with ASTM E331 and ASTM E547.
3. Structural Test Performance Requirements:
   a. Uniform Load Deflection Test
      1) No deflection of any unsupported span L of test unit (framing rails, muntins, mullions, etc.) in excess of L/175 at both a positive and negative load of design test pressure when tested in accordance with ASTM E330.
      2) Structural reinforcing that is not standard on units being furnished is not allowed.
   b. Uniform Load Structural Test:
      1) Unit to be tested at 1.5 x design test pressure, both positive and negative, acting normal to plane of wall in accordance with ASTM E330.
      2) No glass breakage; permanent damage to fasteners, hardware parts, or anchors; damage to make windows inoperable; or permanent deformation of any main frame or ventilator member in excess of 0.2% of its clear span.

B. Forced Entry Resistance Test: ASTM F 588, Type and Grade as indicated for each Product.

C. Thermal Performance Requirements

1. Perform thermal computer simulation in accordance with the configuration specified in NFRC 100.
2. Computed Thermal Transmittance (U-Value) shall not exceed 0.36 BTU/hr/sq.ft./°F for the whole window assembly.
3. Computed Solar Heat Gain Coefficient (SHGC) shall not exceed 0.40 for the whole window

assembly.

1.11 QUALITY ASSURANCE

A. Manufacturer Qualifications: All windows specified in this section shall be supplied by a manufacturer which has been fabricating/manufacturing commercial grade aluminum windows of similar quality and performance for a minimum of ten (10) years.

B. Installer Qualifications: All products listed in this section are to be installed by a single installer with a minimum of five (5) years demonstrated experience in installing windows of the same type and scope as specified, preferably AAMA certified installers.

C. Provide test reports from AAMA accredited laboratory certifying that window units are found to be in compliance with AAMA/WDMA/CSA 101/I.S.2/A440-08 and performance standards listed above.
   1. Test reports shall be accompanied by the window manufacturer's letter of certification stating that the tested window meets or exceeds criteria for the appropriate AAMA/WDMA/CSA 101/I.S.2/A440 test.

1.12 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation in accordance with manufacturer's recommendations.

B. Protect units against damage from the elements, construction activities and other hazards before, during, and after installation.

1.13 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.14 WARRANTY

A. *Refer to Crystal Window & Door Systems, Ltd. standard warranty.*

B. Optional Extended Warranty (contact your Crystal sales representative).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: **Crystal Window & Door Systems, Ltd.**, which is located at: 31-10 Whitestone Expressway, Flushing, NY 11354; Tel: 718. 961.7300; Tel: 800. 472.9988; Fax: 718.460.4594; Web: www.crystalwindows.com

B. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00.

2.2 Aluminum:

A. Extruded aluminum prime billet 6063-T5 or 6063-T6 alloy for primary components; 6063-T5, 6063-T6, or 6061-T6 for structural components; all meeting the requirements of ASTM B221.

B. Aluminum sheet alloy 5005 H 32 (for anodic finish), meeting the requirements of ASTM B209 or alloy 3003 H 14 (for painted or unfinished sheet).

2.3 Thermal Barrier:

A. Structural Thermal Barrier:
1. Structural thermal barrier shall consist of poured-in-place polyurethane polymer that shall transfer shear during bending and provide composite action between frame components.

B. Non Structural Thermal Barriers:
1. Non structural thermal barriers are used only in conjunction with structural thermal barriers. The purpose of non structural thermal barriers is to enhance thermal performance of the primary structural thermal barriers (polyamide struts) by inhibiting heat transfer through thermal radiation and convection. Non structural thermal barriers shall not be used as primary load carrying members.
2. Rigid non structural thermal barriers shall be constructed of extruded polyvinylchloride (PVC).

2.4 GLASS

A. Glazing Materials:
1. Vertical Glazing: For glass surfaces sloped 15 degrees or less from vertical. Design glass to resist design wind pressure based on glass type factors for short-duration load.
2. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.
3. Strength: Where float glass is indicated, provide annealed float glass. Where fully tempered glass is indicated, provide Kind FT heat-treated float glass.
4. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated.
   a. U-Factors: Total-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as BTU/sq.ft x h x deg F (W/sq. m x K).
   b. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
   c. Visible Reflectance: Center-of-glazing values, according to NFRC 300.
5. Float Glass: ASTM C 1036, Type 1, Quality-Q3, Class 1 (clear) unless otherwise indicated.
6. Coated Glass: ASTM C 1376, Type 1, Quality-Q3, Class 1 (clear) unless otherwise indicated, of kind and condition indicated.
7. Laminated Glass: ASTM C 1172, Type 1, Quality-Q3, Class 1 (clear) unless otherwise indicated, of kind and condition indicated.

B. Insulating Glass Units:
1. Factory-assemble units consisting of sealed lites of glass separated by a PPG Intercept Spacer system consisting of a one-piece, metallic, U-channel design that creates an effective thermal barrier to help reduce conducted heat loss through the window.
2. Insulating glass units shall be sealed with an integral dessicant matrix and a butyl sealant extruded around the entire perimeter of the spacer to achieve a seal. The sealant applied is to be Dual Seal Equivalent (DSE). Interspace to be filled with air or argon gas as required by thermal computer simulation.

3. Insulating Glass Types: Low-E coated, insulating glass units.
   a. Overall Unit Thickness: 1" (25.4mm)
   b. Thickness of Each Glass Lite: 3/32" , 1/8" or 1/4 inch
   c. Outdoor Lite: Class 1 (Clear) float glass, or fully tempered float glass.
   d. Interspace Content: Air or Argon Gas.
   e. Indoor Lite: Class 1 (Clear) float glass, or fully tempered float glass.
   f. Low-E Coating: Sputtered on second or third surface.
   g. Glass Winter Night time U-Value: 0.27 maximum.
   h. Solar Heat Gain Coefficient: 0.46 maximum.
   i. Provide safety glazing labeling, if necessary.

2.5 WINDOW ACCESSORIES

Provide the following accessories as specified in the contract drawings. Finish to match window frames or as selected by the Architect:

A. Wrap Around Panning

B. Preset Panning

C. Snap Trim/Clips

D. Expanders

E. Receptors

F. Subsills and Subsill Anchors

G. Mullions and Mullion Covers

H. Exterior Sills

I. Interior Stools

J. Muntins

2.6 FINISHES

A. Conforming to AAMA 2604-05 specification, finish on all extruded aluminum shall consist of zero or near-zero VOC, organic POWDER COAT with a baked on super-durable thermosetting polyester resin, electro-statically applied on five-stage pre-treated aluminum surface. Equivalent to 50% Kynar polyvinylidene fluoride liquid paint finishes. Powder coat material to be as manufactured by Sherwin Williams or PPG Powder Coatings.

B. Color to be selected from Manufacturer's Standard Color Chart (or custom-matched as required by project Architect/Owner).

2.7 Insect Screens:

A. Screen frames shall consist of tubular extruded aluminum profiles with finish to match window frames.

B. Fiberglass mesh (18 X 16) with PVC spline.

2.8 Steel components including attachment fasteners shall be 300 series stainless steel except as noted.

2.9 Thermoplastic or thermo-set plastic caps, housings and other components shall be injection-molded nylon, extruded PVC, or other suitable compound.

2.10 Sealants:

1. Sealants shall comply with applicable provisions of AAMA 800 and/or Federal Specifications FS-TT-001 and 002 Series.
2. Frame joinery sealants shall be suitable for application specified and as tested and approved by window manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

3.4 ANCHORAGE

A. Anchor window units and/or assemblies sufficiently to maintain permanent positions when subjected to normal thermal movement, specified building movement and specified wind loads.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Final operating adjustment shall be made after glazing work is complete. Operating sash and ventilator shall operate smoothly and shall be weathertight when in locked position

C. Touch-up, repair or replace damaged products before Substantial Completion.

3.6 DISPOSAL OF DEBRIS

A.Remove all garbage off site and legally dispose of existing windows and debris generated from the installation of the new windows.

3.7 OPTIONAL FIELD TESTING

A. At the discretion and expense of Owner or Owner's representative, perform on-site testing of installed units in conformance with AAMA 502 - Voluntary Specification for Field Testing of Windows and Sliding Glass Doors. Conduct air and water infiltration testing with the window manufacturer, contractor, and owner present.

B. An AAMA accredited lab will be hired by the owner to perform the required testing.

3.8 ADJUSTMENT AND CLEAN UP

A. Adjust all products, sash, vents, and hardware after installation, as necessary to provide proper operation and a weather tight installation

B. Remove any labels and dirt from the window.

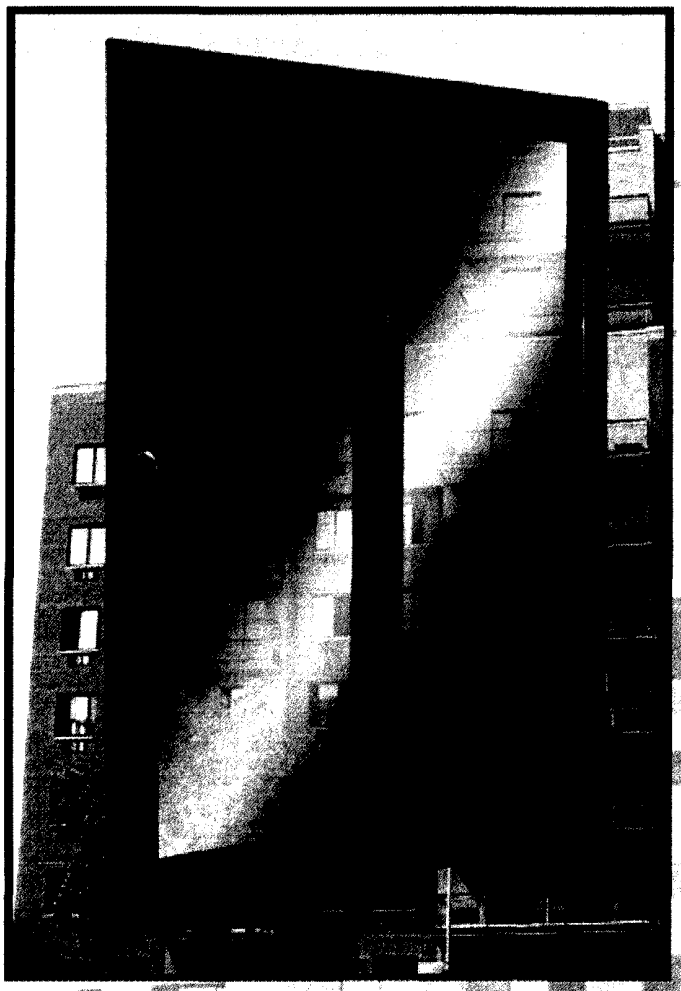
1240 COMMERCIAL THERMAL BREAK ALUMINUM SLIDING PATIO DOOR



PRODUCT FEATURES

- *2-Panel (XO/OX) or 3-Panel (OXO)*
- *AAMA Rating: SGD-C40*
- *Frame Depth: 4-1/2"*
- *Tube Sill w/ Concealed Drainage*
- *Insulating Tempered Glass Unit Size: 1"*
- *"Intercept" Warm Edge PPG Spacer*
- *Fully Reversible Panels Post-Installation*
- *Bronze or White Colors*
- *Fibermesh Locking Screen*
- *Heavy-Duty Adjustable Dual Tandem Ball Bearing Rollers*

Options

- *Low-E Tempered Glass*
- *Argon Gas Filled IGU*
- *Secondary Overhead Pin Lock w/ Open Vent Position*
- *Between Glass Grids*
- *Custom Sizes*
- *Special Colors & Finishes*

SECTION 08 32 13

SLIDING ALUMINUM-FRAMED GLASS DOORS

PART 1 - GENERAL

1.1 SCOPE OF WORK

A. Furnish and install sliding aluminum-framed glass doors as shown in bid drawings and as per specifications stipulated in this section.

B. Factory-installed glass & glazing

1.2 ITEMS FURNISHED BUT NOT INSTALLED (Enter description and quantity of items such as extra sash, screens, glass units, hardware, etc. for attic stock)

1.3 ITEMS INSTALLED BUT NOT FURNISHED (Enter description and quantity of items such as air conditioners, louvers, duct work to be installed in locations as directed by Architect)

1.4 RELATED SECTIONS

A. Section 07 90 00 - Joint Protection.

B. Section 08 41 00 - Entrances and Storefronts.

C. Section 08 70 00 - Hardware.

1.6 SUBMITTALS

A. Submit administrative requirements under provisions of Section 01 30 00.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Shop Drawings:
1. Elevation for each style window specified indicating its size, glazing type, muntin type and design.
2. Manufacturer's head, jamb and sill details and section views for each window type specified.

D. Schedules:
1. Provide a window schedule indicating the type, size, color, , and operation of each unit specified. Coordinate with window mark types found in the Contract Drawings.

E. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

F. Verification Samples: For each finish product specified, samples may be subsequently installed on the project.

G. Test Reports: Submit certified independent testing agency reports indicating window units meet or exceed specified performance requirements.

1.7 SYSTEM DESCRIPTION

A. Operation: HORIZONTAL SLIDING

B. AAMA Rating: SD-C40 when tested according to AAMA/WDMA/CSA 101/I.S.2/A440-05 at the gateway size of 95 x 83"

C. Construction: 4 9/16 inch frame depth. Wall thickness: 0.062"/0.062" frame/sill; 0.062" sash. Factory finished extruded aluminum frame and sash members with integral structural polyurethane thermal break. Rails shall be tubular profile.

D. Glazing: 1 inch insulating glass; black reusable flexible PVC channel gasket;

1.8 HARDWARE:

A. Handle: Each movable panel shall have a black color locking handle set at one of its stiles.

B. Rollers: Two adjustable stainless steel tandem rollers shall be recessed into the bottom rail of each movable panel.

1.9 WEATHERSTRIPPING:

A. High-density woven pile shall be used in combination with continuous polyethylene rigid seal to minimize air infiltration. Double weather-stripping at panel head.

B. Securely stake and join at corners. Provide drainage to exterior as necessary.

1.10 PERFORMANCE REQUIREMENTS

A. Air, Water and Structural Performance Requirements:

When tested in accordance with cited test procedures, windows shall meet or exceed the following performance criteria, as well as those indicated in AAMA 101 and 101/I.S.2/A440-08 for performance grade of unit specified unless otherwise noted herein.

1. Air Test Performance Requirements:
   a. Performance: Air infiltration maximum 0.30 cfm per square foot at 1.6 psf pressure differential when tested in accordance with ASTM E283 for sliding sealed products.
2. Water Test Performance Requirements:
   a. No uncontrolled water leakage at 6 psf static pressure differential when tested in accordance with ASTM E331 and ASTM E547.
3. Structural Test Performance Requirements:
   a. Uniform Load Deflection Test
      1) No deflection of any unsupported span L of test unit (framing rails, muntins, mullions, etc.) in excess of L/175 at both a positive and negative load of design test pressure when tested in accordance with ASTM E330.

2) Structural reinforcing that is not standard on units being furnished is not allowed.

b. Uniform Load Structural Test:
1) Unit to be tested at 1.5 x design test pressure, both positive and negative, acting normal to plane of wall in accordance with ASTM E330.
2) No glass breakage; permanent damage to fasteners, hardware parts, or anchors; damage to make windows inoperable; or permanent deformation of any main frame or ventilator member in excess of 0.2% of its clear span.

B. Forced Entry Resistance Test: ASTM F 588, Type and Grade as indicated for each Product.

C. Thermal Performance Requirements

1.Perform thermal computer simulation in accordance with the configuration specified in NFRC 100.
2.Computed Thermal Transmittance (U-Value) shall not exceed 0.46 BTU/hr/sq.ft./°F for the whole window assembly.
3.Computed Solar Heat Gain Coefficient (SHGC) shall not exceed 0.39 for the whole window assembly.

1.11 QUALITY ASSURANCE

A. Manufacturer Qualifications: All windows specified in this section shall be supplied by a manufacturer which has been fabricating/manufacturing commercial grade aluminum windows of similar quality and performance for a minimum of ten (10) years.

B. Installer Qualifications: All products listed in this section are to be installed by a single installer with a minimum of five (5) years demonstrated experience in installing windows of the same type and scope as specified, preferably AAMA certified installers.

C. Provide test reports from AAMA accredited laboratory certifying that window units are found to be in compliance with AAMA/WDMA/CSA 101/I.S.2/A440-05 and performance standards listed above.
1. Test reports shall be accompanied by the window manufacturer's letter of certification stating that the tested window meets or exceeds criteria for the appropriate AAMA/WDMA/CSA 101/I.S.2/A440 test.

1.12 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation in accordance with manufacturer's recommendations.

B. Protect units against damage from the elements, construction activities and other hazards before, during, and after installation.

1.13 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.14 WARRANTY

A. *Refer to Crystal Window & Door Systems, Ltd. standard warranty.*

B. Optional Extended Warranty (contact your Crystal sales representative).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: **Crystal Window & Door Systems, Ltd**., which is located at: 31-10 Whitestone Expressway, Flushing, NY 11354; Tel: 718. 961.7300; Tel: 800. 472.9988; Fax: 718.460.4594; Web: www.crystalwindows.com

B. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00.

2.2 Aluminum:

A. Extruded aluminum prime billet 6063-T5 or 6063-T6 alloy for primary components; 6063-T5, 6063-T6, or 6061-T6 for structural components; all meeting the requirements of ASTM B221.

B. Aluminum sheet alloy 5005 H 32 (for anodic finish), meeting the requirements of ÅSTM B209 or alloy 3003 H 14 (for painted or unfinished sheet).

2.3 Thermal Barrier:

A. Structural Thermal Barrier:
1. Structural thermal barrier shall consist of poured-in-place polyurethane polymer that shall transfer shear during bending and provide composite action between frame components.

B. Non Structural Thermal Barriers:
1. Non structural thermal barriers are used only in conjunction with structural thermal barriers. The purpose of non structural thermal barriers is to enhance thermal performance of the primary structural thermal barriers (polyamide struts) by inhibiting heat transfer through thermal radiation and convection. Non structural thermal barriers shall not be used as primary load carrying members.
2. Rigid non structural thermal barriers shall be constructed of extruded polyvinylchloride (PVC).

2.4 GLASS

A. Glazing Materials:
1. Vertical Glazing: For glass surfaces sloped 15 degrees or less from vertical. Design glass to resist design wind pressure based on glass type factors for short-duration load.
2. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.
3. Strength: Where float glass is indicated, provide annealed float glass. Where fully tempered glass is indicated, provide Kind FT heat-treated float glass.
4. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated.
   a. U-Factors: Total-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as BTU/sq.ft x h x deg F (W/sq. m x K).
   b. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
   c. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

5. Float Glass: ÅSTM C 1036, Type 1, Quality-Q3, Class 1 (clear) unless otherwise indicated.
6. Coated Glass: ASTM C 1376, Type 1, Quality-Q3, Class 1 (clear) unless otherwise indicated, of kind and condition indicated.
7. Laminated Glass: ÅSTM C 1172, Type 1, Quality-Q3, Class 1 (clear) unless otherwise indicated, of kind and condition indicated.

B. Insulating Glass Units:
1. Factory-assemble units consisting of sealed lites of glass separated by a PPG Intercept Spacer system consisting of a one-piece, metallic, U-channel design that creates an effective thermal barrier to help reduce conducted heat loss through the window.
2. Insulating glass units shall be sealed with an integral dessicant matrix and a butyl sealant extruded around the entire perimeter of the spacer to achieve a seal. The sealant applied is to be Dual Seal Equivalent (DSE). Interspace to be filled with air or argon gas as required by thermal computer simulation.

3. Insulating Glass Types: Low-E coated, insulating glass units.
   a. Overall Unit Thickness: 1" (25.4mm)
   b. Thickness of Each Glass Lite: 1/8" , 3/16" , or 1/4 inch
   c. Outdoor Lite: Class 1 (Clear) float glass, or fully tempered float glass.
   d. Interspace Content: Air or Argon Gas.
   e. Indoor Lite: Class 1 (Clear) float glass, or fully tempered float glass.
   f. Low-E Coating: Sputtered on second or third surface.
   g. Glass Winter Night time U-Value: 0.27 maximum.
   h. Solar Heat Gain Coefficient: 0.46 maximum.
   i. Provide safety glazing labeling, if necessary.

2.5 DOOR INSTALLATION ACCESSORIES

Provide the following accessories as specified in the contract drawings. Finish to match window frames or as selected by the Architect:

A. Wrap Around Panning

B. Preset Panning

C. Snap Trim/Clips

D. Expanders

E. Receptors

F. Subsills and Subsill Anchors

G. Mullions and Mullion Covers

H. Exterior Sills

I. Interior Stools

J. Muntins

2.6 FINISHES

A. Conforming to AAMA 2604-05 specification, finish on all extruded aluminum shall consist of zero

or near-zero VOC, organic POWDER COAT with a baked on super-durable thermosetting polyester resin, electro-statically applied on five-stage pre-treated aluminum surface. Equivalent to 50% Kynar polyvinylidene fluoride liquid paint finishes. Powder coat material to be as manufactured by Sherwin Williams or PPG Powder Coatings.

B. Color to be selected from Manufacturer's Standard Color Chart (or custom-matched as required by project Architect/Owner).

2.7 Insect Screens:

A. Screen frames shall consist of tubular extruded aluminum profiles with finish to match window frames.

B. Fiberglass mesh (18 X 16) with PVC spline.

2.8 Steel components including attachment fasteners shall be 300 series stainless steel except as noted.

2.9 Thermoplastic or thermo-set plastic caps, housings and other components shall be injection-molded nylon, extruded PVC, or other suitable compound.

2.10 Sealants:

1. Sealants shall comply with applicable provisions of AAMA 800 and/or Federal Specifications FS-TT-001 and 002 Series.
2. Frame joinery sealants shall be suitable for application specified and as tested and approved by window manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

3.4 ANCHORAGE

A. Anchor window units and/or assemblies sufficiently to maintain permanent positions when subjected to normal thermal movement, specified building movement and specified wind loads.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Final operating adjustment shall be made after glazing work is complete. Operating sash and ventilator shall operate smoothly and shall be weathertight when in locked position

C. Touch-up, repair or replace damaged products before Substantial Completion.

3.6 DISPOSAL OF DEBRIS

A.Remove all garbage off site and legally dispose of existing windows and debris generated from the installation of the new windows.

3.7 OPTIONAL FIELD TESTING

A. At the discretion and expense of Owner or Owner's representative, perform on-site testing of installed units in conformance with AAMA 502 - Voluntary Specification for Field Testing of Windows and Sliding Glass Doors. Conduct air and water infiltration testing with the window manufacturer, contractor, and owner present.

B. An AAMA accredited lab will be hired by the owner to perform the required testing.

3.8 ADJUSTMENT AND CLEAN UP

A. Adjust all products, sash, vents, and hardware after installation, as necessary to provide proper operation and a weather tight installation

B. Remove any labels and dirt from the window.

GAMCO CORPORATION

MANUFACTURERS OF QUALITY FENESTRATION PRODUCTS

131-10 Maple Avenue, Flushing, N.Y. 11355

SERIES "BD-325"
SWING-OUT BALCONY DOOR

I. GENERAL:

Scope of Work – Furnish all necessary materials, labor, and equipment for the complete installation of aluminum hinged glass doors for this project as show on the drawings and herein specified. Door shall be the "Series BD-325" as manufactured by Gamco Corporation, Flushing, New York. The "Series BD-325" is a single vent Hinged Glass Door with thermally improved main frame and vent consisting of side hinges, locking handle, and multipoint lock system. The specifications and materials for the "Series BD-325" are as follows

II. PRODUCTS:

Materials – Aluminum shall be of proper alloy for commercial window construction. All extruded sections shall be of 6063-T5 aluminum alloy.

Frame – Main frame and sash members shall be .125" nominal thickness. Main frame shall be 3.250" in depth Horizontal and vertical vent members shall be hollow extrusions. Main frames and vent members are to be extruded aluminum with a dual insulbar thermal barrier system creating a .5625" wide thermal barrier.

Sill – Threshold for the swing-out BD-325 is a .500" tall thermally broken aluminum extrusion with an EPDM weather-seal. Check codes for FHA compliance. See drawing cuts.

Hardware – Operating handle shall be lever type connecting to a multi-point lock system. Lock system engagements shall be as follows: Two (2) at handle, one (1) 2.500" from each end of lock stile and one (1) centered between handle and upper locking point.

Hinges – Shall consist of three (3) extruded aluminum butt type hinges. Hinge pins shall be .250" diameter stainless steel with hard vinyl bushings.

Weather-stripping – Door panel shall close to a full perimeter EPDM weather-seal utilizing welded corner construction.

III. CONSTRUCTION:

Assembly – Main frame and door panel corners shall be of mitered, sealed crimped and staked corner construction. Each corner shall consist of one extruded aluminum corner key held in place with two die cast retainer pins, one die cast corner key staked in place and one friction fit hard vinyl corner key. Threshold is mechanically fastened and sealed between the jambs.

Glazing – Glass in the door panel shall be factory glazed using EPDM gasket at exterior perimeter with extruded aluminum glazing bead and EPDM wedge at interior of glass. The insulated glass units shall be 1.000" overall thickness with two lites .125" Tempered glass, separated by a .750" air space for optimum insulation. All insulated glass units shall meet the requirement of the ASTM E 774 specification, Class "A".

Finish – Shall be a factory applied baked polyurethane powder coat finish meeting the requirements of AAMA 2604 for Pigmented Organic Coating on Extruded Aluminum. Standard Tier 1 colors available are bronze and white. Class 1 Clear and Dark Bronze anodizing.

Operation – The door panel is operable to the outside. Deadbolt is operable by thumb turn inside.

IV. PERFORMANCE:

Structural Performance, Air, and Water Infiltration – Shall meet the requirements of AAMA/WDMA/CSA 101/I.S.2/A440-5, ATD-AW50. Design Pressure, ±2400Pa (±50.16 psf). Air Infiltration, 0.5 L/s/m² (0.10 cfm/ft²). Water Penetration Resistance, 480Pa (10.03 psf). Uniform Load Structural, ±3600Pa (±75.24 psf).

Architectural Testing

AAMA/WDMA/CSA 101/I.S.2/A440-05 TEST REPORT

Rendered to:

GAMCO CORPORATION
131-10 Maple Avenue
Flushing, New York 11355

Report No.: 89801.01-109-44

Project Summary: Architectural Testing, Inc. was contracted by Gamco Corporation to perform testing on a Series/Model BD-325, side-hinged door. The sample tested successfully met the performance requirements for a SHD-AW50 1219 x 2438 (48 x 96) rating. Test specimen description and results are reported herein. The sample was provided by the client.

Test Specification: The test specimen was evaluated in accordance with AAMA/WDMA/CSA 101/I.S.2/A440-05, *Standard/Specification for Windows, Doors, and Unit Skylights.*

Test Specimen Description:

Series/Model: BD-325

Product Type: Side-Hinged Door

Overall Size: 1219 mm (48") wide by 2438 mm (96") high

Leaf Size: 908 mm (45-3/4") wide by 2397 mm (94-3/8") high

Overall Area: 3.0 m^2 (32 ft^2)

Finish: All aluminum was painted.

130 Derry Court
York, PA 17406-8405
phone: 717-764-7700
fax: 717-764-4129
www.archtest.com

Test Specimen Description: (Continued)

Frame Construction: The hand and jambs were constructed of dual-strutted thermally improved, extruded aluminum. The sill was constructed of poured and debridged, thermally improved extruded aluminum. The head/jamb corners were mitered, sealed with silicone, and secured with twelve #9 x 3/8" long flat head screws and two aluminum corner keys, six screws per key. The threshold/jamb corners were coped, butted, sealed with silicone, and secured with two #8 x 1-1/4" long hex head screws. An extruded aluminum sill leg extension was utilized at the interior sill leg and was secured with #10 x 1/4" long Phillips flat head screws spaced 16" on center. The joint between the sill leg and the sill leg extension was sealed with silicone. Snap-in aluminum stops were utilized at the head and jambs. An extruded aluminum piece was secured to the hinge jamb using two #9 x 3/8" long flat head screws, located 1-1/4" from each end and spaced 5" on center.

Leaf Construction: The leaf was constructed of dual-strutted thermally improved extruded aluminum members. Corners were mitered, sealed with silicone, and secured with four #9 x 3/8" long pan head screws and a 1" by 1-1/2" solid aluminum corner key.

Weatherstripping:

Description	Quantity	Location
0.187" backed, 1/4" diameter hollow vinyl bulb seal	1 Row	Sill
0.187" backed, 3/16" diameter hollow vinyl bulb seal	3 Rows	Head and jambs
0.187" backed, 3/16" diameter hollow vinyl bulb seal	3 Rows	Leaf stiles and top rail
0.187" backed, 3/16" diameter hollow vinyl bulb seal	4 Rows	Glazing beads
Kerf-mounted vinyl fin	1 Row	Bottom rail

Glazing Details: The unit was glazed with 1" thick insulating glass constructed of a sheet of 1/4" thick tempered glass inboard, a sheet of 7/16" thick laminated glass outboard and an aluminum box spacer system. The laminated glass was comprised of two sheets of 3/16" thick annealed glass and a 0.060" thick PVB interlayer. The glass was glazed from the exterior against a vinyl fin with a silicone cap bead and was secured with snap-in aluminum glazing beads with a hollow bulb seal against the glass and a silicone cap bead. A bead of silicone was utilized between the laminated glass and the leaf members.

Drainage: A sloped threshold was utilized.

Test Specimen Description: (Continued)

Hardware:

Description	Quantity	Location
Lock handle assembly with multi-point lock	1	Lock stile, 35" from bottom rail with four locking points located 6" from end and spaced 28" on center
Barrel hinges	4	Hinge stile, 6" from each end and spaced 28" on center

Reinforcement: No reinforcement was utilized.

Installation: The unit was installed into a Spruce-Pine-Fir wood buck. The frame was secured through the head, sill, and jambs using #10 x 2-1/4" long flat head screws, located 3" from each corner and spaced 12" on center. The exterior perimeter was sealed with silicone.

Test Results: The temperature during testing was 20°C (68°F). The results are tabulated as follows:

Paragraph	Title of Test - Test Method	Results	Allowed
AAMA 910 Life Cycle Testing Procedures: 2.1.1 to 2.1.12			
5.3.1.2	Force to Latch Side-Hinged Door System per ANSI/BHMA A156.2 (First Half)		
	Force to latch	156 N (35 lbf)	Report Only
	Deadbolt	36 N (8 lbf)	Report Only
2.1.2	Air Leakage Resistance per ASTM E 283 (First Half)		
	300 Pa (6.20 psf)	0.1 L/s/m^2 (0.02 cfm/ft^2)	0.5 L/s/m^2 (0.10 cfm/ft^2) max.
2.1.3	Water Penetration Resistance per ASTM E 547 and E 331 (First Half)		
	528 Pa (11.03 psf)	No leakage	No leakage

Note #1: The tested specimen meets (or exceeds) the performance levels specified in AAMA/WDMA/CSA 101/I.S.2/A440-05 for air leakage resistance.

Test Results: (Continued)

Paragraph	Title of Test - Test Method	Results	Allowed
2.1.4	Leaf Cycle Testing (First Half - 1250 cycles)		
	Leaf	No damage	No damage
	Observations: *Oil dripped from hinges.*		
2.1.5	Locking Hardware Cycle Testing (First Half - 1250 cycles)		
	Lock	No damage	No damage
	Handle	No damage	No damage
	Observations: *Slight wear and shavings visible.*		
2.1.7	Misuse Testing		
2.5.2.2	Ventilator Vertical Load Test		
	445 N (100 lbf)	No damage	No damage
2.1.8	Leaf Cycle Testing (Second Half - 1250 cycles)		
	Leaf	No damage	No damage
	Observations: *Slight wear on hinges.*		
2.1.9	Locking Hardware Cycle Testing (Second Half - 1250 cycles)		
	Lock	No damage	No damage
	Handle	No damage	No damage
	Observations: *Slight wear and shavings visible.*		
5.3.1.3	Force to Latch Side-Hinged Door System per ANSI/BHMA A156.2 (Second Half)		
	Force to latch	135 N (30.0 lbf)	Report Only
	Deadbolt	33 N (7.50 lbf)	Report Only
2.1.11	Air Leakage Resistance per ASTM E 283 (Second Half)		
	300 Pa (6.2 psf)	0.5 L/s/m^2 (0.10 cfm/ft^2)	0.5 L/s/m^2 (0.10 cfm/ft^2) max.

Note #1: *The tested specimen meets (or exceeds) the performance levels specified in AAMA/WDMA/CSA 101/I.S.2/A440-05 for air leakage resistance.*

Test Results: (Continued)

Paragraph	Title of Test - Test Method	Results	Allowed
2.1.12	Water Penetration Resistance per ASTM E 547 and E 331 (Second Half)		
	480 Pa (10.03 psf)	No leakage	No leakage
5.3.4.2	Uniform Load Deflection per ASTM E 330		
	(Deflections were taken on the top rail)		
	(Loads were held for 10 seconds)		
	1920 Pa (40.13 psf) (positive)	0.3 mm (0.01")	6.4 mm (0.25") max.
	1920 Pa (40.13 psf) (negative)	1.5 mm (0.06")	6.4 mm (0.25") max.
5.3.4.3	Uniform Load Structural per ASTM E 330		
	(Permanent sets were taken on the top rail)		
	(Loads were held for 10 seconds)		
	2880 Pa (60.19 psf) (positive)	0.3 mm (0.01")	2.3 mm (0.09") max.
	2880 Pa (60.19 psf) (negative)	0.3 mm (0.01")	2.3 mm (0.09") max.
5.3.5	Forced Entry Resistance per AAMA 1304		
	1330 N (300 lbf) point load		
	Top lock stile corner	No entry	No entry
	Bottom lock stile corner	No entry	No entry
	Above lock	No entry	No entry
5.3.6.10	Operation/Cycling Performance per AAMA 920		
	25,000	Meets as stated	Meets as stated
5.3.6.11	Vertical Loading Resistance per AAMA 925		
	Pre-load - 200 N (45 lbf)		
	Maximum vertical deflection	1.3 mm (0.05")	N/A
	Residual vertical deflection	0.3 mm (0.01")	N/A
	Test load - 2224 N (500 lbf)		
	Maximum vertical deflection	15.2 mm (0.60")	N/A
	Residual vertical deflection	9.1 mm (0.36")	N/A
	Diagonal deformation	<0.3 mm (<0.01")	N/A
	Force to latch	65 N (15 lbf)	65 N (15 lbf) max.
Optional Performance			
4.4.2.6	Uniform Load Deflection per ASTM E 330		
	(Deflections were taken on the top rail)		
	(Loads were held for 10 seconds)		
	2400 Pa (50.16 psf) (positive)	1.3 mm (0.05")	6.4 mm (0.25") max.
	2400 Pa (50.16 psf) (negative)	2.3 mm (0.09")	6.4 mm (0.25") max.

Test Results: (Continued)

Paragraph	Title of Test - Test Method	Results	Allowed
Optional Performance: (Continued)			
4.4.2.6	Uniform Load Structural per ASTM E 330 (Permanent sets were taken on the top rail) (Loads were held for 10 seconds)		
	3600 Pa (75.24 psf) (positive)	0.3 mm (0.01")	2.3 mm (0.09") max.
	3600 Pa (75.24 psf) (negative)	0.3 mm (0.01")	2.3 mm (0.09") max.

Tape and film were used to seal against air leakage during structural testing. In our opinion, the tape and film did not influence the results of the test.

MOCK-UP PERFORMANCE TEST REPORT

Rendered to:

GAMCO CORPORATION
131-10 Maple Avenue
Flushing, New York 11355

Report No.: 64333.01-120-32

Project: Generic Curtain Wall System (250CW Series)

Project Summary: Architectural Testing, Inc. (ATI) was contracted by Gamco Corporation to conduct performance testing on a mock-up for the referenced project. All testing was performed in accordance with the attached "Curtain Wall Performance Test Procedure" dated April 18, 2006. The mock-up met all of the performance criteria outlined in the aforementioned test procedure. This report includes comprehensive written and photographic documentation of testing performed and a copy of "As-Built" mock-up drawings.

Drawing Reference: Gamco Corporation "As-Built" drawings for the Generic Curtain Wall System (250CW Series) Test Drawing numbered A-1, D-1 through D-5, last revision dated 05/30/06. A copy of these drawings is attached to this report and represents "As-Built" mock-up drawings.

Mock-up Description:

General: The mock-up was comprised of a single elevation wall system three bays wide by three lites high. The referenced drawings delineate the mock-up configuration and construction.

Overall Size: 15' 0" wide by 30' 0" high

130 Derry Court
York, PA 17406-8405
phone: 717-764-7700
fax: 717-764-4129
www.archtest.com

Test Methods:

Air Infiltration: ASTM E 283-04, *Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen*. Testing was conducted at 6.24 psf positive static air pressure difference.

Static Pressure Water Resistance: ASTM E 331-00, *Standard Test Method for Water Penetration of Exterior Windows, Curtain Walls, and Doors by Uniform Static Air Pressure Difference*. Testing was conducted at a 15.0 psf positive static air pressure difference for a 15 minute duration. Water was applied to the mock-up at a minimum rate of 5 gal/ft^2/hr.

Dynamic Pressure Water Resistance: AAMA 501.1-05, *Standard Test Method for Exterior Windows, Curtain Walls, and Doors for Water Penetration Using Dynamic Pressure*. Testing was conducted with a dynamic pressure equivalent of 15.0 psf for a 15 minute duration. Water was applied to the mock-up at a minimum rate of 5 gal/ft^2/hr.

Structural Performance: ASTM E 330-02, *Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors by Uniform Static Air Pressure Difference*. Testing was conducted at positive and negative loads as listed in the test results. Structural overloads were conducted at 1.5 times design pressures. Design loads and overloads were held for ten seconds.

Interstory Differential Movement (Horizontal Cycling): Three complete cycles shall be performed in the horizontal direction at the 17' 8-1.2" floor simulation. Horizontal movement will be 1.2" to the left, then back to zero, 1.2" to the right, and then back to zero (one cycle).

Test Witnesses: The following representatives witnessed all or part of the performance testing:

Charlie Chan	Gamco Corporation
Philip Snow	Gamco Corporation
John Chang	Gamco Corporation
Ron Wang	Gamco Corporation
Hsing Wang Chao	Gamco Corporation
Scott Kramer	Architectural Testing, Inc.
Shane Haring	Architectural Testing, Inc.

FINAL TEST RESULTS
June 1, 2006

Title of test	Measured	Allowed
Preload at 50% Design Pressure (±30.0 psf)	---	---
Static Pressure Air Infiltration @ 6.24 psf	PASSED <0.01 cfm/ft^2	0.06 cfm/ft^2 max.
Static Pressure Water Resistance @ 15.0 psf	PASSED No uncontrolled leakage	No uncontrolled leakage
Dynamic Pressure Water Resistance @ 15.0 psf	PASSED No uncontrolled leakage	No uncontrolled leakage
June 2, 2006		
Uniform Load Deflection @ Design Loads (+30.0 psf & -60.0 psf)	PASSED Reference Table #1 for results Reference Sketch #1 for indicator locations	L/240 Reference Table #1 for all other allowables
Repeat Static Pressure Air Infiltration @ 6.24 psf	PASSED <0.01 cfm/ft^2	0.06 cfm/ft^2 max.
Repeat Static Pressure Water Resistance @ 15.0 psf	PASSED No uncontrolled leakage	No uncontrolled leakage
Interstory Horizontal Displacement @ 1.200"	PASSED No visible damage	No visible damage
Repeat Static Pressure Air Infiltration @ 6.24 psf	PASSED <0.01 cfm/ft^2	0.06 cfm/ft^2 max.

FINAL TEST RESULTS
June 2, 2006
(Continued)

Title of test	Measured	Allowed
Repeat Static Pressure Water Resistance @ 15.0 psf	PASSED No uncontrolled leakage	No uncontrolled leakage
Additional Uniform Load Deflection @ Design Loads (±40.0 psf)	PASSED Reference Table #2 for results Reference Sketch #1 for indicator locations	L/240 Reference Table #2 for all other allowables
Additional Uniform Load Deflection @ Design Loads (±60.0 psf)	PASSED Reference Table #3 for results Reference Sketch #1 for indicator locations	L/240 Reference Table #3 for all other allowables
Uniform Structural Overloads @ 150% Design Loads (±60.0 psf)	PASSED Reference Table #4 for results Reference Sketch #1 for indicator locations	0.2% Span Reference Table #4
Additional Uniform Structural Overloads @ 150% Design Loads (±90.0 psf)	PASSED Reference Table #5 for results Reference Sketch #1 for indicator locations	0.2% Span Reference Table #5

SEQUENCE OF OPERATION

HVAC INSTRUMENTATION AND CONTROL SYSTEM SPECIFICATION

A. THIS HVAC INSTRUMENTATION AND CONTROL SYSTEM SPECIFICATION MUST BE CONFORMED TO IN ITS ENTIRETY TO ENSURE THAT THE INSTALLED AND PROGRAMMED SYSTEM WILL ACCOMMODATE ALL OF THE CURRENT AND FUTURE REQUIREMENTS OF THE BUILDING OWNER. ANY SPECIFIED HEW OR OPERATIONAL FEATURE NOT SPECIFICALLY ADDRESSED HEREIN TO BE DONE WILL BE INCLUDED TO BE HOT WRONT EXCEPTION.

B. THE INITIAL CHECKOUT AND VERIFICATION OF COMPLETE AND PROPER SYSTEM OPERATION SHALL BE PERFORMED BY PERSONNEL EMPLOYED BY THE AUTOMATIC CONTROL CONTRACTOR, TO BE FULLY TRAINED IN THE SYSTEMS OPERATION, INSTALLATION, CHECK-OUT, AND MAINTENANCE. DETAILED RECORDS OF THE CHECK-OUT AND VERIFICATION PROCEDURES SHALL BE MAINTAINED AND SUBMITTED TO OWNER'S REPRESENTATIVE WEEKLY. THESE RECORDS SHALL INCLUDE THE PROCEDURES USED, THE INDIVIDUALS PERFORMING THE PROCEDURES, THE DATES AND TIMES, AND THE RESULTS. THE FINAL CHECKOUT AND VERIFICATION OF COMPLETE AND PROPER SYSTEM OPERATION SHALL BE PERFORMED BY AIR CONTRACTOR PROJECT MANAGER AND OWNER.

C. CONTROL VALVE
1. PROVIDE AUTOMATIC CONTROL VALVE REQUIRED BY SEQUENCE OF OPERATIONS. PROVIDE NORMALLY OPEN OR NORMALLY CLOSED AUTOMATIC CONTROL VALVE AS REQUIRED BY SEQUENCE OF OPERATIONS. AUTOMATIC CONTROL VALVE SHALL BE BAL, OR BUTTERFLY VALVE.

2. AUTOMATIC CONTROL VALVES 3" AND SMALLER SHALL BE SCREWED TYPE, AND VALVES 2½" AND LARGER SHALL BE FLANGED. VALVES SHALL BE MULTI-PORED TO MINIMIZE THE PRESSURES AND TEMPERATURES ENCOUNTERED. VALVES SHALL HAVE STAINLESS-STEEL STEMS AND SPRING LOADED TEFLON PACKINGS WITH REPLACEABLE DISCS.

3. VALVE SHALL BE SIZED FOR A PRESSURE DROP EQUAL TO THE COIL THEY SERVE BUT NOT TO EXCEED 5 PSI. PROVIDE CONTROL VALVE CAPABLE OF CLOSING OFF AGAINST 150 PSI DIFFERENTIAL PRESSURE. PROVIDE CONTROL VALVE WITH 125 LB FLANGE.

4. BUTTERFLY VALVES SHALL BE SOLID RING TYPE SUITABLE FOR FLANGE MOUNTING WITH FULL LUG.
TYPE DISCBE, DRILLED AND TAPPED IRON BODY, STAINLESS STEEL DISK AND SHAFT.

B. SEQUENCE OF OPERATION OF CONDENSER WATER SYSTEM

1. AUTOMATIC CONTROL SYSTEM (ICS) SHALL CONTROL THE HEAT PUMP CONDENSER WATER LOOP SUPPLY TEMPERATURE BETWEEN A MINIMUM OF 60°F (ADJUSTABLE) IN THE WINTER AND A MAXIMUM OF 80°F (ADJUSTABLE) IN THE SUMMER.

2. ICS SHALL CONTROL THE COOLING TOWER CONDENSER WATER LOOP SUPPLY TEMPERATURE AT 85°F (ADJUSTABLE) WHENEVER THE HEAT PUMP CONDENSER WATER LOOP RETURN TEMPERATURE IS AT 90°F (ADJUSTABLE) AS THE FOLLOWING:
- COOLING TOWERS SHALL BE STARTED VIA ICS CONTROL PANEL, OR MANUALLY THROUGH LAG/ JAG SWITCH AT LEAD/ LAG CONTROL PANEL. THE CONDENSER WATER PUMP (CWP-1 OR CWP-2, CWP-3 OR CWP-4) SHALL BE STARTED AND RUN CONTINUOUS.
- IF LEAD COOLING TOWER FAILS TO START, THE ICS SHALL AUTOMATICALLY BRING LAG COOLING TOWER ON LINE.
- PRIOR TO LEAD OR LAG COOLING TOWER START, DEDICATED ISOLATION CONTROL VALVE SHALL OPEN AND RESPECTIVE COOLING TOWER CONDENSER WATER PUMP SHALL START.
- ICS SHALL MODULATE SPEED OF COOLING TOWER FAN TO MAINTAIN COOLING TOWER CONDENSER WATER LOOP SUPPLY TEMPERATURE SET POINT AFTER TWO MINUTES (ADJUSTABLE). ICS SHALL BRING LAG COOLING TOWER ON LINE AND SHALL RUN BOTH COOLING TOWERS AS NEEDED TO MAINTAIN COOLING TOWER CONDENSER WATER LOOP SUPPLY TEMPERATURE AT SET POINT. WHEN COOLING TOWER CONDENSER WATER LOOP SUPPLY TEMPERATURE IS AT SET POINT FOR 30 MINUTES (ADJUSTABLE), ICS SHALL MODULATE SPEED OF LAG COOLING TOWER FAN TO MAINTAIN SPEED THEN SHUT DOWN LAG COOLING TOWER, THE ONE WITH THE MOST RUN TIME), SHUT DOWN RESPECTIVE COOLING TOWER CONDENSER WATER PUMP AND CLOSE ISOLATION CONTROL VALVE. LAG COOLING TOWER SHALL REMAIN ON LINE. LEAD/ LAG COOLING TOWERS AND RESPECTIVE COOLING TOWERS WATER PUMPS OPERATIONS SHALL BE ROTATED ON A BIWEEKLY BASIS TO EQUALIZE COOLING TOWERS AND PUMPS RUN TIME.
- ICS SHALL OVERRIDE COOLING TOWER SUMP HEATER WHENEVER SUMP WATER TEMPERATURE IS AT 35°F (ADJUSTABLE) UNTIL SUMP WATER TEMPERATURE RISES ABOVE 40°F (ADJUSTABLE), EACH SUMP HEATER SHALL BE INTERLOCKED.
- LOAD LEVEL CONTROLLER SHALL MODULATE COLD WATER CONTROL VALVE TO MAINTAIN CONDENSER COOLING TOWERS SUMP WATER LEVEL.
- FAIL SAFE OPERATION - IF CONTROLS SYSTEM FAILS, COOLING TOWERS AND COOLING TOWERS WATER PUMPS SHALL REMAIN ON.
- PROVIDE ALARMS AS FOLLOWING:
  - COOLING TOWERS FAILED TO START/ STOP
  - COOLING TOWERS CONDENSER WATER PUMPS FAILED TO START/ STOP
  - COOLING TOWERS SUMP HEATERS FAILED TO ENERGIZE/ DEENERGIZE
  - COOLING TOWERS SUMP WATER TEMPERATURE IS BELOW 40°F (ADJUSTABLE).
  - THE COOLING TOWER CONDENSER WATER PUMPS SHALL BE CONTROLLED BY A PANEL FURNISHED AND INSTALLED BY ICS CONTRACTOR.

  COOLING TOWER CONDENSER WATER PUMPS H-O-A SWITCH:
  WHEN PUMP'S H-O-A SWITCH IS ROTATED IN "OFF" POSITION, THE RESPECTIVE PUMP SHALL BE OFF AND ICS SYSTEM SHALL GENERATE AN ALARM.
  WHEN PUMP'S H-O-A SWITCH IS IN "HAND" POSITION, THE RESPECTIVE PUMP SHALL START AND RUN CONTINUOUSLY.
  WHEN PUMP'S H-O-A SWITCH IS ROTATED IN "AUTO" POSITION, THE RESPECTIVE PUMP SHALL BE CONTROLLED BY THE ICS.

3. THE HEAT PUMP CONDENSER WATER LOOP
- THE HEAT PUMP CONDENSER WATER LOOP PUMPS (HP-1 OR P-2, HP-3 OR HP-4) THE PUMPS SHALL BE CONTROLLED BY A PANEL FURNISHED AND INSTALLED BY ICS CONTRACTOR. EACH PUMP SHALL BE CONTROLLED BY A VARIABLE FREQUENCY DRIVE (VFD), MODULATE THE PUMP SPEED TO MAINTAIN THE SYSTEM PRESSURE DIFFERENTIAL. IN AN A (LEAD)/ STANDBY (BACKUP) THE PUMPS SHALL BE STARTED/STOPPED BY ICS CONTROL PANEL IF, AFTER 15 SECONDS, FLOW HAS NOT BEEN PROVEN VIA DIFFERENTIAL PRESSURE SWITCH, AN ALARM SHALL BE GENERATED AND THE STANDBY PUMP SHALL BE STARTED. THE PUMP SHALL RUN CONTINUOUSLY. LEAD/ STANDBY DESIGNATIONS OF PUMPS SHALL BE ROTATED ON A BI-WEEKLY BASIS TO EQUALIZE PUMPS RUN TIME.

  THE CONDENSER WATER LOOP PUMPS H-O-A SWITCH:
  WHEN PUMP'S H-O-A SWITCH IS ROTATED IN "OFF" POSITION, THE RESPECTIVE PUMP SHALL BE OFF AND BOC SYSTEM SHALL GENERATE AN ALARM.
  WHEN PUMP'S H-O-A SWITCH IS IN "HAND" POSITION, THE RESPECTIVE PUMP SHALL START AND RUN CONTINUOUSLY.
  WHEN PUMP'S H-O-A SWITCH IS ROTATED IN "AUTO" POSITION, THE RESPECTIVE PUMP SHALL BE CONTROLLED BY THE ICS.
  FAIL SAFE OPERATION -IF CONTROLS SYSTEM FAILS, SYSTEM PRIMARY HEAT PUMP CONDENSER WATER LOOP PUMPS HP-1 OR HP-2, HP-3 OR HP-4 SHALL REMAIN ON.
- CONTROL VALVES (CV-1 OR CV-2)
  THE CONTROL VALVE CV-1 OR CV-2 SHALL BE NORMALLY OPENED THROUGH HEAT EXCHANGER. THE CONTROL VALVES CV-1 OR CV-2 SHALL CLOSE DURING HEAT EXCHANGER WHENEVER THE PRIMARY HEAT PUMP CONDENSER WATER LOOP SUPPLY WATER TEMPERATURE DROPS TO 60°F (ADJUSTABLE) AND/ OR ANY OF BOILERS IS ENABLED.
- WHEN HEAT PUMP CONDENSER WATER RETURN TEMPERATURE DROPS BELOW 60°F, THE BOILER CONTROL PANEL SHALL ENABLE AND STAGE THE BOILERS (B-1 & B-2, OR B-3 & B-4), THE BOILER SECONDARY CIRCULATING PUMPS (SUPPLIED BY THE BOILER MANUFACTURER) SHALL BE ENERGIZED TO CIRCULATE THE WATER TO MAINTAIN THE HEAT PUMP CONDENSER WATER LOOP SUPPLY WATER TEMPERATURE AT 70°F (ADJUSTABLE).
- ICS SHALL MONITOR THE PRIMARY HEAT PUMP CONDENSER WATER LOOP SUPPLY AND RETURN WATER TEMPERATURES AND GENERATE AN ALARM WHENEVER SUPPLY WATER TEMPERATURE IS 60°F (ADJUSTABLE) AND RETURN WATER TEMPERATURE IS 60°F (ADJUSTABLE). LEAD/ LAG BOILERS DESIGNATIONS SHALL BE ROTATED ON A BIWEEKLY BASIS TO EQUALIZE BOILERS RUN TIME. IF THE HEAT PUMP CONDENSER WATER LOOP RETURN WATER TEMPERATURE DROPS TO 40°F (ADJUSTABLE) THEN THE MANUFACTURER-PROVIDED BOILERS CONTROL PANEL SHALL ENABLE ALL BOILERS UNTIL RETURN WATER TEMPERATURE RISES ABOVE 60°F (ADJUSTABLE).
  ICS SHALL GENERATE AN ALARM IF ANY BOILER FAILS TO START.
  BOILER ROOM EMERGENCY SHUT-OFF SWITCHING GLASS SWITCH SHALL DE-ENERGIZE BOILERS UPON ACTIVATION AND ICS SHALL GENERATE AN ALARM.
  FAIL SAFE OPERATION - IF ICS CONTROLS FAIL, BOILERS SHALL REMAIN ON SUBJECT TO BOILERS SAFETIES.

COOLING TOWER SUMP HEATER

EACH SUMP CONTROLLED BY RTD TO MAINTAIN WATER TEMPERATURE. MAKEUP WATER SOLENOID VALVE AT EACH TOWER SUMP SHALL OPEN AND CLOSE TO MAINTAIN WATER LEVEL IN RESPECTIVE SUMP IN ACCORDANCE WITH FLOAT LEVEL SENSOR.

HEATING COIL AT EACH TOWER SUMP SHALL BE ACTIVATED WHEN SUMP TEMPERATURE IS BELOW 35 DEGREES F.

HEATER SHALL NOT BE ACTIVATED IF THE WATER LEVEL IN RESPECTIVE SUMP IS BELOW LEVEL SENSOR'S SETPOINT. HEAT TRACING AT EXTERIOR PIPING SERVING EACH TOWER SUMP SHALL BE ACTIVATED IF TEMPERATURE IS BELOW SETPOINT 35 DEGREES F.

STAIR PRESSURIZATION FAN SCHEDULE

SP-1, SP-2, SP-3
SERVING STAIR PRESSURIZATION SYSTEMS IN STAIRCASES

QUANTITIES: 3

GREENHECK MODEL SWSI-24, 0.25" S.P., 3,500 CFM,
FAN MOTOR: ½ HP, 120P/1P/60H
WEIGHT 60 LBS

1. FANS SHALL BE CONTROLLED VIA BASE BUILDING FIRE ALARM SYSTEM, WITH A CONTROL PANEL LOCATED IN HOTEL LOBBY.
2. FANS SHALL BE STARTED TO RUN CONTINUOUS TO PRESSURIZE THE STAIRCASE SERVED, WHEN THE BUILDING FIRE ALARM IS ACTIVATED.
3. WHEN THE STAIRWELL PRESSURE IS 0.15"± (ADJUSTABLE), THE BAROMETRIC RELIEF DAMPERS WILL BE OPENED TO RELIEF THE AIR FROM STAIRWELL, TO MAINTAIN THE STAIRWELL PRESSURE NOT TO EXCEED 0.15"± S.P.
4. PROVIDE DISCONNECT SWITCH AND VIBRATION ISOLATORS.
5. MOTORIZED DAMPER W/END SWITCH, SHALL BE INTERLOCKED WITH FAN DAMPER TO BE OPENED WHEN FAN IS STARTED, AND TO BE CLOSED WHEN FAN IS OFF.
6. FAN MOTOR SHALL BE CONNECTED TO BUILDING EMERGENCY POWER.

SP-4, SP-5 & SP-6
SERVING STAIR PRESSURIZATION SYSTEMS IN STAIRCASES

QUANTITIES: 3

GREENHECK MODEL SWSI-24, 0.25" S.P., 3,500 CFM,
FAN MOTOR: ½ HP, 120P/1P/60H
WEIGHT 60 LBS

1. FANS SHALL BE CONTROLLED VIA BASE BUILDING FIRE ALARM SYSTEM, WITH A CONTROL PANEL LOCATED IN HOTEL LOBBY.
2. FANS SHALL BE STARTED TO RUN CONTINUOUS TO PRESSURIZE THE STAIRCASE SERVED, WHEN THE BUILDING FIRE ALARM IS ACTIVATED.
3. WHEN THE STAIRWELL PRESSURE IS 0.15"± (ADJUSTABLE), THE BAROMETRIC RELIEF DAMPERS WILL BE OPENED TO RELIEF THE AIR FROM STAIRWELL, TO MAINTAIN THE STAIRWELL PRESSURE NOT TO EXCEED 0.15"± S.P.
4. PROVIDE DISCONNECT SWITCH AND VIBRATION ISOLATORS.
5. MOTORIZED DAMPER W/END SWITCH, SHALL BE INTERLOCKED WITH FAN DAMPER TO BE OPENED WHEN FAN IS STARTED, AND TO BE CLOSED WHEN FAN IS OFF.
6. FAN MOTOR SHALL BE CONNECTED TO BUILDING EMERGENCY POWER.

SMOKE EXHAUST FAN SCHEDULE

SE-1 & SE-2
SERVING BUILDING SMOKE EXHAUST SYSTEMS
QUANTITIES: 2

GREENHECK MODEL CUBE-300, 2.5" EXT. S.P., 6,000 CFM,
FAN MOTOR: 5 HP, 208P/3P/60H
WEIGHT 340 LBS

SE-3
SERVING BUILDING SMOKE EXHAUST SYSTEM IN HOTEL AND RETAIL SPACE
QUANTITY: 1

GREENHECK MODEL CUBE-300, 1.5" EXT. S.P., 8,000 CFM,
FAN MOTOR: 5 HP, 208P/3P/60H
WEIGHT 340 LBS

1. FANS SHALL BE CONTROLLED VIA BASE BUILDING FIRE ALARM SYSTEM, WITH A CONTROL PANEL LOCATED IN HOTEL LOBBY.
2. FANS SHALL BE STARTED TO EXHAUST SMOKE FROM ONE FLOOR AT ONE TIME.
3. DURING NORMAL CONDITION, ALL FANS (SE-1, SE-2 & SE-3) SHALL BE OFF, ALL FIRE SMOKE DAMPERS (FSD'S) AT THE SMOKE EXHAUST RISERS SHALL BE CLOSED (N.C.).
4. THE FANS BEING ACTIVATED EXHAUST THE SMOKE, ONLY FSD'S AT THE SMOKE EXHAUSTED FLOOR SHALL BE OPENED THRU THE SMOKE EXHAUST CONTROL PANEL AT LOBBY, ALL OTHER FSD'S AT THE RISERS SHALL REMAIN CLOSURE.
5. PROVIDE DISCONNECT SWITCH.
6. FAN MOTORS SHALL BE CONNECTED TO BUILDING EMERGENCY POWER.

AIR-COOLED ROOFTOP PACKAGE AIR CONDITIONING UNIT SCHEDULE

AC-1
SERVING OUTDOOR AIR TO SUB-CELLAR I HOTEL ACCESS SPACE

QUANTITY: 1

AAON MODEL RN-015-A-0-0808-308
NOMINAL 15 TONS COOLING.

SUPPLY FAN: 5,000 CFM (100% OUTDOOR AIR)
FAN MOTOR: 2 HP, 1.0" EXT. S.P.

COOLING PERFORMANCE:
TOTAL COOLING CAPACITY: 197.8 MBH
SENSIBLE COOLING CAPACITY: 134.4 MBH
ENTERING AIR TEMP.: 80°F(DB) / 74°F(WB)
LEAVING AIR TEMP.: 56.7°F(DB) / 55.8°F(WB)

HEATING PERFORMANCE:
HEATING CAPACITY: 234.0 MBH
ENTERING AIR TEMP.: 11°F, LEAVING AIR TEMP.: 78.0°F(DB)
GAS INPUT: 300.0 MBH

ELECTRICAL DATA: UNIT FLA: 43A, MCA: 70A, MFS: 90A, 208V/3P/60H

REFRIGERANT: R410A, OPERATING WEIGHT: 1,650 LBS.
UNIT SIZE: 111.3, THERMAL EFFICIENCY: 80%

PROVIDE:
1. 5-YEAR WARRANTY FOR COMPRESSORS AND FANS, AND ONE YEAR WARRANTY FOR LABOR, FACTORY STAR-UP.
2. AIR-SIDE ECONOMIZER, OUTDOOR AIR INLET HOOD, AND ALL FACTORY RECOMMENDED ACCESSORIES.
3. DURABLE STEEL TO SUPPORT THE UNIT, DESIGNED BY A STRUCTURAL ENGINEER.
4. VIBRATION ISOLATORS.
5. DISCONNECT SWITCH.
6. DUCT MOUNTED SMOKE DETECTOR.
7. DUCT MOUNTED TEMP. SENSORS SHALL CONTROL THE UNIT COMPRESSORS, ECONOMIZER AND GAS FURNACE, TO MAINTAIN THE UNIT DISCHARGE AIR TEMPERATURE AS SHOWN ABOVE.
8. A 7-DAYS, PROGRAMMABLE TIME CLOCK SHALL BE LOCATED IN SUB-CELLAR I DRAWING AREA.

EXHAUST AND OUTDOOR AIR FAN SCHEDULE

EF-1
SERVING SUB-CELLAR HOTEL LAUNDRY DRYER EXHAUST
QUANTITY: 1

GREENHECK MODEL SWSI-90, 0.75" EXT. S.P., 400 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 70 LBS

1. FANS SHALL BE STARTED BY A WALL MOUNTED SWITCH LOCATED IN LAUNDRY ROOM SERVED.
2. PROVIDE DISCONNECT SWITCH AND SPRING VIBRATION ISOLATORS.

EF-2
SERVING SUB-CELLAR HOTEL GUEST LAUNDRY DRYER EXHAUST
QUANTITY: 1

GREENHECK MODEL SWSI-90, 0.75" EXT. S.P., 400 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 70 LBS

1. FANS SHALL BE STARTED BY A WALL MOUNTED SWITCH LOCATED IN LAUNDRY ROOM SERVED.
2. PROVIDE DISCONNECT SWITCH AND SPRING VIBRATION ISOLATORS.

EF-3
SERVING SUB-CELLAR RESIDENTIAL LAUNDRY DRYER EXHAUST
QUANTITY: 1

GREENHECK MODEL SWSI-90, 0.75" EXT. S.P., 300 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 70 LBS

1. FANS SHALL BE STARTED BY A WALL MOUNTED SWITCH LOCATED IN LAUNDRY ROOM SERVED.
2. PROVIDE DISCONNECT SWITCH AND SPRING VIBRATION ISOLATORS.

EF-4
SERVING SUB-CELLAR HOTEL FITNESS ROOM EXHAUST
QUANTITY: 1

GREENHECK MODEL SQ-97-VG, 0.75" EXT. S.P., 300 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 90 LBS

1. FANS SHALL BE STARTED BY A WALL MOUNTED SWITCH LOCATED IN FITNESS ROOM.
2. PROVIDE DISCONNECT SWITCH AND SPRING VIBRATION ISOLATORS.

EF-5
SERVING SUB-CELLAR COMPACTOR ROOM EXHAUST
QUANTITY: 1

GREENHECK MODEL SQ-97-VG, 0.75" EXT. S.P., 300 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 90 LBS

1. FANS SHALL BE STARTED BY A WALL MOUNTED SWITCH LOCATED IN FITNESS ROOM.
2. PROVIDE DISCONNECT SWITCH AND SPRING VIBRATION ISOLATORS.

EF-6
SERVING SUB-CELLAR TOILET EXHAUST
QUANTITY: 1

GREENHECK MODEL SQ-120-VG, 1.0" EXT. S.P., 1,400 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 97 LBS

1. FANS SHALL BE STARTED BY A PROGRAMMABLE TIME CLOCK LOCATED AT FAN.
2. PROVIDE DISCONNECT SWITCH, SPRING VIBRATION ISOLATORS AND MOTORIZED DAMPER.

EF-7
SERVING 2ND FLOOR COMMUNITY FACILITY EXHAUST
QUANTITY: 1

GREENHECK MODEL SQ-109, 0.75" EXT. S.P., 800 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 91 LBS

1. FANS SHALL BE STARTED BY A PROGRAMMABLE TIME CLOCK LOCATED IN 2ND FLOOR TOILET.
2. PROVIDE DISCONNECT SWITCH, SPRING VIBRATION ISOLATORS AND MOTORIZED DAMPER IN 12" ROOFCURB.

EF-8
SERVING 1ST FLOOR RETAIL & HOTEL LOBBY TOILET EXHAUST
QUANTITY: 1

GREENHECK MODEL SQ-101, 1.0" EXT. S.P., 800 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 94 LBS

1. FANS SHALL BE STARTED BY A PROGRAMMABLE TIME CLOCK LOCATED AT FAN.
2. PROVIDE DISCONNECT SWITCH, 12" ROOFCURB AND MOTORIZED DAMPER.

EF-9
SERVING HOTEL TOILET EXHAUST
QUANTITY: 1

GREENHECK MODEL SQ-109HP, 0.5" EXT. S.P., 260 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 94 LBS

1. FANS SHALL BE STARTED BY A PROGRAMMABLE TIME CLOCK LOCATED AT FAN.
2. PROVIDE DISCONNECT SWITCH, 12" ROOFCURB AND MOTORIZED DAMPER.
3. PROVIDE VARI-GREEN MOTOR FOR FAN, MOTOR SHALL BE CONTROLLED BY ONE PRESSURE SENSOR LOCATED IN DUCT.

EF-10
SERVING HOTEL TOILET EXHAUST
QUANTITY: 1

GREENHECK MODEL SQ-141, 1.0" EXT. S.P., 1,900 CFM,
FAN MOTOR: 1½ HP, 120P/1P/60H
WEIGHT 94 LBS

1. FANS SHALL BE STARTED BY A PROGRAMMABLE TIME CLOCK LOCATED AT FAN.
2. PROVIDE DISCONNECT SWITCH, 12" ROOFCURB AND MOTORIZED DAMPER.
3. PROVIDE VARI-GREEN MOTOR FOR FAN, MOTOR SHALL BE CONTROLLED BY ONE PRESSURE SENSOR LOCATED IN DUCT.

EF-11
SERVING HOTEL TOILET EXHAUST
QUANTITY: 1

EF-12
SERVING HOTEL TOILET EXHAUST
QUANTITY: 1

GREENHECK MODEL SQ-109, 0.75" EXT. S.P., 2,200 CFM,
FAN MOTOR: 1" HP, 208P/3P/60H
WEIGHT 100 LBS

1. FANS SHALL BE STARTED BY A PROGRAMMABLE TIME CLOCK LOCATED AT FAN.
2. PROVIDE DISCONNECT SWITCH, 12" ROOFCURB AND MOTORIZED DAMPER.
3. PROVIDE VARI-GREEN MOTOR FOR FAN, MOTOR SHALL BE CONTROLLED BY ONE PRESSURE SENSOR LOCATED IN DUCT.

EF-13
SERVING SUB-CELLAR KITCHEN EXHAUST
QUANTITY: 1

GREENHECK MODEL SWSI-18, 2.5" EXT. S.P., 5,000 CFM,
FAN MOTOR: 5 HP, 208P/3P/60H
WEIGHT 280 LBS

1. FANS SHALL BE STARTED BY A WALL MOUNTED SWITCH LOCATED AT KITCHEN SERVED.
2. PROVIDE DISCONNECT SWITCH & SPRING VIBRATION ISOLATORS.

EF-14
SERVING SUB-CELLAR POOL EXHAUST
QUANTITY: 1

GREENHECK MODEL SWSI-135, 0.75" EXT. S.P., 800 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 97 LBS

1. FANS SHALL BE INTERLOCKED WITH AC UNIT (AC-4), STARTED BY A WALL MOUNTED T-STAT PROGRAMMABLE THERMOSTAT LOCATED IN POOL AREA.
2. PROVIDE DISCONNECT SWITCH, MOTORIZED DAMPER & SPRING VIBRATION ISOLATORS.

AC-5
SERVING SUB-CELLAR II PARKING OUTDOOR AIR
QUANTITY: 1

GREENHECK MODEL AV-40-275-8X13, 1.0" S.P., 30,000 CFM,
FAN MOTOR: 15 HP, 208P/3P/60H
WEIGHT 536 LBS

1. FANS SHALL BE INTERLOCKED WITH FAN EF-5C, ACTIVATED THRU CO SENSORS LOCATED IN SUB-CELLAR PARKING SPACE.
2. PROVIDE DISCONNECT SWITCH AND SPRING VIBRATION ISOLATORS.
3. PROVIDE FAN WITH A CONTROL SWITCH LOCATED IN PARKING ATTENDANT OFFICE TO START FAN BY MANUAL.

EF-5C
SERVING SUB-CELLAR I PARKING EXHAUST
QUANTITY: 1

GREENHECK MODEL AV-40-270-8X17, 1.25" S.P., 16,000 CFM,
FAN MOTOR: 7.5 HP, 208P/3P/60H
WEIGHT 536 LBS

1. FANS SHALL BE ACTIVATED THRU CO SENSORS LOCATED IN PARKING SPACE SERVED.
2. PROVIDE DISCONNECT SWITCH AND SPRING VIBRATION ISOLATORS.
3. MOTORIZED DAMPER W/END SWITCH, SHALL BE INTERLOCKED WITH FAN DAMPER TO BE OPENED WHEN FAN IS STARTED, AND TO BE CLOSED WHEN FAN IS OFF.
4. PROVIDE FAN WITH A CONTROL SWITCH LOCATED IN PARKING ATTENDANT OFFICE TO START FAN BY MANUAL.

EF-5C-1
SERVING SUB-CELLAR I PARKING EXHAUST
QUANTITY: 1

GREENHECK MODEL AV-40-270-8X22, 1.0" S.P., 30,000 CFM,
FAN MOTOR: 15 HP, 208P/3P/60H
WEIGHT 536 LBS

1. FANS SHALL BE ACTIVATED THRU CO SENSORS LOCATED IN PARKING SPACE SERVED.
2. PROVIDE DISCONNECT SWITCH AND SPRING VIBRATION ISOLATORS.
3. MOTORIZED DAMPER W/END SWITCH, SHALL BE INTERLOCKED WITH FAN DAMPER TO BE OPENED WHEN FAN IS STARTED, AND TO BE CLOSED WHEN FAN IS OFF.
4. PROVIDE FAN WITH A CONTROL SWITCH LOCATED IN PARKING ATTENDANT OFFICE TO START FAN BY MANUAL.

EF-RM
SERVING RESIDENTIAL DWELLING UNIT TOILET AND KITCHEN EXHAUST (7TH ~ 10TH FLOORS)
QUANTITIES:

GREENHECK MODEL SQ-70-VG, 0.25" EX. S.P., 300 CFM,
FAN MOTOR: ¾ HP, 120P/1P/60H
WEIGHT 44 LBS

1. FANS SHALL BE CONTROLLED BY WALL-MOUNTED 3-WAY CONTROL SWITCHES WITH PILOT LIGHT, LOCATED IN EACH TOILET, KITCHEN WITHIN DWELLING UNIT.
2. PROVIDE DISCONNECT SWITCH, FLEXIBLE CONNECTION AND VIBRATION ISOLATORS.
3. MOTORIZED DAMPER W/END SWITCH, SHALL BE INTERLOCKED WITH FAN DAMPER TO BE OPENED WHEN FAN IS STARTED, AND TO BE CLOSED WHEN FAN IS OFF.
4. EXHAUST LOUVER SHALL BE MIN. 3 FT FROM ANY OPERABLE WINDOWS IN THE SAME DWELLING UNIT, MIN. 3 FT FROM ANY OPERABLE WINDOWS IN ADJOINING DWELLING UNIT, MIN. 10 FT FROM ANY OUTDOOR INTAKE OPENING, IN COMPLIANCE WITH MC 501.2.1, 2.

OA-RM
SERVING RESIDENTIAL DWELLING UNIT OUTDOOR AIR INTAKE (7TH ~ 10TH FLOORS)
QUANTITIES:

GREENHECK MODEL SQ-70-VG, 0.25" EXT. S.P., 250 CFM
FAN MOTOR: ¾ HP, 120P/1P/60H, WEIGHT 44 LBS

FAN DESIGNED AIR DESIGN CONDITION:
75 CFM (OUTDOOR AIR @ 17°F OUTDOOR AIR TEMPERATURE)
170 CFM (RETURN AIR @ 65°F INDOOR AIR TEMPERATURE)
TOTAL 255 CFM (FAN DISCHARGE AIR @ 51.0°F MIXING AIR TEMPERATURE)

1. FANS SHALL BE CONTROLLED BY A WALL-MOUNTED CONTROL SWITCH WITH PILOT LIGHT, LOCATED IN LIVING ROOM NEXT TO AC THERMOSTAT.
2. PROVIDE DISCONNECT SWITCH, FLEXIBLE CONNECTION AND VIBRATION ISOLATORS.
3. MOTORIZED DAMPER W/END SWITCH, SHALL BE INTERLOCKED WITH FAN DAMPER TO BE OPENED WHEN FAN IS STARTED, AND TO BE CLOSED WHEN FAN IS OFF.
4. A 7/8 CFM OUTDOOR AIR SHALL BE DUCTED INTO EACH DWELLING UNIT, IN [illegible]

HEATING HOT WATER BOILER SCHEDULE

B-1-1, B-1-2, B-2-1 & B-2-2
QUANTITIES: 4

B-1-1 & B-1-2 SERVING HEATING TO THE BUILDING RESIDENTIAL FLOORS FROM 6TH THRU 16TH FLOORS.

B-2-1 & B-2-2 SERVING HEATING TO THE BUILDING COMMERCIAL & HOTEL FLOORS FROM SUB-CELLAR THRU 7TH FLOORS.

LAARS MODEL MIGHTYTEN SIZE 2500

NATURAL GAS INPUT: 2,499.0 MBH
HEATING OUTPUT: 2,374.0 MBH

HOT WATER ENTERING TEMPERATURE: 60°F
HOT WATER LEAVING TEMPERATURE: 75°F

OPERATING PRESSURE: 50 PSIG
RELIEF PRESSURE: 75 PSIG

ELECTRICAL: 120V/1P, 20A (BOILER); 208V/3P, 20A (SECONDARY PUMP)
THERMAL EFFICIENCY: 95.2%
WEIGHT: 2,039 LBS
ASME & AHRI CERTIFIED

PROVIDE WITH FOLLOWINGS:
CONDENSING OUT N' VENTING
HEATINGLER KIT & CONDENSATE DRAIN.
DRAIN VALVE, 24 V CONTROL SYSTEM,
LOW GAS PRESSURE SWITCH, MAIN GAS PRESSURE REGULATOR,
WATER FLOW SWITCH, LOW WATER CUT-OFF.
VARI-FRAME FLOW CONTROL.
INDOOR/OUTDOOR CONTROLLER.
SECONDARY CIRCULATING PUMP.
MIN. 4" CONCRETE PAD AND VIBRATION ISOLATORS.

PLATE AND FRAME HEAT EXCHANGER SCHEDULE

HX-1 & HX-2
QUANTITY: 2

HX-1: SERVING HEAT PUMP CONDENSER WATER SYSTEM FOR THE BUILDING RESIDENTIAL FLOORS FROM 6TH THRU 16TH FLOORS.

HX-2 SERVING HEAT PUMP CONDENSER WATER SYSTEM FOR THE BUILDING COMMERCIAL, COMMUNITY FACILITY & HOTEL FLOORS FROM SUB-CELLAR THRU 7TH FLOORS.

ALFA LAVAL MODEL M15-BFG

TOTAL HEAT LOAD: 6,818.0 MBH

HOT SIDE WATER:
FLOW RATE: 1,250 GPM
ENT. WPT: LVE. 67°F.
WATER PRESSURE DROP: 8.92 PSI

COLD SIDE WATER:
FLOW RATE: 1,250 GPM
ENT. WPT: LVE. 94°F
WATER PRESSURE DROP: 8.87 PSI

DESIGN WATER PRESSURE: 150 PSIG.

OPERATING WEIGHT: 5,670 LBS

EXPANSION TANK SCHEDULE

T-1 & T-2
QUANTITIES: 2

T-1 SERVING RESIDENTIAL HEAT PUMP SYSTEM
T-2 SERVING HOTEL/RETAIL/COMMUNITY FACILITY HEAT PUMP SYSTEM

BELL & GOSSETT MODEL B-300

TANK CAPACITIES: 83 GALLONS
ACCEPTANCE CAPACITIES: 53 GALLONS
WEIGHT: 192 LBS

DIFFUSER SCHEDULE (SELECTION BASED ON MANUFACTURER)

NOTES:
1. ARCHITECT SHALL SELECT COLOR, BORDER AND FRAME TYPE.
2. COORDINATE DIFFUSER AND GRILLE BORDER TYPE WITH THE LATEST ARCHITECTURAL CEILING TYPE TO ENSURE MOUNTING CAPABILITY.
3. REFER TO FLOOR PLANS FOR CFM QUANTITIES.
4. PROVIDE OPPOSED BLADE DAMPER FOR ALL AIR OUTLETS.
5. PROVIDE CABLE OPERATED VOLUME DAMPER FOR DIFFUSERS IF REQUIRED, SEE DETAIL.

COOLING TOWER SCHEDULE

CT-1-1 AND CT-1-2
QUANTITIES: 2

SERVING RESIDENTIAL FLOORS FROM 6TH - 16TH FLOORS

BALTIMORE AIR COIL SERIES 1800, MODEL 018E-12R6-07U4
DOUBLE CELL, NOMINAL 217 TONS COOLING

WHEN OUTDOOR WPT DB & 78°F WB.
ENTERING WATER TEMPERATURE: 95°F
LEAVING WATER TEMPERATURE: 85°F
CONDENSER WATER: 840 GPM

FAN: 15 HP MOTOR, 50,130 CFM, 208V/3P,

UNIT OPERATING WEIGHT: 9,700 LBS
UNIT DIMENSION: 6'-0"(L) X 11'-4"(W) X 11-1"(H)

PROVIDE FOLLOWINGS:
1. STRUCTURAL SUPPORT WITH SPRING VIBRATION ISOLATORS, SEE STRUCTURAL DRAWINGS FOR DETAILS.
2. FACTORY-SUPPLIED VARIABLE FREQUENCY DRIVE (VDF) FOR FAN MOTOR, BASED ON THE CONDENSER WATER ENTERING AND LEAVING TEMPERATURE.
3. FACTORY-SUPPLIED CONTROL PANEL.
4. FACTORY-INSTALLED ELECTRIC HEATER (8 KW EACH, 208V/3P) FOR BASIN.
5. LOW AND HIGH ALARM FLOAT SWITCHES.
6. BYPASS VALVE.
7. SEMIBRAND MECHANICAL WATER LEVEL CONTROL.
8. ENCLOSED CONTROLS WITH FACTORY PROVIDED PROGRAMMABLE LOGIC CONTROLLERS.
9. DISCONNECT SWITCHES.

CT-1-1 & CT-1-2
QUANTITIES: 2
SERVING SERVING HOTEL, RETAIL & COMMUNITY FACILITIES (SUB-CELLAR 1 ~ 7TH FLOORS)

BALTIMORE AIR COIL SERIES 1800, MODEL 018E-12R6-07U4
DOUBLE CELL, NOMINAL 217 TONS COOLING

WHEN OUTDOOR WPT DB & 78°F WB.
ENTERING WATER TEMPERATURE: 95°F
LEAVING WATER TEMPERATURE: 85°F
CONDENSER WATER: 840 GPM

FAN: 15 HP MOTOR, 50,130 CFM, 208V/3P,

UNIT OPERATING WEIGHT: 9,700 LBS
UNIT DIMENSION: 6'-0"(L) X 11'-4"(W) X 11-1"(H)

PROVIDE FOLLOWINGS:
1. STRUCTURAL SUPPORT WITH SPRING VIBRATION ISOLATORS, SEE STRUCTURAL DRAWINGS FOR DETAILS.
2. FACTORY-SUPPLIED VARIABLE FREQUENCY DRIVE (VDF) FOR FAN MOTOR, BASED ON THE CONDENSER WATER ENTERING AND LEAVING TEMPERATURE.
3. FACTORY-SUPPLIED CONTROL PANEL.
4. FACTORY-INSTALLED ELECTRIC HEATER (8 KW EACH, 208V/3P) FOR BASIN.
5. LOW AND HIGH ALARM FLOAT SWITCHES.
6. BYPASS VALVE.
7. SEMIBRAND MECHANICAL WATER LEVEL CONTROL.
8. ENCLOSED CONTROLS WITH FACTORY PROVIDED PROGRAMMABLE LOGIC CONTROLLERS.
9. DISCONNECT SWITCHES.

PUMP SCHEDULE

CWP-1-1 & CWP-1-2
QUANTITIES: 2 (ONE STANDBY)

SERVING COOLING TOWERS (CT-1 & CT-2) FOR RESIDENTIAL FLOORS (6TH ~ 16TH FLOORS)

BELL & GOSSETT SERIES VSX-HSC, MODEL 6AMV10-1/2A, 1,250 GPM, @ 80 FT PUMP HEAD.
MOTOR 1,750 RPM, 80.7% EFFICIENCY, 8.625" IMPELLER, 30 HP, BREAK HP 23.88 HP, 208V/3P,
WEIGHT 1,425 LBS

PROVIDE PUMP WITH FOLLOWING:
VARIABLE FREQUENCY DRIVE (VFD), SIMILAR TO ABB ACH550, CONTROL PUMP BASED ON WATER PRESSURE.
SPRING VIBRATION ISOLATORS, CHECK VALVE AND SHUT-OFF VALVES.
PUMP CONTROL PANEL WITH AUTOMATIC CHANGEOVER AND ALARM WHEN PUMP FAILURE.

CWP-1-1 & CWP-1-2
QUANTITIES: 2 (ONE STANDBY)

SERVING COOLING TOWERS (CT-3 & CT-4) FOR HOTEL, RETAIL & COMMUNITY FACILITY HEAT PUMP SYSTEM (SUB-CELLAR 1 ~ 7TH FLOORS)

BELL & GOSSETT SERIES VSX-HSC, MODEL 6AMV10-1/2A, 1,250 GPM, @ 80 FT PUMP HEAD.
MOTOR 1,750 RPM, 80.7% EFFICIENCY, 8.625" IMPELLER, 30 HP, BREAK HP 23.88 HP, 208V/3P,
WEIGHT 1,425 LBS

PROVIDE PUMP WITH FOLLOWING:
VARIABLE FREQUENCY DRIVE (VFD), SIMILAR TO ABB ACH550, CONTROL PUMP BASED ON WATER PRESSURE.
SPRING VIBRATION ISOLATORS, CHECK VALVE AND SHUT-OFF VALVES.
PUMP CONTROL PANEL WITH AUTOMATIC CHANGEOVER AND ALARM WHEN PUMP FAILURE.

HWP-1-1 & HWP-1-2
QUANTITIES: 2 (ONE STANDBY)

SERVING RESIDENTIAL FLOOR (6TH ~ 16TH FLOORS) HEAT PUMP SYSTEM

BELL & GOSSETT SERIES VSX-HSC, MODEL 5AMV13-1/2A, 1,250 GPM, @ 130 FT PUMP HEAD
MOTOR 1,770 RPM, IMPLLER EFFICIENCY, 12.875" IMPELLER, 60 HP, BREAK HP 51.88 HP, 208V/3P,
WEIGHT 2,497 LBS

PROVIDE PUMP WITH FOLLOWING:
VARIABLE FREQUENCY DRIVE (VFD), SIMILAR TO ABB ACH550, CONTROL PUMP BASED ON WATER PRESSURE.
SPRING VIBRATION ISOLATORS, CHECK VALVE AND SHUT-OFF VALVES.
PUMP CONTROL PANEL WITH AUTOMATIC CHANGEOVER AND ALARM WHEN PUMP FAILURE.

HWP-1-1 & HWP-1-2
QUANTITIES: 2 (ONE STANDBY)

SERVING HOTEL, RETAIL & COMMUNITY FACILITY HEAT PUMP SYSTEM

BELL & GOSSETT SERIES VSX-HSC, MODEL 5AMV13-1/2A, 1,250 GPM, @ 130 FT PUMP HEAD
MOTOR 1,770 RPM, IMPLLER EFFICIENCY, 12.875" IMPELLER, 60 HP, BREAK HP 51.88 HP, 208V/3P,
WEIGHT 2,497 LBS

PROVIDE PUMP WITH FOLLOWING:
VARIABLE FREQUENCY DRIVE (VFD), SIMILAR TO ABB ACH550, CONTROL PUMP BASED ON WATER PRESSURE.
SPRING VIBRATION ISOLATORS, CHECK VALVE AND SHUT-OFF VALVES.
PUMP CONTROL PANEL WITH AUTOMATIC CHANGEOVER AND ALARM WHEN PUMP FAILURE.

PTAC UNIT SCHEDULE

PACKAGED TERMINAL AIR CONDITIONING UNIT WITH ELECTRIC HEAT SERVING ROOF, ELEVATOR MACHINE ROOM AND CORRIDOR

LG PTAC UNIT

PTAC-1(2)-1
QUANTITIES: 2

MODEL: LP1419GSSM
COOLING CAPACITY: 9,000 BTUH
ELECTRICAL: 208V/1/60, MAC 10.0, MCP 20.
AIR FLOW CFM: 280
ELECTRIC HEATER: 3.1 KW, HEATING CAPACITY: 10,571 BTUH
UNIT EER: 12.7

WATER-COOLD HEAT PUMP AC UNIT SCHEDULE

HORIZONTAL UNITS

HP-TYP-1

QUANTITIES: 16

FHP MODEL LV013
FAN 800 CFM @ 0.5" EXT. S.P., 1/2 HP MOTOR

COOLING CAPACITY: TOTAL 14.4 MBH, SENSIBLE 11.2 MBH
ENT 80°F, LVT 66°F
EAT: 80.0°F DB / 67.0°F WB.

HEATING CAPACITY: 15.0 MBH, WHEN EAT 70.0°F, ENT 70°F.

CONDENSER WATER: 3.0 GPM @ 8.7 FT PD

ELECTRICAL: POWER INPUT 1.01 KW, 208V/1P/60H, MCA 8.8, MFS 15.
WEIGHT: 103 LBS
UNIT EER 14.3, UNIT COP 5.2

HP-TYP-2

QUANTITIES: 200

FHP MODEL LV020,
FAN 350 CFM @ 0.5" EXT. S.P., 1/2 HP MOTOR

COOLING CAPACITY: TOTAL 8.8 MBH, SENSIBLE 7.3 MBH
ENT 80°F, LVT 59°F.
EAT: 80.0°F DB / 67.0°F WB.

HEATING CAPACITY: 11.0 MBH, WHEN EAT 60.0°F, ENT 70°F.

CONDENSER WATER: 2.0 GPM @ 3.7 FT PD

ELECTRICAL: POWER INPUT 0.65 KW, 208V/1P/60H, MCA 5.2, MFS 15.
WEIGHT: 103 LBS
UNIT EER 14.1, UNIT COP 5.8

HP-TYP-3

QUANTITIES: 8

FHP MODEL LV036, NOMINAL 3 TON COOLING
FAN 1,200 CFM @ 0.5" EXT. S.P., 1 HP MOTOR

COOLING CAPACITY: TOTAL 36.0 MBH, SENSIBLE 28.4 MBH
ENT 80°F, LVT 64°F.
EAT: 80.0°F DB / 67.2°F WB.

HEATING CAPACITY 48.0 MBH, EAT 60.0°F, ENT 70°F.

CONDENSER WATER: 7.5 GPM @ 8.5 FT PD

WEIGHT 227 LBS
ELECTRICAL: POWER INPUT 2.54 KW, 208V/3P/60H, MCA 14.2, MFS 20
UNIT EER 14.4 UNIT COP 5.1

HP-TYP-4

QUANTITIES: 1

FHP MODEL LV048, NOMINAL 4 TON COOLING
FAN 1,600 CFM @ 0.5" EXT. S.P., 1 HP MOTOR

COOLING CAPACITY: TOTAL 48.7 MBH, SENSIBLE 35.8 MBH
ENT 80°F, LVT 54°F.
EAT: 80.0°F DB / 67.2°F WB.

HEATING CAPACITY: 60.3 MBH, EAT 60.0°F, ENT 70°F.

CONDENSER WATER: 10 GPM @ 8.3 FT PD

WEIGHT: 296 LBS
ELECTRICAL: POWER INPUT 3.81 KW, 208V/3P/60H, MCA 18.2, MFS 25.
UNIT EER 13.8 UNIT COP 5.0

HP-TYP-5

QUANTITIES: 6

FHP MODEL LV060, NOMINAL 5 TON COOLING
FAN 1,980 CFM @ 0.75" EXT. S.P., 1 HP MOTOR

COOLING CAPACITY: TOTAL 60.0 MBH, SENSIBLE 44.5 MBH,
ENT 80°F, LVT 59°F
EAT: 80.0°F DB / 67.0°F WB

HEATING CAPACITY 76.3 MBH, EAT 60°F, ENT 70°F.

CONDENSER WATER: 13 GPM @ 8.0 FT PD

WEIGHT: 327 LBS
ELECTRICAL: POWER INPUT 4.58, 208V/3P/60H, MCA 25.6, MFS 40.

UNIT EER 13.6 UNIT COP 4.8
PROVIDE WATERSIDE ECONOMIZER.

HP-TYP-6

QUANTITIES: 8

FHP MODEL LV090, NOMINAL 7.5 TON COOLING
FAN: 2,200 CFM @ 1.0" EXT. S.P., 1 HP MOTOR

COOLING CAPACITY: TOTAL 87.5 MBH, SENSIBLE 61.4 MBH,
ENT 80°F, LVT 54°F
EAT: 80.0°F DB / 67°F WB

HEATING CAPACITY: 82.7 MBH, EAT 60°F, ENT 70°F.

CONDENSER WATER: 15 GPM @ 11.0 FT PD

WEIGHT 720 LBS
ELECTRICAL: POWER INPUT 5.1 KW, 208V/3P/60H, MCA 28.6, MFS 45.

UNIT EER 13.2 UNIT COP 5.1
PROVIDE WATERSIDE ECONOMIZER & DUCT MOUNTED SMOKE DETECTORS.

HP-TYP-7

QUANTITIES: 1

FHP MODEL LV-024, NOMINAL 2 TON COOLING
@60
COOLING CAPACITY: TOTAL 24.1 MBH, SENSIBLE 17.7 MBH,
ENT 80°F, LVT 54°F
EAT: 80°F DB / 67°F WB

HEATING CAPACITY: 30.4 MBH, EAT 60°F, ENT 70°F.

CONDENSER WATER: 7.0 GPM @ 10.8 FT PD

WEIGHT 181 LBS
ELECTRICAL: POWER INPUT 1.73 KW, 208V/3P/60H, MCA 10.2 A, MFS 15.

UNIT EER 13.9 UNIT COP 4.8
PROVIDE WATERSIDE ECONOMIZER & DUCT MOUNTED SMOKE DETECTORS.

PROVIDE EACH UNIT WITH:
1. DISCONNECT SWITCH.
2. SPRING VIBRATION ISOLATORS WITH STRUCTURAL STEEL TO SUPPORT UNITS.
3. 7-DAY PROGRAMMABLE TIME CLOCK, LOCATED IN AREA SERVED.
4. TWO-WAY WATER REGULATING VALVES WITH ACTUATORS.
5. EXTRA QUIET SOUND PACKAGE.
6. WATER SIDE ECONOMIZER FOR HP-TYP-5 & HP-TYP-6.
7. DUCT SMOKE DETECTORS FOR HP-TYP-5
8. CONDENSATE PUMP & DRAIN PAN W/LEAK DETECTOR.
9. FILTERS

WATER-COOLD SWIMMING POOL AC UNIT SCHEDULE

SP-1
SERVING SUB-CELLAR 1 SWIMMING POOL

QUANTITY: 1

DESTINYON MODEL DSH-092, NOMINAL 13 TON COOLING
FAN 3,800 CFM @ 1.0" EXT. S.P., SUPPLY MOTOR 3 HP

COOLING CAPACITY: TOTAL 155.3 MBH, SENSIBLE 88.1 MBH
MOISTURE REMOVAL CAPACITY: 19.7 LBS/HR

ENT WPT, LVT 59°F
EAT: 84.0°F DB @ 52% RH.

HEATING CAPACITY: 88.3 MBH, EAT 60.0°F, ENT 70°F.

CONDENSER WATER: 27 GPM @ 23.1 FT PD

POOL WATER HEATER CONDENSER WATER: 17 GPM @ CAPACITY OF 99.1 MBH

ELECTRICAL: POWER INPUT 51.0 KW, 208V/3P/60H, MCA 167, MFS 200,
UNIT EER 13.1

PROVIDE:
1. DISCONNECT SWITCH.
2. VIBRATION ISOLATORS.
3. VARIABLE FREQUENCY DRIVE.
4. 7-DAY PROGRAMMABLE THERMOSTAT / HUMIDISTAT.
5. REFRIGERANT HOT-GAS MAIN POOL WATER HEATER EXCHANGER.
6. 5-YEAR COMPRESSOR WARRANTY AND 2-YEAR COIL/LABOR WARRANTY.

ELECTRICAL UNIT HEATER SCHEDULE

EHU-TYP-1
QUANTITIES: 42
RECESS MA SERIES WALL HEATER, POWER: 1,715 WATT, 208V/1P, 8.7 AMPS. 40 CFM, HEATING 3,414BTUH.
WEIGHT 6 LBS.
PROVIDE: DISCONNECT SWITCH, BUILT-IN THERMOSTAT, COORDINATE EXACT LOCATION WITH ARCHITECT.

EHU-TYP-2
QUANTITIES: 8
RECESS MA SERIES WALL HEATER, POWER: 1,500 WATT, 120V/1P, 12.5 AMPS. 100 CFM, HEATING 5,110 BTUH.
WEIGHT 6 LBS.
PROVIDE: DISCONNECT SWITCH, BUILT-IN THERMOSTAT, COORDINATE EXACT LOCATION WITH ARCHITECT.

NOTE: THIS IS A SCHEMATIC DESIGN & SHALL BE SUBJECT TO REVIEW & INTERPRETATION BY NYC DEPT. OF BLDGS ON ZONING AND BUILDING CODES.

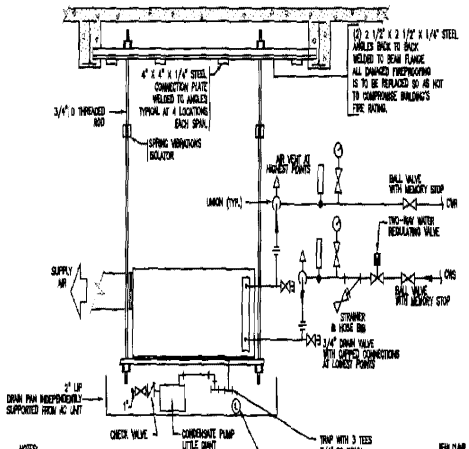
GENERAL NOTES:

1. DAMPER TO BE U.L. LABELED N.F.P.A. 90A AND 96A APPROVED
2. N.F.P.A. APPROVED INSTALLATION DETAILS TO BE PART OF SUBMISSION OF COMBINATION FIRE & SMOKE DAMPER FOR APPROVAL, WHICH SHALL MEET N.F.P.A. STANDARD 90A AND 96A APPROVED.
3. DETAILS SHOWN ARE FOR COMBINATION FIRE AND SMOKE DAMPERS IN HORIZONTAL DUCTWORK. FOR DAMPERS IN VERTICAL DUCTWORK, DETAIL IS SIMILAR.
4. ACCESS DOOR IS SHOWN IN SIDE OF DUCT.
5. DETAIL FOR SMOKE DAMPER SHALL BE SIMILAR TO COMBINATION DAMPER EXCEPT DELETE FUSIBLE LINK IN DAMPER.
6. THIS DETAIL IS FOR GUIDE ONLY. INSTALL DAMPER IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS.

ANGLE IRON TABLE	
WALL OPENING	ANGLE SIZE
UP TO 24"	1 1/2"x1 1/2"x1/8"
24" TO 84"	2"x2"x 3/16"
85" TO 120"	3"x3"x 3/16"

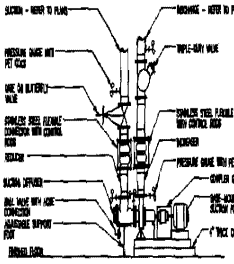
NOTE: RETAINING ANGLES MUST LAP STRUCTURAL OPENING 1" MIN. AND COVER CORNERS OF OPENINGS

COMBINATION FIRE AND SMOKE DAMPER DETAIL



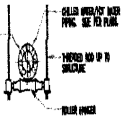
NOTES:
COND. PUMP FLOAT SWITCH TO SHUT DOWN AC UNIT IF WATER IN THE TANK RISES TO A DANGEROUS LEVEL.

AC UNIT PIPING DIAGRAM



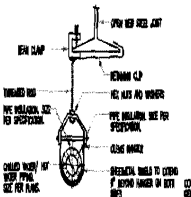
BASE MOUNTED PUMP DETAIL

SPLIT RING HANGER DETAIL

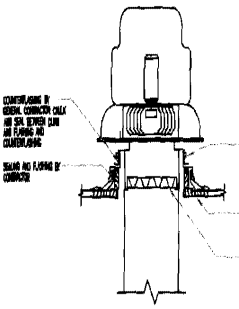


NOTE: REFER TO DIVISION 15 SPECIFICATION FOR ADDITIONAL REQUIREMENTS.

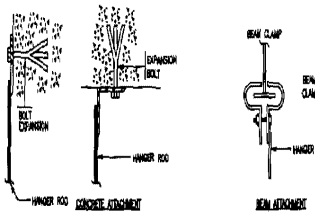
TWO ROD ROLLER HANGER DETAIL

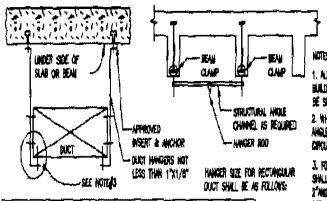


CLEVIS HANGER DETAIL



ROOF MOUNTED EXHAUST FAN DETAIL





NOTES:
1. ALL DUCT TO BE HUNG FROM BUILDING CONSTRUCTION. NOT TO BE SUPPORTED FROM PIPING CEILING.
2. WHEN DUCT AREA EXCEEDS 5 SQ.FT. ANGLE STIFFENERS REQUIRED AROUND CIRCUMFERENCE EVERY 4'-0".
3. FOR DUCT OVER 42" WIDE HANGERS SHALL TURN UNDER DUCT AT LEAST 2" AND SHALL BE FASTENED TO THE BOTTOM AS WELL AS TO THE SIDES OF THE DUCT.
4. FOR DUCTS WITH A CROSS SECTIONAL AREA OF 4 SQ.FT. OR LESS, HANGERS SHALL BE NO MORE THAN 8'-0" A PART. FOR DUCTS WITH A CROSS SECTIONAL AREA OF MORE THAN 4 SQ.FT. BUT NOT OVER 8 SQ.FT. HANGERS SHALL BE NOT MORE THAN 6 FT. A PART. AND FOR DUCTS WITH A CROSS SECTIONAL AREA OF MORE THAN 8 SQ.FT. HANGERS SHALL BE NOT MORE THAN 4 FT. A PART. THE DISTANCES BETWEEN SHALL BE MEASURED LINEARLY ALONG THE DUCT.

HANGER SIZE FOR RECTANGULAR DUCT SHALL BE AS FOLLOWS:

LONGEST DIMENSION OF DUCT	ROUND HANGERS	MAX SPACING SEE NOTE #4	STRAP HANGERS	TRAPEZE SHELF ANGLES
UP TO 18"	Ø DIA WIRE	8'-0"	1"X1/8"	1"X1" X 1/8"

NOTES:

1. CLEARANCE BETWEEN THE FLOOR/DECK OPENING AND THE DAMPER/SLEEVE ASSEMBLY SHALL BE 1/8" PER FOOT OF WIDTH AND HEIGHT. MINIMUM CLEARANCE SHALL BE 1/4" FOR ANY SIZE DAMPER/SLEEVE ASSEMBLY. THE MAXIMUM OPENING SHALL NOT EXCEED 1/8" PER FOOT PLUS 1". MOUNTING ANGLES SHALL OVERLAP FLOOR/DECK 1" MINIMUM ON ALL SIDES.

2. THE DAMPER FRAME MAY BE FASTENED TO THE SLEEVE USING #14 SHEET METAL SCREWS SPACED AT A MINIMUM OF 6" CENTER TO CENTER FOR 3 HR RATED DAMPERS. A MINIMUM OF ONE FASTENER PER SIDE MUST BE USED.

3. MOUNTING ANGLES MUST BE INSTALLED ON BOTH SIDES OF THE FLOOR/DECK OPENING AND MUST BE USED ON ALL 4 SIDES OF THE DAMPER/SLEEVE ASSEMBLY (EXCEPTING BOTTOM). MINIMUM MOUNTING ANGLE SIZE IS 1"X1"X1/8" GAUGE FOR DAMPERS UP TO 12" IN WIDTH OR HEIGHT. 1-1/2"X1-1/2"X1/8" GAUGE FOR DAMPERS UP TO 72" WIDTH OR HEIGHT, AND 2"X2"X1/8" GAUGE FOR LARGER DAMPERS. MOUNTING ANGLES ARE TO BE ATTACHED TO DAMPER/SLEEVE ASSEMBLY USING #14 SHEET METAL SCREWS SPACED AT A MAXIMUM OF 6" CENTER TO CENTER FOR 3 HR RATED DAMPERS. A MINIMUM OF ONE FASTENER PER SIDE MUST BE USED.

4. UL 555 (FOR 1-1/2) SLEEVE THICKNESS REQUIREMENT: SLEEVE THICKNESS WHEN USED WITHOUT SLIP CONNECTION SHALL BE A MINIMUM OF 18 GAUGE FOR DAMPERS WITH DIMENSIONS NOT EXCEEDING 24" IN HEIGHT OR 30" IN WIDTH AND A MINIMUM OF 16 GAUGE FOR LARGER DAMPERS. EXCEPTION: SLEEVES OF LESSER THICKNESS MAY BE USED IF ONE OF NONE OF THE FOLLOWING SLIP CONNECTIONS IS LOCATED WITHIN THE 12" FROM THE WALL/FLOOR OPENING: PLAIN "S" SLIP, REVERSE "S" SLIP, STANDING "S" SLIP, ALTERNATE BAR, ANGLE, OR BAR REINFORCED, HEMMED "S" SLIP. SLEEVE GAUGE MAY NOT BE LESS THAN DUCT GAUGE.

5. SEAL AROUND THE COMPLETE PERIMETER OF DAMPER FRAME WITHIN ITS SLEEVE WITH APPROVED FIRE RESISTANT MATERIAL.

6. SEAL AROUND THE COMPLETE PERIMETER OF THE REMAINING OPENING IN SLEEVE WITHIN WHICH DAMPER INSTALLATION WAS APPROVED FOR RESISTANT MATERIAL.

7. WHEN AIR MOVE DIRECTION IS ACHIEVED THE FIRE DAMPER THE ARROW SHALL BE SENT DOWN AIRWAYS.

NYC DOB NO.

No.	DATE	DESCRIPTION

MARKING OF MECHANICAL SYSTEMS IN COMPLIANCE WITH 2011 NYC ENERGY CONSERVATION CODE:

1. ALL OUTDOOR AIR INTAKE AND EXHAUST OPENINGS SHALL HAVE AUTOMATED DAMPERS WITH MAXIMUM LEAKAGE RATE OF 4 CFM PER SQ. FT. AT 1.0" W.G. WHEN TESTED IN ACCORDANCE WITH AMCA 5000, AS PER 502.4.5
2. THE COOLING AND HEATING LOAD CALCULATION METHOD IS AS PER ASHRAE/ACCA MEL 8/8/10 - COOLING LOAD TEMPERATURE DIFFERENT / COOLING LOAD FACTOR METHODS, IN COMPLIANCE WITH 302.1
3. 7-DAY PROGRAMMABLE THERMOSTATS SHALL BE USED FOR ALL AIR-COOLED (BUT NOT HANDLE REFRIGERANT FLOW) AIR CONDITIONING UNITS AND ALL HEATING AIR HANDLERS OF PER SECTION 403.1. SUCH THERMOSTAT HAS CAPABILITIES FOR SET POINT OVERLAP RESTRICTION, OFF-HOUR CHANGEOVER DELAYS AND SEASONAL ZONE TO SHIFT UP UP TO 5DEG. 7-HOUR OCCUPIED PERIODS, 10-HOUR MINIMUM, AND SHUNT DAMPER CONTROLS.
4. UPON HVAC INSTALLATION COMPLETION, CONTRACTOR SHALL PROVIDE IN AIR AND WATER BALANCING REPORTS FOR ENGINEER'S REVIEW AND APPROVAL, AND PROVIDE AN OPERATING AND MAINTENANCE MANUAL OF ALL MECHANICAL EQUIPMENT INSTALLED, TO THE BUILDING OWNER, IN COMPLIANCE WITH 603.3.3.
5. EACH HVAC SYSTEM HAVING A TOTAL FAN MOTOR HORSEPOWER (HORSE POWER PLUS ANY OTHER DEVICES) WHICH EXCEEDS MAXIMUM ALLOWABLE HORSEPOWER (ALLOWABLE BRAKE HORSEPOWER) SHALL NOT EXCEED ALLOWABLE HORSEPOWER (ALLOWABLE BRAKE HORSEPOWER) SHOWN IN TABLE 503.2.10.1 (1).
6. FOR BUILDINGS GREATER THAN 2 STORIES AND GREATER OR EQUAL 40 STORIES OR EXHAUST AIR FLOWS OF 200 CFM OR LESS, NON-DIRECTIONAL AIR SUPPLY AND EXHAUST DEVICES SHALL BE EQUIPPED WITH MOTORIZED DAMPERS THAT WILL AUTOMATICALLY SHUT WHEN THE SYSTEMS OR SPACES SERVED ARE NOT IN USE, IN COMPLIANCE WITH 503.4.4.
7. ENERGY RECOVERY SYSTEMS SHALL BE PROVIDED FOR RESIDENTIAL FAN SYSTEMS THAT HAVE BOTH A DESIGN SUPPLY AIR CAPACITY OF 5000 CFM OR GREATER AND A MINIMUM OUTDOOR AIR SUPPLY OF 70 PERCENT OR GREATER OF THE DESIGN SUPPLY AIR QUANTITY, IN COMPLIANCE WITH 503.5.6.

TABLE II – PROGRESS INSPECTIONS FOR ENERGY CODE COMPLIANCE

	INSPECTION/TEST	FREQUENCY (MINIMUM)	REFERENCE STANDARD (SEE ECC CHAPTER 8 OR OTHER CRITERIA)	ECC OR OTHER CITATION
MB	MECHANICAL AND SERVICE WATER HEATING INSPECTIONS			
MB2	OUTDOOR AIR INTAKES AND EXHAUST OPENINGS: DAMPERS FOR STAIR AND ELEVATOR SHAFT VENTS AND OTHER OUTDOOR AIR INTAKES AND EXHAUST OPENINGS INTEGRAL TO THE BUILDING ENVELOPE SHALL BE VISUALLY INSPECTED TO VERIFY THAT SUCH DAMPERS, EXCEPT WHERE PERMITTED TO BE GRAVITY DAMPERS, COMPLY WITH APPROVED CONSTRUCTION DRAWINGS. MANUFACTURER'S LITERATURE SHALL BE REVIEWED TO VERIFY THAT THE PRODUCT HAS BEEN TESTED AND FOUND TO MEET THE STANDARD.	AS REQUIRED DURING INSTALLATION	APPROVED CONSTRUCTION DOCUMENTS; AMCA 5000	502.4.4; ASHRAE 90.1-6.4.3.4
MB4	HVAC, SERVICE WATER HEATING AND POOL EQUIPMENT SIZING AND PERFORMANCE: EQUIPMENT SIZING, EFFICIENCIES AND OTHER PERFORMANCE FACTORS OF ALL MAJOR EQUIPMENT UNITS, AS DETERMINED BY THE APPLICANT OF RECORD, AND NO LESS THAN 15% OF MINOR EQUIPMENT UNITS, SHALL BE VERIFIED BY VISUAL INSPECTION AND, WHERE NECESSARY, REVIEW OF MANUFACTURER'S DATA. POOL HEATERS AND COVERS SHALL BE VERIFIED BY VISUAL INSPECTION.	PRIOR TO FINAL PLUMBING AND CONSTRUCTION INSPECTION	APPROVED CONSTRUCTION DOCUMENTS	503.2, 504.2, 504.7; ASHRAE 90.1-6.3, 6.4.1, 6.4.2, 6.8.7.4, 7.8
MB5	HVAC SYSTEM CONTROLS AND ECONOMIZERS AND SERVICE HOT WATER SYSTEM CONTROLS: NO LESS THAN 20% OF EACH TYPE OF REQUIRED CONTROLS AND ECONOMIZERS SHALL BE VERIFIED BY VISUAL INSPECTION AND TESTED FOR FUNCTIONALITY AND PROPER OPERATION. SUCH CONTROLS SHALL INCLUDE, BUT ARE NOT LIMITED TO THERMOSTATIC SET POINT OVERLAP RESTRICTION, OFF-HOUR, SHUTOFF DAMPER, SNOW-MELT SYSTEM, DEMAND CONTROL SYSTEMS, OUTDOOR HEATING SYSTEMS, ZONES, ECONOMIZERS, AIR SYSTEMS, VARIABLE AIR VOLUME FAN, HYDRONIC SYSTEMS, HEAT REJECTION EQUIPMENT FAN SPEED, COMPLEX MECHANICAL SYSTEMS SERVING MULTIPLE ZONES, VENTILATION, ENERGY RECOVERY SYSTEMS, HOT GAS BYPASS LIMITATION, TEMPERATURE, SERVICE WATER HEATING, HOT WATER SYSTEM, POOL HEATER AND TIME SWITCHES, EXHAUST HOODS, RADIANT HEATING SYSTEMS. CONTROLS WITH SEASONALLY DEPENDENT FUNCTIONALITY: CONTROLS WHOSE COMPLETE OPERATION CANNOT BE DEMONSTRATED DUE TO PREVAILING WEATHER CONDITIONS TYPICAL OF THE SEASON DURING WHICH PROGRESS INSPECTIONS WILL BE PERFORMED SHALL BE PERMITTED TO BE SIGNED OFF FOR THE PURPOSE OF A TEMPORARY CERTIFICATE OF OCCUPANCY WITH ONLY A VISUAL INSPECTION, PROVIDED, HOWEVER, THAT THE PROGRESS INSPECTOR SHALL PERFORM A SUPPLEMENTAL INSPECTION WHERE THE CONTROLS ARE VISUALLY INSPECTED AND TESTED FOR FUNCTIONALITY AND PROPER OPERATION DURING THE NEXT IMMEDIATE SEASON THEREAFTER. THE OWNER SHALL PROVIDE FULL ACCESS TO THE PROGRESS INSPECTOR WITHIN TWO WEEKS OF THE PROGRESS INSPECTOR'S REQUEST FOR SUCH ACCESS TO PERFORM THE PROGRESS INSPECTION. FOR SUCH SUPPLEMENTAL INSPECTIONS, THE DEPARTMENT SHALL BE NOTIFIED BY THE APPROVED PROGRESS INSPECTION AGENCY OF ANY UNRESOLVED DEFICIENCIES IN THE INSTALLED WORK WITHIN 180 DAYS OF SUCH SUPPLEMENTAL INSPECTION.	AFTER INSTALLATION AND PRIOR TO FINAL ELECTRICAL AND CONSTRUCTION INSPECTION, EXCEPT THAT FOR CONTROL WITH SEASONALLY DEPENDENT FUNCTIONALITY, SUCH TESTING SHALL BE PERFORMED BEFORE SIGN-OFF FOR ISSUANCE OF A FINAL CERTIFICATE OF OCCUPANCY	APPROVED CONSTRUCTION DOCUMENTS, INCLUDING CONTROL SYSTEM NARRATIVES; ASHRAE GUIDELINE 1: THE HVAC COMMISSIONING PROCESS WHERE APPLICABLE	503.2.4, 503.2.5.1, 503.2.11, 503.3, 503.4, 504.3, 504.6, 504.7; ASHRAE 90.1-6.3, 6.4, 6.5, 6.7.2.4, 7.4.4, 7.4.5
MB6	AIR LEAKAGE TESTING FOR HIGH PRESSURE DUCT SYSTEMS: FOR DUCT SYSTEMS DESIGNED TO OPERATE STATIC PRESSURES IN EXCESS OF 3 INCHES W.G. (746 PA), REPRESENTATIVE SECTIONS, AS DETERMINED BY THE PROGRESS INSPECTOR, TOTALING AT LEAST 25% OF THE DUCT AREA, PER ECC 503.7.1.3, SHALL BE TESTED TO VERIFY THAT ACTUAL AIR LEAKAGE IS BELOW ALLOWABLE AMOUNTS.	AFTER INSTALLATION AND PRIOR TO CLOSING SHAFTS, CEILINGS AND WALLS	APPROVED CONSTRUCTION DOCUMENTS; SMACNA HVAC AIR DUCT LEAKAGE TEST MANUAL	503.2.7.1.3; ASHRAE 90.1-6.4.4.2

	ELECTRICAL POWER AND LIGHTING SYSTEMS			
MC				
MC1	ELECTRICAL METERING: THE PRESENCE AND OPERATION OF INDIVIDUAL METERS OR OTHER MEANS OF MONITORING INDIVIDUAL APARTMENTS SHALL BE VERIFIED BY VISUAL INSPECTION FOR AL APARTMENTS.	PRIOR TO FINAL ELECTRICAL AND CONSTRUCTION INSPECTION	APPROVED CONSTRUCTION DOCUMENTS	508.7
MC3	INTERIOR LIGHTING POWER: INSTALLED LIGHTING SHALL BE VERIFIED FOR COMPLIANCE WITH THE LIGHTING POWER ALLOWANCE BY VISUAL INSPECTION OF FIXTURES, LAMPS, BALLASTS AND TRANSFORMERS.	PRIOR TO FINAL ELECTRICAL AND CONSTRUCTION INSPECTION	APPROVED CONSTRUCTION DOCUMENTS	505.5; ASHRAE 90.1-9.1, 9.2, 9.5, 9.6; (FROM 2010)1-07(9)(9)(9)(4)
MC4	EXTERIOR LIGHTING: INSTALLED LIGHTING SHALL BE VERIFIED FOR COMPLIANCE WITH SOURCE EFFICACY AND/OR THE LIGHTING POWER ALLOWANCE BY VISUAL INSPECTION OF FIXTURES, LAMPS, BALLASTS AND RELEVANT TRANSFORMERS.	PRIOR TO FINAL ELECTRICAL AND CONSTRUCTION INSPECTION	APPROVED CONSTRUCTION DOCUMENTS	505.6; ASHRAE 90.1-9.4.4, 9.4.5; (FROM 2010)1-07(9)(9)(9)(4)
MC5	LIGHTING CONTROLS: EACH TYPE OF REQUIRED LIGHTING CONTROLS, INCLUDING OCCUPANT SENSORS, MANUAL INTERIOR LIGHTING CONTROLS, LIGHT-REDUCTION CONTROLS, AUTOMATIC LIGHTING LIGHTING SHUT-OFF, DAYLIGHT ZONE CONTROLS, SLEEPING UNIT CONTROLS, EXTERIOR LIGHTING CONTROLS SHALL BE VERIFIED BY VISUAL INSPECTION AND TESTED FOR FUNCTIONALITY AND PROPER OPERATION.	PRIOR TO FINAL ELECTRICAL AND CONSTRUCTION INSPECTION	APPROVED CONSTRUCTION DOCUMENTS, INCLUDING CONTROL SYSTEM NARRATIVES	505.2, 505.2.2.2; ASHRAE 90.1-9.4.1, 9.4.1.2 (AS MODIFIED BY SECTION ECC A102)
MC6	EXIT SIGNS: INSTALLED EXIT SIGNS SHALL BE VISUALLY INSPECTED TO VERIFY THAT THE LABEL INDICATED THAT THEY DO NOT EXCEED MAXIMUM PERMITTED WATTAGE.	PRIOR TO FINAL ELECTRICAL AND CONSTRUCTION INSPECTION	APPROVED CONSTRUCTION DOCUMENTS	505.4 ASHRAE 90.1-9.4.3
MC7	TANDEM WIRING: TANDEM WIRING SHALL BE TESTED FOR FUNCTIONALITY.	PRIOR TO FINAL ELECTRICAL AND CONSTRUCTION INSPECTION	APPROVED CONSTRUCTION DOCUMENTS	505.3 ASHRAE 90.1-9.4.2
MC8	ELECTRIC MOTORS (INCLUDING BUT NOT LIMITED TO FAN MOTORS): WHERE REQUIRED BY THE CONSTRUCTION DOCUMENTS FOR ENERGY CODE COMPLIANCE, MOTOR LISTING OR LABELS SHALL BE VISUALLY INSPECTED TO VERIFY THAT THEY COMPLY WITH THE RESPECTIVE ENERGY REQUIREMENTS IN THE CONSTRUCTION DOCUMENT.	PRIOR TO FINAL ELECTRICAL AND CONSTRUCTION INSPECTION	APPROVED CONSTRUCTION DOCUMENTS	606.2.10 ASHRAE 90.1-10.4
MD	OTHER			
MD1	MAINTENANCE INFORMATION: MAINTENANCE MANUALS FOR MECHANICAL, SERVICE HOT WATER AND ELECTRICAL EQUIPMENT AND SYSTEMS REQUIRING PREVENTIVE MAINTENANCE SHALL BE REVIEWED FOR APPLICABILITY TO INSTALLED EQUIPMENT AND SYSTEMS BEFORE SUCH MANUALS ARE PROVIDED TO THE OWNER. LABELS REQUIRED FOR SUCH EQUIPMENT OF SYSTEMS SHALL BE INSPECTED FOR ACCURACY AND COMPLETENESS.	PRIOR TO SIGN-OFF OR ISSUANCE OF FINAL CERTIFICATE OF OCCUPANCY	APPROVED CONSTRUCTION DOCUMENTS, INCLUDING ELECTRICAL DRAWINGS WHERE APPLICABLE; ASHRAE GUIDELINE 4; PREPARATION OF OPERATING AND MAINTENANCE DOCUMENTATION FOR BUILDING SYSTEMS	303.3, 503.2.9.3; ASHRAE 90.1-4.2.2.3, 6.4.2.2, 6.7.2

(Z) ROOFTOP AC UNIT WITH GAS FIRED HEATING, WITH COOLING CAPACITY OF 270.01 MBH, AND GAS INPUT OF 324.0 MBH	COOLING EFFICIENCY EER: 11.2 HEATING EFFICIENCY: 80% EC.	MINIMUM EFFICIENCY EER: 10.8 MINIMUM EFFICIENCY: 80% EC.
(A) GAS-FIRED WATER HEATING BOILER, TOTAL CAPACITY 2000.0 MBH EACH	THERMAL EFFICIENCY: 80% EC.	MINIMUM EFFICIENCY: 80% EC.
(B) GAS-FIRED HOT WATER HEATING BOILER WITH GAS INPUT OF 750.0 MBH EACH	THERMAL EFFICIENCY: 81% EC.	MINIMUM EFFICIENCY: 80% EC.
GAS-FIRED HOT WATER HEATER WITH GAS INPUT OF 199.9 MBH EACH	THERMAL EFFICIENCY: 80% EC.	MINIMUM EFFICIENCY: 80% EC.
GAS-FIRED HOT WATER HEATER WITH GAS INPUT OF 399.9 MBH EACH	THERMAL EFFICIENCY: 80% EC.	MINIMUM EFFICIENCY: 80% EC.
(J) PTAC WITH 7000 BTU ELECTRIC HEATING, TOTAL COOLING CAPACITY OF 9.5 MBH EACH	COOLING EFFICIENCY EER: 12.7	MINIMUM EFFICIENCY EER: 11.2
SUPPLY, EXHAUSTION AND PLENUM FAN SYSTEMS	MIN. 1" 2-LB INSULATION TO BE USED FOR ALL SUPPLY DUCTWORK AND PLENUM	1-1/2 INSULATION FOR DUCTS IN UNCONDITIONED SPACES, 1-LB INSULATION FOR SUPPLY DUCTWORK
SUPPLY AIR RETURN AIR ELECTRICAL TO BE INSTALLED	CONVENTIONAL SPACES OR SEMI-DUCTED ENVIRONMENT BASED ON AN EXCESS CLIMATE OF 10000 BTU/H OR 3000 WATTS	CONVENTIONAL SPACES OR SEMI-DUCTED ENVIRONMENT BASED ON ALL EXCESS CLIMATE OF 10000 BTU/H OR 3000 WATTS
HOT WATER PIPING TO BE INSULATED (EXCEPT BETWEEN TEMP. CUT AND VALVE)	1/2" INSULATION FOR PIPES < 1.5" AND 1" INSULATION FOR PIPES > 1.5"	1/2" INSULATION FOR PIPES < 1.5" AND 1" INSULATION FOR PIPES > 1.5"

ENERGY CODE CONFORMANCE – TABULAR ANALYSIS

ENERGY ANALYSIS NEW YORK CITY ENERGY CONSERVATION CODE – 2011

ITEM DESCRIPTION	PROPOSED DESIGN VALUE	CODE PRESCRIPTIVE VALUE AND CITATION
604.2: SERVICE WATER HEATING EQUIPMENT PERFORMANCE EFFICIENCY	COMMERCIAL WATER HEATER HAS A MINIMUM THERMAL EFFICIENCY OF 82%.	WATER HEATING EQUIPMENT REQUIREMENTS PER TABLE 604.2. THE EFFICIENCY SHALL BE VERIFIED THROUGH DATA FURNISHED BY THE MANUFACTURER
604.3: TEMPERATURE CONTROLS	HOT WATER HEATERS SERVING THE RESIDENTIAL UNITS HAVE A THERMOSTAT CONTROL W/ A SET POINT OF 110°F. HOT WATER HEATER SERVING THE FUTURE TENANT SPACE PROVIDE HEAT TO FOOD RELATED EQUIPMENT AND HAS A THERMOSTAT CONTROL W/ A SET POINT OF 90°F FOR ALL NON-FOOD RELATED EQUIPMENT	SERVICE WATER HEATING EQUIPMENT SHALL BE PROVIDED WITH CONTROLS TO ALLOW A SET POINT OF 110°F FOR EQUIPMENT SERVING DWELLING UNITS AND 90°F FOR EQUIPMENT SERVING OTHER OCCUPANCIES. THE OUTLET TEMPERATURE OF LAVATORIES IN PUBLIC FACILITY REST ROOMS SHALL BE LIMITED TO 110°F.
604.4: HEAT TRAPS	N/A (ALL DOMESTIC HOT WATER HEATERS ARE SERVING CIRCULATING SYSTEMS)	WATER-HEATING EQUIPMENT NOT SUPPLIED WITH INTEGRAL HEAT TRAPS AND SERVING NONRECIRCULATING SYSTEMS SHALL BE PROVIDED WITH HEAT TRAPS ON THE SUPPLY AND DISCHARGE PIPING ASSOCIATED WITH THE EQUIPMENT.
604.5: PIPE INSULATION	DOMESTIC HOT WATER PIPING INSULATION IS SPECIFIED AS FOLLOWS: PIPING DIA. LESS THAN 1¼"=1.0" PIPING DIA. 1¼" AND GREATER=1.0"	FOR AUTOMATIC CIRCULATING HOT WATER SYSTEM PIPING SHALL BE INSULATED WITH 1" OF INSULATION HAVING A CONDUCTIVITY NOT EXCEEDING 0.27BTU PER inch/h x ft x °F.
604.6: HOT WATER SYSTEM CONTROLS	SPECIFIED CIRCULATING HOT WATER SYSTEM SERVING THE RESIDENTIAL UNITS IS PROVIDED WITH MANUALLY CONTROL TO TURN IT OFF WHEN THE HOT WATER SYSTEM IS NOT IN OPERATION. SPECIFIED CIRCULATING HOT WATER SYSTEM SERVING THE TENANT SPACES IS PROVIDED WITH AN AUTOMATIC CONTROL (TIME CLOCK) TO TURN IT OFF WHEN THE HOT WATER SYSTEM IS NOT IN OPERATION.	AUTOMATIC CIRCULATING HOT WATER SYSTEM PUMPS OR HEAT TRACE SHALL BE ARRANGED TO BE TURNED OFF AUTOMATICALLY OR MANUALLY WHEN THE HOT WATER SYSTEM IS NOT IN OPERATION.

NOTE: THIS IS A SCHEMATIC DESIGN & SHALL BE SUBJECT TO REVIEW & INTERPRETATION BY NYC DEPT OF BLDGS ON ZONING AND BUILDING CODES

PLUMBING GENERAL NOTES

ALL PLUMBING WORK SHALL MEET THE REQUIREMENTS OF THE NEW YORK CITY PLUMBING CODE (NYCPC), 2008 EDITION.

1. TRENCHING, EXCAVATION AND BACKFILL FOR PIPING INSTALLATION IN ACCORDANCE WITH PC 306.
2. THE WORK INDICATED ON THESE DRAWINGS ARE DIAGRAMMATIC AND ARE INTENDED TO INDICATE GENERAL ARRANGEMENT OF EQUIPMENT AND PIPING. THE CONTRACTOR MAY MAKE CHANGES/NEW APPROACH IN WRITING BY THE ARCHITECT/ENGINEER WITH NO ADDITIONAL COST.
3. THE CONTRACTOR SHALL PROVIDE NEW PLUMBING FIXTURES, PIPING, INSULATION, VALVES AND APPURTENANCES AS SHOWN ON THE DRAWINGS AND AS REQUIRED FOR A COMPLETE SYSTEM.
4. DURING CONSTRUCTION ALL OPEN ENDS OF EXISTING PIPING SHALL BE PLUGGED AND CAPPED WITH PLASTIC OR METAL CAPS TO KEEP DIRT OUT OF THE SYSTEM.
5. NO LEAD ENDS SHALL BE LEFT ON ANY DRAINAGE PIPING UPON COMPLETION OF WORK.
6. UPON COMPLETION OF WORK THE ENTIRE SYSTEM SHALL BE LEFT IN PERFECT WORKING ORDER.
7. ENGINE SHOP DRAWINGS SUFFICIENTLY IN ADVANCE OF THE WORK TO ALLOW PROPER TIME FOR REVIEW. MATERIALS SHALL NOT BE FABRICATED OR DELIVERED TO THE SITE BEFORE THE SHOP DRAWINGS HAVE BEEN APPROVED.
8. NEW SHUT-OFF VALVES SHALL BE PROVIDED AS REQUIRED TO ISOLATE DIFFERENT AREAS OF THE PLUMBING SYSTEM.
9. VENT PIPE SHALL BE GRADED TO DRAIN OUT ALL MOISTURE AND PROVIDE SOLID INSTALLATION.
10. ALL VALVES AND SPECIALTIES SHALL BE SO PLACED AS TO PERMIT EASY OPERATION AND ACCESS.
11. PROVIDE CALKING BETWEEN WALL HUNG WATER CLOSETS AND WALL AS REQUIRED.
12. FINAL INSPECTION AND TEST OF COMPLETED SYSTEM SHALL BE MADE IN THE PRESENCE OF THE OWNER'S REPRESENTATIVE.
13. THE CONTRACTOR SHALL INSULATE ALL HOT AND COLD DOMESTIC WATER PIPING LOCATED ABOVE HUNG CEILING AFTER TESTING THE SYSTEM.
14. BEFORE BEING PLACED IN SERVICE ALL POTABLE WATER PIPING SHALL BE CLEANED, FLUSHED AND DISINFECTED.
15. UPON COMPLETION OF WORK ALL EXCESS MATERIAL, DEBRIS, ETC. SHALL BE REMOVED AND WORK AREA LEFT CLEAN TO THE OWNER'S SATISFACTION.
16. INSTALL ANCHORS ON PIPING ABOVE HUNG CEILING TO INDICATE DIRECTION OF FLOW.
17. ALL ACOUSTIC CEILING MATERIALS DISTURBED BY THE CONSTRUCTION TO BE REPLACED WITH NEW MATERIAL TO MATCH EXISTING.
18. WHEN THE NEW EQUIPMENT IS INSTALLED BY OTHERS, THE PLUMBING CONTRACTOR SHALL BE RESPONSIBLE FOR PLUMBING ALL NEW APPROPRIATE FITTINGS AND MAKING FINAL CONNECTIONS SUCH AS COLD AND HOT WATER, VENTS, GAS, ETC.
19. SEISMIC OF COMPLETE SYSTEM SHALL BE MADE IN THE PRESENCE OF OWNER'S REPRESENTATIVE AND THE AUTHORITIES HAVING JURISDICTION, AS REQUIRED BY LOCAL CODE.
20. IF INSPECTION OR TEST SHOW DEFECTS, SUCH DEFECTIVE WORK OR MATERIAL SHALL BE REPLACED AND INSPECTION AND TEST SHALL BE REPEATED. REPAIR TO PIPING SHALL BE MADE WITH NEW MATERIAL.
21. STANDARD FOR EQUIPMENT MANUFACTURER, MODEL AND CAPACITY OF EQUIPMENT OR FIXTURES ARE LISTED ON THE DRAWINGS OR IN SPECIFICATIONS. ANY OTHER MANUFACTURER OR MODELS ARE CONSIDERED THE SUBSTITUTION.
22. SUBSTITUTIONS ARE SUBJECT TO THE APPROVAL OF THE ENGINEER. IF A SUBSTITUTION IS SUBMITTED, IT IS THE CONTRACTOR'S RESPONSIBILITY TO EVALUATE IT AND CERTIFY THAT THE SUBSTITUTION IS EQUIVALENT IN ALL RESPECTS TO THE BASE SPECIFICATIONS.
23. IF SUBSTITUTIONS ARE APPROVED, NOTIFY ALL OTHER CONTRACTORS OR TRADES AFFECTED BY THE SUBSTITUTION AND FULLY COORDINATE ANY COST RESULTING FROM SUBSTITUTION AND MAKEUP OF CONTRACTOR OR CONTROL SHALL BE RESPONSIBILITY OF AND PAID FOR BY SUBSTITUTION CONTRACTOR.
24. FIRE STOP ALL PENETRATIONS OF FIRE RATED CONSTRUCTION IN A CODE APPROVED MANNER IN ORDER TO MAINTAIN FIRE RATING. PROVIDE UL LISTED FIRE STOPPING.
25. FULLY WARRANTY ALL MATERIALS, EQUIPMENT AND WORKMANSHIP FOR ONE YEAR FROM DATE OF ACCEPTANCE.
26. REPAIR OR REPLACE WITHOUT CHARGE TO THE OWNER ALL ITEMS FOUND DEFECTIVE DURING THE WARRANTY PERIOD.
27. PIPING INSTALLED UNDER SLAB SHALL BE CAREFULLY LAID OR PLACED ON BED PREPARED, UNDER SOIL BED OF FINE CRUSHED STONE OR SAND TO FIT THE PIPE CONTOUR, WITH ALL PIPE UNDER PIPE FILLED AND THOROUGHLY TAMPED FOR THE FULL RUNNING LENGTH SUPPORT.
28. INSTALL PIPE TO UNIFORM PITCHES BETWEEN POINTS FOR WHICH ELEVATIONS ARE ESTABLISHED OR SHALL BE VERIFIED BY USE OF LEVEL OR OTHER APPROVED METHOD. PIPE GRADE SHALL BE ADJUSTED BY THE ADDITION OR SUBTRACTION OF FULL BEDDING AND NOT BY WEDGING OR BLOCKING.
29. ACCESS DOORS SHALL BE PROVIDED, AS MINIMUM FOR:
    1. CONCEALED VALVES.
    2. CONCEALED SHOCK ABSORBERS.
    3. CONCEALED AIR-VENT CONNECTIONS.
    4. CONCEALED SUMP PUMPS/ TANKS.

    ACCESS DOOR SHALL BE FURNISHED BY THIS CONTRACTOR AND INSTALLED BY GENERAL CONTRACTOR.
30. CONTRACTOR SHALL SIZE DOOR TO PERMIT REMOVAL AND REPACKING OF ALL EQUIPMENT, BUT IN ANY CASE, SHALL BE NOT LESS THAN 12"X16".
31. NOTED ON ANY DRAWING SHALL ALSO APPLY TO ALL OTHER CONTRACT DRAWINGS UNLESS OTHERWISE SPECIFIED.
32. ALL BRACKETS, PLATES, CHANNELS, ETC. SHALL BE GALVANIZED UNLESS OTHERWISE SPECIFIED.
33. ALL SURFACES DAMAGED IN THE COURSE OF THE WORK SHALL BE RESTORED TO THE ORIGINAL CONDITION AND ON MATCHING LIKE MANNER.
34. COORDINATE AND SCHEDULE ALL WORK TO MEET THE OVERALL DESIGN OBJECTIVE.
35. PIPE, ALL PIPES AND CONDUIT PASSING THROUGH WALL OR FLOORS, PROVIDE PIPE SLEEVES.
36. PROVIDE DRAIN VALVES AT ALL LOW POINTS.
37. CHANGES IN DIRECTION IN DRAINAGE PIPING SHALL BE MADE WITH APPROPRIATE USE OF 45 DEGREE WYES, LONG SWEEPS, QUARTER, EIGHTH, OR SIXTEENTH BENDS.
38. PROVIDE CLEANOUTS ON DRAIN LINES AS SHOWN ON DRAWINGS AND AS REQUIRED BY CODE.
39. CORE DRILLING FOR PENETRATION THROUGH FOUNDATION WALLS SHALL BE DONE BY PLUMBING CONTRACTOR.
40. CONTRACTOR SHALL NOT FINISH ANY EQUIPMENT AND MATERIAL FROM ROOF INCLUDE. CONTRACTOR SHALL SUPPORT EQUIPMENT AND MATERIAL FROM BEAMS, IF NEED TO CONTRACTOR SHALL PROVIDE ADDITIONAL SUPPORT STEEL OR METAL TO ATTACH TO BEAMS.
41. ALL PLUMBING EQUIPMENT SHALL BE INSTALLED AND ADJUSTED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATION UNLESS OTHERWISE SHOWN.
42. ALL DIMENSIONS PRIOR SHALL BE PRINTED PER SPECIFICATIONS BY THE PLUMBING CONTRACTOR.
43. ALL EXPOSED PIPES SHALL BE ARRANGED TO PERMIT ACCESS FOR MAINTENANCE.
44. ALL DRAIN AND VENT PIPES SHALL HAVE A MINIMUM SLOPE OF 1/8" PER FOOT.
45. ALL COLD WATER PIPES OUTSIDE THE HEATED STRUCTURES LESS THAN 4'-6" BELOW GRADE OR SUBJECT TO FREEZING SHALL BE INSULATED AND HEAT TRACED. COORDINATE WITH ELECTRICAL CONTRACTOR FOR POWER SUPPLY.
46. COORDINATE WORK WITH OF THOSE DRAWINGS WITH OTHER DRAWINGS.
47. COORDINATE SLOPING OF FLOORS TO FLOOR DRAINS.
48. THE CONTRACTOR SHALL FOLLOW DRAWINGS IN LAYING OUT WORK AND CHECK DRAWINGS OF THE OTHER TRADES TO VERIFY WHICH WORK SHALL BE INSTALLED FIRST BEFORE PROCEEDING
49. THE CONTRACTOR SHALL DURING THE PERIOD OF THE GUARANTEE REPLACE OR REPAIR AS OWN EXPENSE ANY PIECE OF EQUIPMENT AND FOR MATERIAL WHICH IS FOUND TO BE DEFECTIVE. ANY REPLACEMENT OR REPAIR SHALL BE DONE AS SOON AS NOTIFIED. THE CONTRACTOR SHALL ALSO REPAIR ALL DAMAGES TO SURROUNDING WORK CAUSED BY FAILURE OF REPAIR OR REPLACEMENT OF THE DEFECTED EQUIPMENT OR MATERIAL.
50. DRAIN PIPES 2½" AND SMALLER SHALL HAVE A MINIMUM SLOPE OF ¼" PER FOOT. ALL DRAIN PIPES LARGER THAN 2½" SHALL HAVE A MINIMUM SLOPE OF ⅛" PER FOOT.
51. RECORD DRAWINGS SHALL BE PREPARED BY CONTRACTOR AND SHALL INDICATE THE ACTUAL INSTALLED LOCATION OF ALL PIPING AND VALVES INCLUDING INVERT ELEVATION FOR UNDERSLAB PIPING.
52. THE CONTRACTOR SHALL MAKE ALL NECESSARY NOTICES, OBTAIN ALL PERMITS AND PAY ALL GOVERNMENT SALES TAXES, FEES AND OTHER COST INCLUDING UTILITY CONNECTIONS COST.
53. IT IS NOT POSSIBLE TO INDICATE ALL OFFSETS, FITTINGS AND ACCESSORIES THAT MAY BE REQUIRED. CONTRACTOR SHALL MAKE ALL NECESSARY OFFSETS, FITTINGS AND ACCESSORIES AS REQUIRED WITH NO ADDITIONAL COST TO THE OWNER.
54. GAS PIPING MUST MEET THE REQUIREMENTS OF NYC BUILDING CODE AND OTHER REQUIREMENTS OF THE UTILITY COMPANY
55. A LINE AND PRESSURE REGULATOR SHALL BE INSTALLED WHERE THE EQUIPMENT / APPLIANCE IS DESIGNED TO OPERATE AT A LOWER PRESSURE THAN THE SUPPLY PRESSURE.
56. GAS PIPING SHALL BE INSPECTED AND TESTED AS PER NYC BUILDING CODE
57. PROVIDE AND INSTALL NEW WATER HAMMER ARRESTERS IN ALL BRANCH LINES SERVING FIXTURES WITH QUICK CLOSURE VALVES IN ACCORDANCE WITH STANDARD PDI-WH-201. SIZE SHALL BE DETERMINED BY THE FOLLOWING TABLE

FLOW RATE (GPM)	FIXTURE UNITS
A (3/4")	1-11
B (1")	12-32
C (1")	33-60
D (1¼")	61-113
E (1½")	114-154
F (2")	155-330

SPECIAL INSPECTIONS

1. SPECIAL INSPECTIONS REQUIRED IN ACCORDANCE WITH NYC BC SECTION 1704 AND THE APPLICABLE SECTIONS OF THE NYC BC
   FULL PLASHBOIL _____ 2008 CODE REFERENCE BC 1705.22 & BC 1704.7.3
   HIGH PRESSURE GAS PIPING _____ 2008 CODE REFERENCE BC 1704.10
   PIPING _____ 2008 CODE REFERENCE BC 1704.7.3 & BC 3304.6.1
   SEWER WATER EXTENSION _____ 2008 CODE REFERENCE BC 1704.20
   PENETRATION _____ 2008 CODE REFERENCE BC 1704.25
2. SPECIAL INSPECTIONS SHALL BE EMPLOYED BY THE OWNER TO PROVIDE INSPECTIONS DURING CONSTRUCTION AS REQUIRED UNDER SECTION BC 1704 OF THE NYC BUILDING CODE, SUCH CONTROL THE SPECIAL INSPECTOR SHALL BE ACCEPTABLE TO THE REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE.

BUILDING DEPARTMENT PLUMBING NOTES

NEW YORK CITY PLUMBING NOTES

ALL PLUMBING WORK SHALL MEET THE REQUIREMENTS OF THE NEW YORK CITY PLUMBING CODE (NYCPC), 2008 EDITION.

1. TRENCHING, EXCAVATION AND BACKFILL FOR PIPING INSTALLATION IN ACCORDANCE WITH PC 306.
2. ALL PLUMBING PIPING SHALL BE SUPPORTED IN ACCORDANCE WITH SECTION PC 308 AND TABLE 308.5.
3. ALL TESTS AND INSPECTIONS SHALL BE MADE AS DIRECTED IN SECTION PC 312.
4. CONDENSATE DRAIN SHALL COMPLY WITH PC 314.
5. MATERIALS, DESIGN AND INSTALLATION OF PLUMBING FIXTURES, FAUCETS AND PIPING FITTINGS SHALL BE IN ACCORDANCE WITH CHAPTER 4 OF NYCPC.
6. ACCESSIBLE PLUMBING FIXTURES AND FEATURES SHALL BE PROVIDED IN ACCORDANCE WITH 29 ADA.
7. MATERIALS, DESIGN AND INSTALLATION OF WATER HEATERS AND THE RELATED SAFETY DEVICES AND APPURTENANCES SHALL BE AS OUTLINED IN CHAPTER 5 OF NYCPC.
8. MATERIALS, DESIGN AND INSTALLATION OF WATER SUPPLY SYSTEMS SHALL BE AS OUTLINED IN CHAPTER 6 OF NYCPC.
9. WATER SERVICE PIPE SHALL CONFORM TO ONE OF THE STANDARDS LISTED IN TABLE 605.3.
10. WATER DISTRIBUTION PIPE SHALL CONFORM TO ONE OF THE STANDARDS LISTED IN TABLE 605.4.
11. WATER PIPE FITTINGS SHALL CONFORM TO THE RESPECTIVE PIPE STANDARDS OR ONE OF THE STANDARDS LISTED IN TABLE 605.5.
12. HOT WATER SUPPLY SYSTEMS SHALL COMPLY WITH PC 607.
13. PROTECTION OF POTABLE WATER SUPPLY SHALL BE IN ACCORDANCE WITH PC 608.
14. MATERIALS, DESIGN, CONSTRUCTION AND INSTALLATION OF SANITARY DRAINAGE SYSTEMS SHALL BE AS OUTLINED IN CHAPTER 7 NYCPC.
15. SANITARY DRAINAGE AND VENT PIPE SHALL CONFORM TO ONE OF THE STANDARDS LISTED IN TABLE 702.1 AND 702.2. BUILDING SEWER PIPE SHALL CONFORM TO ONE OF THE STANDARDS LISTED IN TABLE 702.3
16. SANITARY BUILDING HOUSE PIPING SHALL BE LOCATED AS SET FORTH IN PC 708.0. CLEANOUTS ON BUILDING SEWERS SHALL BE LOCATED IN ACCORDANCE WITH SECTION PC 708.
17. THE MINIMUM SLOPE OF A HORIZONTAL DRAINAGE PIPE SHALL BE IN ACCORDANCE WITH TABLE 704.1.
18. DRAINAGE FIXTURE UNIT VALUES SHALL BE AS SET FORTH IN TABLE 709.1.
19. DRAINAGE PIPING SIZING IN ACCORDANCE WITH PC 710.
20. INDIRECT / SPECIAL WASTE PIPING SHALL COMPLY WITH CHAPTER 8 NYCPC.
21. MATERIALS, DESIGN, CONSTRUCTION AND INSTALLATION OF VENT SYSTEMS SHALL BE IN ACCORDANCE WITH CHAPTER 9 NYCPC.
22. VENT PIPE SIZING IN ACCORDANCE WITH PC 916.
23. FIXTURE TRAP REQUIREMENTS AS SET FORTH IN PC 1002.
24. MATERIALS, DESIGN, CONSTRUCTION AND INSTALLATION OF STORM DRAINAGE SYSTEMS SHALL BE AS OUTLINED IN CHAPTER 11 NYCPC.
25. STORM DRAINAGE PIPE MATERIALS SHALL BE IN ACCORDANCE WITH PC 1102.
26. SIZE OF CONDUCTORS, LEADERS AND STORM DRAINS SHALL BE AS OUTLINED IN PC 1106. (TABLES 1106.2, TABLE 1106.3, TABLE 1106.4).
27. SECONDARY (EMERGENCY) ROOF DRAINS SHALL BE AS DIRECTED IN PC 1107.
28. ESCAPE PERMIT FROM DOT FOR STREET TRENCHING AND UTILITIES CONNECTION.
29. NEW UTILITIES CONNECTIONS, SANITARY STORM AND WATER MUST BE APPROVED BY DEP.

NEW YORK CITY FUEL GAS NOTES

ALL WORK SHALL MEET THE REQUIREMENTS OF THE NEW YORK CITY FUEL GAS CODE (NYCFGC), 2008 EDITION.

1. EQUIPMENT AND APPLIANCES SHALL BE INSTALLED IN ACCORDANCE WITH FGC 303.
2. CLEARANCES AROUND EQUIPMENT AND APPLIANCES SHALL BE IN ACCORDANCE WITH FGC 308.
3. DESIGN, AND INSTALLATION OF FUEL-GAS PIPING SYSTEM SHALL BE MADE AS DIRECTED IN CHAPTER 4 OF NYCFGC.
4. FUEL-GAS PIPE SIZING SHALL BE IN ACCORDANCE WITH FGC 402.
5. MATERIAL USED FOR FUEL-GAS PIPING SHALL COMPLY WITH THE REQUIREMENTS OF FGC 403.
6. GAS PIPING INSTALLATION SHALL BE IN ACCORDANCE WITH FGC 404.
7. ALL INSPECTIONS, TESTING AND PURGING SHALL BE MADE AS DIRECTED IN SECTION FGC 406.
8. GAS PIPING SHALL BE PROVIDED WITH SUPPORT IN ACCORDANCE WITH FGC 407.
9. GAS PIPING SYSTEMS SHALL BE PROVIDED WITH SHUTOFF VALVES IN ACCORDANCE WITH FGC 409.
10. FLOW CONTROLS SHALL BE INSTALLED AS DIRECTED IN SECTION FGC 410.
11. ALL APPLIANCE CONNECTIONS SHALL COMPLY WITH FGC 411.

GAS BOOSTER PUMP		1.5
GAS PIPING		1.5
WATER HEATERS – GAS FIRED		1.5
APPLIANCES – GAS FIRED		1.5
CONTROL SYSTEMS SERVING EQUIPMENT WITH I_p=1.5		1.5
COMPONENTS CONTAINING HAZARDOUS OR FLAMMABLE MATERIAL IN EXCESS OF MAXIMUM ALLOWABLE QUANTITIES LISTED IN SECTION NO. 307		1.5
COMPONENTS WITH I_p=1.0 LOCATED ABOVE OR IN PROXIMITY TO COMPONENTS WITH I_p=1.5 WHICH COULD DAMAGE COMPONENTS WITH I_p=1.5 REMARKS:	NOTE #5	1.5

NOTES:
1. THE DEFAULT FOR TYPICAL COMPONENTS IN NORMAL SERVICE IS I_p=1.0
2. REFER TO STRUCTURAL DRAWINGS FOR SEISMIC DESIGN CRITERIA INCLUDING SEISMIC DESIGN CATEGORY.
3. REFER TO DETAIL DRAWINGS FOR TYPICAL SEISMIC BRACING.
4. HATCHED CRACKED EQUIPMENT ROOF NOT REQUIRE SEISMIC BRACING.
5. ALL PLUMBING CONTRACTORS IN SEISMIC DESIGN CATEGORY C AND D BUILDING TRADE WITH I_p=1.5 SHALL BE SEISMICALLY BRACED.
6. PERSONS SUPPORTED EQUIPMENT SHALL NOT CONTACT ANY OTHER OBJECT AT A 45° ANGLE TO VERTICAL.

FOR ALL ITEMS THAT ARE REQUIRED TO HAVE SEISMIC BRACING OR RESTRAINTS, SEISMIC PLANS AND SEISMIC BRACING CALCULATIONS SHALL BE PREPARED, SEALED, AND SUBMITTED BY A PROFESSIONAL ENGINEER LICENSED IN THE STATE OF NEW YORK ENGAGED BY THE CONTRACTOR. THE ENGINEER SHALL PROVIDE INSTALLATION SUPERVISION OF ALL SEISMIC BRACING AND RESTRAINTS. THE CONTRACTOR'S REGISTERED PROFESSIONAL ENGINEER SHALL SUBMIT SIGNED AND SEALED AFFIDAVIT AND AS BUILTS STATING THAT THE INSTALLATION IS IN FULL COMPLIANCE WITH THE SIGNED/SEALED SHOP DRAWINGS.

NOTE THIS IS A SCHEMATIC DESIGN & SHALL SUBJECT TO REVIEW & INTERPRETATION BY NYC DEPT. OF BLDGS ON ZONING AND BUILDING CODES

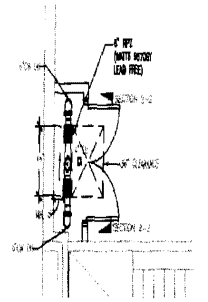
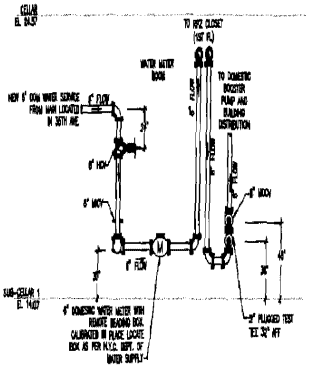
2 WATER METER ROOM (SUB-CELLAR 1) PART PLAN
N.T.S.



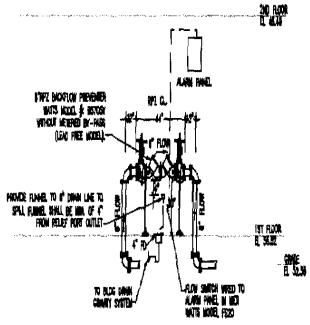
3 RPZ CL. (1ST FL) PART PLAN
N.T.S.

REDUCTION OF LEAD IN DRINKING WATER ACT OF 2014

ALL BACKFLOW PREVENTION DEVICES, ETC. THAT CONVEY DRINKING WATER FOR HUMAN CONSUMPTION MUST BE CERTIFIED FOR MEETING THE REQUIREMENTS OF THE FEDERALLY MANDATED REDUCTION OF LEAD IN DRINKING WATER ACT OF 2014 (NOT MORE THAN 0.25% LEAD). CONTRACTOR SHALL PURCHASE EQUIPMENT MODELS THAT MEET THE REQUIREMENTS OF THE ACT. ALL SOLDER USED DURING INSTALLATION OF VALVES, BACKFLOW PREVENTION ETC. ASSOCIATED WITH THE POTABLE WATER SYSTEM DESIGNED FOR HUMAN CONSUMPTION MUST ALSO MEET THE REQUIREMENTS.



4 DOMESTIC WATER SERVICE ELEVATION 1-1
N.T.S.



5 DOMESTIC RPZ ELEVATION 2-2
N.T.S.

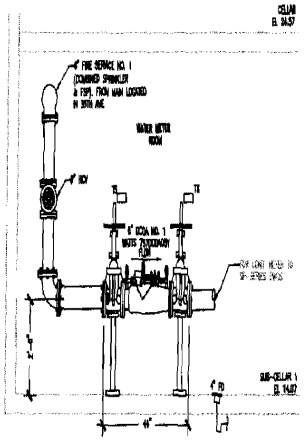
NOTE:
THE RPZ IS INSTALLED MIN. 6" FROM THE WALL AND 36" ABOVE FINISHED FLOOR.

GENERAL NOTES:

1. THE PROPOSED WORK SHALL BE CONSTRUCTED IN STRICT CONFORMITY WITH THE PLANS AND SPECIFICATIONS AS NOTED THIS DAY OR APPROVED AMENDMENTS.
2. DEVICE MUST BE TESTED BY A CERTIFIED BACKFLOW PREVENTION DEVICE TESTER WHO IS EMPLOYED BY A LICENSED PLUMBER.
3. THE INSTALLATION MUST BE INSPECTED BY AN ENGINEER OR ARCHITECT, EMPLOYED BY THE CONTRACTOR, WHO CERTIFIES THAT THE INSTALLATION IS IN ACCORDANCE WITH APPROVED PLANS.
4. THE INSTALLATION MUST BE CHECKED BY A LICENSED PLUMBER WHO CERTIFIES THAT THE INSTALLATION MEETS BUILDING DEPARTMENT REQUIREMENTS.
5. DEVICES MUST NOT BE SUBJECT TO FLOODING OR FREEZING
6. PIPING TO BE UNDISTURBED AND UNOBSTRUCTED FROM MAIN TO DEVICE EXCEPT FOR METER.
7. DEVICE MUST BE TESTED AT LEAST ANNUALLY BY A CERTIFIED TESTER.

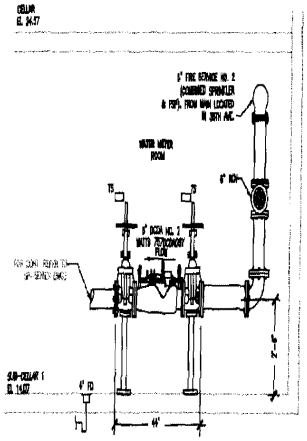
BFP NOTES:

1. NO TAKE-OFF OR TAPS ARE ALLOWED ON STREET SIDE OF BACKFLOW PREVENTER DEVICE.
2. BFP SHALL BE INSTALLED IN HORIZONTAL POSITION. UNLESS THEY ARE SPECIFICALLY APPROVED FOR VERTICAL INSTALLATION.
3. BETWEEN THE POINT OF ENTRY & BACKFLOW PREVENTER THE PIPE MUST BE STENCILED "FEED TO BACKFLOW PREVENTER, DO NOT TAP OR CONNECT TO THIS LINE" AT 5 FT. INTERVAL.
4. LETTERS SHALL BE COLORED RED, 1" HIGH ON WHITE BACKGROUND.
5. ALL ASSEMBLIES SHALL BE ADEQUATELY SUPPORTED AND/OR RESTRAINED TO PREVENT UNDUE MOVEMENT.
6. THE BACKFLOW PREVENTER REQUIRES
   A. SIDE CLEARANCE TO THE REAR WALL MIN. 6".
   B. SIDE CLEARANCE TO THE OPEN AREA MIN. 30"
   C. CENTERLINE TO ABOVE FINISHED FLOOR MIN. 30"
   D. CLEARANCE TO THE CEILING MIN. 12"
   E. DISCHARGE PORT MIN. 12" ABOVE FINISHED FLOOR
7. PROVIDE LABEL ON WALL OR METAL SIGN HUNG W/ CHAIN FOR:
   A. METER OUTLET CONTROL VALVES
   B. METER TEST TEE
8. HORIZONTAL DISTANCE & PIPE LENGTH
   A. POINT OF ENTRY TO WATER METER LENGTH
   B. RPZ TO TEST TEE LENGTH
   C. TEST TEE TO M.A.D.V. LENGTH



6 FIRE WATER SERVICE NO. 1 ELEVATION 3-3
N.T.S.

NOTE:
THE DCVA IS INSTALLED MIN. 6" FROM THE WALL AND 36" ABOVE FINISHED FLOOR.



7 FIRE WATER SERVICE NO. 2 ELEVATION 4-4
N.T.S.

NOTE:
THE DCVA IS INSTALLED MIN. 6" FROM THE WALL AND 36" ABOVE FINISHED FLOOR.

NOTE THIS IS A SCHEMATIC DESIGN & SHALL SUBJECT TO REVIEW & INTERPRETATION BY NYC DEPT OF BUILDING ZONING AND BUILDING CODES

No.	DATE	DESCRIPTION

PLUMBING SPECIFICATIONS

PART 1 - GENERAL

1.01 APPLICABLE STANDARDS, CODES AND PUBLICATIONS

A. THIS ENTIRE INSTALLATION SHALL BE TESTED AND INSTALLED TO CONFORM AS A MINIMUM, TO APPLICABLE PROVISIONS OF THE FOLLOWING CODES AND STANDARDS EXCEPT WHERE STRICTER REQUIREMENTS ARE SPECIFIED ELSEWHERE HEREIN OR SHOWN ON THE CONTRACT DRAWINGS:

1) BUILDING CODE OF THE CITY OF NEW YORK
2) NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION AGENCY.

1.02 WORK SCOPE

A. ALL REQUIRED LABOR, MATERIALS AND CONSTRUCTION EQUIPMENT NECESSARY FOR COMPLETE PIPE INSTALLATION OF PLUMBING WORK IN FULL CONFORMITY WITH REQUIREMENTS OF ALL AUTHORITIES HAVING JURISDICTION. ALL AS INDICATED ON DRAWINGS AND/OR HEREIN SPECIFIED, INCLUDING THE FOLLOWING:

1) EXCAVATION, FILLING, BACKFILLING AND CONCRETE
2) SANITARY DRAINAGE AND VENT PIPING
3) STORM DRAINAGE
4) CONNECTIONS TO PLUMBING FIXTURES AND EQUIPMENT.
5) PLUMBING FIXTURES
6) GAS PIPING
7) INSULATION
8) CUTTING AND PATCHING

1.03 COORDINATION

A. COORDINATE WITH OTHER TRADES AS NECESSARY TO FACILITATE TIMELY COMPLETION AND AVOID INTERFERENCE FOR CUTTING AND PATCHING.

B. FURNISH TO OTHER AFFECTED TRADES ALL NECESSARY INFORMATION, WORKING DRAWINGS OR MATERIALS REQUIRED FOR INSTALLATION AND COMPLETION OF ALL WORK.

C. COORDINATE THE WORK OF ALL SUBMITTALS FOR THE PURPOSE OF ASSURING THAT NO CONFLICT EXISTS WITH THE INSTALLATIONS TO BE MADE BY OTHER ENTITIES, WITH FIELD CONDITIONS AND THE SPECIFIED EXPENSION INCLUDING THE CAPABILITY OF PERFORMING REPAIRS AND EASE MAINTENANCE OF ALL COMPONENTS OF THE INSTALLATIONS.

1.04 SUBMITTALS

A. GENERAL

1) CERTAIN ITEMS SHALL BE RESUBMITTED TO THE SPECIFICATION SECTION AND LOCATION WHERE THE ITEM IS TO BE USED.

2) INCLUDE ON SHOP LAYOUT DRAWING DIMENSIONAL & COORDINATION DATA ALL RELATED CONDITIONS THAT EXIST, SHOWING HOW ALL SHARES, AND THAT NO CONFLICT EXISTS. WORKING DRAWING SUBMISSIONS WILL NOT BE APPROVED WITHOUT SUCH CONFIRMATION.

3) SUBMIT TO THE ENGINEER, FOR APPROVAL, A LIST OF ALL MATERIAL AND EQUIPMENT MANUFACTURERS WHOSE PRODUCTS ARE PROPOSED, INCLUDING ALL DELIVERY DATES.

4) MAKE ALL SUBMITTALS SUFFICIENTLY IN ADVANCE OF FIELD REQUIREMENTS TO ALLOW ANPLE TIME FOR CHECKING, NO CLAIM FOR EXTENSION OF TIME SHALL BE HONORED BY REASON OF FAILURE IN THIS RESPECT AND NO WORK IN THE FIELD MAY BE STARTED WITHOUT APPROVED SHOP DRAWINGS AND THE ENGINEER'S APPROVAL.

5) APPROVAL OF ANY SUBMITTAL SHALL NOT RELIEVE THE CONTRACTOR FROM THE RESPONSIBILITY OF FURNISHING MATERIALS AND SYSTEMS OF PROPER DIMENSIONS, CHARACTER, SIZE, QUANTITIES, QUALITY AND INSTALLATION DETAILS, TO EFFICIENTLY PERFORM THE REQUIREMENTS AND INTENT OF THE CONTRACT DOCUMENTS. SUCH APPROVAL SHALL NOT RELIEVE THE CONTRACTOR FROM THE RESPONSIBILITY FOR ERRORS IN SUBMITTALS.

6) IF THE SUBMITTALS DEPART FROM THE REQUIREMENTS OF THE CONTRACT DOCUMENTS, MAKE SPECIFIC MENTION OF SUCH DIFFERENCE IN LETTERS OF TRANSMITTAL, WITH A REQUEST FOR SUBSEQUENT CONSIDERATION WITH REGARDS THEREOFORE, SO SAID, IF ACCEPTABLE, REMARKS ACTION MAY BE MADE FOR PROPER ADJUSTMENT. FAILING THIS, THE CONTRACTOR WILL NOT BE RELEASED OF THE RESPONSIBILITY FOR EXECUTING THE WORK IN ACCORDANCE WITH THE CONTRACT DOCUMENTS.

B. SHOP DRAWINGS

1) PIPING LOCATION LAYOUTS, INCLUDING METHOD AND LOCATION OF SUPPORTS.

2) ENLARGED LOCATION DETAILS.

C. CATALOG CUTS AND BROCHURES

1) PIPE AND FITTINGS
2) HANGERS AND SUPPORTS.
3) VALVES AND ESCUTCHEONS.
4) VALVES.
5) STOCK IDENTIFICATION BANDS.
6) INSULATION.
7) FIXTURES AND TRIM
8) EQUIPMENT

1.05 CUTTING AND PATCHING

A. WHERE CUTTING AND PATCHING OF CONSTRUCTION PERFORMED UNDER THIS CONTRACT BECOMES NECESSARY BECAUSE OF FAILURE TO PROPERLY COORDINATE THE WORKMEN'S INSTALLATION WITH OTHER CONSTRUCTION, ARRANGE FOR THIS WORK TO BE PERFORMED BY THE WORKER TRADES INVOLVED AND IN ACCORDANCE WITH APPLICABLE SPECIFICATIONS HEREIN TO AS TO AVOID ADVANCE DAMAGES.

B. PERFORM ALL PATCHING TO MATCH EXISTING ADJACENT CONSTRUCTION TO THE SATISFACTION OF THE ARCHITECT/ENGINEER AND USING THE BEST POSSIBLE WORKMANSHIP OF THE VARIOUS TRADES INVOLVED.

1.06 RECORD DRAWINGS

A. FURNISH TO THE ENGINEER A COPY OF EACH APPLICABLE CONTRACT DRAWING NEATLY MARKED UP INDICATING THE ACTUAL FINAL INSTALLATION INCLUDING ALL DEVIATIONS OR ADDENDUM NOT SHOWN ON THE ISSUED SET.

B. THE CONTRACTOR ALSO PROVIDE "AS BUILT" DRAWING TO BUILDING MANAGEMENT AT COMPLETION OF WORK.

1.07 TESTS

A. GENERAL

1) PERFORM TESTS AS HEREIN SPECIFIED ON THE VARIOUS PIPING SYSTEMS OR PORTIONS THEREOF PRIOR TO PAINTING, CONCEALING OR BUILDING.

2) NOTIFY THE ENGINEER AND REPRESENTATIVES OF AGENCIES OR OTHER ENTITIES WHICH WOULD HAVE JURISDICTION AT LEAST 48 HOURS IN ADVANCE OF MAKING THE REQUIRED TESTS, SO THAT ARRANGEMENTS MAY BE MADE FOR THEIR PRESENCE TO WITNESS THE TESTS.

3) FURNISH AND INSTALL ALL GAUGES, MATERIAL, SUPPLIES, LABOR AND POWER REQUIRED IN CONNECTION WITH TESTS. MAKE ALL TESTS IN THE PRESENCE AND TO THE SATISFACTION OF THE ENGINEER AND REPRESENTATIVES OF THE APPROVING AGENCIES OR OTHER ENTITIES.

4) SHOULD THE TESTED SYSTEM, ANY LINES OR OTHER EVIDENCE OF UNSATISFACTORY MATERIALS OR WORKMANSHIP, MAKE NECESSARY REPAIRS IMMEDIATELY, OR, IF REQUIRED BY THE ENGINEER, REMOVE DEFECTIVE WORK, THEN MAKE SOUND WORKMAN, SUBJECT TO THE APPROVAL. REPEAT TESTS AS DIRECTED UNTIL THE ENTIRE INSTALLATION IS PROVEN SATISFACTORY. NO TEMPORARY MEANS OF REPAIRED LEAKS SHALL BE PERMITTED.

5) THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY PROPERTY OR INSTALLATION DAMAGED BY THE TESTS AND SHALL RESTORE ONE DAMAGED WORK TO THEIR ORIGINAL CONDITION OR REPLACE THEM WITH NEW ITEMS.

6) DISPOSE OF WATER REMOVED FROM PIPE LINES IN A MANNER THAT WILL NOT CAUSE DAMAGE TO ANY PROPERTY.

7) PROVIDE AND INSTALL ONE REQUIRED AIR VENTS IN THE PIPING SYSTEM TESTED.

8) ALL EQUIPMENT, CONTROLS, INSTRUMENTS AND VALVES SHALL BE ISOLATED FROM THE PIPING SYSTEM DURING TEST.

B. PLUMBING

1) DOMESTIC WATER: CAP OR PLUG ALL OUTLETS, APPLY A HYDROSTATIC PRESSURE OF 125 PSI AND MAINTAIN SUCH PRESSURE FOR ONE HOUR.

2) SANITARY DRAINAGE: CAP OR PLUG ALL OUTLETS, APPLY A 10-FOOT HEAD OF WATER BEFORE MAKING CONNECTIONS TO EXISTING SYSTEM.

1.08 EXCAVATION

A. THE CONTRACTOR SHALL HAVE NO CLAIM OF TITLE TO ANY OF THE EQUIPMENT, MATERIALS OR OTHER ITEMS TO BE REMOVED FROM THE EXISTING BUILDING.

B. NO EXISTING WORK SHALL BE CUT TO BE REMOVED UNLESS THE CONTRACT SHALL BE DAMAGED IN ANY WAY, IF ANY SUCH DISTURBANCE OR DAMAGE OCCURS TO THE EXISTING WORK, THE CONTRACTOR SHALL PROMPTLY REPAIR, MAKE AND REPLACE SUCH DISTURBANCE OR DAMAGE TO THE EXISTING WORK TO THE SATISFACTION OF THE OWNER'S REPRESENTATIVE AND THE ENGINEER.

C. INCLUDE ALL EXCAVATION OF EXISTING AND CONCEALED WORK THERE THERE ARE SUPERVISED BY THE NEW WORK. CONSTRUCTION SHALL THEREFORE, EXCAVATE AND REMOVE ALL EXPOSED AND CONCEALED WORK WHERE SUPERVISED BY THE NEW LAYOUTS.

D. THERE IS NO GUARANTEE AS TO THE ACCURACY OF THE EXCAVATION SHOWN ON THE DRAWINGS, NOT ALL EXCAVATION IS FULLY DEFINED ON THE DRAWINGS.

1.09 EXCAVATION, FILLING, BACKFILLING AND CONCRETE

A. IF THE WORK UNDER IS CHANGE AS A RESULT OF THE WORK DONE UNDER CONTRACT, THE CONTRACTOR SHALL HAVE SUCH CHANGES MADE BY AGENCIES OF THE OWNERS AND UTILITY COMPANY AND/OR LOCAL AGENCIES, UNLESS HIGHER JURISDICTION.

B. ALL CHANGES MARKING UTILITY SERVICES SHALL BE REQUIRED, CAPPED OR PLUGGED OR OTHERWISE DISCONTINUED.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. MANUFACTURER'S NAME AND MARKINGS ARE USED TO IDENTIFY THE TYPE AND QUALITY OF PRODUCTS REQUIRED, HOWEVER, PRODUCTS OF OTHER MANUFACTURERS WHICH ARE SIMILAR AND EQUAL MAY BE SUBMITTED FOR APPROVAL.

2.02 PIPE SUPPORTS AND HANGERS

A. INSTALL SLEEVES AND ESCUTCHEONS, PIPE HANGERS ADJUSTABLE HEAVY CLEVIS TYPES, SUPPORTS, GUIDES AND ANCHORS ADEQUATE TO SUPPORT AND BRACE THE PIPING. ALLOW FOR PROPER EXPANSION OF EXPANSION JOINTS, EXPERT INSTALLATION, INCORPORATE AND MAINTAIN PROPER CLEARANCES WITH RESPECT TO ADJACENT PIPING, EQUIPMENT AND STRUCTURES.

B. KEEP THE TYPES OF HANGERS TO A MINIMUM AND PROVIDE HANGERS THAT ARE MOST SUITABLE CONSTRUCTED BOLTING AND WITH THE MINIMUM OF PARTS OF EACH HANGER AND ITS ANCHOR SUITE TO A MINIMUM.

C. HANGERS SHALL BE SUSPENDED FROM ROOF CLAMPS, BRACKETS, TRAPEZE PLATES, INSERTS OR OTHER APPROVED MEANS, FLANGES AND INSTALL ANY ADDITIONAL MISCELLANEOUS STEEL SUPPORTED BETWEEN BUILDING FRAMING MEMBERS AS MAY BE REQUIRED.

D. SUPPORT AND ANCHORAL PIPING ON EVERY FLOOR WITH STEEL BEAM CLAMPS, ADJUSTING, STRENGTHENING SUPPORT BRACKETS, REQUIRED TO RELOCATING, SHALL BE INSTALLED ON PIPING FOLLOWING ABOVE COUPLING ROOMS AND IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS.

E. COPPER PLATE ALL HANGERS THAT SHALL BE IN DIRECT CONTACT WITH BRASS RANGE OR COPPER PIPING.

F. HANGERS, ANCHORS, SLEEVES AND SUPPORTS SHALL BE MANUFACTURED BY GRINNELL CO. F & S CENTRAL DUAL PIPE AND ANCHOR, B-LINE-MACO CO., OR ANOTHER APPROVED PIPE HANGER SPECIALIST AND SHALL BE FABRICATED IN ACCORDANCE WITH SECTION 1 OF AND SHALL "CODE FOR PRESSURE PIPING".

G. BASE HANGER LOADS ON WEIGHT OF PIPE OR EQUIPMENT SUPPORTED, WEIGHT OF INSULATION COVERING WEIGHT OF FLUID BEING TRANSPORTED WHICHEVER IS HEAVIER.

H. INSTALL PROTECTIVE SHIELDS FOR INSULATED PIPING

I. SPACE LOADS BETWEEN SUPPORTS SUH AS TO CAUSE A RISE IN THE PIPE IN EXCESS OF 1/4" BECAUSE ENGINEER AS NECESSARY TO STAY WITHIN SLOPE LINE.

J. UNLESS OTHERWISE SPECIFICALLY APPROVED, HANGER ROD SIZE AND SPACING SHALL BE WITHIN THE FOLLOWING LIMITS

PIPE SIZE (Nominal Size)		
1/2" TO 1-1/4"	6 FT. O.C.	3/8"
1-1/2" TO 3"	9 FT. O.C.	3/8"
HORIZONTAL RUNS OF STEEL		
ALL	5 FT. O.C. AND BEHIND EVERY HUB	3/8"

2.03 VALVES

GATE VALVES AS MANUFACTURED BY CRANEMEN NO. ALL APPROVED MANUFACTURERS SHALL BE AMONG OR MILWAUKEE.

A. FOR 3" AND SMALLER - CLASS 150, BRONZE BODY, RISING-N-BONNET, BRONZE TRIM, SOLID WEDGE, THREADED OR SOLDERED ENDS.

B. ABOVE GRADE-NON, VALVE NON-RISING-STEM, NON-CLOSED VALVE BOXES, HIGH CLASS, CAST OF DURABLE-HEAVY BODY AND BONNET.

C. MANUFACTURERS

1. MUELLER CO.
2. NIBCO
3. JENKINS CO.
4. NORMAN CO.
5. HYMANS EQUAL

D. ALL VALVES EXCEPT WHERE ARE 3" IN DIAMETER AND LARGER. THE CONTACT LANGUAGE SHALL FOR CLEANER CONSTRUCTED LAID BE CERTIFIED FOR MEETING THE REQUIREMENTS OF THE FEDERALLY ANNOUNCED REDUCTION OF LEAD IN DRINKING WATER ACT OF 1974 (NOT MORE THAN 8 WEIGHTED AVERAGE OF CLEAN LEAD, MANUFACTURER SHALL PROVIDE VALVES THAT MEET THE REQUIREMENTS OF THE ACT. ALL BUILDING LINES DURING INSTALLATION OF VALVES ASSOCIATED WITH THE POTABLE WATER SYSTEMS SHALL BE FLUSHED WITH THE POTABLE WATER SYSTEM DESIGNED FOR HUMAN CONSUMPTION AND MUST MEET THE REQUIREMENTS.

2.04 SYSTEM IDENTIFICATION

A. BANDS - INSTALL IN EACH SYSTEM IN EACH EXPOSED SPACE, AND NOT MORE THAN 10 FEET APART WHERE THEY CAN EASILY BE READ. ARRANGE BANDS IDENTIFYING THE SYSTEM IN BLACK LETTERS 3" HIGH FOR 3" PIPE AND LARGER, 1" HIGH FOR 2-1/2" PIPE AND SMALLER. BLACK FLOW DIRECTIONAL ARROW AND BACKGROUND IN COLOR TO CONFORM WITH ANSI A13.1. SHALL BE ECTOR CORP., W.H. BRADY CO., OR APPROVED EQUAL.

2.05 JOINTS

A. THREADED JOINTS

1) SCREWED JOINTS SHALL BE MADE TIGHT WITHOUT THE USE OF WICKING. TEFLON TAPE AND/OR COMPOUND SUITABLE FOR THE TYPE OF SERVICE SHALL BE APPLIED TO MALE THREADS ONLY.

B. FLANGED JOINTS

1) MAKE UP FLANGE AND JOINT WITH GASKETS 1/16" THICK FULL FACE RUBBER, CUT FROM SHEET STOCK. FLANGE, OF BOLTS AND NUTS IN MIXTURE OF GRAPHITE AND OIL IMMEDIATELY PRIOR TO INSTALLATION.

C. UNION JOINTS

1) 65-0 TIN ANTIMONY SOLDER MAKING A MELTING POINT GREATER THAN 450F. EXCESS SOLDER SHALL BE REMOVED WHILE STILL IN A MOLTEN STATE WITH A PILOT LIGHT AT THE FACE OF PIPE FITTING. INTERNAL PARTS OF VALVES SHALL BE REMOVED BEFORE SOLDERING.

D. DIELECTRIC FITTINGS

1) CONFLICT FITTING OF REGULAR METALS WITH DIELECTRIC FITTINGS

2.06 PIPING

A. INSTALL PIPING AS INDICATED ON THE CONTRACT DRAWINGS AND AS DIRECTED DURING INSTALLATION, STRAIGHT AND DIRECT AS POSSIBLE, PITCHING PIPES ANGLES OR PARALLEL LINES WITH BUILDING WALLS, VERTICALLY SPACED, TRUING FRAME AND PLUG, AND AVOID INTERFERENCE WITH OTHER CONSTRUCTION.

B. PITCH SHALL PITCH BACK TOWARD SYSTEM DRAIN VALVE AND ANY INSTALLED LOW POINTS OR POCKETS SHALL HAVE A HOSE END DRAIN VALVE.

C. AVOID TOOL MARKS AND UNNECESSARY PIPE THREADS, BURRS REAMED WHEN CUTTING PIPE SHALL BE REMOVED BY REAMING, BEFORE INSTALLING PIPE, THOROUGHLY CLEAN THE INTERIOR OF CUTTINGS AND FOREIGN MATTER, CAP ALL PIPE OPENINGS AND DURING WORK OF ALL JOINTS TO REQUIRED UNITS.

D. CHECK ALL PIPING TO ENSURE SUFFICIENT FLEXIBILITY TO PREVENT EXCESSIVE STRESSES IN MATERIALS AND EXCESSIVE BENDING MOMENTS AT JOINTS OR CONNECTIONS, WHERE EXPANSION, LOOPS, EXPANSION JOINTS AND SWING CONNECTIONS WHERE SHOWN ON THE CONTRACT DRAWINGS.

E. MAKE CHANGES IN PIPE SIZE BY THE USE OF REDUCING FITTINGS, DO NOT USE REDUCING BUSHINGS EXCEPT BY APPROVAL OF THE ENGINEER, DO NOT USE CLOSE OR EXCESSIVE NIPPLES.

F. ARRANGE WATER PIPING SO THAT SYSTEM CAN BE COMPLETELY DRAINED, WHERE LINES ARE PURPOSELY PITCHED FOR DRAINAGE, A BRONZE DRAIN SHALL BE MANIFOLDED, LINES SHALL NOT BE SUSPENDED AS TO PREVENT POCKETING OF LIQUID, NO LINES SHALL HAVE POCKETS DUE TO CHANGES IN ELEVATION.

G. INSTALLED PIPING SHALL NOT INTERFERE WITH THE OPERATION OR ACCESSIBILITY OF DOORS OR WINDOWS SHALL NOT ENCROACH ON AISLES, PASSAGEWAYS AND EQUIPMENT AND SHALL NOT INTERFERE WITH THE REMOVING OF MAINTENANCE OF ANY EQUIPMENT. ADJACENT PIPE LINES SHALL BE GROUPED IN THE SAME HORIZONTAL OR VERTICAL PLANE.

H. ESCUTCHEONS AS NECESSARY TO ENSURE THAT ALL SHARES, SUPPORTS, SLEEVES AND OTHER PIPES ARE INCORPORATED IN FINISH OR IN HARMONY IN WITH NECESSITY OF OTHER PIPING STRUCTURE.

I. PROVIDE GOLD A NOT SHARES WITH COPPER, TYPE L, ASTM 888, SOLDERED ENDS. COPPER FITTINGS, WROUGHT VALVE TO BE OF CASTING ALLOY, SOLDER MANUFACTURED, CHASE BRASS & COPPER CO. PRICE'S BRONZE COPPER PRODUCTS CORP., AND MUELLER COPPER & BRASS CO.

J. ALL PIPE AND PIPE FITTINGS SHALL COMPLY WITH THE LEAD CONTENT REQUIREMENTS OF THE FEDERALLY ANNOUNCED REDUCTION OF LEAD IN DRINKING WATER ACT OF 1974 (NOT MORE THAN 8 WEIGHTED AVERAGE OF CLEAN LEAD). MANUFACTURER SHALL PROVIDE PIPE AND PIPE FITTINGS THAT MEET THE REQUIREMENTS OF THE ACT. ALL VALVES AND BRASS INSTALLATION OF PIPING ASSOCIATED WITH POTABLE WATER SYSTEMS DESIGNED FOR HUMAN CONSUMPTION SHALL MEET THE REQUIREMENTS.

K. SHARES AND LEAD PIPING SHALL HAVE BRASS, LEAD, SOLDERING BRASS AND PIPE AND PIPING SHALL HAVE PIPE AS REFERENCE CONNECTIONS FOR SOLDER JOINTS, SOLDERED JOINTS SHALL CONSIST OF A SOLDER, SOLDER PIPE SHALL BE CHARGED TO SHARE BUSHINGS AND PREVENT SHARE OVERHEATING. PROVIDE CLEARANCES TO MAKE LEAD SHARE BUSHINGS AND AS NECESSARY OF CARE. CHANGES OF DIRECTION IN SHARE PIPING SHALL BE MADE WITH APPROPRIATE USE OF 45 DEGREES ELLS, LONG RADIUS AND APPROVED BENDS, MALLEABLE MANUFACTURERS, CHARLOTTE PIPE AND FOUNDRY COMPANY.

L. ALL PIPING WITHIN THE BUILDING SHALL BE STANDARD WEIGHT BLACKSTEEL OR BLACK STEEL PIPE, STEAMS THE BUILDING SHALL BE ASTM, 53-69, GRADE B, STEEL PIPE, PIPING AND FITTINGS SHALL BE NEW AND FREE FROM DEFECTS AND IN STRICT CONFORMANCE TO ANSI, B-16 LATEST EDITION, MALLEABLE MANUFACTURERS ALL STEEL CO., KOPPER PIPE MFRS. AND MORRIS, CRANE, CORP.

2.07 PROTECTION AND CLEANUP

A. PROTECT ENTIRE INSTALLATION FROM DAMAGE DURING CONSTRUCTION AND BE RESPONSIBLE FOR ALL DAMAGE UNTIL FINAL ACCEPTANCE OF THE WORK. ALL PIPES SHALL BE PROTECTED FROM OUTSIDE CONTAMINANT AS SOON AS THEY ARE SET. ALL OPEN ENDS OF PIPES SHALL BE CLOSED BY A PLUG FITTING TO PREVENT CONTAMINATION AND DAMAGE.

B. ALL OPENINGS IN FLOORS SHALL BE COVERED AND PROTECTED DURING THE COURSE OF CONSTRUCTION.

C. BEFORE FINAL CONNECTIONS ARE MADE AND BEFORE EXPANSION OF EQUIPMENT AND PIPING, ALL PIPING SHALL BE THOROUGHLY BLOWN OUT, BOILERS CLEAN, OR SHARES OUT OF LEAST THREE IN A MANNER AS DIRECTED AND/OR APPROVED BY THE ENGINEER, TO REMOVE ALL ACCUMULATION OF DIRT, CHIPS OR OTHER DELETERIOUS MATERIAL. MAKE ALL TEMPORARY CONNECTIONS AND FLUSHES ALL APPLIANCES REQUIRED FOR THE PURPOSE OF CLEANING.

D. UPON COMPLETION OF THE INSTALLATION AND WHEN DIRECTED BY THE ENGINEER, REMOVE ALL PROTECTIVE MATERIALS ALL SCALE, DIRT, GREASE, SHARD AND THE LIKE, AND LEAVE IN A CLEAN CONDITION FOR FINISHING.

2.08 PIPE AND FITTING INSULATION

A. INSULATE ALL DOMESTIC HOT WATER PIPING WITH MINIMUM MOLDED LOW PRESSURE PIPE INSULATION, USE MOLDED LOW A-7 PLUS VAPOR BARRIER INSULATION WITH PRESSURE SENSITIVE CLOSURE SYSTEM FOR COLD WATER, EXISTING WATER COOLER SHALL PIPING. THE INSULATION MATERIAL MATERIAL, CONSISTENCY SHALL NOT EXCEED 0.22 BTU PER HOUR, PER SQUARE FOOT PER DEGREES F, PER HOUR AT A MEAN TEMPERATURE OF 75 DEGREES F. INSULATION THICKNESS SHALL CONFORM TO THE FOLLOWING TABLE:

PIPING SYSTEM	PIPE SIZE	INSULATION THICKNESS
DOMESTIC COLD WATER	ALL	1/2"
DOMESTIC HOT WATER	ALL	1"

B. COLD WATER COVERING SHALL BE REQUIRED AS REQUIRED BY THE INSULATION MANUFACTURER AND SEALED WITH REINFORCED FOIL SCRIM NO. 30-36 ADHESIVE.

C. COVERING FOR FITTINGS - ALL FITTINGS SHALL BE REQUIRED TO CONFORM SHALL BE INSULATED WITH ALUMINUM SPECIAL PREFORMED.

2.09 PLUMBING FIXTURES & TRIM

A. PROVIDE AND INSTALL NEW PLUMBING FIXTURES, FAUCETS, TRIMS, PIPING SUPPORTS, PIPING INSULATION, SUPPORTS, VALVES REQUIRED FOR A COMPLETE SYSTEM. ALL PLUMBING EQUIPMENT AND FIXTURES SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURERS INSTRUCTIONS.

B. FIXTURES SHALL BE OF THE TYPE CLEARLY AS ENUMERATED BY A A-1/2" 2020, 24-3/8" LONG, 21-1/2" HIGH, WITH HIGH ACCORDANCE POLICY MANUFACTURER OF ESTABLISHED REPUTATION.

C. ALL PLUMBING FIXTURE SHALL COMPLY WITH LL 29/96 MANDATE FIXTURE SHALL COMPLY WITH LL 29 AND ANY REQUIREMENTS.

D. PROVIDE LOOSE KEY LOCK SHALL HANDLE STOP AT EACH PLUMBING FIXTURE.

E. UNLESS OTHERWISE NOTED BY THE ARCHITECT, PLUMBING FIXTURE SHALL BE AS INDICATED ON DRAWING P-002.

F. ALL FAUCETS AND MIXTURES SHALL BE CERTIFIED TO MEET THE REQUIREMENTS OF THE FEDERALLY ANNOUNCED REDUCTION OF LEAD IN DRINKING WATER ACT OF 1974 (NOT MORE THAN 8 WEIGHTED AVERAGE OF THE ACT). ALL BUILDING LINES DURING INSTALLATION OF FAUCETS AND MIXTURES ASSOCIATED WITH THE POTABLE WATER SYSTEMS DESIGNED FOR HUMAN CONSUMPTION SHALL MEET THE REQUIREMENTS.

2.10 WATER HAMMER ARRESTOR

A. PROVIDE AND INSTALL NEW WATER HAMMER ARRESTOR IN ALL BRANCH LINES SERVING FIXTURES WITH QUICK CLOSURE VALVES IN ACCORDANCE WITH STANDARD PDI-WH-201.

THE WATER HAMMER ARRESTOR SHALL BE "MADE" DESCRIPTIVE OF ALL MANUFACTURERS SPECIFIC CONFIGURATION WITH RELATED ASSISTED BELLOWS. MAKE DESCRIPTIVE SHALL BE INSTALLED AS PER MANUFACTURER'S RECOMMENDATION.

2.11 VACUUM BREAKERS

A. VACUUM BREAKER AS MANUFACTURED BY "WATTS" SHALL BE MANUFACTURERS' ANTI-SIPHON ANTI-SHALL AND SHALL BE INSTALLED IN ACCORDANCE W/ THE MANUFACTURER'S INSTRUCTION - BRONZE BODY W/ VALVE ASSEMBLY. SPRINGS SHALL BE STAINLESS STEEL. THE VALVE SHALL BE CONSTRUCTED WITH A MOLDED DIAPHRAGM SEPARATING THE AIR INLET FROM THE POTABLE WATER SUPPLY TO PREVENT SPILLAGE. COORDINATE WITH ARCHITECT FOR ACCESS PANEL LOCATIONS.

PART 3 - EXECUTION

3.01 INSTALLATION

A. FIXTURE FAUCET SHALL MAKE THE COLD WATER HANDLE ON THE RIGHT HAND SIDE OF THE FIXTURE AND THE HOT WATER FAUCET ON THE LEFT HAND SIDE OF THE FIXTURE.

B. PROTECT PLUMBING FIXTURES INCLUDED IN THESE SPECIFICATIONS AGAINST INJURY FROM THE BUILDING MATERIALS, AUTO, TOOLS AND EQUIPMENT.

C. FLANGE OF POLISHED FITTINGS, PIPES AND APPLIANCES SHALL BE COATED WITH VARNISH, IMMEDIATELY AFTER INSTALLATION AND SHALL BE FINALLY POLISHED AND PIECES FROM ALL MARKS AND FOREIGN SUBSTANCES, WHEN DIRECTED BY THE ARCHITECT.

D. PRIOR TO BUILDING'S ACCEPTANCE BY THE OWNER, REMOVE MANUFACTURERS' LABELS AND THOROUGHLY CLEAN ALL FIXTURES AND HAVE READY FOR USE BY BUILDING'S OCCUPANTS.

E. SET FIXTURE AND HEIGHTS AS SPECIFIED OR AS DIRECTED BY THE ARCHITECT.

F. IMMEDIATELY REMOVE ALL CONTRACT DEBRIS AND DESTROY OTHER OF MISCELLANEOUS FIXTURES, TOILET ACCESSORIES, ETC. SPECIFIED IN OTHER SECTIONS OF THE SPECIFICATIONS AND DELIVER TO SITE PROPERLY. ALL MATERIAL AND LABOR REQUIRED TO INSTALL THE ITEMS SPECIFIED IN OTHER SECTIONS AND/OR CLAUSES OF THIS TRADE.

G. PLUMBING CONTRACTOR SHALL APPROVE AND PAY FOR ALL BUILDING DEPARTMENT SIGN, INSPECTIONS AND SHALL FURNISH APPROVAL PAPERS AT COMPLETION OF WORK.

H. PROVIDE ACCESS DOOR FOR ALL ELEMENTS, VALVES, FLUSH VALVES, AND ANY OTHER EQUIPMENT OR ASSEMBLIES THAT ARE REQUIRED ACCESS FOR MAINTENANCE OR OPERATION WHICH ARE LOCATED BEHIND WALLS AND PARTITIONS OR CONCEALED IN FURR CHASE.

3.02 MATERIALS, DELIVERY, STORAGE AND HANDLING

A. DELIVER MATERIALS IN MANUFACTURER'S ORIGINAL UNOPENED PROTECTIVE PACKAGING.

B. STORE MATERIALS IN ORIGINAL PACKAGING IN A MANNER TO PREVENT SOILING, PHYSICAL DAMAGE, WETTING OR DEGRADATION PRIOR TO INSTALLATION.

C. HANDLE IN A MANNER TO PREVENT DAMAGE TO FINISHED SURFACES. WHERE POSSIBLE, REMOVE PROTECTIVE COVERINGS ONLY INSTALLATION IS COMPLETE AND REMOVE SUCH COVERS AS PART OF FINAL CLEAN-UP.

D. TOUCH-UP ANY DAMAGE TO FINISHES TO MATCH ADJACENT SURFACES TO SATISFACTION OF OWNER.

3.03 INSPECTION

A. ALL WORKING AND EQUIPMENT CLEANSED TO THE CITY WILL BE INSPECTED, WORKING, AND EQUIPMENT THAT IS DEFECTIVE OR FAILS TO CONFORM TO THE REQUIREMENTS OF THESE SPECIFICATIONS SHALL BE REMOVED IMMEDIATELY FROM THE CONSTRUCTION SITE AND REPLACED WITH NEW MATERIAL AND EQUIPMENT SATISFACTORY TO THE ENGINEER.

B. PLUMBING CONTRACTOR SHALL ARRANGE FOR ALL REQUIRED DEPARTMENT INSPECTIONS AND SHALL FURNISH THE BUILDING DEPARTMENT NON-OFFICIAL KEEP CONFORMITY IF ACCEPTABLE.

3.04 DISINFECTION OF POTABLE WATER SYSTEMS

A. NEW OR REMODELED POTABLE WATER BUILDING SHALL BE DISINFECTED PRIOR TO USE WHENEVER SAMPLES FROM THE SYSTEM SHOW ANY CONTAMINATION AFTER HAVING A BACTERIOLOGICAL EXAMINATION. SAMPLE SHALL BE TAKEN AS REQUIRED BY THE DEPARTMENT OF HEALTH. THE METHOD TO BE FOLLOWED SHALL BE THAT AS PRESCRIBED BY THE DEPARTMENT OF HEALTH, AS THE FOLLOWING.

1. THE PIPE SYSTEM SHALL BE FLUSHED WITH CLEAN, POTABLE WATER UNTIL NO DIRTY WATER APPEARS AT THE HYDRANT. THE SYSTEM SHALL THEN BE FILLED WITH A WATER-CHLORINE.
2. SOLUTION CONTAINING AT LEAST 50 PARTS PER MILLION OF CHLORINE AND ALLOW TO STAND FOR AT LEAST 24 HOURS. THE VALVES OF PIPE SHALL BE FILLED WITH A WATER-CHLORINE SOLUTION CONTAINING AT LEAST 100 PARTS PER MILLION OF CHLORINE AND ALLOW TO STAND FOR 6 HRS.
3. FOLLOWING THE PRESCRIBED DISINFECTING TIME, THE SYSTEM SHALL BE FLUSHED WITH CLEAN POTABLE WATER UNTIL NO CHLORINE CONTAINING RESIDUAL IN THE WATER LEAVING FROM THE SYSTEM.
4. SAMPLES OF WATER SHALL BE REQUIRED IF IT IS FOUND THAT CONTAMINATION STILL REMAINS IN THE SYSTEM.
5. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE REQUIREMENTS OF SECTION 17 OF THE NYC HEALTH CODE AND THE NEW DEPARTMENT OF HEALTH CODE BULLETIN 2000, AND SECTION 715 OF THE NYC PLUMBING CODE.

NOTE: THIS IS A SCHEMATIC DESIGN. A SHALL SUBJECT TO REVIEW & W/ INTERPRETATION BY NYC DEPT OF BLDGS ON ZONING AND BUILDING CODES.

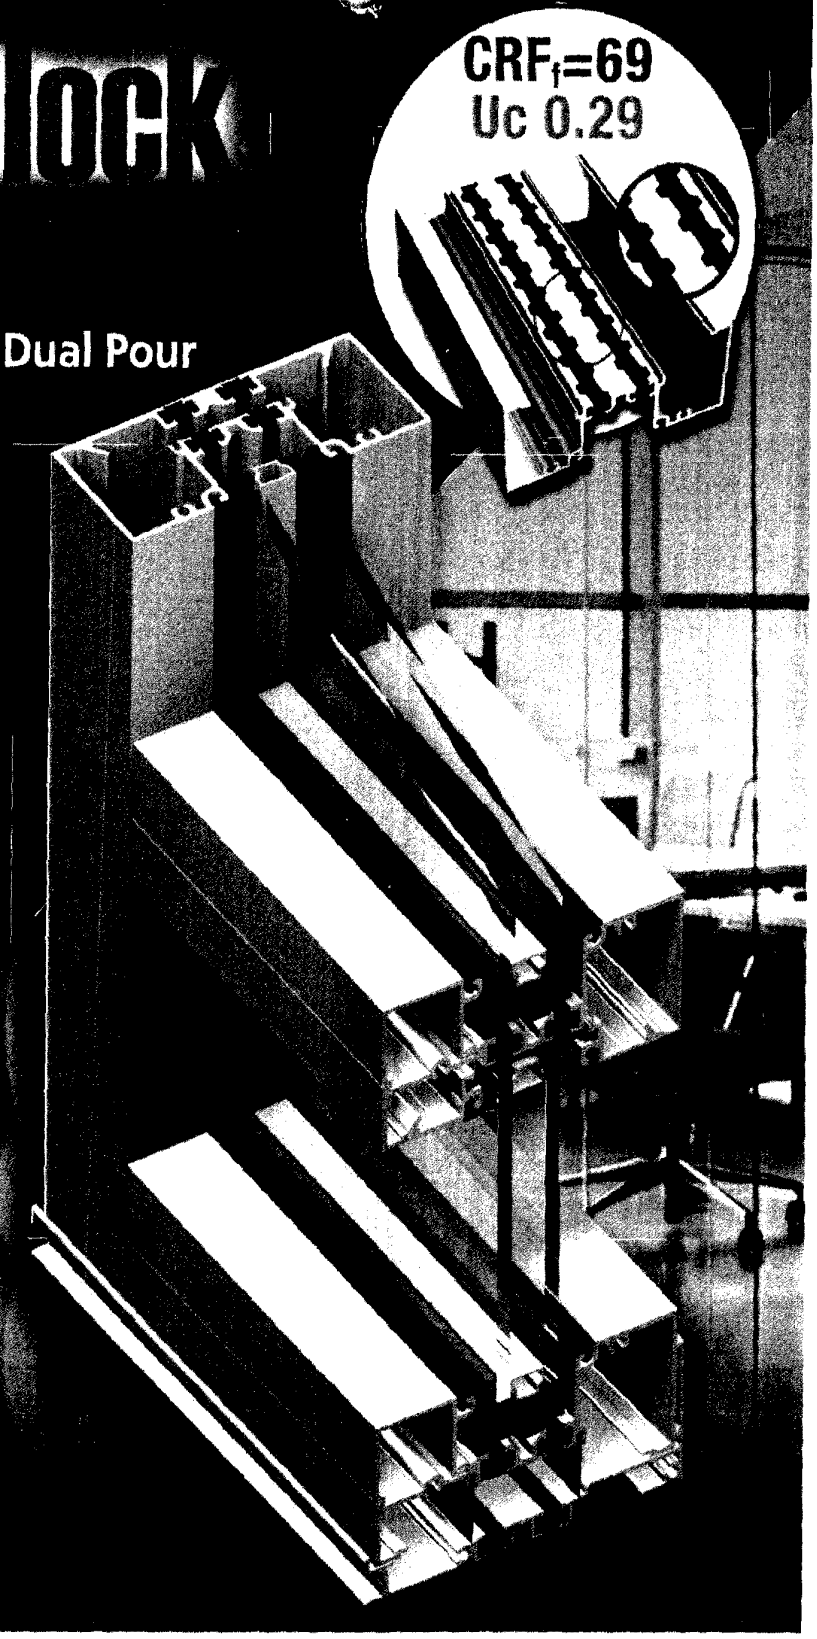
Therm=Block

TU24000

High Thermal Performance Dual Pour & Debridged Storefront



Tubelite's most popular thermally broken storefront line has been expanded and enhanced with an additional P&D thermal break pocket. The TU24000 Series has the same 2" x 4 ½" profile as the T14000 system, and offers standard screw-spline or shear block joints.

The dual thermal break decreases U-factors by 36% and increases CRF by 30% over a single P&D pocket when using the same size and type of insulated glass. Azon's Lancer® mechanical lock provides long-term resistance to shrinkage of the polyurethane barrier. Glass is centered in the 4 ½" system depth for a pleasing reveal on the exterior and interior sides of the frame. Seven anodized finishes and 20 standard paint color are available on this storefront framing system to complement any project with warranty protection as well as street appeal.

With industry leading condensation resistance, the TU24000 system is capable of providing condensation resistance even in extreme cold weather. Under standard interior building conditions, The TU24000 system has been tested to show condensation resistance down to an outdoor temperature of -12 degrees F°.

1. Assuming indoor air temperature of 70 degrees F° and indoor relative humidity of 35%

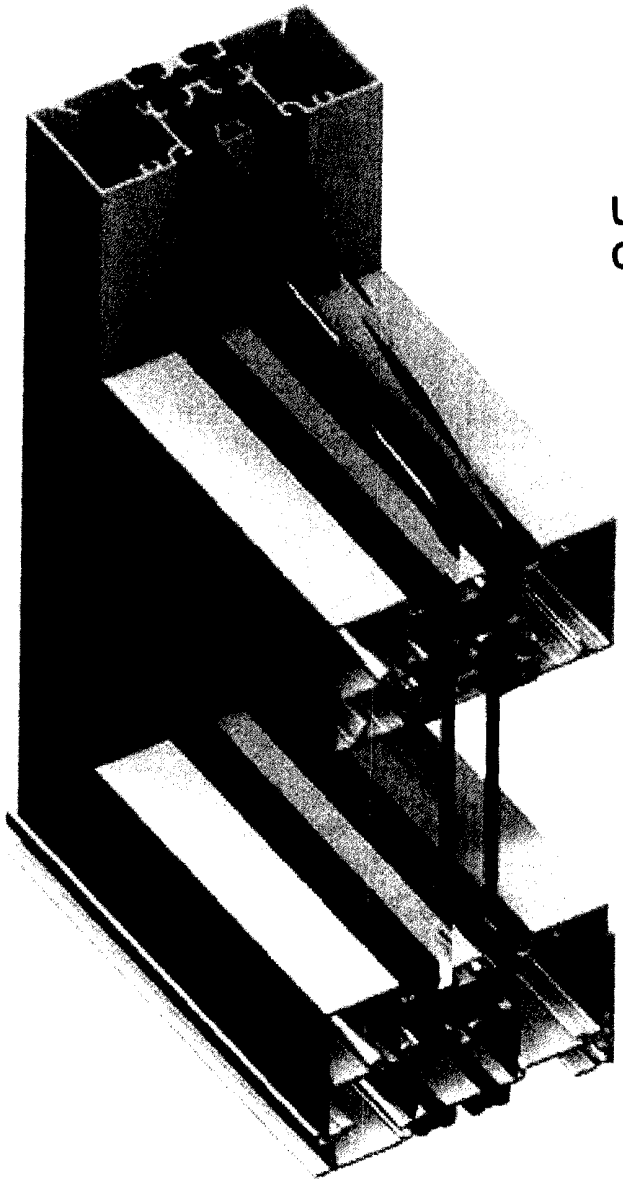
19.01
TU24000 Series HP Thermal Storefront
Description



$U_C = 0.29$
CRF = 69

Description

Tubelite TU24000 Series Framing is a 2" x 4 1/2" flush glazed storefront system for use on first floor applications. Two poured and de-bridged thermal breaks provide industry leading Condensation Resistance and reduced thermal conduction. The thermal pocket also employs Azon Lance technology to prevent dry shrinkage of the polyurethane barrier. This dry glazed internally drained framing can be glazed with 1" insulated glass or panels positioned in the center of the frame. Glass pocket reducers can be used for infill thicknesses from 1" to 1/4" .

19.02
TU24000 Series HP Thermal Storefront
Guide Specifications

General

Description

Furnish all necessary materials, labor and equipment for the complete installation of aluminum framing as shown on the drawings and specified herein.

Fixed window framing shall be 24000 Series (2" x 4 1/2") as manufactured by Tubelite Inc., Walker, Michigan. Whenever substitute products are to be considered, supporting technical literature, samples drawings and performance data must be submitted ten (10) days prior to bid in order to make a valid comparison of the products involved.

Test reports certified by an independent laboratory must be made available upon request.

Performance Requirements

Air infiltration shall not exceed .06 CFM/Ft^2 when tested in accordance with ASTM E-283 at a test pressure of 6.24 PSF.

There shall be no uncontrolled water entry when tested in accordance with ASTM E-331 "Water Penetration of Exterior Windows, Curtainwalls and Doors by Uniform Static Air Pressure Difference" at a test pressure of 12 PSF.

There shall be no uncontrolled water entry when tested in accordance with AAMA 501.1-94 at a dynamic pressure equivalent of 12 PSF.

Structural performance per ASTM E330 shall be based on a maximum allowable deflection of L/175 of the span or 3/4" maximum. The system shall perform to those criteria under a wind load of +30/-30 PSF.

There shall be no buckling, stress on glass, edge seal failure, excess stress on storefront structure, anchors and fasteners or reduction in performance when tested in accordance with AAMA 501.5-98 at a temperature range of 0^0 to 180^0 F.

Thermal transmittance due to conduction (U_c) as low as 0.29 - BTU/Hr/Ft^2/F degree when tested in accordance with AAMA 1503-98. Condensation Resistance Factor (CRF) shall not be less than 69 - when tested in accordance with AAMA 1503-98.

The system shall have a Sound Transmission Class (STC) rating of 37 and an Outdoor-Indoor Transmission Class (OITC) rating of 31 when tested in accordance with ASTM E90-09, ASTM E413-10 and ASTM E1332-10a.

Products

Materials

Extrusions shall be of aluminum alloy 6063-T5 extruded within commercial tolerance and free from defects impairing strength and/or durability. Main framing sections to be of .075 inch minimum wall thickness and glazing stop moldings of .060 inch thickness.

Screws, bolts and all other accessories to be compatible with the aluminum under normal service conditions.

Glazing shall be by means of an exterior and interior roll-in wedge of high quality extruded elastomeric material.

Thermal barrier shall be a two part chemically curing, unfilled polyurethane casting resin poured in place for perimeter members. Snap-in pocket fillers shall be aluminum with PVC inserts for efficient thermal performance.

Finish

All exposed framing surfaces shall be free of scratches and other serious blemishes.

Finish to be: (architect select)

- Etched and clear anodized
  - (AAM10C21A31)
    - Clear - Class II (C2)
  - (AAM10C21A41)
    - Clear - Class I (C1)
- Electrolytically deposited color
  - (AAM10C21A44) Class 1
    - Champagne (CH)
    - Medium Bronze (MB)
    - Light Bronze (LB)
    - Dark Bronze (DB)
    - Extra Dk Bronze (EB)
    - Black (BL)
- Fluoropolymer (70%) painted color _____.

Execution

Installation

Shall be in accordance with the manufacturer's installation instructions and the approved shop drawings.

Note:

In keeping with Tubelite's policy of continuing product improvements, all specifications are subject to change without written notice by the manufacturer.

Technical Notes 5A - Sound Insulation - Clay Masonry Walls
(Reissued August 2000)

INTRODUCTION

The sound insulation or sound transmission loss of a wall is that property which enables it to resist the passage of noise or sound from one side to the other. This should not be confused with sound absorption which is that property of a material which permits sound waves to be absorbed, thus reducing the noise level within a given space and eliminating echoes or reverberations. Only sound insulation will be discussed in this *Technical Notes*.

MEASUREMENT OF SOUND

The sound insulation of a building assembly is expressed as a reduction factor in decibels (dB). The decibel is approximately the smallest change in energy the human ear can detect, and the decibel scale is used for measuring ratios of sound intensities. The reference sound intensity used to measure absolute noise levels is that corresponding to the faintest sound a human ear can hear (0 dB). However, a difference of 3 or less dB is not especially significant, because the human ear cannot detect a change in sounds of less than 3 dB.

Figure 1 shows the intensity level of common sounds on the decibel scale. These data are reproduced from "How Loud is Loud? Noise, Acoustics and Health", by Lee E. Farr, M.D., published in the February 1970 issue of Architectural & Engineering News.

SOUND TRANSMISSION LOSS

It is desirable to have a single number rating as a means for describing the performance of building elements when exposed to an "average" noise. In the past it was customary to use the numerical average of the transmission loss values at nine frequencies. This rating, termed the *nine-frequency average transmission loss*, is often quite inaccurate in comparing an assembly of materials having widely differing TL-frequency characteristics. One single number rating method which has been recently proposed is the *sound transmission class* (STC). This rating is based on the requirements that the value of transmission loss at any of the eleven measuring frequencies does not fall below a specified TL-frequency contour. The shape of this contour is drawn to represent the more common types of noise, and generally covers the requirements for speech privacy.

	dB	SOURCE	COMMENT
Deafening	150		Short exposure can cause hearing loss
	140	Jet plane takeoff	
	130	Artillery fire Machine gun Riveting	
	120	Siren at 100 ft Jet plane (passenger ramp) Thunder - Sonic boom	Threshold of pain
	110	Woodworking shop Accelerating motorcycle Hard rock band	Threshold of discomfort
Very Loud	100	Subway (steel wheels) Loud street noise Power lawnmower Outboard motor	
	90	Truck unmuffled Train whistle Kitchen blender Pneumatic jackhammer	
Loud	80	Printing press Subway (rubber wheels) Noisy office Average factory	Intolerable for phone use
	70	Average street noise Quiet typewriter Freight train at 100 ft Average radio	
Moderate	60	Noisy home Average office Normal conversation

	30	Quiet conversation Broadcast studio	
Very Faint	20	Empty auditorium Whisper	
	10	Rustling leaves Sound proof room Human breathing	
	0		Threshold of audibility

FIG. 1

The following are conclusions in a report entitled, "Measurements of Sound Transmission Loss in Masonry", by William Siekman of Riverbank Acoustical Laboratories, June 1969.

"In conclusion, changes in results of transmission loss measurements have been studied. They indicate that deficiencies in earlier test methods and environments have apparently been corrected. Although data reported today are lower than ever before, they agree very well with data taken in field situations, and consequently

provide assurance that laboratory tests can be relied upon to achieve the desired noise reductions. The performance of walls near the coincidence frequency cannot be predicted yet on a theoretical basis, nor can the performance of walls having a compound structure, but test specimen sizes are now large enough to be representative of typical walls and to provide data over the present frequency range of interest.

"Since the principal deviation due to specimen size is apt to occur at the lower frequencies, users of transmission loss data are urged to avoid dependence upon single figure ratings, even such a relatively good one as is recommended by the Proposed Classification for Determination of Sound Transmission Class, ASTM RM 14-2 (1966). The decision to use a particular construction should always be based upon the total curve and the requirements at individual frequencies."

DESCRIPTION OF SPECIMENS

The specimens discussed in this issue of *Technical Notes* were constructed at the Riverbank Acoustical Laboratories in a testing frame having inside dimensions of 14 ft 4 in. wide by 9 ft 4 in. high. The joints were of typical thickness and were staggered. Mortar was mixed in a ratio by volume of 1 part cement, 2 parts lime and 9 parts sand. All specimens were constructed by a professional mason. The curing time was 28 days or more. The transmission area, S. used in the computations was generally 126 sq ft.

Following are the descriptions of tests, performed at the Riverbank Acoustical Laboratories starting with the lowest Sound Transmission Class (STC):

STC 39. 4-in. Structural Clay Tile Wall

Tile dimensions: 3-9/16 by 4-7/8 by 11-3/4 in

Wall thickness: 3-9/16 in.

Average weight: 22.3 psf

Test: TL 67-59

STC 41. 4 in. Structural Clay Tile Wall, with 5/8-in. plaster one face

Tile dimensions: 3-9/16 by 4-7/8 by 11-3/4 in.

Wall thickness: 4-3/16 in.

Average weight: 25.3 psf

Test: TL 67-82

STC 45. 8-in. Structural Clay Tile Wall

Tile dimensions: 7-5/8 by 4-7/8 by 11-3/4 in.

Wall thickness: 7-5/8 in.

Average weight: 40.6 psf

Test: TL 67-69

STC 45. 4-in. Face Brick Wall

Brick dimensions: 2-1/4 by 3-3/4 by 8-1/4 in.

Wall thickness: 3-3/4 in.

Average weight: 38.7 psf

Test: TL 67-70

STC 49. 6-in. "SCR brick" (Reg. U.S. Pat. Off., SCPI) **Wall, with 3/8-in. gypsum board over 1-in. styrofoam insulation one face**

Brick dimensions: 2-1/4 by 5-1/2 by 11-1/2.

Wall thickness: 6-7/8 in.

Average weight: 57.7 psf

Test: TL 70-39

NOTE: The styrofoam was placed with adhesive, spot applied 12 in. o.c. both vertically and horizontally, to the brick wall on one side. A single layer of 3/8 in. gypsum board was applied vertically over the foam with adhesive, spot applied 12 in. o.c. vertically and horizontally in the field and 6 in. o.c. at the joints. The external joints were finished with a typical drywall joint system.

STC 50. 8-in. Face Brick and Structural Clay Tile Composite Wall

Brick dimensions: 2-1/4 by 3-3/4 by 8-1/4 in.

Tile dimensions: 4 in. nominal thickness

Wall thickness: 8 in.

Average weight: 63.8 psf

Test: TL 67-65

STC 50. 10-in. Face Brick Cavity Wall, with 2-in. air space

Brick dimensions: 2-1/4 by 3-3/4 by 8-1/4 in.

Wall thickness: 10 in.

Average weight: 81.0 psf

Test: TL 68-31

NOTE: The 2 wythes of masonry were tied together with metal wall ties.

STC 50. 4-in. Brick Wall, with 1/2-in. sanded plaster, two-coat one face

Brick dimensions: 2-1/4 by 3-5/8 by 7-5/8 in.

Wall thickness: 4-1/8 in.

Average weight: 42.4 psf

Test: TL 69-283

STC 51. 6-in. "SCR brick" (Reg. U.S. Pat. Off., SCPI) **Wall**

Brick dimensions: 2-1/4 by 5-1/2 by 11-1/2 in.

Wall thickness: 5-1/2 in.

Average weight: 55.8 psf

Test: TL 69-286

STC 52. 8-in. Solid Face Brick Wall

Brick dimensions: 2-1/4 by 3-3/4 by 8-1/4 in.

Wall thickness: 8 in.

Average weight: 83.3 psf

Test: TL 67-68

STC 53. 8-in. Solid Brick Wall, with 1/2-in. gypsum board on furring strips one face

Brick dimensions: 2-1/4 by 3-5/8 by 7-5/8 in.

Wall thickness: 9-1/4 in.

Average weight: 86.7 psf

Test: TL 69-287

NOTE: The 3/4-in. collar joint was filled with mortar. Metal Z ties were used between wythes spaced at 24 in. o.c. both vertically and horizontally. The 1 by 3 wood vertical furring strips were spaced at 16 in. o.c. and nailed at the mortar joints approximately 12 in. o.c. The gypsum board was applied vertically and attached with nails spaced 12 in. o.c. in the field and 8 in. o.c. along the edges. The joints and nail heads were finished with standard drywall system.

STC 53. 6-in. "SCR brick" (Reg. U.S. Pat. Off., SCPI) **Wall, with 1/2-in. plaster one face**

Brick dimensions: 2-1/4 by 5-1/2 by 11-1/2 in.

Wall thickness: 6 in.

Average weight: 60.8 psf

Test: TL 70-70

STC 55. 12-in. Face Brick and Structural Clay Tile Composite Wall

Brick dimensions: 2-1/4 by 3-3/4 by 8-1/4 in.

Tile dimensions: 7-5/8 by 4-7/8 by 11-3/4 in.

Wall thickness: 12 in.

Average weight: 84.1 psf

Test: TL 67-62

STC 59. 12-in. Solid Brick Wall

Brick dimensions:

Face: 2-1/4 by 3-3/4 by 8-1/4 in.

Building: 2-1/4 by 3-5/8 by 8 in.

Wall thickness: 12 in.

Average weight: 116.7 psf

Test: TL 67-32

NOTE: The outside wythes were of face brick. The interior wythe was of common brick.

STC 59. 10-in. Reinforced Brick Masonry Wall (RBM)

Brick dimensions: 2-1/4 by 3-5/8 by 7-5/8 in

Wall thickness: 9-1/2 in.

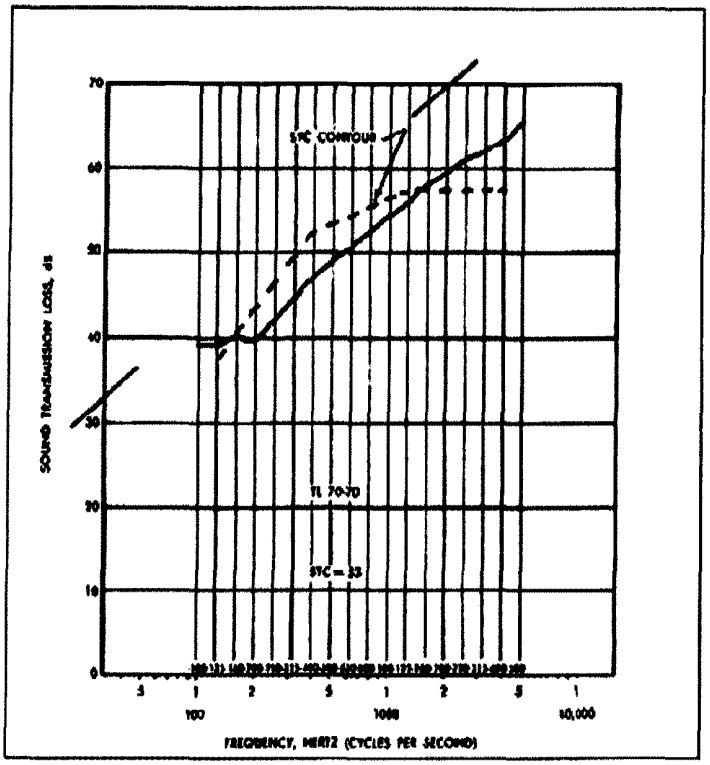
Average weight: 94.2 psf

Test: TL 70-6

NOTE: The 2-1/4-in. grouted cavity contained No. 6 bars at 48 in. o.c. vertically and No. 5 bars at 30 in. o.c. horizontally.

SOUND TRANSMISSION CLASS

Sound transmission class contours (see Fig. 2) may be constructed in accordance with ASTM RM 14-2 on conventional semi-logarithmic paper as follows: a horizontal line segment from 1250 to 4000 Hz (cycles per second); a middle line segment decreasing 5 dB in the interval 1250 to 400 Hz; and a low frequency segment decreasing 15 dB in the interval 400 to 125 Hz.



The sound transmission loss of the tested specimen is shown by the curved line in the above graph. The broken line is the limiting sound transmission class contour.

The theoretical transmission loss of that limp mass having the same weight per square foot as the specimen can be located by drawing a straight line between the two slash marks on the edges of the grid. This was derived from the equation: TL = 20 log W + 20 log F - 33, where W is weight in pounds per square foot, and F is frequency in Hertz (cycles per second).

FIG. 2

The STC contour is shifted vertically relative to the test curve until some of the measured TL values for the test specimen fall below those of the STC contour and the following conditions are fulfilled: The sum of the deficiencies (that is; the deficiencies of test points below the contour) shall not be greater than 32 dB, and the maximum deficiency of any single test point shall not exceed 8 dB. The sound transmission class for the specimen is the TL (transmission loss) value corresponding to the intersection of the sound transmission class contour and the 500-Hz ordinate.

Table 1 shows the decibel losses for 18 frequencies of test specimens listed above. Deficiencies or deviations from the contour (see graph) are tabulated to correspond with the proper frequencies.

These measurements were made using a one-third octave bank of pink noise, swept in 13 min from 100 to 5000 Hz. Runs were made before and after a system interchange, during which the ratio of sound pressure levels in the two rooms was directly recorded graphically. The final results were obtained by averaging the runs, with a resultant precision within a 90 per cent confidence limit of ±1 dB.

The sound transmission class is computed in accordance with the Tentative Recommended Practice for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions, ASTM E 90-66T, and ASTM RM 14-2. The STC number is intended to be used as a preliminary estimate of the acoustical properties of the specimen. Final decisions for design use should be based upon the entire TL curve for the values at all the test frequencies.

TABLE 1
Test Measurements for 13 Minutes from 100 to 5000 Hertz

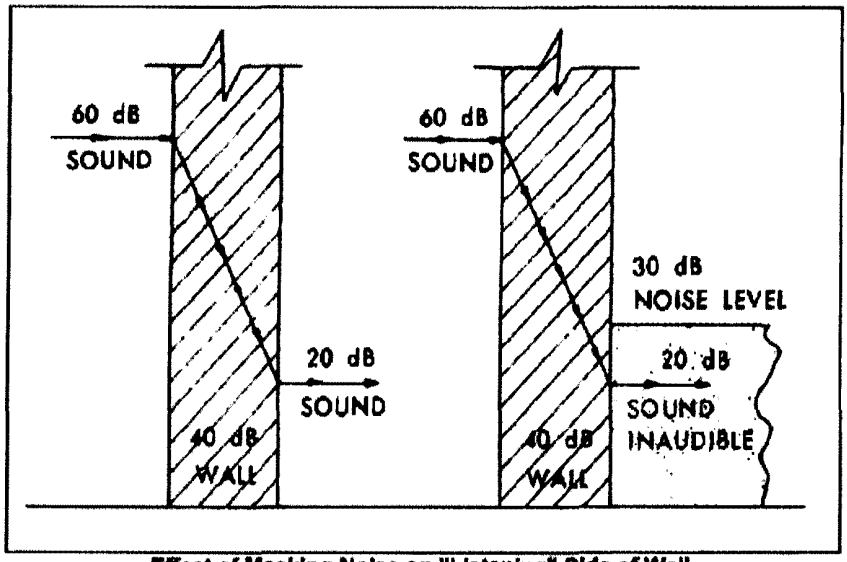
MASKING EFFECT

The sound insulation required in a structure to give satisfactory results depends not only upon the noise level outside of the building or in adjoining rooms, but also upon the noise level within the room under consideration.

If it is to be assumed that there is no noise within the room to be insulated against sound transmission and the noise level in the adjoining room is 60 dB, it will require a partition having a reduction factor of 60 dB to render the noise in the adjoining room inaudible. However, if the noise level in the room under consideration is 30 dB, a partition having a sound reduction factor of approximately 40 dB (see Fig. 3) will make the sound in the adjoining room inaudible. Experiments have shown that for one sound to mask another, there must be at least 10 dB difference between the two sounds. This effect of the sound within the room under consideration is known as the "masking effect". Figure 3 illustrates this "masking effect" principle.



Effect of Masking Noise on "Listening" Side of Wall

FIG. 3

CONCLUSION

This issue of *Technical Notes* has discussed recent test data for, and sound insulation performance of, brick and tile walls and partitions. Future issues of *Technical Notes* will contain some suggestions and recommendations for the control of sound transmission through brick and tile walls and partitions.

Expiration Date: 01/16/13

Test Sample Identification:

Series/Model: 8000

Type: Casement Window

Overall Size: 24-1/16" by 48"

Glazing Option A (Nominal Dimensions): 1" IG (1/8" Annealed, 3/4" Air Space, 1/8" Annealed)

Glazing Option B (Nominal Dimensions): 1" IG (5/16" Laminated, 3/8" Air Space, 5/16" Laminated) Glass Temperature 75 °F

Project Scope: Architectural Testing, Inc. was contracted by Crystal Window and Door Systems, Ltd. to conduct a sound transmission loss test on a Series/Model 8000, casement window. A summary of the results is listed in the Test Results section and the complete test data is included as Appendix B of this report. The samples were provided by the client.

Test Methods: The acoustical test was conducted in accordance with the following:

ASTM E 90-04, *Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions.*

ASTM E 413-04, *Classification for Rating Sound Insulation.*

ASTM E 1332-90 (Re-approved 2003), *Standard Classification for Determination of Outdoor-Indoor Transmission Class.*

ASTM E 2235-04, *Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods.*

130 Derry Court
York, PA 17406-8405
phone: 717-764-7700
fax: 717-764-4129
www.archtest.com

Test Equipment: The equipment used to conduct this test meets the requirements of ASTM E 90. The microphones were calibrated before conducting the sound transmission loss test. The test equipment and test chamber descriptions are listed in Appendix A.

Sample Installation: Sound transmission loss tests were initially performed on a filler wall that was designed to test 48" by 72" and 72" by 48" specimens. The filler wall achieved an STC rating of 69.

A filler wall reducing element was used to reduce the test opening size to 24-9/16" wide by 48-1/2" high. The reducing element consisted of a double 2x4 wood stud wall construction with three layers of 5/8" drywall on both sides. The stud cavities in the wall were insulated with two layers of R-13 fiberglass insulation. The window was placed on a foam isolation pad in the new test opening. Duct seal was used to seal the perimeter of the window to the test opening on both sides. The interior side of the window frame, when installed, was approximately 1/4" from being flush with the receiving room side of the filler wall. A stethoscope was used to check for any abnormal air leaks around the test specimen prior to testing. The vent was opened and closed at least five times prior to testing.

Test Procedure: The window was closed and locked for this test. The sound transmission loss test consisted of the following measurements: One background noise sound pressure level and five sound absorption measurements were conducted at each of the five microphone positions. Two sound pressure level measurements were made simultaneously in both rooms, at each of the five microphone positions. The air temperature and relative humidity conditions were monitored and recorded during the background, absorption, source, and receive room measurements.

Sample Descriptions:

Frame Construction:

	Frame
Size	24-1/16" by 48"
Thickness	2-1/4"
Corners	Coped
Fasteners	Screws
Seal Method	Sealant
Material	Thermally broken aluminum
Reinforcement	None
Thermal Break Material	Urethane

Sample Descriptions: (Continued)

Vent Construction:

	Vent
Size	21-15/16" by 45-3/4"
Thickness	2-1/8"
Corners	Mitered
Fasteners	Keyed and staked
Seal Method	None
Material	Thermally broken aluminum
Reinforcement	None
Thermal Break Material	Urethane
Daylight Opening Size	16-3/4" by 40-3/4"

Vent Glazing Option A:

Measured Overall Insulation Glass Unit Thickness	0.996"
Spacer Type	Steel U-shaped

	Exterior Sheet	Gap	Interior Sheet
Measured Thickness	0.118"	0.760"	0.118"
Muntin Pattern	N/A	N/A	N/A
Material	Annealed	Air*	Annealed
Laminate Material	N/A	N/A	N/A

Glazing Method	Interior
Glazing Material	Butyl tape
Glazing Bead Material	Aluminum with 3/16" foam-filled bulb gasket

Sample Descriptions: (Continued)

Vent Glazing Option B:

Measured Overall Insulation Glass Unit Thickness	1.000"
Spacer Type	Steel U-shaped

	Exterior Sheet	Gap	Interior Sheet
Measured Thickness	0.118" - 0.062" - 0.118"	0.405"	0.118" - 0.061" - 0.118"
Muntin Pattern	N/A	N/A	N/A
Material	Laminated	Air*	Laminated
Laminate Material	PVB	N/A	PVB

Glazing Method	Interior
Glazing Material	Butyl tape
Glazing Bead Material	Aluminum with 3/16" foam-filled bulb gasket

** - Stated per Client/Manufacturer, N/A-Non Applicable*

Components:

TYPE	QUANTITY	LOCATION
Weatherstrip		
3/16" Foam-filled bulb gasket	2 Rows	Vent perimeter
Hardware		
Multi-point hinge system	2	Head and top rail, Sill and bottom rail
Sweep lock	2	Lock jamb
Keeper	2	Lock stile
Roto crank assembly	1	Interior sill face
Drainage		
No drainage		

Comments: The weight of Option A was 48 lbs. The weight of the Option B was 68 lbs. The client did not supply drawings on the Series/Model 8000, casement window. The window was disassembled, and the components will be retained by Architectural Testing for four years. Photographs of the test specimen are included in Appendix C.

Test Results: The STC (Sound Transmission Class) rating was calculated in accordance with ASTM E 413. The OITC (Outdoor-Indoor Transmission Class) was calculated in accordance with ASTM E 1332. A summary of the sound transmission loss test results on the Series/Model 8000, casement window is listed below.

Summary of Test Results			
Data File No.	**Glazing Option (Nominal Dimensions)**	**STC**	**OITC**
87002.01A	1" IG (1/8" annealed, 3/4" air space, 1/8" annealed)	31	24
87002.01B	1" IG (5/16" laminated, 3/8" air space, 5/16" laminated) Glass temperature 75°F	37	30

Note: Transmission loss coefficient differences less than 6 indicate the lower limit of the transmission loss for this specimen. On each data sheet listed in Appendix B, the cells are highlighted red for the transmission loss values limited in this way. Due to the calculations and sample size, transmission loss coefficient differences between 6 and 15 indicate there has been a filler wall correction applied. On each data sheet listed in Appendix B, cells highlighted in green indicate transmission loss values affected in this way.

The complete test results are listed in Appendix B. Flanking limit tests and reference specimen tests are available upon request.

Detailed drawings, data sheets, representative samples of test specimens, a copy of this report, or other pertinent project documentation will be retained by Architectural Testing for a period of four years from the original test date. At the end of this retention period, such materials shall be discarded without notice and the service life of this report will expire. Results obtained are tested values and were secured by using the designated test methods. This report does not constitute certification of this product nor an opinion or endorsement by this laboratory. It is the exclusive property of the client so named herein and relates only to the specimens tested. This report may not be reproduced, except in full, without the written approval of Architectural Testing.

ACOUSTICAL PERFORMANCE TEST REPORT

Rendered to:

CRYSTAL WINDOW & DOOR SYSTEMS, LTD.
31-10 Whitestone Expressway
Flushing, New York 11354

Report No: 87004.01-113-11
Test Date: 03/02/09
Report Date: 05/20/09
Expiration Date: 03/02/13

Test Sample Identification:

Series/Model: 8100

Type: Fixed Window

Overall Size: 47" by 59-1/16"

Glazing (Nominal Dimensions): 1" IG (5/16" Laminated, 3/8" Argon, 5/16" Laminated), Glass Temperature 75°F

Project Scope: Architectural Testing, Inc. was contracted by Crystal Window & Door Systems, Ltd. to conduct a sound transmission loss test on a Series/Model 8100, fixed window. A summary of the results is listed in the Test Results section and the complete test data is included as Appendix B of this report. The sample was provided by the client.

Test Methods: The acoustical tests were conducted in accordance with the following:

ASTM E 90-04, *Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions.*

ASTM E 413-04, *Classification for Rating Sound Insulation.*

ASTM E 1332-90 (Re-approved 2003), *Standard Classification for Determination of Outdoor-Indoor Transmission Class.*

ASTM E 2235-04, *Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods.*

130 Derry Court
York, PA 17406-8405
phone: 717-764-7700
fax: 717-764-4129
www.archtest.com

Test Equipment: The equipment used to conduct these tests meets the requirements of ASTM E 90. The microphones were calibrated before conducting sound transmission loss tests. The test equipment and test chamber descriptions are listed in Appendix A.

Sample Installation: Sound transmission loss tests were initially performed on a filler wall that was designed to test 48" by 72" and 72" by 48" test specimens. The filler wall achieved an STC rating of 70.

A filler wall reducing element was used to reduce the test opening size. The reducing element consisted of two separate 2x6 wood frames filled with concrete to reduce the test opening size to 47" by 59-1/16". A dense neoprene gasket was placed between the two wood and concrete frames. The window was placed on an isolation pad in the new test opening. Duct seal was used to seal the perimeter of the window to the test opening on both sides. The interior side of the window frame, when installed, was approximately 1/4" from being flush with the receiving room side of the filler wall. A stethoscope was used to check for any abnormal air leaks around the test specimen prior to testing. The vent was opened and closed at least five times prior to testing.

Test Procedure: The sound transmission loss test consisted of the following measurements: One background noise sound pressure level and five sound absorption measurements were conducted at each of the five microphone positions. Two sound pressure level measurements were made simultaneously in both rooms, at each of the five microphone positions. The air temperature and relative humidity conditions were monitored and recorded during the background, absorption, source, and receive room measurements.

STC Rating = **39** *(Sound Transmission Class)*

Deficiencies = **30** *(Number of deficiencies versus contour curve)*

OITC Rating = **32** *(Outdoor/Indoor Transmission Class)*

Notes:

1) The acoustical chambers are qualified for measurements down to 80 hertz. Data reported below 80 hertz is for reference only.

2) Transmission loss coefficient differences less than 6 indicate the lower limit of the transmission loss for this specimen. These cells are highlighted red.

3) Transmission loss coefficient differences between 6 and 15 indicate there has been a filler wall correction applied. These cells are highlighted green.

4) Receive Room levels less than 5dB above the Background levels are highlighted in yellow.

ACOUSTICAL PERFORMANCE TEST REPORT

Rendered to:

CRYSTAL WINDOW & DOOR SYSTEMS, LTD.
31-10 Whitestone Expressway
Flushing, New York 11354

Report No: C3501.01-113-11
Test Date: 12/27/12
Report Date: 01/17/13
Record Retention End Date: 01/17/17

Test Sample Identification:

Series/Model: 1240 Aluminum

Type: Sliding Glass Door

Overall Frame Size: 72" by 80"

Glazing (Nominal Dimensions):

Option A: 1" IG (1/8" Tempered, 3/4" Air Space, 1/8" Tempered)

Option B: 1" IG (3/16" Tempered Exterior, 11/16" Air Space, 1/8" Tempered Interior)

Option C: 1" IG (3/16" Tempered, 5/8" Air Space, 3/16" Tempered)

Option D: 1" IG (1/4" Laminated Exterior, 5/8" Air Space, 1/8" Tempered Interior), Glass Temperature 75°F

Option E: 1" IG (1/4" Laminated, 1/2" Air Space, 1/4" Laminated), Glass Temperature 75°F

Project Scope: Architectural Testing, Inc. was contracted by Crystal Window & Door Systems, Ltd. to conduct sound transmission loss tests on Series/Model 1240 Aluminum, sliding glass doors. A summary of the results is listed in the Test Results section, and the complete test data is included as Appendix B of this report. The samples were provided by the client.

Test Methods: The acoustical tests were conducted in accordance with the following:

ASTM E 90-09, *Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions.*
ASTM E 413-10, *Classification for Rating Sound Insulation.*
ASTM E 1332-10a, *Standard Classification for Rating Outdoor-Indoor Sound Attenuation.*
ASTM E 2235-04 (Reapproved 2012), *Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods.*

ACCREDITED TL-144

Test Equipment: The equipment used to conduct these tests meets the requirements of ASTM E 90. The microphones were calibrated before conducting sound transmission loss tests. The test equipment and test chamber descriptions are listed in Appendix A.

Sample Installation: Sound transmission loss tests were initially performed on a filler wall that was designed to test sliding glass door specimens. The filler wall achieved an STC rating of 69.

A filler wall reducing element was used to reduce the test opening size to accommodate the test specimen. The reducing element consisted of a double 2x4 wood stud wall construction with three layers of 5/8" drywall on both sides. The stud cavities in the wall were insulated with two layers of R-13 fiberglass insulation. The sliding glass door was placed on a foam isolation pad in the new test opening. Duct seal was used to seal the perimeter of the test specimen to the test opening on both sides. The interior side of the door frame, when installed, was approximately 1/4" from being flush with the receiving room side of the filler wall. A stethoscope was used to check for any abnormal air leaks around the test specimen prior to testing. The panels were opened and closed at least five times prior to testing.

Test Procedure: The sliding glass door was closed and locked for this test. The sound transmission loss tests were conducted in accordance with the ASTM E 90 test method using a single direction of measurement. The sound transmission loss test consisted of the following measurements: One background noise sound pressure level and five sound absorption measurements were conducted at each of the five microphone positions. Two sound pressure level measurements were made simultaneously in both rooms, at each of the five microphone positions. The air temperature and relative humidity conditions were monitored and recorded during the background, absorption, source, and receive room measurements.

Sample Descriptions:

Frame Construction:

		Frame
Size		72" by 80"
Thickness		4-1/4"
Corners		Coped
	Fasteners	Screws
	Seal Method	Sealant
Material		Aluminum
	Reinforcement	None
	Thermal Break Material	Urethane

Sample Descriptions: (Continued)

Panel Construction:

		Fixed Panel	Active Panel
Size		35-3/8" by 76-3/4"	36-5/8" by 76-3/4"
Thickness		1-1/2"	1-1/2"
Corners		Coped	Coped
	Fasteners	Screws	Screws
	Seal Method	Sealant	Sealant
Material		Aluminum	Aluminum
	Reinforcement	None	None
	Thermal Break Material	Urethane	Urethane
Daylight Opening Size		32-1/4" by 71-1/2"	32-1/4" by 71-1/2"

Note: Expanded polyurethane foam was located in all members of the panels and frame.

Glazing Option A:

Measured Overall Insulation Glass Unit Thickness	0.984"

Handle with lock	1	Lock stile
Keeper	1	Lock jamb
Drainage		
No drainage		

Comments: The weight of Option A was 180 lbs. The weight of Option B was 204 lbs. The weight of Option C was 230 lbs. The weight of Option D was 228 lbs. The weight of Option E was 274 lbs. The client did not supply drawings on the Series/Model 1240 Aluminum, sliding glass door. The sliding glass door was disassembled, and the components will be retained by Architectural Testing for four years. Photographs of the test specimen are included in Appendix C.

Test Results: The STC (Sound Transmission Class) rating was calculated in accordance with ASTM E 413. The OITC (Outdoor-Indoor Transmission Class) was calculated in accordance with ASTM E 1332. A summary of the sound transmission loss test results on the Series/Model 1240 Aluminum, sliding glass door is listed below.

Summary of Test Results			
Data File No.	**Glazing Option (Nominal Dimensions)**	**STC**	**OITC**
C3501.01A	1" IG (1/8" tempered, 3/4" air space, 1/8" tempered)	29	22
C3501.01B	1" IG (3/16" tempered exterior, 11/16" air space, 1/8" tempered interior)	32	26
C3501.01C	1" IG (3/16" tempered, 5/8" air space, 3/16" tempered)	30	25
C3501.01D	1" IG (1/4" laminated exterior, 5/8" air space, 1/8" tempered interior), Glass temperature 75°F	33	28
C3501.01E	1" IG (1/4" laminated, 1/2" air space, 1/4" laminated), Glass temperature 75°F	35	30

The complete test results are listed in Appendix B. Flanking limit tests and reference specimen tests are available upon request.

Architectural Testing will service this report for the entire test record retention period. Test records, such as detailed drawings, datasheets, representative samples of test specimens, or other pertinent project documentation, will be retained by Architectural Testing for the entire test record retention period.

This report does not constitute certification of this product nor an opinion or endorsement by this laboratory. It is the exclusive property of the client so named herein and relates only to the specimen tested. This report may not be reproduced, except in full, without the written approval of Architectural Testing.

Deficiencies 23 *(Number of deficiencies versus contour curve)*
OITC Rating **26** *(Outdoor Indoor Transmission Class)*

Notes:

1) Transmission loss coefficient differences less than 6 indicate the lower limit of the transmission loss for this specimen. These cells are highlighted red.

2) Transmission loss coefficient differences between 6 and 15 indicate there has been a filler wall correction applied. These cells are highlighted green.

3) Receive Room levels less than 5 dB above the background levels are highlighted in yellow.

Intertek | Architectural Testing

Acoustical Performance Test Report

GAMCO CORPORATION
131-10 Maple Avenue
Flushing, New York 11355

Report No E6086.01-113-11

Project Scope
Architectural Testing, Inc., an Intertek company ("Intertek-ATI"), was contracted to conduct a sound transmission loss test. The complete test data is included as Appendix B of this report. The client provided the test specimen.

Test Methods
Testing for this project was conducted in accordance with the following standards. The equipment listed in the attachments meets the requirements of the following standards.

ASTM E90-09, *Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements*
ASTM E413-10, *Classification for Rating Sound Insulation*
ASTM E1332-10a, *Standard Classification for Rating Outdoor-Indoor Sound Attenuation*
ASTM E2235-04 (2012), *Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods*

Test Procedure
All measurements were conducted in the HT test chambers at Intertek-ATI located in York, Pennsylvania. The sensitivity of the microphones was checked before measurements were conducted.

The transmission loss values were obtained for a single direction of measurement. Two background noise sound pressure level and twenty-five sound absorption measurements were conducted at each of five microphone positions.

Two sound pressure levels were made simultaneously in the receive and source rooms at each of five microphone positions.

The air temperature and relative humidity conditions were monitored and recorded during all measurements.

Specimen Installation
A sound transmission loss test was initially performed on a filler wall.

The specimen plug was removed from the filler wall assembly. The specimen was placed on a foam isolation pad in the test opening. Duct seal was used to seal the perimeter of the specimen to the test opening on both sides. The interior side of the specimen frame, when installed, was approximately 1/4" from being flush with the receive room side of the filler wall. A stethoscope was used to check for any abnormal air leaks around the test specimen prior to testing. Operable portions of the test specimen, if any, were cycled at least five times prior to testing.

Test Calculations
Transmission loss (TL) at each 1/3 octave frequency is the average source room sound pressure level minus the average receive room sound pressure level, plus, 10 times the log of the specimen area divided by the sound absorption of the receive room with the sample in place.

STC Rating
To obtain the Sound Transmission Class (STC), read the TL of the contour curve at 500 Hz. The sum of the deficiencies below the contour curve may not exceed 32. The maximum deficiency at any one frequency may not exceed 8.

OITC Rating
The Outdoor-Indoor Transmission Class (OITC) is calculated by subtracting the logarithmic summation of the TL values from the logarithmic summation of the A-weighted transportation noise spectrum stated in ASTM E1332.

Specimen Descriptions

		Frame	Leaf
Size		37-3/4" by 82-3/8"	34-1/2" by 79-1/2"

Comments

The client did not supply a report drawing of the test specimen. Intertek-ATI will store samples of test specimens for four years.

Intertek-ATI will service this report for the entire test record retention period. Test records, such as detailed drawings, datasheets, representative samples of test specimens, or other pertinent project documentation, will be retained by Intertek-ATI for the entire test record retention period. The test record retention period ends four years after the test date.

This report does not constitute certification of this product nor an opinion or endorsement by this laboratory. It is the exclusive property of the client so named herein and relates only to the specimen tested. This report is intended to help in the client's quality assurance program, but it does not represent a continuous or exhaustive evaluation of the specimen tested or of other products or materials that were not evaluated. The statements and data provided herein do not constitute approval, disapproval, certification, or acceptance of performance or materials.

This report may not be reproduced, except in full, without the written approval of Intertek-ATI.

For INTERTEK-ATI:

Daniel P. Platts
Senior Technician - Acoustical Testing

Todd D. Kister
Laboratory Supervisor – Acoustical Testing

Intertek | Architectural Testing

Acoustical Performance Test Report

GAMCO CORPORATION
131-10 Maple Avenue
Flushing, New York 11355

Report No E6085.01-113-11

Project Scope
Architectural Testing, Inc., an Intertek company (Intertek-ATI), was contracted to conduct a sound transmission loss test. The complete test data is included as Appendix B of this report. The client provided the test specimen.

Test Methods
Testing for this project was conducted in accordance with the following standards. The equipment listed in the attachments meets the requirements of the following standards.

ASTM E90-09, *Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements*
ASTM E413-10, *Classification for Rating Sound Insulation*
ASTM E1332-10a, *Standard Classification for Rating Outdoor-Indoor Sound Attenuation*
ASTM E2235-04 (2012), *Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods*

Test Procedure
All measurements were conducted in the HT test chambers at Intertek-ATI located in York, Pennsylvania. The sensitivity of the microphones was checked before measurements were conducted.

The transmission loss values were obtained for a single direction of measurement. Two background noise sound pressure level and twenty-five sound absorption measurements were conducted at each of five microphone positions.

Two sound pressure levels were made simultaneously in the receive and source rooms at each of five microphone positions.

The air temperature and relative humidity conditions were monitored and recorded during all measurements.

Specimen Installation
A sound transmission loss test was initially performed on a filler wall.

The specimen plug was removed from the filler wall assembly. The specimen was placed on a foam isolation pad in the test opening. Duct seal was used to seal the perimeter of the specimen to the test opening on both sides. The interior side of the specimen frame, when installed, was approximately 1/4" from being flush with the receive room side of the filler wall. A stethoscope was used to check for any abnormal air leaks around the test specimen prior to testing. Operable portions of the test specimen, if any, were cycled at least five times prior to testing.

Test Calculations
Transmission loss (TL) at each 1/3 octave frequency is the average source room sound pressure level minus the average receive room sound pressure level, plus, 10 times the log of the specimen area divided by the sound absorption of the receive room with the sample in place.

STC Rating
To obtain the Sound Transmission Class (STC), read the TL of the contour curve at 500 Hz. The sum of the deficiencies below the contour curve may not exceed 32. The maximum deficiency at any one frequency may not exceed 8.

OITC Rating
The Outdoor-Indoor Transmission Class (OITC) is calculated by subtracting the logarithmic summation of the TL values from the logarithmic summation of the A-weighted transportation noise spectrum stated in ASTM E1332.

Specimen Descriptions

Comments

The client did not supply a report drawing of the test specimen. Intertek-ATI will store samples of test specimens for four years.

Intertek-ATI will service this report for the entire test record retention period. Test records, such as detailed drawings, datasheets, representative samples of test specimens, or other pertinent project documentation, will be retained by Intertek-ATI for the entire test record retention period. The test record retention period ends four years after the test date.

This report does not constitute certification of this product nor an opinion or endorsement by this laboratory. It is the exclusive property of the client so named herein and relates only to the specimen tested. This report is intended to help in the client's quality assurance program, but it does not represent a continuous or exhaustive evaluation of the specimen tested or of other products or materials that were not evaluated. The statements and data provided herein do not constitute approval, disapproval, certification, or acceptance of performance or materials.

This report may not be reproduced, except in full, without the written approval of Intertek-ATI.

For INTERTEK-ATI:

Reed City, Michigan 49677

Report No: C5774.01-113-11
Test Date: 04/10/13
Report Date: 05/01/13
Record Retention End Date: 05/01/17

Test Sample Identification:

Series/Model: T24000

Type: Two-Lite Storefront

Overall Size: 78-3/4" by 79-1/4"

Glazing (Nominal Dimensions): 1-1/16" IG (1/4" Heat Strengthened Exterior, 1/2" Air Space, 5/16" Laminated Interior), Glass Temperature 75°F

Project Scope: Architectural Testing, Inc. was contracted by Tubelite, Inc. to conduct sound transmission loss tests on a Series/Model T24000, two-lite storefront. A summary of the results is listed in the Test Results section, and the complete test data is included as Appendix B of this report. The sample was provided by the client.

Test Methods: The acoustical tests were conducted in accordance with the following:

ASTM E 90-09, *Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions.*
ASTM E 413-10, *Classification for Rating Sound Insulation.*
ASTM E 1332-10a, *Standard Classification for Rating Outdoor-Indoor Sound Attenuation.*
ASTM E 2235-04 (Reapproved 2012), *Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods.*

Test Equipment: The equipment used to conduct these tests meets the requirements of ASTM E 90. The microphones were calibrated before conducting sound transmission loss tests. The test equipment and test chamber descriptions are listed in Appendix A.

fax: 717-764-4129
www.archtest.com

ACCREDITED TL-144

Sample Installation: Sound transmission loss tests were initially performed on a filler wall that was designed to test curtain wall specimens. The filler wall achieved an STC rating of 69.

The specimen plug was removed from the filler wall assembly. The storefront was placed on a foam isolation pad in the test opening. Duct seal was used to seal the perimeter of the test specimen to the test opening on both sides. The interior side of the curtain wall frame, when installed, was approximately 1/4" from being flush with the receiving room side of the filler wall. A stethoscope was used to check for any abnormal air leaks around the test specimen prior to testing.

Test Procedure: The sound transmission loss test was performed in accordance with the ASTM E 90 test method using a single direction of measurement. The sound transmission loss test consisted of the following measurements: One background noise sound pressure level and five sound absorption measurements were conducted at each of the five microphone positions. Two sound pressure level measurements were made simultaneously in both rooms, at each of the five microphone positions. The air temperature and relative humidity conditions were monitored and recorded during the background, absorption, source, and receive room measurements.

Comments: The weight of the test sample was 324 lbs. The design drawings (included in Appendix C) supplied by the client, accurately describe the Series/Model T24000, two-lite storefront. The dimensions on the drawings that are circled and/or checked were verified against the test specimen. The storefront was disassembled, and the components will be retained by Architectural Testing for four years. Photographs of the test specimen are included in Appendix D.

Test Results: The STC (Sound Transmission Class) rating was calculated in accordance with ASTM E 413. The OITC (Outdoor-Indoor Transmission Class) was calculated in accordance with ASTM E 1332. A summary of the sound transmission loss test results on the Series/Model T24000, two-lite storefront is listed below.

Summary of Test Results			
Data File No.	**Glazing (Nominal Dimensions)**	**STC**	**OITC**
C5774.01	1-1/16" IG (1/4" heat strengthened exterior, 1/2" air space, 5/16" laminated interior), Glass temperature 75°F	37	31

The complete test results are listed in Appendix B. Flanking limit tests and reference specimen tests are available upon request.

Architectural Testing will service this report for the entire test record retention period. Test records, such as detailed drawings, datasheets, representative samples of test specimens, or other pertinent project documentation, will be retained by Architectural Testing for the entire test record retention period.

5000	7	14.4	105	48	84	51	0.4	-	29.4

STC Rating	**37**	*(Sound Transmission Class)*
Deficiencies	27	*(Number of deficiencies versus contour curve)*
OITC Rating	**31**	*(Outdoor Indoor Transmission Class)*

Notes:

1) Transmission loss coefficient differences less than 6 indicate the lower limit of the transmission loss for this specimen. These cells are highlighted red.

2) Transmission loss coefficient differences between 6 and 15 indicate there has been a filler wall correction applied. These cells are highlighted green.

3) Receive Room levels less than 5 dB above the background levels are highlighted in yellow.

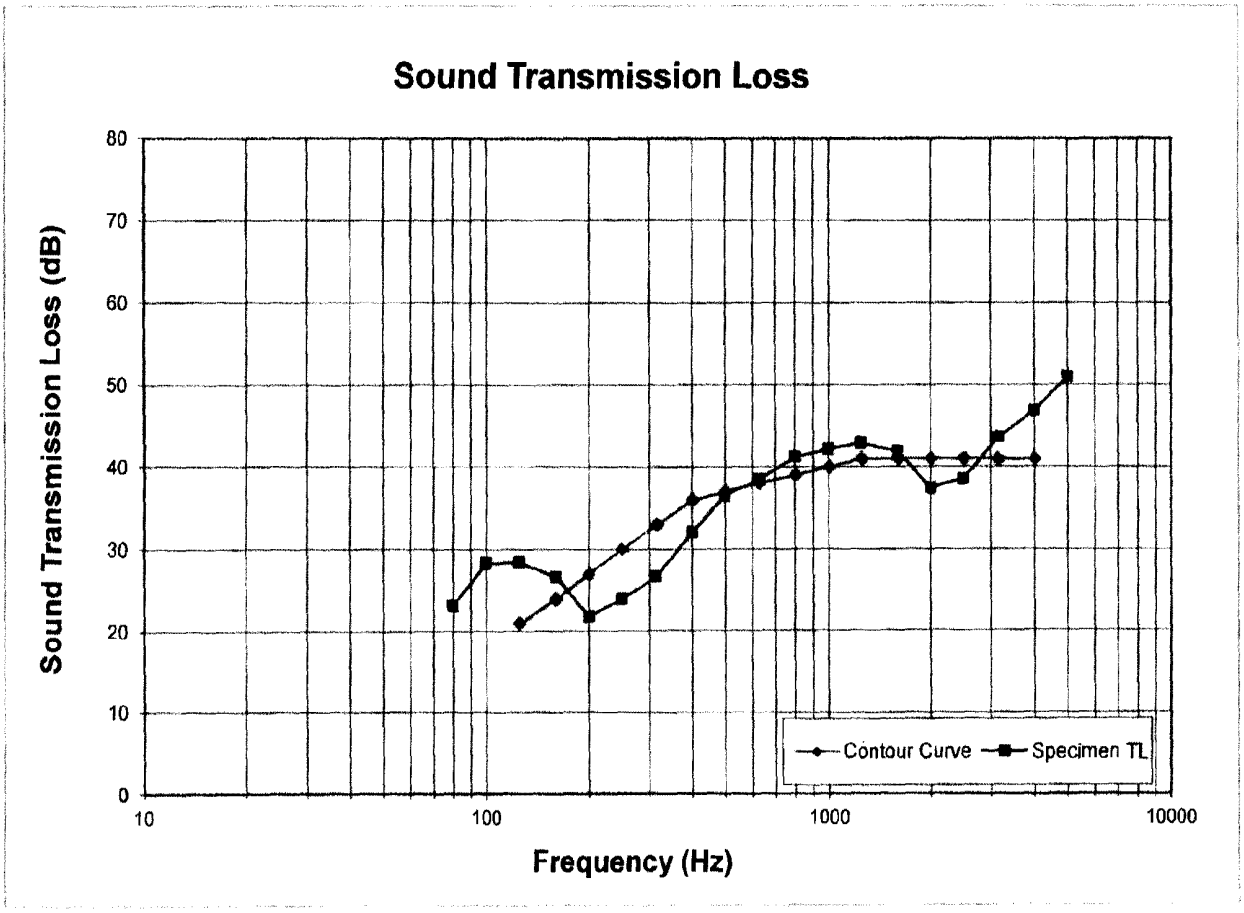
SOUND TRANSMISSION LOSS

ASTM E 90

Test Date	04/10/13		
ATI No.	C5774.01		
Client	Tubelite, Inc.		
Specimen	Series/Model: T24000, two-lite storefront with 1-1/16" IG (1/4" heat strengthened exterior, 1/2" air space, 5/16" laminated interior), Glass temperature 75°F		
Operator	Kurt Golden		
Sample Area	4.03 m^2		
Filler Area	8.97 m^2		
	Source	Receive	Sample
Temp C	23	23	23
RH %	50	47	47



Note: To obtain the Sound Transmission Class (STC), read the Sound Transmission Loss of the contour curve at 500 Hz. The sum of the deficiencies below the contour curve cannot exceed 32. The maximum deficiencies at any one frequency cannot exceed 8.

ACOUSTICAL PERFORMANCE TEST REPORT

Rendered to:

TUBELITE, INC.
4878 Mackinaw Trail
Reed City, Michigan 49677

Report No: C5775.01-113-11
Test Date: 03/25/13
Report Date: 05/01/13
Record Retention End Date: 05/01/17

Test Sample Identification:

Series/Model: T24000

Type: Side-Hinged Single Thermal Door

Overall Frame Size: 43" by 88"

Glazing (Nominal Dimensions): 1-1/16" IG (1/4" Heat Strengthened Exterior, 1/2" Air Space, 5/16" Laminated Interior), Glass Temperature 75°F

Project Scope: Architectural Testing, Inc. was contracted by Tubelite, Inc. to conduct sound transmission loss tests on a Series/Model T24000, side-hinged single thermal door. A summary of the results is listed in the Test Results section, and the complete test data is included as Appendix B of this report. The sample was provided by the client.

Test Methods: The acoustical tests were conducted in accordance with the following:

ASTM E 90-09, *Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions.*
ASTM E 413-10, *Classification for Rating Sound Insulation.*
ASTM E 1332-10a, *Standard Classification for Rating Outdoor-Indoor Sound Attenuation.*
ASTM E 2235-04 (Reapproved 2012), *Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods.*

Test Equipment: The equipment used to conduct these tests meets the requirements of ASTM E 90. The microphones were calibrated before conducting sound transmission loss tests. The test equipment and test chamber descriptions are listed in Appendix A.

ACCREDITED
TL-144

Sample Installation: Sound transmission loss tests were initially performed on a filler wall that was designed to test similar size specimens. The filler wall achieved an STC rating of 68.

The specimen plug was removed from the filler wall assembly. The side-hinged single thermal door was placed on an isolation pad in the test opening. Duct seal was used to seal the perimeter of the test specimen to the test opening on both sides. A stethoscope was used to check for any abnormal air leaks around the test specimen prior to testing. The operable panel was opened and closed at least five times prior to testing.

Test Procedure: The side-hinged single thermal door was closed and locked for this test. The sound transmission loss test was conducted in accordance with the ASTM E 90 test method using a single direction of measurement. The sound transmission loss test consisted of the following measurements: One background noise sound pressure level and five sound absorption measurements were conducted at each of the five microphone positions. Two sound pressure level measurements were made simultaneously in both rooms, at each of the five microphone positions. The air temperature and relative humidity conditions were monitored and recorded during the background, absorption, source, and receive room measurements.

Sample Descriptions:

Frame Construction:

	Frame
Size	43" by 88"
Thickness	4-1/2"
Corners	Butted
Fasteners	Screws
Seal Method	None
Material	Aluminum
Reinforcement	N/A
Thermal Break Material	Insulbar

N/A-Non Applicable

Sample Descriptions: (Continued)

Panel Construction:

	Panel
Size	39-3/4" by 85"
Thickness	1-3/4"
Corners	Butted
Fasteners	Screws
Seal Method	None
Material	Aluminum
Reinforcement	N/A
Thermal Break Material	Insulbar
Daylight Opening Size	29-1/2" by 69"

Glazing:

Measured Overall Insulation Glass Unit Thickness	1.087"
Spacer Type	Aluminum

	Exterior Sheet	Gap	Interior Sheet

Sample Descriptions: (Continued)

Components:

	TYPE	QUANTITY	LOCATION
Weatherstrip			
	1/4" Diameter hollow bulb gasket	1 Row	Head and jambs
	Sweep with 3/8" leaf	1 Row	Bottom rails
Hardware			
	Hinge	3	Hinge jamb
	Keyed lock bolt	1	Lock stile
	Handle	1	Lock stiles
Drainage			
	No drainage		

Comments: The total weight of the sample was 198 lbs. The design drawings (included in Appendix C) supplied by the client, accurately describe the Series/Model T24000, side-hinged single thermal door. The dimensions on the drawings that are circled and/or checked were verified against the test specimen. The side-hinged single thermal door was disassembled, and the components will be retained by Architectural Testing for four years. Photographs of the test specimen are included in Appendix D.

Test Results: The STC (Sound Transmission Class) rating was calculated in accordance with ASTM E 413. The OITC (Outdoor-Indoor Transmission Class) was calculated in accordance with ASTM E 1332. A summary of the sound transmission loss test results on the Series/Model T24000, side-hinged single thermal door is listed below.

Summary of Test Results			
Data File No.	**Glazing (Nominal Dimensions)**	**STC**	**OITC**
C5775.01	1-1/16" IG (1/4" heat strengthened exterior, 1/2" air space, 5/16" laminated interior), Glass temperature 75°F	33	30

The complete test results are listed in Appendix B. Flanking limit tests and reference specimen tests are available upon request.

Architectural Testing will service this report for the entire test record retention period. Test records, such as detailed drawings, datasheets, representative samples of test specimens, or other pertinent project documentation, will be retained by Architectural Testing for the entire test record retention period.

This report does not constitute certification of this product nor an opinion or endorsement by this laboratory. It is the exclusive property of the client so named herein and relates only to the specimen tested. This report may not be reproduced, except in full, without the written approval of Architectural Testing.

4000	6	11.9	106	64	81	35	0.4	2	39.8
5000	6	15.3	105	62	84	35	0.4	-	42.8

STC Rating **33** *(Sound Transmission Class)*
Deficiencies 31 *(Number of deficiencies versus contour curve)*
OITC Rating **30** *(Outdoor Indoor Transmission Class)*

Notes:

1) Transmission loss coefficient differences less than 6 indicate the lower limit of the transmission loss for this specimen. These cells are highlighted red.

2) Transmission loss coefficient differences between 6 and 15 indicate there has been a filler wall correction applied. These cells are highlighted green.

3) Receive Room levels less than 5 dB above the background levels are highlighted in yellow.

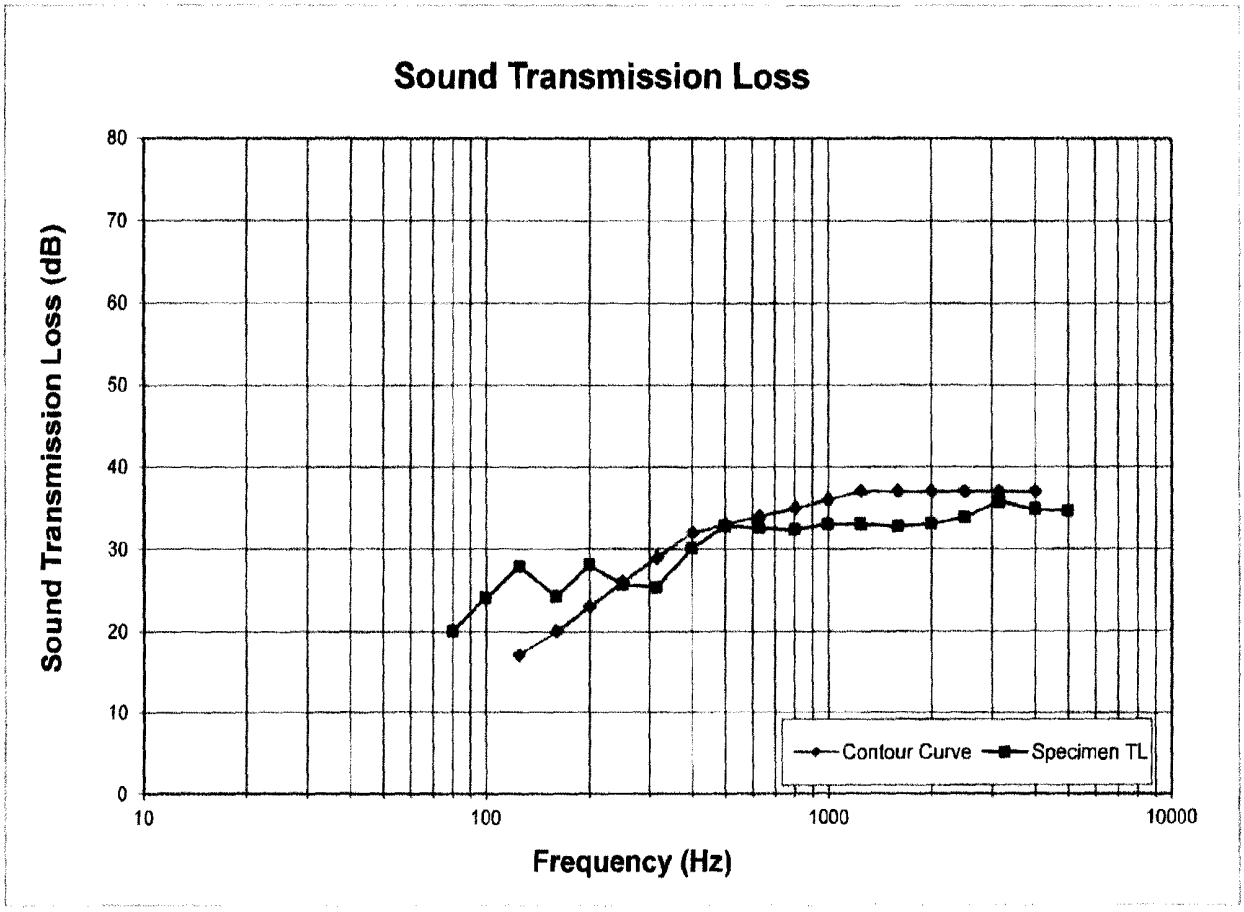
SOUND TRANSMISSION LOSS

ASTM E 90

Test Date	03/25/13		
ATI No.	C5775.01		
Client	Tubelite, Inc.		
Specimen	Series/Model: T24000, side-hinged single door system with full lite 1-1/16" IG (1/4" heat strengthened exterior, 1/2" air space, 5/16" laminated interior), Glass temperature 75°F		
Operator	Kurt Golden		
Sample Area	2.50 m^2		
Filler Area	10.50 m^2		
	Source	Receive	Sample
Temp C	22	20	21
RH %	48	52	49



Note: To obtain the Sound Transmission Class (STC), read the Sound Transmission Loss of the contour curve at 500 Hz. The sum of the deficiencies below the contour curve cannot exceed 32. The maximum deficiencies at any one frequency cannot exceed 8.

ACOUSTICAL PERFORMANCE TEST REPORT

Rendered to:

TUBELITE, INC.
4878 Mackinaw Trail
Reed City, Michigan 49677

Report No: C5776.01-113-11
Test Date: 04/10/13
Report Date: 05/01/13
Record Retention End Date: 05/01/17

Test Sample Identification:

Series/Model: T24000

Type: Side-Hinged Double Thermal Door

Overall Frame Size: 80" by 87-3/4"

Glazing (Nominal Dimensions): 1-1/16" IG (1/4" Heat Strengthened Exterior, 1/2" Air Space, 5/16" Laminated Interior), Glass Temperature 75°F

Project Scope: Architectural Testing, Inc. was contracted by Tubelite, Inc. to conduct sound transmission loss tests on a Series/Model T24000, side-hinged double thermal door. A summary of the results is listed in the Test Results section, and the complete test data is included as Appendix B of this report. The sample was provided by the client.

Test Methods: The acoustical tests were conducted in accordance with the following:

ASTM E 90-09, *Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions.*
ASTM E 413-10, *Classification for Rating Sound Insulation.*
ASTM E 1332-10a, *Standard Classification for Rating Outdoor-Indoor Sound Attenuation.*
ASTM E 2235-04 (Reapproved 2012), *Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods.*

Test Equipment: The equipment used to conduct these tests meets the requirements of ASTM E 90. The microphones were calibrated before conducting sound transmission loss tests. The test equipment and test chamber descriptions are listed in Appendix A.

ACCREDITED
TL-144

Sample Installation: Sound transmission loss tests were initially performed on a filler wall that was designed to test similar size specimens. The filler wall achieved an STC rating of 68.

The specimen plug was removed from the filler wall assembly. The side-hinged double thermal door was placed on an isolation pad in the test opening. Duct seal was used to seal the perimeter of the test specimen to the test opening on both sides. A stethoscope was used to check for any abnormal air leaks around the test specimen prior to testing. The operable panels were opened and closed at least five times prior to testing.

Test Procedure: The side-hinged double thermal door was closed and locked for this test. The sound transmission loss test was conducted in accordance with the ASTM E 90 test method using a single direction of measurement. The sound transmission loss test consisted of the following measurements: One background noise sound pressure level and five sound absorption measurements were conducted at each of the five microphone positions. Two sound pressure level measurements were made simultaneously in both rooms, at each of the five microphone positions. The air temperature and relative humidity conditions were monitored and recorded during the background, absorption, source, and receive room measurements.

Sample Descriptions:

Frame Construction:

	Frame
Size	80" by 87-3/4"
Thickness	4-1/2"
Corners	Butted
Fasteners	Screws
Seal Method	None
Material	Aluminum
Reinforcement	N/A
Thermal Break Material	Insulbar

N/A-Non Applicable

Sample Descriptions: (Continued)

Panel Construction:

	Active Panel	Inactive Panel
Size	37-3/4" by 85"	37-3/4" by 85"

Sample Descriptions: (Continued)

Components:

TYPE	QUANTITY	LOCATION
Weatherstrip		
1/4" Diameter hollow bulb gasket	1 Row	Head and jambs
0.110" by 0.510" Polypile	2 Rows	Active panel meeting stile
Sweep with 3/8" leaf	1 Row	Bottom rails
Hardware		
Hinge	6	Jambs
Keyed lock bolt	1	Active panel lock stile
Handle	2	Lock stiles
Vertical rod lock system	2	Inactive panel lock stile
Drainage		
No drainage		

Comments: The total weight of the sample was 352 lbs. The design drawings (included in Appendix C) supplied by the client, accurately describe the Series/Model T24000, side-hinged double thermal door. The dimensions on the drawings that are circled and/or checked were verified against the test specimen. The side-hinged double thermal door was disassembled, and the components will be retained by Architectural Testing for four years. Photographs of the test specimen are included in Appendix D.

Test Results: The STC (Sound Transmission Class) rating was calculated in accordance with ASTM E 413. The OITC (Outdoor-Indoor Transmission Class) was calculated in accordance with ASTM E 1332. A summary of the sound transmission loss test results on the Series/Model T24000, side-hinged double thermal door is listed below.

Summary of Test Results			
Data File No.	**Glazing (Nominal Dimensions)**	**STC**	**OITC**
C5776.01	1-1/16" IG (1/4" heat strengthened exterior, 1/2" air space, 5/16" laminated interior), Glass temperature 75°F	25	25

The complete test results are listed in Appendix B. Flanking limit tests and reference specimen tests are available upon request.

Architectural Testing will service this report for the entire test record retention period. Test records, such as detailed drawings, datasheets, representative samples of test specimens, or other pertinent project documentation, will be retained by Architectural Testing for the entire test record retention period.

This report does not constitute certification of this product nor an opinion or endorsement by this laboratory. It is the exclusive property of the client so named herein and relates only to the specimen tested. This report may not be reproduced, except in full, without the written approval of Architectural Testing.

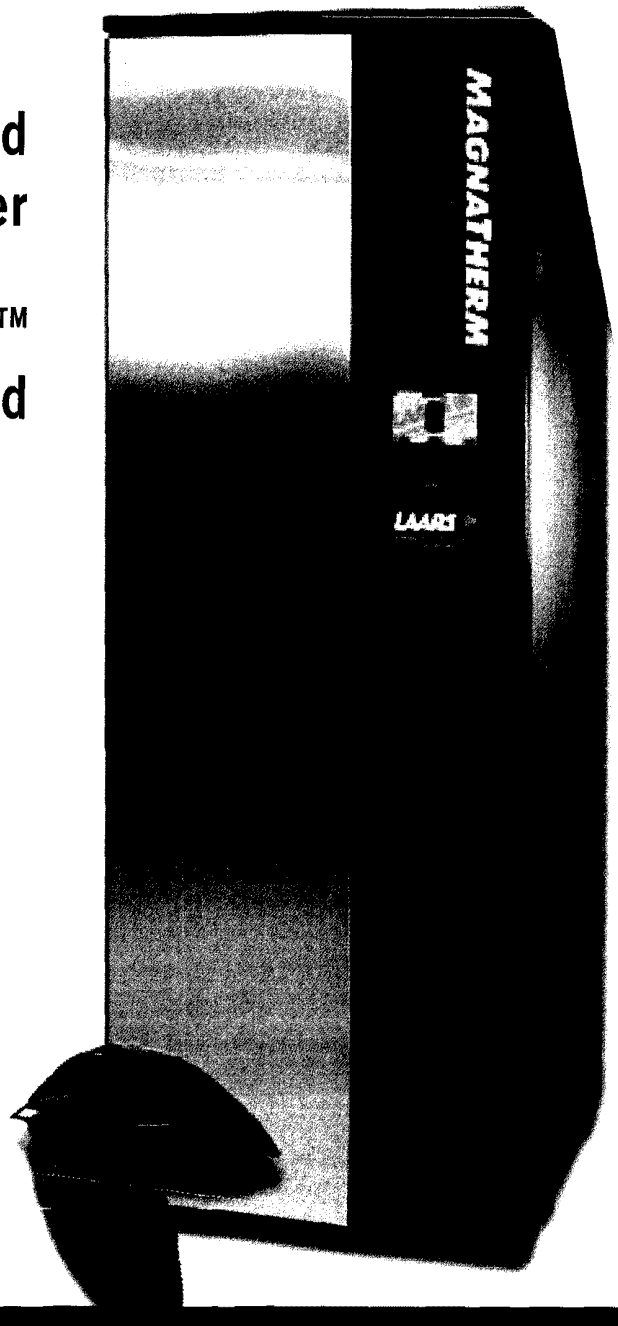
MAGNATHERM®

COMMERCIAL HIGH EFFICIENC

Condensing Boiler and Volume Water Heater

with VARI-PRIME™ Pump Control On-Board



MADE IN AMERICA

2.0, 2.5, 3.0, 3.5 and 4.0 MILLION BTU/HR

95% Certified Thermal Efficiency

Indoor and Outdoor Installation

Laars Heat Exchanger Design

LAARS Heating Systems Company

THE MAGNATHERM

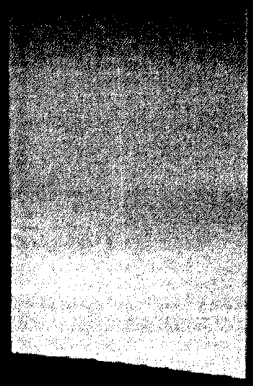
CONDENSING BOILER & VOLUME WATER HEATER

A Perfect Balance of Size, Form and Function

Every commercial heating system is unique and as such requires a boiler that can respond to system fluctuations, while maintaining the energy conservation standards held by today's building owners. Such a boiler now exists in the innovative Laars MagnaTherm.

On board every boiler is MagnaTherm's unique VARI-PRIME™ control that allows building owners to save thousands of dollars over the life of the boiler due to dramatically reduced energy costs versus a typical on/off pump arrangement. Only the Laars MagnaTherm includes the VARI-PRIME™ control that balances combustion, air flow and water flow on every boiler!

The MagnaTherm's small footprint, slim vertical design and removable top section help it to fit into tight mechanical rooms. It's optional electrical packages allow for easy pairing with various field supply voltages. And the large easy-to-navigate color touch screen display results in quick setup and diagnostics and allows up to 8 MagnaTherms to be controlled in a cascading boiler bank.

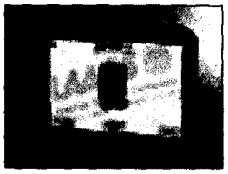


Features:

- Laars designed and built heat exchanger
- Stylish, modern cabinet design
- Up to 99% thermal efficiency, condensing operation
- Reliable, smooth starting hot surface ignition
- Optimized gas usage for lower energy bills via a 5:1 (20% to 100% input) modulating gas valve
- Quiet, variable speed blower
- VARI-PRIME™, variable speed pump control matches system pump with boiler modulation to optimize efficiency
- Small footprint compared to others in class
- Forward mounted low voltage panel for easy wiring and trouble shooting
- Unique, sealed condensate trap does not need to be primed at startup
- Single or up to 8 boilers in a cascade installation
- Up to 100 feet of vent
- Meets the most stringent NOx emission requirements
- 439 Stainless Steel Heat Exchanger for increased corrosion resistance
- Advanced control system with temperature control, diagnostics, outdoor reset capability, and easy access for field wiring
- 10-year heat exchanger warranty

LAARS
Heating Systems Company

Getting to know the MAGNATHERM



Large Color Touch Screen
A multi-color, simple to use smart touch screen display allows you to fully control and setup the MagnaTherm.

Removable Top Section
An easy-to-remove top blower section makes getting into tight spaces and elevators a smooth operation!

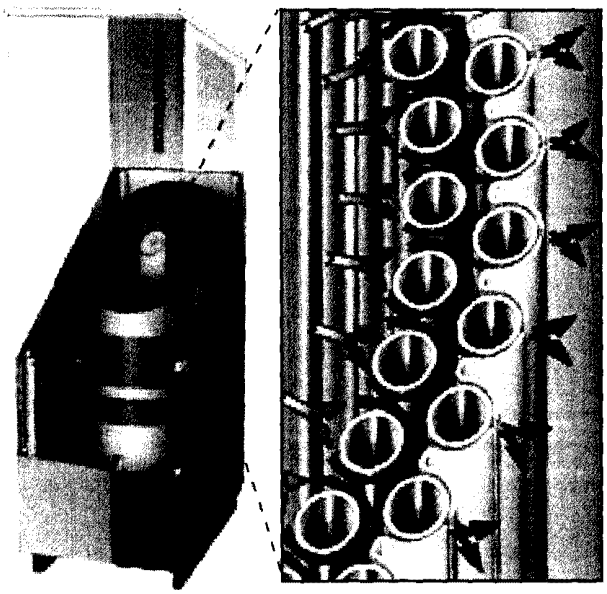
Full Access
Two full-swing removable doors allow complete access to electrical, controls, gas valves and accessories from the front of the MagnaTherm for quick setup.

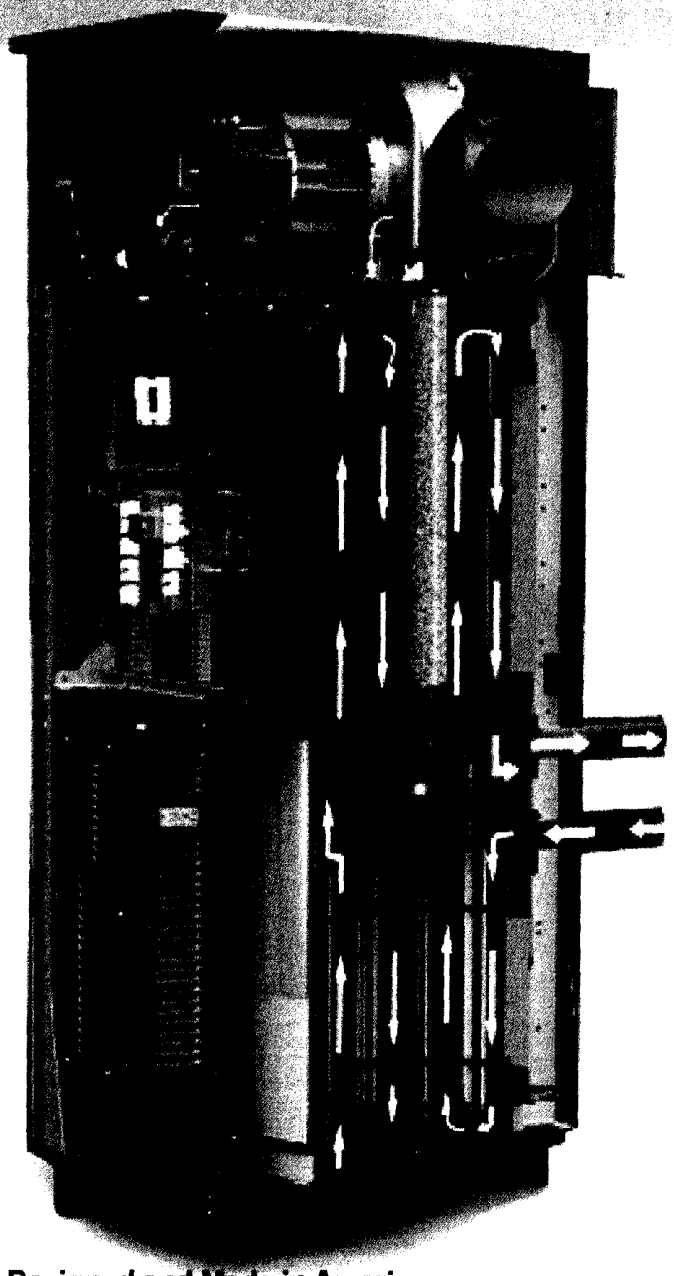
Electrical Flexibility
The MagnaTherm comes with a centralized electrical load center that allows for various voltage packages (single and three phase), to better match job site requirements.

Superior Heat Exchanger Materials
The MagnaTherm uses American produced 439 and 316 SS heat exchanger materials to withstand the extreme temperatures and caustic conditions found in high efficiency combustion chambers.

Indoor / Outdoor Installation

Slim Design, Small Footprint
The MagnaTherm's width allows it to fit through standard doorways.





Designed and Made in America
The MagnaTherm's heat exchanger design is the latest from Laars engineering. You can rely on years of worry free service knowing that the heart of the MagnaTherm was designed and built at the Laars manufacturing headquarters in Rochester, NH USA.

Optimized Heat Transfer Technology and Extended Life
The MagnaTherm's efficiency secret lies in its precise alignment of micro-finned heating tubes combined with highly engineered flue gas channels. This arrangement optimizes the flow of flue gases in order to transfer maximum heat to the water inside the heating tubes and extending heat exchanger life.

Boasting an AHRI certified 95% or higher Thermal Efficiency, indoor or outdoor certification, a 5:1 turndown and the Laars boiler VARI-PRIME™ control package, the Laars MagnaTherm is the clear choice when selecting a high efficiency boiler or volume water heater.

VARI-PRIME™ Control Technology

Laars VARI-PRIME™ flow control matches the modulation rate of a MagnaTherm's combustion system to the rate of a variable speed boiler pump. This unique on board control allows the MagnaTherm boiler to mirror the heating system's profile during varying load conditions and optimize overall efficiency.

Boiler pumps are typically sized for the maximum flow that a boiler needs, but boilers rarely operate at maximum capacity. A pump's power consumption can drop by as much as 50% with only a 20% reduction in speed. By replacing a boiler's typical on/off pump with a VARI-PRIME™ equipped MagnaTherm control and variable speed pump, over a thousand dollars in boiler pump watt usage can be saved per year. The payback for the variable speed pump setup can be realized in as little as one year!

The combined potential energy savings of the MagnaTherm's high efficiency combustion coupled with the VARI-PRIME™ control system is huge. Only the Laars MagnaTherm with built in VARI-PRIME™ controls can offer such savings in one package!

VARI-PRIME™ Pump Control Energy Savings Example

Typical boiler pump energy use seen over a full heating season located in upstate New York (September through April).

When an On/Off Boiler Pump is used - kWH consumed	18,773
When the Laars VARI-PRIME is used - kWH consumed	5,540
Annual VARI-PRIME™ kWH savings	**13,233**
Annual Percent Pump Electrical Savings	**70%**
Annual Dollar Savings*	**$1,417**

A Three Million BTU/hr MagnaTherm using VARI-PRIME™ pump control and a Goulds 22SH variable speed boiler pump were used in this example.
*2013 US Average of 11 cents per KWH used, source US Energy Information Administration.
See Laars VARI-PRIME™ white paper 9185 for complete details.

Lead Lag Cascading of up to 8 MagnaTherms

The advanced MagnaTherm control system also includes a cascading feature that allows for up to eight units to be lead lagged together. This results in a modulating heating cell of up to 32 million BTU/hr with a combined 40:1 turndown. Also included is an auto rotation function that periodically changes lead boiler to evenly spread service between all boilers. Communication with Building Automation Systems happens seamlessly via a built-in Modbus protocol included with all MagnaTherm boilers. The Laars Gateway is available for use with BacNET and LON networks.

Bell & Gossett
a xylem brand

A-350C

Series B Full acceptance Tanks

Expansion tank
t-1 and t-2

DESCRIPTION

Series B expansion tanks are ASME rated pre-charged bladder-type pressure vessels. The Series B tank is designed to absorb the expansion forces of heating/cooling system water while maintaining proper system pressurization under varying operating conditions. The heavy duty bladder contains system water thereby eliminating tank corrosion and waterlogging problems.

OPERATING DATA

Maximum working pressure ..... 125 PSI (862kPa)
Maximum operating temperature ..... 240°F (115°C)

MATERIALS OF CONSTRUCTION

System Connection: Forged Steel
Shell: Carbon Steel
Bladder: Heavy Duty Butyl Rubber

NOTES FOR DOUBLE CELL UNITS:

1. Nominal tons of cooling represents the capability to cool 3 USGPM of water from a 95°F entering water temperature to an 85°F leaving water temperature at a 78°F entering wet-bulb temperature.
2. Operating weight is based on the water level in the cold water basin at overflow height. If a lower operating weight is needed to meet design requirements, your local BAC Representative can provide additional assistance.
3. Refer to **page B61** for dimensional reference drawings.
4. Unless otherwise indicated all connections 3" and smaller are MPT. Connections 4" and larger are beveled for welding and mechanically grooved.

Do not use for construction. Refer to factory certified dimensions. This catalog includes data current at the time of publication, which should be reconfirmed at the time of purchase.

NOTES FOR XE-MODELS:

1. Nominal tons of cooling represents the capability to cool 3 USGPM of water from a 95°F entering water temperature to an 85°F leaving water temperature at a 78°F entering wet-bulb temperature.
2. Operating weight is based on the water level in the cold water basin at overflow height. If a lower operating weight is needed to meet design requirements, your local BAC Representative can provide additional assistance.
3. Refer to **page B61** for dimensional reference drawings.
4. Unless otherwise indicated all connections 3" and smaller are MPT. Connections 4" and larger are beveled for welding and mechanically grooved.

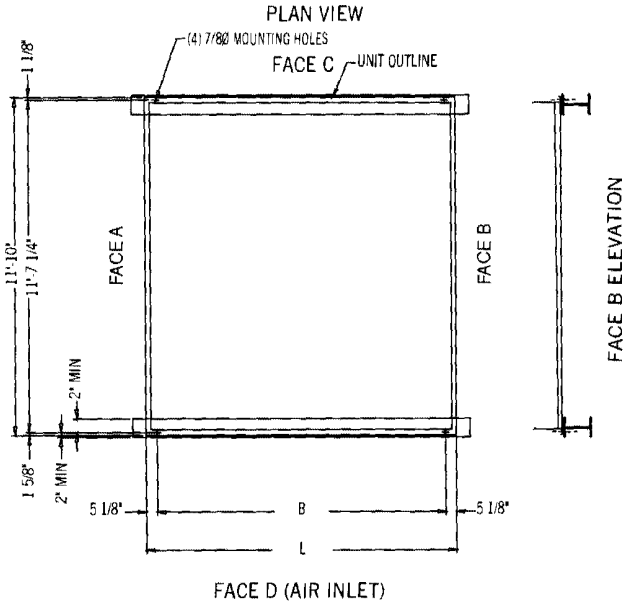
NOTES FOR DOUBLE CELL UNITS:

1. Nominal tons of cooling represents the capability to cool 3 USGPM of water from a 95°F entering water temperature to an 85°F leaving water temperature at a 78°F entering wet-bulb temperature.
2. Operating weight is based on the water level in the cold water basin at overflow height. If a lower operating weight is needed to meet design requirements, your local BAC Representative can provide additional assistance.
3. Refer to **page B61** for dimensional reference drawings.
4. Unless otherwise indicated all connections 3" and smaller are MPT. Connections 4" and larger are beveled for welding and mechanically grooved.

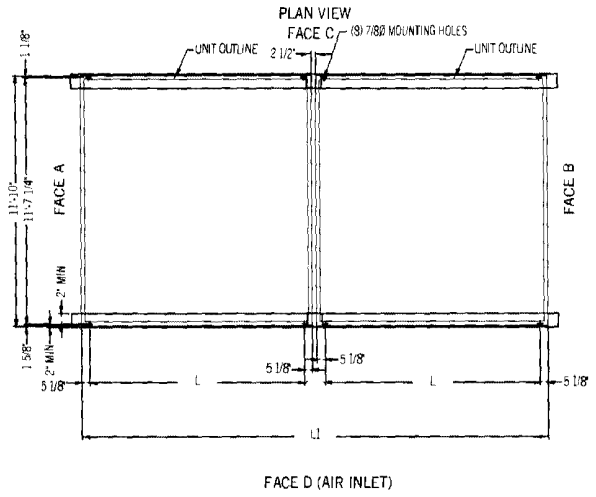
Do not use for construction. Refer to factory certified dimensions. This catalog includes data current at the time of publication, which should be reconfirmed at the time of purchase.

Series 1500 Structural Support

The recommended support arrangement for the Series 1500 Cooling Tower consists of parallel I-beams positioned as shown in the following drawings. Besides providing adequate support, the steel also serves to raise the unit above any solid foundation to ensure access to the bottom of the tower. The Series 1500 may also be supported on columns at the anchor bolt locations shown in Plan A. A minimum 12"x12" bearing surface must be provided under each of the concentrated load points. The support beams may also be run in the direction perpendicular to the beams shown below (Plan B). To support a Series 1500 Cooling Tower on columns or in an alternate steel support arrangement, consult your local BAC Representative. Upgraded structures for high wind and seismic load regions will require additional mounting holes.

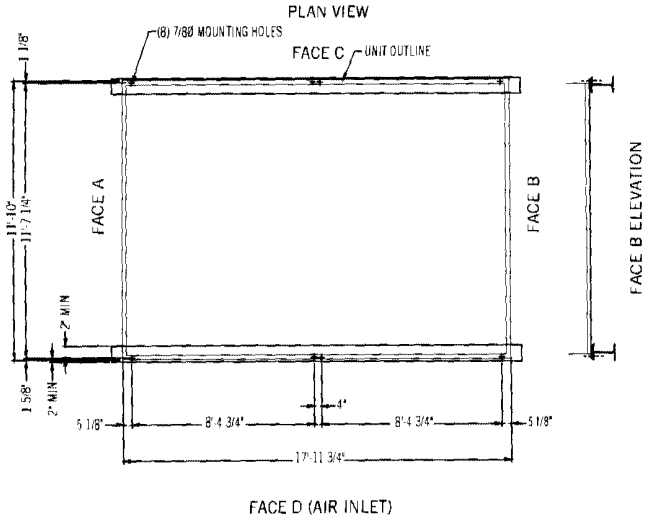


Plan A: Single Cell Unit

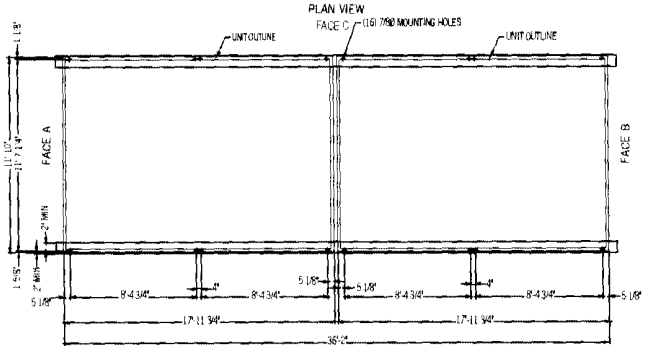


Plan A: Double Cell Unit

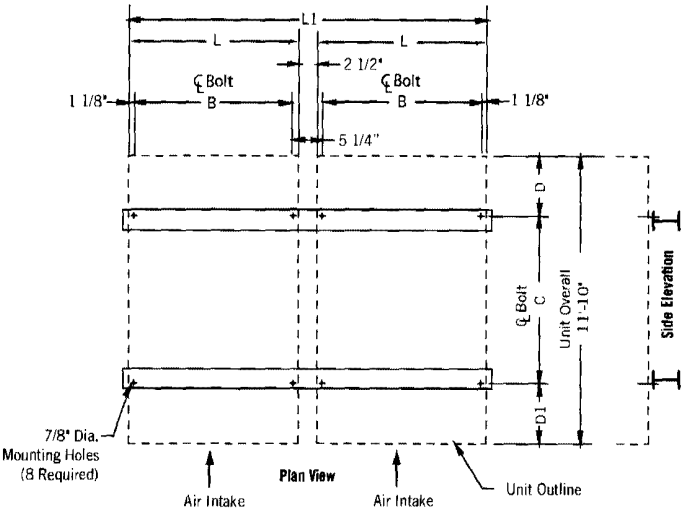
Model Number	B	L	L1
S15E/XES15E-1285	7'-7 1/2"	8'-5 3/4"	17'-2"
S15E/XES15E-1212	11'-1 1/2"	11'-11 3/4"	24'-2"



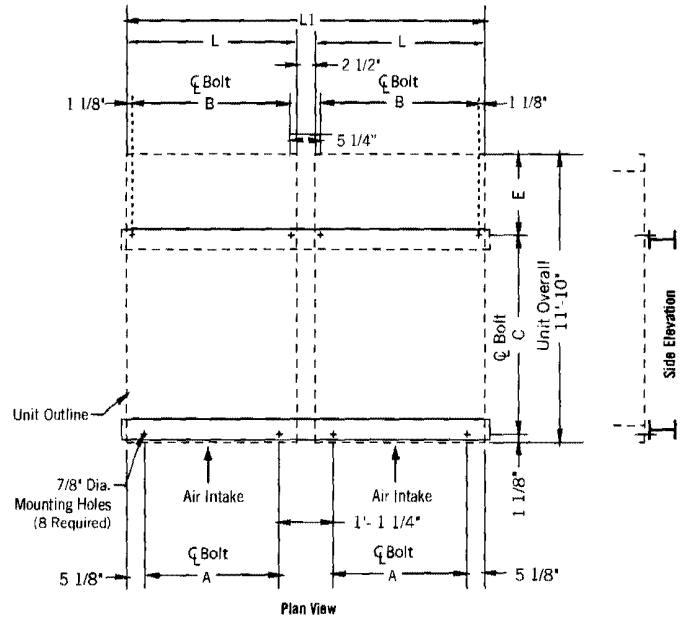
Plan A: S15E/XES15E-1285 Single Cell Unit



Plan A: S15E/XES15E-1285 Double Cell Unit



Plan C: Cantilever Inlet and Blank-Off (Double Cell Unit Shown)



Plan C: Cantilever Blank-Off Only (Double Cell Unit Shown)

NOTES:

1. Support beams and anchor bolts are to be selected and installed by others.
2. All supporting steel must be level at the top.
3. Beams must be selected in accordance with accepted structural practice. Maximum deflection of beam under unit to be 1/360 of span, not to exceed 1/2 inch.
4. If point vibrations isolation (provided by others) is used with multi-cell towers, the isolators must be located under the supporting steel, not between the support steel and the cooling towers.
5. When using Alternative Plan C support arrangements with optional bottom water outlet, size and location restrictions will apply to water outlet piping. Consider the Cantilevered Plan C support arrangement or consult your local BAC Representative for details.

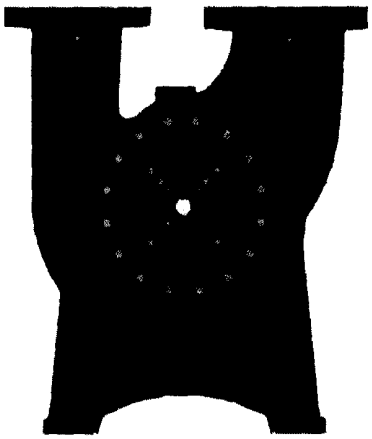
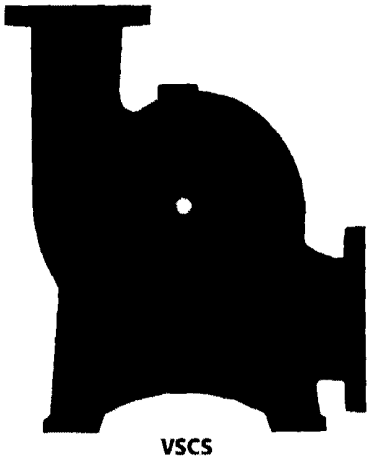
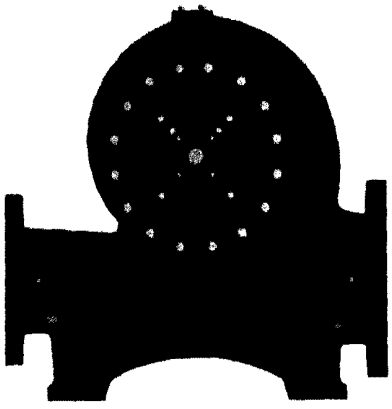
You said you needed one pump that does it all.



VSC



VSCS



VSH

Only the VSX platform offers so many piping installation configurations, thanks to its revolutionary design. Utilizing CFD technology, we can deliver identical hydraulic performance in any flange configuration: VSC (top-top), VSCS (top-side) and VSH (side-side). In addition, every model and size is available in either right or left hand rotation providing up to six possible installation configurations. See below for availability of exact sizes and models.

The VSH®, VSC™ and VSCS® are all available in the following pump sizes:

4x6x10.5	8x10x10.5	12x14x13.5
4x6x13.5	8x10x13.5	12x14x17.5
4x6x17.5	8x10x17.5	12x14x22
5x6x10.5	8x10x22	14x16x13.5
5x6x13.5	10x12x10.5	14x16x17.5
5x6x17.5	10x12x13.5	14x16x22
6x8x10.5	10x12x17.5	16x18x19*
6x8x13.5	10x12x22	18x20x22†
6x8x17.5		

** Available in VSH and VSCS models only.*

† Available in VSH model only.

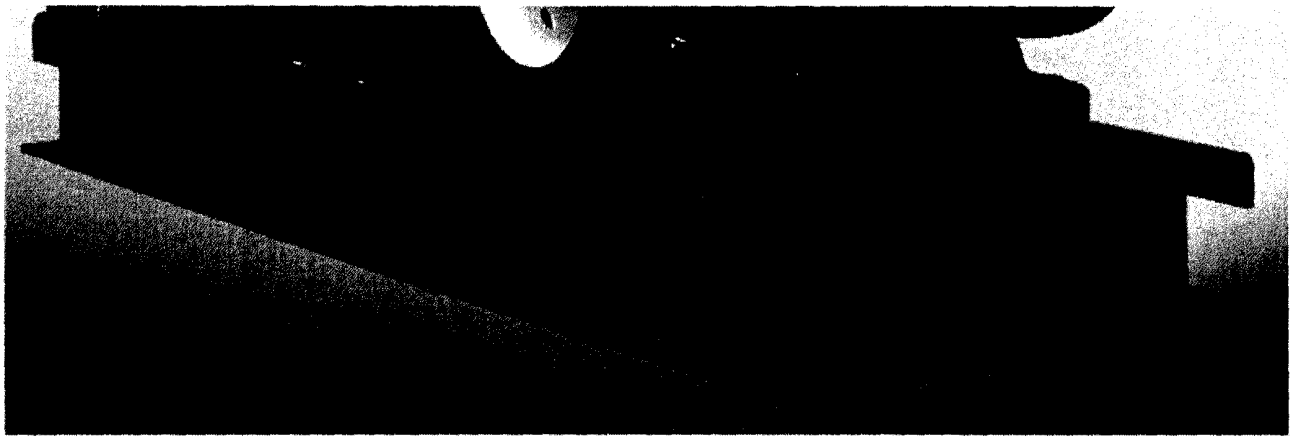
Groutless Structural-Steel Base Plate

Base plates must be designed with sufficient rigidity to allow the pump and motor shafts to accept the loads without resulting in undue stress, deflection or vibration. This avoids premature wear on the coupling, bearings and mechanical seals and avoids early failure of the equipment. By utilizing advanced Finite Element Analysis and design, a modern state of the art base plate can be provided.

When compared against other styles of base plates commonly found on the market today, the VSX welded-steel baseplate provides superior base stress and frequency capabilities, designed in accordance to ANSI/H.I. 1.3-2000.

- Typical rolled-channel base: the maximum amount of base plate stress reaches 41600 PSI.
- Typical fabricated-rail base: the maximum amount of base plate design stress reaches 28700 PSI.
- VSX structural-steel base plate: the maximum amount of base stress reaches 22900 PSI.



Stresses on a rolled-steel base plate are over 41000 PSI, or 180% worse than a VSX

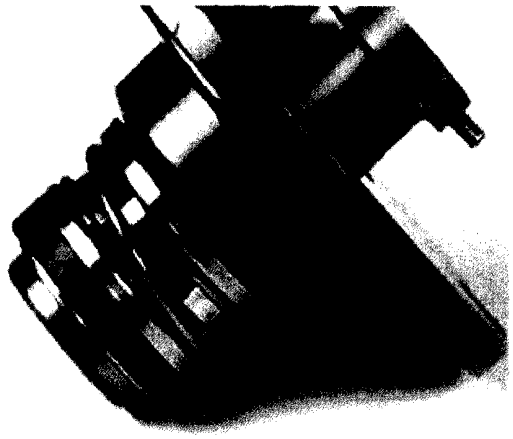
Two common base plate designs utilized on double suction pumps were evaluated against the new VSX welded-steel base plate. Utilizing Finite Element Analysis a rolled steel ("C" channel) and a fabricated-rail design base plate were analyzed against the VSX base plate.

The amount of stress exposed on the VSX base plate will be no more than 22900 PSI whereas the maximum stress reached on a rolled-steel base plate will be over 41000 PSI, or 180% worse.

Simplified Service

No rigging or heavy-duty material handling equipment is necessary to gain access to the bearing, mechanical seals or shaft sleeves. Unlike older horizontal double-suction, split-case and larger vertical inline pumps, there are no heavy top casings or motors to lift off, saving cost, reducing risk and providing easy access to the rotating assembly.

The VSX platform makes bearing, mechanical seal and shaft sleeve inspection easy. The VSX design makes these components readily accessible from both sides of the pump, so that you can service from the inboard* or outboard side without disturbing the piping or the motor. You can also replace just one bearing, mechanical seal or sleeve without disturbing the other side.



Maintenance-Free Bearings

Our maintenance-free bearings eliminate the need for regular maintenance, documentation logs, over-greasing problems and the risk of mixing greases that can cause early failure. This design not only reduces maintenance time and costs, but also helps extend pump life.

New One-Piece Unitized Seal

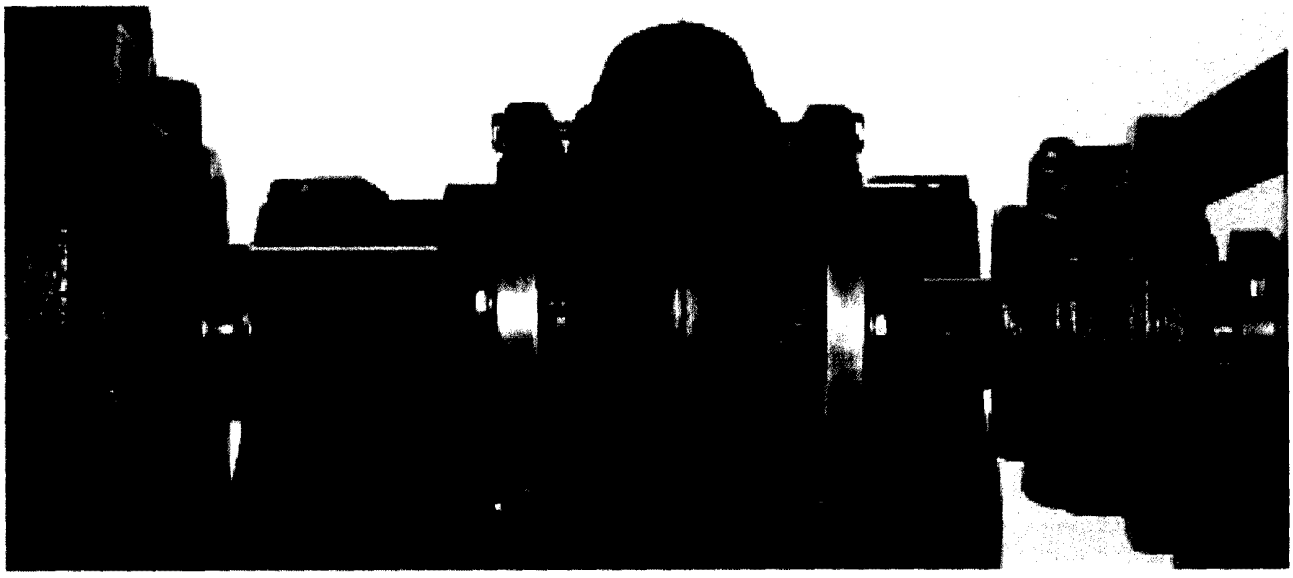
Bell & Gossett's new one-piece unitized seal eliminates multiple seal components and simplifies replacement. Because it uses a one-piece elastomeric bellows, it has fewer parts than competitive seals, resulting in significantly fewer installation errors.

Alignment Friendly Coupling

Elastomeric couplings are specifically designed to accommodate angular shaft misalignment, as well as parallel offset of the pump and motor shafts. However, the amount of the offset and/or misalignment is dependent on the type and style of flexible coupling applied. Left unchecked, coupling misalignment has a significant impact on the overall life of the mechanical seals and bearings of the pump. Laser and even infrared thermal imaging is sometimes necessary on couplings with very tight operating tolerances to insure that the proper alignment has been locked down. This process can be both time consuming as well as expensive.

Compared to the VSX coupling, typical elastomeric inserts consist of either an EPDM, Polyurethane or Hytrel material and are available in dropout or jaw type configuration with the following typical tolerances:

Coupling Type	VSX Non-Spacer Coupling up to 1500 HP	Jaw Type	EPDM	Hytrel
Angular Misalignment	1 - 4 Degrees	.9 - 1.3 Degrees	1 Degree	.25 Degrees
Parallel Misalignment	1/16" - 1/8"	.008" - .027"	.01" - .062"	.01" - .035"



A Robust Pump Starts with Heavy Duty Flanges

Other split-case pumps are provided with flat face, 125# ANSI drilled flanges for 175# working pressure design. When 300# working pressure becomes necessary, a heavier casing becomes necessary - at a heavy price.

VSX pumps provide as standard a higher level of capability. Every VSX pump is available as standard with 125# ANSI flange drilling coupled with the same heavy duty 300# volute that is provided in applications requiring 175# working pressure.

Table 2, to the right, demonstrates this difference. A typical flange on a six-inch diameter pump is 1" thick. The six-inch flange on a VSX pump is 1.69" thick – 69% thicker than older traditional pump flanges found in the market today.

Flange	Typical Split-Case	VSX Split-Case
Diameter	Flange Thickness (in)	Flange Thickness (in)
	125#ANSI	125 & 250# ANSI
4"	0.938"	1.50"

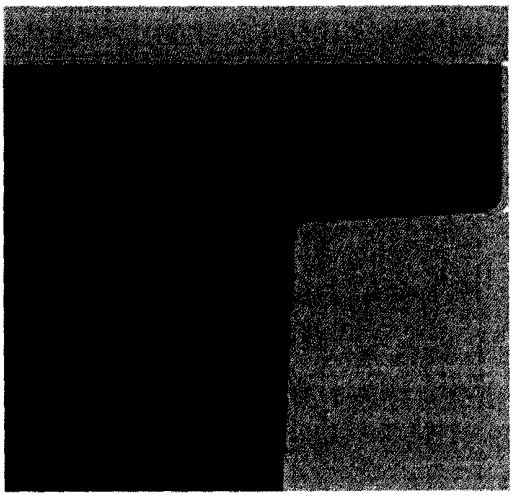
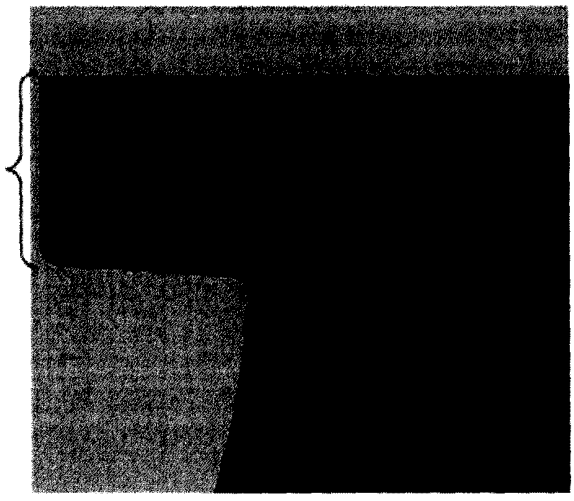
18"	1.562"	2.57"
20"	1.687"	2.69"

Table 2

Typical Split-Case 125# Flange Thickness



Standard VSX 125# Flange Thickness



Allowable Static Flange Loading for VSX Pumps

The vertical split case volute design of the VSX provides optimum nozzle loading capability that others just can't match. VSX pump flanges easily support the weight of heavy piping directly on its nozzles.

The unique design of the VSX allows for a significantly higher load level of combined forces versus traditional split case pumps that can only accept singular forces acting upon the pump.

Flg Dia (in)	Fx Max (lb)	Fy Max (lb)	Fz Max (lb)	Mx Max (ft-lb)	My Max (ft-lb)	Mz Max (ft-lb)

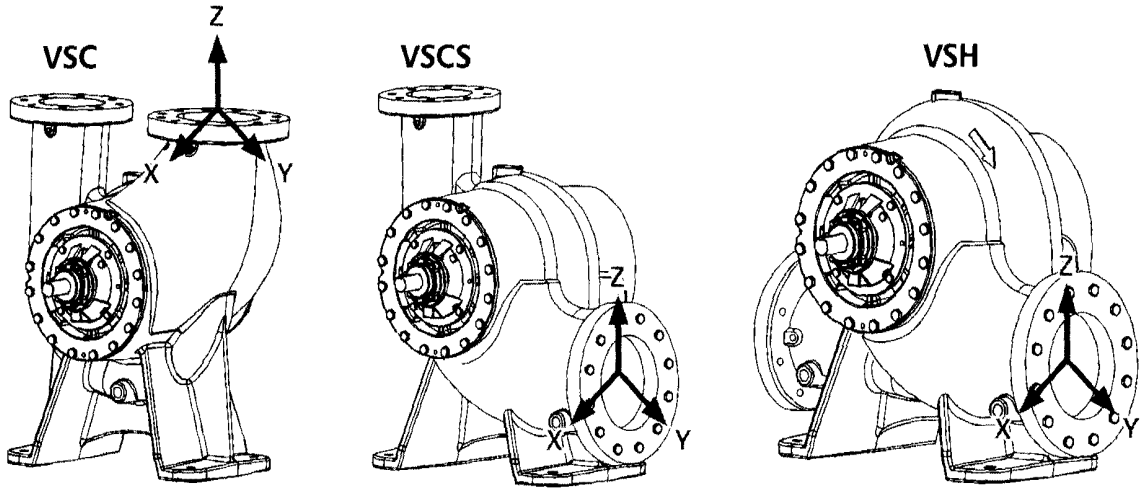
20	8032	2924	8032	5645	1278	5645

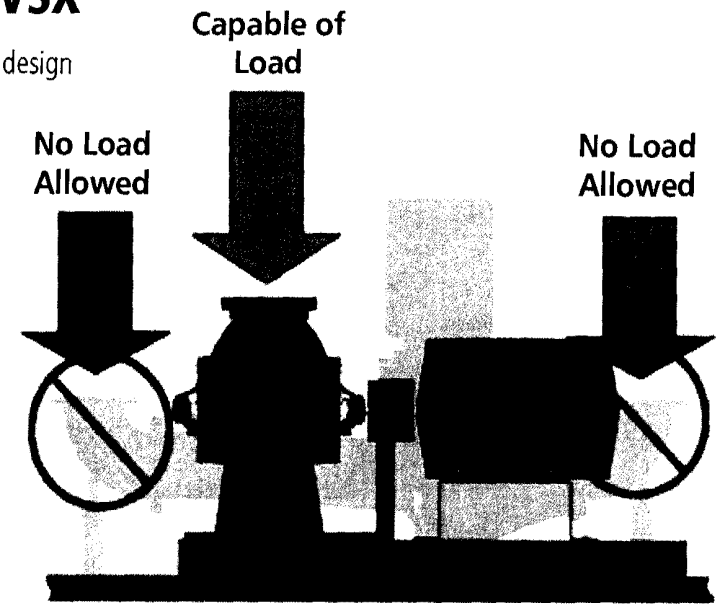
Table 3

System piping can place both forces (Fx, Fy, Fz) and twisting (Mx, My, Mz) moments on a pump casing as seen in Table 3. Only pump casings and base plates of sufficient robustness can endure these types of forces.



Reduce Space and Cost with VSX

Only the VSX offers you so many configurations for piping design flexibility. And only the top suction and discharge flange offering of the VSC offers exceptional space savings. Utilizing a VSC model can reduce your equipment footprint by up to 40 percent over traditional double-suction and large vertical inline pumps. The VSC optimizes the advantages of vertical suction and discharge piping applications by eliminating the added costs of space robbing elbows, protruding accessories and pipe supports.



VSC/VSCS Series

Floor space savings for a VSC pump as compared to a vertical in-line pump as seen in Table 4.

Series VSC

Floor Space – 13 sq. ft.

- Up to 40% smaller footprint than VIL
- Static vertical load on flanges allowed
- Pipe spool not required
- Fewer components for installation

Vertical In-Line

Floor Space – 21 sq. ft.

- Installed floor space is as much as 40% larger
- Discharge spool required to prevent hydraulic noise
- Static vertical load not allowed on valve or diffuser
- Additional components to purchase and install

ESTIMATED ADDITIONAL INSTALLED COSTS FOR VERTICAL IN-LINE PUMPS

ITEM	DESCRIPTION	4" PIPE	5" PIPE	6" PIPE	8" PIPE	10" PIPE
1	Suction Diffuser	$ 277.00	$ 380.00	$ 409.00	$ 777.00	$1,030.00

Specifications

2.02 COMPONENTS

A. The pumps shall be long coupled, base mounted, single stage, double suction, vertical split case design, in cast iron bronze fitted construction specifically designed for quiet operation. Suitable for standard operations at 300° F and 175 PSIG working pressure or optional operation up to 300 PSIG working pressure. Working pressures shall not be de-rated at temperatures up to 300F.

B. The bearing housing shall supply support for heavy-duty single row permanently lubricated ball bearings, with provision for purging or flushing if desired. Polyurea grease, capable of handling both high and low temperatures and that is resistant to washout and condensation shall be provided. The bearings shall be capable of absorbing both radial and thrust loads and maintaining the rotating element in proper axial alignment. Bearings shall be capable of being inspected and repaired by removal of only a bearing bracket.

C. The impeller shaft shall be of solid 416 stainless steel material; heat-treated to 80 KSI yield strength.

D. Pump shall be equipped with internally flushed unitized mechanical seal assemblies, mounted on 304SS sleeves, installed in enlarged tapered seal chambers. Application of an internally flushed mechanical seal shall be adequate for seal flushing without requiring external flushing lines. As an option, pump may include a packing gland type seal arrangement.

E. Mechanical seal assemblies shall be unitized, single spring, EPR elastomer bellows with drive ring, Carbon face rotating against a stationary Silicon Carbide face allowing for fast and easy installation and replacement. Seals shall be capable of being inspected and easily repaired.

F. Impeller shall be of the enclosed double suction type made of low zinc silicon bronze, both hydraulically and dynamically balanced to ISO 1940-1:2003 balance grade G6.3 and keyed to the shaft.

G. A coupling, capable of absorbing torsional vibration and of operating in variable speed applications, shall be employed between the pump and motor. An optional Spacer Coupler shall allow for removal of pump's wetted end without disturbing pump volute or movement of the pump's motor and electrical connections.

H. An ANSI B15.1 and OSHA 1910.219 compliant coupling guard shall shield the coupler during operation. Coupler guard shall be dual designed and contain viewing windows for inspection of the coupling. No more than .25 inch opening in the guard around the rotating assembly shall be visible.

I. Pump volute shall be of a cast iron ASTM A159 material (35,000 psi) design with an integrally cast pump discharge and an integrally cast pump suction. Flanges shall be extra heavy-duty design and will be of 250# thickness while capable of being drilled for 125# ANSI flat face use.

Service & Support.

Unsurpassed Bell & Gossett support

The Bell & Gossett name on the Series VSX pump is your assurance of the highest quality, backed by uncompromising support.

For us, customer service excellence is an 90-year tradition built upon innovation.

Your local Bell & Gossett representative is an experienced professional with a wealth of technical expertise available at your call. In addition to expert system and product application assistance, and a wide product inventory warehoused locally, we offer our award-winning ESP-PLUS® product selection tool.

Xylem Online enables you to calculate and quote your job requirements. The software selects the optimum pump for your needs.

It's fast. It's easy. And it's yours exclusively from Bell & Gossett.

With more than 90 years' experience as an industry leader, we know how to design, build, and support centrifugal pumps. Our hallmarks are excellence and dependability.

Pump us for information

Our comprehensive Web site (www.bellgossett.com) makes it easier for you to find, specify and understand the VSX pump, fluid handling systems, parts, specifications and applications.

Bell & Gossett. We make the difference.

By design.

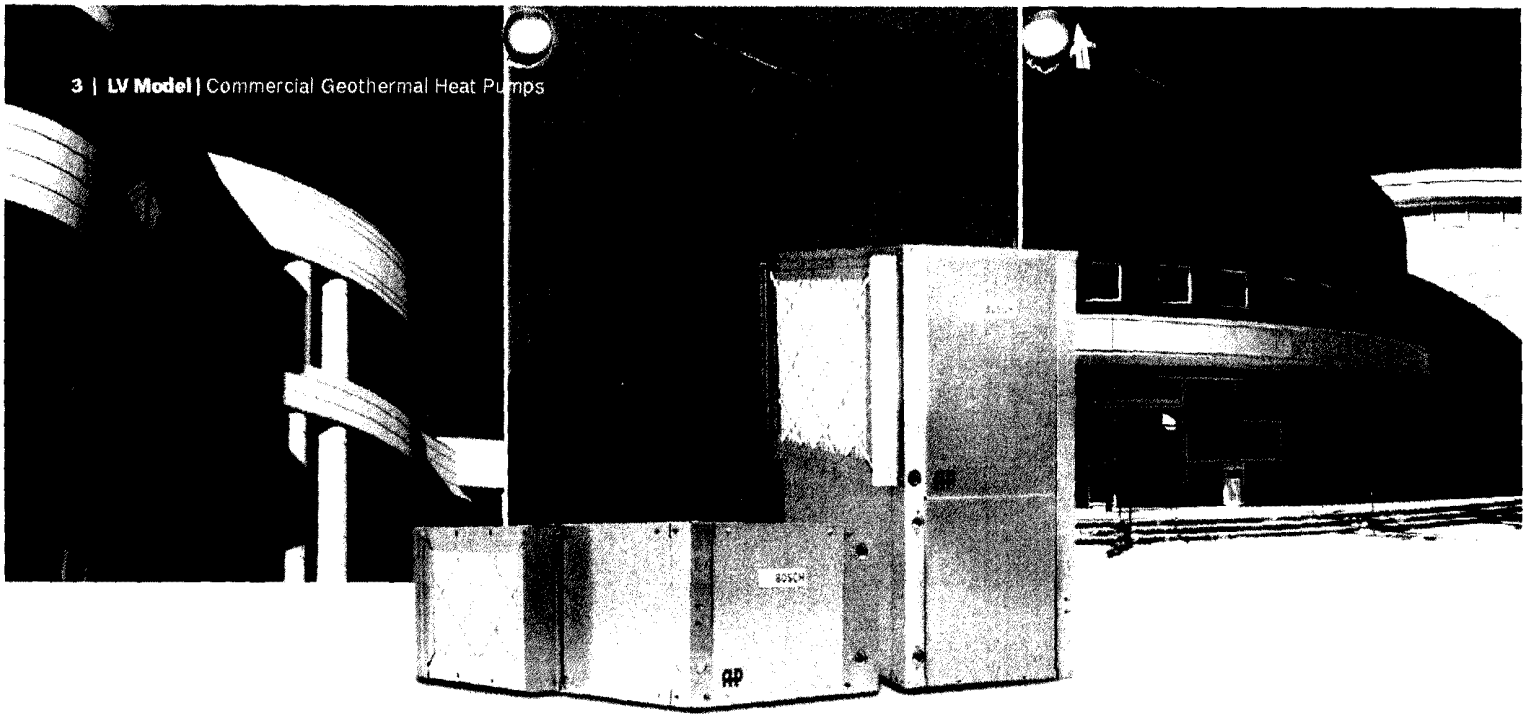
Tabulated performance data is at noted water temperatures and entering air conditions of 80.6°F DB/66.2°F WB at AHRI/ANSI 13256-1 rated CFM with 1" disposable filter.

GLHP ratings require an extended range option. ECM motors can be either constant torque or constant CFM.

Subject to change without prior notice.



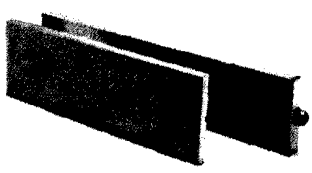
FHP Equipment

Specializing in efficient green technology for commercial heating and cooling products. FHP products are one of the leading Geothermal and Water Source heat pumps in the market, which assures that you are buying a unit that you can trust. Bosch Thermotechnology Corp. is dedicated to providing highly efficient heating and cooling solutions to the private and public sectors.

Bosch Thermotechnology Corp. is always on the forefront of product development and innovative design to optimize the performance of FHP units. Our products are designed and manufactured to the highest quality, reflecting the no-compromise standards for which FHP and Bosch are renowned in order to provide our customers with the highest level of satisfaction and comfort. The variety of options, energy efficiency, and uncompromising quality of all FHP products makes them the ideal choice for the commercial new construction market and the ease of designing into tight retrofit spaces of buildings.

Advantages of FHP Technology

- Low installation costs
- Lower operating costs
- Flexibility and comfort
- Energy efficiency
- Space savings
- Superior quality
- Quiet operation



LV Model 007 - 070

- 13 Models from 1/2 through 6 tons
- Horizontal, Vertical, and Counterflow Configurations*

The LV Model is a cost-effective, single stage water source heat pump designed for commercial retrofit and new construction applications.

*Not all model sizes are available in all configurations. Consult the charts found in this catalog for details.

Features, Functions and Benefits

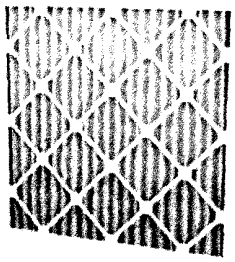
Cabinet

The LV unit cabinetry is constructed using heavy-gauge, G90 galvanized steel. This steel provides superior corrosion protection for units located indoors.

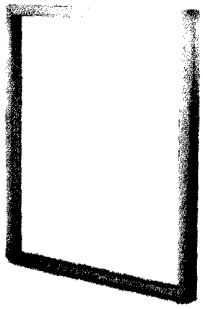
All interior surfaces are lined with 1/2" thick, 1.5 lb./cu.ft. density, Micromat insulation for thermal insulation and acoustical attenuation. This insulation is non-combustible, non-hydroscopic and does not support fungal growth. Insulation meets NFPA 90A and 90B for fire protection and is certified to meet the GREENGUARD® Indoor Air Quality Standard for Low Emitting Products.

Protection against corrosion is a feature in the LV unit. A stainless steel drain pan will last the lifetime of the unit and resist corrosion and cracking that may occur with steel or plastic materials.

Subject to change without prior notice.



MERV-8 or MERV-13 Filter Option



2" 4-Sided Filter Rack Option

Schrader Charging Valves

Closed Cell Foam Insulation (Optional)

Quiet Operation

Noise reduction is a critical consideration of the unit design. All LV units have a distinct floating base pan; the compressor is mounted on a heavy steel plate which rests on a high density rubber pad on the base of the unit. In addition, compressors are mounted on rubber grommets. This double isolation, distinct to FHP equipment, is standard in all LV units preventing vibration and noise transmission from the compressor to the unit structure, resulting in exceptionally quiet operation.

The LV offers optional 1/2" thick, closed cell foam insulation to help aid indoor air quality (IAQ) and to further attenuate low frequency noise from the compressor compartment. The closed cell foam insulation option is available in all unit sizes. For additional sound attenuation, an optional compressor blanket is available on unit sizes 024 and above.

Serviceability

All units are designed to be serviced from the front of the unit. Schrader valves for high and low pressure gauges and the electrical box components are easily accessible for diagnosing and servicing the unit. Insulated bulkheads in all units, separate the compressor section from the blower section, allowing the unit to be serviced during operation.

Large removable panels aid in servicing the unit, when necessary. Separate electrical knockouts in the unit corner post allow for easy and safe routing of high and low voltage lines to the inside of the cabinet.

Unit Configurations

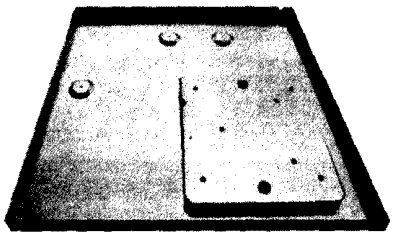
All units are available in horizontal, vertical and counterflow configurations. Additionally, several options of return air and supply air are offered as standard, providing configuration flexibility.

Filter Racks and Options

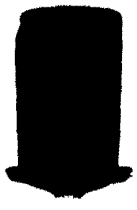
Units come standard with a 1" filter rack and construction filter. A 2" four-sided filter rack and pleated filter is optional and greatly improves air filtration. Filter doors allow for easy routine maintenance and changing of the air filter. A 1" return duct collar is integral to the filter rack eliminating the need for field mounted duct collars.

MERV-8 and MERV-13 Filters

The optional MERV-8 or -13 filter is most advantageous for premium air filtration on commercial HVAC projects. High efficiency filtration is a cost-effective way of upgrading air quality while maintaining low pressure drop and sustaining long service life. These filters effectively remove up to 98% of airborne matter, such as fine particulates, bacteria, smoke, gases and allergens including dust mites, pollen, mold spores, dust and smog. MERV-8 and MERV-13 rated filters are a minimum requirement for EQ credits 3.1 and 5 on LEED projects. With the standard ECM constant airflow motor the LV is prepared to handle higher external pressure drops when utilizing the higher efficiency MERV-13 filters.

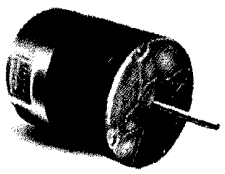


Standard

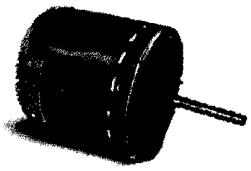


Optional

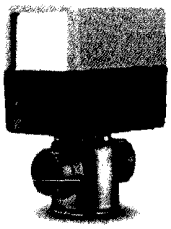
Subject to change without prior notice.



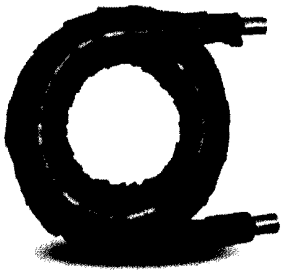
Constant Airflow ECM Option



Constant Torque ECM Option



2-Way Valve with Actuator



Coax Coil

Fan Motor

Permanent Split Capacitor Motors (PSC)

The standard motor for all LV model heat pumps is a PSC motor. For all models other than 575 V units, the supplied motor is a three speed motor. 575 V motors are single speed.

ECM Constant Torque Motor (Optional)

The LV's constant torque blower motor option offers improved efficiency (up to 33%) over the standard PSC motor. This motor is similar in function to a PSC, but can handle up to 1 in.w.g. external static pressure making it a wise choice for high filtration applications. These motors are available in unit sizes 015 to 070. This ECM motor option is an excellent choice for retrofit. The constant-torque motors do not require a neutral wire for 460/3 power.

ECM Constant Airflow Motor

The LV's new high efficiency ECM motor option, available in 1/3hp to 1hp, provides constant airflow in a wide static pressure range up to 1 in.w.g. Available in unit sizes 015 to 070, this motor is a great choice in high filtration applications, such as MERV-13. The motor has a soft start/stop feature, keeping noise to a minimum. LV units outfitted with any ECM motor can see an efficiency boost with up to 1.8 additional points of EER.

Passive dehumidification can be achieved with the constant airflow ECM by reducing nominal airflow by 15%. This control feature lowers air coil temperature and prevents over-cooling of the space when in dehumidification mode. IMPORTANT NOTE: The constant airflow ECM requires a neutral wire in a 460V application.

Hanging Brackets

All horizontal units come standard with hanging bracket kits for suspending the unit from field supplied hanger rods. These kits include heavy-duty steel brackets and rubber grommets for sound and vibration isolation from the building structure.

Water Connections

All water connections are heavy-duty bronze FPT fittings securely fastened to the unit corner post. This allows connecting to a flexible hose kit without the use of a backup wrench making for easier, faster installation.

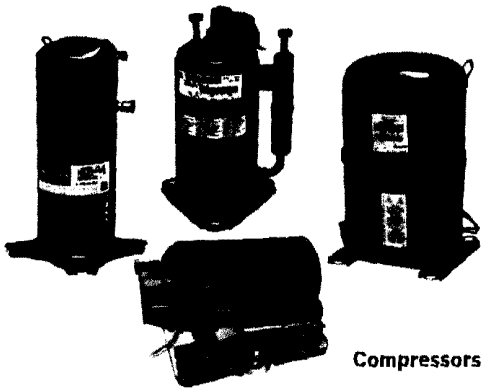
Two-Position Water Valve

The two-position motorized water valve is optional on all unit sizes and is a great energy savings option. The valve opens to allow 100% fluid flow through the coaxial heat exchanger only when there is a call for cooling or heating. Closing off fluid flow to the unit when there is no call for cooling or heating reduces system operating costs, when using variable speed pumping, by reducing the speed of the primary loop pumps.

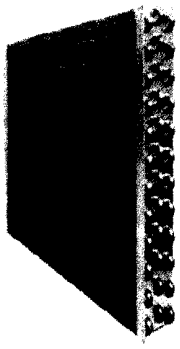
Refrigerant Circuit

LV units are designed using the optimum combination of compressor, water and air coils to provide peak performance. LV units are rated to withstand 600 PSIG working refrigerant pressure and 400 PSIG working water pressure.

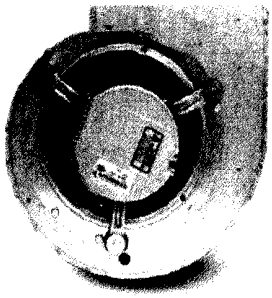
Heavy-duty heat pump compressors are used in all units. Rotary, reciprocating and scroll compressors offer optimum performance for each unit size.



Compressors



Tin Plated with Coated Fin Evaporator Coil (Optional)



Blower Housing (with Removable Inlet Ring)

Refrigerant to water heat exchangers are coaxial tube-in-tube type providing a robust construction, ensuring years of trouble free operation. Coaxial coils are selected and designed for peak performance, offering the best combination of low water pressure drop and maximum heat transfer in both the cooling and heating modes. Standard coaxial coils have a copper interior water tube and a steel outer shell. Optional Cupro-Nickel coils are available for applications where the water is of lower quality.

In geothermal applications where fluid temperatures can drop below the dew point of the surrounding air, optional insulation is available to prevent water coils and refrigerant piping from sweating.

Air side refrigerant coils have copper tubes, aluminum fins and side plates to prevent corrosion.

Air coils are state of the art, employing lanced fin and rifled tubing for maximum heat transfer. Large face areas result in lower face velocity reducing sound while ensuring high latent heat removal for maximum dehumidification in the cooling mode.

A pilot operated four-way reversing valve in the refrigeration circuit allows the unit to operate in either the heating or cooling mode. All FHP units have the reversing valve energized in cooling mode. This will ensure you are not left without heat in the middle of winter, should the reversing valve coil fail.

Refrigerant flow to the air coil is metered by capillary tubes as standard in LV units. Thermal Expansion Valves come with the optional Extended Range LV and are designed to vary the flow of refrigerant depending on the load. TXV's provide unit optimization and a more stable control over a wider range of operating conditions.

Evaporator Coil and DuoGuard™ (Option)

Air handling sections come standard with a copper tube aluminum fin evaporator coil. Available as an option is the DuoGuard™ evaporator coil protection system. DuoGuard™ Protection® - Tin Electro-Plated Copper Tubing with High-Tech Polymer Coated Aluminum Fins will aid in protecting the evaporator coil from most forms of corrosive elements in the airstream. The tin plating provides a best-in-class protection of the copper tubing from formicary corrosion while the fin coating provides protection against salt spray and other corrosive elements. DuoGuard™ protected coils are able to exceed 1000 hours salt spray per ASTM standard B-117.

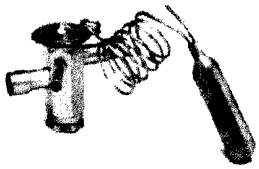
Blower Housing

A removable inlet ring is a standard feature of the blower housing on all unit sizes. The removable inlet ring helps facilitate motor removal without having to remove the fan housing from the cabinet.

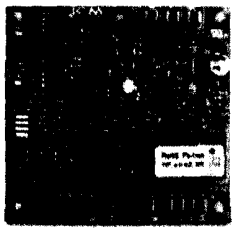
Unit Protection Module

Each LV Model is factory provided with a Unit Protection Module (UPM) that controls the unit operation and monitors the safety controls that protect the unit. The UPM interfaces with the thermostat or direct digital controller. The main purpose of the UPM is to protect the compressors by monitoring the different states of switches and sensors. This module provides time delays and protects the unit against freezing of the water to refrigerant and air to refrigerant heat exchangers as well as condensate overflow.

Subject to change without prior notice.



TXV Valve (Optional)



UPM Control Board

Safety controls include the following as standard:

- High pressure switch located in the refrigerant discharge line.
- Low pressure switch located in the unit refrigerant suction line.
- Standard low fluid temperature (freeze) protection sensor. The freeze protection sensor, located on the refrigerant liquid line entering the coaxial heat exchanger, is designed to disable compressor operation when the unit is in the heating mode, should the refrigerant temperature fall below either 26°F (-6.6°C) or 15°F (-9.4°C).
- Condensate overflow protection sensor is standard and factory mounted in the drain pan of the unit.
- Low air coil temperature (freeze) protection sensor disables the compressor when the refrigerant entering the air coil drops below 30°F (-1.1°C).

UPM Control Board Features

- **Condensate Overflow Protection** – The UPM controller continuously monitors the drain pan for high condensate water level, and if this exceeds normal operating levels, the compressor operation is interrupted to protect against drain pan overflow.
- **Anti-Short Cycle Timer** – 5 minute delay on break timer to prevent compressor short cycling.
- **Random Start** – Each controller has a unique random start delay ranging from 270 to 300 seconds after power is applied to the board. This will prevent the simultaneous start of multiple units after a power outage.
- **Low Pressure Bypass Timer** – The low pressure switch is bypassed for 120 seconds after a call for compressor operation to prevent nuisance low pressure lockouts during cold start-up in the heating mode.
- **Brownout/Surge/Power Interruption Protection** – Prevents compressor operation should the voltage drop below 10% of unit rated value. The unit will restart once the voltage is within tolerance and the random start has timed out.
- **Malfunction (Alarm) Output** – The controller has a set of contacts for remote fault indication. This can be either a steady output or can be set to pulse with the fault code. Two connections are available - one to provide a 24 volt output, the other to provide a dry contact.
- **Test Service Mode** – A dip switch setting is provided to reduce all time delay settings to 10 seconds maximum during troubleshooting for verification of unit operation.
- **LED Fault Indication** – Two LED indicators are provided as follows:
  - **Green**: Power LED indicates 18 – 30 VAC present at the board.
  - **Red**: Fault indicator with blink codes identifying the particular fault. This information is available via the malfunction (alarm) output contacts.

    1 Blink - High Pressure
    2 Blinks - Low Pressure
    3 Blinks - Low Fluid Temperature (Freeze Protection)
    4 Blinks - Condensate Overflow
    5 Blinks - Brownout condition

Subject to change without prior notice.

- **Intelligent Reset**–If a fault condition is initiated, the 5 minute delay on break time period is initiated and the unit will restart after this delay expires. The UPM is configurable for either 2 or 4 fault occurrences before going into a hard lockout. The selection is made through a dip switch setting on the board. If the fault condition still exists or reoccurs twice or four times within one hour, the unit will go into a hard lockout and requires a manual lockout reset. A condensate overflow fault will, however, put the unit into a hard lockout immediately.
- **Lockout Reset**–A hard lockout can be reset by turning the unit thermostat off and then back on or by shutting off unit power at the circuit breaker. The method of reset is selectable by the dip switch on the board.

Additional Options

- Blower monitor relay
- Compressor monitor relay
- Phase monitor
- Pump relay
- Fire alarm relay
- Fault LED light
- 50, 75 or 100 VA transformer option
- 40 Amp disconnect switch
- Single and three phase

Hot Gas Reheat

Hot gas reheat (HGR) allows the user to not only control space temperature, but also humidity levels within the conditioned space. Excessive moisture in the space can promote mold growth leading to damage in the structure or interior surfaces, as well as reducing the air quality and creating an unhealthy environment.

Possible causes of excess humidity could be a byproduct of the unit having to operate under a widely varying load, an oversized short cycling unit, a high percentage of unconditioned outside air being introduced into the space, a high latent load in the space or any location where humidity infiltration is a problem.

Typical unit control is by a wall mounted thermostat that senses temperature in the occupied space. By utilizing a humidistat in addition to the thermostat, LV units with Hot Gas Reheat are able to control the humidity levels in the space as well. The Hot Gas Reheat option allows cooling and dehumidification to satisfy both the thermostat and humidistat while preventing over-cooling of the space while in the dehumidification mode.

Once the thermostat reaches set point temperature, the humidity is above set point, the unit controller will energize the reheat valve operating the unit in hot gas reheat mode, first cooling and dehumidifying, then reheating the air (using hot refrigerant gas) before delivering it to the space, usually 2° to 5°F below room temperature. The unit operates like a dehumidifier by reheating the air along a constant sensible heat line, while the relative humidity of the leaving air is reduced.This option offers significant energy savings over reheating air with electric heating coils.

The moisture removal capacity of a specific heat pump is determined by the unit latent capacity rating. A heat pump's latent capacity can be determined by reviewing the heat pump specification data sheets. Depending upon the entering water and air conditions, a total and sensible capacity can be interpolated from the data sheets. Subtracting sensible capacity from total capacity yields latent capacity. Dividing the latent capacity by 1069 converts the amount of moisture removal from BTU/Hr. to Pounds Per/Hr.

A hot gas reheat valve and a reheat coil are included in the refrigerant circuit. The refrigerant circuit in the cooling and heating mode is identical to a standard heat pump.

In the reheat mode, the compressor discharge gas is diverted through the reheat valve to the reheat coil which is located downstream of the cooling coil. The superheated refrigerant gas reheats the air leaving the cooling coil. The hot refrigerant gas then passes though the water to refrigerant coil where it is condensed to a liquid. From this point the rest of the cooling cycle is completed as in a regular heat pump. There are check valves to prevent refrigerant flow into the reheat coil during standard cooling/ heating cycles.

Subject to change without prior notice.

Hot Gas Reheat Control Options

There are several ways to control heat pumps with hot gas reheat. You should choose the means that best suits your specific application. Please refer to the Hot Gas Reheat wiring diagrams for typical thermostat wiring. Most heat pump compatible thermostats in conjunction with a humidistat are acceptable for use, (Note: "O" output for reversing valve energized in cooling mode is required.) Combination thermostat/ humidistats are also available.

Special Considerations

Some applications require special attention to maximize the performance of the hot gas reheat function:

- Low Temperature Well Water
- Indoor Pool Dehumidifying During Winter Months (Re: Heating Mode)

Consult the factory for special application considerations.

Low Temperature Well Water

When low temperature well water is utilized as the water source (below 55°F), a means of establishing two flow rates, one for the cooling/reheat mode and one for heating mode is recommended. In the cooling mode at low entering water temperatures and standard flow rates, discharge pressures and corresponding discharge gas temperatures are relatively low. At these conditions, when the reheat mode is initiated, the low temperature discharge gas can reduce reheat capacity. A means to reduce the water flow rate and elevate the discharge pressure/temperature in cooling/reheat mode should be provided. Conversely, at low entering water temperatures in the heating mode, system suction pressure is reduced causing a loss in heating capacity. A means of providing higher flow in the heating mode should be supplied. The simplest way to accomplish the above is to install water regulating valves.

Indoor Pool Dehumidifying During Winter Months

It is important to remember that when in the reheat/ dehumidification mode the heat pump is cooling and reheating. A secondary means of heating the space during the dehumidification mode should be provided. For indoor pool environments, the indoor space temperature should be kept at least two (2) degrees F above the pool water temperature. If this is not done the warm pool water attempts to heat the space and the humidity levels increase exponentially. The heat pump is normally sized to handle the design latent load moisture removal. A second heat pump or resistance heat should be provided to handle the structure's shell loss load. DuoGuard™ evaporator coil option is required for this application.

Protective coatings are highly recommended for all pool applications, due to the highly corrosive chemical environment.

Sequence of Operation - Modulating Hot Gas Reheat (MHGRH)

Modulating Hot Gas Reheat differs from On/Off in that the reheat function is always active. The purpose of Modulating Hot Gas Reheat is to deliver supply air at or close to neutral conditions.

Air is cooled and dehumidified by the cooling coil to around 55°F DB/54°F WB. A sensor located in the supply air stream is set at the required leaving dry bulb temperature and will send a signal to the modulating hot gas reheat valve to direct the flow of hot gas to maintain that temperature. A typical application for this would be in treating 100% outside air. This air would be ducted directly into the space relieving the unit handling the zone of any outside air load. This can result in a smaller zone unit, less airflow and a savings in both initial and operating cost.

Control of the hot gas modulation is by the thermostat in the supply air duct or through a building management system. A separate controller is used to control the unit itself.

Hot Gas Bypass

The function of the hot gas bypass valve is to prevent icing of the air coil when the unit is operating at low cooling load conditions. This situation could arise if the space experiences widely different loads, for example a conference center or if a unit is sized for heating, it could be oversized for cooling. Without a hot gas bypass circuit the evaporating temperature could fall and ice could form on the coil restricting airflow and aggravating the situation. Eventually the heat pump could lock out on air coil freeze protection.

The hot gas bypass valve located in the compressor discharge line diverts hot gas to the inlet of the air coil. The valve is factory set to open when the evaporating pressure falls to 90 PSI and will modulate to prevent the pressure falling any lower. This setting is field adjustable and this set point may be adjusted as required.

Psychrometric Chart

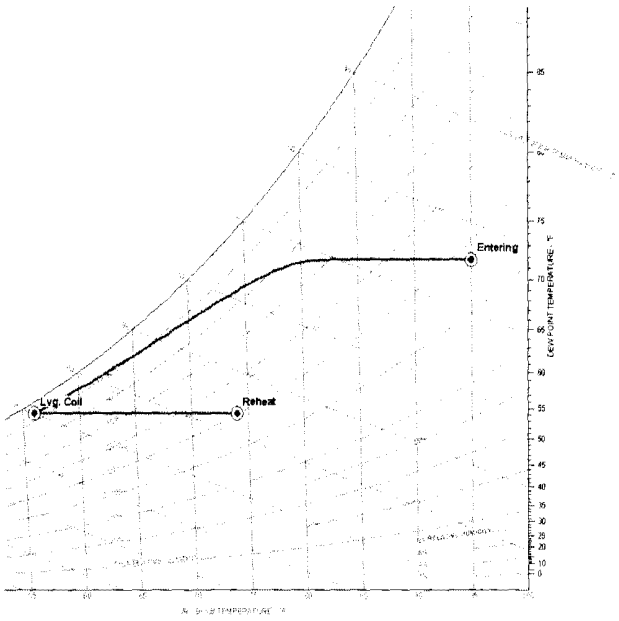


Figure 1

DDC Controls

The optional factory mounted DDC Controller is preprogrammed and installed on the unit with the Unit Protection Module (UPM) to be job site ready. The unit will operate in a 100% stand-alone control mode or connect to a Building Automation System (BAS) using open protocols BACnet™, Modbus, N2 or LonWorks® (with an optional Lon card). Stand-alone DDC modules must use remote intelligent sensors and are to be programmed by the BACview® controller only.

Zone temperatures, leaving air temperatures and water temperatures can be monitored from the central control computer and unit fault indication displayed. Available inputs/outputs include:

- Discharge air temperature
- Leaving water temperature
- Fan run time
- Override time remaining
- Night setback status
- Percent of units cooling
- Percent of units heating
- Cooling set point
- Heating set point
- Status of all the alarms
- Space temperature
- Occupied heating and cooling set points
- Continuous or cycle fan during occupied mode
- Command for occupied or unoccupied mode
- Command for override of the unoccupied mode (unit resorts to occupied set points)
- Set point adjustment

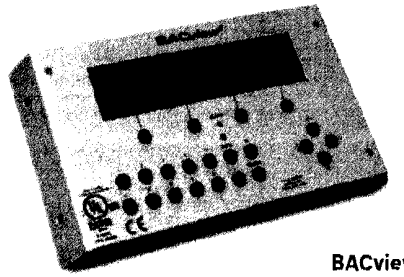
DDC Room Sensors

To complement the controller, Bosch offers a line of intelligent space sensors, which provide precision measurement and communication capabilities in an attractive low profile enclosure. A hidden communications jack provides access to the HVAC control system for commissioning and maintenance.

Models available include:

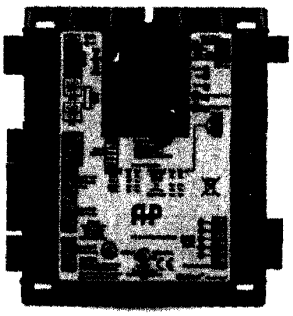
- **The RS Pro** has a large LCD display and easy-to-use occupant controls for set point adjustment.
- **The RS Plus** offers a local set point adjustment and override to an occupied mode and LED indication of current status.
- **The RS Standard** which has no local temperature set point adjustment.

A BACview® hand held diagnostic tool is available to allow local access to display and modify user defined properties without any computer software. These space sensors will monitor, sense and provide local control for the room.

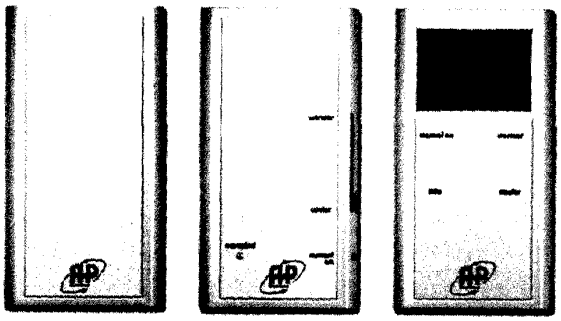


BACview® Hand Held Diagnostic Tool

Subject to change without prior notice.



DDC Control Board



RS Base DDC Sensor | RS Plus DDC Sensor | RS Pro DDC Sensor

DDC Zone Sensors*

The Pro Zone Sensor (ZS) has an LCD screen that can display the current temperature and set temperature. It can also display relative humidity and CO_2 settings as well as their current readings. It comes with a button for additional information that can be displayed.

The Pro ZS can be ordered in any of the following combinations:

- Temperature setting only
- Temperature with relative humidity settings
- Temperature, relative humidity, and CO_2 settings

The Plus Zone Sensor (ZS) has a little different look to it. It has a occupied indicator that identifies the sensor to be operating in occupied conditions. It comes with a slide bar of for some manual temperature control in the occupied mode +/- setting can be adjusted during commissioning.

The Plus ZS can be ordered in any of the following combinations:

- Temperature setting only

The Base Zone Sensor (ZS) is limited to only sensing capabilities without local controllability. This zone sensor offers a basic look and blends into most decors.

The Base ZS can be ordered in any of the following combinations:

- Temperature sensor
- Temperature and relative humidity sensor

* DDC Zone Sensors available through Applications Special Handling Sheet. When the Zone Sensors (ZS) are available as a standard option they will replace the Room Sensors (RS).

Waterside Economizer

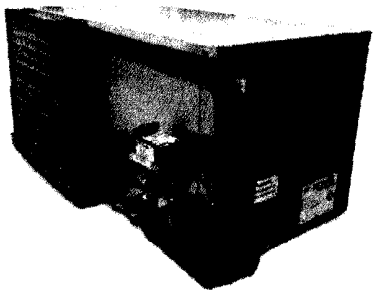
Common Waterside Economizer Applications

- Commercial application where perimeter heating is taking place while core cooling is required. Perimeter heat pumps operating in the heating mode extract heat from the building loop, thus dropping the building loop fluid temperature. Internal core cooling requirements are usually high even in the winter months due to people, lighting, and equipment loads. The moderate temperature loop water circulated through a core heat pump's waterside economizer coil can provide free-cooling without the use of mechanical cooling (Compressors). Also, in many areas code requires some type of economizer cycle. Waterside Economizers in lieu of air side economizers are an inexpensive way to satisfy code requirements in commercial applications.
- Can also be sized up for preheating.
- Tenant build out commercial applications where the central chilled water fluid loop serves as a individual zoned heat pump condenser water. In this application low temperature fluid is always available for free-cooling.

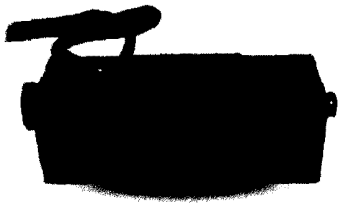
Fluid Flow

Fluid flow through heat pumps equipped with waterside economizer coils is directed by the use of a single three-way motorized ball valve. Flow is either through the waterside economizer coil and then through the condenser or through the condenser only. When applying these units to a variable speed pumping system, a separate field provided means of positive flow shut-off is required. (Re: A positive shut-off solenoid valve located down stream of the heat pump. See figure 2 on next page).

Subject to change without prior notice.



Waterside Economizer (Optional)



Fluid Differential Pressure Switch (Optional)

Aquastat

The aquastat controller is mounted to the heat pump electrical control box. All electrical control wiring is factory installed. The controller is supplied with an external range adjustment and screwdriver slot. Actual range is -30° to 100°F and requires field setting. The remote bulb stored inside the heat pump for shipping requires field mounting.

Recommended settings: 45° F Cool, 90° F Heat

Air Side Pressure Drop

The air side pressure drop shown on the waterside economizer performance tables is considered as additional heat pump external static pressure. Refer to Bosch Select Tools selection software for blower performance and to determine if the unit requires an optional fan upgrade.*

*See fhp-mfg.com for BST Software.

Fluid Differential Pressure Switch

The function of the differential pressure switch is to prevent or stop compressor operation should the water supply fail. This will prevent the unit from locking out on a safety requiring a manual reset to restart. This optional control is internally mounted and factory installed.

The switch is piped between the water entering and leaving connections. Should the pressure drop across the water to refrigerant heat exchanger and fall below set value, the switch will open de-energizing the compressor. The blower operation will not be affected by this option.

Energy Management Switch (EMS)

This switch allows you to connect to an energy management system that can turn the unit off and on.

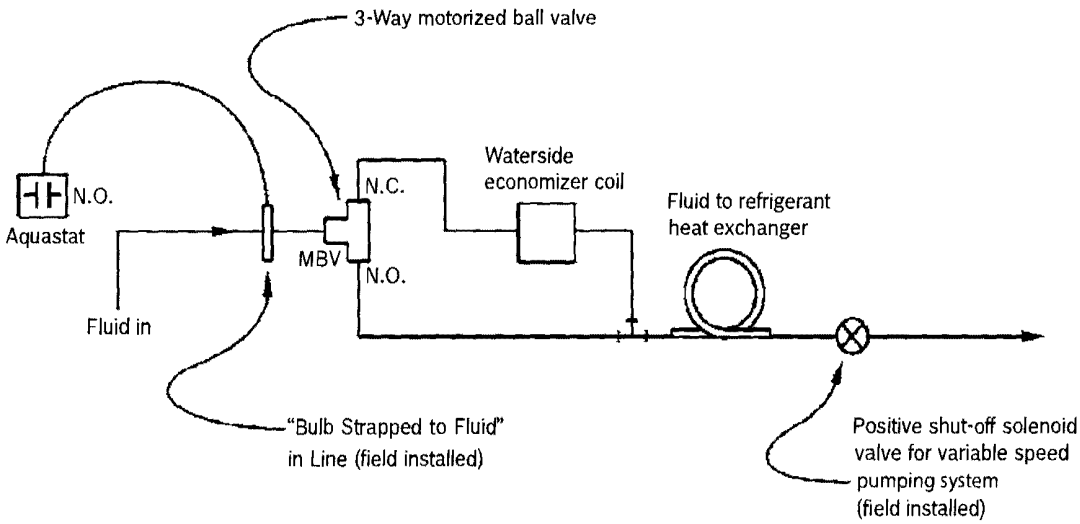


Figure 2

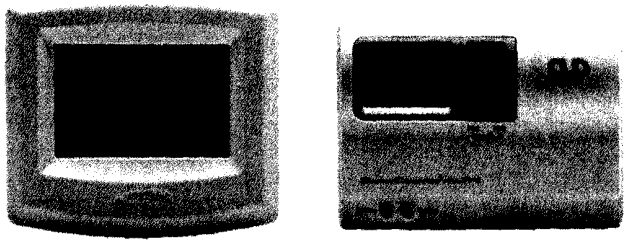
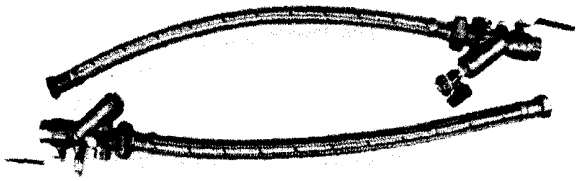


Thermostats



Hose Kit

Accessories

Thermostats

The unit control may be as simple as a single stage thermostat or the unit may have a DDC controller integrated into the building management system.

All external low voltage control wiring is made to the thermostat terminal located in the unit electrical box.

Thermostats may be manual change over, auto change over, programmable or non-programmable depending on the requirements of the project. A full line of thermostats are available as an accessory.

Hose Kits

Hose kits are recommended between the unit and system loop piping. This will help eliminate the transmission of vibration and noise from the unit to the space.

Hoses are fire rated fiber reinforced EPDM Stainless Steel braid hoses with swivel connections.

Maximum working pressure 400 PSI for sizes 1/2" – 1" diameter and 300 PSI for sizes 1 1/4" – 2".

A variety of hose kits are available depending on the job requirement.

- **Kit 1**: Hoses only. 3/4" through 2" diameter hoses are available with 24" and 36" hose lengths. 1/2" diameter hose kits are available only with 12" long hoses.
- **Kit 2**: Hose kit 1 with ball valves on the supply and return hoses. Valves have P/T (pressure/temperature) ports to facilitate pressure and temperature readings.
- **Kit 3**: Hose kit 2 with an automatic flow control valve. The design flow rate is preset at the factory per the design conditions and will automatically limit the flow to this value. This will greatly facilitate balancing of the fluid loop and ensuring each unit gets the required flow.
- **Kit 4**: Hose kit 3 with a Y-strainer and blow down valve on the supply side. The filter screen is 20 mesh, 304 stainless steel to help prevent dirt and debris from entering the water coil.
- **Kit 5**: Hose kit 3 with a 24 v 2 position solenoid valve. This could be used to shut off flow to the unit when there is not a call for heating or cooling. A typical application would be with VFD pumping.
- **Kit 6**: Hose kit 4 with a 24 v 2 position solenoid valve. Hose kit options are available in the accessories section of the BST selection software.

Typical Horizontal Unit Configurations

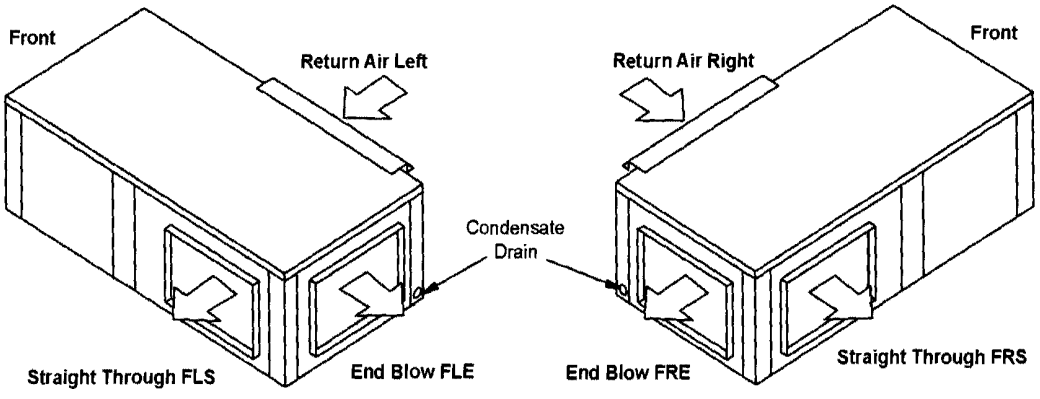

Figure 5

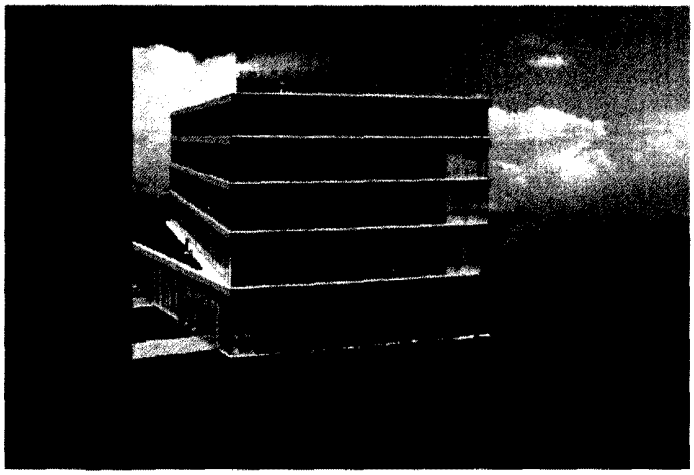
Systems

LV Models may be used in a variety of different applications depending on the system design. An overview of tower/boiler and geothermal systems is given below. There could be several variations and combinations of these systems.

Cooling Tower/Boiler Systems



Water source heat pumps with cooling tower/boiler systems have been used for many years and are recognized as having a low installation cost and providing more energy efficient operation than most other systems on the market.

In a typical building, each office or space would receive its own heat pump. This ensures that the unit will independently satisfy the heating or cooling requirements for that space irrespective of the requirements of any other space. Unlike some other systems, this offers individual control and enhanced comfort in all areas.

All the units are connected to a common water loop containing, in addition to the heat pumps, a cooling tower, boiler, a primary and standby pump and a loop water temperature controller. In the summer cooling mode, the units are cooling and rejecting heat to the water loop. This heat is then rejected to the atmosphere through a cooling tower. In winter, heat is taken from the loop and, together with the compressor's heat of compression, used to heat the space. The heat removed from the loop is then replenished by the boiler. The loop water temperature controller will keep the fluid within certain temperature limits typically 70°F in winter and 85°F in summer by cycling either the cooling tower or boiler.

In today's modern buildings the interior core usually has a net cooling requirement year round irrespective of the outside temperature. This is due to the internal heat gains from people, office equipment and lighting. The heat from heat pumps operating in cooling is rejected to the common water loop and is absorbed by heat pumps on the building's perimeter that are in the heating mode. In effect the system is transferring energy around the building areas from where it is in excess to those areas where it is needed. In many instances we find a balanced system where the heat generated in the interior space is sufficient to heat the perimeter, resulting in neither the cooling tower nor boiler operating. This concept, unique to a water source system, provides the most energy efficient system on the market.

Geothermal Systems

The earth has a tremendous capacity of storing thermal energy, which can be utilized to heat or cool a building.

A geothermal system offers all the benefits of a cooling tower and boiler system with the additional advantage of having overall greater energy efficiency. As the cost of energy increases, geothermal installations are becoming the system of choice by developers and design engineers.

There are several alternative methods of utilizing the energy contained in a geothermal system, giving the design engineer several options for selecting the one that is right for a particular application.

Earth Coupling Options

Ground Loop Systems (Closed Loop)

Lengths of high density polyethylene piping are buried in the earth either in vertical bore holes or horizontal trenches depending on the space available.

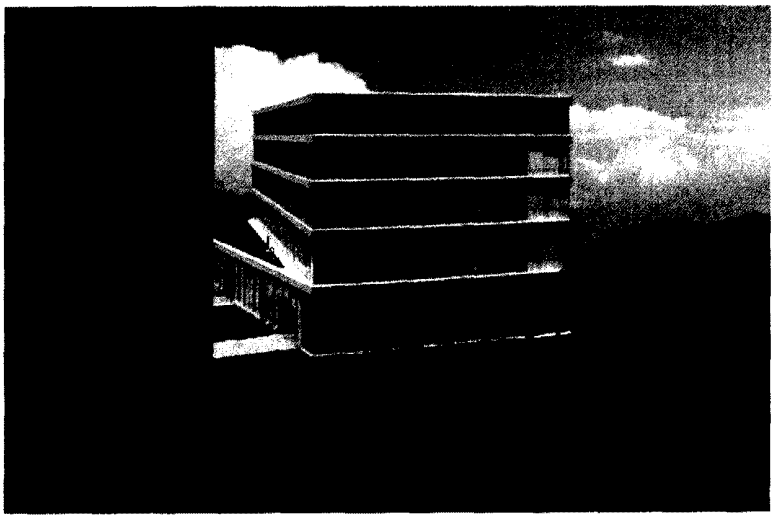
Fluid from the loop inside the building circulates through these pipes either rejecting heat to the ground when there is a net cooling requirement or absorbing heat from the ground when heating is the dominant requirement.

The temperature of the earth below 6 feet is relatively constant and is not affected by the ambient temperature. For this reason, the ground temperature is cooler than the summer ambient and warmer than the winter ambient in most regions. Geothermal systems are able to operate effectively in extreme ambient conditions exceeding 100°F in summer and -30°F in winter. This is one of the reasons why geothermal systems have such an advantage over other systems. An additional advantage is that no fossil fuels are used, reducing the carbon emission of the building.

Even in areas which are cooling or heating dominant a hybrid system can be used with a downsized cooling tower or boiler. This system will reduce the installed cost significantly with only a modest impact on overall operating efficiency.

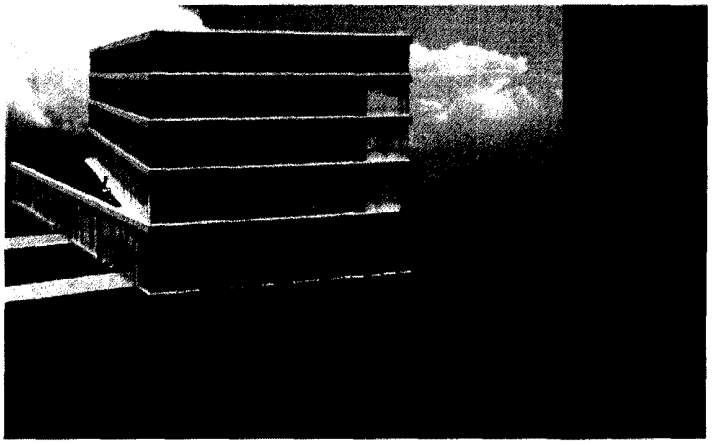
Geothermal systems may cost more to install but the savings in energy and low maintenance costs more than off set this with payback times typically five years or even less.

Vertical Ground Loop System



This method is used mainly in commercial buildings or where space for a loop field is limited. Vertical holes 100 to 400 feet deep are drilled in the ground, and a single loop of high density polyethylene pipe with a U-tube at the bottom is installed. The bore hole is then sealed with grout to ensure good contact for heat transfer with the soil. The size of the project will determine how many bore holes are required. The vertical ground loops are then connected to a horizontal header pipe that carries fluid to the building and circulated to each heat pump. The Earth's temperature is stable below the surface which is an advantage for this system and provides for the greater efficiency. Vertical ground loop fields may be located under buildings or parking lots. The life expectancy is in excess of 50 years.

Horizontal Ground Loop System



This type is cost effective on smaller projects or where there is sufficient space for the loop field. Trenches, three to six feet deep are dug in which a series of high density polyethylene pipes are laid. These loops are manifolded and connected to the loop inside the building which feeds the heat pumps. The fluid is then circulated, absorbing or rejecting heat to the earth depending on the requirement for heating or cooling.

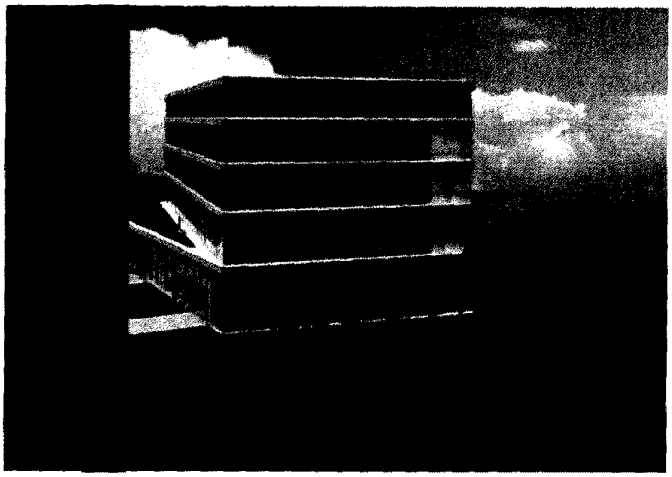
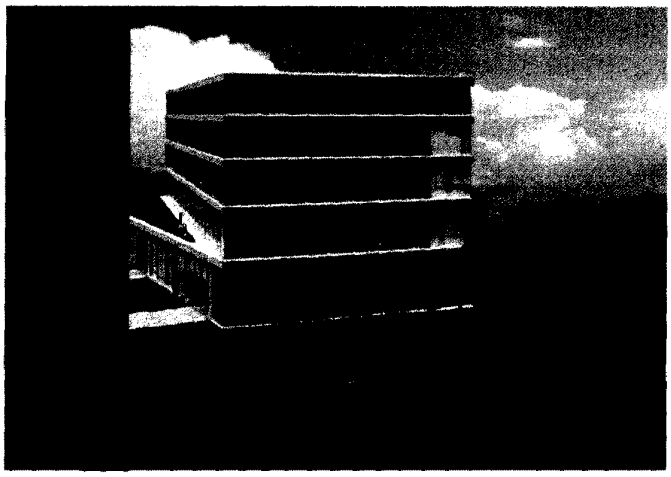
Typical Heat Pump System

Surface Water, Lake or Pond System



This type of design is economical when a project is located near a body of water. Fluid circulates through polyethylene piping in a closed system, just as it does through ground loops, but in this case, underwater. The pipes may be coiled in a slinky to fit more surface into a given amount of space. The lake needs to be a minimum size and depth depending on the building load. Lake loops have no adverse impact on the aquatic system. Specialized lake heat exchangers are also available for this application. New technology is emerging for stainless steel and titanium heat exchangers.

Well Water System



This type of installation is only possible if there is sufficient ground water available in a well. The water must be of good quality. Local codes may limit the use of this system in certain areas. The arrangement is referred to as an open system which means that water is pumped directly from the source into the geothermal unit and then discharged either into a return well or a body of water. The water quality is unaffected other than a change in the temperature. Refer to the installation manuals for water quality guidelines.

Typical Heat Pump Operation

Cooling Mode

In the cooling mode, hot high pressure refrigerant gas is pumped from the compressor to the water-to-refrigerant heat exchanger via the reversing valve. Water, or an anti-freeze solution, flowing through the water-to-refrigerant heat exchanger transfers heat from the refrigerant to the fluid raising the fluid temperature while condensing the hot gas into a liquid. This liquid refrigerant then flows through a metering device, where the refrigerant is expanded to a cold liquid, to the air-to-refrigerant heat exchanger coil.

The air-to-refrigerant heat exchanger cools and dehumidifies air by evaporating the liquid refrigerant. The cooling cycle is completed when the refrigerant flows as a low pressure gas through the reversing valve and back to the suction side of the compressor. Cool dehumidified air is circulated to the space maintaining comfort conditions.

Heating Mode

During the heating mode, the high pressure refrigerant gas is pumped from the compressor to the air-to-refrigerant heat exchanger coil via the reversing valve. In the air-to-refrigerant heat exchanger coil, the heat is removed by the air that passes over the coil surface, and the hot gas condenses into a liquid.

The heated air is ducted to the space and provides heating for the building. The refrigerant liquid then flows through a metering device to the water-to-refrigerant heat exchanger. Water, or an anti-freeze solution, circulates through this heat exchanger and is cooled by the evaporating refrigerant which evaporates into a gas. The heating cycle is completed when the refrigerant flows as a low pressure gas through the reversing valve and back to the suction side of the compressor.

Typical Unit Installation

Water-to-Air Heat Pump Cycle – Cooling

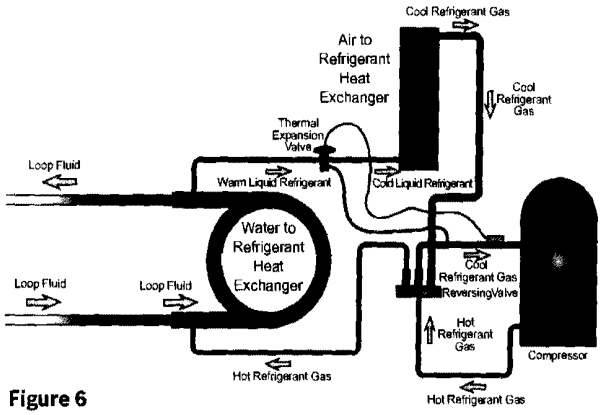

Figure 6

Water-to-Air Heat Pump Cycle – Heating

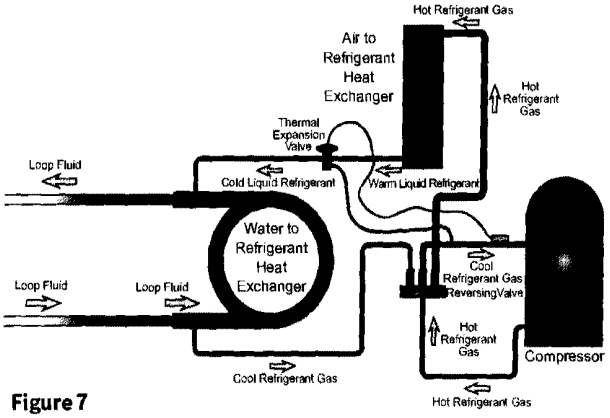

Figure 7

Unit Location

Any mechanical device will, at some point in time require servicing and repair.

With this in mind sufficient space must be provided around the unit for service personnel to perform maintenance or repair.

Units are not designed for outdoor installation. Avoid locations where the unit may be exposed to freezing conditions or where the humidity levels could cause condensation on the unit panels, for example, when exposed to outdoor ambient conditions.

Vertical Unit Installation

Vertical units are normally installed in a closet or mechanical plant room.

If installed in a closet or other confined space, ensure adequate space for return air to the unit.

Sufficient space must be provided for filter replacement and access to the compressor and blower for service.

Units should be set on a piece of rubber, neoprene or other vibration absorbing material at least 1/3" to 1/2" thick. The pad should extend 3/4" over the entire base of the unit.

Avoid direct line of sight to the unit. Install a sound baffle over any door that has a return air grille.

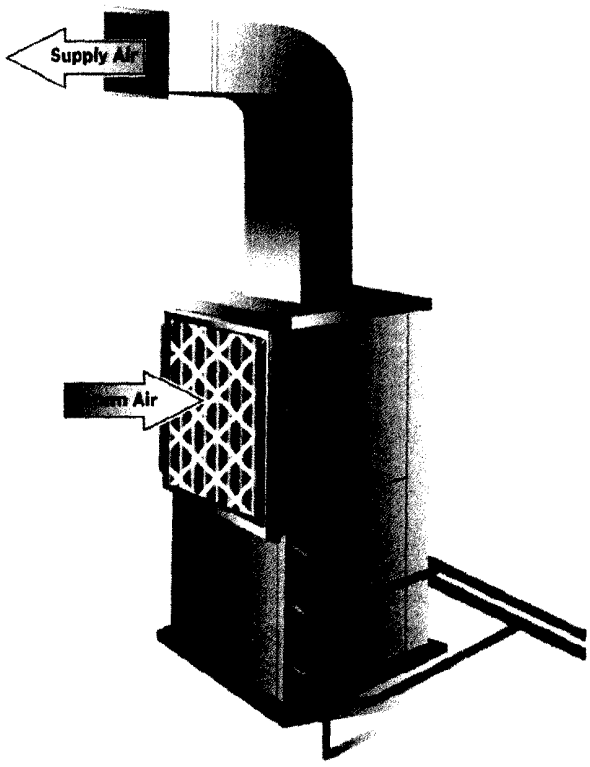

Figure 8

Typical Unit Installation

Horizontal Unit Installation

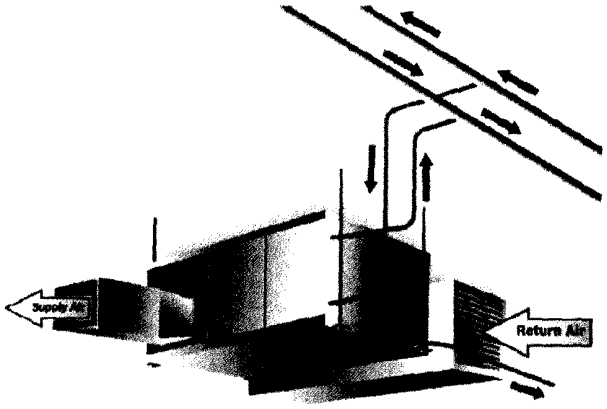

Figure 9

Horizontal units are typically suspended above the ceiling by four (field supplied) 3/8" threaded rods fastened to the unit by the factory supplied hanger bracket kits. The kits include rubber isolators to help prevent transmission of vibration and noise to the building structure. Units should be located directly below a structural member, so that it is securely anchored.

A horizontal unit should be positioned to allow for removal of the filters and access panels. Allow at least 18" clearance on each side of the unit for service and 36" in front of the unit for maintenance access. The filter needs to be slid out and sufficient space must be provided to allow this.

Do not install the unit above any piping or electrical raceways. The unit should be able to be removed to the floor without major rearrangement of other mechanical or ceiling components.

Consideration needs to be made as to the location of the units. Avoid installing units directly above occupied spaces (e.g. above office desks or classrooms). This will minimize possible disruption to the occupants if maintenance or service is required as well as keeping a potential source of noise out of the area. If possible, units should be installed above the hallway drop ceiling in schools, and the supply and return air is routed directly into classrooms. Local code may require fire dampers to be used in this application.

Ductwork and Sound Attenuation Considerations

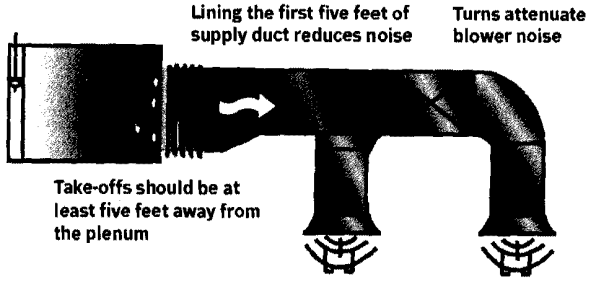

Figure 10: Supply Air Ducting

Sound is becoming an increasingly important factor in all HVAC installations. The LV models has been designed to minimize sound, but sound acoustical design plays an important part of the sound level in the space.

Most of the problems associated with HVAC generated sound can be avoided by paying close attention to duct design and equipment placement.

A discharge flange is provided on all horizontal unit models for fastening of ductwork. We recommend using a flexible collar between the discharge flange and the duct transformation to reduce vibration transmission from the cabinet and to simplify disconnection of the unit from the ceiling ductwork.

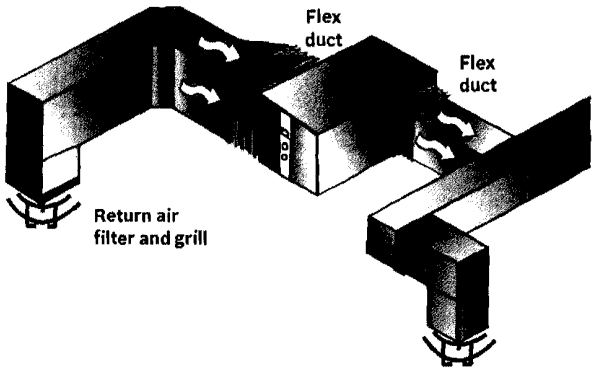

Figure 11: Return Air Ducting

Return air to the unit could be either free return or ducted. The filter rack is provided with a 1" flange should a ducted return be used. We recommend using a flexible collar between the return flange and the duct transformation to reduce vibration transmission from the cabinet and to simplify disconnection of the unit from the ductwork.

Sound is transmitted down the ductwork and it is important to avoid direct line of sight between the unit and the space, both on the return or supply side. To accomplish this, design the duct runs with two 90° turns.

As a general recommendation, duct interiors should have an acoustic / thermal lining of least ½" thick over the entire duct run or a minimum of the first 5 feet of the supply trunk.

Line the last five diameters of duct before each outlet with a 1" thick sound blanket. Line elbows and transition pieces, as well as a short distance upstream and downstream of the fittings.

Elbows, tees and dampers can create turbulence or distortion in the airflow. Using aerodynamic fittings will help in reducing this effect. Place a straight length of duct, 5 to 10 times the duct width, before the next fitting to smooth out airflow.

Diffusers that are located in the bottom of a trunk duct can also produce noise.Balancing dampers should be located several duct widths upstream from an air outlet. Ductwork should be mounted and supported using isolation devices that absorb vibration.

Applications such as Hotel, Motel, Dormitory or Nursing Home that use a single duct discharge are susceptible to noise. These applications typically have low static pressures and short duct lengths. In these applications the discharge duct must be fully lined and have a square elbow without turning vanes. A velocity not exceeding 500 to 600 fpm is recommended. Return air for these applications should enter through a sidewall grille and route up the stud space to a ceiling plenum.

For horizontal heat pumps mounted in the ceiling plenum, an insulated return plenum is sometimes placed at the return air opening to further attenuate line-of-sight sound transmission through return openings.

Piping

The water loop system is typically designed using a "reverse return" piping system which includes a flow control device so that flow requirements are met for each zone.

A high pressure stainless steel flexible hose kit is recommended to connect the unit to the building's hard piping and acts as a sound attenuator for both the unit operating noise and hydraulic pumping noise. One end of the hose has a swivel fitting to facilitate removal of the unit for replacement or service.

Hose kits come in several configurations, but in all cases should include supply and return shutoff ball valves to allow removal of a unit without the need to shut down the entire heat pump system. The hose kit may contain either a manual or automatic flow control that may be preset to ensure correct water flow to the unit.

Pressure / Temperature ports should be included in these fittings to allow the service technician to measure water flow and temperatures when checking unit operation.

Condensate Drain Piping

Condensate piping can be made of steel, copper or PVC pipe. In most cases, PVC pipe eliminates the need to wrap insulation around the pipe to prevent sweating.

A 3/4" FPT condensate drain connection is installed in the unit. The condensate piping must be trapped at the unit and pitched away from the unit not less than 1/4" per foot. A vent is required after the trap so that the condensate will drain away from the unit. The vent can also act as a cleanout if the trap becomes clogged. The condensate drain should not be directly piped to a drain/waste/vent stack. See local codes for the correct application of condensate piping to drains.

Operating Limits

LV Models are capable of operating over a wide range of conditions. For operation in a geothermal application or any other installation where the loop fluid temperature may drop below the ambient dew point, the extended range option is recommended. This consists of TXV in lieu of capillary tubes and additional insulation on the piping and wax exchanger to prevent condensation.

- Maximum and minimum fluid conditions are at unit rated flow rate.
- Maximum and minimum operating limits may not be combined. If one value is at either maximum or minimum, the other two should be at normal operating range.
- Entering fluid temperatures below 45°F in the heating mode requires antifreeze.

Equipment Selection

To ensure that you get the optimal performance from your FHP heat pump it is important that they be selected accurately to match your design conditions.

Prior to making equipment selections the zone conditions need to be determined. Bosch Thermotechnology Corp. recommends using a building load program to determine the heating and cooling loads.

The catalog provides a wide range of entering air and water conditions that will meet most applications. The unit performance can be determined by referring to the data tables from page 23 to 35.

Our Bosch Select Tools Selection Software (BST) is designed to provide you with a fast and accurate selection based on your specific conditions. This software is available through the commercial website. You may click on the BST link and request an account.

Unit Operating Limits–LV Model

Operating Limits – Cooling & Heating	Standard Unit	Extended Range Option
Cooling		
Minimum ambient air temperature °F	50	50
Maximum ambient air temperature °F	100	100
Minimum evaporator entering air db/wb °F	68/57	68/57

Extended Range - Anti-freeze required

AHRI/ISO13256-1 certified performance is rated at entering air conditions of 80.6°F DB and 66.2°F WB in cooling and 68°F DB in heating.

Tabulated unit performance does not include fan or pump power corrections required for AHRI/ISO standard performance ratings.

Unit performance may be interpolated. Extrapolation is not allowed.

For conditions other than rating conditions provided, consult the BST selection software.

Ratings below 40°F are with a methanol solution.

The results reported herein are estimates based on testing by FHP. Variations in the installation and operational environment may alter performance. Bosch disclaims all warranties, express and implied, that the performance will be as reported, including the warranty of merchantability and fitness for purpose. In addition, continuous research and development may result in a change to an appliances design and specifications, which Bosch may change without notice. Before purchase, confirm the design specifications of the appliance.

Extended Range - Anti-freeze required

AHRI/ISO13256-1 certified performance is rated at entering air conditions of 80.6°F DB and 66.2°F WB in cooling and 68°F DB in heating.

Tabulated unit performance does not include fan or pump power corrections required for AHRI/ISO standard performance ratings.

Unit performance may be interpolated. Extrapolation is not allowed.

For conditions other than rating conditions provided, consult the BST selection software.

Ratings below 40°F are with a methanol solution.

The results reported herein are estimates based on testing by FHP. Variations in the installation and operational environment may alter performance. Bosch disclaims all warranties, express and implied, that the performance will be as reported, including the warranty of merchantability and fitness for purpose. In addition, continuous research and development may result in a change to an appliances design and specifications, which Bosch may change without notice. Before purchase, confirm the design specifications of the appliance.

Extended Range - Anti-freeze required

AHRI/ISO13256-1 certified performance is rated at entering air conditions of 80.6°F DB and 66.2°F WB in cooling and 68°F DB in heating.

Tabulated unit performance does not include fan or pump power corrections required for AHRI/ISO standard performance ratings.

Unit performance may be interpolated. Extrapolation is not allowed.

For conditions other than rating conditions provided, consult the BST selection software.

Ratings below 40°F are with a methanol solution.

The results reported herein are estimates based on testing by FHP. Variations in the installation and operational environment may alter performance. Bosch disclaims all warranties, express and implied, that the performance will be as reported, including the warranty of merchantability and fitness for purpose. In addition, continuous research and development may result in a change to an appliances design and specifications, which Bosch may change without notice. Before purchase, confirm the design specifications of the appliance.

Extended Range - Anti-freeze required

AHRI/ISO13256-1 certified performance is rated at entering air conditions of 80.6°F DB and 66.2°F WB in cooling and 68°F DB in heating.

Tabulated unit performance does not include fan or pump power corrections required for AHRI/ISO standard performance ratings.

Unit performance may be interpolated. Extrapolation is not allowed.

For conditions other than rating conditions provided, consult the BST selection software.

Ratings below 40°F are with a methanol solution.

The results reported herein are estimates based on testing by FHP. Variations in the installation and operational environment may alter performance. Bosch disclaims all warranties, express and implied, that the performance will be as reported, including the warranty of merchantability and fitness for purpose. In addition, continuous research and development may result in a change to an appliances design and specifications, which Bosch may change without notice. Before purchase, confirm the design specifications of the appliance.

Extended Range - Anti-freeze required

AHRI/ISO13256-1 certified performance is rated at entering air conditions of 80.6°F DB and 66.2°F WB in cooling and 68°F DB in heating.

Tabulated unit performance does not include fan or pump power corrections required for AHRI/ISO standard performance ratings.

Unit performance may be interpolated. Extrapolation is not allowed.

For conditions other than rating conditions provided, consult the BST selection software.

Ratings below 40°F are with a methanol solution.

The results reported herein are estimates based on testing by FHP. Variations in the installation and operational environment may alter performance. Bosch disclaims all warranties, express and implied, that the performance will be as reported, including the warranty of merchantability and fitness for purpose. In addition, continuous research and development may result in a change to an appliances design and specifications, which Bosch may change without notice. Before purchase, confirm the design specifications of the appliance.

Subject to change without prior notice.

Extended Range - Anti-freeze required

AHRI/ISO13256-1 certified performance is rated at entering air conditions of 80.6°F DB and 66.2°F WB in cooling and 68°F DB in heating.

Tabulated unit performance does not include fan or pump power corrections required for AHRI/ISO standard performance ratings.

Unit performance may be interpolated. Extrapolation is not allowed.

For conditions other than rating conditions provided, consult the BST selection software.

Ratings below 40°F are with a methanol solution.

The results reported herein are estimates based on testing by FHP. Variations in the installation and operational environment may alter performance. Bosch disclaims all warranties, express and implied, that the performance will be as reported, including the warranty of merchantability and fitness for purpose. In addition, continuous research and development may result in a change to an appliances design and specifications, which Bosch may change without notice. Before purchase, confirm the design specifications of the appliance.

208/230V units shipped with transformer wired for 230V–for 208V remove orange tranformer primary lead and replace with red lead.
All blower motors are single phase.

UNIT POWER SUPPLY: A voltage variation of +/- 10% of nameplate rating is acceptable. Phase imbalance shall not exceed 2%.

Subject to change without prior notice.

Guide Specification

1.0 General

Furnish and install FHP water source heat pumps as indicated on the plans with capacities and characteristics as listed in the schedule and the specifications that follow. The units shall be manufactured in an ISO 9001:2000 certified facility.

2.0 Horizontal/Vertical/Counterflow Water Source Heat Pumps

The units shall be designed to operate with entering fluid temperatures between 50°F (10°C) and 100°F (38°C) in cooling and between 50°F (10°C) and 80°F (27°C) in heating. With the optional factory installed extended range package, units shall operate with entering fluid temperatures between 50°F (10°C) and 110°F (43.3°C) in cooling and between 20°F (-6.6°C) and 80°F (27°C) in heating. Equivalent units from other manufacturers can be proposed, provided approval to bid is given 10 days prior to bid closing. All equipment with a nominal capacity of 135,000 BTUH Total Cooling or lower must be listed in the current AHRI Applied Equipment Directory under the AHRI Standard AHRI/ISO- 13256-1, WLHP, GWHP and GLHP certification points.

All equipment in this section must meet or exceed the DOE mandated minimum EER's and COP's as listed in ASHRAE 90.1 as follows:

For the AHRI/ISO-13256-1, WLHP Rating (12.0 EER and 4.2 COP for units larger than a nominal 17,000 BTUH Total Cooling – 11.2 EER and 4.2 COP for units below a nominal 17,000 BTUH Total Cooling).

For the AHRI/ISO-13256-1, GLHP Rating a minimum 13.4 EER and 3.1 COP. All units shall be listed with Underwriters Laboratories (UL) for safety.

2.01 Basic Construction

A. Units shall have the airflow arrangement as shown on the plans. If units with these arrangements are not used, the contractor supplying the water source heat pumps is responsible for any extra costs incurred by other trades and must submit detailed mechanical drawings showing ductwork requirements and changes or relocation of any other mechanical or electrical system. If other arrangements make servicing difficult, the contractor must provide access panels and clear routes to ease service. The architect must approve all changes 10 days prior to bid.

B. All units shall have stainless steel drain pans to comply with this project's IAQ requirements. Painted steel or plastic is not acceptable.

C. The cabinet shall be fabricated from heavy-gauge G-90 galvanized steel for superior corrosion protection. All interior surfaces shall be lined with 1/2" (12.7mm) thick, multi density, coated, glass fiber insulation. Insulation within the air handling section shall not have any exposed edges. All insulation must meet NFPA 90A and be certified to meet the GREENGUARD® Indoor Air Quality Standard for Low Emitting Products. One blower access panel and two compressor compartment access panels shall be removable with supply and return air ductwork in place.

D. Unit shall have a floating compressor or pan consisting of a 1/2" (12 mm) thick high density elastomeric pad between the compressor base plate and the unit base pan to prevent transmission of vibration to the structure.

E. Units shall have a 1" filter rack and 1" thick throw-away type glass fiber filter as standard. Units shall have an optional 2" thick pleated MERV 8 filter (size 007-070) or MERV 13 filter (size 015 and larger with upgraded ECM) available. The filter rack shall incorporate a 1" duct flange. The units shall have an insulated divider panel between the air handling section and the compressor section to minimize the transmission of compressor noise, and to permit service testing without air bypass.

F. Cabinets shall have separate holes and knockouts for entrance of line voltage and low voltage control wiring.

Supply and return water connections shall be brass female pipe thread fittings and mounted flush to cabinet exterior. Connections that require a back up wrench or that extrude past the unit corner post are not acceptable. Condensate connections will be stainless steel female pipe thread fittings. Plastic is not acceptable.

G. Hanging brackets shall be provided as standard for horizontal units.

Guide Specification

2.02 Fan and Motor Assembly

A. The fan shall be direct-drive centrifugal forward curved type with a dynamically balanced wheel. The housing and wheel shall be designed for quiet low velocity operation. The blower housing shall feature a removable inlet ring to facilitate removal and servicing of the fan motor. The fan motor shall be 3-speed, permanently lubricated, PSC type with thermal overload protection.

B. 15,000 Btu/Hr to 70,000 Btu/Hr models shall have an optional constant torque electronically commutated motor for premium fan efficiency. These motors shall feature 5 pre-programmed torque settings that can be changed in the field to match design requirements. 460 V – 3 Ph – 60 Hz units with these motors must be able to operate without the need for a neutral wire for the motor.

C. 15,000 Btu/Hr to 70,000 Btu/Hr models shall have an optional constant CFM electronically commutated motor for premium fan efficiency and constant air delivery over a wide range of external static pressures. These motors shall be field adjustable for +/- 15% of nominal design airflow. These motors shall provide feedback to the unit control box to verify motor operating mode and delivered CFM.

2.03 Refrigerant Circuit

Units shall use R-410A refrigerant. All units shall have a factory sealed and fully charged refrigerant circuit with the following components:

A. Hermetic compressor: Hermetic reciprocating, rotary, or scroll compressors shall be specifically designed for R-410A refrigerant and shall be internally sprung (if reciprocating), externally isolated and with thermal overload protection.

B. Refrigerant metering thermal expansion valves or capillary tubes.

C. The finned tube heat exchanger shall be constructed of lanced aluminum fins not exceeding sixteen fins per inch bonded to rifled copper tubes in a staggered pattern and will have a 600 PSIG (4140 kPa) working pressure. The heat exchanger shall have aluminum end sheets.

Optional Air Coil Protection: The finned tube heat exchanger shall have optional DuoGuard™ protective coil coating. This corrosion protection shall consist of tin plated copper tubing with coated aluminum fins that must pass 1000 hours of ASTM B117 salt fog testing. Painted, dipped or e-coated heat exchangers are not acceptable.

D. Reversing valve. Reversing valves shall be four-way solenoid activated refrigerant valves which shall fail to the heating operation should the solenoid fail to function. Reversing valves which fail to the cooling operation shall not be allowed.

E. Coaxial (tube in tube) refrigerant to water heat exchanger. Refrigerant to water heat exchangers shall be of copper inner water tube and steel outer refrigerant tube design rated to withstand 600 PSIG working refrigerant pressure and 400 PSIG working water pressure. Shell and Tube style refrigerant to water heat exchangers shall be treated as pressure vessels and shall require refrigerant pressure relief valves piped to the exterior of the building. The contractor supplying the water source heat pumps with Shell and Tube heat exchangers shall be responsible for any additional installation costs. Brazed Plate water to refrigerant heat exchangers shall require additional centrifugal separators added to the supply water piping at each unit. Each separator shall have an automated clean out valve piped to a waste line. The contractor supplying water source heat pumps with Brazed Plate heat exchangers shall be responsible for any additional costs.

Option for E: Cupro-Nickel water coil – The refrigerant to water heat exchanger shall be of Cupro-Nickel inner water tube construction.

F. Safety controls include both a high pressure and low pressure switch. Temperature sensors shall not replace these safety switches. See the controls section of this specification for additional information.

G. Access fittings shall be factory installed on high and low pressure refrigerant lines to facilitate field service.

Guide Specification

H. Activation of any safety device shall prevent compressor operation via a lockout circuit. The lockout circuit shall be reset at the thermostat or at the contractor supplied disconnect switch. Units which may be reset at the disconnect switch only shall not be acceptable. Refer to solid state safety circuit below.

2.04 Electrical

Controls and safety devices will be factory wired and mounted within the unit. Controls shall include fan relay, compressor contactor, 24V transformer, reversing valve coil and solid state lockout controller, Unit Protection Module (UPM). The standard transformer shall be rated for a minimum 50 VA. All units shall be name-plated for use with time delay fuses or HACR circuit breakers. Unit controls shall be 24 volts.

Option: Optional transformers shall be rated 75VA and shall have a push button reset circuit breaker on the secondary power.

2.05 Solid-State Safety Circuit

All units shall have a solid-state UPM safety control circuit with the following features:

1. Anti-short cycle time delay (5 minute delay on break).
2. Random start time delay on initial power.
3. Brown out/surge/power interruption protection.
4. 120 second low pressure switch bypass timer.
5. High refrigerant pressure shutdown.
6. Low refrigerant pressure shutdown.
7. Low water temperature shutdown (adjustable for closed loop systems).
8. Air coil freeze protection shutdown.
9. High condensate level shutdown.
10. 24 VAC alarm output for remote fault indication.

The UPM shall automatically reset after a safety shut down. Restart the unit if the cause of the shut down no longer exists (except for low temperature and high condensate level shutdowns). Should a fault re-occur within 60 minutes after reset, then a "hard" lockout will occur. A light emitting diode (LED) shall annunciate the following alarms: brown out, high refrigerant pressure, low refrigerant pressure, low water temperature and a high level of condensate in the drain pan. The LED will display each fault condition as soon as the fault occurs. If a hard lockout occurs, then the fault LED will display the type of fault until the unit is reset.

The UPM shall feature the following field configurable adjustments:

1. Lock out reset on thermostat interruption or power reset.
2. 2 or 4 restart attempts before a hard lockout.
3. Test mode (reduces all time delays to 5 seconds for diagnostic work).
4. Antifreeze setting for low water temperature sensor.

Safety devices include:

1. Low pressure cutout set a 40 PSIG (280 kPA) for loss of charge protection (freezestat and/or high discharge gas temperature sensor is not acceptable).
2. High pressure cutout control set at 600 PSIG (4125 kPA).
3. Low supply water temperature sensor that detects drops in refrigerant temperature that could result in water coax heat exchanger freezing.
4. Low air coil temperature sensor that detects drops in refrigerant temperature that could result in air heat exchanger freezing.
5. High level condensate sensor that shuts off the compressor if the condensate drain pan fills with water.
6. On board voltage detection that disables the compressor control circuit if there are extreme variations in supply voltage.

An optional energy management relay that allows unit control by an external source shall be factory installed. A terminal block with screw terminals shall be provided for control wiring.

2.06 Options

A. Units shall have an optional 2-way electrically operated shut-off valve mounted internally in the unit cabinet.

B. Units shall have an optional water flow regulating valve set to 3 gallons per minute of water flow per nominal ton of refrigeration capacity.

Guide Specification

C. Extra quiet construction: Optional compressor blanket shall be provided on units having a capacity above 18,000 BTUH.

D. Hot Gas Reheat: Units as noted on the schedule shall be equipped with optional Hot Gas Reheat (HGRH) on units having a capacity above 12,000 BTUH. HGRH shall be either on/off control or modulating as noted in the specifications.

On/Off HGRH shall be controlled by a humidistat connected to the unit H terminal and shall start the unit in the reheat mode should the humidity be above set-point once the thermostat control is satisfied. Cooling or heating requirements shall take precedent over HGRH.

Modulating Hot Gas Reheat (MHGRH) shall be active during the cooling mode. A 0 - 10 VDC signal from a sensor located in the unit discharge air supply shall modulate the hot gas valve to maintain an adjustable preset leaving air temperature to the conditioned space.

E. Hot Gas Bypass: For units as noted on the schedule, supply each unit with a ETL listed modulating hot gas bypass valve with factory supplied and installed controls to prevent air coils from frost development by taking hot gas and bypassing the water coil and expansion device and reintroducing the hot gas into the refrigerant line prior to the air coil. The hot gas bypass valve shall maintain a minimum refrigerant suction pressure to allow for a light load cooling mode or a low entering air temperature cooling mode.

F. Water Differential Pressure Switch: Prevents unit operation if there is no fluid flow. This factory installed, internally mounted device shall be rated at 600psi and disable the compressor if a lack of water-flow occurs.

G. Water Side Economizer: Water side economizer shall be completely installed at the factory, with an additional condensate drain pan, motorized 3 way valve, aqua stat, and all internal electric controls. Water side economizer shall be rated at 400 psi and UL listed for application with the heat pump. This option is externally mounted outside the unit.

H. Factory-installed control options: Water differential pressure switch, 75 VA transformer (resettable), phase loss and reversal protection, and unit mounted disconnect switch.

I. A 2", four-sided filter rack is optional to accommodate nominal 2" thick pleated filters.

J. DDC Controls: Unit shall be equipped with a factory installed DDC control capable of interfacing with BacNet, Modbus, N2 and Lonworks. The controller shall be pre-programmed to control the unit and monitor the safety controls. The unit shall be able to operate as a standalone or be incorporated into the building management system. A leaving water and leaving air sensor shall be installed in the unit. Wall sensors shall be available for controlling zone temperature.

3.0 Hose Kits

All units shall be connected with hoses. The hoses shall be either 2 or 3 feet long, braided stainless steel, fire rated hoses complete with adapters. Non-fire rated hoses are not acceptable. Optional ball valves with P/T ports, flow controller, Y strainer and electric valve shall be in included as specified in the schedule.

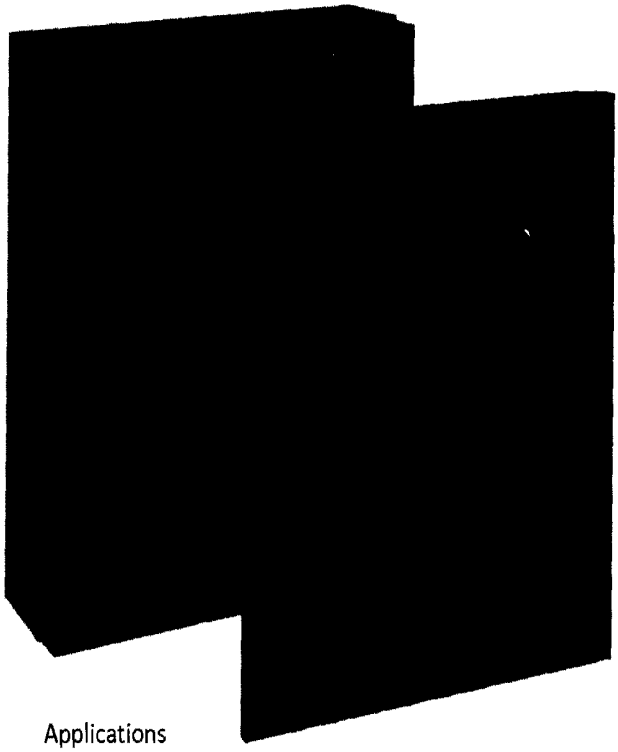
Made in the U.S.A.

Architectural Wall Heater



The WAI fan-forced wall heater is designed for commercial and industrial areas requiring higher KW ratings and quick recovery. The unit provides a burst of heat in areas affected by cold drafts or wide temperature swings.

- **Efficient Operation:** The fan draws air into the top of the grille and discharges warm air downward to distribute heat and keep floors warm and dry. High CFMs create air circulation within the room to provide uniform temperatures.
- **Extended Capacity:** The WAI is available with one or two modules and ratings up to 12,000 W and 320 CFM.

Applications

- Entryways
- Garages
- Guard Houses
- Offices
- Reception Areas
- Restrooms
- Stairwells
- Vestibules

Standard Construction Features

Heating Elements – Steel finned tubular elements.

Outlet Grille – The WAI has an architectural extruded aluminum grille in a choice of eight polyester powder paint finishes. The closely spaced, heavy bar grille design prevents insertion of foreign objects. The tamperproof thermostat adjustment is concealed behind the front cover.

Built-in Controls – Automatic reset thermal cutout, fan override and tamperproof thermostat (32° to 120°F).

Fan Motor – Permanently lubricated, totally enclosed fan operates at a low 58 dBA.

Installation Requirements – Standard supply wiring rated at 60°C can be used for installation of wall heaters. Heater must be installed at least ten inches from the floor and adjacent walls.

Rough in Dimensions –

- 1500/1125 - 4800 Watt heaters: 14-1/2" wide x 19-7/8" high x 4-1/2" deep.
- 6000/4500 - 8000 Watt heaters: 30-3/16" wide x 19-7/8" high x 4-1/2" deep.
- 12000/9000 Watt heaters: 46-5/8" wide x 19-7/8" high x 4-1/2" deep.

Architectural Wall Heater

Factory Built-in Options

Code	Description
D1	Disconnect Switch 600V, Three-pole, 40 Amp
D3	Disconnect Switch 277V, Double-pole, 20 Amp
R1	24 Relay (1)
R2	24V Relay with Transformer (1)
S3	Fan On/Auto Switch

(1) A built-in thermostat will not be supplied when option R1 or R2 are selected. If built-in thermostat is required with these options, add Code T1 to the part number.

Field-Installed Options

(shipped loose for field installation into heater)

DRY-O-TRON®

For the Ultimate Indoor Pool Environment

DS | DSV SERIES

Indoor Pool :: Whirlpool :: SPA

Light Commercial & Residential Dehumidifiers

Dectron (a subsidiary of Dectron Internationale) developed the DRY-O-TRON® energy recycling pool dehumidifier more than 40 years ago. Constant innovations and advancements have kept the DRY-O-TRON® as the standard to be met for indoor pool environmental comfort.

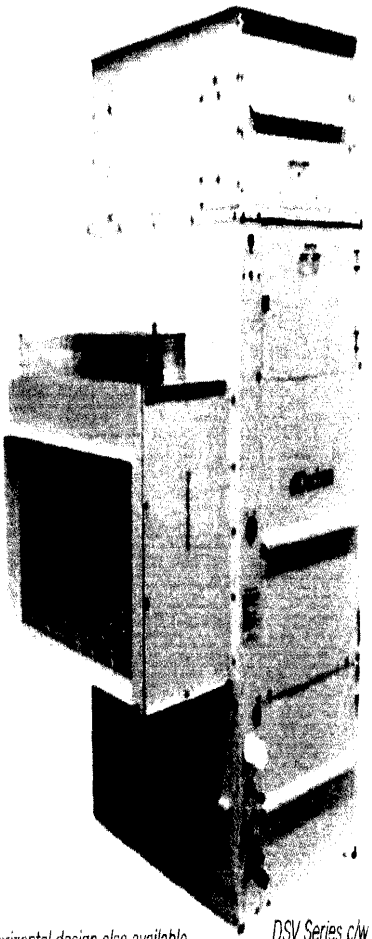
Additionally, Dectron's engineering team also developed the DSV Series, a vertical configuration of the ever-popular DS unit. It has all of the standard horizontal DS features including Water Smart pool water heating and microprocessor control. All combined in a package with 10 field selectable discharge locations providing a smaller footprint with no loss of performance.

That may not seem like much, but with increasing construction costs, a compact unit that fits through a standard 32-inch door, that can be installed in a corner and serviced through the front, not only makes sense, it can save dollars.

Take a look at the DRY-O-TRON® DS and DSV Series today, and see why the innovation never stops at Dectron.

Water Smart.

- :: Plenum fan section, complete with VFD controlled direct drive motor
- :: Up to 10 field selectable air discharge locations and 2 selectable outdoor air locations
- :: Suitable for corner installation, compact footprint
- :: Supervisaire® controls for real time monitoring and diagnostics
- :: Choice of "Green" refrigerants: R-134a, R-407C and R-410A
- :: Controls space humidity
- :: Heats pool water with recycled energy*
- :: Vertical design up to Model 042 (8.8 Ton) fits through a 32" door**
- :: Vertical design suitable for corner installation, compact footprint
- :: Single side service access
- :: Optional A/C for year-round comfort control
- :: Contributes to space heating
- :: "Water Smart" feature indicates reliable operation even without pool water flow
- :: HyPoxy® coated coils for performance enhancement and corrosion resistance
- :: Microprocessor control, flexible and reliable
- :: Separate compressor and water heater compartment out of airstream
- :: Indoor installation
- :: Factory tested at operating conditions
- :: Optional internal space heating coil



DSV Series c/w Plenum Fan

** Models also available without pool water heater*

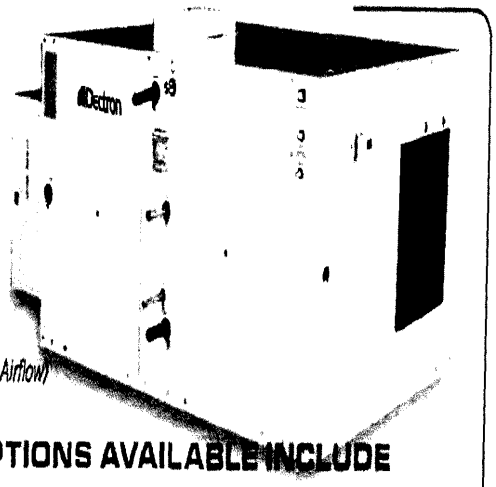
*** Horizontal design also available*

FEATURES AND BENEFITS

An indoor pool is a challenging indoor air quality project unlike few others. With a combination of high temperatures, high moisture generation, high chemical usage, differential activity levels and multiple interdependent systems, it requires specialized design and engineering which Dectron can provide.

The indoor pool environment also requires specialized equipment, and here Dectron can help even more.

See some of the features and benefits that keep the DRY-O-TRON® DS and DSV Series ahead of the competition ( ). Ask for these features ( ).



Also available DS Series (Horizontal Airflow)

QUALITY FEATURES INCLUDE

- Patented simultaneous heat rejection to air and pool water avoids temperature swings
- Outdoor air inlet to meet ASHRAE Ventilation Standard 62 with filter and balancing damper
- "Water Smart" feature for reliable operation even without pool water flow
- Heavy gauge enclosure painted internally and externally with baked alkyd powder paint in a 5-stage process
- Scroll compressors for high reliability and quieter operation
- Contributes to space heating when required
- Corrosion proof self-draining sanitary drain pan
- Side drain with integral P-trap
- Supervisaire® microprocessor control reduces service time
- Unit mounted sensors simplify installation
- Vented coaxial cupronickel pool water heater suitable for potable water
- VFD controlled plenum fan complete with Direct Drive Motor
- Choice of "Green" refrigerants: R-134a, R-407C and R-410A
- Voltages available: 208/230 single phase 60 Hz (some models) 208/230, 460, 575 three phase 60 Hz

OPTIONS AVAILABLE INCLUDE

- Electronically commutated premium efficiency EC motors
- Remote air-conditioning package (air, water or fluid-cooled)
- Matching remote outdoor air-cooled condenser or fluid cooler
- Auxiliary outdoor gas boiler for pool water heating
- Higher air volumes and higher external static pressures
- Second pool water heater
- Power supply for ventilation 80VA, 24V
- Firestat interlock
- Remote Chloraguard® module for advanced gas-phase air filtration
- Mirror image configuration
- Extended warranty plans
- 50 Hz operation

PERFORMANCE DATA

Model[4]	Moisture Removal[1]	Air Volume[2]	Total Energy Consumption[1]	Total Capacity[1]	External Static Pressure[3]
DSV/DV5	lb./h	cfm	kW	Btu/h	in WC
010	12.3	1,000	3.0	28,635	1.0
015	14.0	1,200	3.4	32,660	1.0

040	45.5	3,800	8.9	106,160	1.0
042	45.5	3,800	9.6	106,160	1.0
050	57.8	4,800	11.9	134,780	1.0
060	68.3	5,500	15.8	159,285	1.0
062	63.0	5,500	13.4	146,990	1.0
080	91.0	6,500	18.2	212,310	1.0
082	91.0	6,500	18.2	212,310	1.0

1. *At air on 82°F DB and 60% RH.*
2. *Higher air volumes available, please contact factory.*
3. *Higher external static pressures available, please contact factory.*
4. *DSV Commercial & Industrial dehumidifiers (size 100 & up) also available, please contact factory.*

DIMENSIONAL DATA

Plenum Model	Dimensions[1,2,3] (Footprint)	DSV/DV5 Net Weight[4]	DSH Net Weight[4]
DSV/DV5	L x W x H (in.)	lb.	lb.
010	30 x 30 x 83	700	410
015	30 x 30 x 83	725	535
020	43 x 30 x 83	1,050	720
030	43 x 30 x 83	1,135	835
040	52 x 30 x 99	1,500	1,700
042	52 x 30 x 99	1,570	1,700
050	72 x 46 x 103	2,130	1,950
060	72 x 46 x 103	2,300	2,300
062	72 x 46 x 103	2,400	2,300
080	72 x 46 x 103	2,800	3,900
082	72 x 46 x 103	2,880	3,900

1. *Certain options require larger enclosures.*
2. *Add 18 inches for removable filter section to "inches" for overall width.*
3. *Height includes removable plenum fan section.*
4. *For basic unit with air-cooled air conditioning. For other options, please contact factory.*

OPERATING RANGE*

Air on temperature	74°F thru 86°F DB
Air on relative humidity	40 thru 70% RH
Pool water temperature	78 thru 104°F

** For conditions outside this range, consult your DRY-O-TRON® representative or the factory for assistance*

Re: Mix-usage Hotel/Residential/Retail/Community Facilities
134-37 35th Avenue, Flushing, NY 11101
Block: 4949, Lot 31 & 8900 OER Project: 14EHAN384Q

To Whom It May Concern:

I, Eric Chang, am currently a NYS licensed engineer, the design applicant on record, for the HVAC systems (Heating, Ventilation and Air Conditioning) serving above referenced project, certify that our engineering design comply with the Air Quality Requirements, stated in Section 2.1.1, the natural gas will be utilized at the site for boilers, hot water heaters, cooking, and HVAC systems; our engineering design also comply with Alternate Means of Ventilation (AMV), stated in Section 2.2.2. and Section 3.3.

Individual outdoor air louvers shall be installed within each hotel guest room, public corridors, retail units and community facility units, minimum code required outdoor air will be provided via. HPAC units. Individual outdoor air intake fans shall be installed within each residential dwelling unit, to supply minimum code required (75 cfm) outdoor air to each dwelling unit, in compliance with 2014 NYC Mechanical Code Table 403.3, Footnote i. An air-cooled rooftop AC unit with gas-fired heating will be provided on 1st floor roof, to supply minimum code required outdoor air to the hotel accessory spaces in cellar and sub-cellar floors.

The locations of the proposed flue pipes (direct-venting condensing boilers and hot water heaters) on roof, are in compliance with Chapter 8 of 2014 NYC Mechanical Code, Chapter 5 of 2014 NYC Fuel Gas Code and E-designation requirements. No chimneys or stacks are required for these type boilers and hot water heaters. Therefore, if a taller building is erected at east, south or north sides of lot line in the future, the owner of the taller building is not required to alter the direct-venting flue pipes, in compliance with MC 802.1.1.1.

Thank you for your attention in this matter.
Sincerely,

Eric Chang, P.E.

STATE OF NEW YORK ERIC J. CHANG No. 073... LICENSED PROFESSIONAL ENGINEER

Air Quality and Noise Remedial Action Plan
35th Ave. Farrington St. Hotel Development
134-37 35th Avenue, Flushing, NY Block 4949 Lot 31
DOB No. 420892323, OER No. 14EHAN384Q

Air Quality Requirement
The Air Quality E- Designation (E-246) for Block 4949 and Lot 31 requires the following: "Any new residential and/or commercial development on the above referenced property must use natural gas for HVAC systems or, if fuel oil No. 4/2 is used, ensure that the heating, ventilating and air conditioning stack(s) are located at least 37 feet from the Lot lines facing Prince Street and 35th Avenue, to avoid any potential significant adverse air quality impacts. "

1) **Fuel type**
   Natural gas will be used at the site for space heating, hot water, residential and commercial (hotel) cooking.

   No. 2 fuel oil will be used for an emergency generator located at 2nd floor roof, at 12' from west side of lot line. A 175-gallon fuel storage day tank will be provided below the generator on 2nd floor roof. The emergency generator will only be used during emergency condition to supply power for the building life safety equipment in compliance with 2014 NYC Building Code.

2) Alternate Means of Ventilation (AMV)
   In order to satisfy the requirements of the E-designation, Alternate Means of Ventilation (AMV) will be installed in order to maintain a closed window condition.
   AMV for this project will be achieved by:

   The water source heat pump air conditioning units (HPAC) will be used for the space heating and cooling in entire building, including residential dwelling units, hotel guest rooms, community facilities and retail units. The heat pump units are made by Bosch – Florida Heat Pump; size varies from LV009 – LV070.HPAC units will provide outdoor air through individual louvers to all hotel living space, retail and community facility space. An outdoor air intake fan in each residential dwelling unit will provide outdoor air to all living spaces, i.e. living rooms and bedrooms in compliance with 2014 NYC Mechanical Code.

   Four (4) gas-fired hot water boilers, made by LAARS Model MAGNATHERM Size 2500, will be provided in the roof mechanical room, for the building heating. These

boilers are high efficiency direct-venting type condensing boilers with flue pipes to outdoor. No chimney is required.

Two (2) double-cell cooling towers, made by Baltimore Air Coil, Series 1500 Model S15E-1285-7MN-2, will be installed on the building roof for the building cooling. Total nine (9) gas-fired direct-venting hot water heaters will be installed in mechanical rooms in 2nd, 3rd floors and the roof. All proposed hot water heaters are direct-venting condensing hot water heaters, made by Conquest Condensing Heater, models 130A-GCL, 130A-GCML, 100A-GCL & 130A-GCML. Each hot water heater will have direct-venting type flue pipe to outdoor at roof, and no chimney is required.

Each residential dwelling unit will have individual exhaust fan within the unit, to provide minimum code required exhaust air from toilet (50 cfm each) and kitchen (150 cfm). The exhaust louvers in each dwelling unit will have minimum 2 ft from any operational window or door serving the same dwelling unit, minimum 3 ft from any operational window or door serving an adjoining dwelling unit, and minimum 10 ft from any outdoor air intake opening, in compliance with 2014 NYC Mechanical Code.

Each residential dwelling unit will have one outdoor air fan within the unit, to supply 75 cfm outdoor fresh air to all living spaces, i.e. living rooms and bedrooms in compliance with 2014 NYC Mechanical Code. Outdoor air louvers at each floor corridor will provide minimum code required outdoor air via. HPAC units dedicated for residential corridors and lobby.

Each hotel guest room will have an outdoor air intake louver (6x6) within the room, to provide minimum code required outdoor fresh air (30 cfm), drawn by a heat pump air conditioning unit, for all living spaces, i.e. living rooms and bedrooms in compliance with 2014 NYC Mechanical Code. All hotel public corridors in guest room floors will have dedicated louvers for minimum outdoor fresh air, drawn by heat pump units serving the corridors.

A gas-fired rooftop AC unit (AC-1), located on 1st floor roof, will supply tempered outdoor air to the hotel lobby, dining areas, meeting rooms, gym, swimming pool and other hotel accessory areas in cellar and sub-cellar, in compliance with 2014 NYC Mechanical Code.

June 5, 2015

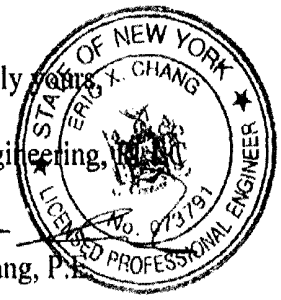
Re: Air Quality and Noise Remedial Action Plan
134-37 35th Avenue, Flushing, NY Block 4949 Lot 31
DOB No. 420892323, OER No. 14EHAN384Q

12" height architectural louvers will be provided above all windows in retail and community facility space in cellar and 2nd floor, and blanked off for future tenant outdoor air connection. Toilet exhaust fans will be installed and providing 50 cfm per toilet fixture for all toilets in retail and community facility units.

Compliance with Mechanical Code: Providing outdoor fresh air to commercial spaces and common areas such as lobbies and corridors in accordance with 2014 NYC Mechanical Code.

Very truly yours,

EJC Engineering, PLLC



Eric Chang, P.E.

Restoration & Conservation LLC

Dr. James M. Cervino
(917) 620-5287

Transportation & Disposal of Non-Hazardous Contaminated Soils From 134-37 35th Avenue Flushing, Queens, New York OER Project Number 14EHAN384Q; E-Designation E-246

Prepared By:
Dr. James M. Cervino
RESTORATION LLC Marine & Environmental Specialist

OER Project Number 14EHAN384Q; E-Designation E-246

Restoration & Conservation LLC (RCAG) is pleased to submit this proposal for Environmental Consulting Services as detailed below:

August 8th, 2015 : *REVISED SCOPE OF WORK:*

The scope of work involves the tasks associated with an approved RAP Plan conducted by FPM Group 909 Marconi Avenue Ronkonkoma, New York 11779. This next phase involves the following scope of work:

1) Soil Testing Characterization, see below

2) Off Site Disposal Plan, see below

3) Facility acceptance letters of clean vs. contaminated soils, see below

4) Daily Reporting & Air CAMP monitoring and PID-VOC meter see below

5) Reporting and daily tracking of waste hauling manifests for soils being hauled and disposed to off site, to approved facilities as per the OER & NYSDEC compliance specification. see below (45/hr).

6) Remedial Investigation Report & Closure Report to OER

7) Traffic Control (flag man) and Street Sweeping will be supplied by the excavating contractor. This is mandatory in the OER FPM APPROVED RAP.

8) Your engineer must apply for a NYSDEC SPDES permit as per 1.90 page 51.

9) On Page 51 1.10 FPM RAP includes a SWPP Storm water pollution plan and site work implementation including hay-bales, silt curtains, and de-contamination exclusion zone on site. The site needs a truck wash station that will need to be implemented on site with running water. Pay supply cost for materials: haybales, silt curtains nails, stakes and site mini bobcat use and operator. 3 days labor installation charge =2,800.

10) If a vapor barrier is needed, then the installation of this material and engineer sign off is an extra. The foundation contractor knows how to install this. Restoration LLC can get this signed off for an extra cost. This will only be needed if the bottom layer has an oil spill or the final end point samples do not meet Unrestricted NYSDEC track one.

11) Meetings at OER office, site visits and NYSDEC meetings= FREE NO TIME CHARGED

Restoration & Conservation Environmental LLC
Address: 9-22 119st College Point: New York 11356
Contact: (917) 620-5287: OSHA HAZMAT SPECIALIST, Marine & Environmental Specialist

Task #1 - Site Characterization, Soil Classification and Investigation:

This task involves conducting Soil Testing & Characterization of soils currently present at the site for the purpose of Off-Site Disposal. RCAG will perform soil waste characterization sampling meeting the requirements of the selected disposal facilities. As part of this task, RCAG assumes a proposed construction depth of approximately five (30) feet below existing grade surface.

**NO Petroleum contamination was not found during my investigation. If petrol spill or strong odor is found during Restoration LLC working at the site, then a separate proposal will be created for environmental reporting, along with a NYSDEC submittal will be presented to Century. A clean up plan will also be presented at this time.

For this purposes of this scope, RCAG will assume a total of six (15) waste characterization samples for disposal at NYSDEC 375 Track 1 analysis. Separate end-point samples when at the terminal depth will be conducted at a later time.

Top Layer 0-3ft

NJDEP Waste Classification samples: PAY COST TO LAB

NYSDEC 375 Track 1 for 3-30ft: PAY COST TO LAB

Restoration will assist Century Construction LLC with on site management and off site disposal. RCAG will provide a list of recommended soil disposal facilities to facilitate with this sampling task. Due to already visually characterizing the recognized environmental concerns; we will be able to excavate the layers of PAH impacted, and historic fill soils, and load them onto trucks to be taken for off site disposal. Some of the "native soils" will be slated for beneficial reused, and taken off site to a facility or program that is using native clean NYSDEC 375 unrestricted use soils, remaining soils will be confirmed with end point sampling to meet NYSDEC Track 1 & 2 SCOs.

Sample Collection

Daily Monitoring & Field Work

1) Principal and Senior Scientist ~~$90.00~~ per hour FREE
2) Field Assistant $45.00 per hour
3) Equipment and Mobilization (FREE)
4) Comparative Excel Sheets and Comparative Analysis (Review Data+ Time=FREE)

Task #1 Services - Soil Classification for Off-Site Disposal

3	NYSDEC 375 Analysis Track One END POINT	1 Comp 1-VOC	NYSDEC 375 (a) 15 Samples	PAY LAB DIRECT 500/sample
4	Remedial Investigation Report Required by OER			**5,000**

Task #2 Onsite soil removal and compliance

Controlled Environmental Oversight & Off Site Disposal Activities

ITEM #	DESCRIPTION	RATE	CHARGE
5	Daily Field Assistant Tracking Manifesting (each truck signed in and out). DAILY CAMP MONITOR & EQUIPMENT INCLUDING DUST METER REPORTING We will follow the approved RAP plan to implement the number of dust meters at different parameters of the property.		**45/hr** **PAY DIRECT FOR RENTAL USE**
6	Obtain Acceptance Letters & Waste Class Disposal Plan for OER & Disposal Sites (with drawings)		1,200
7	Closure Report for OER		5,000

IMPORTANT:

Contaminated Soil Disposal sites require 1 composite sample for every 800cyd of soils under NJDEP Waste Classification standards. Two composite samples,

and two VOC samples were collected. We will be approved for the first 1,600 cy only. If we generate more than 1,600 cy then additional samples will be needed for every 800cy (1-composite +VOC).

Clean Fill Disposal Facilities in Long Island will require a sample frequency of one test for every 1,000 cy of soils disposed for Long Island Disposal NYSDEC 360 Facilities.

RCAG will collect one (1) waste characterization sample per 1,200 tons (800cy) of soil proposed for off-site disposal. RCAG' Licensed Environmental Specialist shall perform all sampling and will collect the environmental samples. Each sample collected will be relinquished under chain-of-custody protocol to an accredited laboratory and will be analyzed for total petroleum hydrocarbons (TPH) via United States Environmental Protection Agency (USEPA Method 8105M, total volatile organics (VOCs) via USEPA Method 8260B, petroleum aromatic hydrocarbons (PAHs) via USEPA Method 8270, total Resource Conservation Recovery Act (RCRA) metals via USEPA Method 6010, Toxicity Characteristic Leaching Procedure (TCLP) RCRA metals via USEPA Method 1311/6010, ignitability via USEPA Method 1010A, corrosivity via USEPA Method 9040C, reactivitity via USEPA Method SW846, and polychlorinated biphenyls (PCBs) via USEPA Method 8082. Upon receipt of all waste characterization-sampling results, RCAG will complete and submit all necessary paperwork to disposal facilities on behalf of Double Walker Realty and/or the selected subcontractor(s). Standard timeframe from sampling to facility acceptance is ten (10) business days.

NOTE: IN CASE OF HAZ OR PETROL FINDINGS A NEW AGREEMENT WILL BE DEVISED. Additional Services Proposal - Soil Classification for Off-Site Petrol Spill and or/ HAZ Waste Disposal will be discussed.

IF THE NYSDEC OR OER REQUEST ADDITIONAL GROUND WATER SAMPLING, INVESTIGATION OR DRILLING INTO GROUND WATER THIS IS ALSO NOT INCLUDED

STANDARD TERMS AND CONDITIONS:

1. Work will be scheduled upon acceptance of this agreement. **Work already started.**
2. Payment shall be based on the costs stated above, plus reimbursable expenses. Payments shall be made upon submittal of RCAG invoice.
3. Meetings, which require the attendance of a Project Manager, will be billed and are not complementary. Phone call discussions and **conference calls are FREE.**
   Any additional testing and/or analysis will be charged as per RCAG standard rates. RUSH analysis could be provided - a surcharge will be applied.
   Unless notice is made of any discrepancies for the total amount due within five (5) days of receipt of invoice, all items will be deemed as acceptable.
   The client or building/land owner must provide free and clear access to the work area(s).
   The client must provide an advance notice, 24-48 hours prior to project start,

Restoration & Conservation Environmental LLC
Address: 9-22 119st College Point: New York 11356
Contact: (917) 620-5287: OSHA HAZMAT SPECIALIST. Marine & Environmental Specialist

The client agrees to indemnify, exonerate, and hold harmless RCAG against the risk of loss, damage, or expense, by reason of suits, claims, demands, judgments, and causes of action for personal injury, death, or property damage arising out of or in any way in consequence of the performance of all work undertaken by RCAG, except that in no instance shall the client be held responsible for any liability claim, demand, or cause of action attributable solely to the negligence of RCAG.

Neither RCAG, nor any of its employees, agents or sub-contractors shall be liable for any loss or damages arising out of RCAG's performance or nonperformance, except by way of negligence or breach of contract, or otherwise, in any amount greater than the amount billed to the customer for the work leading to the claim of the customer. Said remedy shall be the sole and exclusive remedy against RCAG arising out of its work.
In no event shall RCAG, its employees, agents or sub-contractors be responsible for consequential or special damages of any kind or in any amount.

Results pertain only to items analyzed. Information supplied by client is assumed to be correct. This information may be used on reports and in calculations and RCAG is not responsible for the accuracy of this information.
RCAG's insurance coverage meets and exceeds the industry standard. RCAG maintains Professional, General Liability and Pollution Liability insurance coverage of $2,000,000.00.

Respectfully,

AGREED AND ACCEPTED:

Restoration & Conservation Environmental LLC (RCAG)

CERTIFICATION
I, Dr. James M. Cervino, am a Qualified Environmental Professional as defined in §43-140. I have primary direct responsibility for implementation of this remedial action.

RE: 134-37 35th Ave.; BIS# 420892323

Your application number is 13843. Use this number to reference all future correspondence for this site.

Your Plan Review request has been received and is ready to review. You will be contacted by a member of the Forestry staff should changes need to be made to your plan. Upon the completion of the review you will receive 2 approved sealed copies of your site plan in the mail. Should you encounter issues with existing trees during construction you must contact the borough forestry office immediately.

PLEASE NOTE: **If your plans involve any work around existing trees or tree removals, you must coordinate for associated permits from the proper Borough Forestry office two weeks prior to the start of demolition and/or construction. If your application impacts any existing City tree(s), tree preservation and protection is required to be properly installed immediately & remain throughout the duration of this project. Be aware NYC Parks Inspector's require access to trees within the city right of way. Regulated activity requiring a NYC Parks Forestry permit can include sidewalk, curb, utility installation etc. including site access. Failure to comply may result in a summons, fine and/or restitution.**

This is NOT a permit to perform any tree work or work adjacent to a tree.

Thank you for contacting NYC Parks

Re: Four Points Sheraton / Luxury Condo Development
134-37 35th Avenue, Flushing NY 11354

Dear CSC EB-5 Unit Officer:

Century Construction Group was hired by Farrington Realty LLC as the general contractor on the above-referenced Project. I am the president of Century Construction Group and have worked in the construction industry for twenty years and have supervised, managed and/or constructed. My experience includes hospitality, commercial interior and residential projects. I have constructed similar projects to the proposed Four Points Sheraton in term of size, budgets and timeline. These projects include the Marriot Fairfield Inn, the Leavitt Manor Condominium and the Farrington Estate, all located in Flushing. I have been asked by Farrington Realty, LLC to provide you with some information concerning the Project in connection with certain funding obtained by EB-5.

Century Construction Group has advised that construction estimate cost would be [redacted] (b)(4) The construction timeline is 30 months. This mixed used building consists of luxury condominium, hotel, commercial retail, community facility/medical offices, and parking garage. The Project will include 100 luxury condominium units and a Four Points Sheraton hotel that will provide 210 keys. The demolition stage of the Project has been completed and excavation is scheduled to begin in September 2015. I attest that the construction budgets and timeline are estimated based on established industry standards

Very Truly Yours,

George Xu

D. Continuation, if needed, to provide information for additional management companies/agencies, regional center principals, agents, individuals or entities who are or will be involved in the management, oversight, and administration of the regional center.)

Not applicable - Please find attached for reference the Regional Center's previous approval letter of May 14, 2015. Reference can also be made to the following USCIS receipt numbers: RCW1420251818/ID1420251818

Part 3. Information About the Regional Center (Continued)

Note: If extra space is needed to complete any item, attach a continuation sheet, indicate the item number, and provide the response.

1a. Describe the structure, ownership and control of the regional center entity.

Please find attached for reference the Regional Center's previous approval letter of May 14, 2015. Reference can also be made to the following USCIS receipt numbers: RCW1420251818/ID1420251818

b. Date the Regional Center was established(mm/dd/yyyy): 03/25/2014

c. Organization Structure for the Regional Center:

- ☐ **1.** Agency of a U.S. State or Territory (identify) _____
- ☐ **2.** Corporation
- ☐ **3.** Partnership (including Limited Partnership)
- ☒ **4.** Limited Liability Company (LLC)
- ☐ **5.** Other (Explain) _____

2. Has this regional center's designation ever been formally terminated by USCIS, or has the regional center ever filed a Form I-924 or regional center proposal or amendment that was denied?

☒ No ☐ Yes - Attach a copy of the adverse decision, with an explanation, the date of decision, and case number, if any.

3. Describe the geographic area of the regional center. **Note:** This area must be contiguous. Provide a map of the geographic area.

Please find attached for reference the Regional Center's previous approval letter of May 14, 2015. Reference can also be made to the following USCIS receipt numbers: RCW1420251818/ID1420251818

4. Describe the regional center's administration, oversight, and management functions that are or will be in place to monitor all EB-5 capital investment activities and the allocation of the resulting jobs created or maintained under the sponsorship of the regional center.

Please find attached for reference the Regional Center's previous approval letter of May 14, 2015. Reference can also be made to the following USCIS receipt numbers: RCW1420251818/ID1420251818

Part 3. Information About the Regional Center (Continued)

5. Describe the past, current, and future promotional activities for the regional center. Include a description of the budget for this activity, along with evidence of the funds committed to the regional center for promotional activities. Submit a plan of operation for the regional center that addresses how EB-5 investors will be recruited, the methods by which the capital investment opportunities will be offered to the investors, and how they will subscribe or commit to the investment interest.

Please find attached for reference the Regional Center's previous approval letter of May 14, 2015. Reference can also be made to the following USCIS receipt numbers: RCW1420251818/ID1420251818

6. Describe whether and how the regional center is engaged in supporting a due diligence screening of its alien investor's lawful source of capital and the alien investor's ability to fully invest the requisite amount of capital. Also, describe the regional center's prospective plans in this regard if they differ from past practice.

Please find attached for reference the Regional Center's previous approval letter of May 14, 2015. Reference can also be made to the following USCIS receipt numbers: RCW1420251818/ID1420251818

7. Identify each industry that has or will be the focus of EB-5 capital investments sponsored through the regional center.

Industry Category Title: Nonresidential Building Construction NAICS Code for the Industry Category: 2 3 6 2 _ _	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes
Industry Category Title: Furniture and Home Furnishing Mercha NAICS Code for the Industry Category: 4 2 3 2 _ _	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes
Industry Category Title: Hotel and Motel NAICS Code for the Industry Category: 7 2 2 5 1 _	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes

Part 3. Information About the Regional Center (Continued)

8a. Describe and document the current and/or prospective structure of ownership and control of the commercial entities in which the EB-5 alien investors have or will make their capital investments.

Please see the Operating Agreement attached in the Exhibits.

b. Date commercial enterprise established, if any (mm/dd/yyyy): 08/07/2015

c. Organization Structure for commercial enterprise:

- ☐ **1.** Corporation
- ☐ **2.** Partnership (including Limited Partnership)
- ☒ **3.** Limited Liability Company (LLC)
- ☐ **4.** Other (Explain) _____

d. Has or will the Regional Center or any of its principals or agents have an equity stake in the commercial enterprise?

☒ No ☐ Yes - Attach an explanation and documentation that outlines when and under what circumstances these remittances will be paid.

e. Has or will the Regional Center or any of its principals or agents receive fees, profits, surcharges, or other like remittances through EB-5 capital investment activities from this commercial enterprise, beyond the minimum capital investment threshold required of the EB-5 alien entrepreneurs?

☐ No ☒ Yes - Attach an explanation and documentation that outlines when and under what circumstances these remittances will be paid.

Part 4. Applicant Signature

RE: Request for an Amendment to an Approved Regional Center Application, Form I-924, Exemplar Filing for a New Project (QB Ventures EB5 Capital, LLC) and Form I-526 Petition
Petitioner: Century New York City Regional Center, LLC / RCW1420251818
Project: QB Ventures EB5 Capital, LLC

Dear Adjudicating Officer,

Attached please find request for an amendment to Century New York City Regional Center, LLC's previously approved RC petition, along with an Exemplar Form I-526.

Attached also is our G-28 and supporting documentation, indexed and tabbed.

Should you require any additional document or clarification, please do not hesitate to contact us, we will be delighted to oblige.

Sincerely,

Mona Shah & Associates

Omar Al Hakim, Esq.

Part 3. Information About the Regional Center

Question 7. Identify each industry that has or will be the focus of EB-5 capital investments sponsored through the regional center.

Industry Category Title	NAICS Code	Economic Analysis & Business Plan?
Food Services and drinking places	72251	Yes
Real Estate	53112/5313	Yes
Other government enterprises	921	Yes
Architectural, engineering and related services	5413	Yes
Insurance	5241	Yes
Accounting tax preparation, bookkeeping services	5412	Yes
Legal Services	5411	Yes
Monetary authorities and depository credit intermediation	5222	Yes
Other miscellaneous professional and technical services	5419	Yes

Part 3. Information About the Regional Center

Question 8e. Has or will the Regional Center or any of its principals or agents receive fees, profits, surcharges, or other like remittances through EB-5 capital investment activities from this commercial enterprise, beyond the minimum capital investment threshold required of the EB-5 alien entrepreneurs?

The Regional Center will charge each investor a (b)(4) administrative fee. Please see the Offering Documents at Exhibit 5 for more details.

Application:	Form I-924, Application for Regional Center under the Immigrant Investor Pilot Program
Applicant(s):	Century New York City Regional Center
Re:	Initial Regional Center Designation Century New York City Regional Center RCW1420251818/ID1420251818

This notice is in reference to the Form I-924, Application for Regional Center Under the Immigrant Investor Pilot Program that was filed by the applicant with the U.S. Citizenship and Immigration Services ("USCIS") on July 21, 2014. The Form I-924 application was filed to request approval of initial regional center designation under the Immigrant Investor Program. The Immigrant Investor Program was established under § 610 of the Department of Commerce, Justice and State, the Judiciary, and Related Agencies Appropriations Act of 1993 (Pub. L. 102-395, Oct. 6, 1992, 106 Stat. 1874).

I. Executive Summary of Adjudication

Effective the date of this notice, USCIS approves the Form I-924 request to designate Century New York City Regional Center as a qualifying participant in the Immigrant Investor Program.

II. Regional Center Designation

USCIS approves the applicant's request to focus, promote economic growth, and offer capital investment opportunities in the following geographic area and industry categories:

A. Geographic Area

State	Counties/Cities
New York	Queens, New York, Bronx County, Richmond County, Westchester County, and Nassau County

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the geographic area referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

B. Industry Categories

Industry Category	NAICS code
Nonresidential Building Construction	2362
Furniture and Home Furnishing Merchant Wholesalers	4232
Hotel and Motel (including Casino)	72251
Restaurants and Other Eating Places	72251
Lessors of Nonresidential Buildings (Except Miniwarehouses)	53112
Architectural, Engineering and Related Services	5413
Insurance Carriers	5241
Accounting Tax Preparation, Bookkeeping Services	5412
Legal Services	5411
Monetary Authorities and Depository Credit Intermediation	5222
Other miscellaneous professional and technical services	5419

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the industry categories referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

III. Job Creation

USCIS approves the geographic area and industry categories noted above based on the economic impact analysis presented and reviewed in conjunction with the adjudication of this regional center proposal.

This hypothetical project does not have the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998), and therefore, USCIS's approval of the hypothetical job creation estimates presented in the Form I-924 will not be accorded deference and may not be relied upon by an individual investor when filing the Form I-526. The business plan and job creation estimates will receive a de novo review by USCIS when an individual investor files Form I-526. Once an actual project is adjudicated upon the filing of the initial Form I-526, USCIS will give deference to subsequent Forms I-526 when the critical assumptions remain materially unchanged from the initially-approved Form I-526.

When filing Form I-526, it will be the responsibility of the individual investor to submit a comprehensive, detailed and credible business plan, showing by a preponderance of the evidence that his or her investment in the new commercial enterprise will create not fewer than 10 full-time positions. If prior to filing a form I-829, the job creation estimated in the business plan submitted by the individual investor materially changes or will not be realized, then it will be the responsibility of the EB-5 investor to notify USCIS of an agreed upon methodology to allocate job creation among eligible investors.

IV. Guidelines for Filing Form I-526 Petitions

Each individual petition, in order to demonstrate that it is affiliated with the Century New York City Regional Center in conjunction with addressing all the requirements for an individual immigrant investor petition, shall also contain the following:

1. A copy of this regional center approval notice and designation letter including all subsequent amendment approval letters (if applicable).

2. An economic impact analysis which reflects a job creation methodology required at 8 CFR § 204.6 (j)(4)(iii) and shows how the capital investment by an individual immigrant investor will create not fewer than ten (10) indirect jobs for each immigrant investor.

3. A comprehensive, detailed and credible business plan for an actual project that contains the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998).

4. Legally executed organizational documents of the commercial enterprise.

Note: The project reviewed with this Form I-924 application is a hypothetical project. Organizational and transactional documents associated with the new commercial enterprise (NCE) submitted with this Form I-924 have not been reviewed to determine compliance with program requirements since these documents will receive de novo review in subsequent filings (e.g., an amended Form I-924 application with a Form I-526 exemplar or the first Form I-526 petition filed by an investor under the regional center project).

V. Designee's Responsibilities in the Operations of the Regional Center

As provided in 8 CFR § 204.6 (m)(6), to ensure that the regional center continues to meet the requirements of section 610(a) of the Appropriations Act, a regional center must provide USCIS with updated information to demonstrate the regional center is continuing to promote economic growth, improved regional productivity, job creation, and increased domestic capital investment in the approved geographic area. Such information must be submitted to USCIS on an annual basis or as otherwise requested by USCIS. The applicant must monitor all investment activities under the sponsorship of the regional center and to maintain records in order to provide the information required on the Form I-924A Supplement to Form I-924. Form I-924A, Supplement to Form I-924 Application is available in the "Forms" section on the USCIS website at www.uscis.gov.

Regional centers that remain designated for participation in the Immigrant Investor Program as of September 30th of a calendar year are required to file Form I-924A Supplement in that year. The Form I-924A Supplement with the required supporting documentation must be filed on or before December 29th of the same calendar year.

The failure to timely file a Form I-924A Supplement for each fiscal year in which the regional center has been designated for participation in the Immigrant Investor Program will result in the issuance of an intent to terminate the participation of the regional center in the Immigrant Investor Program, which may ultimately result in the termination of the designation of the regional center.

The regional center designation is non-transferable.

VI. Legal Notice

This approval and designation of a Regional Center under the Immigrant Investor Program does not constitute or imply an endorsement or recommendation by USCIS, the United States Government or any instrumentality thereof, of the investment opportunities, projects or other business activities related to or undertaken by such Regional Center. Except as expressly set forth in this approval and designation, USCIS has not reviewed any information provided in connection with or otherwise related to the Regional Center for compliance with relevant securities laws or any other laws unrelated to eligibility for designation as a Regional Center. Accordingly USCIS makes no determination or representation whatsoever regarding the compliance of either the Regional Center or associated New Commercial Enterprises with such laws.

Each Regional Center designated by USCIS must monitor and oversee all investment offerings and activities associated with, through or under the sponsorship of the Regional Center. The failure of an associated New Commercial Enterprise to comply with all laws and regulations related to such investment offerings and activities may result in the issuance by USCIS of a notice of intent to terminate the Regional Center designation.

If the applicant has any questions concerning the regional center designation under the Immigrant Investor Program, please contact the USCIS by email at USCIS.ImmigrantInvestorProgram@uscis.dhs.gov.

Sincerely,

Nicholas Colucci
Chief, Immigrant Investor Program

RE: I-526 Immigrant Petition by Alien Entrepreneur: **John Doe**
New Commercial Enterprise: **QB Ventures EB5 Capital, LLC**
Regional Center: **Century New York City Regional Center**

Dear Adjudicating Officer:

This letter is submitted in support of an exemplar I-526 petition with the Century New York City Regional Center, LLC, under the regulations at 8 CFR §204.6, for Petitioner **John Doe**. Materials specific to the I-526 petitioner's investment and source of funds are organized under separate cover.

The Offering Package provided to investors included all of the offering and organizational documents, project business plan, economic analysis, and voluminous supporting documents necessary for the investors' I-526 petitions. The Offering Package contains a detailed Table of Contents for all of those documents and divides offering materials into 17 numbered sections. Exhibits 1 through 5 consist of documents relating to the Regional Center, New Commercial Enterprise and placement of capital "at risk". Exhibit 6 comprises the economic report, while

exhibits 7 through 16 encompass supporting documents relating to the *Matter of Ho* Roadmap, beginning with the comprehensive Business Plan. For ease of reference, a detailed exhibit list is attached. This is the only valid version of the offering documents, and no other version should be submitted by any investor.

(b)(4)

In summary, each investor in the Project seeks classification as an alien entrepreneur based on his or her $500,000 capital investment in the *Holiday Inn Express & Suites Project.* The Project will spend a maximum [redacted] contributed from EB-5 funds to finance the construction, development and operations of a hotel, located at 64-06 Queens Blvd, Woodside, NY 11377. The hotel will feature 135 rooms, including a breakfast room, a fitness room, business center, market pantry, outdoor lounge, and vending areas. The project is estimated to break ground no later than October 2015, and will open around mid-2018.

In accordance with 8 C.F.R. § 204.6(m)(7), this petition is accompanied by supporting evidence establishing the investor's qualifying investment into a new commercial enterprise within an approved regional center and that such investment will create jobs directly and indirectly through this enterprise. Evidence that the investor's funds for capital investment are derived from a lawful source as required by 8 C.F.R. § 204.6(j)(3) are provided separately from the project materials.

I. NEW COMMERCIAL ENTERPRISE AND CREDIBLE PROJECT

Holiday Inn Express & Suites Project

(b)(4)

The investor has made an at-risk capital investment of [redacted] in cash into the QB Ventures EB-5 Capital, LLC (the "NCE"). $500,000 will be used for the investment, and [redacted] is the Administrative Fee. Century New York City Regional Center, LLC ("CNYRC") is the regional center. Please see documents relevant to the regional center at **Exhibit 1.** (b)(4)

The Manager of QB Ventures EB-5 Capital, LLC is Century New York City Regional Center, LLC. The New Commercial Enterprise, QB Ventures EB-5 Capital, LLC, is a newly formed entity for the purpose of raising investment capital for the development of the Project. As it is a for-profit limited partnership that was established after November 29, 1990, QB Ventures EB-5 Capital, LLC is classified as a "new" commercial enterprise as defined in 8 C.F.R. § 204.6(e).

Queens Blvd Ventures, LLC is the job creating entity ("JCE"). The NCE, QB Ventures EB-5 Capital, LLC, will make a loan to the JCE to provide EB-5 investment capital for the development of the Project and for the job creation. The Project will be developed by a real estate development company, Midtown Properties Group, which is an affiliate company of the JCE.

There are a maximum of 16 Limited Member Units, one of which has been purchased by the investor. Please refer to a copy of the Subscription and Operating Agreements at **Exhibit 5** for additional details. A copy of the Private Placement Memorandum and Escrow Agreement are also included at **Exhibit 5**.

As described in the comprehensive business plan at **Exhibit 8**, the total project cost is estimated to be [redacted] For the capital stack, the EB-5 funds will be [redacted] the bank loan will be [redacted] and the developer's equity contribution will be [redacted] The hotel will feature 135 rooms, including a breakfast room, a fitness room, business center, market pantry, outdoor lounge, and vending areas. (b)(4)

The construction of the Project will take approximately 27 months to complete, and will break ground no later than October 2015. Please refer to the submitted construction timeline at **Exhibit 10**. The construction budget was estimated by Century Construction Group, a qualified, unaffiliated, third-party general contractor, which offers the experience of having constructed similar projects in size, nature and scope. The construction budget was based on their previous experience of projects similar in size and nature and scope for the Project. The construction timeline was derived from figures and statistics; the detailed plans and specifications drawn up by the architect; spot checks on the numbers developed, and the comparable analysis method of similar hotel projects in a similar location.

The project has made great efforts to commence the Project. The Developer has entered into formal contract with General Contractor Century Construction Group, Architect and Engineer Raymond Chan Architect. Please refer to **Exhibit 10**, **Exhibit 11**. It has purchased the land upon which it will construct the hotel. Please see the deed for the land at **Exhibit 13**. It has researched and explored the necessary permits, zoning and environmental regulations, licensing requirements, and other restrictions concerning the Project. Please refer to the permits at **Exhibit 15**. It has entered into the franchise agreement with Holiday Hospitality Franchising, LLC. Please see the executed franchise agreement at **Exhibit 7**.

(b)(4)

The NCE will make the Loan to the Borrower at a fixed rate of [redacted] per annum. The EB-5 funds will fund the construction cost of the Project. EB-5 Investors, as Members, will be entitled to a return of up to [redacted] per annum if the NCE generates sufficient revenues. There is no guarantee that the EB-5 Investors will receive a return on their investment or that their principal will be repaid. Copies of the loan agreement and promissory note are included at **Exhibit 3**.

***Matter of Ho* Roadmap- All contained in at EXHIBITS 8 THROUGH 16**

- The Comprehensive Business Plan – with the description of the business, its products and/or services, and its objectives (**Exhibit 8**)
- Appraisal Report prepared by HVS, dated August 17, 2015. This document lays out the market analysis, the names of competing businesses, their relative strengths and weaknesses, a comparison of the competition's products and pricing structures, and a description of the target market/prospective customers of the new commercial enterprise along the reasonable analysis method used to derive the development cost estimates as well as to show the prospective market value of the project (**Exhibit 9**)
- Documents relating to construction documents, including the construction timeline, fully executed AIA document with general contractor, certificate of liability insurance and evidence of commercial property insurance (**Exhibit 10**)
- Documents relating to architectural documents, including fully executed document with architect, approved building plans, architecture renderings, and architecture and site plans (**Exhibit 11**)
- Deed (**Exhibit 13**)
- Franchise Agreement between Holiday Hospitality Franchising, LLC. and Queens Blvd Ventures, LLC (**Exhibit 7**)
- Independent Third Party Analysis (**Exhibit 14**)
- Permits obtained by the project (**Exhibit 15**)
- Project Financials (**Exhibit 16**)

II. CREATION OF DIRECT AND INDIRECT EMPLOYMENT POSITIONS

(b)(4)

The new commercial enterprise is affiliated with an approved regional center in this project.

Based on the EB-5 Economic Impact Report by Evans, Carroll & Associates, Inc., Holiday Inn Express & Suites Project will create [redacted] permanent new jobs, including [redacted] jobs from construction activity and [redacted] jobs from the hotel operation.

Table A. Summary of Employment and Revenue Estimates

Activity	Exp/Rev mil cur $	Exp/Rev mil 2010 $	RIMS II Mult	Total Jobs	Direct Jobs
Hard construction costs	[redacted]	[redacted]	13.2149	[redacted]	[redacted]
Architect & Engineering Svcs			11.9014		
Purchase of FF&E *			5.6974		
Hotel Operations			15.0799		
Total					

All figures based on unrounded numbers

* Indirect and induced jobs only

The [redacted] jobs will support a maximum EB-5 capital raise of [redacted] The project intends to raise [redacted] from [redacted] EB-5 investors. The full Economic and Job Creation Impacts Report is included at **Exhibit 6**.

Jobs will be allocated to each investor in the order in which the investment funds were received into the project.

(b)(4)

III. MANAGEMENT OF THE NEW COMMERCIAL ENTERPRISE

Each investor is a limited member in QB Ventures EB-5 Capital, LLC, a New York Limited Liability Company. Pursuant to 8 C.F.R. § 204.6(j)(5), a limited member is considered sufficiently engaged in the management of the new commercial enterprise through policy formulation.

Investors in this project are sufficiently engaged in the management of the new commercial enterprise through policy formulation. Please see the ***Management and Voting Rights Section*** of Private Placement Memorandum and other Offering Documents at **Exhibit 5**. Therefore, the investors satisfy immigrant investor requirements.

IV. CAPITAL INVESTMENT

The Property is located at 64-06 Queens Blvd., Woodside, NY. The project is located at Census tract 245 in Queens County and qualifies as a "targeted employment area". Attached at **Exhibit 4** is the most updated TEA confirmation letter dated August 20, 2015, issued by New York State Department of Economic Development. The location of the Project therefore falls squarely within the definition of "TEA" provided in 8 C.F.R. §204.6(e).

The investor made an at-risk capital investment of $500,000 into QB Ventures EB-5 Capital, LLC. Evidence that the funds were deposited into specific escrow account designated for QB Ventures EB-5 Capital, LLC's bank account is provided under separate cover with the investor-specific source of funds exhibits.

In compliance with the regulations and governing precedent decisions, the full amount of the capital contribution has been invested solely in QB Ventures EB-5 Capital, LLC. $500,000 of the funds will be released for purposes of financing the construction, development and operation of the property as described in the comprehensive business plan at **Exhibit 8**. No portion of an investor's contribution has been or will be applied towards legal service fees or administrative fee, marketing costs or interest payment of QB Ventures EB-5 Capital, LLC or Century New York City Regional Center, LLC, which are paid from the separate (b)(4) administrative fee. In addition, legal fees for pursuit of immigration benefits are paid by each investor outside of the $500,000 investment.

The investor's investment is placed in an active commercial enterprise in the form of cash. There are no loans, promissory notes, mortgage agreements or other forms of borrowing relating to any of his or her capital contribution. The investor is thus subject to the inherent risks associated with operating a new commercial enterprise. Should the business not perform well, the investor risks losing part or all of the petitioner's investment.

V. CONCLUSION

For these reasons and based on the supporting documentation, the investor meets all the requirements to qualify as an EB-5 alien entrepreneur under the Immigrant Investor Pilot Program, pursuant to INA § 203(b)(5) and 8 C.F.R. §204.6. Furthermore, this investment in the United States will result in job creation that will benefit the regional and/or national economies.

We respectfully request your prompt approval of the enclosed I-526 Petition.

Sincerely,
Mona Shah & Associates

Mona Shah, Esq.

In the Matter of:

	}
I-924 EXEMPLAR FILING	}
Pursuant to 8 CFR ss.204.6	}
Petitioner: Century New York City Regional Center	}
Project: QB Ventures EB5 Capital, LLC	}

REQUEST FOR AN AMENDMENT TO AN APPROVED REGIONAL CENTER APPLICATION, FORM I-924, EXEMPLAR FILING FOR A NEW PROJECT (QB Ventures EB5 Capital, LLC) AND FORM I-526 PETITION

ATTORNEY MEMORANDUM

This Instant Request for an Amendment is filed to seek:

(1) A preliminary determination of an exemplar Form I-526 – *QB Ventures EB5 Capital, LLC*

This letter and the annexed supporting documentation constitute a request for the approval of an exemplar Form I-526, filed in accordance with 8 CFR 204.6., in order for

USCIS to determine if the documentation is EB-5 compliant and thus facilitate adjudication of an actual but identical Form I-526 petition, if the evidence of record otherwise establishes EB-5 eligibility.

Attached is a detailed exhibit list covering all the supporting documents; the exhibits have been tabbed for your reference.

I. Preliminary:

The petitioning regional center is named *Century New York City Regional Center*. The company was incorporated on March 25, 2014. Please see company formation documents, exhibited at **Exhibit 2.**

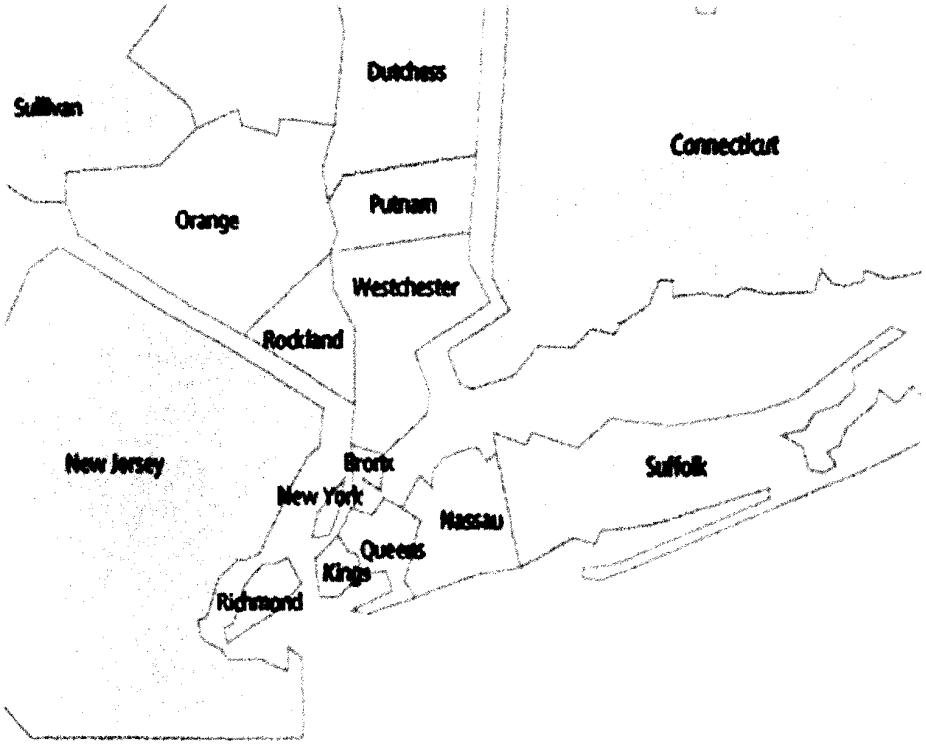
The Century New York City Regional Center, LLC (hereafter "CNYC") seeks approval of an exemplar Form I-526, filed in accordance with 8 CFR 204.6., in order for USCIS to determine if the documentation is EB-5 compliant and thus facilitate adjudication of an actual but identical Form I-526 petition, if the evidence of record otherwise establishes EB-5 eligibility.

II. Prior Approval

CNYC was approved on March 14, 2015. Please see approval letter **at Exhibit 1.**

III. Regional Center Geographical Region and TEA Designation

The geographical area for CNYC has not changed. It continues to comprise the New York counties of Queens County, New York County, Bronx County, Richmond County, Westchester County and Nassau County. Below is a map of the geographical area.



The Project is located at 64-06 Queens Blvd, Woodside, New York 11377. This is a designated targeted employment area (TEA), as per 8CFR 204.6 and thus qualified to accept an investment of $500,000.00. Please see attached **Exhibit 4**, TEA confirmation letter issued by the Empire State Development.

III. Industry Sectors Requested

The industry sectors have not changed. Please see the North American Industry Classification System (NAICS) code listed below:

Queens Blvd Ventures, LLC developments continue to encompass the following industries:

North American Industry Classification System (NAICS) codes are listed as follows:

Construction Hard Costs

- Construction (Building & Site) – 2362/23622
- Wholesale Trade (FF&E) – 42/4232

- Real Estate – 53112/5313

Financing & Soft Costs

- Other government enterprises – 921
- Architectural, engineering and related services – 5413
- Insurance - 5241
- Accounting tax preparation, bookkeeping services – 5412
- Legal Services – 5411
- Monetary authorities and depository credit intermediation – 5222
- Other miscellaneous professional and technical services – 5419

IV. Brief Project Description (b)(4)

The Project will provide funding to construct and operate a mix-use building which consists of a 135-room and suites hotel, including a breakfast room, a fitness room, business center, market pantry, outdoor lounge, and vending areas. The Project is looking to raise US[ ] from[ ] investors through EB5 investment.

Attached at **Exhibit 8** is a comprehensive business plan, compliant with *Matter of Ho*. CNYC is seeking approval of an exemplar Form I-526, filed in accordance with 8 CFR 204.6., in order for USCIS to determine if the documentation is EB-5 compliant and thus facilitate adjudication of an actual but identical Form I-526 petition, if the evidence of record otherwise establishes EB-5 eligibility. The business plan clearly describes how the project will promote economic growth through improved regional productivity, job creation, and increased domestic capital investment.

V. Promotion of Economic Growth

The New Commercial Enterprise (NCE) QB Ventures EB5 Capital, LLC is seeking to raise US$[ ] in investors' capital from [ ] investors through the EB-5 Immigrant Investor Program for the expansion plan into the seven counties in the state of New York.

Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment is not required if investment opportunities arise outside the geographic area referenced. (b)(4)

Under 8 CFR 204.6(g), the establishment of a new commercial enterprise may be used as the basis of a petition for classification as an alien entrepreneur by more than one investor, provided each petitioning investor has invested or is actively in the process of investing the required amount for the area in which the new commercial enterprise is principally doing business, and provided each individual investment results in the creation of at least ten (10) full-time positions for qualifying employees. The establishment of a new commercial enterprise may be used as the basis of a petition for classification as an alien entrepreneur even though there are several owners of the enterprise, including persons who are not seeking classification under Section 203(b)(5) of the Act and non-natural persons, both foreign and domestic, provided that the source(s) of all capital invested is identified and all invested capital has been derived by lawful means.

VI. Job Creation (b)(4)

Exhibited hereto at **Exhibit 6** is a *full* economic analysis by Dr. Michael K. Evans of Evans, Carroll & Associates, Inc, dated July 24, 2015. According to the Economic Impact Report, the Flushing Hotel will create [redacted] jobs, including [redacted] jobs from direct and indirect from construction, and [redacted] direct and indirect jobs from operation.

(b)(4)

Century New York City Regional Center take note of recent USCIS guidance which states: that the full-time employment requirement excludes jobs that are intermittent, temporary, seasonal or transient in nature [1] seen as intermittent, temporary, seasonal and transient rather than permanent.

The Project has developed a five year strategic business plan to increase sales and market share. The method of obtaining the funding would be through EB-5 program. The alternative financing plan is to obtain a bridge loan. The financial banking criteria and federally defined underwriting guidelines will be applied in determining the rate of the mortgage loan.

[1] Spencer Enterprises v. U.S., 229 F.Supp.2d 1025 (E.D. Cal. 2001)

The JCE will review each project under the RC that is seeking funding focusing on job creation, development potential, financial stability and exit plan. The Holiday Inn Express & Suites Project meets the JCE's assessment standards after conducting full due diligence studies.

VII. Investment Terms

Each EB-5 investor must execute the Private Placement Memorandum, the Operating Agreement, and the Subscription Agreement, all attached at **Exhibit 5.**

If the I-526 petition is denied or if the I-526 petition is approved but the EB-5 investor is denied at the consulate interview, Century New York City Regional Center will return the investor's capital contribution $500,000 and [redacted] administrative fee without interest. In addition, EB-5 Investors must pay an administrative fee of [redacted] which will be used to pay for a thorough review of the investor's personal questionnaire, background documents, commissions, finder's fees, to offset advertising costs and other administrative expenses. (b)(4)

The Subscription Agreement requires the investor to affirm that he or she is an accredited investor pursuant to Rule 506 of Regulation D under the Securities Act of 1933. By signing the Subscription Agreement, the EB-5 investor agrees to become a member pursuant to the particular LLC Operating Agreement and Subscription Agreement **Exhibit 6.** Immigrant investors may not file their I-526 petition until their cash investments are fully invested in the particular project. The investor deposits his investment capital directly to the account of the Project managing the particular project. EB-5 regulations and USCIS rulings require that the investment be at risk for at least five (5) years. However, the Project may, at its sole discretion, make distributions of profits and income during this time period.

In Conclusion:

The documentary evidence submitted complies with the regulatory requirements for approval of an exemplar Form I-526. Thank you for your consideration in this matter.

Respectfully Submitted:

Dated: September 18, 2015

Application:	Form I-924, Application for Regional Center under the Immigrant Investor Pilot Program
Applicant(s):	Century New York City Regional Center
Re:	Initial Regional Center Designation Century New York City Regional Center RCW1420251818/ID1420251818

This notice is in reference to the Form I-924, Application for Regional Center Under the Immigrant Investor Pilot Program that was filed by the applicant with the U.S. Citizenship and Immigration Services ("USCIS") on July 21, 2014. The Form I-924 application was filed to request approval of initial regional center designation under the Immigrant Investor Program. The Immigrant Investor Program was established under § 610 of the Department of Commerce, Justice and State, the Judiciary, and Related Agencies Appropriations Act of 1993 (Pub. L. 102-395, Oct. 6, 1992, 106 Stat. 1874).

I. Executive Summary of Adjudication

Effective the date of this notice, USCIS approves the Form I-924 request to designate Century New York City Regional Center as a qualifying participant in the Immigrant Investor Program.

II. Regional Center Designation

USCIS approves the applicant's request to focus, promote economic growth, and offer capital investment opportunities in the following geographic area and industry categories:

A. Geographic Area

State	Counties/Cities
New York	Queens, New York, Bronx County, Richmond County, Westchester County, and Nassau County

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the geographic area referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

B. Industry Categories

Industry Category	NAICS code
Nonresidential Building Construction	2362
Furniture and Home Furnishing Merchant Wholesalers	4232
Hotel and Motel (including Casino)	72251
Restaurants and Other Eating Places	72251
Lessors of Nonresidential Buildings (Except Miniwarehouses)	53112
Architectural, Engineering and Related Services	5413
Insurance Carriers	5241
Accounting Tax Preparation, Bookkeeping Services	5412
Legal Services	5411
Monetary Authorities and Depository Credit Intermediation	5222
Other miscellaneous professional and technical services	5419

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the industry categories referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

III. Job Creation

USCIS approves the geographic area and industry categories noted above based on the economic impact analysis presented and reviewed in conjunction with the adjudication of this regional center proposal.

This hypothetical project does not have the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998), and therefore, USCIS's approval of the hypothetical job creation estimates presented in the Form I-924 will not be accorded deference and may not be relied upon by an individual investor when filing the Form I-526. The business plan and job creation estimates will receive a de novo review by USCIS when an individual investor files Form I-526. Once an actual project is adjudicated upon the filing of the initial Form I-526, USCIS will give deference to subsequent Forms I-526 when the critical assumptions remain materially unchanged from the initially-approved Form I-526.

When filing Form I-526, it will be the responsibility of the individual investor to submit a comprehensive, detailed and credible business plan, showing by a preponderance of the evidence that his or her investment in the new commercial enterprise will create not fewer than 10 full-time positions. If prior to filing a form I-829, the job creation estimated in the business plan submitted by the individual investor materially changes or will not be realized, then it will be the responsibility of the EB-5 investor to notify USCIS of an agreed upon methodology to allocate job creation among eligible investors.

IV. Guidelines for Filing Form I-526 Petitions

Each individual petition, in order to demonstrate that it is affiliated with the Century New York City Regional Center in conjunction with addressing all the requirements for an individual immigrant investor petition, shall also contain the following:

1. A copy of this regional center approval notice and designation letter including all subsequent amendment approval letters (if applicable).

2. An economic impact analysis which reflects a job creation methodology required at 8 CFR § 204.6 (j)(4)(iii) and shows how the capital investment by an individual immigrant investor will create not fewer than ten (10) indirect jobs for each immigrant investor.

3. A comprehensive, detailed and credible business plan for an actual project that contains the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998).

4. Legally executed organizational documents of the commercial enterprise.

Note: The project reviewed with this Form I-924 application is a hypothetical project. Organizational and transactional documents associated with the new commercial enterprise (NCE) submitted with this Form I-924 have not been reviewed to determine compliance with program requirements since these documents will receive de novo review in subsequent filings (e.g., an amended Form I-924 application with a Form I-526 exemplar or the first Form I-526 petition filed by an investor under the regional center project).

V. Designee's Responsibilities in the Operations of the Regional Center

As provided in 8 CFR § 204.6 (m)(6), to ensure that the regional center continues to meet the requirements of section 610(a) of the Appropriations Act, a regional center must provide USCIS with updated information to demonstrate the regional center is continuing to promote economic growth, improved regional productivity, job creation, and increased domestic capital investment in the approved geographic area. Such information must be submitted to USCIS on an annual basis or as otherwise requested by USCIS. The applicant must monitor all investment activities under the sponsorship of the regional center and to maintain records in order to provide the information required on the Form I-924A Supplement to Form I-924. Form I-924A, Supplement to Form I-924 Application is available in the "Forms" section on the USCIS website at www.uscis.gov.

Regional centers that remain designated for participation in the Immigrant Investor Program as of September 30th of a calendar year are required to file Form I-924A Supplement in that year. The Form I-924A Supplement with the required supporting documentation must be filed on or before December 29th of the same calendar year.

The failure to timely file a Form I-924A Supplement for each fiscal year in which the regional center has been designated for participation in the Immigrant Investor Program will result in the issuance of an intent to terminate the participation of the regional center in the Immigrant Investor Program, which may ultimately result in the termination of the designation of the regional center.

The regional center designation is non-transferable.

VI. Legal Notice

This approval and designation of a Regional Center under the Immigrant Investor Program does not constitute or imply an endorsement or recommendation by USCIS, the United States Government or any instrumentality thereof, of the investment opportunities, projects or other business activities related to or undertaken by such Regional Center. Except as expressly set forth in this approval and designation, USCIS has not reviewed any information provided in connection with or otherwise related to the Regional Center for compliance with relevant securities laws or any other laws unrelated to eligibility for designation as a Regional Center. Accordingly USCIS makes no determination or representation whatsoever regarding the compliance of either the Regional Center or associated New Commercial Enterprises with such laws.

Each Regional Center designated by USCIS must monitor and oversee all investment offerings and activities associated with, through or under the sponsorship of the Regional Center. The failure of an associated New Commercial Enterprise to comply with all laws and regulations related to such investment offerings and activities may result in the issuance by USCIS of a notice of intent to terminate the Regional Center designation.

If the applicant has any questions concerning the regional center designation under the Immigrant Investor Program, please contact the USCIS by email at USCIS.ImmigrantInvestorProgram@uscis.dhs.gov.

Sincerely,

Nicholas Colucci
Chief, Immigrant Investor Program

ARTICLES OF ORGANIZATION
OF
QB VENTURES EB5 CAPITAL, LLC

Under Section 203 of the Limited Liability Company Law

THE UNDERSIGNED, being a natural person of at least eighteen (18) years of age, and acting as the organizer of the limited liability company hereby being formed under Section 203 of the Limited Liability Company Law of the State of New York certifies that:

FIRST: The name of the limited liability company is:

QB VENTURES EB5 CAPITAL, LLC

SECOND: To engage in any lawful act or activity within the purposes for which limited liability companies may be organized pursuant to Limited Liability Company Law provided that the limited liability company is not formed to engage in any act or activity requiring the consent or approval of any state official, department, board, agency, or other body without such consent or approval first being obtained.

THIRD: The county, within this state, in which the office of the limited liability company is to be located is QUEENS.

FOURTH: The Secretary of State is designated as agent of the limited liability company upon whom process against it may be served. The address within or without this state to which the Secretary of State shall mail a copy of any process against the limited liability company served upon him or her is:

THE LIMITED LIABILITY COMPANY
35-06 LEAVITT ST, SUITE CF-A
FLUSHING, NY 11354

FIFTH: The limited liability company is to be managed by: ONE OR MORE MEMBERS.

SIXTH: The limited liability company shall have a perpetual existence.

SEVENTH: The limited liability company shall defend, indemnify and hold harmless all members, managers, and former members and managers of the limited liability company against expenses (including attorney's fees, judgments, fines, and amounts paid in settlement) incurred in connection with any claims, causes of action, demands, damages, liabilities of the limited liability company, and any pending or threatened action, suit, or proceeding. Such indemnification shall be made to the fullest extent permitted by the laws of the State of New York, provided that such acts or omissions which gives rise to the cause of action or proceedings occurred while the Member or Manager was in performance of his or her duties for the limited liability company and was not as a result of his or her fraud, gross negligence, willful misconduct or a wrongful taking. The indemnification provided herein shall inure to the benefit of successors, assigns, heirs, executors, and the administrators of any such person.

I certify that I have read the above statements, I am authorized to sign these Articles of Organization, that the above statements are true and correct to the best of my knowledge and belief and that my signature typed below constitutes my signature.

For assistance you may call us at:
1-800-829-4933

IF YOU WRITE, ATTACH THE
STUB AT THE END OF THIS NOTICE.

WE ASSIGNED YOU AN EMPLOYER IDENTIFICATION NUMBER

(b)(3) Thank you for applying for an Employer Identification Number (EIN). We assigned you EIN [redacted] This EIN will identify you, your business accounts, tax returns, and documents, even if you have no employees. Please keep this notice in your permanent records.

When filing tax documents, payments, and related correspondence, it is very important that you use your EIN and complete name and address exactly as shown above. Any variation may cause a delay in processing, result in incorrect information in your account, or even cause you to be assigned more than one EIN. If the information is not correct as shown above, please make the correction using the attached tear off stub and return it to us.

Based on the information received from you or your representative, you must file the following form(s) by the date(s) shown.

Form 1065 04/15/2016

If you have questions about the form(s) or the due date(s) shown, you can call us at the phone number or write to us at the address shown at the top of this notice. If you need help in determining your annual accounting period (tax year), see Publication 538, *Accounting Periods and Methods*.

We assigned you a tax classification based on information obtained from you or your representative. It is not a legal determination of your tax classification, and is not binding on the IRS. If you want a legal determination of your tax classification, you may request a private letter ruling from the IRS under the guidelines in Revenue Procedure 2004-1, 2004-1 I.R.B. 1 (or superseding Revenue Procedure for the year at issue). Note: Certain tax classification elections can be requested by filing Form 8832, *Entity Classification Election*. See Form 8832 and its instructions for additional information.

A limited liability company (LLC) may file Form 8832, *Entity Classification Election*, and elect to be classified as an association taxable as a corporation. If the LLC is eligible to be treated as a corporation that meets certain tests and it will be electing S corporation status, it must timely file Form 2553, *Election by a Small Business Corporation*. The LLC will be treated as a corporation as of the effective date of the S corporation election and does not need to file Form 8832.

To obtain tax forms and publications, including those referenced in this notice, visit our Web site at www.irs.gov. If you do not have access to the Internet, call 1-800-829-3676 (TTY/TDD 1-800-829-4059) or visit your local IRS office.

(IRS USE ONLY) 575B 08-10-2015 QBVE B 9999999999 SS-4

IMPORTANT REMINDERS:

* Keep a copy of this notice in your permanent records. **This notice is issued only one time and the IRS will not be able to generate a duplicate copy for you.** You may give a copy of this document to anyone asking for proof of your EIN.

* Use this EIN and your name exactly as they appear at the top of this notice on all your federal tax forms.

* Refer to this EIN on your tax-related correspondence and documents.

If you have questions about your EIN, you can call us at the phone number or write to us at the address shown at the top of this notice. If you write, please tear off the stub at the bottom of this notice and send it along with your letter. If you do not need to write us, do not complete and return the stub.

Your name control associated with this EIN is QBVE. You will need to provide this information, along with your EIN, if you file your returns electronically.

Thank you for your cooperation.

Keep this part for your records. CP 575 B (Rev. 7-2007)

Return this part with any correspondence so we may identify your account. Please correct any errors in your name or address.

For assistance you may call us at:
1-800-829-4933

IF YOU WRITE, ATTACH THE
STUB AT THE END OF THIS NOTICE.

(b)(3) WE ASSIGNED YOU AN EMPLOYER IDENTIFICATION NUMBER

Thank you for applying for an Employer Identification Number (EIN). We assigned you EIN [redacted] This EIN will identify you, your business accounts, tax returns, and documents, even if you have no employees. Please keep this notice in your permanent records.

When filing tax documents, payments, and related correspondence, it is very important that you use your EIN and complete name and address exactly as shown above. Any variation may cause a delay in processing, result in incorrect information in your account, or even cause you to be assigned more than one EIN. If the information is not correct as shown above, please make the correction using the attached tear off stub and return it to us.

Based on the information received from you or your representative, you must file the following form(s) by the date(s) shown.

Form 1065 04/15/2015

If you have questions about the form(s) or the due date(s) shown, you can call us at the phone number or write to us at the address shown at the top of this notice. If you need help in determining your annual accounting period (tax year), see Publication 538, *Accounting Periods and Methods*.

We assigned you a tax classification based on information obtained from you or your representative. It is not a legal determination of your tax classification, and is not binding on the IRS. If you want a legal determination of your tax classification, you may request a private letter ruling from the IRS under the guidelines in Revenue Procedure 2004-1, 2004-1 I.R.B. 1 (or superseding Revenue Procedure for the year at issue). Note: Certain tax classification elections can be requested by filing Form 8832, *Entity Classification Election*. See Form 8832 and its instructions for additional information.

A limited liability company (LLC) may file Form 8832, *Entity Classification Election*, and elect to be classified as an association taxable as a corporation. If the LLC is eligible to be treated as a corporation that meets certain tests and it will be electing S corporation status, it must timely file Form 2553, *Election by a Small Business Corporation*. The LLC will be treated as a corporation as of the effective date of the S corporation election and does not need to file Form 8832.

To obtain tax forms and publications, including those referenced in this notice, visit our Web site at www.irs.gov. If you do not have access to the Internet, call 1-800-829-3676 (TTY/TDD 1-800-829-4059) or visit your local IRS office.

(IRS USE ONLY) 575B 03-07-2014 QUEE B 9999999999 SS-4

IMPORTANT REMINDERS:

* Keep a copy of this notice in your permanent records. **This notice is issued only one time and the IRS will not be able to generate a duplicate copy for you.** You may give a copy of this document to anyone asking for proof of your EIN.

* Use this EIN and your name exactly as they appear at the top of this notice on all your federal tax forms.

* Refer to this EIN on your tax-related correspondence and documents.

If you have questions about your EIN, you can call us at the phone number or write to us at the address shown at the top of this notice. If you write, please tear off the stub at the bottom of this notice and send it along with your letter. If you do not need to write us, do not complete and return the stub.

Your name control associated with this EIN is QUEE. You will need to provide this information, along with your EIN, if you file your returns electronically.

Thank you for your cooperation.

ARTICLES OF ORGANIZATION
OF
CENTURY NEW YORK CITY REGIONAL CENTER, LLC

Under Section 203 of the Limited Liability Company Law

THE UNDERSIGNED, being a natural person of at least eighteen (18) years of age, and acting as the organizer of the limited liability company hereby being formed under Section 203 of the Limited Liability Company Law of the State of New York certifies that:

FIRST: The name of the limited liability company is:

CENTURY NEW YORK CITY REGIONAL CENTER, LLC

SECOND: To engage in any lawful act or activity within the purposes for which limited liability companies may be organized pursuant to Limited Liability Company Law provided that the limited liability company is not formed to engage in any act or activity requiring the consent or approval of any state official, department, board, agency, or other body without such consent or approval first being obtained.

THIRD: The county, within this state, in which the office of the limited liability company is to be located is QUEENS.

FOURTH: The Secretary of State is designated as agent of the limited liability company upon whom process against it may be served. The address within or without this state to which the Secretary of State shall mail a copy of any process against the limited liability company served upon him or her is:

THE LIMITED LIABILITY COMPANY
35-06 LEAVITT STREET
SUITE CF-A
FLUSHING, NY 11354

FIFTH: The limited liability company is to be managed by: ONE OR MORE MEMBERS.

SIXTH: The limited liability company shall defend, indemnify and hold harmless all members, managers, and former members and managers of the limited liability company against expenses (including attorney's fees, judgments, fines, and amounts paid in settlement) incurred in connection with any claims, causes of action, demands, damages, liabilities of the limited liability company, and any pending or threatened action, suit, or proceeding. Such indemnification shall be made to the fullest extent permitted by the laws of the State of New York, provided that such acts or omissions which gives rise to the cause of action or proceedings occurred while the Member or Manager was in performance of his or her duties for the limited liability company and was not as a result of his or her fraud, gross negligence, willful misconduct or a wrongful taking. The indemnification provided herein shall inure to the benefit of successors, assigns, heirs, executors, and the administrators of any such person.

I certify that I have read the above statements, I am authorized to sign these Articles of Organization, that the above statements are true and correct to the best of my knowledge and belief and that my signature typed below constitutes my signature.

Mona Shah & Associates, PLLC
299 Broadway, Suite 1005
New York, New York 10007

Dear Mr. Mokaddam:

Attached is a letter from Mr. Joseph Nardone, of the New York State Department of Labor, identifying an area including census tract 245 in Queens County. Based on 2014 annual average labor force data, the Department of Labor has determined that this area meets the minimum threshold of unemployment to qualify as a Targeted Employment Area.

Based on the Labor Department's determination, I am able to certify that the area described in the attached letter qualifies as a Targeted Employment Area.

Census tract 245, in Queens County, contains the address, 64-06 Queens Blvd., Queens, New York 11377.

Please feel free to contact me if you have any questions.

Sincerely,

Ms. Kay Alison Wilkie
