Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Do not breathe dust. Wear suitable protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If you feel unwell, seek medical attention and show the label when possible. Keep away from incompatibles such as oxidizing agents, combustible materials, metals, acids.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 1 (mg/m3) from ACGIH (TLV) [United States] Inhalation Respirable. TWA: 0.5 (mg/m3) [United Kingdom (UK)] TWA: 1 (mg/m3) from OSHA (PEL) [United States] InhalationConsult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Metal solid. Lustrous solid.)

Odor: Odorless.

Taste: Not available.

Molecular Weight: 58.71 g/mole

Color: Silvery.

pH (1% soln/water): Not applicable.

Boiling Point: 2730°C (4946°F)

Melting Point: 1455°C (2651°F)

Critical Temperature: Not available.

Specific Gravity: Density: 8.908 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility:

Insoluble in cold water, hot water. Insoluble in Ammonia. Soluble in dilute Nitric Acid. Slightly soluble in Hydrochloric Acid, Sulfuric Acid.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials

Incompatibility with various substances: Reactive with oxidizing agents, combustible materials, metals, acids.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Incompatible with strong acids, selenium, sulfur, wood and other combustibles, nickel nitrate, aluminum, aluminum trichloride, ethylene, p-dioxan, hydrogen, methanol, non-metals, oxidants, sulfur compounds, aniline, hydrogen sulfide, flammable solvents, hydrazine, and metal powders (especially zinc, aluminum, and magnesium), ammonium nitrate, nitryl fluoride, bromine pentafluoride, potassium perchlorate + titanium powder + indusorial earth.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified 2B (Possible for human.) by IARC. Classified 2 (Some evidence.) by NTP. Causes damage to the following organs: skin. May cause damage to the following organs: kidneys, lungs, liver, upper respiratory tract.

Other Toxic Effects on Humans:
Hazardous in case of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer), of ingestion.

Special Remarks on Toxicity to Animals:
Lowest Published Lethal Dose/Conc: LDL [Rat] - Route: Oral; Dose: 5000 mg/kg LDL [Guinea Pig] - Route: Oral; Dose: 5000 mg/kg

Special Remarks on Chronic Effects on Humans: May cause cancer based on animal test data

Special Remarks on other Toxic Effects on Humans:
Acute Potential Health Effects: Skin: Nickel dust and fume can irritate skin. Eyes: Nickel dust and fume can irritate eyes. Inhalation: Inhalation of dust or fume may cause respiratory tract irritation with non-productive cough, hoarseness, sore throat, headache, vertigo, weakness, chest pain, followed by delayed effects, including tachypnea, dyspnea, and ARDS. Death due to ARDS has been reported following inhalation of high concentrations of respirable metallic nickel dust. Later effects may include pulmonary edema and fibrosis. Ingestion: Metallic nickel is generally considered not to be acutely toxic if ingested. Ingestion may cause nausea, vomiting, abdominal , and diarrhea. Nickel may damage the kidneys(proteinuria), and may affect liver function. It may also affect behavior (somnolence), and cardiovascular system (increased cornary artery resistance, decreased myocardial contractility, myocardial damage, regional or general arteriolar or venus dilation). Chronic Potential Health Effects: Skin: May cause skin allergy. Nickel and nickel compounds are among the most common sensitizers inducing allergic contact dermatitis. Inhalation: Chronic inhalation nickel dust or fume can cause chronic hypertrophic rhinitis, sinusitis, nasal polyps, perforation of the nasal septum, chronic pulmonary irritation, fibrosis, pulmonary edema, pulmonary eosinophilia, Pneumoconiosis, allergies (asthma-like allergy), and cancer of the nasal sinus cavities, lungs, and possibly other organs. Future exposures can cause asthma attacks with shortness of breath, wheezing, cough, and/or chest tightness. Chronic inhalation of nickel dust or fume may also affect the liver (impaired liver function tests), and blood (changes in red blood cell count). Ingestion: Prolonged or repeated ingestion of nickel can be a source chronic urticaria and other signs of allergy.

Chronic ingestion of Nickel may also affect respiration and cause pneumoconiosis or fibrosis. Note: In the general population, sensitization occurs from exposure to nickel-containing coins, jewelry, watches,

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Nickel metal California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Nickel metal Connecticut hazardous material survey.: Nickel metal Illinois toxic substances disclosure to employee act: Nickel metal Illinois chemical safety act: Nickel metal New York release reporting list: Nickel metal Rhode Island RTK hazardous substances: Nickel metal Pennsylvania RTK: Nickel metal Michigan critical material: Nickel metal Massachusetts RTK: Nickel metal Massachusetts spill list: Nickel metal New Jersey: Nickel metal New Jersey spill list: Nickel metal Louisiana spill reporting: Nickel metal California Director's List of Hazardous Substances: Nickel metal TSCA 8(b) inventory: Nickel metal

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada): CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R40- Possible risks of irreversible effects. R43- May cause sensitization by skin contact. S22- Do not breathe dust. S36- Wear suitable protective clothing.

Polycyclic Aromatic Hydrocarbons (PAHs)

What are PAHs?

Short for polycyclic aromatic hydrocarbons, PAHs describe chemicals that are often found together in groups of two or more. PAHs are found naturally in the environment but they can also be man-made. In their purest form, PAHs are solid and range in appearance from colorless to white or pale yellow-green. PAHs are created when products like coal, oil, gas, and garbage are burned but the burning process is not complete. Although PAHs can exist in over 100 different combinations, the National Waste Minimization Program defines this group using the Toxic Release Inventory reporting category for polycyclic aromatic compounds.

Chemicals included in this category, by name and CAS number, are:

1. Benzo(a)anthracene, 56-55-3
2. Benzo(a)phenanthrene (chrysene), 218-01-9
3. Benzo(a)pyrene, 50-32-8
4. Benzo(b)fluoranthene, 205-99-2
5. Benzo(j)fluoranthene, 205-82-3
6. Benzo(k)fluoranthene, 207-08-9
7. Benzo(j,k)fluorene (fluoranthene), 206-44-0
8. Benzo(r,s,t)pentaphene, 189-55-9
9. Dibenz(a,h)acridine, 226-36-8
10. Dibenz(a,j)acridine, 224-42-0
11. Dibenzo(a,h)anthracene, 53-70-3
12. Dibenzo(a,e)fluoranthene, 5385-75-1
13. Dibenzo(a,e)pyrene, 192-65-4
14. Dibenzo(a,h)pyrene, 189-64-0
15. Dibenzo(a,l)pyrene, 191-30-0
16. 7H-Dibenzo(c,g)carbazole, 194-59-2
17. 7,12-Dimethylbenz(a)anthracene, 57-97-6
18. Indeno(1,2,3-cd)pyrene 193-39-5
19. 3-Methylcholanthrene, 56-49-5
20. 5-Methylchrysene, 3697-24-3
21. 1-Nitropyrene, 5522-43-0

It should be noted that some PAHs are listed individually on EPA's Priority Chemical list. They are:

1. Acenaphthene, 83-32-9
2. Acenaphtylene, 208-96-8
3. Anthracene, 120-12-7
4. Benzo(g,h,i)perylene, 191-24-2
5. Fluorene, 86-73-7
6. Phenanthrene, 85-01-8
7. Pyrene, 129-00-0

Why are PAHs bad actors?

PAHs are a concern because they are persistent. Because they do not burn very easily, they can stay in the environment for long periods of time. Individual PAHs vary in behavior. Some can turn into a vapor in the air very easily. Most do not break down easily in the water.

What are PAHs used for?

Most PAHs are used to conduct research. However, some PAHs are used to make dyes, plastics, and pesticides. Some are even used in medicines.

How can PAHs enter and leave your body?

One of the most common ways PAHs can enter the body is through breathing contaminated air. PAHs get into your lungs when you breathe them. If you live near a hazardous waste site where PAHs are disposed, you are likely to breathe PAHs. If you eat or drink food and water contaminated with PAHs, you could be

exposed. Exposure to PAHs can also occur if your skin contacts PAH-contaminated soil or products like heavy oils, coal tar, roofing tar, or creosote. Creosote is an oily liquid found in coal tar and is used to preserve wood. Once in your body, PAHs can spread and target fat tissues. Target organs include the kidneys and liver. However, PAHs will leave your body through urine and feces in a matter of days.

How can you be exposed to PAHs?

You can be exposed to PAHs in the environment, in your home, and in the workplace. Because PAHs exist naturally in the environment and are man-made, you can be exposed in a number of ways. Fumes from vehicle exhaust, coal, coal tar, asphalt, wildfires, agricultural burning and hazardous waste sites are all sources of exposure.

You could be exposed to PAHs by breathing cigarette and tobacco smoke, eating foods grown in contaminated soil, or by eating meat or other food that you grilled. Grilling and charring food actually increases the amount of PAHs in the food.

If you work in a plant that makes coal tar, asphalt and aluminum, or that burns trash, you can be exposed to PAHs. You can also be exposed if you work in a facility that uses petroleum or coal, or where wood, corn, and oil are burned.

How can PAHs affect your health?

A number of PAHs have caused tumors in laboratory animals that were exposed to PAHs through their food, from breathing contaminated air, and when it was applied to their skin. When pregnant mice ate high doses of a PAH (benzo(a)pyrene) they experienced reproductive problems. In addition, the offspring of the pregnant mice showed birth defects and a decrease in their body weight. Other effects include damage to the skin, body fluids, and the immune system. However, these effects have not been seen in humans.

Is there a medical test to determine if you have been exposed to PAHs?

There is a test that can measure the presence of PAH in your urine. This test can only tell you if you have been exposed; but it can't reveal how harmful the effects of the exposure will be. This test would have to be performed in a laboratory that has special equipment to detect the PAHs. Another test currently being developed will be able to measure PAHs in your body tissue and blood.

What are the medical treatments in cases of exposure?

Most exposures to PAHs happen every day at very low levels in the air we breathe and the foods we eat. Treatment for a short-term exposure is unlikely. Contact your doctor if you experience symptoms of PAHs poisoning.

What levels of exposure have resulted in harmful health effects?

There is no information available from studies on humans to tell what effects can result from being exposed to individual PAHs at certain levels. However, breathing PAHs and skin contact seem to be associated with cancer in humans. Animal studies showed that mice exposed to 308 parts per million (ppm) of PAHs (specifically benzo (a) pyrene) in food for 10 days (short term exposure) caused birth defects. Mice exposed to 923 ppm of benzo (a) pyrene in food for months caused problems in the liver and blood.

Where can I get more information?

Contact your state health or environmental department, or:

Material Safety Data Sheet
Tetrachloroethylene MSDS

Section 1: Chemical Product and Company Identification

Product Name: Tetrachloroethylene

Catalog Codes: SLT3220

CAS#: 127-18-4

RTECS: KX3850000

TSCA: TSCA 8(b) inventory: Tetrachloroethylene

CI#: Not available.

Synonym: Perchloroethylene; 1,1,2,2-Tetrachloroethylene; Carbon bichloride; Carbon dichloride; Ankilostin; Didakene; Dilatin PT; Ethene, tetrachloro-; Ethylene tetrachloride; Perawin; Perchlor; Perclene; Perclene D; Percosolvel; Tetrachloroethene; Tetraleno; Tetralex; Tetravec; Tetroguer; Tetropil

Chemical Name: Ethylene, tetrachloro-

Chemical Formula: C2-Cl4

Contact Information:

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Tetrachloroethylene	127-18-4	100

Toxicological Data on Ingredients: Tetrachloroethylene: ORAL (LD50): Acute: 2629 mg/kg [Rat]. DERMAL (LD): Acute: >3228 mg/kg [Rabbit]. MIST(LC50): Acute: 34200 mg/m 8 hours [Rat]. VAPOR (LC50): Acute: 5200 ppm 4 hours [Mouse].

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of skin contact (irritant), of inhalation. Slightly hazardous in case of skin contact (permeator), of eye contact (irritant), of ingestion.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH. Classified 2A (Probable for human.) by IARC, 2 (anticipated carcinogen) by NTP. MUTAGENIC EFFECTS: Mutagenic for bacteria and/or yeast. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to kidneys, liver, peripheral nervous system, respiratory tract, skin, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact:
In case of contact, immediately flush skin with plenty of water. Cover the irritated skin with an emollient. Remove contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention.

Serious Skin Contact:
Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek medical attention.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention if symptoms appear.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention if symptoms appear.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: Non-flammable.

Auto-Ignition Temperature: Not applicable.

Flash Points: Not applicable.

Flammable Limits: Not applicable.

Products of Combustion: Not available.

Fire Hazards in Presence of Various Substances: Not applicable.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions: Not applicable.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Absorb with an inert material and put the spilled material in an appropriate waste disposal.

Large Spill:
Absorb with an inert material and put the spilled material in an appropriate waste disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Do not ingest. Do not breathe gas/fumes/ vapor/spray. Avoid contact with skin. Wear suitable protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents, metals, acids, alkalis.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value.

Personal Protection:
Safety glasses. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 25 (ppm) from OSHA (PEL) [United States] TWA: 25 STEL: 100 (ppm) from ACGIH (TLV) [United States] TWA: 170 (mg/m3) from OSHA (PEL) [United States] Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Liquid.

Odor: Ethereal.

Taste: Not available.

Molecular Weight: 165.83 g/mole

Color: Clear Colorless.

pH (1% soln/water): Not available.

Boiling Point: 121.3°C (250.3°F)

Melting Point: -22.3°C (-8.1°F)

Critical Temperature: 347.1°C (656.8°F)

Specific Gravity: 1.6227 (Water = 1)

Vapor Pressure: 1.7 kPa (@ 20°C)

Vapor Density: 5.7 (Air = 1)

Volatility: Not available.

Odor Threshold: 5 - 50 ppm

Water/Oil Dist. Coeff.: The product is more soluble in oil; log(oil/water) = 3.4

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility:
Miscible with alcohol, ether, chloroform, benzene, hexane. It dissolves in most of the fixed and volatile oils. Solubility in water: 0.015 g/100 ml @ 25 deg. C It slowly decomposes in water to yield Trichloroacetic and Hydrochloric acids.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials

Incompatibility with various substances: Reactive with oxidizing agents, metals, acids, alkalis.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Oxidized by strong oxidizing agents. Incompatible with sodium hydroxide, finely divided or powdered metals such as zinc, aluminum, magnesium, potassium, chemically active metals such as lithium, beryllium , barium. Protect from light.

Special Remarks on Corrosivity: Slowly corrodes aluminum, iron, and zinc.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Eye contact. Inhalation. Ingestion.

Toxicity to Animals:
WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 2629 mg/kg [Rat]. Acute dermal toxicity (LD50): >3228 mg/kg [Rabbit]. Acute toxicity of the vapor (LC50): 5200 4 hours [Mouse].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH. Classified 2A (Probable for human.) by IARC, 2 (Some evidence.) by NTP. MUTAGENIC EFFECTS: Mutagenic for bacteria and/or yeast. May cause damage to the following organs: kidneys, liver, peripheral nervous system, upper respiratory tract, skin, central nervous system (CNS).

Other Toxic Effects on Humans:
Hazardous in case of skin contact (irritant), of inhalation. Slightly hazardous in case of skin contact (permeator), of ingestion.

Special Remarks on Toxicity to Animals:
Lowest Publishe Lethal Dose/Conc: LDL [Rabbit] - Route: Oral; Dose: 5000 mg/kg LDL [Dog] - Route: Oral; Dose: 4000 mg/kg LDL [Cat] - Route: Oral; Dose: 4000 mg/kg

Special Remarks on Chronic Effects on Humans:
May cause adverse reproductive effects and birth defects(teratogenic). May affect genetic material (mutagenic). May cause cancer.

Special Remarks on other Toxic Effects on Humans:
Acute Potential Health Effects: Skin: Causes skin irritation with possible dermal blistering or burns. Symtoms may include redness, itching, pain, and possible dermal blistering or burns. It may be absorbed through the skin with possible systemic effects. A single prolonged skin exposure is not likely to result in the material being absorbed in harmful amounts. Eyes: Contact causes transient eye irritation, lacrimation. Vapors cause eye/conjunctival irritation. Symptoms may include redness and pain. Inhalation: The main route to occupational exposure is by inhalation since it is readily absorbed through the lungs. It causes respiratory tract irritation, . It can affect behavior/central nervous system (CNS depressant and anesthesia ranging from slight inebriation to death, vertigo, somnolence, anxiety, headache, excitement, hallucinations, muscle incoordination, dizziness, lightheadness, disorentiation, seizures, enotional instability, stupor, coma). It may cause pulmonary edema Ingestion: It can cause nausea, vomiting, anorexia, diarrhea, bloody stool. It may affect the liver, urinary system (proteinuria, hematuria, renal failure, renal tubular disorder), heart (arrhythmias). It may affect behavior/central nervous system with symptoms similar to that of inhalation. Chronic Potential Health Effects: Skin: Prolonged or repeated skin contact may result in excessive drying of the skin, and irritation. Ingestion/Inhalation: Chronic exposure can affect the liver(hepatitis,fatty liver degeneration), kidneys, spleen, and heart (irregular heartbeat/arrhythmias, cardiomyopathy, abnormal EEG), brain, behavior/ central nervous system/peripheral nervous system (impaired memory, numbness of extremeties, peripheral neuropathy and other

Section 12: Ecological Information

Ecotoxicity:
Ecotoxicity in water (LC50): 18.4 mg/l 96 hours [Fish (Fatthead Minnow)]. 18 mg/l 48 hours [Daphnia (daphnia)]. 5 mg/l 96 hours [Fish (Rainbow Trout)]. 13 mg/l 96 hours [Fish (Bluegill sunfish)].

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The product itself and its products of degradation are not toxic.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : Tetrachloroethylene UNNA: 1897 PG: III

Special Provisions for Transport: Marine Pollutant

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Tetrachloroethylene California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Tetrachloroethylene Connecticut hazardous material survey.: Tetrachloroethylene Illinois toxic substances disclosure to employee act: Tetrachloroethylene Illinois chemical safety act: Tetrachloroethylene New York release reporting list: Tetrachloroethylene Rhode Island RTK hazardous substances: Tetrachloroethylene Pennsylvania RTK: Tetrachloroethylene Minnesota: Tetrachloroethylene Michigan critical material: Tetrachloroethylene Massachusetts RTK: Tetrachloroethylene Massachusetts spill list: Tetrachloroethylene New Jersey: Tetrachloroethylene New Jersey spill list: Tetrachloroethylene Louisiana spill reporting: Tetrachloroethylene California Director's List of Hazardous Substances: Tetrachloroethylene TSCA 8(b) inventory: Tetrachloroethylene TSCA 8(d) H and S data reporting: Tetrachloroethylene: Effective date: 6/1/87; Sunset date: 6/1/97 SARA 313 toxic chemical notification and release reporting: Tetrachloroethylene CERCLA: Hazardous substances.: Tetrachloroethylene: 100 lbs. (45.36 kg)

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada):
CLASS D-1B: Material causing immediate and serious toxic effects (TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R40- Possible risks of irreversible effects. R51/53- Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment. S23- Do not breathe gas/fumes/vapour/spray S26- In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S37- Wear suitable gloves. S61- Avoid release to the environment. Refer to special instructions/Safety data sheets.

SUBSTANCE: TRICHLOROETHYLENE

TRADE NAMES/SYNONYMS:
MTG MSDS 199; ACETYLENE TRICHLORIDE; ETHYLENE TRICHLORIDE; 1-CHLORO-2,2-DICHLOROETHYLENE; 1,1-DICHLORO-2-CHLOROETHYLENE; TCE; ETHINYL TRICHLORIDE; TRICHLOROETHENE; 1,1,2-TRICHLOROETHYLENE; 1,1,2-TRICHLOROETHENE; UN 1710; RCRA U228; C2HCl3; MAT23850; RTECS KX4550000

CHEMICAL FAMILY: halogenated, alkenes

CREATION DATE: Jan 24 1989
REVISION DATE: Dec 11 2008

2. COMPOSITION, INFORMATION ON INGREDIENTS

COMPONENT: TRICHLOROETHYLENE
CAS NUMBER: 79-01-6
PERCENTAGE: >99

COMPONENT: INHIBITORS
CAS NUMBER: Not assigned.
PERCENTAGE: <0.1

COMPONENT: AMINES
CAS NUMBER: Not assigned.
PERCENTAGE: <0.1

3. HAZARDS IDENTIFICATION

NFPA RATINGS (SCALE 0-4): HEALTH=2 FIRE=1 REACTIVITY=0

EMERGENCY OVERVIEW:

COLOR: colorless
PHYSICAL FORM: liquid
ODOR: sweet odor
MAJOR HEALTH HAZARDS: respiratory tract irritation, skin irritation, eye irritation, central nervous system depression, allergic reactions, cancer hazard (in humans)
PHYSICAL HAZARDS: May polymerize. Containers may rupture or explode. May decompose on contact with air, light, moisture, heat or storage and use above room temperature. Releases toxic, corrosive, flammable or explosive gases.

POTENTIAL HEALTH EFFECTS:
INHALATION:
SHORT TERM EXPOSURE: irritation, changes in blood pressure, nausea, vomiting, stomach pain, difficulty breathing, irregular heartbeat, headache, drowsiness, dizziness, disorientation, mood swings, tremors, loss of coordination, visual disturbances, bluish skin color, lung congestion, kidney damage, liver damage, unconsciousness, coma
LONG TERM EXPOSURE: same as effects reported in short term exposure, loss of appetite, weight loss, blood disorders, brain damage, cancer
SKIN CONTACT:
SHORT TERM EXPOSURE: irritation, allergic reactions
LONG TERM EXPOSURE: irritation, allergic reactions, nausea, loss of appetite, weight loss, difficulty breathing, headache, drowsiness, dizziness, joint pain, loss of coordination, visual disturbances, paralysis
EYE CONTACT:
SHORT TERM EXPOSURE: irritation (possibly severe), blurred vision
LONG TERM EXPOSURE: irritation (possibly severe), eye damage
INGESTION:
SHORT TERM EXPOSURE: same as effects reported in short term inhalation
LONG TERM EXPOSURE: same as effects reported in long term inhalation

4. FIRST AID MEASURES

INHALATION: If adverse effects occur, remove to uncontaminated area. Give artificial respiration if not breathing. Get immediate medical attention.

SKIN CONTACT: Wash skin with soap and water for at least 15 minutes while removing contaminated clothing and shoes. Get medical attention, if needed. Thoroughly clean and dry contaminated clothing and shoes before reuse.

EYE CONTACT: Flush eyes with plenty of water for at least 15 minutes. Then get immediate medical attention.

INGESTION: If vomiting occurs, keep head lower than hips to help prevent aspiration. If person is unconscious, turn head to side. Get medical attention immediately.

NOTE TO PHYSICIAN: For ingestion, consider gastric lavage. Consider oxygen.

5. FIRE FIGHTING MEASURES

FIRE AND EXPLOSION HAZARDS: Slight fire hazard.

EXTINGUISHING MEDIA: carbon dioxide, regular dry chemical

Large fires: Use regular foam or flood with fine water spray.

FIRE FIGHTING: Cool containers with water spray until well after the fire is out. Stay away from the ends of tanks. For tank, rail car or tank truck, evacuation radius: 800 meters (1/2 mile).

FLASH POINT: No data available.
LOWER FLAMMABLE LIMIT: 7.8% @ 100 C
UPPER FLAMMABLE LIMIT: 52% @ 100 C
AUTOIGNITION: 770 F (410 C)

6. ACCIDENTAL RELEASE MEASURES

AIR RELEASE:
Reduce vapors with water spray. Collect runoff for disposal as potential hazardous waste.

SOIL RELEASE:
Dig holding area such as lagoon, pond or pit for containment. Dike for later disposal. Absorb with sand or other non-combustible material.

WATER RELEASE:
Absorb with activated carbon. Remove trapped material with suction hoses. Collect spilled material using mechanical equipment. Subject to California Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65). Keep out of water supplies and sewers.

OCCUPATIONAL RELEASE:
Avoid heat, flames, sparks and other sources of ignition. Stop leak if possible without personal risk. Small liquid spills: Absorb with sand or other non-combustible material. Large spills: Dike for later disposal. Remove sources of ignition. Keep unnecessary people away, isolate hazard area and deny entry. Notify Local Emergency Planning Committee and State Emergency Response Commission for release greater than or equal to RQ (U.S. SARA Section 304). If release occurs in the U.S. and is reportable under CERCLA Section 103, notify the National Response Center at (800)424-8802 (USA) or (202)426-2675 (USA).

7. HANDLING AND STORAGE

STORAGE: Store and handle in accordance with all current regulations and standards. Store in a cool, dry place. Store in a well-ventilated area. Avoid heat, flames, sparks and other sources of ignition. Keep separated from incompatible substances.

8. EXPOSURE CONTROLS, PERSONAL PROTECTION

EXPOSURE LIMITS:
TRICHLOROETHYLENE:
100 ppm OSHA TWA
200 ppm OSHA ceiling
300 ppm OSHA peak (5 minutes in any 2 hours)
50 ppm (269 mg/m3) OSHA TWA (vacated by 58 FR 35338, June 30, 1993)
200 ppm (1070 mg/m3) OSHA STEL (vacated by 58 FR 35338, June 30, 1993)
10 ppm ACGIH TWA
25 ppm ACGIH STEL
25 ppm NIOSH TWA 10 hour(s)
2 ppm NIOSH ceiling 60 minute(s) (used as halogenated anesthetic gas)

VENTILATION: Provide local exhaust ventilation system. Ensure compliance with applicable exposure limits.

EYE PROTECTION: Wear splash resistant safety goggles. Provide an emergency eye wash fountain and quick drench shower in the immediate work area.

CLOTHING: Wear appropriate chemical resistant clothing.

GLOVES: Wear appropriate chemical resistant gloves.

RESPIRATOR: The following respirators and maximum use concentrations are drawn from NIOSH and/or OSHA.
At any detectable concentration -
Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode.
Any supplied-air respirator with a full facepiece that is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in pressure-demand or other positive-pressure mode.
Escape -
Any air-purifying full-facepiece respirator (gas mask) with a chin-style, front-mounted or back-mounted organic vapor canister.
Any appropriate escape-type, self-contained breathing apparatus.
For Unknown Concentrations or Immediately Dangerous to Life or Health -
Any supplied-air respirator with a full facepiece that is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in pressure-demand or other positive-pressure mode.
Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode.

9. PHYSICAL AND CHEMICAL PROPERTIES

PHYSICAL STATE: liquid
COLOR: colorless
ODOR: sweet odor
MOLECULAR WEIGHT: 131.39
MOLECULAR FORMULA: Cl-C-H-C-Cl2
BOILING POINT: 189 F (87 C)
FREEZING POINT: -99 F (-73 C)
VAPOR PRESSURE: 58 mmHg @ 20 C
VAPOR DENSITY (air=1): 4.53
SPECIFIC GRAVITY (water=1): 1.4642
WATER SOLUBILITY: 0.1%
PH: Not available
VOLATILITY: Not available
ODOR THRESHOLD: 21 ppm
EVAPORATION RATE: 0.69 (carbon tetrachloride=1)
COEFFICIENT OF WATER/OIL DISTRIBUTION: Not available
SOLVENT SOLUBILITY:
Soluble: alcohol, ether, acetone, chloroform, benzene, vegetable oils

10. STABILITY AND REACTIVITY

REACTIVITY: May decompose on contact with air, light, moisture, heat or storage and use above room temperature. Releases toxic, corrosive, flammable or explosive gases.

CONDITIONS TO AVOID: Avoid heat, flames, sparks and other sources of ignition. Containers may rupture or explode if exposed to heat.

INCOMPATIBILITIES: bases, metals, combustible materials, oxidizing materials

HAZARDOUS DECOMPOSITION:
Thermal decomposition products: phosgene, halogenated compounds, oxides of carbon

POLYMERIZATION: May polymerize. Avoid contact with heat or light and monitor inhibitor content.

11. TOXICOLOGICAL INFORMATION

TRICHLOROETHYLENE:
IRRITATION DATA: 2 mg/24 hour(s) skin-rabbit severe; 20 mg/24 hour(s) eyes-rabbit moderate
TOXICITY DATA: 140700 mg/m3/1 hour(s) inhalation-rat LC50; >20 gm/kg skin-rabbit LD50; 4920 mg/kg oral-rat LD50
CARCINOGEN STATUS: NTP: Anticipated Human Carcinogen; IARC: Human Limited Evidence,

Animal Sufficient Evidence, Group 2A; ACGIH: A2 -Suspected Human Carcinogen
LOCAL EFFECTS:
Irritant: inhalation, skin, eye
ACUTE TOXICITY LEVEL:
Moderately Toxic: ingestion
Slightly Toxic: inhalation
Relatively Non-toxic: dermal absorption
TARGET ORGANS: immune system (sensitizer), central nervous system
MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE: heart problems
TUMORIGENIC DATA: Available.
MUTAGENIC DATA: Available.
REPRODUCTIVE EFFECTS DATA: Available.
ADDITIONAL DATA: May cross the placenta. Stimulants such as epinephrine may induce ventricular fibrillation.

12. ECOLOGICAL INFORMATION

ECOTOXICITY DATA:
FISH TOXICITY: 3100 ug/L 96 hour(s) LC50 (Mortality) Flagfish (Jordanella floridae)

INVERTEBRATE TOXICITY: 1700 ug/L 7 hour(s) EC50 (Regeneration) Flatworm (Dugesia japonica)

OTHER TOXICITY: 45000 ug/L 48 week(s) LC50 (Mortality) Clawed toad (Xenopus laevis)

FATE AND TRANSPORT:
BIOCONCENTRATION: 17 ug/L 1-14 hour(s) BCF (Residue) Bluegill (Lepomis macrochirus) 8.23 ug/L

13. DISPOSAL CONSIDERATIONS

Subject to disposal regulations: U.S. EPA 40 CFR 262. Hazardous Waste Number(s): U228. Hazardous Waste Number(s): D040. Dispose of in accordance with U.S. EPA 40 CFR 262 for concentrations at or above the Regulatory level. Regulatory level- 0.5 mg/L. Dispose in accordance with all applicable regulations.

14. TRANSPORT INFORMATION

U.S. DOT 49 CFR 172.101:
PROPER SHIPPING NAME: Trichloroethylene
ID NUMBER: UN1710
HAZARD CLASS OR DIVISION: 6.1
PACKING GROUP: III
LABELING REQUIREMENTS: 6.1

CANADIAN TRANSPORTATION OF DANGEROUS GOODS:
SHIPPING NAME: Trichloroethylene
UN NUMBER: UN1710
CLASS: 6.1
PACKING GROUP/CATEGORY: III

15. REGULATORY INFORMATION

U.S. REGULATIONS:
CERCLA SECTIONS 102a/103 HAZARDOUS SUBSTANCES (40 CFR 302.4):
TRICHLOROETHYLENE: 100 LBS RQ

SARA TITLE III SECTION 302 EXTREMELY HAZARDOUS SUBSTANCES (40 CFR 355 Subpart B): Not regulated.

SARA TITLE III SECTION 304 EXTREMELY HAZARDOUS SUBSTANCES (40 CFR 355 Subpart C): Not regulated.

SARA TITLE III SARA SECTIONS 311/312 HAZARDOUS CATEGORIES (40 CFR 370 Subparts B and C):
ACUTE: Yes
CHRONIC: Yes
FIRE: No
REACTIVE: No
SUDDEN RELEASE: No

SARA TITLE III SECTION 313 (40 CFR 372.65):
TRICHLOROETHYLENE

OSHA PROCESS SAFETY (29 CFR 1910.119): Not regulated.

STATE REGULATIONS:
California Proposition 65:
Known to the state of California to cause the following:
TRICHLOROETHYLENE
Cancer (Apr 01, 1988)

CANADIAN REGULATIONS:
WHMIS CLASSIFICATION: D2

NATIONAL INVENTORY STATUS:
U.S. INVENTORY (TSCA): Listed on inventory.

TSCA 12(b) EXPORT NOTIFICATION: Not listed.

CANADA INVENTORY (DSL/NDSL): Not determined.

Material Safety Data Sheet
Zinc Metal MSDS

Section 1: Chemical Product and Company Identification

Product Name: Zinc Metal

Catalog Codes: SLZ1054, SLZ1159, SLZ1267, SLZ1099, SLZ1204

CAS#: 7440-66-6

RTECS: ZG8600000

TSCA: TSCA 8(b) inventory: Zinc Metal

CI#: Not applicable.

Synonym: Zinc Metal Sheets; Zinc Metal Shot; Zinc Metal Strips

Chemical Name: Zinc Metal

Chemical Formula: Zn

Contact Information:

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Zinc Metal	7440-66-6	100

Toxicological Data on Ingredients: Zinc Metal LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects: Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Not available. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. Repeated or prolonged exposure is not known to aggravate medical condition.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: Flammable.

Auto-Ignition Temperature: 480°C (896°F)

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Not available.

Fire Hazards in Presence of Various Substances:
Slightly flammable to flammable in presence of open flames and sparks, of heat, of oxidizing materials, of acids, of alkalis, of moisture. Non-flammable in presence of shocks.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
Flammable solid. SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray or fog. Cool containing vessels with water jet in order to prevent pressure build-up, autoignition or explosion.

Special Remarks on Fire Hazards:
Zinc + NaOH causes ignition. Oxidation of zinc by potassium proceeds with incandescence. Residues from zinc dust /acetic acid reduction operations may ignite after long delay if discarded into waste bins with paper. Incandescent reaction when Zinc and Arsenic or Tellurium, or Selenium are combined. When hydrazine mononitrate is heated in contact with zinc, a flamming decomposition occurs at temperatures a little above its melting point. Contact with acids and alkali hydroxides (sodium hydroxide, postasium hydroxide, calcium hydroxide, etc.) results in evolution of hydrogen with sufficient heat of reaction to ignite the hydrogen gas. Zinc foil ignites if traces of moisture are present. It is water reactive and produces flammable gases on contact with water. It may ignite on contact with water or moist air.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Flammable solid that, in contact with water, emits flammable gases. Stop leak if without risk. Do not get water inside container. Do not touch spilled material. Cover with dry earth, sand or other non-combustible material. Prevent entry into sewers, basements or confined areas; dike if needed. Eliminate all ignition sources. Call for assistance on disposal. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system.

Section 7: Handling and Storage

Precautions:
Keep away from heat. Keep away from sources of ignition. Ground all equipment containing material. Do not breathe dust. Keep away from incompatibles such as oxidizing agents, acids, alkalis, moisture.

Storage:
Keep container tightly closed. Keep container in a cool, well-ventilated area. Keep from any possible contact with water. Do not allow water to get into container because of violent reaction.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits: Not available.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid. Metal solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 65.39 g/mole

Color: Bluish-grey

pH (1% soln/water): Not applicable.

Boiling Point: 907°C (1664.6°F)

Melting Point: 419°C (786.2°F)

Critical Temperature: Not available.

Specific Gravity: Not available.

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water, methanol, diethyl ether, n-octanol, acetone.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Excess heat, incompatible materials, moisture

Incompatibility with various substances:
Reactive with oxidizing agents, acids, alkalis. Slightly reactive to reactive with moisture. The product may react violently with water to emit flammable but non toxic gases.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Incompatible with acids, halogenated hydrocarbons, NH4NO3, barium oxide, Ba(NO3)2, Cadmium, CS2, chlorates, Cl2, CrO3, F2, Hydroxylamine, Pb(N3)2, MnCl2, HNO3, performic acid, KClO3, KNO3, N2O2, Selenium, NaClO3, Na2O2, Sulfur, Te, water, (NH4)2S, As2O3, CS2, CaCl2, chlorinated rubber, catalytic metals, halocarbons, o-nitroanisole, nitrobenzene, nonmetals, oxidants, paint primer base, pentacarbonoyliron, transition metal halides, seleninyl bromide, HCl, H2SO4, (Mg +Ba(NO3)2 +BaO2), (ethyl acetoacetate +tribromoneopentyl alcohol. Contact with Alkali Hydroxides(Sodium Hydroxide, Potassium Hydroxide, Calcium Hydroxide, etc) results in evolution of hydrogen. Ammonium nitrate + zinc + water causes a violent reaction with evolution of steam and zinc oxide. May react with water.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans: Not available.

Other Toxic Effects on Humans: Slightly hazardous in case of skin contact (irritant), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans:
Acute Potential Health Effects: Skin: May cause skin irritation. Dermal exposure to zinc may produce leg pains, fatigue, anorexia and weight loss. Eyes: May cause eye irritation. Ingestion: May be harmul if swallowed. May cause digestive tract irritation with tightness in throat, nausea, vomiting, diarrhea, loss of appetite, malaise, abdominal pain, fever, and chills. May affect behavior/central nervous system and autonomic nervous system with ataxia, lethargy, staggering gait, mild derrangement in cerebellar function, lightheadness, dizzness, irritability, muscular stiffness, and pain. May also affect blood. Inhalation: Inhalation of zinc dust or fumes may cause respiratory tract and mucous membrane irritation with cough and chest pain. It can also cause "metal fume fever", a flu-like condition characterized appearance of chills, headached fever, maliase, fatigue, sweating, extreme thirst, aches in the legs and chest, and difficulty in breathing. A sweet taste may also be be present in metal fume fever, as well as a dry throat, aches, nausea, and vomiting, and pale grey cyanosis. The toxicological properties of this substance have not been fully investisgated.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: Not available.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
New York release reporting list: Zinc Metal Rhode Island RTK hazardous substances: Zinc Metal Pennsylvania RTK: Zinc Metal Florida: Zinc Metal Michigan critical material: Zinc Metal Massachusetts RTK: Zinc Metal New Jersey: Zinc Metal California Director's List of Hazardous Substances: Zinc Metal TSCA 8(b) inventory: Zinc Metal TSCA 12(b) one time export: Zinc Metal SARA 313 toxic chemical notification and release reporting: Zinc Metal CERCLA: Hazardous substances.: Zinc Metal: 1000 lbs. (453.6 kg)

Other Regulations: EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada): Not Available

DSCL (EEC):
R15- Contact with water liberates extremely flammable gases. R17- Spontaneously flammable in air. S7/8- Keep container tightly closed and dry.

HMIS (U.S.A.):

Health Hazard: 1

Fire Hazard: 1

Reactivity: 1

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 0

Flammability: 1

Reactivity: 1

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Safety glasses.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

Project Location : 64-06 Queens Blvd, Woodside, NY
Project Description : 135 rooms of Holiday Inn Express & Suites

CONSTRUCTION COST: (b)(4)

SCOPE OF WORK:

1. GENERAL

1.01 Mobilization & preparation
1.02 Insurance-general liability 25M & workmen comp
1.03 Sign-offs
1.04 Permit applications
1.05 Provide all necessary SOE inspections
1.06 Provide all necessary TR-2 TR-3
1.07 Provide engineer on site for supervision of all foundation and shoring work
1.08 Provide all necessary surveys
1.09 Provide all necessary shop drawings

2. SITEWORK

2.01 Provide and Install roof protection on adjacent buildings
2.02 Scaffold
  a. Provide and install Sidewalk Bridge
  b. Provide and install scaffold to roof
  c. Provide and install protection net to roof
  d. Scaffold reinforcement
2.03 Shoring, Sheeting & Lagging as per SOE
2.04 Temporary Protection Plywood Fence
2.05 Provide and install exterior material hoist
2.06 Excavation and backfill as necessary
2.07 Provide and install sidewalk, trees, curb and curb as per approved BPP

3. MASONRY

3.01 Concrete block as per drawings
3.02 Stucco in rear of building
3.03 Stone on first floor as per rendering

4. CONCRETE

4.01 Foundation wall, straps beams and pile caps
4.02 Concrete Slabs
4.03 Roof Bulkhead
4.04 Sidewalk, curbs and pavement
4.05 Surveys and stakeout
4.06 All waterproofing of exterior foundation walls

5. METALS

5.01 Concrete filled metal pan stairs
5.02 Metal framing and gates
5.03 Roof, railing and ladder
5.04 Structural metal framing
5.05 Provide and install steel dunnage
5.06 Omagalite exterior aluminum panel front and 2 sides

Queens Blvd Ventures LLC
35-06 Leavitt Street, Suite CF-A, Flushing NY 11354
Tel: 718.939.1060 Fax: 718.939.1036
Email: centurygroup88@yahoo.com

(b)(4)

6. THERMAL & MOISTURE PROTECTION

6.01 Roof waterproofing
- a. Six-ply rubber roofing
- b. 2" rigid insulation
- c. Vent sheet
- d. Fire Stone 12 year labor and material warrenty

6.02 Insulation
- a. Exterior wall insulation close cell sprayed on
- b. Interior wall insulation open cell sprayed on

7. DOORS & WINDOWS

7.01 Doors 1 3/4 " solid core doors, frames and hardware
7.02 Aluminum windows & storefront entrance by crystal or equal
7.03 All window system by crystal or equal per window schedule
7.04 All hollow metal door per schedule
7.05 Thermacore 490 garage door
7.06 Provide and install glass railing as per rendering

8. FINISHES

8.01 Gypsum board ceiling w / paint finished
8.02 Gypsum board wall w / paint finished
8.03 Epoxy paint for areaway, Elec.meter Rm., water meter Rm.
8.04 All apartment interior as per finish schedule
8.05 All hallways as per plan and finish schedule
8.06 All commercial, lobby as per design

9. CONVEYING SYSTEM

9.01 Provide and install Thyssen Krupp MRL 250FPM 2300# elevator
9.02 Standard cab $20,000 allowance

10. EQUIPMENT

10.01 Kitchen cabinets allowance is $5,000 per unit
10.02 All appliances
10.03 Bathroom accessories
10.04 Trash chute and compactor
10.05 Kitchen counter top to be Caesar Stone

11. MECHANICAL

11.01 HVAC system as per drawings
11.02 Provide and install exhaust & fresh air system as per drawings
11.03 Provide and install LG PTAC unit
11.04 Provide and install all kitchen and bath exhaust duct and fans
11.05 Provide and install HVAC system for lobby, trash storage and rec room PTAC

12. FIRE SYSTEM

12.01 Sprinkler system as per drawings
12.02 Stand Pipe system as per drawings
12.03 Provide and install sprinkler alarm system as per DOB and FDNY code

Queens Blvd Ventures LLC
35-06 Leavitt Street, Suite CF-A, Flushing NY 11354
Tel: 718.939.1060 Fax: 718.939.1036
Email: centurygroup88@yahoo.com

(b)(4)

13. ELECTRICAL

13.01 Apply and install all electrical meters
13.02 Provide and install electrical panels
13.03 Provide and install lighting fixtures as per plan
13.04 Provide and install emergency exit lights
13.05 Provide and install receptacles
13.06 Provide and install Aiphone color audio / video intercom system
13.07 Provide and install all Verizon, TimeWarner lines
13.08 Provide and install 100 Amp panels in every Apt. unit
13.09 Provide and install 1600 ConEd SEB
13.10 Provide temporary electrical service

14. PLUMBING WORK

14.01 Provide all utility services and meters
14.02 Install copper water supply & no-hub drainage system and all vent pipes
14.03 Supply & install plumbing fixtures as per owner's schedule
14.04 Install new gas main service with meters
14.05 All supply and return water lines
14.06 All kitchen gas pipes to all equipment in builing
14.07 Provide and install 1 duplex water booster and sewer ejector booster pump
14.08 Provide and install RZP as per design
14.09 Provide and install 3 150 Gal HWH and 1 25 Gal electrical HWH per residential
14.10 Provide and install all incoming water, sewer main as per plans

Re: Holiday Inn Express & Suites
64-06 Queens Blvd, Woodside, NY 11377

Dear CSC EB-5 Unit Officer:

Century Construction Group was hired by Queens Blvd Ventures, LLC as the general contractor on the above-referenced Project. I am the president of Century Construction Group and have worked in the construction industry for twenty years and have supervised, managed and/or constructed. My experience includes hospitality, commercial interior and residential projects. I have constructed similar projects to the proposed Holiday Inn Express & Suites in term of size, budgets and timeline. These projects include the Marriot Fairfield Inn, the Leavitt Manor Condominium and the Farrington Estate, all located in Flushing. I have been asked by Queens Blvd Ventures, LLC to provide you with some information concerning the Project in connection with certain funding obtained by EB-5.

Century Construction Group has advised that hard construction cost estimate would be [redacted] The construction timeline is 27 months. This Holiday Inn Express & Suites hotel will include a breakfast room, a fitness room, business center, market pantry, outdoor lounge, and vending areas. This hotel will include 135 rooms and suites. The Demolition is scheduled to begin in early October of 2015. I attest that the construction budgets and timeline are estimated based on established industry standards.

(b)(4)

Very Truly Yours,

George Xu
President

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

SECTION 6.0
MEDICAL SURVEILLANCE PROGRAM

All workers at the Site must participate in a medical surveillance program in accordance with 29 CFR 1910.120. A medical examination and consultation must have been performed within the last twelve months to be eligible for fieldwork.

The content of the examination and consultation will include a medical and work history with special emphasis on symptoms related to the handling of hazardous substances, health hazards, and fitness for duty including the ability to wear required personal protective equipment under conditions (i.e., temperature extremes) that may be expected at the work Site. All medical examinations and procedures shall be performed by, or under the supervision of, a licensed physician.

The physician shall furnish a written opinion containing:

- The results of the medical examination and tests.
- The physician's opinion as to whether the employee has any detected medical conditions that would place the worker at increased risk of material impairment of the employee's health from work in hazardous waste operations.
- The physician's recommended limitations upon the worker assigned to the work.
- A statement that the worker has been informed by the physician of the results of the medical examination and any further examination or treatment.

An accurate record of the medical surveillance will be retained. The record will consist of at least the following information:

- The name and social security number of the employee.
- Physician's written opinions, recommended limitations, and results of examinations and tests.
- Any worker medical complaints related to exposure to hazardous substances.

SECTION 7.0
PERSONAL PROTECTIVE EQUIPMENT

7.1 General Considerations

The two basic objectives of the personal protective equipment (PPE) are to protect the wearer from safety and health hazards, and to prevent the wearer from incorrect use and/or malfunction of the PPE.

Potential Site hazards were discussed previously in Section 4.0. The duration of Site activities is estimated to be approximately four weeks. All work is expected to be performed during daylight hours and workdays, in general, are expected to be eight hours in duration.

Personal protection levels for the Site activities, based on investigations of nearby properties, are anticipated to be Level D with the unlikely possibility of upgrading to Level C. The equipment included for each level of protection is provided as follows:

Level C Protection

Personnel protective equipment:

- Air-purifying respirator, full-face, equipped with dust and organic vapor cartridges.
- Chemical-resistant clothing includes: Tyvek^{tm} (spunbonded olefin fibers) for particulate and limited splash protection or Saranex^{tm} (plastic film-laminated Tyvek) for permeation resistance to solvents.
- Coveralls*, or
- Long cotton underwear*
- Gloves (outer), chemical-resistant
- Gloves (inner), chemical-resistant
- Boots (outer), leather or chemical-resistant, steel toe and shank.
- Boot covers (outer), chemical-resistant (disposable)*
- Hard hat (face shield)*
- Escape mask*
- 2-way radio communications (intrinsically safe)*

(*) optional

Criteria for Selection of Level C Protection

Meeting all of these criteria permits use of Level C Protection:

- Oxygen concentrations are not less than 19.5% by volume.
- Measured air concentrations of identified substances will be reduced by the respirator below the substance's threshold limit value (TLV).
- Atmospheric contaminants, liquid splashes, or other direct contact will not adversely affect any body area left unprotected by chemical-resistant clothing.
- Job functions do not require self-contained breathing apparatus.
- Direct readings are below 50 ppm on the PID.

Level D Protection

Personnel protective equipment:

- Coveralls
- Gloves*
- Boots/shoes, leather or chemical-resistant, steel toe and shank.
- Safety glasses or chemical splash goggles*
- Hard hat (face shield*)
- Escape mask*

(*) optional

Criteria for Selection of Level D Protection

Meeting any of these criteria allows use of Level D Protection:

- No contaminant levels above 5 ppm organic vapors or dusty conditions are present.
- Work functions preclude splashes, immersion, or the reasonable potential for unexpected inhalation of any chemicals above the TLV.

Additional Considerations for Selecting Levels of Protection

Other factors which will be considered in selecting the appropriate level of protection are heat and physical stress. The use of protective clothing and respirators increases physical stress, in particular, heat stress on the wearer. Chemical protective clothing greatly reduces natural ventilation and diminishes the body's ability to regulate its temperature. Even in moderate ambient temperatures, the diminished capacity of the body to dissipate heat can result in one or more heat-related problems.

All chemical protective garments can be a contributing factor to heat stress. Greater susceptibility to heat stress occurs when protective clothing requires the use of a tightly fitted hood against the respirator face piece, or when gloves or boots are taped to the suit. As more body area is covered, less cooling takes place, increasing the probability of heat stress.

Wearing protective equipment also increases the risk of accidents. It is heavy, cumbersome, decreases dexterity, agility, interferes with vision, and is fatiguing to wear. These factors all increase physical stress and the potential for accidents. In particular, the necessity of selecting a level of protection will be balanced against the increased probability of heat stress and accidents.

7.2 Donning and Doffing Ensembles

Donning an Ensemble

A routine will be established and practiced periodically for donning a Level C ensemble. Assistance may be provided for donning and doffing since these operations are difficult to perform alone. Donning will be completed in the decontamination zone.

Table 7.2.1 lists sample procedures for donning a Level C ensemble. These procedures should be modified depending on the particular type of suit and/or when extra gloves and/or boots are used.

Doffing an Ensemble

Exact procedures for removing Level C ensembles must be established and followed to prevent contaminant migration from the work area and transfer of contaminants to the wearer's body, the doffing assistant, and others. Doffing will be completed in the decontamination zone.

Doffing procedures are provided in Table 7.2.2. These procedures should be performed only after decontamination of the suited worker. They require a suitably attired assistant. Throughout the procedures, both worker and assistant should avoid any direct contact with the outside surface of the suit.

7.3 Respirator Fit Testing

The fit or integrity of the facepiece-to-face seal of a respirator affects its performance. Most facepieces fit only a certain percentage of the population; thus each facepiece must be tested on the potential wearer in order to ensure a tight seal. Facial features such as scars, hollow temples, very prominent cheekbones, deep skin creases, dentures or missing teeth, and the chewing of gum and tobacco may interfere with the respirator-to-face seal. Facial hair in the seal area may also interfere with the respirator-to-face seal and should be removed prior to entry into the work zone. A respirator shall not be worn when such conditions prevent a good seal. The worker's diligence in observing these factors shall be evaluated by periodic checks. Fit testing will comply with 29 CFR 1910.1025 regulations.

TABLE 7.2.1
SAMPLE DONNING PROCEDURES

1. Inspect the clothing and respiratory equipment before donning (see Inspection in subsection 7.4).

2. Adjust hard hat or headpiece if worn, to fit user's head.

3. Standing or sitting, step into the legs of the suit; ensure proper placement of the feet within the suit; then gather the suit around the waist.

4. Put on chemical-resistant safety boots over the feet of the suit. Tape the leg cuff over the tops of the boots.

5. Don the respirator and adjust it to be secure, but comfortable.

6. Perform negative and positive respirator facepiece seal test procedures.

   - To conduct a negative-pressure test, close the inlet part with the palm of the hand or squeeze the breathing tube so it does not pass air, and gently inhale for about 10 seconds. Any inward rushing of air indicates a poor fit. Note that a leaking facepiece may be drawn tightly to the face to form a good seal, giving a false indication of adequate fit.

   - To conduct a positive-pressure test, gently exhale while covering the exhalation valve to ensure that a positive pressure can be built up. Failure to build a positive pressure indicates a poor fit.

7. Depending on type of suit:

   - Put on inner gloves (surgical gloves).

   - Additional overgloves, worn over attached suit gloves, may be donned later.

8. Put on hard hat

9. Have assistant observe the wearer for a period of time to ensure that the wearer is comfortable, psychologically stable, and that the equipment is functioning properly.

TABLE 7.2.2
DOFFING PROCEDURES

1. Remove any extraneous or disposable clothing, boot covers, outer gloves, and tape.

2. Remove respirator by loosening straps and pulling straps over the top of the head and move mask away from head. Do not pull mask over the top of the head.

3. Remove arms, one at a time, from suit, avoiding any contact between the outside surface of the suit and wearer's body and lay the suit out flat behind the wearer. Leave internal gloves on, if any.

4. Sitting, if possible, remove both legs from the suit.

5. After suit is removed, remove internal gloves by rolling them off the hand, inside out.

7.4 Inspection

The PPE inspection program will entail five different inspections:

- Inspection and operational testing of equipment received from the factory or distributor.
- Inspection of equipment as it is issued to workers.
- Inspection after use.
- Periodic inspection of stored equipment.
- Periodic inspection when a question arises concerning the appropriateness of the selected equipment, or when problems with similar equipment arise.

The inspection checklist is provided in Table 7.4.1. Records will be kept of all inspection procedures. Individual identification numbers will be assigned to all reusable pieces of equipment and records should be maintained by that number. At a minimum, each inspection should record the ID number, date, inspector, and any unusual conditions or findings. Periodic review of these records may indicate an item or type of item with excessive maintenance costs or a particularly high level of down-time.

7.5 Storage

Clothing and respirators will be stored properly to prevent damage or malfunction due to exposure to dust, moisture, sunlight, damaging chemicals, extreme temperatures, and impact. Storage procedures are as follows:

TABLE 7.4.1
PPE INSPECTION CHECKLIST

CLOTHING

Before use:

- Determine that the clothing material is correct for the specified task at hand.
- Visually inspect for:
  - imperfect seams
  - non-uniform coatings
  - tears
  - malfunctioning closures
- Hold up to light and check for pinholes.
- Flex product:
  - observe for cracks or other signs of shelf deterioration
- If the product has been used previously, inspect inside and out for signs of chemical attack:
  - discoloration, swelling, stiffness

During the work task, periodically inspect for:

- Evidence of chemical attack such as discoloration, swelling, stiffening, and softening. Keep in mind, however, that chemical permeation can occur without any visible effects.
- Closure failure
- Tears
- Punctures
- Seam discontinuities

GLOVES

Before use:

- Pressurize glove to check for pinholes. Either blow into glove, then roll gauntlet toward fingers or inflate glove and hold under water. In either case, no air should escape.

AIR-PURIFYING RESPIRATORS

- Inspect air-purifying respirators:
  - before each use to be sure they have been adequately cleaned
- Check material conditions for:
  - signs of pliability, deterioration, distortion
- Examine cartridges to ensure that:
  - they are the proper type for the intended use
  - the expiration date has not been passed
  - they have not been opened or used previously
- Check faceshields and lenses for:
  - cracks, crazing, fogginess
- Air purifying respirators will be stored individually in resealable plastic bags.

Clothing:

- Potentially contaminated clothing will be stored in an area separate from street clothing.
- Potentially contaminated clothing will be stored in a well-ventilated area, with good air flow around each item, if possible.
- Different types and material of clothing and gloves will be stored separately to prevent issuing the wrong material by mistake.
- Protective clothing will be folded or hung in accordance with manufacturer's recommendations.

Respirators:

- Air-purifying respirators should be dismantled, washed, and placed in sealed plastic bags.

7.6 Maintenance

Specialized maintenance will be performed only by the factory or an authorized repair person. Routine maintenance, such as cleaning, will be performed by the personnel to whom the equipment is assigned. Respirators will be cleaned at the end of each day with alcohol pads or, preferably, by washing with warm soapy water.

7.7 Decontamination Methods

All personnel, clothing, equipment, and samples leaving the (potentially) contaminated, or work zone, area of the Site must be decontaminated to remove any harmful chemicals or infectious organisms that may have adhered to them. Decontamination methods either (1) physically remove contaminants (2) inactivate contaminants by chemical detoxification or disinfection/sterilization, or (3) remove contaminants by a combination of both physical and chemical means. In many cases, gross contamination can be removed by physical means involving dislodging/displacement, rinsing, wiping off, and evaporation. Contaminants that can be removed by physical means include dust, vapors, and volatile liquids. All reusable equipment will be decontaminated by rinsing in a bath of detergent and water (respirators, gloves to be reused). Monitoring equipment will be decontaminated by wiping with paper towels and water.

The effectiveness of the decontamination will be evaluated near the beginning of Site activities and will be modified if determined to be ineffective. Visual observation will be used for this purpose. The HSO will inspect decontaminated materials for discoloration, stains, corrosive effects, visible dirt, or other signs of possible residual contamination.

All disposable PPE will be discarded following use. All used PPE to be discarded will be placed in an appropriate receptacle for disposal.

SECTION 8.0
DECONTAMINATION PROCEDURES FOR SAMPLING EQUIPMENT

All non-dedicated sampling equipment shall be decontaminated prior to, and following, use at each sampling location. Decontamination procedures shall consist of the following:

1. Scrub equipment in a bath of low-phosphate detergent and potable water.

2. Potable water rinse.

3. Air dry.

4. Aluminum foil wrap, shiny side out, for transport.

Personal protective equipment decontamination has been discussed in Subsection 7.7.

All direct-push equipment and other equipment which has contacted Site soil, groundwater, or soil vapor will be decontaminated prior to leaving the Site. Decontamination of this equipment will consist of physically removing adhering soil using hand tools followed by rinsing the equipment with potable water. Decontamination will be performed in the immediate vicinity of the work area so that the removed soil and rinseate will be discharged in the area from which it originated.

SECTION 9.0
CALIBRATION PROCEDURES, FREQUENCIES, AND MAINTENANCE

This section summarizes the calibration procedures, frequencies, and maintenance for the health and safety field monitoring instruments. The manufacturer's owner's manuals for all monitoring equipment to be used will be present at the Site and will be followed.

The monitoring equipment will include a photoionization detector (PID) which measures the concentration of airborne ionizable gases and vapors. The PID does not distinguish between individual compounds and will not read methane. The PID calibration will be performed using ambient air to "zero" the instrument and a 95 to 100 ppm cylinder of isobutylene to calibrate the span. The calibration will be performed in accordance with the manufacturer's instructions.

Additional monitoring instruments may include a dust monitor, a noise monitor, and other equipment, as necessary. All instruments will be calibrated prior to the commencement of each day's work in accordance with the manufacturer's instructions. The instruments will also be charged overnight prior to each day's work. Maintenance will be performed periodically as needed and in accordance with the manufacturer's instructions.

SECTION 10.0
EMERGENCY RESPONSE PLAN

This section will present the Emergency Response Plan (ERP) for the Site. Pre-emergency planning will consist of reviewing the ERP with all workers at the Site prior to initiation of work.

Personnel Roles

It is anticipated that during sampling activities at the Site several persons, including the HSO and contractor personnel, will be onsite. Should an emergency situation arise at the Site, the HSO will assume control and decision-making. The HSO will also resolve all disputes concerning health and safety requirements and precautions. The HSO will also:

- Be authorized to seek and purchase supplies as necessary.
- Have control over activities of everyone entering the Site.

The HSO will communicate, by field telephone or other, with off-Site personnel to include the Project Manager to evaluate data and assist in the decision-making process. Phone numbers for the fire department, police, ambulance, poison control center, NYS Spills Hotlines, are listed in Table 1.2.1 of this document. The hospital which will be utilized during an emergency will be Elmhurst Hospital Center in Elmhurst. The directions to the hospital, along with the hospital's emergency room phone number are presented in Table 1.2.1. Copies of Table 1.2.1 will be available at the Site and will be placed in all vehicles of personnel involved in activities at the Site.

Internal communications will consist of a single whistle (or compressed air horn if Level C is donned) blast. This blast will signal all workers to evacuate the work zone by the nearest exit.

Response Follow-Up

Following an emergency, or incident, a detailed report will be generated by the HSO. All equipment will be restored to pre-emergency conditions. The HASP will be reviewed following an emergency to determine if it provides adequate information to assist in dealing with the emergency. The HASP may be revised to incorporate additional information as needed.

Emergency Recognition and Prevention

Before daily work assignments begin, each day a brief on-Site meeting will be held by the HSO which will address health and safety issues related to the day's work. Prior to initiation of work, a detailed on-Site health and safety meeting will be held to review all potential hazards, contingencies, and safety measures.

Safe Distances and Places of Refuge

The main potential cause of work zone evacuation is a significant vapor release. Vapor release evacuation will be discussed prior to subsurface activities at the Site and in general will be in the upwind direction. Wind direction will be monitored at each work location and all workers will be notified of the direction of evacuation prior to commencement of work. Safe distances will be discussed at each location and determined by the HSO. The PID will be used to determine if workers have evacuated a

sufficient distance.

At all times, vehicles which may be utilized in an emergency for transport to the hospital (or other destination) will have clear access to leave the Site. The HSO will assure that an emergency vehicle does not become blocked-in by other vehicles.

Site Security and Control

The HSO will control entry of personnel into the work zone. No unnecessary persons shall be permitted in the work zone.

Decontamination Procedures During Emergencies

In the event of a medical emergency, decontamination will be performed if it does not interfere with essential treatment. Decontamination will be performed by washing, rinsing, and/or cutting off protective clothing and equipment.

If decontamination cannot be performed, the victim will be wrapped in plastic to reduce contamination to other personnel. Emergency and off-Site medical personnel will be alerted to the potential contamination.

Emergency Medical Treatment and First Aid

Medical emergencies will be treated, in general, by medical experts by transporting the victim to the nearby hospital. A first aid kit will be present on Site for minor medical treatment.

Section 1: Chemical Product and Company Identification

Product Name: Acetone

Catalog Codes: SLA3502, SLA1645, SLA3151, SLA3808

CAS#: 67-64-1

RTECS: AL3150000

TSCA: TSCA 8(b) inventory: Acetone

CI#: Not applicable.

Synonym: 2-propanone; Dimethyl Ketone; Dimethylformaldehyde; Pyroacetic Acid

Chemical Name: Acetone

Chemical Formula: C3-H6-O

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call: 1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Acetone	67-64-1	100

Toxicological Data on Ingredients: Acetone: ORAL (LD50): Acute: 5800 mg/kg [Rat]. 3000 mg/kg [Mouse]. 5340 mg/kg [Rabbit]. VAPOR (LC50): Acute: 50100 mg/m 8 hours [Rat]. 44000 mg/m 4 hours [Mouse].

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation. Slightly hazardous in case of skin contact (permeator).

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: A4 (Not classifiable for human or animal.) by ACGIH. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Classified Reproductive system/toxin/female, Reproductive system/toxin/male [SUSPECTED]. The substance is toxic to central nervous system (CNS). The substance may be toxic to kidneys, the reproductive system, liver, skin. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Cold water may be used. Get medical attention.

Skin Contact:
In case of contact, immediately flush skin with plenty of water. Cover the irritated skin with an emollient. Remove contaminated clothing and shoes. Cold water may be used.Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention.

Serious Skin Contact:
Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek medical attention.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention if symptoms appear.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention if symptoms appear.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: Flammable.

Auto-Ignition Temperature: 465°C (869°F)

Flash Points: CLOSED CUP: -20°C (-4°F). OPEN CUP: -9°C (15.8°F) (Cleveland).

Flammable Limits: LOWER: 2.6% UPPER: 12.8%

Products of Combustion: These products are carbon oxides (CO, CO2).

Fire Hazards in Presence of Various Substances: Highly flammable in presence of open flames and sparks, of heat.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Slightly explosive in presence of open flames and sparks, of oxidizing materials, of acids.

Fire Fighting Media and Instructions:
Flammable liquid, soluble or dispersed in water. SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use alcohol foam, water spray or fog.

Special Remarks on Fire Hazards: Vapor may travel considerable distance to source of ignition and flash back.

Special Remarks on Explosion Hazards:
Forms explosive mixtures with hydrogen peroxide, acetic acid, nitric acid, nitric acid + sulfuric acid, chromic anydride, chromyl chloride, nitrosyl chloride, hexachloromelamine, nitrosyl perchlorate, nitryl perchlorate, permonosulfuric acid, thiodiglycol + hydrogen peroxide, potassium ter-butoxide, sulfur dichloride, 1-methyl-1,3-butadiene, bromoform, carbon, air, chloroform, thitriazylperchlorate.

Section 6: Accidental Release Measures

Small Spill:
Dilute with water and mop up, or absorb with an inert dry material and place in an appropriate waste disposal container.

Large Spill:
Flammable liquid. Keep away from heat. Keep away from sources of ignition. Stop leak if without risk. Absorb with DRY earth, sand or other non-combustible material. Do not touch spilled material. Prevent entry into sewers, basements or confined areas; dike if needed. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Ground all equipment containing material. Do not ingest. Do not breathe gas/fumes/ vapor/spray. Wear suitable protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes. Keep away from incompatibles such as oxidizing agents, reducing agents, acids, alkalis.

Storage:
Store in a segregated and approved area (flammables area) . Keep container in a cool, well-ventilated area. Keep container tightly closed and sealed until ready for use. Keep away from direct sunlight and heat and avoid all possible sources of ignition (spark or flame).

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

Personal Protection:
Splash goggles. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 500 STEL: 750 (ppm) from ACGIH (TLV) [United States] TWA: 750 STEL: 1000 (ppm) from OSHA (PEL) [United States] TWA: 500 STEL: 1000 [Austalia] TWA: 1185 STEL: 2375 (mg/m3) [Australia] TWA: 750 STEL: 1500 (ppm) [United Kingdom (UK)] TWA: 1810 STEL: 3620 (mg/m3) [United Kingdom (UK)] TWA: 1800 STEL: 2400 from OSHA (PEL) [United States]Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Liquid.

Odor: Fruity. Mint-like. Fragrant. Ethereal

Taste: Pungent, Sweetish

Molecular Weight: 58.08 g/mole

Color: Colorless. Clear

pH (1% soln/water): Not available.

Boiling Point: 56.2°C (133.2°F)

Melting Point: -95.35 (-139.6°F)

Critical Temperature: 235°C (455°F)

Specific Gravity: 0.79 (Water = 1)

Vapor Pressure: 24 kPa (@ 20°C)

Vapor Density: 2 (Air = 1)

Volatility: Not available.

Odor Threshold: 62 ppm

Water/Oil Dist. Coeff.: The product is more soluble in water; log(oil/water) = -0.2

Ionicity (in Water): Not available.

Dispersion Properties: See solubility in water.

Solubility: Easily soluble in cold water, hot water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Excess heat, ignition sources, exposure to moisture, air, or water, incompatible materials.

Incompatibility with various substances: Reactive with oxidizing agents, reducing agents, acids, alkalis.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Dermal contact. Eye contact. Inhalation.

Toxicity to Animals:
WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 3000 mg/kg [Mouse]. Acute toxicity of the vapor (LC50): 44000 mg/m3 4 hours [Mouse].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: A4 (Not classifiable for human or animal.) by ACGIH. DEVELOPMENTAL TOXICITY: Classified Reproductive system/toxin/female, Reproductive system/toxin/male [SUSPECTED]. Causes damage to the following organs: central nervous system (CNS). May cause damage to the following organs: kidneys, the reproductive system, liver, skin.

Other Toxic Effects on Humans:
Hazardous in case of skin contact (irritant), of ingestion, of inhalation. Slightly hazardous in case of skin contact (permeator).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans:
May affect genetic material (mutagenicity) based on studies with yeast (S. cerevisiae), bacteria, and hamster fibroblast cells. May cause reproductive effects (fertility) based upon animal studies. May contain trace amounts of benzene and formaldehyde which may cancer and birth defects. Human: passes the placental barrier.

Special Remarks on other Toxic Effects on Humans:
Acute Potential Health Effects: Skin: May cause skin irritation. May be harmful if absorbed through the skin. Eyes: Causes eye irritation, characterized by a burning sensation, redness, tearing, inflammation, and possible corneal injury. Inhalation: Inhalation at high concentrations affects the sense organs, brain and causes respiratory tract irritation. It also may affect the Central Nervous System (behavior) characterized by dizzness, drowsiness, confusion, headache, muscle weakeness, and possibly motor incoordination, speech abnormalities, narcotic effects and coma. Inhalation may also affect the gastrointestinal tract (nausea, vomiting). Ingestion: May cause irritation of the digestive (gastrointestinal) tract (nausea, vomiting). It may also

affect the Central Nevous System (behavior), characterized by depression, fatigue, excitement, stupor, coma, headache, altered sleep time, ataxia, tremors as well at the blood, liver, and urinary system (kidney, bladder, ureter) and endocrine system. May also have musculoskeletal effects. Chronic Potential Health Effects: Skin: May cause dermatitis. Eyes: Eye irritation.

Section 12: Ecological Information

Ecotoxicity:
Ecotoxicity in water (LC50): 5540 mg/l 96 hours [Trout]. 8300 mg/l 96 hours [Bluegill]. 7500 mg/l 96 hours [Fatthead Minnow]. 0.1 ppm any hours [Water flea].

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The product itself and its products of degradation are not toxic.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: CLASS 3: Flammable liquid.

Identification: : Acetone UNNA: 1090 PG: II

Special Provisions for Transport: Not available.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (male) which would require a warning under the statute: Benzene California prop. 65: This product contains the following ingredients for which the State of California has found to cause birth defects which would require a warning under the statute: Benzene California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Benzene, Formaldehyde Connecticut hazardous material survey.: Acetone Illinois toxic substances disclosure to employee act: Acetone Illinois chemical safety act: Acetone New York release reporting list: Acetone Rhode Island RTK hazardous substances: Acetone Pennsylvania RTK: Acetone Florida: Acetone Minnesota: Acetone Massachusetts RTK: Acetone Massachusetts spill list: Acetone New Jersey: Acetone New Jersey spill list: Acetone Louisiana spill reporting: Acetone California List of Hazardous Substances (8 CCR 339): Acetone TSCA 8(b) inventory: Acetone TSCA 4(a) final test rules: Acetone TSCA 8(a) IUR: Acetone

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada):
CLASS B-2: Flammable liquid with a flash point lower than 37.8°C (100°F). CLASS D-2B: Material causing other toxic effects (TOXIC).

DSCL (EEC):
R11- Highly flammable. R36- Irritating to eyes. S9- Keep container in a well-ventilated place. S16- Keep away from sources of ignition - No smoking. S26- In case of contact with eyes, rinse immediately with plenty of water and seek medical advice.

HMIS (U.S.A.):

Health Hazard: 2

Fire Hazard: 3

Reactivity: 0

Personal Protection: h

National Fire Protection Association (U.S.A.):

Health: 1

Flammability: 3

Reactivity: 0

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Splash goggles.

Material Safety Data Sheet
Cadmium MSDS

Section 1: Chemical Product and Company Identification

Product Name: Cadmium

Catalog Codes: SLC3484, SLC5272, SLC2482

CAS#: 7440-43-9

RTECS: EU9800000

TSCA: TSCA 8(b) inventory: Cadmium

CI#: Not applicable.

Synonym:

Chemical Name: Cadmium

Chemical Formula: Cd

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call: 1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Cadmium	7440-43-9	100

Toxicological Data on Ingredients: Cadmium: ORAL (LD50): Acute: 2330 mg/kg [Rat.]. 890 mg/kg [Mouse]. DUST (LC50): Acute: 50 ppm 4 hour(s) [Rat].

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer), of eye contact (irritant). Severe over-exposure can result in death.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, liver. Repeated or prolonged exposure to the substance can produce target organs damage. Repeated exposure to an highly toxic material may produce general deterioration of health by an accumulation in one or many human organs.

Section 4: First Aid Measures

Eye Contact: No known effect on eye contact, rinse with water for a few minutes.

Skin Contact:
After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact: Not available.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. WARNING: It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek immediate medical attention.

Ingestion:
Do not induce vomiting. Examine the lips and mouth to ascertain whether the tissues are damaged, a possible indication that the toxic material was ingested; the absence of such signs, however, is not conclusive. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 570°C (1058°F)

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances:
Non-flammable in presence of open flames and sparks, of heat, of oxidizing materials, of reducing materials, of combustible materials, of moisture.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards:
Material in powder form, capable of creating a dust explosion. When heated to decomposition it emits toxic fumes.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable protective clothing In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage:
Keep container dry. Keep in a cool place. Ground all equipment containing material. Keep container tightly closed. Keep in a cool, well-ventilated place. Highly toxic or infectious materials should be stored in a separate locked safety storage cabinet or room.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.01 (ppm) Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 112.4 g/mole

Color: Silvery.

pH (1% soln/water): Not applicable.

Boiling Point: 765°C (1409°F)

Melting Point: 320.9°C (609.6°F)

Critical Temperature: Not available.

Specific Gravity: 8.64 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water, methanol, diethyl ether, n-octanol.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Not considered to be corrosive for metals and glass.

Special Remarks on Reactivity: Reacts violently with potassium.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals:
WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 890 mg/kg [Mouse]. Acute toxicity of the dust (LC50): 229.9 mg/m3 4 hour(s) [Rat].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. The substance is toxic to kidneys, lungs, liver.

Other Toxic Effects on Humans:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: An allergen. 0047 Animal: embryotoxic, passes through the placental barrier.

Special Remarks on other Toxic Effects on Humans: May cause allergic reactions, exzema and/or dehydration of the skin.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification:

Identification:

Special Provisions for Transport:

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Copper	7440-50-8	100

Toxicological Data on Ingredients: Copper LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects:
Very hazardous in case of ingestion. Hazardous in case of eye contact (irritant), of inhalation. Slightly hazardous in case of skin contact (irritant).

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Not available. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to lungs, mucous membranes. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact: Check for and remove any contact lenses. Do not use an eye ointment. Seek medical attention.

Skin Contact:
After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact: Not available.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation: Not available.

Ingestion:
Do not induce vomiting. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Not available.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not breathe dust. Avoid contact with eyes Wear suitable protective clothing In case of insufficient ventilation, wear suitable respiratory equipment If you feel unwell, seek medical attention and show the label when possible.

Storage:
Keep container dry. Keep in a cool place. Ground all equipment containing material. Keep container tightly closed. Keep in a cool, well-ventilated place. Combustible materials should be stored away from extreme heat and away from strong oxidizing agents.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection:
Splash goggles. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 1 (mg/m3) from ACGIH [1990] Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid.

Odor: Not available.

Taste: Not available.

Molecular Weight: 63.54 g/mole

Color: Not available.

pH (1% soln/water): Not applicable.

Boiling Point: 2595°C (4703°F)

Melting Point: 1083°C (1981.4°F)

Critical Temperature: Not available.

Specific Gravity: 8.94 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Not available.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Eye contact. Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans: The substance is toxic to lungs, mucous membranes.

Other Toxic Effects on Humans:
Very hazardous in case of ingestion. Hazardous in case of inhalation. Slightly hazardous in case of skin contact (irritant).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Human: passes through the placenta, excreted in maternal milk.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Marine Pollutant

Section 15: Other Regulatory Information

Federal and State Regulations:
Pennsylvania RTK: Copper Massachusetts RTK: Copper TSCA 8(b) inventory: Copper CERCLA: Hazardous substances.: Copper

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada): CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC): R36- Irritating to eyes.

HMIS (U.S.A.):

Health Hazard: 2

Fire Hazard: 1

Reactivity: 0

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 2

Flammability: 1

Reactivity: 0

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Splash goggles.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

MATERIAL SAFETY DATA SHEET

Gasoline, All Grades **MSDS No. 9950**

EMERGENCY OVERVIEW

DANGER!

EXTREMELY FLAMMABLE - EYE AND MUCOUS MEMBRANE IRRITANT - EFFECTS CENTRAL NERVOUS SYSTEM - HARMFUL OR FATAL IF SWALLOWED - ASPIRATION HAZARD

NFPA 704 (Section 16)

High fire hazard. Keep away from heat, spark, open flame, and other ignition sources.

If ingested, do NOT induce vomiting, as this may cause chemical pneumonia (fluid in the lungs). Contact may cause eye, skin and mucous membrane irritation. Harmful if absorbed through the skin. Avoid prolonged breathing of vapors or mists. Inhalation may cause irritation, anesthetic effects (dizziness, nausea, headache, intoxication), and respiratory system effects.

Long-term exposure may cause effects to specific organs, such as to the liver, kidneys, blood, nervous system, and skin. Contains benzene, which can cause blood disease, including anemia and leukemia.

1. CHEMICAL PRODUCT and COMPANY INFORMATION

Hess Corporation
1 Hess Plaza
Woodbridge, NJ 07095-0961

EMERGENCY TELEPHONE NUMBER (24 hrs):	**CHEMTREC (800)424-9300**
COMPANY CONTACT (business hours):	Corporate Safety (732)750-6000
MSDS (Environment, Health, Safety) Internet Website	www.hess.com

SYNONYMS: Hess Conventional (Oxygenated and Non-oxygenated) Gasoline; Reformulated Gasoline (RFG); Reformulated Gasoline Blendstock for Oxygenate Blending (RBOB); Unleaded Motor or Automotive Gasoline

See Section 16 for abbreviations and acronyms.

2. COMPOSITION and INFORMATION ON INGREDIENTS *

INGREDIENT NAME (CAS No.)	CONCENTRATION PERCENT BY WEIGHT
Gasoline (86290-81-5)	100
Benzene (71-43-2)	0.1 - 4.9 (0.1 - 1.3 reformulated gasoline)
n-Butane (106-97-8)	< 10
Ethyl Alcohol (Ethanol) (64-17-5)	0 - 10
Ethyl benzene (100-41-4)	< 3
n-Hexane (110-54-3)	0.5 to 4
Methyl-tertiary butyl ether (MTBE) (1634-04-4)	0 to 15.0
Tertiary-amyl methyl ether (TAME) (994-05-8)	0 to 17.2
Toluene (108-88-3)	1 - 25
1,2,4- Trimethylbenzene (95-63-6)	< 6
Xylene, mixed isomers (1330-20-7)	1 - 15

A complex blend of petroleum-derived normal and branched-chain alkane, cycloalkane, alkene, and aromatic hydrocarbons. May contain antioxidant and multifunctional additives. Non-oxygenated Conventional Gasoline and RBOB do not have oxygenates (Ethanol or MTBE and/or TAME).

Oxygenated Conventional and Reformulated Gasoline will have oxygenates for octane enhancement or as legally required.

3. HAZARDS IDENTIFICATION

EYES
Moderate irritant. Contact with liquid or vapor may cause irritation.

SKIN
Practically non-toxic if absorbed following acute (single) exposure. May cause skin irritation with prolonged or repeated contact. Liquid may be absorbed through the skin in toxic amounts if large areas of skin are exposed repeatedly.

INGESTION
The major health threat of ingestion occurs from the danger of aspiration (breathing) of liquid drops into the lungs, particularly from vomiting. Aspiration may result in chemical pneumonia (fluid in the lungs), severe lung damage, respiratory failure and even death.

Ingestion may cause gastrointestinal disturbances, including irritation, nausea, vomiting and diarrhea, and central nervous system (brain) effects similar to alcohol intoxication. In severe cases, tremors, convulsions, loss of consciousness, coma, respiratory arrest, and death may occur.

INHALATION
Excessive exposure may cause irritations to the nose, throat, lungs and respiratory tract. Central nervous system (brain) effects may include headache, dizziness, loss of balance and coordination, unconsciousness, coma, respiratory failure, and death.

WARNING: the burning of any hydrocarbon as a fuel in an area without adequate ventilation may result in hazardous levels of combustion products, including carbon monoxide, and inadequate oxygen levels, which may cause unconsciousness, suffocation, and death.

CHRONIC EFFECTS and CARCINOGENICITY
Contains benzene, a regulated human carcinogen. Benzene has the potential to cause anemia and other blood diseases, including leukemia, after repeated and prolonged exposure. Exposure to light hydrocarbons in the same boiling range as this product has been associated in animal studies with systemic toxicity. See also Section 11 - Toxicological Information.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE
Irritation from skin exposure may aggravate existing open wounds, skin disorders, and dermatitis (rash). Chronic respiratory disease, liver or kidney dysfunction, or pre-existing central nervous system disorders may be aggravated by exposure.

4. FIRST AID MEASURES

EYES
In case of contact with eyes, immediately flush with clean, low-pressure water for at least 15 min. Hold eyelids open to ensure adequate flushing. Seek medical attention.

SKIN
Remove contaminated clothing. Wash contaminated areas thoroughly with soap and water or waterless hand cleanser. Obtain medical attention if irritation or redness develops.

INGESTION

DO NOT INDUCE VOMITING. Do not give liquids. Obtain immediate medical attention. If spontaneous vomiting occurs, lean victim forward to reduce the risk of aspiration. Small amounts of material which enter the mouth should be rinsed out until the taste is dissipated.

INHALATION
Remove person to fresh air. If person is not breathing, ensure an open airway and provide artificial respiration. If necessary, provide additional oxygen once breathing is restored if trained to do so. Seek medical attention immediately.

5. FIRE FIGHTING MEASURES

FLAMMABLE PROPERTIES:

FLASH POINT:	-45 °F (-43°C)
AUTOIGNITION TEMPERATURE:	highly variable; > 530 °F (>280 °C)
OSHA/NFPA FLAMMABILITY CLASS:	1A (flammable liquid)
LOWER EXPLOSIVE LIMIT (%):	1.4%
UPPER EXPLOSIVE LIMIT (%):	7.6%

FIRE AND EXPLOSION HAZARDS
Vapors may be ignited rapidly when exposed to heat, spark, open flame or other source of ignition. Flowing product may be ignited by self-generated static electricity. When mixed with air and exposed to an ignition source, flammable vapors can burn in the open or explode in confined spaces. Being heavier than air, vapors may travel long distances to an ignition source and flash back. Runoff to sewer may cause fire or explosion hazard.

EXTINGUISHING MEDIA
SMALL FIRES: Any extinguisher suitable for Class B fires, dry chemical, CO2, water spray, fire fighting foam, or Halon.

LARGE FIRES: Water spray, fog or fire fighting foam. Water may be ineffective for fighting the fire, but may be used to cool fire-exposed containers.

During certain times of the year and/or in certain geographical locations, gasoline may contain MTBE and/or TAME. Firefighting foam suitable for polar solvents is recommended for fuel with greater than 10% oxygenate concentration - refer to NFPA 11 "Low Expansion Foam - 1994 Edition."

FIRE FIGHTING INSTRUCTIONS
Small fires in the incipient (beginning) stage may typically be extinguished using handheld portable fire extinguishers and other fire fighting equipment.

Firefighting activities that may result in potential exposure to high heat, smoke or toxic by-products of combustion should require NIOSH/MSHA- approved pressure-demand self-contained breathing apparatus with full facepiece and full protective clothing.

Isolate area around container involved in fire. Cool tanks, shells, and containers exposed to fire and excessive heat with water. For massive fires the use of unmanned hose holders or monitor nozzles may be advantageous to further minimize personnel exposure. Major fires may require withdrawal, allowing the tank to burn. Large storage tank fires typically require specially trained personnel and equipment to extinguish the fire, often including the need for properly applied fire fighting foam.

See Section 16 for the NFPA 704 Hazard Rating.

6. ACCIDENTAL RELEASE MEASURES

ACTIVATE FACILITY SPILL CONTINGENCY or EMERGENCY PLAN.

Evacuate nonessential personnel and remove or secure all ignition sources. Consider wind direction; stay upwind and uphill, if possible. Evaluate the direction of product travel, diking, sewers, etc. to confirm spill areas. Spills may infiltrate subsurface soil and groundwater; professional assistance may be necessary to determine the extent of subsurface impact.

Carefully contain and stop the source of the spill, if safe to do so. Protect bodies of water by diking, absorbents, or absorbent boom, if possible. Do not flush down sewer or drainage systems, unless system is designed and permitted to handle such material. The use of fire fighting foam may be useful in certain situations to reduce vapors. The proper use of water spray may effectively disperse product vapors or the liquid itself, preventing contact with ignition sources or areas/equipment that require protection.

Take up with sand or other oil absorbing materials. Carefully shovel, scoop or sweep up into a waste container for reclamation or disposal - caution, flammable vapors may accumulate in closed containers. Response and clean-up crews must be properly trained and must utilize proper protective equipment (see Section 8).

7. HANDLING and STORAGE

HANDLING PRECAUTIONS

******USE ONLY AS A MOTOR FUEL******
******DO NOT SIPHON BY MOUTH******

Handle as a flammable liquid. Keep away from heat, sparks, and open flame! Electrical equipment should be approved for classified area. Bond and ground containers during product transfer to reduce the possibility of static-initiated fire or explosion.

Special slow load procedures for "switch loading" must be followed to avoid the static ignition hazard that can exist when higher flash point material (such as fuel oil) is loaded into tanks previously containing low flash point products (such as this product) - see API Publication 2003, "Protection Against Ignitions Arising Out Of Static, Lightning and Stray Currents.

STORAGE PRECAUTIONS

Keep away from flame, sparks, excessive temperatures and open flame. Use approved vented containers. Keep containers closed and clearly labeled. Empty product containers or vessels may contain explosive vapors. Do not pressurize, cut, heat, weld or expose such containers to sources of ignition.

Store in a well-ventilated area. This storage area should comply with NFPA 30 "Flammable and Combustible Liquid Code". Avoid storage near incompatible materials. The cleaning of tanks previously containing this product should follow API Recommended Practice (RP) 2013 "Cleaning Mobile Tanks In Flammable and Combustible Liquid Service" and API RP 2015 "Cleaning Petroleum Storage Tanks".

WORK/HYGIENIC PRACTICES

Emergency eye wash capability should be available in the near proximity to operations presenting a potential splash exposure. Use good personal hygiene practices. Avoid repeated and/or prolonged skin exposure. Wash hands before eating, drinking, smoking, or using toilet facilities. Do not use as a cleaning solvent on the skin. Do not use solvents or harsh abrasive skin cleaners for washing this product from exposed skin areas. Waterless hand cleaners are effective. Promptly remove contaminated clothing and launder before reuse. Use care when laundering to prevent the formation of flammable vapors which could ignite via washer or dryer. Consider the need to discard contaminated leather shoes and gloves.

8. EXPOSURE CONTROLS and PERSONAL PROTECTION

EXPOSURE LIMITS

Component (CAS No.)	Source	Exposure Limits TWA (ppm)	STEL (ppm)	Note
Gasoline (86290-81-5)	ACGIH	300	500	A3
Benzene (71-43-2)	OSHA	1	5	Carcinogen
	ACGIH	0.5	2.5	A1, skin
	USCG	1	5	
n-Butane (106-97-8)	ACGIH	1000	--	Aliphatic Hydrocarbon Gases Alkane (C1-C4)
Ethyl Alcohol (ethanol) (64-17-5)	OSHA	1000	–	
	ACGIH	1000	–	A4
Ethyl benzene (100-41-4)	OSHA	100	–	
	ACGIH	100	125	A3
n-Hexane (110-54-3)	OSHA	500	–	
	ACGIH	50	–	Skin
Methyl-tertiary butyl ether [MTBE] (1634-04-4)	ACGIH	50		A3
Tertiary-amyl methyl ether [TAME] (994-05-8)				None established
Toluene (108-88-3)	OSHA	200		Ceiling: 300 ppm; Peak: 500 ppm (10 min.)
	ACGIH	20	–	A4
1,2,4- Trimethylbenzene (95-63-6)	ACGIH	25	–	
Xylene, mixed isomers (1330-20-7)	OSHA	100	–	
	ACGIH	100	150	A4

ENGINEERING CONTROLS

Use adequate ventilation to keep vapor concentrations of this product below occupational exposure and flammability limits, particularly in confined spaces.

EYE/FACE PROTECTION

Safety glasses or goggles are recommended where there is a possibility of splashing or spraying.

SKIN PROTECTION

Gloves constructed of nitrile or neoprene are recommended. Chemical protective clothing such as that made of of E.I. DuPont Tychem ®, products or equivalent is recommended based on degree of exposure.

Note: The resistance of specific material may vary from product to product as well as with degree of exposure. Consult manufacturer specifications for further information.

RESPIRATORY PROTECTION

A NIOSH-approved air-purifying respirator with organic vapor cartridges or canister may be permissible under certain circumstances where airborne concentrations are or may be expected to exceed exposure limits or for odor or irritation. Protection provided by air-purifying respirators is limited. Refer to OSHA 29 CFR 1910.134, NIOSH Respirator Decision Logic, and the manufacturer for additional guidance on respiratory protection selection and limitations.

Use a positive pressure, air-supplied respirator if there is a potential for uncontrolled release, exposure levels are not known, in oxygen-deficient atmospheres, or any other circumstance where an air-purifying respirator may not provide adequate protection.

9. PHYSICAL and CHEMICAL PROPERTIES

APPEARANCE

A translucent, straw-colored or light yellow liquid

ODOR
A strong, characteristic aromatic hydrocarbon odor. Oxygenated gasoline with MTBE and/or TAME may have a sweet, ether-like odor and is detectable at a lower concentration than non-oxygenated gasoline.

ODOR THRESHOLD

	Odor Detection	Odor Recognition
Non-oxygenated gasoline:	0.5 - 0.6 ppm	0.8 - 1.1 ppm
Gasoline with 15% MTBE:	0.2 - 0.3 ppm	0.4 - 0.7 ppm
Gasoline with 15% TAME:	0.1 ppm	0.2 ppm

BASIC PHYSICAL PROPERTIES

BOILING RANGE:	85 to 437 °F (39 to 200 °C)
VAPOR PRESSURE:	6.4 - 15 RVP @ 100 °F (38 °C) (275-475 mm Hg @ 68 °F (20 °C)
VAPOR DENSITY (air = 1):	AP 3 to 4
SPECIFIC GRAVITY (H_2O = 1):	0.70 – 0.78
EVAPORATION RATE:	10-11 (n-butyl acetate = 1)
PERCENT VOLATILES:	100 %
SOLUBILITY (H_2O):	Non-oxygenated gasoline - negligible (< 0.1% @ 77 °F). Gasoline with 15% MTBE - slight (0.1 - 3% @ 77 °F); ethanol is readily soluble in water

10. STABILITY and REACTIVITY)

STABILITY: Stable. Hazardous polymerization will not occur.

CONDITIONS TO AVOID
Avoid high temperatures, open flames, sparks, welding, smoking and other ignition sources

INCOMPATIBLE MATERIALS
Keep away from strong oxidizers.

HAZARDOUS DECOMPOSITION PRODUCTS
Carbon monoxide, carbon dioxide and non-combusted hydrocarbons (smoke). Contact with nitric and sulfuric acids will form nitrocresols that can decompose violently.

11. TOXICOLOGICAL PROPERTIES

ACUTE TOXICITY
Acute Dermal LD50 (rabbits): > 5 ml/kg
Acute Oral LD50 (rat): 18.75 ml/kg
Primary dermal irritation (rabbits): slightly irritating
Draize eye irritation (rabbits): non-irritating
Guinea pig sensitization: negative

CHRONIC EFFECTS AND CARCINOGENICITY
Carcinogenicity:OSHA: NO IARC: YES - 2B NTP: NO ACGIH: YES (A3)

IARC has determined that gasoline and gasoline exhaust are possibly carcinogenic in humans. Inhalation exposure to completely vaporized unleaded gasoline caused kidney cancers in male rats and liver tumors in female mice. The U.S. EPA has determined that the male kidney tumors are species-specific and are irrelevant for human health risk assessment. The significance of the tumors seen in female mice is not known. Exposure to light hydrocarbons in the same boiling range as this product has been associated in animal studies with effects to the central and peripheral nervous systems, liver, and kidneys. The significance of these animal models to predict similar human response to gasoline is uncertain.

This product contains benzene. Human health studies indicate that prolonged and/or repeated overexposure to benzene may cause damage to the blood-forming system (particularly bone marrow), and serious blood disorders such as aplastic anemia and leukemia. Benzene is listed as a human carcinogen by the NTP, IARC, OSHA and ACGIH.

This product may contain methyl tertiary butyl ether (MTBE): animal and human health effects studies indicate that MTBE may cause eye, skin, and respiratory tract irritation, central nervous system depression and neurotoxicity. MTBE is classified as an animal carcinogen (A3) by the ACGIH.

12. ECOLOGICAL INFORMATION

Keep out of sewers, drainage areas and waterways. Report spills and releases, as applicable, under Federal and State regulations. If released, oxygenates such as ethers and alcohols will be expected to exhibit fairly high mobility in soil, and therefore may leach into groundwater. The API (www.api.org) provides a number of useful references addressing petroleum and oxygenate contamination of groundwater.

13. DISPOSAL CONSIDERATIONS

Consult federal, state and local waste regulations to determine appropriate disposal options.

14. TRANSPORTATION INFORMATION

DOT PROPER SHIPPING NAME:	Gasoline
DOT HAZARD CLASS and PACKING GROUP:	3, PG II
DOT IDENTIFICATION NUMBER:	UN 1203
DOT SHIPPING LABEL:	FLAMMABLE LIQUID

PLACARD:

15. REGULATORY INFORMATION

U.S. FEDERAL, STATE, and LOCAL REGULATORY INFORMATION

This product and its constituents listed herein are on the EPA TSCA Inventory. Any spill or uncontrolled release of this product, including any substantial threat of release, may be subject to federal, state and/or local reporting requirements. This product and/or its constituents may also be subject to other federal, state, or local regulations; consult those regulations applicable to your facility/operation.

CLEAN WATER ACT (OIL SPILLS)

Any spill or release of this product to "navigable waters" (essentially any surface water, including certain wetlands) or adjoining shorelines sufficient to cause a visible sheen or deposit of a sludge or emulsion must be reported immediately to the National Response Center (1-800-424-8802) as required by U.S. Federal Law. Also contact appropriate state and local regulatory agencies as required.

CERCLA SECTION 103 and SARA SECTION 304 (RELEASE TO THE ENVIRONMENT)

The CERCLA definition of hazardous substances contains a "petroleum exclusion" clause which exempts crude oil, refined, and unrefined petroleum products and any indigenous components of such. However, other federal reporting requirements (e.g., SARA Section 304 as well as the Clean Water Act if the spill occurs on navigable waters) may still apply.

SARA SECTION 311/312 - HAZARD CLASSES

ACUTE HEALTH	CHRONIC HEALTH	FIRE	SUDDEN RELEASE OF PRESSURE	REACTIVE
X	X	X	--	--

SARA SECTION 313 - SUPPLIER NOTIFICATION

This product contains the following toxic chemicals subject to the reporting requirements of section 313 of the Emergency Planning and Community Right-To-Know Act (EPCRA) of 1986 and of 40 CFR 372:

INGREDIENT NAME (CAS NUMBER)	CONCENTRATION WT. PERCENT
Benzene (71-43-2)	0.1 to 4.9 (0.1 to 1.3 for reformulated gasoline)
Ethyl benzene (100-41-4)	< 3

n-Hexane (110-54-3)	0.5 to 4
Methyl-tertiary butyl ether (MTBE) (1634-04-4)	0 to 15.0
Toluene (108-88-3)	1 to 15
1,2,4- Trimethylbenzene (95-63-6)	< 6
Xylene, mixed isomers (1330-20-7)	1 to 15

US EPA guidance documents (www.epa.gov/tri) for reporting Persistent Bioaccumulating Toxics (PBTs) indicate this product may contain the following deminimis levels of toxic chemicals subject to Section 313 reporting:

INGREDIENT NAME (CAS NUMBER)	CONCENTRATION - Parts per million (ppm) by weight
Polycyclic aromatic compounds (PACs)	17
Benzo (g,h,i) perylene (191-24-2)	2.55
Lead (7439-92-1)	0.079

CALIFORNIA PROPOSITION 65 LIST OF CHEMICALS

This product contains the following chemicals that are included on the Proposition 65 "List of Chemicals" required by the California Safe Drinking Water and Toxic Enforcement Act of 1986:

INGREDIENT NAME (CAS NUMBER)	Date Listed
Benzene	2/27/1987
Ethyl benzene	6/11/2004
Toluene	1/1/1991

CANADIAN REGULATORY INFORMATION (WHMIS)

Class B, Division 2 (Flammable Liquid)
Class D, Division 2A (Very toxic by other means) and Class D, Division 2B (Toxic by other means)

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Lead	7439-92-1	100

Toxicological Data on Ingredients: Lead LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects: Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:
Slightly hazardous in case of skin contact (permeator). CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to blood, kidneys, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Non-flammable in presence of open flames and sparks, of shocks, of heat.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: When heated to decomposition it emits highly toxic fumes of lead.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.05 (mg/m3) from ACGIH (TLV) [United States] TWA: 0.05 (mg/m3) from OSHA (PEL) [United States] TWA: 0.03 (mg/m3) from NIOSH [United States] TWA: 0.05 (mg/m3) [Canada]Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Metal solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 207.21 g/mole

Color: Bluish-white. Silvery. Gray

pH (1% soln/water): Not applicable.

Boiling Point: 1740°C (3164°F)

Melting Point: 327.43°C (621.4°F)

Critical Temperature: Not available.

Specific Gravity: 11.3 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials, excess heat

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Can react vigorously with oxidizing materials. Incompatible with sodium carbide, chlorine trifluoride, trioxane + hydrogen peroxide, ammonium nitrate, sodium azide, disodium acetylide, sodium acetylide, hot concentrated nitric acid, hot concentrated hydrochloric acid, hot concentrated sulfuric acid, zirconium.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. May cause damage to the following organs: blood, kidneys, central nervous system (CNS).

Other Toxic Effects on Humans: Slightly hazardous in case of skin contact (irritant), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans:
Acute Potential: Skin: Lead metal granules or dust: May cause skin irritation by mechanical action. Lead metal foil, shot or sheets: Not likely to cause skin irritation Eyes: Lead metal granules or dust: Can irritate eyes by mechanical action. Lead metal foil, shot or sheets: No hazard. Will not cause eye irritation. Inhalation: In an industrial setting, exposure to lead mainly occurs from inhalation of dust or fumes. Lead dust or fumes: Can irritate the upper respiratory tract (nose, throat) as well as the bronchi and lungsby mechanical action. Lead dust can be absorbed through the respiratory system. However, inhaled lead does not accumulate in the lungs. All of an inhaled dose is eventually abssorbed or transferred to the gastrointestinal tract. Inhalation effects of exposure to fumes or dust of inorganic lead may not develop quickly. Symptoms may include metallic taste, chest pain, decreased physical fitness, fatigue, sleep disturbance, headache, irritability, reduces memory, mood and personality changes, aching bones and muscles, constipation, abdominal pains, decreasing appetite. Inhalation of large amounts may lead to ataxia, deliriuim, convulsions/seizures, coma, and death. Lead metal foil, shot, or sheets: Not an inhalation hazard unless metal is heated. If metal is heated, fumes will be released. Inhalation of these fumes may cause "fume metal fever", which is characterized by flu-like symptoms. Symptoms may include metallic taste, fever, nausea, vomiting, chills, cough, weakness, chest pain, generalized muscle pain/aches, and increased white blood cell count. Ingestion: Lead metal granules or dust: The symptoms of lead poisoning include abdominal pain or cramps (lead cholic), spasms, nausea, vomiting, headache, muscle weakness, hallucinations, distorted perceptions, "lead line" on the gums, metallic taste, loss of appetite, insomnia, dizziness and other symptoms similar to that of inhalation. Acute poisoning may result in high lead levels in the blood and urine, shock, coma and death in extreme cases. Lead metal foil, shot or sheets: Not an ingestion hazard for usual industrial handling.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are less toxic than the product itself.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (female) which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (male) which would require a warning under the statute: Lead California prop. 65 (no significant risk level): Lead: 0.0005 mg/day (value) California prop. 65: This product contains the following ingredients for which the State of California has found to cause birth defects which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Lead Connecticut hazardous material survey.: Lead Illinois toxic substances disclosure to employee act: Lead Illinois chemical safety act: Lead New York release reporting list: Lead Rhode Island RTK hazardous substances: Lead Pennsylvania RTK: Lead

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada): CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R20/22- Harmful by inhalation and if swallowed. R33- Danger of cumulative effects. R61- May cause harm to the unborn child. R62- Possible risk of impaired fertility. S36/37- Wear suitable protective clothing and gloves. S44- If you feel unwell, seek medical advice (show the label when possible). S53- Avoid exposure - obtain special instructions before use.

Material Safety Data Sheet
Methylene chloride MSDS

Section 1: Chemical Product and Company Identification

Product Name: Methylene chloride

Catalog Codes: SLM2398, SLM3772, SLM1297, SLM2677, SLM4054

CAS#: 75-09-2

RTECS: PA8050000

TSCA: TSCA 8(b) inventory: Methylene chloride

CI#: Not available.

Synonym: Dichloromethane

Chemical Name: Methylene Chloride

Chemical Formula: C-H2-Cl2

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call: 1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Methylene chloride	75-09-2	100

Toxicological Data on Ingredients: Methylene chloride: ORAL (LD50): Acute: 1600 mg/kg [Rat].

Section 3: Hazards Identification

Potential Acute Health Effects: Very hazardous in case of eye contact (irritant), of ingestion, of inhalation. Hazardous in case of skin contact (irritant, permeator). Inflammation of the eye is characterized by redness, watering, and itching.

Potential Chronic Health Effects: CARCINOGENIC EFFECTS: Classified + (Proven.) by OSHA. Classified 2B (Possible for human.) by IARC. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to lungs, the nervous system, liver, mucous membranes, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact: Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Cold water may be used. Get medical attention immediately.

Skin Contact: In case of contact, immediately flush skin with plenty of water. Cover the irritated skin with an emollient. Remove contaminated clothing and shoes. Cold water may be used.Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention.

Serious Skin Contact: Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek immediate medical attention.

Inhalation: If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention if symptoms appear.

Serious Inhalation: Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion: Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 556°C (1032.8°F)

Flash Points: Not available.

Flammable Limits: LOWER: 12% UPPER: 19%

Products of Combustion: These products are carbon oxides (CO, CO2), halogenated compounds.

Fire Hazards in Presence of Various Substances: Not available.

Explosion Hazards in Presence of Various Substances: Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions: SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Dilute with water and mop up, or absorb with an inert dry material and place in an appropriate waste disposal container.

Large Spill: Absorb with an inert material and put the spilled material in an appropriate waste disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions: Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe gas/ fumes/ vapor/spray. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls: Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

Personal Protection: Splash goggles. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill: Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits: TWA: 50 from ACGIH (TLV) [United States] TWA: 174 from ACGIH (TLV) [United States] Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Liquid.

Odor: Not available.

Taste: Not available.

Molecular Weight: 84.93g/mole

Color: Not available.

pH (1% soln/water): Not available.

Boiling Point: 39.75°C (103.5°F)

Melting Point: -96.7°C (-142.1°F)

Critical Temperature: Not available.

Specific Gravity: 1.3266 (Water = 1)

Vapor Pressure: 46.5 kPa (@ 20°C)

Vapor Density: 2.93 (Air = 1)

Volatility: Not available.

Odor Threshold: 214 ppm

Water/Oil Dist. Coeff.: The product is equally soluble in oil and water; log(oil/water) = 0.1

Ionicity (in Water): Not available.

Dispersion Properties: See solubility in water, methanol, diethyl ether, n-octanol, acetone.

Solubility: Easily soluble in methanol, diethyl ether, n-octanol, acetone. Partially soluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Not available.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Dermal contact. Eye contact. Inhalation. Ingestion.

Toxicity to Animals: WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 1600 mg/kg [Rat]. Acute toxicity of the vapor (LC50): 52000 1 hours [Rat].

Chronic Effects on Humans: CARCINOGENIC EFFECTS: Classified + (Proven.) by OSHA. Classified 2B (Possible for human.) by IARC. Causes damage to the following organs: lungs, the nervous system, liver, mucous membranes, central nervous system (CNS).

Other Toxic Effects on Humans: Very hazardous in case of ingestion, of inhalation. Hazardous in case of skin contact (irritant, permeator).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Human: passes through the placenta, excreted in maternal milk.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation: Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are more toxic.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : Dichloromethane UNNA: 1593 PG: III

Special Provisions for Transport: Not available.

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Nickel metal	7440-02-0	100

Toxicological Data on Ingredients: Nickel metal LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer), of eye contact (irritant), of ingestion.

Potential Chronic Health Effects:
Slightly hazardous in case of skin contact (sensitizer), of ingestion, of inhalation (lung sensitizer). CARCINOGENIC EFFECTS: Classified 2B (Possible for human.) by IARC. Classified 2 (Some evidence.) by NTP. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to skin. The substance may be toxic to kidneys, lungs, liver, upper respiratory tract. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact:
In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Cover the irritated skin with an emollient. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: Non-flammable.

Auto-Ignition Temperature: Not applicable.

Flash Points: Not applicable.

Flammable Limits: Not applicable.

Products of Combustion: Not available.

Fire Hazards in Presence of Various Substances: Not applicable.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
Flammable solid. SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray or fog. Cool containing vessels with water jet in order to prevent pressure build-up, autoignition or explosion.

Special Remarks on Fire Hazards: Material in powder form, capable of creating a dust explosion. This material is flammable in powder form only.

Special Remarks on Explosion Hazards:
Material in powder form, capable of creating a dust explosion. Mixtures containing Potassium Perchlorate with Nickel & Titanium powders & infusorial earth can explode. Adding 2 or 3 drops of approximately 90% peroxyformic acid to powdered nickel will result in explosion. Powdered nickel reacts explosively upon contact with fused ammonium nitrate at temperatures below 200 deg. C.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Do not breathe dust. Wear suitable protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If you feel unwell, seek medical attention and show the label when possible. Keep away from incompatibles such as oxidizing agents, combustible materials, metals, acids.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 1 (mg/m3) from ACGIH (TLV) [United States] Inhalation Respirable. TWA: 0.5 (mg/m3) [United Kingdom (UK)] TWA: 1 (mg/m3) from OSHA (PEL) [United States] InhalationConsult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Metal solid. Lustrous solid.)

Odor: Odorless.

Taste: Not available.

Molecular Weight: 58.71 g/mole

Color: Silvery.

pH (1% soln/water): Not applicable.

Boiling Point: 2730°C (4946°F)

Melting Point: 1455°C (2651°F)

Critical Temperature: Not available.

Specific Gravity: Density: 8.908 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility:

Insoluble in cold water, hot water. Insoluble in Ammonia. Soluble in dilute Nitric Acid. Slightly soluble in Hydrochloric Acid, Sulfuric Acid.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials

Incompatibility with various substances: Reactive with oxidizing agents, combustible materials, metals, acids.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Incompatible with strong acids, selenium, sulfur, wood and other combustibles, nickel nitrate, aluminum, aluminum trichloride, ethylene, p-dioxan, hydrogen, methanol, non-metals, oxidants, sulfur compounds, aniline, hydrogen sulfide, flammable solvents, hydrazine, and metal powders (especially zinc, aluminum, and magnesium), ammonium nitrate, nitryl fluoride, bromine pentafluoride, potassium perchlorate + titanium powder + indusorial earth.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified 2B (Possible for human.) by IARC. Classified 2 (Some evidence.) by NTP. Causes damage to the following organs: skin. May cause damage to the following organs: kidneys, lungs, liver, upper respiratory tract.

Other Toxic Effects on Humans:
Hazardous in case of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer), of ingestion.

Special Remarks on Toxicity to Animals:
Lowest Published Lethal Dose/Conc: LDL [Rat] - Route: Oral; Dose: 5000 mg/kg LDL [Guinea Pig] - Route: Oral; Dose: 5000 mg/kg

Special Remarks on Chronic Effects on Humans: May cause cancer based on animal test data

Special Remarks on other Toxic Effects on Humans:
Acute Potential Health Effects: Skin: Nickel dust and fume can irritate skin. Eyes: Nickel dust and fume can irritate eyes. Inhalation: Inhalation of dust or fume may cause respiratory tract irritation with non-productive cough, hoarseness, sore throat, headache, vertigo, weakness, chest pain, followed by delayed effects, including tachypnea, dyspnea, and ARDS. Death due to ARDS has been reported following inhalation of high concentrations of respirable metallic nickel dust. Later effects may include pulmonary edema and fibrosis. Ingestion: Metallic nickel is generally considered not to be acutely toxic if ingested. Ingestion may cause nausea, vomiting, abdominal , and diarrhea. Nickel may damage the kidneys(proteinuria), and may affect liver function. It may also affect behavior (somnolence), and cardiovascular system (increased cornary artery resistance, decreased myocardial contractility, myocardial damage, regional or general arteriolar or venus dilation). Chronic Potential Health Effects: Skin: May cause skin allergy. Nickel and nickel compounds are among the most common sensitizers inducing allergic contact dermatitis. Inhalation: Chronic inhalation nickel dust or fume can cause chronic hypertrophic rhinitis, sinusitis, nasal polyps, perforation of the nasal septum, chronic pulmonary irritation, fibrosis, pulmonary edema, pulmonary eosinophilia, Pneumoconiosis, allergies (asthma-like allergy), and cancer of the nasal sinus cavities, lungs, and possibly other organs. Future exposures can cause asthma attacks with shortness of breath, wheezing, cough, and/or chest tightness. Chronic inhalation of nickel dust or fume may also affect the liver (impaired liver function tests), and blood (changes in red blood cell count). Ingestion: Prolonged or repeated ingestion of nickel can be a source chronic urticaria and other signs of allergy.

Chronic ingestion of Nickel may also affect respiration and cause pneumoconiosis or fibrosis. Note: In the general population, sensitization occurs from exposure to nickel-containing coins, jewelry, watches,

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Nickel metal California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Nickel metal Connecticut hazardous material survey.: Nickel metal Illinois toxic substances disclosure to employee act: Nickel metal Illinois chemical safety act: Nickel metal New York release reporting list: Nickel metal Rhode Island RTK hazardous substances: Nickel metal Pennsylvania RTK: Nickel metal Michigan critical material: Nickel metal Massachusetts RTK: Nickel metal Massachusetts spill list: Nickel metal New Jersey: Nickel metal New Jersey spill list: Nickel metal Louisiana spill reporting: Nickel metal California Director's List of Hazardous Substances: Nickel metal TSCA 8(b) inventory: Nickel metal

Other Regulations:

Polycyclic Aromatic Hydrocarbons (PAHs)

What are PAHs?

Short for polycyclic aromatic hydrocarbons, PAHs describe chemicals that are often found together in groups of two or more. PAHs are found naturally in the environment but they can also be man-made. In their purest form, PAHs are solid and range in appearance from colorless to white or pale yellow-green. PAHs are created when products like coal, oil, gas, and garbage are burned but the burning process is not complete. Although PAHs can exist in over 100 different combinations, the National Waste Minimization Program defines this group using the Toxic Release Inventory reporting category for polycyclic aromatic compounds.

Chemicals included in this category, by name and CAS number, are:

1. Benzo(a)anthracene, 56-55-3
2. Benzo(a)phenanthrene (chrysene), 218-01-9
3. Benzo(a)pyrene, 50-32-8
4. Benzo(b)fluoranthene, 205-99-2
5. Benzo(j)fluoranthene, 205-82-3
6. Benzo(k)fluoranthene, 207-08-9
7. Benzo(j,k)fluorene (fluoranthene), 206-44-0
8. Benzo(r,s,t)pentaphene, 189-55-9
9. Dibenz(a,h)acridine, 226-36-8
10. Dibenz(a,j)acridine, 224-42-0
11. Dibenzo(a,h)anthracene, 53-70-3
12. Dibenzo(a,e)fluoranthene, 5385-75-1
13. Dibenzo(a,e)pyrene, 192-65-4
14. Dibenzo(a,h)pyrene, 189-64-0
15. Dibenzo(a,l)pyrene, 191-30-0
16. 7H-Dibenzo(c,g)carbazole, 194-59-2
17. 7,12-Dimethylbenz(a)anthracene, 57-97-6
18. Indeno(1,2,3-cd)pyrene 193-39-5
19. 3-Methylcholanthrene, 56-49-5
20. 5-Methylchrysene, 3697-24-3
21. 1-Nitropyrene, 5522-43-0

It should be noted that some PAHs are listed individually on EPA's Priority Chemical list. They are:

1. Acenaphthene, 83-32-9
2. Acenaphtylene, 208-96-8
3. Anthracene, 120-12-7
4. Benzo(g,h,i)perylene, 191-24-2
5. Fluorene, 86-73-7
6. Phenanthrene, 85-01-8
7. Pyrene, 129-00-0

Why are PAHs bad actors?

PAHs are a concern because they are persistent. Because they do not burn very easily, they can stay in the environment for long periods of time. Individual PAHs vary in behavior. Some can turn into a vapor in the air very easily. Most do not break down easily in the water.

What are PAHs used for?

Most PAHs are used to conduct research. However, some PAHs are used to make dyes, plastics, and pesticides. Some are even used in medicines.

How can PAHs enter and leave your body?

One of the most common ways PAHs can enter the body is through breathing contaminated air. PAHs get into your lungs when you breathe them. If you live near a hazardous waste site where PAHs are disposed, you are likely to breathe PAHs. If you eat or drink food and water contaminated with PAHs, you could be

exposed. Exposure to PAHs can also occur if your skin contacts PAH-contaminated soil or products like heavy oils, coal tar, roofing tar, or creosote. Creosote is an oily liquid found in coal tar and is used to preserve wood. Once in your body, PAHs can spread and target fat tissues. Target organs include the kidneys and liver. However, PAHs will leave your body through urine and feces in a matter of days.

How can you be exposed to PAHs?

You can be exposed to PAHs in the environment, in your home, and in the workplace. Because PAHs exist naturally in the environment and are man-made, you can be exposed in a number of ways. Fumes from vehicle exhaust, coal, coal tar, asphalt, wildfires, agricultural burning and hazardous waste sites are all sources of exposure.

You could be exposed to PAHs by breathing cigarette and tobacco smoke, eating foods grown in contaminated soil, or by eating meat or other food that you grilled. Grilling and charring food actually increases the amount of PAHs in the food.

If you work in a plant that makes coal tar, asphalt and aluminum, or that burns trash, you can be exposed to PAHs. You can also be exposed if you work in a facility that uses petroleum or coal, or where wood, corn, and oil are burned.

How can PAHs affect your health?

A number of PAHs have caused tumors in laboratory animals that were exposed to PAHs through their food, from breathing contaminated air, and when it was applied to their skin. When pregnant mice ate high doses of a PAH (benzo(a)pyrene) they experienced reproductive problems. In addition, the offspring of the pregnant mice showed birth defects and a decrease in their body weight. Other effects include damage to the skin, body fluids, and the immune system. However, these effects have not been seen in humans.

Is there a medical test to determine if you have been exposed to PAHs?

There is a test that can measure the presence of PAH in your urine. This test can only tell you if you have been exposed; but it can't reveal how harmful the effects of the exposure will be. This test would have to be performed in a laboratory that has special equipment to detect the PAHs. Another test currently being developed will be able to measure PAHs in your body tissue and blood.

What are the medical treatments in cases of exposure?

Most exposures to PAHs happen every day at very low levels in the air we breathe and the foods we eat. Treatment for a short-term exposure is unlikely. Contact your doctor if you experience symptoms of PAHs poisoning.

What levels of exposure have resulted in harmful health effects?

There is no information available from studies on humans to tell what effects can result from being exposed to individual PAHs at certain levels. However, breathing PAHs and skin contact seem to be associated with cancer in humans. Animal studies showed that mice exposed to 308 parts per million (ppm) of PAHs (specifically benzo (a) pyrene) in food for 10 days (short term exposure) caused birth defects. Mice exposed to 923 ppm of benzo (a) pyrene in food for months caused problems in the liver and blood.

Where can I get more information?

Contact your state health or environmental department, or:

Material Safety Data Sheet
Tetrachloroethylene MSDS

Section 1: Chemical Product and Company Identification

Product Name: Tetrachloroethylene

Catalog Codes: SLT3220

CAS#: 127-18-4

RTECS: KX3850000

TSCA: TSCA 8(b) inventory: Tetrachloroethylene

CI#: Not available.

Synonym: Perchloroethylene; 1,1,2,2-Tetrachloroethylene; Carbon bichloride; Carbon dichloride; Ankilostin; Didakene; Dilatin PT; Ethene, tetrachloro-; Ethylene tetrachloride; Perawin; Perchlor; Perclene; Perclene D; Percosolvel; Tetrachloroethene; Tetraleno; Tetralex; Tetravec; Tetroguer; Tetropil

Chemical Name: Ethylene, tetrachloro-

Chemical Formula: C2-Cl4

Contact Information:

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Tetrachloroethylene	127-18-4	100

Toxicological Data on Ingredients: Tetrachloroethylene: ORAL (LD50): Acute: 2629 mg/kg [Rat]. DERMAL (LD): Acute: >3228 mg/kg [Rabbit]. MIST(LC50): Acute: 34200 mg/m 8 hours [Rat]. VAPOR (LC50): Acute: 5200 ppm 4 hours [Mouse].

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of skin contact (irritant), of inhalation. Slightly hazardous in case of skin contact (permeator), of eye contact (irritant), of ingestion.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH. Classified 2A (Probable for human.) by IARC, 2 (anticipated carcinogen) by NTP. MUTAGENIC EFFECTS: Mutagenic for bacteria and/or yeast. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to kidneys, liver, peripheral nervous system, respiratory tract, skin, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact:
In case of contact, immediately flush skin with plenty of water. Cover the irritated skin with an emollient. Remove contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention.

Serious Skin Contact:
Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek medical attention.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention if symptoms appear.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention if symptoms appear.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: Non-flammable.

Auto-Ignition Temperature: Not applicable.

Flash Points: Not applicable.

Flammable Limits: Not applicable.

Products of Combustion: Not available.

Fire Hazards in Presence of Various Substances: Not applicable.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions: Not applicable.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Absorb with an inert material and put the spilled material in an appropriate waste disposal.

Large Spill:
Absorb with an inert material and put the spilled material in an appropriate waste disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Do not ingest. Do not breathe gas/fumes/ vapor/spray. Avoid contact with skin. Wear suitable protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents, metals, acids, alkalis.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value.

Personal Protection:
Safety glasses. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 25 (ppm) from OSHA (PEL) [United States] TWA: 25 STEL: 100 (ppm) from ACGIH (TLV) [United States] TWA: 170 (mg/m3) from OSHA (PEL) [United States] Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Liquid.

Odor: Ethereal.

Taste: Not available.

Molecular Weight: 165.83 g/mole

Color: Clear Colorless.

pH (1% soln/water): Not available.

Boiling Point: 121.3°C (250.3°F)

Melting Point: -22.3°C (-8.1°F)

Critical Temperature: 347.1°C (656.8°F)

Specific Gravity: 1.6227 (Water = 1)

Vapor Pressure: 1.7 kPa (@ 20°C)

Vapor Density: 5.7 (Air = 1)

Volatility: Not available.

Odor Threshold: 5 - 50 ppm

Water/Oil Dist. Coeff.: The product is more soluble in oil; log(oil/water) = 3.4

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility:
Miscible with alcohol, ether, chloroform, benzene, hexane. It dissolves in most of the fixed and volatile oils. Solubility in water: 0.015 g/100 ml @ 25 deg. C It slowly decomposes in water to yield Trichloroacetic and Hydrochloric acids.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials

Incompatibility with various substances: Reactive with oxidizing agents, metals, acids, alkalis.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Oxidized by strong oxidizing agents. Incompatible with sodium hydroxide, finely divided or powdered metals such as zinc, aluminum, magnesium, potassium, chemically active metals such as lithium, beryllium , barium. Protect from light.

Special Remarks on Corrosivity: Slowly corrodes aluminum, iron, and zinc.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Eye contact. Inhalation. Ingestion.

Toxicity to Animals:
WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 2629 mg/kg [Rat]. Acute dermal toxicity (LD50): >3228 mg/kg [Rabbit]. Acute toxicity of the vapor (LC50): 5200 4 hours [Mouse].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH. Classified 2A (Probable for human.) by IARC, 2 (Some evidence.) by NTP. MUTAGENIC EFFECTS: Mutagenic for bacteria and/or yeast. May cause damage to the following organs: kidneys, liver, peripheral nervous system, upper respiratory tract, skin, central nervous system (CNS).

Other Toxic Effects on Humans:
Hazardous in case of skin contact (irritant), of inhalation. Slightly hazardous in case of skin contact (permeator), of ingestion.

Special Remarks on Toxicity to Animals:
Lowest Publishe Lethal Dose/Conc: LDL [Rabbit] - Route: Oral; Dose: 5000 mg/kg LDL [Dog] - Route: Oral; Dose: 4000 mg/kg LDL [Cat] - Route: Oral; Dose: 4000 mg/kg

Special Remarks on Chronic Effects on Humans:
May cause adverse reproductive effects and birth defects(teratogenic). May affect genetic material (mutagenic). May cause cancer.

Special Remarks on other Toxic Effects on Humans:
Acute Potential Health Effects: Skin: Causes skin irritation with possible dermal blistering or burns. Symtoms may include redness, itching, pain, and possible dermal blistering or burns. It may be absorbed through the skin with possible systemic effects. A single prolonged skin exposure is not likely to result in the material being absorbed in harmful amounts. Eyes: Contact causes transient eye irritation, lacrimation. Vapors cause eye/conjunctival irritation. Symptoms may include redness and pain. Inhalation: The main route to occupational exposure is by inhalation since it is readily absorbed through the lungs. It causes respiratory tract irritation, . It can affect behavior/central nervous system (CNS depressant and anesthesia ranging from slight inebriation to death, vertigo, somnolence, anxiety, headache, excitement, hallucinations, muscle incoordination, dizziness, lightheadness, disorentiation, seizures, enotional instability, stupor, coma). It may cause pulmonary edema Ingestion: It can cause nausea, vomiting, anorexia, diarrhea, bloody stool. It may affect the liver, urinary system (proteinuria, hematuria, renal failure, renal tubular disorder), heart (arrhythmias). It may affect behavior/central nervous system with symptoms similar to that of inhalation. Chronic Potential Health Effects: Skin: Prolonged or repeated skin contact may result in excessive drying of the skin, and irritation. Ingestion/Inhalation: Chronic exposure can affect the liver(hepatitis,fatty liver degeneration), kidneys, spleen, and heart (irregular heartbeat/arrhythmias, cardiomyopathy, abnormal EEG), brain, behavior/ central nervous system/peripheral nervous system (impaired memory, numbness of extremeties, peripheral neuropathy and other

Section 12: Ecological Information

Ecotoxicity:
Ecotoxicity in water (LC50): 18.4 mg/l 96 hours [Fish (Fatthead Minnow)]. 18 mg/l 48 hours [Daphnia (daphnia)]. 5 mg/l 96 hours [Fish (Rainbow Trout)]. 13 mg/l 96 hours [Fish (Bluegill sunfish)].

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The product itself and its products of degradation are not toxic.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : Tetrachloroethylene UNNA: 1897 PG: III

Special Provisions for Transport: Marine Pollutant

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Tetrachloroethylene California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Tetrachloroethylene Connecticut hazardous material survey.: Tetrachloroethylene Illinois toxic substances disclosure to employee act: Tetrachloroethylene Illinois chemical safety act: Tetrachloroethylene New York release reporting list: Tetrachloroethylene Rhode Island RTK hazardous substances: Tetrachloroethylene Pennsylvania RTK: Tetrachloroethylene Minnesota: Tetrachloroethylene Michigan critical material: Tetrachloroethylene Massachusetts RTK: Tetrachloroethylene Massachusetts spill list: Tetrachloroethylene New Jersey: Tetrachloroethylene New Jersey spill list: Tetrachloroethylene Louisiana spill reporting: Tetrachloroethylene California Director's List of Hazardous Substances: Tetrachloroethylene TSCA 8(b) inventory: Tetrachloroethylene TSCA 8(d) H and S data reporting: Tetrachloroethylene: Effective date: 6/1/87; Sunset date: 6/1/97 SARA 313 toxic chemical notification and release reporting: Tetrachloroethylene CERCLA: Hazardous substances.: Tetrachloroethylene: 100 lbs. (45.36 kg)

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada):
CLASS D-1B: Material causing immediate and serious toxic effects (TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R40- Possible risks of irreversible effects. R51/53- Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment. S23- Do not breathe gas/fumes/vapour/spray S26- In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S37- Wear suitable gloves. S61- Avoid release to the environment. Refer to special instructions/Safety data sheets.

MATERIAL SAFETY DATA SHEET

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

MATHESON TRI-GAS, INC.
150 Allen Road Suite 302
Basking Ridge, New Jersey 07920
Information: 1-800-416-2505

Emergency Contact:
CHEMTREC 1-800-424-9300
Calls Originating Outside the US:
703-527-3887 (Collect Calls Accepted)

SUBSTANCE: TRICHLOROETHYLENE

TRADE NAMES/SYNONYMS:
MTG MSDS 199; ACETYLENE TRICHLORIDE; ETHYLENE TRICHLORIDE; 1-CHLORO-2,2-DICHLOROETHYLENE; 1,1-DICHLORO-2-CHLOROETHYLENE; TCE; ETHINYL TRICHLORIDE; TRICHLOROETHENE; 1,1,2-TRICHLOROETHYLENE; 1,1,2-TRICHLOROETHENE; UN 1710; RCRA U228; C2HCl3; MAT23850; RTECS KX4550000

CHEMICAL FAMILY: halogenated, alkenes

CREATION DATE: Jan 24 1989
REVISION DATE: Dec 11 2008

2. COMPOSITION, INFORMATION ON INGREDIENTS

COMPONENT: TRICHLOROETHYLENE
CAS NUMBER: 79-01-6
PERCENTAGE: >99

COMPONENT: INHIBITORS
CAS NUMBER: Not assigned.
PERCENTAGE: <0.1

COMPONENT: AMINES
CAS NUMBER: Not assigned.
PERCENTAGE: <0.1

3. HAZARDS IDENTIFICATION

NFPA RATINGS (SCALE 0-4): HEALTH=2 FIRE=1 REACTIVITY=0

EMERGENCY OVERVIEW:

COLOR: colorless
PHYSICAL FORM: liquid
ODOR: sweet odor
MAJOR HEALTH HAZARDS: respiratory tract irritation, skin irritation, eye irritation, central nervous system depression, allergic reactions, cancer hazard (in humans)
PHYSICAL HAZARDS: May polymerize. Containers may rupture or explode. May decompose on contact with air, light, moisture, heat or storage and use above room temperature. Releases toxic, corrosive, flammable or explosive gases.

POTENTIAL HEALTH EFFECTS:
INHALATION:
SHORT TERM EXPOSURE: irritation, changes in blood pressure, nausea, vomiting, stomach pain, difficulty breathing, irregular heartbeat, headache, drowsiness, dizziness, disorientation, mood swings, tremors, loss of coordination, visual disturbances, bluish skin color, lung congestion, kidney damage, liver damage, unconsciousness, coma
LONG TERM EXPOSURE: same as effects reported in short term exposure, loss of appetite, weight loss, blood disorders, brain damage, cancer
SKIN CONTACT:
SHORT TERM EXPOSURE: irritation, allergic reactions
LONG TERM EXPOSURE: irritation, allergic reactions, nausea, loss of appetite, weight loss, difficulty breathing, headache, drowsiness, dizziness, joint pain, loss of coordination, visual disturbances, paralysis
EYE CONTACT:
SHORT TERM EXPOSURE: irritation (possibly severe), blurred vision
LONG TERM EXPOSURE: irritation (possibly severe), eye damage
INGESTION:
SHORT TERM EXPOSURE: same as effects reported in short term inhalation
LONG TERM EXPOSURE: same as effects reported in long term inhalation

4. FIRST AID MEASURES

INHALATION: If adverse effects occur, remove to uncontaminated area. Give artificial respiration if not breathing. Get immediate medical attention.

SKIN CONTACT: Wash skin with soap and water for at least 15 minutes while removing contaminated clothing and shoes. Get medical attention, if needed. Thoroughly clean and dry contaminated clothing and shoes before reuse.

EYE CONTACT: Flush eyes with plenty of water for at least 15 minutes. Then get immediate medical attention.

INGESTION: If vomiting occurs, keep head lower than hips to help prevent aspiration. If person is unconscious, turn head to side. Get medical attention immediately.

NOTE TO PHYSICIAN: For ingestion, consider gastric lavage. Consider oxygen.

5. FIRE FIGHTING MEASURES

FIRE AND EXPLOSION HAZARDS: Slight fire hazard.

EXTINGUISHING MEDIA: carbon dioxide, regular dry chemical

Large fires: Use regular foam or flood with fine water spray.

FIRE FIGHTING: Cool containers with water spray until well after the fire is out. Stay away from the ends of tanks. For tank, rail car or tank truck, evacuation radius: 800 meters (1/2 mile).

FLASH POINT: No data available.
LOWER FLAMMABLE LIMIT: 7.8% @ 100 C
UPPER FLAMMABLE LIMIT: 52% @ 100 C
AUTOIGNITION: 770 F (410 C)

6. ACCIDENTAL RELEASE MEASURES

AIR RELEASE:
Reduce vapors with water spray. Collect runoff for disposal as potential hazardous waste.

SOIL RELEASE:
Dig holding area such as lagoon, pond or pit for containment. Dike for later disposal. Absorb with sand or other non-combustible material.

WATER RELEASE:
Absorb with activated carbon. Remove trapped material with suction hoses. Collect spilled material using mechanical equipment. Subject to California Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65). Keep out of water supplies and sewers.

OCCUPATIONAL RELEASE:
Avoid heat, flames, sparks and other sources of ignition. Stop leak if possible without personal risk. Small liquid spills: Absorb with sand or other non-combustible material. Large spills: Dike for later disposal. Remove sources of ignition. Keep unnecessary people away, isolate hazard area and deny entry. Notify Local Emergency Planning Committee and State Emergency Response Commission for release greater than or equal to RQ (U.S. SARA Section 304). If release occurs in the U.S. and is reportable under CERCLA Section 103, notify the National Response Center at (800)424-8802 (USA) or (202)426-2675 (USA).

7. HANDLING AND STORAGE

STORAGE: Store and handle in accordance with all current regulations and standards. Store in a cool, dry place. Store in a well-ventilated area. Avoid heat, flames, sparks and other sources of ignition. Keep separated from incompatible substances.

8. EXPOSURE CONTROLS, PERSONAL PROTECTION

EXPOSURE LIMITS:
TRICHLOROETHYLENE:
100 ppm OSHA TWA
200 ppm OSHA ceiling
300 ppm OSHA peak (5 minutes in any 2 hours)
50 ppm (269 mg/m3) OSHA TWA (vacated by 58 FR 35338, June 30, 1993)
200 ppm (1070 mg/m3) OSHA STEL (vacated by 58 FR 35338, June 30, 1993)
10 ppm ACGIH TWA
25 ppm ACGIH STEL
25 ppm NIOSH TWA 10 hour(s)
2 ppm NIOSH ceiling 60 minute(s) (used as halogenated anesthetic gas)

VENTILATION: Provide local exhaust ventilation system. Ensure compliance with applicable exposure limits.

EYE PROTECTION: Wear splash resistant safety goggles. Provide an emergency eye wash fountain and quick drench shower in the immediate work area.

CLOTHING: Wear appropriate chemical resistant clothing.

GLOVES: Wear appropriate chemical resistant gloves.

RESPIRATOR: The following respirators and maximum use concentrations are drawn from NIOSH and/or OSHA.
At any detectable concentration -
Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode.
Any supplied-air respirator with a full facepiece that is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in pressure-demand or other positive-pressure mode.
Escape -
Any air-purifying full-facepiece respirator (gas mask) with a chin-style, front-mounted or back-mounted organic vapor canister.
Any appropriate escape-type, self-contained breathing apparatus.
For Unknown Concentrations or Immediately Dangerous to Life or Health -
Any supplied-air respirator with a full facepiece that is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in pressure-demand or other positive-pressure mode.
Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode.

9. PHYSICAL AND CHEMICAL PROPERTIES

PHYSICAL STATE: liquid
COLOR: colorless
ODOR: sweet odor
MOLECULAR WEIGHT: 131.39
MOLECULAR FORMULA: Cl-C-H-C-Cl2
BOILING POINT: 189 F (87 C)
FREEZING POINT: -99 F (-73 C)
VAPOR PRESSURE: 58 mmHg @ 20 C
VAPOR DENSITY (air=1): 4.53
SPECIFIC GRAVITY (water=1): 1.4642
WATER SOLUBILITY: 0.1%
PH: Not available
VOLATILITY: Not available
ODOR THRESHOLD: 21 ppm
EVAPORATION RATE: 0.69 (carbon tetrachloride=1)
COEFFICIENT OF WATER/OIL DISTRIBUTION: Not available
SOLVENT SOLUBILITY:
Soluble: alcohol, ether, acetone, chloroform, benzene, vegetable oils

10. STABILITY AND REACTIVITY

REACTIVITY: May decompose on contact with air, light, moisture, heat or storage and use above room temperature. Releases toxic, corrosive, flammable or explosive gases.

CONDITIONS TO AVOID: Avoid heat, flames, sparks and other sources of ignition. Containers may rupture or explode if exposed to heat.

INCOMPATIBILITIES: bases, metals, combustible materials, oxidizing materials

HAZARDOUS DECOMPOSITION:
Thermal decomposition products: phosgene, halogenated compounds, oxides of carbon

POLYMERIZATION: May polymerize. Avoid contact with heat or light and monitor inhibitor content.

11. TOXICOLOGICAL INFORMATION

TRICHLOROETHYLENE:
IRRITATION DATA: 2 mg/24 hour(s) skin-rabbit severe; 20 mg/24 hour(s) eyes-rabbit moderate
TOXICITY DATA: 140700 mg/m3/1 hour(s) inhalation-rat LC50; >20 gm/kg skin-rabbit LD50; 4920 mg/kg oral-rat LD50
CARCINOGEN STATUS: NTP: Anticipated Human Carcinogen; IARC: Human Limited Evidence,

Animal Sufficient Evidence, Group 2A; ACGIH: A2 -Suspected Human Carcinogen
LOCAL EFFECTS:
Irritant: inhalation, skin, eye
ACUTE TOXICITY LEVEL:
Moderately Toxic: ingestion
Slightly Toxic: inhalation
Relatively Non-toxic: dermal absorption
TARGET ORGANS: immune system (sensitizer), central nervous system
MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE: heart problems
TUMORIGENIC DATA: Available.
MUTAGENIC DATA: Available.
REPRODUCTIVE EFFECTS DATA: Available.
ADDITIONAL DATA: May cross the placenta. Stimulants such as epinephrine may induce ventricular fibrillation.

12. ECOLOGICAL INFORMATION

ECOTOXICITY DATA:
FISH TOXICITY: 3100 ug/L 96 hour(s) LC50 (Mortality) Flagfish (Jordanella floridae)

INVERTEBRATE TOXICITY: 1700 ug/L 7 hour(s) EC50 (Regeneration) Flatworm (Dugesia japonica)

OTHER TOXICITY: 45000 ug/L 48 week(s) LC50 (Mortality) Clawed toad (Xenopus laevis)

FATE AND TRANSPORT:
BIOCONCENTRATION: 17 ug/L 1-14 hour(s) BCF (Residue) Bluegill (Lepomis macrochirus) 8.23 ug/L

13. DISPOSAL CONSIDERATIONS

Subject to disposal regulations: U.S. EPA 40 CFR 262. Hazardous Waste Number(s): U228. Hazardous Waste Number(s): D040. Dispose of in accordance with U.S. EPA 40 CFR 262 for concentrations at or above the Regulatory level. Regulatory level- 0.5 mg/L. Dispose in accordance with all applicable regulations.

14. TRANSPORT INFORMATION

U.S. DOT 49 CFR 172.101:
PROPER SHIPPING NAME: Trichloroethylene
ID NUMBER: UN1710
HAZARD CLASS OR DIVISION: 6.1
PACKING GROUP: III
LABELING REQUIREMENTS: 6.1

CANADIAN TRANSPORTATION OF DANGEROUS GOODS:
SHIPPING NAME: Trichloroethylene
UN NUMBER: UN1710
CLASS: 6.1
PACKING GROUP/CATEGORY: III

15. REGULATORY INFORMATION

U.S. REGULATIONS:
CERCLA SECTIONS 102a/103 HAZARDOUS SUBSTANCES (40 CFR 302.4):
TRICHLOROETHYLENE: 100 LBS RQ

SARA TITLE III SECTION 302 EXTREMELY HAZARDOUS SUBSTANCES (40 CFR 355 Subpart B): Not regulated.

SARA TITLE III SECTION 304 EXTREMELY HAZARDOUS SUBSTANCES (40 CFR 355 Subpart C): Not regulated.

SARA TITLE III SARA SECTIONS 311/312 HAZARDOUS CATEGORIES (40 CFR 370 Subparts B and C):
ACUTE: Yes
CHRONIC: Yes
FIRE: No
REACTIVE: No
SUDDEN RELEASE: No

SARA TITLE III SECTION 313 (40 CFR 372.65):
TRICHLOROETHYLENE

OSHA PROCESS SAFETY (29 CFR 1910.119): Not regulated.

STATE REGULATIONS:
California Proposition 65:
Known to the state of California to cause the following:
TRICHLOROETHYLENE
Cancer (Apr 01, 1988)

CANADIAN REGULATIONS:
WHMIS CLASSIFICATION: D2

NATIONAL INVENTORY STATUS:
U.S. INVENTORY (TSCA): Listed on inventory.

TSCA 12(b) EXPORT NOTIFICATION: Not listed.

CANADA INVENTORY (DSL/NDSL): Not determined.

Zinc Metal MSDS

Section 1: Chemical Product and Company Identification

Product Name: Zinc Metal

Catalog Codes: SLZ1054, SLZ1159, SLZ1267, SLZ1099, SLZ1204

CAS#: 7440-66-6

RTECS: ZG8600000

TSCA: TSCA 8(b) inventory: Zinc Metal

CI#: Not applicable.

Synonym: Zinc Metal Sheets; Zinc Metal Shot; Zinc Metal Strips

Chemical Name: Zinc Metal

Chemical Formula: Zn

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Zinc Metal	7440-66-6	100

Toxicological Data on Ingredients: Zinc Metal LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects: Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Not available. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. Repeated or prolonged exposure is not known to aggravate medical condition.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: Flammable.

Auto-Ignition Temperature: 480°C (896°F)

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Not available.

Fire Hazards in Presence of Various Substances:
Slightly flammable to flammable in presence of open flames and sparks, of heat, of oxidizing materials, of acids, of alkalis, of moisture. Non-flammable in presence of shocks.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
Flammable solid. SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray or fog. Cool containing vessels with water jet in order to prevent pressure build-up, autoignition or explosion.

Special Remarks on Fire Hazards:
Zinc + NaOH causes ignition. Oxidation of zinc by potassium proceeds with incandescence. Residues from zinc dust /acetic acid reduction operations may ignite after long delay if discarded into waste bins with paper. Incandescent reaction when Zinc and Arsenic or Tellurium, or Selenium are combined. When hydrazine mononitrate is heated in contact with zinc, a flamming decomposition occurs at temperatures a little above its melting point. Contact with acids and alkali hydroxides (sodium hydroxide, postasium hydroxide, calcium hydroxide, etc.) results in evolution of hydrogen with sufficient heat of reaction to ignite the hydrogen gas. Zinc foil ignites if traces of moisture are present. It is water reactive and produces flammable gases on contact with water. It may ignite on contact with water or moist air.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Flammable solid that, in contact with water, emits flammable gases. Stop leak if without risk. Do not get water inside container. Do not touch spilled material. Cover with dry earth, sand or other non-combustible material. Prevent entry into sewers, basements or confined areas; dike if needed. Eliminate all ignition sources. Call for assistance on disposal. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system.

Section 7: Handling and Storage

Precautions:
Keep away from heat. Keep away from sources of ignition. Ground all equipment containing material. Do not breathe dust. Keep away from incompatibles such as oxidizing agents, acids, alkalis, moisture.

Storage:
Keep container tightly closed. Keep container in a cool, well-ventilated area. Keep from any possible contact with water. Do not allow water to get into container because of violent reaction.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits: Not available.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid. Metal solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 65.39 g/mole

Color: Bluish-grey

pH (1% soln/water): Not applicable.

Boiling Point: 907°C (1664.6°F)

Melting Point: 419°C (786.2°F)

Critical Temperature: Not available.

Specific Gravity: Not available.

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water, methanol, diethyl ether, n-octanol, acetone.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Excess heat, incompatible materials, moisture

Incompatibility with various substances:
Reactive with oxidizing agents, acids, alkalis. Slightly reactive to reactive with moisture. The product may react violently with water to emit flammable but non toxic gases.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Incompatible with acids, halogenated hydrocarbons, NH4NO3, barium oxide, Ba(NO3)2, Cadmium, CS2, chlorates, Cl2, CrO3, F2, Hydroxylamine, Pb(N3)2, MnCl2, HNO3, performic acid, KClO3, KNO3, N2O2, Selenium, NaClO3, Na2O2, Sulfur, Te, water, (NH4)2S, As2O3, CS2, CaCl2, chlorinated rubber, catalytic metals, halocarbons, o-nitroanisole, nitrobenzene, nonmetals, oxidants, paint primer base, pentacarbonoyliron, transition metal halides, seleninyl bromide, HCl, H2SO4, (Mg +Ba(NO3)2 +BaO2), (ethyl acetoacetate +tribromoneopentyl alcohol. Contact with Alkali Hydroxides(Sodium Hydroxide, Potassium Hydroxide, Calcium Hydroxide, etc) results in evolution of hydrogen. Ammonium nitrate + zinc + water causes a violent reaction with evolution of steam and zinc oxide. May react with water.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans: Not available.

Other Toxic Effects on Humans: Slightly hazardous in case of skin contact (irritant), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans:
Acute Potential Health Effects: Skin: May cause skin irritation. Dermal exposure to zinc may produce leg pains, fatigue, anorexia and weight loss. Eyes: May cause eye irritation. Ingestion: May be harmul if swallowed. May cause digestive tract irritation with tightness in throat, nausea, vomiting, diarrhea, loss of appetite, malaise, abdominal pain. fever, and chills. May affect behavior/central nervous system and autonomic nervous system with ataxia, lethargy, staggering gait, mild derrangement in cerebellar function, lightheadness, dizzness, irritability, muscular stiffness, and pain. May also affect blood. Inhalation: Inhalation of zinc dust or fumes may cause respiratory tract and mucous membrane irritation with cough and chest pain. It can also cause "metal fume fever", a flu-like condition characterized appearance of chills, headached fever, maliase, fatigue, sweating, extreme thirst, aches in the legs and chest, and difficulty in breathing. A sweet taste may also be be present in metal fume fever, as well as a dry throat, aches, nausea, and vomiting, and pale grey cyanosis. The toxicological properties of this substance have not been fully investisgated.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: Not available.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
New York release reporting list: Zinc Metal Rhode Island RTK hazardous substances: Zinc Metal Pennsylvania RTK: Zinc Metal Florida: Zinc Metal Michigan critical material: Zinc Metal Massachusetts RTK: Zinc Metal New Jersey: Zinc Metal California Director's List of Hazardous Substances: Zinc Metal TSCA 8(b) inventory: Zinc Metal TSCA 12(b) one time export: Zinc Metal SARA 313 toxic chemical notification and release reporting: Zinc Metal CERCLA: Hazardous substances.: Zinc Metal: 1000 lbs. (453.6 kg)

Other Regulations: EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada): Not Available

DSCL (EEC):
R15- Contact with water liberates extremely flammable gases. R17- Spontaneously flammable in air. S7/8- Keep container tightly closed and dry.

HMIS (U.S.A.):

Health Hazard: 1

Fire Hazard: 1

Reactivity: 1

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 0

Flammability: 1

Reactivity: 1

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Safety glasses.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

Email: centurygroup88@yahoo.com

Project Location : 64-06 Queens Blvd, Woodside, NY
Project Description : 135 rooms of Holiday Inn Express & Suites

CONSTRUCTION COST: (b)(4)

SCOPE OF WORK:

1. GENERAL

1.01 Mobilization & preparation
1.02 Insurance-general liability 25M & workmen comp
1.03 Sign-offs
1.04 Permit applications
1.05 Provide all necessary SOE inspections
1.06 Provide all necessary TR-2 TR-3
1.07 Provide engineer on site for supervision of all foundation and shoring work
1.08 Provide all necessary surveys
1.09 Provide all necessary shop drawings

2. SITEWORK

2.01 Provide and Install roof protection on adjacent buildings
2.02 Scaffold
  a. Provide and install Sidewalk Bridge
  b. Provide and install scaffold to roof
  c. Provide and install protection net to roof
  d. Scaffold reinforcement
2.03 Shoring, Sheeting & Lagging as per SOE
2.04 Temporary Protection Plywood Fence
2.05 Provide and install exterior material hoist
2.06 Excavation and backfill as necessary
2.07 Provide and install sidewalk, trees, curb and curb as per approved BPP

3. MASONRY

3.01 Concrete block as per drawings
3.02 Stucco in rear of building
3.03 Stone on first floor as per rendering

4. CONCRETE

4.01 Foundation wall, straps beams and pile caps
4.02 Concrete Slabs
4.03 Roof Bulkhead
4.04 Sidewalk, curbs and pavement
4.05 Surveys and stakeout
4.06 All waterproofing of exterior foundation walls

5. METALS

5.01 Concrete filled metal pan stairs
5.02 Metal framing and gates
5.03 Roof, railing and ladder
5.04 Structural metal framing
5.05 Provide and install steel dunnage
5.06 Omagalite exterior aluminum panel front and 2 sides

Queens Blvd Ventures LLC
35-06 Leavitt Street, Suite CF-A, Flushing NY 11354
Tel: 718.939.1060 Fax: 718.939.1036
Email: centurygroup88@yahoo.com

(b)(4)

6. THERMAL & MOISTURE PROTECTION

6.01 Roof waterproofing
- a. Six-ply rubber roofing
- b. 2" rigid insulation
- c. Vent sheet
- d. Fire Stone 12 year labor and material warrenty

6.02 Insulation
- a. Exterior wall insulation close cell sprayed on
- b. Interior wall insulation open cell sprayed on

7. DOORS & WINDOWS

7.01 Doors 1 3/4 " solid core doors, frames and hardware
7.02 Aluminum windows & storefront entrance by crystal or equal
7.03 All window system by crystal or equal per window schedule
7.04 All hollow metal door per schedule
7.05 Thermacore 490 garage door
7.06 Provide and install glass railing as per rendering

8. FINISHES

8.01 Gypsum board ceiling w / paint finished
8.02 Gypsum board wall w / paint finished
8.03 Epoxy paint for areaway, Elec.meter Rm., water meter Rm.
8.04 All apartment interior as per finish schedule
8.05 All hallways as per plan and finish schedule
8.06 All commercial, lobby as per design

9. CONVEYING SYSTEM

9.01 Provide and install Thyssen Krupp MRL 250FPM 2300# elevator
9.02 Standard cab $20,000 allowance

10. EQUIPMENT

10.01 Kitchen cabinets allowance is $5,000 per unit
10.02 All appliances
10.03 Bathroom accessories
10.04 Trash chute and compactor
10.05 Kitchen counter top to be Caesar Stone

11. MECHANICAL

11.01 HVAC system as per drawings
11.02 Provide and install exhaust & fresh air system as per drawings
11.03 Provide and install LG PTAC unit
11.04 Provide and install all kitchen and bath exhaust duct and fans
11.05 Provide and install HVAC system for lobby, trash storage and rec room PTAC

12. FIRE SYSTEM

12.01 Sprinkler system as per drawings
12.02 Stand Pipe system as per drawings
12.03 Provide and install sprinkler alarm system as per DOB and FDNY code

Queens Blvd Ventures LLC
35-06 Leavitt Street, Suite CF-A, Flushing NY 11354
Tel: 718.939.1060 Fax: 718.939.1036

Re: Holiday Inn Express & Suites
64-06 Queens Blvd, Woodside, NY 11377

Dear CSC EB-5 Unit Officer:

Century Construction Group was hired by Queens Blvd Ventures, LLC as the general contractor on the above-referenced Project. I am the president of Century Construction Group and have worked in the construction industry for twenty years and have supervised, managed and/or constructed. My experience includes hospitality, commercial interior and residential projects. I have constructed similar projects to the proposed Holiday Inn Express & Suites in term of size, budgets and timeline. These projects include the Marriot Fairfield Inn, the Leavitt Manor Condominium and the Farrington Estate, all located in Flushing. I have been asked by Queens Blvd Ventures, LLC to provide you with some information concerning the Project in connection with certain funding obtained by EB-5.

Century Construction Group has advised that hard construction cost estimate would be [redacted] (b)(4) [redacted] The construction timeline is 27 months. This Holiday Inn Express & Suites hotel will include a breakfast room, a fitness room, business center, market pantry, outdoor lounge, and vending areas. This hotel will include 135 rooms and suites. The Demolition is scheduled to begin in early October of 2015. I attest that the construction budgets and timeline are estimated based on established industry standards.

Very Truly Yours,

George Xu
President

35-06 Leavitt St., Suite CF-A Flushing, NY 11354

2.b. Name of Recognized Organization

2.c. Date accreditation expires *(mm/dd/yyyy)* ▶

Part 3. Eligibility Information for Attorney or Accredited Representative *(continued)*

3. ☐ I am associated with

[ ],

the attorney or accredited representative of record who previously filed Form G-28 in this case, and my appearance as an attorney or accredited representative is at his or her request.

NOTE: If you select this item, also complete **Item Numbers 1.a. - 1.b. or Item Numbers 2.a. - 2.c.** in **Part 3.** *(whichever is appropriate).*

4.a. ☐ I am a law student or law graduate working under the direct supervision of the attorney or accredited representative of record on this form in accordance with the requirements in 8 CFR 292.1(a)(2)(iv).

4.b. Name of Law Student or Law Graduate

[ ]

Part 4. Applicant, Petitioner, Requestor, or Respondent Consent to Representation, Contact Information, and Signature

Consent to Representation and Release of Information

1. I have requested the representation of and consented to being represented by the attorney or accredited representative named in **Part 1.** of this form. According to the Privacy Act of 1974 and DHS policy, I also consent to the disclosure to the named attorney or accredited representative of any record pertaining to me that appears in any system of records of USCIS, ICE or CBP.

When you (the applicant, petitioner, requestor, or respondent) are represented, DHS will send notices to both you and your attorney or accredited representative either through mail or electronic delivery.

DHS will also send the Form I-94, Arrival Departure Record, to you **unless** you select **Item Number 2.a.** in **Part 4.** All secure identity documents and Travel Documents will be sent to you (the applicant, petitioner, requestor, or respondent) unless you ask us to send those documents to your attorney of record or accredited representative.

If you do not want to receive original notices or secure identity documents directly, but would rather have such notices and documents sent to your attorney of record or accredited representative, please select **all applicable** boxes below:

2.a ☒ I request DHS send any notice (including Form I-94) on an application, petition, or request to the business address of my attorney of record or accredited representative as listed in this form. I understand that I may change this election at any future date through written notice to DHS.

2.b. ☒ I request that DHS send any secure identity document, such as a Permanent Resident Card, Employment Authorization Document, or Travel Document, that I am approved to receive and authorized to possess, to the business address of my attorney of record or accredited representative as listed in this form. I consent to having my secure identity document sent to my attorney of record or accredited representative and understand that I may request, at any future date and through written notice to DHS, that DHS send any secure identity document to me directly.

3.a. Signature of ~~Applicant, Petitioner,~~ Requestor, or Respondent

[ ]

3.b. Date of Signature *(mm/dd/yyyy)*▶ 09/16/2015

Part 5. Signature of Attorney or Accredited Representative

I have read and understand the regulations and conditions contained in 8 CFR 103.2 and 292 governing appearances and representation before the Department of Homeland Security. I declare under penalty of perjury under the laws of the United States that the information I have provided on this form is true and correct.

1. Signature of Attorney or Accredited Representative

D. Continuation, if needed, to provide information for additional management companies/agencies, regional center principals, agents, individuals or entities who are or will be involved in the management, oversight, and administration of the regional center.)

Please see attached Counsel's project cover letter.

Part 3. Information About the Regional Center (Continued)

Note: If extra space is needed to complete any item, attach a continuation sheet, indicate the item number, and provide the response.

1a. Describe the structure, ownership and control of the regional center entity.

The Regional Center is owned by Mr. George Xu. Please see the counsel's project cover letter and organizational chart and operating agreement

b. Date the Regional Center was established(mm/dd/yyyy): 03/25/2014

c. Organization Structure for the Regional Center:

- ☐ **1.** Agency of a U.S. State or Territory (identify) _____
- ☐ **2.** Corporation
- ☐ **3.** Partnership (including Limited Partnership)
- ☒ **4.** Limited Liability Company (LLC)
- ☐ **5.** Other (Explain) _____

2. Has this regional center's designation ever been formally terminated by USCIS, or has the regional center ever filed a Form I-924 or regional center proposal or amendment that was denied?

☒ No ☐ Yes - Attach a copy of the adverse decision, with an explanation, the date of decision, and case number, if any.

3. Describe the geographic area of the regional center. **Note:** This area must be contiguous. Provide a map of the geographic area.

Geographic area of the regional center includes the New York counties of Queens County, New York County, Bronx County, Richmond County, Westchester County and Nassau County.

The map of the geographic area is attached in the Business Plan.

4. Describe the regional center's administration, oversight, and management functions that are or will be in place to monitor all EB-5 capital investment activities and the allocation of the resulting jobs created or maintained under the sponsorship of the regional center.

Please see counsel's cover letter and administrative exhibits.

Part 3. Information About the Regional Center (Continued)

5. Describe the past, current, and future promotional activities for the regional center. Include a description of the budget for this activity, along with evidence of the funds committed to the regional center for promotional activities. Submit a plan of operation for the regional center that addresses how EB-5 investors will be recruited, the methods by which the capital investment opportunities will be offered to the investors, and how they will subscribe or commit to the investment interest.

Century New York City Regional Center has a comprehensive marketing plan in operation. Please see attached project cover letter and attachments for details.

6. Describe whether and how the regional center is engaged in supporting a due diligence screening of its alien investor's lawful source of capital and the alien investor's ability to fully invest the requisite amount of capital. Also, describe the regional center's prospective plans in this regard if they differ from past practice.

Century New York City Regional Center will support due diligence screening of its foreign investors' lawful source of capital by requiring all investors to complete the Regional Center's Suitability Evaluation Form and to provide certified and notarized documentary evidence, containing official seal or consular legalization, of any loan or mortgage agreements, promissory notes, security agreements, foreign business registration records, corporate, partnership, and personal tax returns.

7. Identify each industry that has or will be the focus of EB-5 capital investments sponsored through the regional center.

Industry Category Title: Construction NAICS Code for the Industry Category: 2 3 6 2 2 3	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes
Industry Category Title: Wholesale Trade NAICS Code for the Industry Category: 4 2 4 2 3 2	Is the Form I-924 application supported by an economic analysis and underlying business plan for the determination of prospective EB-5 job creation through EB-5 investments in this industry category? ☐ No - Attach an explanation ☒ Yes

SUBMISSION CONTAINS CONFIDENTIAL COMMERCIAL INFORMATION PER FOIA (5 U.S.C. § 552 (b)(4)), SUBMITTER REQUESTS PREDISCLOSURE NOTIFICATION PER PRESIDENTIAL EXECUTIVE ORDER NO. 12, 600, 52 FED. REG. 23781 (JUNE 23, 1987)

RE: I-526 Immigrant Petition by Alien Entrepreneur: **John Doe**
New Commercial Enterprise: **88th Avenue EB5 Capital, LLC**
Regional Center: **Century New York City Regional Center, LLC**

Dear Adjudicating Officer:

This letter is submitted in support of an exemplar I-526 petition with the Century New York City Regional Center, LLC, under the regulations at 8 CFR §204.6, for Petitioner **John Doe**. Materials specific to the I-526 petitioner's investment and source of funds are organized under separate cover.

The Offering Package provided to investors included all of the offering and organizational documents, project business plan, economic analysis, and voluminous supporting documents necessary for the investors' I-526 petitions. The Offering Package contains a detailed Table of Contents for all of those documents and divides offering materials into 17 numbered sections. Exhibits 1 through 5 consist of documents relating to the Regional Center, New Commercial Enterprise and placement of capital "at risk". Exhibit 6 comprises the economic report, while

exhibits 7 through 17 encompass supporting documents relating to the *Matter of Ho* Roadmap, beginning with the comprehensive Business Plan. For ease of reference, a detailed exhibit list is attached. This is the only valid version of the offering documents, and no other version should be submitted by any investor.

(b)(4)

In summary, each investor in the Project seeks classification as an alien entrepreneur based on his or her $500,000 capital investment in the *Jamaica Project.* The Project will spend a maximum [redacted] contributed from EB-5 funds to finance the construction, development and operations of a mixed-use development, located at 148-44/48 Hillside Avenue / 148-31/43 88th Avenue, Jamaica, NY 11435. The mixed—used development will include two buildings: The first building will be a six-floor commercial space with 17,099 rentable sf. The second building will be an eight-floor residential building with 109 units and 84,709 rentable sf. The total building gross size is 101,808 sf. The buildings will include retail spaces, office spaces, residential spaces, community facilities, and 55 paid parking spaces. The project is estimated to break ground no later than December of 2015, and will open around February of 2018.

In accordance with 8 C.F.R. § 204.6(m)(7), this petition is accompanied by supporting evidence establishing the investor's qualifying investment into a new commercial enterprise within an approved regional center and that such investment will create jobs directly and indirectly through this enterprise. Evidence that the investor's funds for capital investment are derived from a lawful source as required by 8 C.F.R. § 204.6(j)(3) are provided separately from the project materials.

I. NEW COMMERCIAL ENTERPRISE AND CREDIBLE PROJECT

Jamaica Project

The investor has made an at-risk capital investment of [redacted] in cash into the 88th Avenue EB5 Capital, LLC (the "NCE"). $500,000 will be used for the investment, and [redacted] is the Administrative Fee. Century New York City Regional Center, LLC ("RC") is the regional center. Please see documents relevant to the regional center at **Exhibit 1.**

(b)(4)

The Manager of 88th Avenue EB5 Capital, LLC is Century New York City Regional Center, LLC. The New Commercial Enterprise, 88th Avenue EB5 Capital, LLC, is a newly formed entity for the purpose of raising investment capital for the development of the Project. As it is a for-profit

limited partnership that was established after November 29, 1990, 88th Avenue EB5 Capital, LLC is classified as a "new" commercial enterprise as defined in 8 C.F.R. § 204.6(e).

88th Avenue Realty, LLC is the job creating entity ("JCE"). The NCE, 88th Avenue EB5 Capital, LLC, will make a loan to the JCE to provide EB-5 investment capital for the development of the Project and for the job creation. The Project will be developed by a real estate development company, Midtown Properties Group, which is an affiliate company of the JCE.

There are a maximum of 24 Limited Member Units, one of which has been purchased by the investor. Please refer to a copy of the Subscription and Operating Agreements at **Exhibit 5** for additional details. A copy of the Private Placement Memorandum and Escrow Agreement are also included at **Exhibit 5**.

As described in the comprehensive business plan at **Exhibit 7**, the total project cost is estimated (b)(4) to be [redacted] For the capital stack, the EB-5 funds will be [redacted] the bank loan will be [redacted] and the developer's equity contribution will be [redacted] The (b)(4) mixed—used development will include two buildings: The first building will be a six-floor commercial space with 17,099 rentable sf. The second building will be an eight-floor residential building with 109 units and 84,709 rentable sf. The total building gross size is 101,808 sf. The buildings will include retail spaces, office spaces, residential spaces, community facilities, and 55 paid parking spaces.

The construction of the Project will take approximately 27 months to complete, and will break ground no later than December of 2015. Please refer to the submitted construction timeline at **Exhibit 9**. The construction budget was estimated by Century Construction Group, a qualified, unaffiliated, third-party general contractor, which offers the experience of having constructed similar projects in size, nature and scope. The construction budget was based on their previous experience of projects similar in size and nature and scope for the Project. The construction timeline was derived from figures and statistics; the detailed plans and specifications drawn up by the architect; spot checks on the numbers developed, and the comparable analysis method of similar hotel projects in a similar location.

The project has made great efforts to commence the Project. The Developer has entered into formal contract with General Contractor Century Construction Group, Architect and Engineer Raymond Chan Architect. Please refer to **Exhibit 9, Exhibit 10.** It has purchased the land upon which it will construct the hotel. Please see the deed for the land at **Exhibit 12.** It has

researched and explored the necessary permits, zoning and environmental regulations, licensing requirements, and other restrictions concerning the Project. Please refer to the work permit schedule at **Exhibit 14**. The Jamaica project anticipates entering into a management agreement with First Management Group. First Management Group is a full-service Real Estate Management firm.

The NCE will make the Loan to the Borrower at a fixed rate of (b)(4) per annum. The EB-5 funds will fund the construction cost of the Project. EB-5 Investors, as Members, will be entitled to a return of up to (b)(4) per annum if the NCE generates sufficient revenues. There is no guarantee that the EB-5 Investors will receive a return on their investment or that their principal will be repaid. Copies of the loan agreement and promissory note are included at **Exhibit 3**.

***Matter of Ho* Roadmap- All contained in at EXHIBITS 7 THROUGH 19**

- The Comprehensive Business Plan – with the description of the business, its products and/or services, and its objectives (**Exhibit 7**)
- Appraisal Report prepared by Betsy Mak Appraisal Group LLC, dated September 2, 2015. This document lays out the market analysis, the names of competing businesses, their relative strengths and weaknesses, a comparison of the competition's products and pricing structures, and a description of the target market/prospective customers of the new commercial enterprise along the reasonable analysis method used to derive the development cost estimates as well as to show the prospective market value of the project (**Exhibit 8**)
- Documents relating to construction documents, including the construction timeline, certificate of liability insurance (**Exhibit 9**)
- Documents relating to architectural documents, including fully executed document with architect, and architecture and site plans (**Exhibit 10**)
- Deed (**Exhibit 12**)
- Permits to be obtained by the project (**Exhibit 13**)
- Project Financials (**Exhibit 14**)

II. CREATION OF DIRECT AND INDIRECT EMPLOYMENT POSITIONS

(b)(4)

The new commercial enterprise is affiliated with an approved regional center in this project.

Based on the EB-5 Economic Impact Report by Evans, Carroll & Associates, Inc., Jamaica Project will create [redacted] permanent new jobs, including [redacted] jobs from construction activity and [redacted] jobs from the building's operation.

Table A. Summary of Employment and Revenue Estimates

Activity	Exp/Rev mil cur $	Exp/Rev mil 2010 $	RIMS II Mult	Total Jobs	Direct Jobs
Hard construction costs	[redacted]		13.2149	[redacted]	
Architect & Engineering Svcs			11.9014		
Rental Income			13.0752		
Total					

All figures based on unrounded numbers

The [redacted] jobs will support a maximum EB-5 capital raise of [redacted] The project intends to raise [redacted] from 24 EB-5 investors. The full Economic and Job Creation Impacts Report is included at **Exhibit 6.**

(b)(4)

Jobs will be allocated to each investor in the order in which the investment funds were received into the project.

III. MANAGEMENT OF THE NEW COMMERCIAL ENTERPRISE

Each investor is a limited member in 88th Avenue EB5 Capital, LLC, a New York Limited Liability Company. Pursuant to 8 C.F.R. § 204.6(j)(5), a limited member is considered sufficiently engaged in the management of the new commercial enterprise through policy formulation.

Investors in this project are sufficiently engaged in the management of the new commercial enterprise through policy formulation. Please see the ***Management and Voting Rights Section*** of Private Placement Memorandum and other Offering Documents at **Exhibit 5**. Therefore, the investors satisfy immigrant investor requirements.

IV. CAPITAL INVESTMENT

The Property is located at 148-44/48 Hillside Avenue / 148-31/43 88th Avenue, Jamaica, NY 11435. The project is located at Census tract 238 in Queens County and qualifies as a "targeted employment area". Attached at **Exhibit 4** is the most updated TEA confirmation letter dated August 20, 2015, issued by New York State Department of Economic Development. The location of the Project therefore falls squarely within the definition of "TEA" provided in 8 C.F.R. §204.6(e).

The investor made an at-risk capital investment of $500,000 into 88th Avenue EB5 Capital, LLC. Evidence that the funds were deposited into specific escrow account designated for 88th Avenue EB5 Capital, LLC's bank account is provided under separate cover with the investor-specific source of funds exhibits.

In compliance with the regulations and governing precedent decisions, the full amount of the capital contribution has been invested solely in 88th Avenue EB5 Capital, LLC. $500,000 of the funds will be released for purposes of financing the construction, development and operation of the property as described in the comprehensive business plan at **Exhibit 7**. No portion of an investor's contribution has been or will be applied towards legal service fees or administrative fee, marketing costs or interest payment of 88th Avenue EB5 Capital, LLC or Century New York City Regional Center, LLC, which are paid from the separate $50,000 administrative fee. In addition, legal fees for pursuit of immigration benefits are paid by each investor outside of the $500,000 investment.

The investor's investment is placed in an active commercial enterprise in the form of cash. There are no loans, promissory notes, mortgage agreements or other forms of borrowing relating to any of his or her capital contribution. The investor is thus subject to the inherent risks associated with operating a new commercial enterprise. Should the business not perform well, the investor risks losing part or all of the petitioner's investment.

V. CONCLUSION

For these reasons and based on the supporting documentation, the investor meets all the requirements to qualify as an EB-5 alien entrepreneur under the Immigrant Investor Pilot Program, pursuant to INA § 203(b)(5) and 8 C.F.R. §204.6. Furthermore, this investment in the United States will result in job creation that will benefit the regional and/or national economies.

We respectfully request your prompt approval of the enclosed I-526 Petition.

Sincerely,
Mona Shah & Associates

Mona Shah, Esq.
New York, NY

In the Matter of:

I-924 EXEMPLAR FILING }
Pursuant to 8 CFR ss.204.6 }
Petitioner: Century New York City Regional Center }
Project: 88th Avenue EB5 Capital, LLC }

REQUEST FOR AN AMENDMENT TO AN APPROVED REGIONAL CENTER APPLICATION, FORM I-924, EXEMPLAR FILING FOR A NEW PROJECT (88th Avenue EB5 Capital, LLC) AND FORM I-526 PETITION

ATTORNEY MEMORANDUM

This Instant Request for an Amendment is filed to seek:

(1) A preliminary determination of an exemplar Form I-526 – *88th Avenue EB5 Capital, LLC*

This letter and the annexed supporting documentation constitute a request for the approval of an exemplar Form I-526, filed in accordance with 8 CFR 204.6., in order for USCIS to determine if the documentation is EB-5 compliant and thus facilitate adjudication of an actual but identical Form I-526 petition, if the evidence of record otherwise establishes EB-5 eligibility.

Attached is a detailed exhibit list covering all the supporting documents; the exhibits have been tabbed for your reference.

I. Preliminary:

The petitioning regional center is named *Century New York City Regional Center*. The company was incorporated on March 25, 2014. Please see company formation documents, exhibited at **Exhibit 2.**

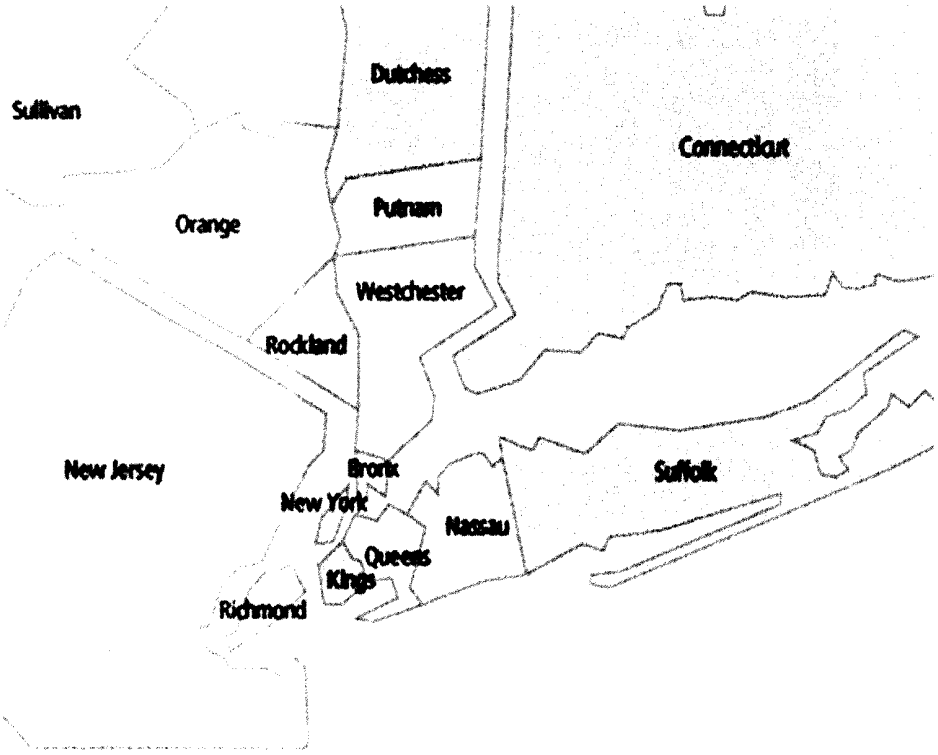
The Century New York City Regional Center, LLC (hereafter "CNYC") seeks approval of an exemplar Form I-526, filed in accordance with 8 CFR 204.6., in order for USCIS to determine if the documentation is EB-5 compliant and thus facilitate adjudication of an actual but identical Form I-526 petition, if the evidence of record otherwise establishes EB-5 eligibility.

II. Prior Approval

CNYC was approved on March 14, 2015. Please see approval letter **at Exhibit 1.**

III. Regional Center Geographical Region and TEA Designation

The geographical area for CNYC has not changed. It continues to comprise the New York counties of Queens County, New York County, Bronx County, Richmond County, Westchester County and Nassau County. Below is a map of the geographical area.



The Project is located at 148-31/43 88th Avenue, Jamaica, NY 11435. This is a designated targeted employment area (TEA), as per 8CFR 204.6 and thus qualified to accept an investment of $500,000.00. Please see attached **Exhibit 7**, TEA confirmation letter issued by the Empire State Development.

III. Industry Sectors Requested

The industry sectors have not changed. Please see the North American Industry Classification System (NAICS) code listed below:

88th Avenue Realty, LLC developments continue to encompass the following industries:

North American Industry Classification System (NAICS) codes are listed as follows:

Construction Hard Costs

- Construction (Building & Site) – 2362/23622
- Wholesale Trade (FF&E) – 42/4232
- Real Estate – 53112/5313

Financing & Soft Costs

- Other government enterprises – 921
- Architectural, engineering and related services – 5413
- Insurance - 5241
- Accounting tax preparation, bookkeeping services – 5412
- Legal Services – 5411
- Monetary authorities and depository credit intermediation – 5222
- Other miscellaneous professional and technical services – 5419

IV. Brief Project Description

The Project will provide funding to construct and operate a mixed-use building which consists of retail spaces, office spaces, residential spaces, community facilities, and 55 paid parking spaces. The Project is looking to raise US[ ] from[ ] investors through EB5 investment. (b)(4)

Attached at **Exhibit 3** is a comprehensive business plan, compliant with *Matter of Ho.* CNYC is seeking approval of an exemplar Form I-526, filed in accordance with 8 CFR 204.6., in order for USCIS to determine if the documentation is EB-5 compliant and thus facilitate adjudication of an actual but identical Form I-526 petition, if the evidence of record otherwise establishes EB-5 eligibility. The business plan clearly describes how the project will promote economic growth through improved regional productivity, job creation, and increased domestic capital investment.

V. Promotion of Economic Growth

The New Commercial Enterprise (NCE) 88th Avenue EB5 Capital, LLC is seeking to raise US[ ] in investors' capital from[ ] investors through the EB-5 Immigrant Investor Program for the expansion plan into the seven counties in the state of New York. (b)(4)

Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment is not required if investment opportunities arise outside the geographic area referenced.

The JCE will review each project under the RC that is seeking funding focusing on job creation, development potential, financial stability and exit plan. The Jamaica Project meets the JCE's assessment standards after conducting full due diligence studies.

VII. Investment Terms

Each EB-5 investor must execute the Private Placement Memorandum, the Operating Agreement, and the Subscription Agreement, all attached at **Exhibit 6.**

If the I-526 petition is denied or if the I-526 petition is approved but the EB-5 investor is denied at the consulate interview, Century New York City Regional Center will return the investor's capital contribution $500,000 and [redacted] administrative fee without interest. In addition, EB-5 Investors must pay an administrative fee of [redacted] which will be used to pay for a thorough review of the investor's personal questionnaire, background documents, commissions, finder's fees, to offset advertising costs and other administrative expenses. (b)(4)

The Subscription Agreement requires the investor to affirm that he or she is an accredited investor pursuant to Rule 506 of Regulation D under the Securities Act of 1933. By signing the Subscription Agreement, the EB-5 investor agrees to become a member pursuant to the particular LLC Operating Agreement and Subscription Agreement **Exhibit 6.** Immigrant investors may not file their I-526 petition until their cash investments are fully invested in the particular project. The investor deposits his investment capital directly to the account of the Project managing the particular project. EB-5 regulations and USCIS rulings require that the investment be at risk for at least five (5) years. However, the Project may, at its sole discretion, make distributions of profits and income during this time period.

In Conclusion:

The documentary evidence submitted complies with the regulatory requirements for approval of an exemplar Form I-526. Thank you for your consideration in this matter.

Application:	Form I-924, Application for Regional Center under the Immigrant Investor Pilot Program
Applicant(s):	Century New York City Regional Center
Re:	Initial Regional Center Designation Century New York City Regional Center RCW1420251818/ID1420251818

This notice is in reference to the Form I-924, Application for Regional Center Under the Immigrant Investor Pilot Program that was filed by the applicant with the U.S. Citizenship and Immigration Services ("USCIS") on July 21, 2014. The Form I-924 application was filed to request approval of initial regional center designation under the Immigrant Investor Program. The Immigrant Investor Program was established under § 610 of the Department of Commerce, Justice and State, the Judiciary, and Related Agencies Appropriations Act of 1993 (Pub. L. 102-395, Oct. 6, 1992, 106 Stat. 1874).

I. Executive Summary of Adjudication

Effective the date of this notice, USCIS approves the Form I-924 request to designate Century New York City Regional Center as a qualifying participant in the Immigrant Investor Program.

II. Regional Center Designation

USCIS approves the applicant's request to focus, promote economic growth, and offer capital investment opportunities in the following geographic area and industry categories:

A. Geographic Area

State	Counties/Cities
New York	Queens, New York, Bronx County, Richmond County, Westchester County, and Nassau County

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the geographic area referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

B. Industry Categories

Industry Category	NAICS code
Nonresidential Building Construction	2362
Furniture and Home Furnishing Merchant Wholesalers	4232
Hotel and Motel (including Casino)	72251
Restaurants and Other Eating Places	72251
Lessors of Nonresidential Buildings (Except Miniwarehouses)	53112
Architectural, Engineering and Related Services	5413
Insurance Carriers	5241
Accounting Tax Preparation, Bookkeeping Services	5412
Legal Services	5411
Monetary Authorities and Depository Credit Intermediation	5222
Other miscellaneous professional and technical services	5419

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the industry categories referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

III. Job Creation

USCIS approves the geographic area and industry categories noted above based on the economic impact analysis presented and reviewed in conjunction with the adjudication of this regional center proposal.

This hypothetical project does not have the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998), and therefore, USCIS's approval of the hypothetical job creation estimates presented in the Form I-924 will not be accorded deference and may not be relied upon by an individual investor when filing the Form I-526. The business plan and job creation estimates will receive a de novo review by USCIS when an individual investor files Form I-526. Once an actual project is adjudicated upon the filing of the initial Form I-526, USCIS will give deference to subsequent Forms I-526 when the critical assumptions remain materially unchanged from the initially-approved Form I-526.

When filing Form I-526, it will be the responsibility of the individual investor to submit a comprehensive, detailed and credible business plan, showing by a preponderance of the evidence that his or her investment in the new commercial enterprise will create not fewer than 10 full-time positions. If prior to filing a form I-829, the job creation estimated in the business plan submitted by the individual investor materially changes or will not be realized, then it will be the responsibility of the EB-5 investor to notify USCIS of an agreed upon methodology to allocate job creation among eligible investors.

IV. Guidelines for Filing Form I-526 Petitions

Each individual petition, in order to demonstrate that it is affiliated with the Century New York City Regional Center in conjunction with addressing all the requirements for an individual immigrant investor petition, shall also contain the following:

1. A copy of this regional center approval notice and designation letter including all subsequent amendment approval letters (if applicable).

2. An economic impact analysis which reflects a job creation methodology required at 8 CFR § 204.6 (j)(4)(iii) and shows how the capital investment by an individual immigrant investor will create not fewer than ten (10) indirect jobs for each immigrant investor.

3. A comprehensive, detailed and credible business plan for an actual project that contains the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998).

4. Legally executed organizational documents of the commercial enterprise.

Note: The project reviewed with this Form I-924 application is a hypothetical project. Organizational and transactional documents associated with the new commercial enterprise (NCE) submitted with this Form I-924 have not been reviewed to determine compliance with program requirements since these documents will receive de novo review in subsequent filings (e.g., an amended Form I-924 application with a Form I-526 exemplar or the first Form I-526 petition filed by an investor under the regional center project).

V. Designee's Responsibilities in the Operations of the Regional Center

As provided in 8 CFR § 204.6 (m)(6), to ensure that the regional center continues to meet the requirements of section 610(a) of the Appropriations Act, a regional center must provide USCIS with updated information to demonstrate the regional center is continuing to promote economic growth, improved regional productivity, job creation, and increased domestic capital investment in the approved geographic area. Such information must be submitted to USCIS on an annual basis or as otherwise requested by USCIS. The applicant must monitor all investment activities under the sponsorship of the regional center and to maintain records in order to provide the information required on the Form I-924A Supplement to Form I-924. Form I-924A, Supplement to Form I-924 Application is available in the "Forms" section on the USCIS website at www.uscis.gov.

Regional centers that remain designated for participation in the Immigrant Investor Program as of September 30th of a calendar year are required to file Form I-924A Supplement in that year. The Form I-924A Supplement with the required supporting documentation must be filed on or before December 29th of the same calendar year.

The failure to timely file a Form I-924A Supplement for each fiscal year in which the regional center has been designated for participation in the Immigrant Investor Program will result in the issuance of an intent to terminate the participation of the regional center in the Immigrant Investor Program, which may ultimately result in the termination of the designation of the regional center.

The regional center designation is non-transferable.

VI. Legal Notice

This approval and designation of a Regional Center under the Immigrant Investor Program does not constitute or imply an endorsement or recommendation by USCIS, the United States Government or any instrumentality thereof, of the investment opportunities, projects or other business activities related to or undertaken by such Regional Center. Except as expressly set forth in this approval and designation, USCIS has not reviewed any information provided in connection with or otherwise related to the Regional Center for compliance with relevant securities laws or any other laws unrelated to eligibility for designation as a Regional Center. Accordingly USCIS makes no determination or representation whatsoever regarding the compliance of either the Regional Center or associated New Commercial Enterprises with such laws.

Each Regional Center designated by USCIS must monitor and oversee all investment offerings and activities associated with, through or under the sponsorship of the Regional Center. The failure of an associated New Commercial Enterprise to comply with all laws and regulations related to such investment offerings and activities may result in the issuance by USCIS of a notice of intent to terminate the Regional Center designation.

If the applicant has any questions concerning the regional center designation under the Immigrant Investor Program, please contact the USCIS by email at USCIS.ImmigrantInvestorProgram@uscis.dhs.gov.

Sincerely,

Nicholas Colucci

Application:	Form I-924, Application for Regional Center under the Immigrant Investor Pilot Program
Applicant(s):	Century New York City Regional Center
Re:	Initial Regional Center Designation Century New York City Regional Center RCW1420251818/ID1420251818

This notice is in reference to the Form I-924, Application for Regional Center Under the Immigrant Investor Pilot Program that was filed by the applicant with the U.S. Citizenship and Immigration Services ("USCIS") on July 21, 2014. The Form I-924 application was filed to request approval of initial regional center designation under the Immigrant Investor Program. The Immigrant Investor Program was established under § 610 of the Department of Commerce, Justice and State, the Judiciary, and Related Agencies Appropriations Act of 1993 (Pub. L. 102-395, Oct. 6, 1992, 106 Stat. 1874).

I. Executive Summary of Adjudication

Effective the date of this notice, USCIS approves the Form I-924 request to designate Century New York City Regional Center as a qualifying participant in the Immigrant Investor Program.

II. Regional Center Designation

USCIS approves the applicant's request to focus, promote economic growth, and offer capital investment opportunities in the following geographic area and industry categories:

A. Geographic Area

State	Counties/Cities
New York	Queens, New York, Bronx County, Richmond County, Westchester County, and Nassau County

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the geographic area referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

B. Industry Categories

Industry Category	NAICS code
Nonresidential Building Construction	2362
Furniture and Home Furnishing Merchant Wholesalers	4232
Hotel and Motel (including Casino)	72251
Restaurants and Other Eating Places	72251
Lessors of Nonresidential Buildings (Except Miniwarehouses)	53112
Architectural, Engineering and Related Services	5413
Insurance Carriers	5241
Accounting Tax Preparation, Bookkeeping Services	5412
Legal Services	5411
Monetary Authorities and Depository Credit Intermediation	5222
Other miscellaneous professional and technical services	5419

Note: Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment request is not required if investment opportunities arise outside the industry categories referenced above. USCIS will evaluate eligibility upon the filing of an initial Form I-526 related to that new investment opportunity.

III. Job Creation

USCIS approves the geographic area and industry categories noted above based on the economic impact analysis presented and reviewed in conjunction with the adjudication of this regional center proposal.

This hypothetical project does not have the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998), and therefore, USCIS's approval of the hypothetical job creation estimates presented in the Form I-924 will not be accorded deference and may not be relied upon by an individual investor when filing the Form I-526. The business plan and job creation estimates will receive a de novo review by USCIS when an individual investor files Form I-526. Once an actual project is adjudicated upon the filing of the initial Form I-526, USCIS will give deference to subsequent Forms I-526 when the critical assumptions remain materially unchanged from the initially-approved Form I-526.

When filing Form I-526, it will be the responsibility of the individual investor to submit a comprehensive, detailed and credible business plan, showing by a preponderance of the evidence that his or her investment in the new commercial enterprise will create not fewer than 10 full-time positions. If prior to filing a form I-829, the job creation estimated in the business plan submitted by the individual investor materially changes or will not be realized, then it will be the responsibility of the EB-5 investor to notify USCIS of an agreed upon methodology to allocate job creation among eligible investors.

IV. Guidelines for Filing Form I-526 Petitions

Each individual petition, in order to demonstrate that it is affiliated with the Century New York City Regional Center in conjunction with addressing all the requirements for an individual immigrant investor petition, shall also contain the following:

1. A copy of this regional center approval notice and designation letter including all subsequent amendment approval letters (if applicable).

2. An economic impact analysis which reflects a job creation methodology required at 8 CFR § 204.6 (j)(4)(iii) and shows how the capital investment by an individual immigrant investor will create not fewer than ten (10) indirect jobs for each immigrant investor.

3. A comprehensive, detailed and credible business plan for an actual project that contains the factual details necessary to be in compliance with the requirements described in Matter of Ho, 22 I&N Dec. 206 (Assoc. Comm'r 1998).

4. Legally executed organizational documents of the commercial enterprise.

Note: The project reviewed with this Form I-924 application is a hypothetical project. Organizational and transactional documents associated with the new commercial enterprise (NCE) submitted with this Form I-924 have not been reviewed to determine compliance with program requirements since these documents will receive de novo review in subsequent filings (e.g., an amended Form I-924 application with a Form I-526 exemplar or the first Form I-526 petition filed by an investor under the regional center project).

V. Designee's Responsibilities in the Operations of the Regional Center

As provided in 8 CFR § 204.6 (m)(6), to ensure that the regional center continues to meet the requirements of section 610(a) of the Appropriations Act, a regional center must provide USCIS with updated information to demonstrate the regional center is continuing to promote economic growth, improved regional productivity, job creation, and increased domestic capital investment in the approved geographic area. Such information must be submitted to USCIS on an annual basis or as otherwise requested by USCIS. The applicant must monitor all investment activities under the sponsorship of the regional center and to maintain records in order to provide the information required on the Form I-924A Supplement to Form I-924. Form I-924A, Supplement to Form I-924 Application is available in the "Forms" section on the USCIS website at www.uscis.gov.

Regional centers that remain designated for participation in the Immigrant Investor Program as of September 30th of a calendar year are required to file Form I-924A Supplement in that year. The Form I-924A Supplement with the required supporting documentation must be filed on or before December 29th of the same calendar year.

The failure to timely file a Form I-924A Supplement for each fiscal year in which the regional center has been designated for participation in the Immigrant Investor Program will result in the issuance of an intent to terminate the participation of the regional center in the Immigrant Investor Program, which may ultimately result in the termination of the designation of the regional center.

The regional center designation is non-transferable.

VI. Legal Notice

This approval and designation of a Regional Center under the Immigrant Investor Program does not constitute or imply an endorsement or recommendation by USCIS, the United States Government or any instrumentality thereof, of the investment opportunities, projects or other business activities related to or undertaken by such Regional Center. Except as expressly set forth in this approval and designation, USCIS has not reviewed any information provided in connection with or otherwise related to the Regional Center for compliance with relevant securities laws or any other laws unrelated to eligibility for designation as a Regional Center. Accordingly USCIS makes no determination or representation whatsoever regarding the compliance of either the Regional Center or associated New Commercial Enterprises with such laws.

Each Regional Center designated by USCIS must monitor and oversee all investment offerings and activities associated with, through or under the sponsorship of the Regional Center. The failure of an associated New Commercial Enterprise to comply with all laws and regulations related to such investment offerings and activities may result in the issuance by USCIS of a notice of intent to terminate the Regional Center designation.

If the applicant has any questions concerning the regional center designation under the Immigrant Investor Program, please contact the USCIS by email at USCIS.ImmigrantInvestorProgram@uscis.dhs.gov.

Sincerely,

Nicholas Colucci
Chief, Immigrant Investor Program

ARTICLES OF ORGANIZATION
OF
88TH AVE EB5 CAPITAL, LLC

Under Section 203 of the Limited Liability Company Law

THE UNDERSIGNED, being a natural person of at least eighteen (18) years of age, and acting as the organizer of the limited liability company hereby being formed under Section 203 of the Limited Liability Company Law of the State of New York certifies that:

FIRST: The name of the limited liability company is:

88TH AVE EB5 CAPITAL, LLC

SECOND: To engage in any lawful act or activity within the purposes for which limited liability companies may be organized pursuant to Limited Liability Company Law provided that the limited liability company is not formed to engage in any act or activity requiring the consent or approval of any state official, department, board, agency, or other body without such consent or approval first being obtained.

THIRD: The county, within this state, in which the office of the limited liability company is to be located is QUEENS.

FOURTH: The Secretary of State is designated as agent of the limited liability company upon whom process against it may be served. The address within or without this state to which the Secretary of State shall mail a copy of any process against the limited liability company served upon him or her is:

THE LIMITED LIABILITY COMPANY
35-06 LEAVITT ST SUITE CF-A
FLUSHING, NY 11354

FIFTH: The limited liability company is to be managed by: ONE OR MORE MEMBERS.

SIXTH: The limited liability company shall have a perpetual existence.

SEVENTH: The limited liability company shall defend, indemnify and hold harmless all members, managers, and former members and managers of the limited liability company against expenses (including attorney's fees, judgments, fines, and amounts paid in settlement) incurred in connection with any claims, causes of action, demands, damages, liabilities of the limited liability company, and any pending or threatened action, suit, or proceeding. Such indemnification shall be made to the fullest extent permitted by the laws of the State of New York, provided that such acts or omissions which gives rise to the cause of action or proceedings occurred while the Member or Manager was in performance of his or her duties for the limited liability company and was not as a result of his or her fraud, gross negligence, willful misconduct or a wrongful taking. The indemnification provided herein shall inure to the benefit of successors, assigns, heirs, executors, and the administrators of any such person.

I certify that I have read the above statements, I am authorized to sign these Articles of Organization, that the above statements are true and correct to the best of my knowledge and belief and that my signature typed below constitutes my signature.

IF YOU WRITE, ATTACH THE
STUB AT THE END OF THIS NOTICE.

WE ASSIGNED YOU AN EMPLOYER IDENTIFICATION NUMBER

(b)(3) Thank you for applying for an Employer Identification Number (EIN). We assigned you EIN [redacted] This EIN will identify you, your business accounts, tax returns, and documents, even if you have no employees. Please keep this notice in your permanent records.

When filing tax documents, payments, and related correspondence, it is very important that you use your EIN and complete name and address exactly as shown above. Any variation may cause a delay in processing, result in incorrect information in your account, or even cause you to be assigned more than one EIN. If the information is not correct as shown above, please make the correction using the attached tear off stub and return it to us.

Based on the information received from you or your representative, you must file the following form(s) by the date(s) shown.

Form 1065 04/15/2016

If you have questions about the form(s) or the due date(s) shown, you can call us at the phone number or write to us at the address shown at the top of this notice. If you need help in determining your annual accounting period (tax year), see Publication 538, *Accounting Periods and Methods*.

We assigned you a tax classification based on information obtained from you or your representative. It is not a legal determination of your tax classification, and is not binding on the IRS. If you want a legal determination of your tax classification, you may request a private letter ruling from the IRS under the guidelines in Revenue Procedure 2004-1, 2004-1 I.R.B. 1 (or superseding Revenue Procedure for the year at issue). Note: Certain tax classification elections can be requested by filing Form 8832, *Entity Classification Election*. See Form 8832 and its instructions for additional information.

A limited liability company (LLC) may file Form 8832, *Entity Classification Election*, and elect to be classified as an association taxable as a corporation. If the LLC is eligible to be treated as a corporation that meets certain tests and it will be electing S corporation status, it must timely file Form 2553, *Election by a Small Business Corporation*. The LLC will be treated as a corporation as of the effective date of the S corporation election and does not need to file Form 8832.

To obtain tax forms and publications, including those referenced in this notice, visit our Web site at www.irs.gov. If you do not have access to the Internet, call 1-800-829-3676 (TTY/TDD 1-800-829-4059) or visit your local IRS office.

(IRS USE ONLY) 575B 08-07-2015 88TH B 9999999999 SS-4

IMPORTANT REMINDERS:

* Keep a copy of this notice in your permanent records. **This notice is issued only one time and the IRS will not be able to generate a duplicate copy for you.** You may give a copy of this document to anyone asking for proof of your EIN.

* Use this EIN and your name exactly as they appear at the top of this notice on all your federal tax forms.

* Refer to this EIN on your tax-related correspondence and documents.

If you have questions about your EIN, you can call us at the phone number or write to us at the address shown at the top of this notice. If you write, please tear off the stub at the bottom of this notice and send it along with your letter. If you do not need to write us, do not complete and return the stub.

Your name control associated with this EIN is 88TH. You will need to provide this information, along with your EIN, if you file your returns electronically.

Thank you for your cooperation.

IF YOU WRITE, ATTACH THE
STUB AT THE END OF THIS NOTICE.

WE ASSIGNED YOU AN EMPLOYER IDENTIFICATION NUMBER

(b)(3)

Thank you for applying for an Employer Identification Number (EIN). We assigned you EIN [redacted] This EIN will identify you, your business accounts, tax returns, and documents, even if you have no employees. Please keep this notice in your permanent records.

When filing tax documents, payments, and related correspondence, it is very important that you use your EIN and complete name and address exactly as shown above. Any variation may cause a delay in processing, result in incorrect information in your account, or even cause you to be assigned more than one EIN. If the information is not correct as shown above, please make the correction using the attached tear off stub and return it to us.

Based on the information received from you or your representative, you must file the following form(s) by the date(s) shown.

Form 1065 04/15/2015

If you have questions about the form(s) or the due date(s) shown, you can call us at the phone number or write to us at the address shown at the top of this notice. If you need help in determining your annual accounting period (tax year), see Publication 538, *Accounting Periods and Methods*.

We assigned you a tax classification based on information obtained from you or your representative. It is not a legal determination of your tax classification, and is not binding on the IRS. If you want a legal determination of your tax classification, you may request a private letter ruling from the IRS under the guidelines in Revenue Procedure 2004-1, 2004-1 I.R.B. 1 (or superseding Revenue Procedure for the year at issue). Note: Certain tax classification elections can be requested by filing Form 8832, *Entity Classification Election*. See Form 8832 and its instructions for additional information.

A limited liability company (LLC) may file Form 8832, *Entity Classification Election*, and elect to be classified as an association taxable as a corporation. If the LLC is eligible to be treated as a corporation that meets certain tests and it will be electing S corporation status, it must timely file Form 2553, *Election by a Small Business Corporation*. The LLC will be treated as a corporation as of the effective date of the S corporation election and does not need to file Form 8832.

To obtain tax forms and publications, including those referenced in this notice, visit our Web site at www.irs.gov. If you do not have access to the Internet, call 1-800-829-3676 (TTY/TDD 1-800-829-4059) or visit your local IRS office.

(IRS USE ONLY) 575B 05-02-2014 CENT B 9999999999 SS-4

IMPORTANT REMINDERS:

* Keep a copy of this notice in your permanent records. **This notice is issued only one time and the IRS will not be able to generate a duplicate copy for you.** You may give a copy of this document to anyone asking for proof of your EIN.

* Use this EIN and your name exactly as they appear at the top of this notice on all your federal tax forms.

* Refer to this EIN on your tax-related correspondence and documents.

If you have questions about your EIN, you can call us at the phone number or write to us at the address shown at the top of this notice. If you write, please tear off the stub at the bottom of this notice and send it along with your letter. If you do not need to write us, do not complete and return the stub.

Your name control associated with this EIN is CENT. You will need to provide this information, along with your EIN, if you file your returns electronically.

Thank you for your cooperation.

Keep this part for your records. CP 575 B (Rev. 7-2007)

Return this part with any correspondence so we may identify your account. Please correct any errors in your name or address.

ARTICLES OF ORGANIZATION
OF
CENTURY NEW YORK CITY REGIONAL CENTER, LLC

Under Section 203 of the Limited Liability Company Law

THE UNDERSIGNED, being a natural person of at least eighteen (18) years of age, and acting as the organizer of the limited liability company hereby being formed under Section 203 of the Limited Liability Company Law of the State of New York certifies that:

FIRST: The name of the limited liability company is:

CENTURY NEW YORK CITY REGIONAL CENTER, LLC

SECOND: To engage in any lawful act or activity within the purposes for which limited liability companies may be organized pursuant to Limited Liability Company Law provided that the limited liability company is not formed to engage in any act or activity requiring the consent or approval of any state official, department, board, agency, or other body without such consent or approval first being obtained.

THIRD: The county, within this state, in which the office of the limited liability company is to be located is QUEENS.

FOURTH: The Secretary of State is designated as agent of the limited liability company upon whom process against it may be served. The address within or without this state to which the Secretary of State shall mail a copy of any process against the limited liability company served upon him or her is:

THE LIMITED LIABILITY COMPANY
35-06 LEAVITT STREET
SUITE CF-A
FLUSHING, NY 11354

FIFTH: The limited liability company is to be managed by: ONE OR MORE MEMBERS.

SIXTH: The limited liability company shall defend, indemnify and hold harmless all members, managers, and former members and managers of the limited liability company against expenses (including attorney's fees, judgments, fines, and amounts paid in settlement) incurred in connection with any claims, causes of action, demands, damages, liabilities of the limited liability company, and any pending or threatened action, suit, or proceeding. Such indemnification shall be made to the fullest extent permitted by the laws of the State of New York, provided that such acts or omissions which gives rise to the cause of action or proceedings occurred while the Member or Manager was in performance of his or her duties for the limited liability company and was not as a result of his or her fraud, gross negligence, willful misconduct or a wrongful taking. The indemnification provided herein shall inure to the benefit of successors, assigns, heirs, executors, and the administrators of any such person.

I certify that I have read the above statements, I am authorized to sign these Articles of Organization, that the above statements are true and correct to the best of my knowledge and belief and that my signature typed below constitutes my signature.

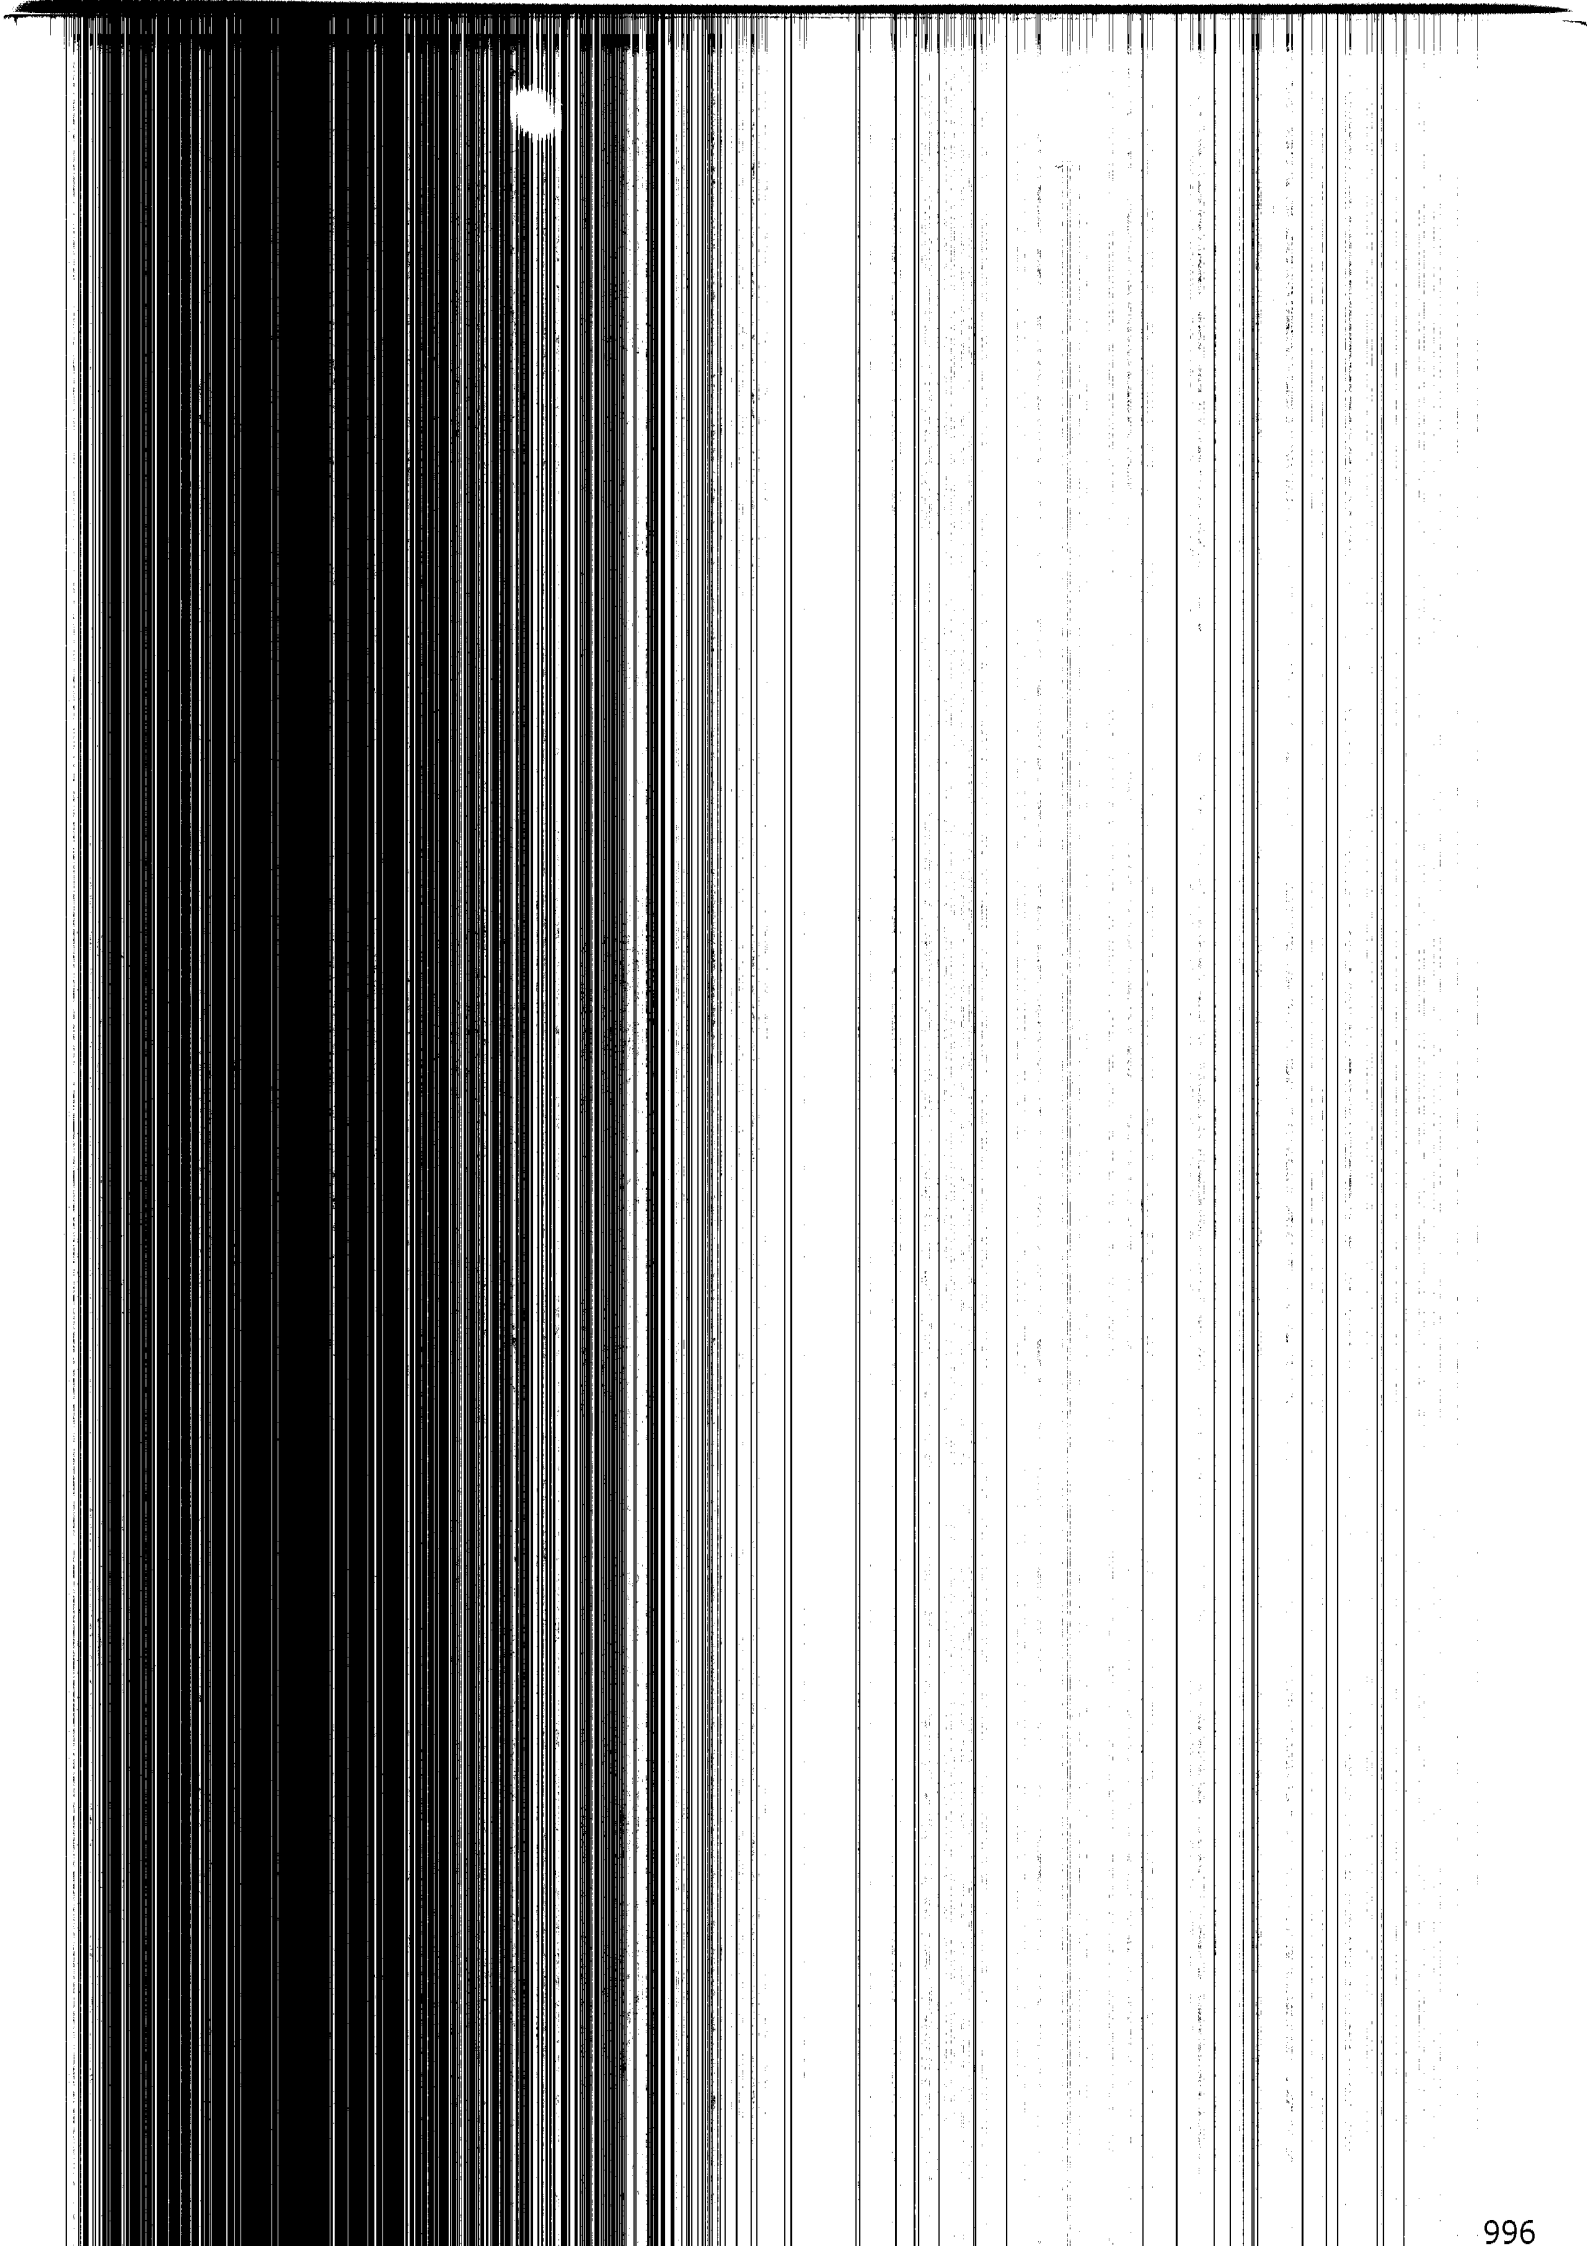
Documentation that Project is Located in a Targeted Economic Area (TEA)

- **TEA Confirmation Letter** from the New York State Department of Economic Development, dated August 20, 2025



NEW YORK STATE OF OPPORTUNITY. | New York State Department of Economic Development

August 20, 2015

Mr. Hassan Mokaddam
Paralegal
Mona Shah & Associates, PLLC
299 Broadway, Suite 1005
New York, New York 10007

Dear Mr. Mokaddam:

Attached is a letter from Mr. Joseph Nardone, of the New York State Department of Labor, identifying an area including census tract 238 in Queens County. Based on 2014 annual average labor force data, the Department of Labor has determined that this area meets the minimum threshold of unemployment to qualify as a Targeted Employment Area.

Based on the Labor Department's determination, I am able to certify that the area described in the attached letter qualifies as a Targeted Employment Area.

Census tract 238, in Queens County, contains the address, 148-31 88th Avenue, Jamaica, New York 11435.

Please feel free to contact me if you have any questions.

Sincerely,

Ms. Kay Alisen Wilkie
Economic Development Program Administrator

August 19, 2015

Kay Alison Wilkie
Director for International Policy
Division of Business Advocacy and Research
Empire State Development | NYS Department of Economic Development
625 Broadway
Albany, NY 12245

Dear Ms. Wilkie:

The 2014 average unemployment rate for census tract 238 in Queens County that contains the address, 148-31 88th Ave., Jamaica, NY 11435, as you requested is 7.6 percent. The current minimum threshold to qualify as a Targeted Employment Area is 9.3 percent.

For your consideration, we developed an alternative area composed of census tracts 212, 238, and 240 in Queens County with an annual average unemployment rate of 9.7 percent.

2010 census tract boundaries, 2013 American Community Survey five-year estimate labor force data, and 2014 annual average Local Area Unemployment Statistics (LAUS) data were used in this estimate. These data were ACS-shared as described by the U.S. Bureau of Labor Statistics in LAUS Technical Memorandum No. S-13-17.

Please feel free to contact me if you have any questions.

Sincerely,

Joseph Nardone

Circular 230 Disclosure

Pursuant to U.S. Internal Revenue Service Circular 230, the statements set forth herein with respect to Federal Tax Issues, as defined below, were not intended nor written to be used, and such statements cannot be used by any taxpayer for the purpose of avoiding any penalties that may be imposed on the taxpayer under the U.S. Internal Revenue Code. Such statements were written to support the marketing of the LLC or matters addressed herein. It is possible that additional issues may exist that would affect the federal tax treatment of an investment in the LLC and the statements contained herein do not consider or provide any conclusions with respect to such additional issues. Each taxpayer should seek advice based on the taxpayer's particular circumstances from an independent tax advisor. A "Federal Tax Issue" is a question concerning the federal tax treatment of any item of income, gain, loss, deduction or credit, the existence or absence of a taxable transfer of property, or the value of property for purposes of any tax imposed by or pursuant to the U.S. Internal Revenue Code.

MANAGEMENT BIOGRAPHIES AND INTERRELATIONS

The following paragraphs set forth the Officers of the Issuer and its Manager.

The amounts and percentage of Units beneficially owned are reported on the basis of regulations of the SEC governing the determination of beneficial ownership of securities. Under the rules of the SEC, a person is deemed to be a "beneficial owner" of a security if that person has or shares "voting power," which includes the power to vote or to direct the voting of such security, or "investment power," which includes the power to dispose of or to direct the disposition of such security. A person is also deemed to be a beneficial owner of any securities of which that person has a right to acquire beneficial ownership within 60 days. Under these rules, more than one person may be deemed a beneficial owner of the same securities and a person may be deemed a beneficial owner of securities as to which he has no economic interest.

MANAGEMENT BIOGRAPHIES

Mr. George Xu, CEO/Regional Center Principal

George Xu is the founder and a principal of the Century New York City Regional Center ("CNYCRC"). Mr. Xu is also the founder and the President of Century Development Group, a real estate development company based in New York City. With nearly 20 years of real estate holding and development experience, he has worked on over a million square feet of real estate developments; mixed-use developments including residential, hospitality, office, and retail. He has also worked in all phases of assembly, acquisition, finance, design, construction, marketing, and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters, and he provides marketing oversight and policy guidance for the Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and Computer Science and a Master of Science degree in Computer Science from Polytechnic University, New York.

Qili Li, MD, Regional Center Principal

Qili Li, MD, FACOG, is a principal of CNYCRC. Dr. Li has been in private practice for more than 15 years specializing in the field of Obstetrics and Gynecology in downtown Flushing, Queens County, New York City. Dr. Li attended the Sophie Davis School of Biomedical Education. She graduated Magna Cum Laude. After receiving her Medical Doctor degree from New York Medical College, Dr.Li completed her internship and residency training in Obstetrics/Gynecology at North Shore University Hospital at Manhasset, New York. Dr.Li is board certified in the specialty of Obstetrics/Gynecology. She is also a fellow of the American College of Obstetrics/Gyneoclogy (ACOG). In recent years, Dr. Li has expanded her interest/investment into real estate. She is currently involved in several real estate development projects ranging from high end condominiums to hotel construction.

David Pan, Vice President

David Pan is a vice president of CNYCRC. He has over 15 years of experience in fixed-income securities trading and risk management. Mr. Pan has worked in various roles at Credit Suisse, Citigroup, Deutsche Bank and the hedge fund industry. Formerly a Director at Credit Suisse in the Strategic Risk Management division covering Residential Mortgage Backed Security (RMBS) business, he was instrumental in developing models and methodologies in assessing the firm's risk exposure to the mortgage security market. Prior to his Wall Street career, Mr. Pan spent 10 years as a senior software engineer responsible for the development of the state-of-the-art fixed-income security trading and analytics software systems. He graduated with a Bachelor's degree in Computer Science from Queens College, City University of New York.

James Ho, Vice President

James Ho is a vice president of CNYCRC. Mr. Ho's role in the CNYCRC is to provide oversight of operations, maintain cohesion between the project's developer, general contractor, law and accounting firms, and to ensure overall compliance. Mr. Ho has extensive experience in computer programming, securities trading, and security related business. Currently, he is involved in real estate development of several projects in the New York City area. Mr. Ho graduated from Polytechnic University with a major in Electrical Engineering and Computer Science.

Robert Chen Vice President

Robert Chen is a vice president of CNYCRC, and oversees the overall operations of the Regional Center. He's also in charge of due diligence and evaluating potential projects and determining business feasibilities. Prior to joining CNYCRC, Mr. Chen had over 10 years' experience in a senior management position with FedEx. He has owned, managed, and operated companies in computer wholesale and repair business. Mr. Chen received his Bachelor of Science degree in Environmental Health Science from City University of New York.

Anthea Quan, Accounting Controller

Anthea Quan serves as the director of accounting controller for CNYCRC. She is responsible for the accounting, financial reporting, and audit functions. Ms. Quan also performs management of operating cash flow and financial analysis for development projects and investor distribution. She is passionate about accounting and has experience working with a variety of small businesses. Ms. Quan graduated from Yanbian University in China with a bachelor of mathematics. She is fluent in Chinese, English and Korean. She currently resides in New York City with her husband.

Tracy Law, Director of Project Management

Tracy Law is the director of project management of CNYCRC. Ms. Law is responsible for a full spectrum of the operation to ensure projects are done on time and within budget. Her constant communication with contractors and architects provides a strong network of relationships in the field. She is responsible for supervising and coordinating OS&E and FF&E. She is integral in bringing new hotels to full operation. Ms. Law graduated with a Bachelor of Science degree in Accounting from Queens College, City University of New York.

Lynn Wei, Director of Marketing and Business Development

Lynn Wei is CNYCRC's director of marketing and business development. Ms. Wei is responsible for a full spectrum of business development initiatives including creating and overseeing international marketing strategies for all CNYCRC project offerings. She is also involved in managing client relations. Ms. Wei is also a senior business development associate at the Century Development Group. In this capacity, she focuses on creating Request for Proposals and general marketing materials, as well as developing a customer analytical database, and implementing strategic marketing and communication initiatives. Ms. Wei graduated with a Master of Science degree in Economics from Brooklyn College, City University of New York and a Bachelor of Administrative Degree in Marketing from Shanghai Finance University.

(b)(4)

EB-5 IMMIGRATION DISCLOSURES AND RISK FACTORS

While the Company intends that this Offering and the provisions of the Company Agreement will enable the Members to satisfy the EB-5 requirements related to investment and job creation under USCIS law and regulations, there are no assurances that a Member's I-526 petition will be granted by USCIS or that a Member will be able to obtain an immigrant visa or unconditional lawful permanent resident status.

TEA Designation

USCIS regulations and interpretations hold that the targeted employment area (the "TEA") is not decided until the time that an investor's I-526 Petition is filed with USCIS. The unemployment statistics used to determine the TEA could change based on new data with respect to unemployment rates and, at the time of the investor's filing of his or her I-526 Petition, the area may no longer qualify as a TEA (*i.e.* an area that has experienced unemployment at a rate that is at least 150% of the national average). The New York State Department of Labor has designated the area where the Project is located as a TEA as of August 20, 2015. See TEA Designation Letter in Exhibit B.

TEA Deference

USCIS may not give deference in the future to state designation letters with respect to geographical areas or census tracts that were aggregated to form a TEA. As such, the Company cannot assure you that USCIS will continue to accept the designation of the area encompassing the Project as located as within a TEA.

Bridge Financing

The Project Company, may use some, if not all, of the Loan Amount to repay debt obtained from the Senior Lender and/or debt and equity obtained or contributed by the Sponsor to bridge construction and development expenses in anticipation of the proceeds of Loan, which is currently permitted by USCIS' May 30, 2013 Policy Memorandum. USCIS may change its position on the use of bridge financing and determine that the use of these proceeds to repay a portion of such bridge financing does not satisfy the job creation requirements of the EB-5 Program and/or USCIS may determine that there is no nexus between the proceeds and the creation of jobs, resulting in no credit given to investors for job creation necessary to support approval of the I-526 Petition(s) or the I-829 Petition(s) of all or a portion of the investors in the EB-5 Program.

Highly Regulated Program

The EB-5 Program was created in 1990 by the U.S. Congress, which has accorded broad regulatory powers to the Department of Homeland Security and, in particular, to USCIS in administering the EB-5 Program. While the Company will strive to coordinate with USCIS to achieve the investors' immigration goals, there can be no assurance that USCIS examiners will take a consistent position as to many of the issues arising under the EB-5 Program, and there can be no assurance that USCIS regulations, precedent case law and policies will remain the same in the future. Since the laws, regulations and USCIS interpretations of the EB-5 Program are subject to change at any time, there can be no assurance that the Loan to the Project will meet USCIS criteria.

Visa Unavailability; Retrogression.

The current law applies a country quota if the 10,000 visa cap is reached on an annual fiscal basis. The U.S. State Department's Visa Office in its July 2015 Visa Bulletin established a cut-off date for Chinese nationals of September 1, 2013. This means effective July 1, 2015, visa numbers will be unavailable for Chinese nationals having a priority date (I-526 Petition filing date) of September 1, 2013 or later. These investors will be required to wait until their priority date becomes "current" or is reached under the Visa Bulletin after I-526 petition approval to proceed to immigrant visa processing or adjustment of status. Members who are also Chinese nationals will be affected by visa unavailability as the July 2015 Visa Bulletin currently predicts that the EB-5 category will be subject to cut-off dates or visa unavailability "indefinitely." This may have a serious and adverse effect on EB-5 Program marketing in China, thereby potentially preventing the Company from raising the maximum amount of capital needed to complete the Project and from creating the necessary number of jobs estimated by the economic study. Visa unavailability could also result in Chinese nationals having to wait an extended period of time before they can complete the Visa Process and gain lawful permanent resident status. Visa unavailability may also limit the visa availability for the child of a Member if the child is under the age of 21 years at the time of the Member's filing of the I-526 Petition but over the age of 21 when a visa becomes available. Additionally, because a Member's investment in the Company must be "sustained" during the two years of their

conditional residence, the time before which a Member can have his or her investment capital returned may be extended by the length of the visa unavailability subject to USCIS's adjudication standards to emerge during visa unavailability. This may require Member capital investment to be maintained in the Company or the Project for an extended period of time until the approval by USCIS to remove the Member's conditions on his or her permanent residence, thereby delaying the Member's "exit strategy". In addition, to the extent the repayment of the Loan predates the expiration of the conditional residence period, as extended by the length of the visa unavailability period, the Member may not be able to demonstrate that his or her investment in the Company was "sustained" during the entirety of the conditional residence period, subject to USCIS's adjudication standards to emerge during visa unavailability. USCIS has not issued any guidance regarding the impact of visa unavailability or retrogression on I-829 Petition adjudication. While legislation has previously been proposed to eliminate the per country quota to expand the number of visas available to Chinese nationals, there are no assurances that such legislation may ultimately become law.

Delay in Obtaining Conditional Lawful Permanent Resident Status

USCIS processing times are fluid; the processing times found on USCIS website are not always accurate. USCIS may issue a Request for Evidence ("RFE") or a Notice of Intent to Deny ("NOID") during the adjudication of the investor's I-526 Petition. The RFE or NOID can result in extensive delays in the adjudication of an individual's I-526 Petition. Likewise, USCIS may delay adjudications associated with a securities offering, such as this Offering, to consider policy issues related to the offering which may result in extensive delays in adjudication. USCIS delays could also result in long lapses of time between admitting investors into the Company as members which, in turn, could delay job creation, impacting an investor's ability to have his or her I-829 Petition approved.

USCIS Action to Terminate the Regional Center's Designation

USCIS may *sua sponte* terminate the Regional Center's designation as a regional center under the EB-5 Program at any time and for any reason, including concerns regarding job creating activities, economic development activities for which it was designated, or concerns over the immigration, securities or corporate formation documents submitted to USCIS at the time of the Regional Center's initial application to be designated as a regional center or at the time of any subsequent amendment filings.

General Immigration Risks

The process of obtaining conditional resident status and permanent resident status involves many factors and circumstances that are not within the Company's control. These include, among others, the investor's past history, history of alcohol and drug use, criminal history, past membership or association with certain political, social or religious groups, immigration visa backlogs, potential changes in immigration laws and regulations (including laws and regulations specific to the EB-5 Program), and quotas established by the U.S. government limiting the number of immigrant visas available to qualified individuals seeking permanent resident status under the EB-5 Program. Although the Company has been structured with the objective of providing the Members with eligibility for conditional and permanent resident status under the EB-5 Program, no assurance can be given that a Member will obtain approval of his or her particular immigrant application. Purchase of Interests does not guarantee temporary, conditional or permanent residence status in the U.S. Furthermore, no assurances or advice can be given that conditional resident status, if granted, will be converted to permanent resident status.

Job Creation and Retention Requirements

Under the EB-5 Program, the Company, by virtue of its Loan to the Borrower, must create 10 direct, indirect or induced full-time U.S. jobs per immigrant investor during a specified two year period in order for each such immigrant investor to have the conditions removed from that investor's conditional permanent resident status. For example, if the Company raises the anticipated offering amount of $12 million from 24 Investors seeking immigration benefits, the Company will be required to create at least 240 direct, indirect and/or induced jobs. The Company will rely on the Project, which may or may not hire or create the required number of jobs even if all of the Interests are sold. Additionally, job creation from the Project is estimated using the Regional Input/Output Model ("RIMS II"). Job creation based on RIMS II is evaluated based on economic activity of the Project such as construction expenditures and operating revenues. If the Project generates less initial economic activity than estimated for use in the RIMS II model, USCIS may conclude that the Project creates fewer jobs than initially anticipated. If an investor receives conditional lawful permanent resident status, but later does not receive lawful permanent resident status, the Company has no obligation to refund any of the investor's Capital Contribution to the Company or otherwise redeem the investor's Interests.

Allocation of Jobs

Jobs will be allocated to the Members for EB-5 purposes on a first-in, first-out basis tied to the date of the commencement of each Member's period of conditional residence in the U.S. (either the date of admission from outside the U.S. using the immigrant visa, or else the date of approval of adjustment of status for Member's located within the U.S.). This allocation process will continue until all jobs have been allocated to the Members and there is no guaranty that one or more Members will receive legal permanent residency in the United States as a result of his or her investment in the Company.

Background Check

According to USCIS policy, no application for lawful permanent residence will be approved until a definitive FBI fingerprint check and Interagency Border Inspection Services (IBIS) check are completed and resolved favorably. An EB-5 immigrant investor's background (or that of an immediate family member) may not meet USCIS or Department of State criteria for conditional or permanent residency in the U.S. For example, among other criteria, the following may be grounds for denial of immigration benefits for the immigrant, and/or other members of the immigrant's family: having a communicable disease or other dangerous contagious disease; having been at any time involved with, trafficking in, or taking, illegal drugs; having been convicted of certain crimes; having committed fraud or misrepresentation to a U.S. Government official; or having violated U.S. immigration laws in the past. If an investor receives I-526 Petition approval but later does not receive conditional or unconditional lawful permanent resident status, the Company has no obligation to refund any of the investor's Capital Contribution or Administrative Fee or otherwise redeem the investor's Interests. Other security checks could be required by USCIS, Department of State or other governmental agencies which could delay adjudication of the I-526 Petition or the subsequent application for conditional lawful permanent resident status.

Source of Funds

Immigrant investors must demonstrate to USCIS that the funds they intend to invest (or have invested) in the Company were obtained through lawful means. Further, each immigrant investor must document, to the satisfaction of USCIS, the source of these funds (e.g., whether the funds were income from a salary, sale of real estate, sale of stock, gifted, a loan, divorce settlement, etc.). The investor also must, to the best of his or her ability, trace the funds from the time they were obtained through the time they were invested in the Company. USCIS will retain ultimate authority in deciding whether the investor has met his or her burden of proof with respect to such tracing of funds and demonstrating the lawful source of such funds. Prior to subscribing for Interests, the investor must be prepared to present all documents relevant to lawful source of funds and tracing of these funds to the Manager. If the investor is unable or unwilling to provide timely to the Manager and/or USCIS evidence, satisfactory to the Manager, regarding the source and lawful nature of that Member's Capital Contribution, then, according to the terms of the Company Agreement, the Manager may expel the investor as a Member of the Company.

U.S. Immigration Residency Requirements

Immigrant investors who obtain conditional or lawful permanent resident status under the EB-5 Program must intend to make the U.S. their primary residence. Lawful permanent residents who maintain their primary residence outside the U.S. risk revocation of their U.S. residence status. Each prospective immigrant investor should consult a competent immigration attorney to review the likelihood that the investor's immigration objectives will be achieved. The Company must satisfy the job creation and retention requirements of the EB-5 Program at the time when the investors file for the removal of the condition of their permanent residency. If an investor fails to obtain or later loses his or her lawful permanent resident status because of a failure to comply with the residency requirements of the EB-5 Program, the Company has no obligation to refund any portion of that investor's investment in the Interests or otherwise redeem the investor's Interests regardless of whether the investor requests a refund of his or her investment.

Material Change in Business Plan

The Company's or the Project Company's business operations may not proceed according to the business plan submitted with the investor's original I-526 Petition because of economic conditions, weather conditions, labor conditions, competitive conditions or other factors. A material change from the Project Company's original business plan after I-526 submission and prior to obtaining conditional permanent residence could result in denial or even revocation of the initial I-526 petition and the need to file a new I-526 Petition, resulting in a delay in the immigration process as well as the possibility of qualifying children reaching the age of 21 to become disqualified from obtaining immigration benefits along with the principal petitioner. A material change from the Project Company's original business plan between the time of I-526 Petition approval and I-829 Petition approval may lead to the denial of an investor's I-829 Petition. USCIS' May 30, 2013 Policy Memorandum states that USCIS will review I-829 Petitions for compliance with the regulations even if there is

a material change in the busines[illegible]. However, it is not known whether USCIS w[illegible]llow this new policy or how it will apply this policy, and USCIS ha[illegible]t defined a "material change." If the I-829 Pet[illegible]is denied on this basis, USCIS can place the investor into removal proceedings where the investor's conditional lawful permanent resident status may be terminated, making the investor deportable.

Incorrect Job Creation Analysis

The estimated number of jobs to be created by the Project is based on the findings of an economic impact analysis (the "Analysis") prepared by Evans, Carroll & Associates, Inc. The estimates are based on assumptions and projections that may be rejected by USCIS as incorrect or insufficient. If the projected number of jobs to be created is incorrect, the fulfillment of the conditions of the EB-5 Program could be placed in jeopardy. Further, this could result in the denial of the removal of conditions on your residency in the U.S. (*i.e.*, I-829 petition denial). The Company will provide a copy of the Analysis to all investors on request, and in connection with the filing of their I-526 petitions with USCIS.

Visa Eligibility

Even after approval of the I-526 Petition, there is no guarantee that the Member, his or her spouse or any of their minor, unmarried children will be granted lawful permanent residence. The grant of such immigration status is dependent, among other things, upon the personal and financial history of each applicant. Any one of several government agencies may determine in its discretion, sometimes without the possibility of appeal, that an applicant for lawful permanent residence is excludable from the United States. In limited instances, a waiver of a ground of exclusion may be available under the law, but adjudications of waiver applications are themselves made in the unreviewable discretion of the United States.

Statutory Presumption of Inadmissibility

Persons applying for lawful permanent residence must overcome the statutory presumption of inadmissibility. Applicants must demonstrate, affirmatively, that they are admissible to the United States. There are many grounds of inadmissibility that the government may cite as a basis to deny admission for lawful permanent residence. Various statutes, including for example Sections 212, 237 & 241 of the Immigration Act, the Antiterrorism & Effective Death Penalty Act of 1996 and the Illegal Immigration Reform & Immigrant Responsibility Act of 1996 set forth grounds of inadmissibility, which may prevent an otherwise eligible applicant from receiving an immigrant visa, entering the United States or adjusting to lawful permanent residence.

Examples of aliens precluded from entering the United States include:

(a) persons who are determined to have a communicable disease of public health significance;

(b) persons who are found to have, or have had, a physical or mental disorder and behavior associated with the disorder which poses or may pose, a threat to the property, safety, or welfare of the alien or of others, or have had a physical or mental disorder and a history of behavior associated with the disorder, which behavior has posed a threat to the property, safety, or welfare of the immigrant alien or others, and which behavior is likely to recur or to lead to other harmful behavior;

(c) persons who have been convicted of a crime involving moral turpitude (other than a purely political offense), or persons who admit having committed the essential elements of such a crime;

(d) persons who have been convicted of any law or regulation relating to a controlled substance, admitted to having committed or admits committing acts which constitute the essential elements of same;

(e) persons who are convicted of multiple crimes (other than purely political offenses) regardless of whether the conviction was in a single trial or whether the offenses arose from a single scheme of misconduct and regardless of whether such offenses involved moral turpitude;

(f) persons who are known, or for whom there is reason to believe, are, or have been, traffickers in controlled substances;

(g) persons engaged in prostitution or commercialized vice;

(h) persons who have committed in the United States certain serious criminal offenses, regardless of whether such offense was not prosecuted as a result of diplomatic immunity;

(i) persons excludable on grounds related to national security, related grounds, or terrorist activities;

(j) persons determined to be excludable by the secretary of state of the United States on grounds related to foreign policy;

(k) persons who are or have been a member of a totalitarian party, or persons who have participated in Nazi persecutions or genocide;

(l) persons who are likely to become a public charge at any time after entry;

(m) persons who were previously deported or excluded and deported from the United States;

(n) persons who by fraud or willfully misrepresenting a material fact, seek to procure (or have procured) a visa, other documentation or entry into the United States or other benefit under the Act;

(o) persons who have at any time assisted or aided any other alien to enter or try to enter the United States in violation of law;

(p) certain aliens who have departed the United States to avoid or evade U.S. Military service or training;

(q) persons who are practicing polygamists; and

(r) persons who were unlawfully present in the United States for continuous or cumulative periods in excess of 180 days.

Conditional Residency

Lawful permanent residence status granted initially to the Member, his or her spouse and their qualifying children is "conditional." The Member, his or her spouse and their qualifying children must seek removal of conditions before the second anniversary of lawful permanent admission to the United States. There is no assurance that USCIS will grant the removal of conditions as to the Member, his or her spouse and their qualifying children. If the Member fails to have conditions removed, the Member, his or her spouse and their qualifying children will be required to leave the United States and may be placed in removal proceedings. Even if the Member succeeds in having conditions removed, the Member, his or her spouse and each of their qualifying children, separately, must have conditions removed. Failure to have conditions removed as to any of these members of the Member's family may require some members to depart from the United States and such family members may be placed in removal proceedings. Examples of possible reasons for denial of the Member's petition to remove conditions from permanent residence include:

- failure to sustain the investment for the required two years, such as through return of the Member's capital before the time for removal of conditions on the Member's residence, even if 10 jobs were created;
- failure to maintain investment according to USCIS due to a repayment of the Loan to the Company even though such a repayment may not result in any return of the Member's capital;
- failure of the Project to use all of the Member's Capital Contribution in job creating activity, according to technical requirements of USCIS (some of which are not clearly articulated and which could change over time), even if 10 jobs were created;
- failure to show that the Member's investment has created 10 new jobs for U.S. workers that can be allocated to such Member (which may result from failure to meet the Project's economic milestones that were used as assumptions in projection of the direct, indirect and induced jobs that would be created by the Member's investment); and

- even if the required 10 /ere created, the Project's material departu .n the business plan presented to USCIS in obtaining appr .al of the Member's I-526 Petition.

Removal of Conditions

USCIS regulations governing lawful permanent residence for foreign investors do not state specifically the criteria which USCIS must apply to determine eligibility for the removal of conditions to lawful permanent resident status. U.S. courts have determined some standards to be followed by USCIS in some, but not all, circumstances. The Company may make certain management decisions in the absence of these specific eligibility criteria. The Company will seek as much information as possible from USCIS in an effort to assist Members in their attempts to qualify for the removal of conditions, where good business practices permit. Notwithstanding the foregoing, Members should become educated about the standards that will determine eligibility to achieve unconditional lawful permanent residence in the United States pursuant to this program which currently is in a state of evolution.

EB-5 Regional Center Pilot Program

In 1992, the U.S. Congress enacted the EB-5 Regional Center Program to stimulate interest in the EB-5 program. As a "pilot," the Regional Center Pilot Program is not yet permanent, and consequently requires periodic renewal by Congress. The Regional Center Pilot Program has been renewed several times by Congress and is currently due to expire or "sunset" on September 30, 2015. Congress is expected to renew this program prior to its expiration, or make the program permanent by removing its "pilot" designation. However, there is a risk that Congress may not renew, or not renew before the current expiration date. If the Regional Center Pilot Program is not renewed before expiration, the effect of the gap on pending immigration petitions is unknown. In the past, USCIS indicated that it would hold pending I-526 Petitions "in abeyance" for an indeterminate period of time until USCIS renewed the Regional Center Pilot Program. USCIS may or may not follow the same procedure. With respect to Immigrant Visa issuance, in the past the U.S. State Department announced that it would issue regional center-based EB-5 immigrant visas until close of business on the sunset date. The U.S. State Department may or may not follow the same procedure. Finally, with respect to admission to the U.S., in the past U.S Customs and Border Protection announced that it would admit EB-5 immigrant visa holders after the sunset date during the full validity period of the immigrant visa. U.S. Customs and Border Protection may or may not follow the same procedure.

It connection with any renewal of the Regional Center Pilot Program, Congress may impose new requirements or modify existing requirements. For example, Congress may change the TEA definition or raise the minimum capital investment amount. It is uncertain at this time whether Congress will impose any of these or any other new or changed requirement and when such new or changed requirement will be made effective. Any such requirement imposed in connection with the renewal of the Regional Center Pilot Program could adversely affect a Member's immigration process or benefit.

Change in Legislation or Policy

There may be change in U.S. laws or policy after the date of this Memorandum. The immigration laws and the corresponding rules, regulations and USCIS interpretations related to the EB-5 Program and the corresponding applications are in a constant state of flux, and there are no assurances that new laws and/or interpretations will result that will otherwise modify the disclosures and information set forth in this Memorandum.

IMMIGRATION AND NATIONALITY ACT § 212.

Admissible to the U.S.: Foreign persons applying for a U.S. Green Card must demonstrate that they are admissible to the U.S. Section 212 of the Immigration and Nationality Act sets forth various grounds of inadmissibility, which may prevent an otherwise eligible applicant from receiving a green card or entering the U.S. Foreign individuals who are ineligible to receive a Green Card or to be admitted to the U.S. include, but are not limited to, an individual who (1) is determined to have a communicable disease of public health significance, which shall include infection with the etiologic agent for acquired immune deficiency syndrome; (2) is determined to have a physical or mental disorder and behavior associated with the disorder that may pose, or has posed, a threat to the property, safety, or welfare of the individual or others; (3) is determined to have had a physical or mental disorder and a history of behavior associated with the disorder, which behavior has posed a threat to the property, safety, or welfare of the individual or others, and which behavior is likely to recur or to lead to other harmful behavior; (4) is determined to be a drug abuser or addict; (5) has been convicted of committing, or who admits having committed, acts which constitute the essential elements of a crime involving moral turpitude (other than a purely political offense), or a violation of (or a conspiracy or attempt to violate) any law or regulation of a State, the United States, or a foreign country relating to a controlled substance; (6) has been convicted of 2 or more offenses (other than purely political offenses), regardless of whether the conviction was in a single trial or whether the offenses arose from a single scheme of misconduct and regardless of whether the offenses involved moral turpitude, for which the aggregate sentences to confinement were 5 years or more; (7) is or has been an illicit trafficker in any controlled substance or in any listed chemical (as defined in section 102 of the Controlled Substances Act (21 U.S.C. § 802), or is or has been a knowing aider, abettor, assister, conspirator, or colluder with others in the illicit trafficking in any such controlled or listed substance or chemical, or endeavored to do so; (8) is the spouse, son, or daughter of an alien inadmissible under clause (7) and has, within the previous 5 years, obtained any financial or other benefit from the illicit activity of that alien, and knew or reasonably should have known that the financial or other benefit was the product of such illicit activity; (9) is coming to the U.S. solely, principally, or incidentally to engage in prostitution, or has engaged in prostitution within 10 years of the date of application for a visa, admission, or adjustment of status; (10) directly or indirectly procures or attempts to procure, or (within 10 years of the date of application for a visa, admission, or adjustment of status) procured or attempted to procure or to import, prostitutes or persons for the purpose of prostitution, or receives or (within such 10 year period) received, in whole or in part, the proceeds of prostitution; (11) is coming to the United States to engage in any other unlawful commercialized vice, whether or not related to prostitution; (12) has committed in the U.S. a serious criminal offense, regardless of whether such offense was prosecuted as a result of diplomatic immunity; (13) is excludable from the U.S. on grounds relating to national security, related grounds, or terrorist activities; (14) is excludable from the U.S. on grounds relating to foreign policy; (15) is or has been a member of or affiliated with the Communist or any other totalitarian party or who has participated in Nazi prosecutions or genocide; (16) is likely to become a public charge at any time after entry; (17) by fraud or willfully misrepresenting a material fact, seeks to procure (or has sought to procure or has procured) a visa, other documentation, or admission into the U.S.; (18) illegally entered into the U.S.; or (19) has at any time knowingly encouraged, induced, assisted, abetted, or aided any other alien to enter or to try to enter the U.S. in violation of law.

		4.00 ≤ 4.00 (LOT AREA: 4,274.84 SF)							

* (ZR 12-10) CELLAR FLOOR, CHASE & MECH. SPACE NOT COUNT AS ZONING FLOOR AREA.
** (ZR 36-231) WAIVER OF REQUIREMENTS FOR PARKING SPACE BELOW MINIMUM NUMBER OF 25 IN COMMERCIAL & COMMUNITY FACILITY.

ZONING ANALYSIS

TAX LOT SIZE= 4,274.84 SF

ZR 115-23 <HEIGHT AND SETBACK REGULATIONS>
ALL HEIGHTS SHALL BE MEASURED FROM THE BASE PLANE.
PROPOSED BASE PLANE = 64.76' (SEE DWG.A601)

ZR 33-121
<MAX. F.A.R. FOR BUILDING USED FOR BOTH COMMERCIAL AND COMMUNITY FACILITY USES = 4.00>
4,274.84 x 4.00 = 17,099 SF ALLOWED
= 17,099 SF PROPOSED
PROPOSED FAR = 4.00 < 4.00 -(COMPLIES)

<MAX. F.A.R. FOR COMMERCIAL= 2.00>
4,274.84 x 2.00 = 8,549.6 SF ALLOWED
= 3,420.0 SF PROPOSED
PROPOSED FAR = 0.80 < 2.00 -(COMPLIES)

<MAX. F.A.R. FOR COMMUNITY FACILITY= 4.00>
4,274.84 x 4.00 = 17,099 SF ALLOWED
= 13,679 SF PROPOSED
PROPOSED FAR = 3.20 < 4.00 -(COMPLIES)

ZR 24-11 <MAX. LOT COVERAGE FOR INTERIOR LOT = 65%>
4,274.84 x 65% = 2,778.6 SF ALLOWED
= 2,773/ 4,274.84
= 0.649 x 100% = 64.9% PROPOSED

PROPOSED LOT COVERAGE= 2,773 SF = 64.9% < 65% -(COMPLIES)

YARD REGULATION

ZR 35-52
NO SIDE YARD REQUIRED, IF PROVIDED, 8' MIN. -(COMPLIES)

33-261 <BEYOND 100' OF A STREET LINE>
(a) 20' REAR YARD FOR COMMERCIAL
REQUIRED WHEN REAR LOT LINE COINCIDES WITH A REAR LOT LINE OF AN ADJOINING ZONING LOT.
(c) NO REAR YARD REQUIRED WHEN REAR LOT LINE COINCIDES WITH A SIDE LOT LINE OF AN ADJOINING ZONING LOT.

ZR 23-541 & ZR 33-301 <WITHIN 100' OF CORNERS>
NO REAR YARD REQUIRED

ZR 35-51
NO FRONT YARD IS REQUIRED. -(COMPLIES)

ZR 23-633(a1)(b1) & ZR 35-24(c) <SETBACK REGULATION>
REQUIRED: 10' SETBACK ALONG A WIDE STREET;
40' MIN. BASE HEIGHT; 65' MAX. BASE HEIGHT;
80' MAX. BUILDING HEIGHT

PROPOSED: 67'-4" BUILDING HEIGHT. -(COMPLIES)
(SEE BUILDING SECTION, DWG A.601)

PARKING REQUIREMENT

ZR 36-21 <REQ. PARKINGS FOR COMM.>
RETAIL: 1 PER 400 SF
/400 = 8.55 PARKING SPACE REQUIRED

AMBULATORY HEALTH CARE FACILITY: 1 PER 400 SF
/400 = 10.39 PARKING SPACE REQUIRED

COMMUNITY CENTER: 1 PER 20 PERSONS
/2,000 = 4.76 PARKING SPACE REQUIRED

ZR 36-231 <WAIVER OF REQUIREMENTS FOR SPACES BELOW MINIMUM NUMBER IS 25 IN C2-3 DISTRICT>
TOTAL PARKING SPACE REQUIRED IN COMMERCIAL & COMMUNITY FACILITY:
8.55+10.39+4.76 = 23.7 < 25 -(COMPLIES)

TOTAL PARKING REQUIRED = 0
TOTAL PARKING PROPOSED = 0 -(COMPLIES)
(SEE PARKING REQUIREMENT TABLE)

ZR 36-62 <REQUIRED LOADING BERTH>
COMMERCIAL USES: FIRST 25,000 SF = NONE REQUIRE;

TOTAL LOADING BERTH REQUIRED = 0
TOTAL LOADING BERTH PROPOSED = 0 -(COMPLIES)

ZR 36-70 <BICYCLE PARKING>
ALL OTHER USE GROUP 3 & 4: 1 PER 10,000 SF
/ 10,000 = 1.37 PARKING SPACE REQUIRED

GENERAL RETAIL OR SERVICE USUS:
USE GROUP 6: 1 PER 10,000 SF
/ 10,000 = 0.72 PARKING SPACE REQUIRED

ZR 36-711(d) <WAIVER FOR BICYCLE PARKING SPACES>
1.37+0.72 = 2.09 < 3 -(COMPLIES)

TOTAL BICYCLE SPACE REQUIRED = 0
TOTAL BICYCLE SPACE PROPOSED = 0 -(COMPLIES)
(SEE PARKING REQUIREMENT TABLE)

STREET TREE PLANTING
ZR 33-03, ZR 26-41
REQUIRED ONE STREET TREE FOR EVERY 25' OF STREET FRONTAGE OF THE ZONING LOT.

AT HILLSIDE AVENUE, 45/25 = 1.8 TREES REQUIRED
PROPOSED 0 TREES ON-SITE, & 2 TREES OFF-SITE

MAX. FA OF BUILDING		84709 < 84,709.6 SF								
TOTAL FAR OF BUILDING		3.45 < 3.45 (LOT AREA: 24,553.53 SF)								

* (ZR 12-10) CELLAR FLOOR, CHASE & MECH. SPACE NOT COUNT AS ZONING FLOOR AREA.

ZONING ANALYSIS

LOT SIZE = 24,553.53 SF

ZR 115-23 <HEIGHT AND SETBACK REGULATIONS>
ALL HEIGHTS SHALL BE MEASURED FROM THE BASE PLANE.
PROPOSED BASE PLANE = 61.24' (SEE DWG. A601)

ZR 115-211(b) <MAX. F.A.R. FOR ENTIRE BUILDING= 3.45>
24,553.53 x 3.45 = 84,709.6 SF ALLOWED
= 84,709.0 SF PROPOSED
PROPOSED FAR = 3.45 < 3.45 -(COMPLIES)

ZR 115-211(b) <FOR RESIDENTIAL IN R7A= 3.45>
MAX. ALLOWED BASE F.A.R. IN R7A
24,553.53 x 3.45 = 84,709.6 SF ALLOWED
= 84,709.0 SF PROPOSED
PROPOSED FAR = 3.45 < 3.45 -(COMPLIES)

ZR 23-145 <MAX. LOT COVERAGE FOR INTERIOR LOT = 65%>
24,553.53 SF x 65% = 15,959.7 SF
= 13,324/ 24,553.53
= 0.543 x 100% = 54.3% PROPOSED
PROPOSED LOT COVERAGE = 13,324 SF = 54.3% < 65.0% -(COMPLIES)

ZR 35-40 <MAX. NUMBER OF DWELLING UNITS>
FACTOR = 680, ZR 23-22,
(LOT AREA)/(MAX. FAR - ACT. OF FAR - ACT. COMM. FAR/ FACTOR
24,553.53 x 3.45 /680 = 124 UNITS ALLOWED
= 109 UNITS PROPOSED -(COMPLIES)

YARD REGULATION
ZR 23-462(c) & ZR 35-52
NO SIDE YARD REQUIRED, IF PROVIDED. 8' MIN. -(COMPLIES)

23-471 & 33-261 <BEYOND 100' OF A STREET LINE>
A 30' REAR YARD FOR RESIDENTIAL & 20' REAR YARD FOR COMM.
IS REQUIRED WHEN REAR LOT LINE COINCIDES WITH A REAR
LOT LINE OF AN ADJOINING ZONING LOT.
NO REAR YARD REQUIRED WHEN REAR LOT LINE COINCIDES
WITH A SIDE LOT LINE OF AN ADJOINING ZONING LOT.

ZR 23-541 & ZR 33-301 <WITHIN 100' OF CORNERS>
NO REAR YARD REQUIRED

ZR 23-632 & ZR 35-51
NO FRONT YARD IS REQUIRED. -(COMPLIES)

ZR 23-633(a1)(b1) & ZR 35-24(c) <SETBACK REGULATION>
REQUIRED: 10' SETBACK ALONG A WIDE STREET;
15' SETBACK ALONG A NARROW STREET;
40' MIN. BASE HEIGHT; 65' MAX. BASE HEIGHT;
80' MAX. BUILDING HEIGHT

PROPOSED: AT 88TH AVENUE, 26'-6" SETBACK @ 60'-0" BASE HEIGHT;
AND 80'-0" BUILDING HEIGHT. -(COMPLIES)
(SEE BUILDING SECTION, DWG A.601)

PARKING REQUIREMENT

ZR 25-23 <REQ. PARKINGS FOR RESIDENTIAL>
TOTAL NUMBER OF DWELLING UNITS = 50%
109 x 50% = 54.5 PARKING SPACE REQUIRED

TOTAL PARKING REQUIRED = 55
TOTAL PARKING PROPOSED = 55 -(COMPLIES)
(REQUIRED 10% OF RESERVOIR SPACE)
55 x 10% = 5.5 REQUIRED, 6 PROVIDED -(COMPLIES)
(SEE PARKING REQUIREMENT TABLE)

ZR 25-81 & ZR 36-70 <BICYCLE PARKING>
FOR RESIDENTIAL USES
USE GROUP 2: 1 PER 2 DWELLING UNITS
109/ 2 = 54.5 PARKING SPACE REQUIRED -(COMPLIES)

TOTAL BICYCLE SPACE REQUIRED = 55
TOTAL BICYCLE SPACE PROPOSED = 55 -(COMPLIES)
(SEE PARKING REQUIREMENT TABLE)

ZR 36-73
15 SF OF AREA SHALL BE PROVIDED FOR EACH BICYCLE SPACE.
55 SPACE x 15 SQ. FT. = 825 SQ. FT. REQUIRED

STREET TREE PLANTING
ZR 33-03, ZR 26-41
REQUIRED ONE STREET TREE FOR EVERY 25' OF STREET
FRONTAGE OF THE ZONING LOT.

AT 88TH AVENUE, 140'/25 = 5.6 TREES REQUIRED
PROPOSED 4 TREES ON-SITE, & 2 TREES OFF-SITE

AT 150TH STREET, 10'/25 = 0.4 TREES REQUIRED
PROPOSED 0 TREES ON-SITE, & 0 TREES OFF-SITE

Jamaica, NY 11435

We certify to the best of our knowledge and belief:

THAT, the statements of fact contained in this report are true and correct;

THAT, the reported analyses, opinions and conclusions are limited only the reported assumptions and limiting conditions, and are our personal, unbiased professional analyses, opinions and conclusions;

THAT, the appraisal assignment was not based on a requested minimum valuation, a specific valuation, or the approval of a loan;

THAT, we have no present or prospective interest in the property that is the subject of this report, and we have no personal interest or bias with respect to the parties involved;

THAT, the compensation is not contingent on an action or event resulting from the analyses, opinions or conclusions in, or the use of, this report;

THAT, no other person(s) provided significant professional assistance to the person signing this report;

THAT, the analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Codes of Professional Ethics and the Standards of Professional Practice of the organizations of which the appraisers are affiliated.

THAT, the use of this report is subject to the requirements of the Appraisal Institute relating to its review by its duly authorized representatives;

THAT, we have made a personal inspection of the property on August 31, 2015.

THAT, we have performed no (or the specified) services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this assignment. In other words, update the certification; See Standards Rule 2-3, page U-29 of the USPAP 2013/14 Edition.

As of the date of this report, we have completed the requirements of the continuing education program of the State of New York for the professional license associated with her credentials.

(b)(4)

INCOME CAPITALIZATION INTRODUCTION

The income approach is based on the underlying assumption that the value of a property tends to be set by the amount of anticipated benefits to be derived from its ownership. This approach, therefore, is a procedure in the appraisal process whereby anticipated economic benefits to be derived from property ownership are converted into a present value estimate through a capitalization process. The process of estimating future or anticipated economic benefits from a real property investment requires the estimation of potential gross income, less vacancy and collection loss to which a deduction for all operating and fixed expenditures are allocated. This results in a net income estimate as applied to the particular property under valuation. A selection process for the most appropriate capitalization method is then employed.

A capitalization rate can be developed by a variety of methods and is dependent primarily on market derived findings with considerable emphasis placed on the type and class of property under review. Since this overall rate consists of a mortgage and equity position, these individual elements are carefully analyzed. In considering the rate of return necessary to attract debt proceeds or equity capital to invest in an income producing parcel of real estate, the following factors are analyzed:

. The return that is available on competing forms of investments, taking into consideration the comparative risks and time element of money.

. The character of the property with particular regard to the neighborhood, the type of tenancy, and the problems of management and liquidity.

. Typical financing terms that are available for similar property types based on competitive yields commensurate with various alternative investment vehicles.

. Potential property appreciation (residual value), equity buildup (debt reduction), and the accumulation of cash flows over a specified holding period.

In the instance of the subject, a market survey was performed to corroborate the reported rents and to establish market rent for the vacant and owner occupied units.

However, the highest and best use of these types of properties is to convert into individual condo units and sell for maximum value. Therefore, Income Approach is not considered an appropriate measure of value.

VALUATION PROBLEM AND METHOD OF VALUATION

The Income Approach and Sales Comparison Approach techniques have been considered in this analysis in order to reach a Market Value estimate for the subject property.

The Income Approach derives a value for the subject as an investment property. A survey of comparable rents in the area is conducted to establish market rents. After deducting the vacancy allowance and estimated operating expenses of the building from the estimated gross income, the net operating income is then reduced to an indication of value by a process known as capitalization. Properties with income potential such as the subject are sometimes bought or sold on the basis of their income. However, the highest and best use of these types of properties is to convert into individual condo units and sell for maximum value. Therefore, Income Approach is not considered an appropriate measure of value.

The Sales Comparison Approach involves researching sales of similar properties within the subject's influencing area and then analyzing these sales on a per-square-foot basis. Primarily caused by differences in economic profiles and location, building sales often display a wide range of square-foot values. Information on recent sales is gathered here and compared to the subject. Commercial buildings such as the subject are typically bought by owner-users after conversion to condo units. Therefore, this method is considered an appropriate measure of value.

Maximally Productive
Among the financially feasible uses, the use that produces the highest residual land value consistent with the warranted rate of return is considered maximally productive.

The above definitions apply specifically to the highest and best use of land. It is to be recognized that in cases where a site has existing improvements on it, the highest and best use may very well be determined to be different from the existing use. The existing use will continue, however, unless and until land value in its highest and best use exceeds the total value of the property in its existing use. In consideration of the four criteria that affect Highest and Best Use our conclusions are as follows.

Highest and Best Use of Land as Vacant:
The subject consists of a total of 28,829 square foot site, which appears physically well-suited for development. The property is located within a C2-3/R7A/DJ Commercial Overlap Residential Density District, which permits commercial and residential use. There is currently a nominal amount of retail and residential vacancies in the subject neighborhood.

Based upon this analysis, the highest and best use of the site, as if vacant, would be to erect a new commercial building and a new apartment building, which is in compliance with the existing zoning regulations.

Highest and Best Use as Improved
The second type of highest and best use, highest and best use of a property as improved, pertains to the existing use and alternative uses suitable for the subject property, under its present condition and occupancy. It attempts to answer four vital questions:

1. How should the property, as improved, be utilized?
2. Should the existing improvement be continued in use?
3. Should conversion to an alternative use be implemented?
4. Should demolition occur and an entirely new improvement be built?

When a site contains improvements, the highest and best use determination may vary from the existing use. The land may be suitable for a much higher and more intensive use than the prevailing use. The existing use will continue until land value, in its highest and best use, exceeds the value of the improvements in its existing use and the demolition cost associated with its removal. Both lots are parking lots without any improvement. The highest and best use of the site is to erect a new commercial building and a new apartment building while use as parking lots as interim use.

Conclusion:

The highest and best use of the site, as if **vacant**, would be **to erect a new commercial building and a new apartment building**, which is in compliance with the existing zoning regulations.

The highest and best use, **as improved,** will not applicable because the subject is a vacant parking lot as interim use.

HIGHEST AND BEST USE

The appraisers have analyzed the subject property for the purpose of determining the property's Highest and Best Use. Highest and Best Use is defined as:

"The reasonably probable and legal use of vacant land or an improved property, that is physically possible, appropriately supported, and financially feasible and that results in the highest value."[4]

"Appraisal theory holds that as long as the value of a property as improved is greater than the value of the site as unimproved, the highest and best use is use of the property as improved. Once the value of the vacant land exceeds the value of the improved property, the highest and best use becomes use of the land as though vacant."

Highest and Best Use of Land as though Vacant

"Among all reasonable, alternative uses, the use that yields the highest present land value, after payments are made for labor, capital, and coordination. The use of a property based on the assumption that the parcel of land is vacant or can be made vacant by demolishing any improvements."

Highest and Best Use of Property as Improved

"The use that should be made of a property as it exists. An existing property should be renovated or retained as is so long as it continues to contribute to the total market value of the property, or until the return from a new improvement would more than offset the cost of demolishing the existing building and constructing a new one."

Criteria in Highest and Best Use Analysis

The highest and best use of both land as though vacant and property as improved must meet four criteria. The highest and best use must be legally permissible, physically possible, financially feasible, and maximally productive.

Legally Permissible
Factors such as private restrictions, zoning, building codes, deed restrictions and environmental regulations need to be considered in both cases.

Physically Possible
The size, shape, terrain of the parcel of land, among other factors affects the uses for which the land can be developed.

Financially Feasible
After determining what is legally permissible and physically possible, a use that produces a net profit is considered feasible.

Roof	785	318	Mechanic Room
Total	98,652	84,709	109 Apartments & 55 Parking Spaces

General:
The subject currently is a development site with architectural plans. Many elements are unknown and estimated based on an average condition. The anticipated completion date is on or about September 1, 2017.

148-31/43 88th Avenue Site Description:

Location - The subject site is an irregular parcel located on the north side of 88th Avenue between 148th Street and 150th Street, 60± feet east of 150th Street, in the Jamaica neighborhood of Queens, City and State of New York. The site is identified on the Queens County Tax Maps as Block 9694, Lot 49. According the NYC Buildings Department, there are two open DOB violations and three open ECB violations existing at the time of inspection. The subject is located within census tract 0238.00. 88th Avenue is an east bound street with one lane and moderate traffic. 150th Street is a south bound street with one lane and moderate traffic. The street is improved with a macadam surface and concrete sidewalks with steel reinforced concrete curbs.

Size and Dimensions - The parcel comprises of one tax lot for a total area of 24,554± square feet. The site has a frontage of 140± feet on 88th Avenue, a frontage of 10± feet on 150th Street and depth of 190± feet.

Flood Hazard Information - According to the National Flood Insurance program's flood insurance rate index map, the subject property is not located in a special flood hazard area (panel not printed).

Community Panel No.	3604970233F
Index Map Last Revised	September 5, 2007
Zone	Zone X

148-44/48 Hillside Avenue Building Description:

According to architectural plans, the property will be improved with an 8-story apartment building with a gross building area (GBA) of 98,652± square feet above grade. We used the above grade GBA as the basis for all calculations throughout this report. The subject currently is a development site with architectural plans.

DESCRIPTION OF THE PROPERTY

148-44/48 Hillside Avenue Site Description:

Location - The subject site is a mostly rectangular parcel located on the south side of Hillside Avenue between 148th Street and 150th Street, 180± feet west of 150th Street, in the Jamaica neighborhood of Queens, City and State of New York. The site is identified on the Queens County Tax Maps as Block 9694, Lot 26. According the NYC Buildings Department, there is no open ECB or DOB violation existed at the time of inspection. The subject is located within census tract 0238.00. Hillside Avenue is a two-way street with two lanes in each direction and moderate traffic. The street is improved with a macadam surface and concrete sidewalks with steel reinforced concrete curbs.

Size and Dimensions - The parcel comprises of one tax lot for a total area of 4,275± square feet. The site has a frontage of 45± feet on Hillside Avenue and depth of 95± feet.

Flood Hazard Information - According to the National Flood Insurance program's flood insurance rate index map, the subject property is not located in a special flood hazard area (panel not printed).

Community Panel No.	3604970233F
Index Map Last Revised	September 5, 2007
Zone	Zone X

148-44/48 Hillside Avenue Building Description:

According to the architectural plan, the property will be improved with a 6-story commercial building with a gross building area (GBA) of 17,373± square feet above grade. We used the above grade GBA as the basis for all calculations throughout this report. The subject currently is a development site with architectural plans.

The GBA is calculated as follows:

	Gross GLA	Net GLA	Use
Cellar	4,274	2,610	3 Offices
First Floor	4,274	3,420	1 Retail Store
Second Floor	2,773	1,960	2 Community Facilities & a Terrace
Third Floor	2,773	1,960	2 Community Facilities
Fourth Floor	2,773	1,960	2 Community Facilities
Fifth Floor	2,773	1,960	2 Community Facilities
Sixth Floor	2,007	1,325	1 Community Facility
Total	17,373	12,585	1 Retail Store, 3 Offices & 9 Community Faciliti

General:

The subject currently is a development site with architectural plans. Many elements are unknown and estimated based on an average condition. The anticipated completion date is on or about September 1, 2017.

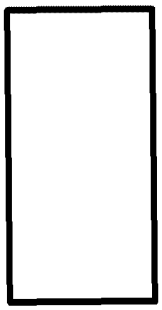
The 148-31/43 88th Avenue is only partially located in C2-3 and fully in R7A/DJ zoning. Zoning regulations are listed as follows for:

Land Size/Square Feet:
X Community Facility FAR
Allowable Bulk/Square Feet:

Land Size/Square Feet:
X Residential FAR
Allowable Bulk/Square Feet:



(b)(4)

According to the architectural drawing, 148-31/43 88th Avenue will contain a gross building area of 98,652± square feet above ground and including mechanic & chase area of 7,954 square feet. Mechanic and chase area doesn't count as zoning floor area. The maximum community facility building area, based on the as-of-right maximum FAR, is estimated at 98,210 square feet. The maximum residential building area, based on the as-of-right maximum FAR, is estimated at 98,216 square feet.

zoning districts. The district's controls pertaining to glazing, street walls, retail continuity, sidewalk widening, sidewalk cafes and other streetscape elements support an attractive and viable downtown area. The Inclusionary Housing designated areas Program provides incentives for affordable housing in 70 blocks in Downtown Jamaica and along nearby portions of Hillside Avenue.

The maximum floor area ratio for any zoning lot containing a residential use shall not exceed the base floor area ratio set forth in the table in this Section, except that such base floor area ratio may be increased to the maximum floor area ratio, set forth in Section 23-952, through the provision of affordable housing, pursuant to the provisions relating to Inclusionary Housing designated areas# in Section 23-90, inclusive.

District	Base #Floor Area Ratio#
R7A C4-4A	3.45
R7X C4-5X	3.75
R8 C6-2	5.4
R9 C6-3	6.0
R10 C6-4	9.0

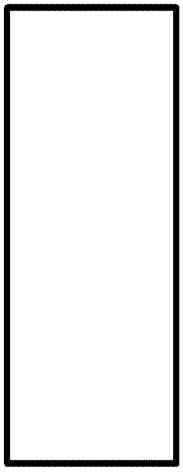
The maximum commercial FAR for C2-3 districts is 2.00. The maximum community facility FAR for C2-3/R7A districts is 4.00. The maximum residential FAR for C2-3/R7A districts is also 4.00.

The C2-3/R7A/DJ zoning regulations are listed as follows for 148-44/48 Hillside Avenue:

Land Size/Square Feet:
X Commercial FAR
Allowable Bulk/Square Feet:

Land Size/Square Feet:
X Community Facility FAR
Allowable Bulk/Square Feet:

Land Size/Square Feet:
X Residential FAR
Allowable Bulk/Square Feet:



(b)(4)

According to the architectural drawing, 148-44/48 Hillside Avenue will contain a gross building area of 17,373± square feet above ground and including mechanic & chase area of 344 square feet. Mechanic and chase area doesn't count as zoning floor area. The maximum commercial building area permitted is 8,550 square feet. The maximum community facility building area, based on the as-of-right maximum FAR, is estimated at 17,100 square feet. The maximum residential building area, based on the as-of-right maximum FAR, is estimated at 17,100 square feet.

ZONING

The subject property is in C2-3/R7A/DJ Commercial Overlap Residential District.

C1-1 through C1-5 and C2-1 through C2-5 districts are commercial overlays mapped within residence districts. Mapped along streets that serve local retail needs, they are found extensively throughout the city's lower- and medium-density areas and occasionally in higher-density districts.

Typical retail uses include neighborhood grocery stores, restaurants and beauty parlors. C2 districts permit a slightly wider range of uses, such as funeral homes and repair services. In mixed buildings, commercial uses are limited to one or two floors and must always be located below the residential use.

When commercial overlays are mapped in R1 through R5 districts, the maximum commercial floor area ratio (FAR) is 1.0; when mapped in R6 through R10 districts, the maximum commercial FAR is 2.0. Commercial buildings are subject to commercial bulk rules.

Overlay districts differ from other commercial districts in that residential bulk is governed by the residence district within which the overlay is mapped. All other commercial districts that permit residential use are assigned a specific residential district equivalent. Unless otherwise indicated on the zoning maps, the depth of overlay districts ranges from 100 to 200 feet.

Generally, the lower the numerical suffix, the more off-street parking is required. For example, in C1-1 districts, typically mapped in outlying areas of the city, a large food store would require one parking space for every 100 square feet of floor area, whereas no parking is required in C1-5 districts, which are well served by mass transit.

The contextual Quality Housing regulations, which are mandatory in R7A districts, typically produce high lot coverage, seven- and eight-story apartment buildings, blending with existing buildings in many established neighborhoods. R7A districts are mapped along Prospect Park South and Ocean Parkway in Brooklyn, Jackson Heights in Queens, and in Harlem and along the avenues in the East Village in Manhattan.

The floor area ratio (FAR) in R7A districts is 4.0. Above a base height of 40 to 65 feet, the building must set back to a depth of 10 feet on a wide street and 15 feet on a narrow street before rising to a maximum height of 80 feet. In order to preserve the traditional streetscape, the street wall of a new building can be no closer to the street line, than any building within 150 feet on the same block, but need not be farther than 15 feet. Buildings must have interior amenities for the residents pursuant to the Quality Housing Program. Off-street parking is not allowed in front of a building. Parking is required for 50% of all dwelling units.

The Special Downtown Jamaica District (DJ) builds upon Jamaica's strengths as a multimodal transportation hub to support the downtown business district, expand housing and economic opportunities along the area's major streets and transportation corridors, protect adjacent low-density neighborhoods and create affordable housing. The district's use regulations encourage mixed use development in denser transit-oriented locations convenient to shoppers and its bulk provisions allow taller buildings with higher floor area ratios at the transit hubs.

The transition rule regulates the change in building massing from taller building portions allowed along wide streets to a reduced scale for building portions that abut smaller homes in lower density residential

Conclusion

Jamaica is a well-established, mixed-use area in Queens. Overall, the economy is currently considered stable. The current trends of commercial and residential uses are in the rise. The recent tightening of the credit market has little affected the financing aspects of real estate in the subject local area. As of the effective date of the appraisal, real estate brokers and principals interviewed have indicated stronger demand. The effects of this situation as well as substantial number of job creation predicted to occur in the financial industry might strengthen demand in the immediate future. We are confident that the negative trends subsided and positive trends have resumed and the outlook for this neighborhood is very optimistic.

New York City Department of City Planning

Employment Opportunities:
Employment opportunities are good in the area. There are many commercial establishments located along Archer Avenue, Hillside Avenue, Jamaica Avenue, Liberty Avenue, Merrick Boulevard, Parsons Boulevard, Guy R. Brewer Boulevard, Sutphin Boulevard, and Union Turnpike.

The employment of the population in Jamaica is represented below. The highest percentage of the population (25.53%) is in Sales, office, administrative Support Occupations.

POPULATION BY OCCUPATION	
Management, business, finance	11.51%
Engineering, computers, science	3.68%
Community, social services	1.98%
Legal	1.15%
Education, library	5.10%
Arts, design, media, sports, entertainment	1.85%
Healthcare practitioners and technology	4.61%
Healthcare support	4.91%
Firefighters, law enforcement	3.47%
Food preparation, serving	5.29%
Building maintenance	6.81%
Personal care	5.24%
Sales, office, administrative support	23.53%
Farming, fishing, forestry	0.03%
Construction, extraction, maintenance/repair	8.93%
Production, transportation, material moving	11.92%

The district's population had a 1.0% increase from 223,602 in 2000 to 225,919 in 2010. In addition, the number of housing units had also increase 1.8% from 75,111 in 2000 to 76,426 in 2010.

The subject is situated in Census Tract 0238.00, as of 2010 this tract had a population of 5,101 persons, residing in 1,408 households.

Land Use:
Community District 12 is 4.0 square miles. According to the most recent (2014) Land Use figures, 60.8% of the total number of lots in the district were comprised of one and two-family residential use. Multi-family residential and mixed residential/commercial use comprised 9.2%. Commercial/office, industrial, transportation/utility, institutions, open space/recreation and parking facilities comprised 27.1%. Vacant land comprised 2.4% of the total number of lots.

Hospitals:
The nearby hospitals are Jamaica Hospital Medical Center is located within a mile from the subject property.

Schools / Parks / Religious Facilities:
Located within the district and adjacent districts are numerous public, private, and parochial schools. The Queens College and St. John's University are all located within a few miles from the subject property. School is considered adequate in the subject area. Several smaller parks and playgrounds are situated throughout the neighborhood. There are several churches and houses of worship for most denomination located throughout the area.

Police Precinct and Fire Engine Company:
The subject's area is served by the 103rd Precinct of the New York City Police Department, located at 168-02 P.O Edward Byrne Ave. The area is also served by a unit of the New York City Fire Department, located at 153-11 Hillside Avenue.

Housing:
The area surrounding the subject is comprised of some one and two family residences and interspersed by small to medium rise apartment building. One and two family homes range from $400,000 to over $1,000,000.

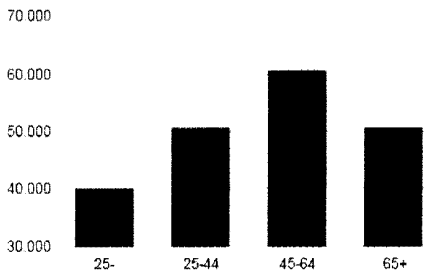
Zoning:
Zoning in the area comes under the New York Zoning Resolution: City of New York Department of City Planning. Zoning ordinances are strictly regulated –new construction; although new construction of both commercial and residential properties can be grand with certain beneficial tax exemption and abatements.

Medium Income:

Household Income and Average Income in Jamaica

top ▲

Median Income Under 25	$40,139
Median Income 25-44	$50,710
Median Income 45-64	$60,739
Median Income Over 65	$50,727



Average Household Income	$64,983
Median Household Income	$53,606
Percent Increase/Decrease in Income Since 2000	34%

Average Household Net Worth	$553,294
Median Home Sale Price	$325,125
Sales Tax Rate	8.875%
Average Household Total Expenditure	$51,677

The most prominent piece of development has been the creation of the Jamaica Station, which was fully completed in 2003. It includes Sutphin Boulevard – Archer Avenue – JFK Airport subway station (E J Z trains), the LIRR, and the Airtrain JFK to John F. Kennedy International Airport; the latter remains the central figure for ongoing economic progress. With the growing number of riders each day passing through this station, the city is providing some major changes to the surrounding blocks of this massive hub of transport.

Efforts have been made to follow the examples of major redevelopment occurring in Long Island City, Flushing, and Downtown Brooklyn. In 2005, the New York City Department of City Planning drafted a plan that would rezone 368 blocks of Jamaica in order to stimulate new development, relieve traffic congestion, and shift upscale amenities away from low-density residential neighborhoods. The plan includes up-zoning the immediate areas around Jamaica Station to accommodate passengers traveling through the area. To improve infrastructure the New York City Department of Parks & Recreation has agreed to create more greenery and open spaces to allow pedestrians to enjoy the scenery. At the same time, the city has reserved the right to protect the suburban/residential charm of neighboring areas. Several blocks will be down-zoned to keep up with the existing neighborhood character. On September 10, 2007 the City Council overwhelmingly approved the plan. Structures of up to 28 stories can be built around the main transit hub as well as residential buildings of up to 7 stories can be built on Hillside Avenue.

Several projects are in progress. The New York City Economic Development Corporation has issued an RFP for redevelopment of a 45,000 sq ft (4,200 m2) abandoned garage located at 168th St. and 93rd Ave. Plans are underway to convert this space into retail and parking spots. "TechnoMart Queens" was the first approved project. Located at Sutphin Blvd. and 94th Ave., Korean-based Prime Construction Corp., Greater Jamaica Development Corporation, and several other partners have signed a deal to create a 13-story mega-mall. 9 floors will be dedicated towards wholesale electronics, 3 floors to retail space for shopping, and it is estimated to contain parking for up to 800 cars. Groundbreaking on this site will initiate in late 2008 and is slated for completion by mid-2011. The GJDC has announced in their newsletter that another site adjacent to the mall will be converted into a hotel for Airtrain passengers. Official groundbreaking information has not been released nor declared yet its completion is set for 2010.

Accessibility

Public transportation in the area is adequate. The "E" & "F" subway line is available at Parsons Blvd Station, corner of Hillside Avenue and Parsons Blvd, two blocks away from subject. Local bus service is found along most major roadways including Hillside Avenue.

Major thoroughfares include Long Island Expressway, Van Wyck Expressway, Clearview Expressway & Grand Central Pkwy. Long Island Expressway, which leads eastward to Long Island and westward to Brooklyn & Manhattan. Grand Central Pkwy, which leads eastward to Long Island and westward to Jackie Robinson Pkwy & Triboro Bridge. Van Wyck Expressway, which leads northward to Whitestone Bridge and southward to John F. Kennedy Airport. Clearview Expressway, which leads northward to Throgs Neck Bridge and southward to Hillside Avenue.

Commercial Use:

The prime commercial thoroughfares in the community are Archer Avenue, Hillside Avenue, Jamaica Avenue, Liberty Avenue, Merrick Boulevard, Parsons Boulevard, Guy R. Brewer Boulevard, Sutphin Boulevard, and Union Turnpike lined with predominantly one- to three-story commercial and mixed-use buildings, with retail space on the ground level. The majority of the shops and services in the area cater to the needs of the local community, including usages such as grocery stores, dry cleaners, bakeries, pharmacies, restaurants, etc.

American Revolutionary War. In 1790, in William Warner's tavern. Rufus King, a signer of the United States Constitution, relocated here in 1805. He added to a modest 18th-century farmhouse, creating the manor which stands on the site today. King Manor was restored at the turn of the 21st century to its former glory, and houses King Manor Museum.

By 1776, Jamaica had become a trading post for farmers and their produce. For more than a century, their horse-drawn carts plodded along Jamaica Avenue, then called King's Highway. The Jamaica Post Office opened September 25, 1794, and was the only post office in the present-day Boroughs of Queens or Brooklyn before 1803. Union Hall Academy for boys, and Union Hall Seminary for girls, were chartered in 1787. The Academy eventually attracted students from all over the United States and the West Indies. The public school system was started in 1813 with funds of $125. Jamaica Village, the first village on Long Island, was incorporated in 1814 with its boundaries being from the present-day Van Wyck Expressway (on the west) and Jamaica Avenue (on the north, later Hillside Avenue) to Farmers Boulevard (on the east) and Linden Boulevard (on the south) in what is now St. Albans. By 1834, the Brooklyn and Jamaica Railroad company had completed a line to Jamaica. Jamaica railroad stations in 1873 In 1850, the former Kings Highway (now Jamaica Avenue) became the Brooklyn and Jamaica Plank Road, complete with toll gate. In 1866, tracks were laid for a horsecar line, and 20 years later it was electrified, the first in the state. On January 1, 1898, Queens became part of the City of New York, and Jamaica became the county seat.

The present Jamaica station of the Long Island Rail Road was completed in 1913, and the BMT Jamaica Line arrived in 1918, followed by the IND Queens Boulevard Line in 1936 and the IND/BMT Archer Avenue Lines in 1988, the latter of which replaced the eastern portion of the Jamaica Line that was torn down in 1977–85. The 1920s and 1930s saw the building of the Valencia Theatre (now restored by the Tabernacle of Prayer), the "futuristic" Kurtz furniture store and the Roxanne Building. In the 1970s, it became the headquarters for the Islamic Society of North America. The many foreclosures and the high level of unemployment of the 2000s and early 2010s induced many black people to move from Jamaica to the South, as part of the New Great Migration.

Economic development:
Economic development was long neglected. In the 1960s and 1970s, many big box retailers moved to suburban areas where business was more profitable. Departing retailers included brand name stores and movie theaters that once thrived in Jamaica's busiest areas. Macy's and the Valencia theater were the last companies to move out in 1969. The 1980s crack epidemic created even more hardship and crime. Prime real estate spaces were filled by hair salons and 99 cent stores. Furthermore, existing zoning patterns and inadequate infrastructure did not anticipate future development.

Since then, the decrease of the crime rate has encouraged entrepreneurs who plan to invest in the area. The Greater Jamaica Development Corporation (GJDC), the local business improvement district, acquired valuable real estate for sale to national chains in order to expand neighborhood commerce. As well they have completed underway proposals by allocating funds and providing loans to potential investors who have already established something in the area. One Jamaica Center is a mixed-use commercial complex that was built in 2002 by The Mattone Group housing Old Navy, Bally Total Fitness, Walgreens, Subway, Dunkin' Donuts, a 15-screen multiplex theater and for a while a Gap. Banking has also made a strong revival as Bank of America, Sterling National Bank, Chase Bank, and Carver Federal Savings Bank have each created at least one branch along various major streets: Jamaica Avenue, Parsons Boulevard, Merrick Boulevard, and Sutphin Boulevard. A $75 million deal between the developers, the Mattone Group and Ceruzzi Enterprises, and Home Depot cleared the way for a new location at 168th St. and Archer Ave. All approvals were obtained within three months of the application dates.

NEIGHBORHOOD ANALYSIS

Location:
Jamaica is a middle-class neighborhood in the New York City borough of Queens. The neighborhood is part of Queens Community Board 12, which also includes Hollis, St. Albans, Springfield Gardens, Baisley Pond Park, Rochdale Village, and South Jamaica.

It was settled under Dutch rule in 1656 in New Netherland as Rustdorp. Under British rule, Jamaica became the center of the "Town of Jamaica". Jamaica was the county seat of Queens County from the formation of the county in 1683 until March 7, 1788, when the town was reorganized by the state government and the county seat was moved to Mineola (now part of Nassau County). In 1814, Jamaica became the first incorporated village on Long Island. When Queens was incorporated into the City of Greater New York in 1898, both the Town of Jamaica and the Village of Jamaica were dissolved, but the neighborhood of Jamaica regained its role as county seat. Today, some locals group Jamaica's surrounding neighborhoods into an unofficial Greater Jamaica, roughly corresponding to the former Town of Jamaica, including Richmond Hill, Woodhaven, St. Albans, Rosedale, Springfield Gardens, Hollis, Laurelton, Cambria Heights, Queens Village, Howard Beach and Ozone Park.

Jamaica is the location of several government buildings including Queens Civil Court, the civil branch of the Queens County Supreme Court, the Queens County Family Court and the Joseph P. Addabbo Federal Building, home to the Social Security Administration's Northeastern Program Service Center. The U.S. Food and Drug Administration's Northeast Regional Laboratory as well as the New York District Office are also located in Jamaica. Jamaica Center, the area around Jamaica Avenue and 165th Street, is a major commercial center, as well as the home of the Central Library of the Queens Borough Public Library. The New York Racing Association, based at Aqueduct Racetrack in South Ozone Park, lists its official address as Jamaica (Central Jamaica once housed NYRA's Jamaica Racetrack, now the massive Rochdale Village housing development). John F. Kennedy International Airport and the hotels nearby also use Jamaica as their address.

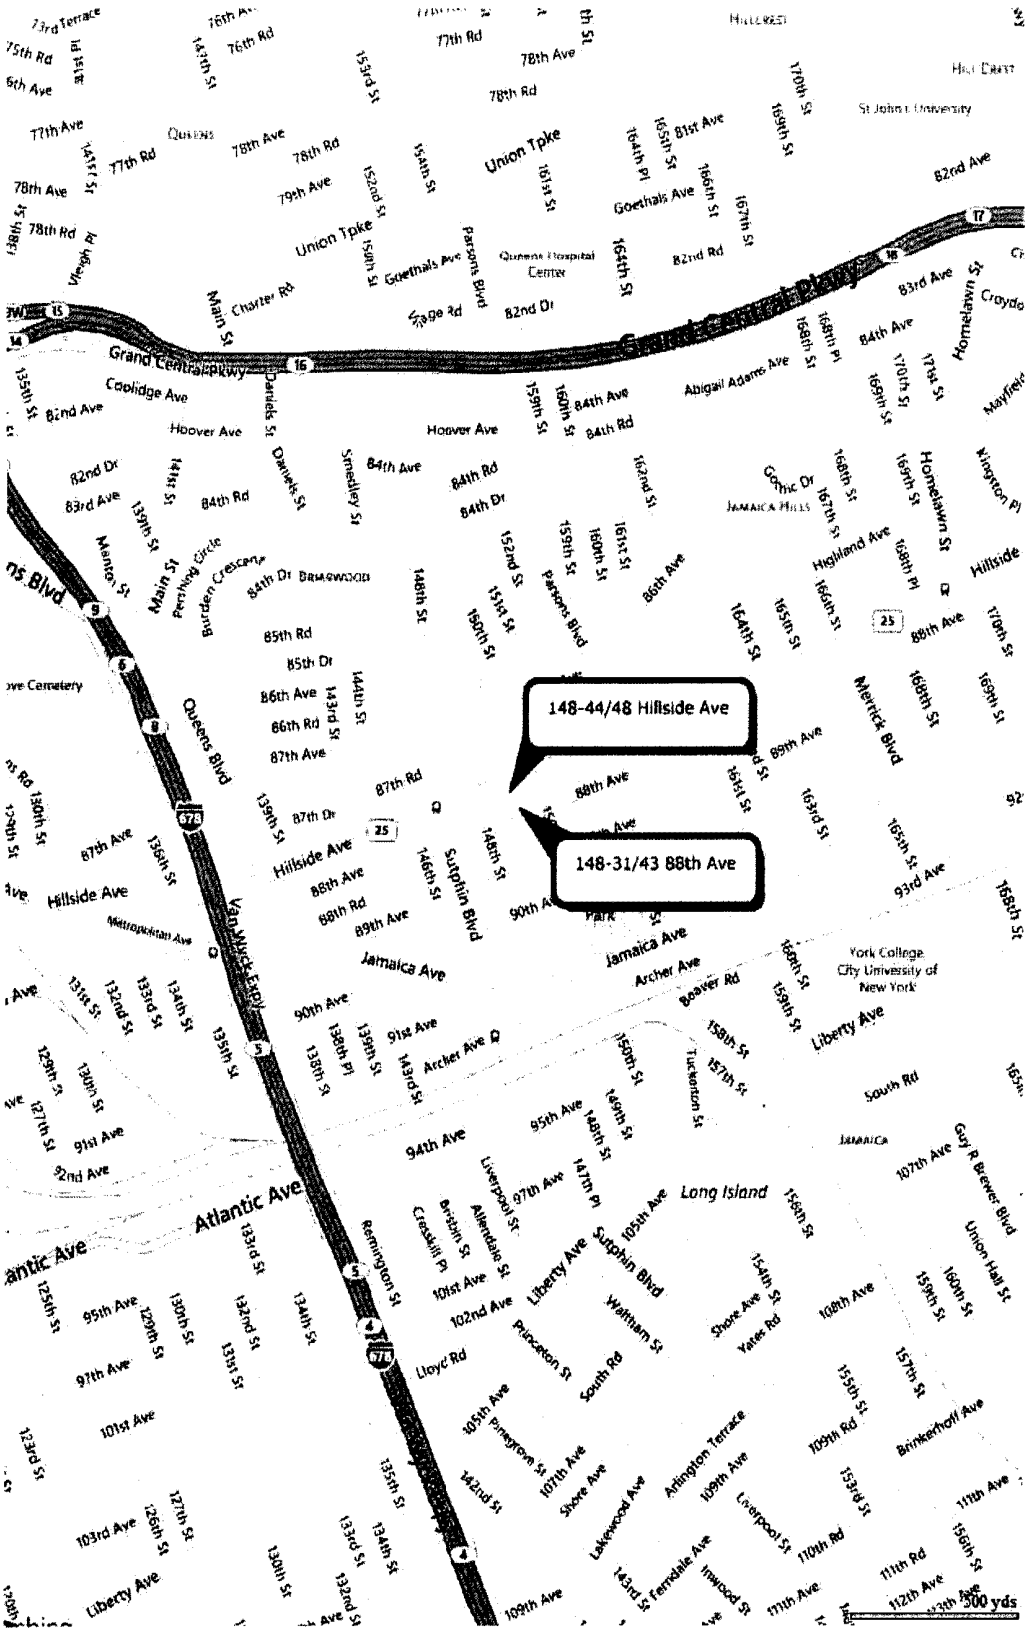
History:
Although many current residents of the neighborhood are immigrants from the Caribbean nation of Jamaica, the two names have different derivations. The name of Jamaica in New York City derives from Yameco, a corruption of a word for "beaver" in the Lenape language spoken by the Native Americans who lived in the area at the time of first European contact. The "y" sound in English is spelled with a "j" in Dutch, the first Europeans to write about the area. This resulted in the eventual English pronunciation of "Jamaica" when read and repeated orally. In the Caribbean, the Arawaks, people of the nation of Jamaica, named their land Xaymaca, which meant "land of wood and water".

Jamaica Avenue was an ancient trail for tribes from as far away as the Ohio River and the Great Lakes, coming to trade skins and furs for wampum. It was in 1655 that the first settlers paid the Native Americans with two guns, a coat, and some powder and lead, for the land lying between the old trail and "Beaver Pond" (later Baisley Pond). Dutch Director-General Peter Stuyvesant dubbed the area Rustdorp ("rest-town") in granting the 1656 land patent.

The English took over in 1664 and made it part of the county of Yorkshire. In 1683, when the British divided the Province of New York into counties, Jamaica became the county seat of Queens County, one of the original counties of New York.

Colonial Jamaica had a band of 56 minutemen who played an active part in the Battle of Long Island, the outcome of which led to the occupation of the New York City area by British troops during most of the

LOCATION MAP



The luxury retailer Hermès signed a 10-year extension on its 30,000-square-foot lease at 691 Madison Avenue at a cost of more than $1,700 per square foot, making its rent the highest on the street. Seven of the 25 largest business improvement districts in the city will see a windfall in next year's budget, with a 21% year-over-year median gain in budgets across all BIDs. The annual assessment for the Alliance for Downtown New York, for example, grew 21% to $15.8 million this year, due to an influx of local businesses. About 400 new stores are slated for the neighborhood by 2016, many of them at Brookfield Place and Pier 17.

U.S. Corporations and foreign investors continue to acquire prime commercial real estate assets in New York City. In 1/2015, Ivanhoé Cambridge and Callahan Capital Properties purchased the building located at 1095 Sixth Ave. for $2.2 billion. The building has 1.2 million square-foot tower is 100% leased to MetLife, Verizon and Dechert LLP. The Waldorf Astoria in New York is being sold to a Chinese insurance company, Anbang Insurance Group for $1.95 billion. In 4/2015, General Growth Properties has announced the acquisition of The Crown Building in New York City for $1.78 billion.

Conclusion

New York City will continue to be a destination for tourism and business, supporting the local economy. Additionally, it will remain a desirable place to reside for young families and the growing mature population. The services and activities that can only be experienced in New York City will continually support and maintain the residential market. Improving economic conditions worldwide are expected to boost the volume of foreign visitors to New York City.

With its central location to the global marketplace, New York City provides a good location for a company's office space. With the development of new office space in Manhattan, the market will see greater stability as the space is absorbed.

Overall, we remain fundamentally optimistic that 2015 will remain stable despite looming concerns regarding the impact of a rising interest rate environment. As a result of low-cost mortgage capital and noted stability in underlying fundamentals – such as absorption and vacancy rates, as well as sales and rental pricing on various property types throughout the city – the outlook for New York City is positive.

Industrial Market

The New York Outer Boroughs Industrial market ended the first quarter 2014 with a vacancy rate of 5.3% according to CoStar Group 1st Quarter 2014 Market Report. The vacancy rate was up over the previous quarter, with net absorption totaling negative 99,860 square feet in the first quarter. That compares to positive 103,487 square feet in the fourth quarter 2013. Vacant sublease space increased in the quarter, ending the quarter at 125,700 square feet. Tenants moving into large blocks of space in 2014 include: All City Metal moving into 45,000 square feet at 5435 46th St in Maspeth, Four Seasons Packaging Corp moving into 25,000 square feet at Onderdonk Ave in Ridgewood, and Venture Stationary moving into 23,000 square feet at 520 Coster St in the Bronx. Rental rates ended the first quarter at $15.27, an increase over the previous quarter. There was 135,349 square feet still under construction at the end of the quarter.

This trend is compared to the U.S. National Industrial vacancy rate, which decreased to 7.8% from the previous quarter, with net absorption positive 46.96 million square feet in the first quarter. Average rental rates increased to $5.39, and 279 buildings delivered to the market totaling almost 27.8 million square feet.

New Developments and Future Growth

The city has a few large projects that are part of a larger growth initiative; World Trade Center Site, Hudson Yards, and Atlantic Yards. Hudson Yards is 360 acres, including the 26-acre site over the MTA's rail yards with an undetermined mix of residential and office space proposed. It will be larger than the World Trade Center redevelopment and the Atlantic Yards project. It comprises the underutilized area bounded by West 42nd and West 30th Streets, Eighth Avenue to the Hudson River.[10] The extension of the No. 7 subway line is an integral part of the area's redevelopment and involves extending the train to Eleventh Avenue and down to West 34th Street and Eleventh Avenue; the subway extension is expected to be operational by early 2015. The redevelopment also includes more open space, expansion of Javits Center, and development of the MTA's Eastern Rail Yard. Although approved in January 2005 as part of New York City's long range plan, the Hudson Yards Development project had been stalled during the economic downturn. Construction on the Hudson Yards began in fall 2012.

There are numerous smaller projects contributing to the New York City's residential and business vitality including the High Line Park on the abandoned rail line running from Gansevoort Street to 30th Street in Chelsea. In addition, projects are being launched to revitalize 125th Street in Harlem and to improve the East River Park for public access in the Lower Manhattan from the Battery Maritime Building in the south to Montgomery Street in the north. Several high-end residential projects are in various stages of development. Some of the more notable projects are Extell Development's 90-story One57, located at 157 West 57th Street. Recently completed One57 will offer condominium apartments, a hotel and rental apartments. Some closings have already begun; prices range from $3,500+ per square foot to over $6,000 per square foot.

Macy's flagship store on 34th Street is under a $400 million makeover. The four-year renovation project will be completed in 2015 and will add 100,000 square feet of retail space to the store, bringing the total retail space in the store to 1.2 million square feet. Macy's is rumored to be going uptown to a 400,000-square-foot complex on 125th Street being built by the Empire State Development Corp. The retail mega giant, though, has not announced plans for a store in Harlem and others contend the location has been tapped as the headquarters of the Urban League.

Hotel

New York City's dynamic hotel industry is ever changing. New properties are still being added to the City's inventory of hotel across all five boroughs and property types. Repurposed landmark buildings are undergoing architectural and green renovations to become destination hotels in destination neighborhoods from Harlem and the Bronx to Lower Manhattan and Brooklyn. Boutiques and select service brands are making more and more neighborhoods attractive for visitors seeking a hotel to match their lifestyle, type of travel and budget.

All five boroughs are represented in this list with expansions, new ideas, and new opportunities. Twenty four hotels have opened since the beginning of this year, adding over 4,000 rooms to the city's hotel inventory. 2015 looks to kick off another period of dynamic hotel activity, with 61 properties listed here accounting for an addition of at least 11,600 rooms by year end. Then from 2016 looking forward we are adding another 24 properties and over 6,600 rooms.

Nevertheless, new building still predominates in the recent openings and looking out to the future. Luxury, boutique and lifestyle hotel brands, some new and some quite well known are planning to take their place among NYC's hotels. All five boroughs are represented in this list with expansions, new ideas, and new opportunities especially in The Bronx and Staten Island.

At year-end 2014, the city's active hotel inventory stood at approximately 102 thousand, and room night demand was over 32.5 million. By all accounts it was another year of extraordinary growth in new hotel rooms at all price points and in dozens of neighborhoods around the five boroughs. Looking forward to 2015 and beyond, the pipeline of new developments is still wide open. There are more than 105 properties planned and in construction adding an additional by the end of this year, the city will have over 102,000 rooms serving our visitors. At the same time the pipeline is still wide open and more than 18,000 new and newly renovated rooms could be open by the middle of 2017. New York City remains the most dynamic hotel development location in the US.

The New York lodging sector is among the highest performing markets in the world. Hotel occupancy among upper-tier hotels wen nearly uninterrupted during the economic downturn, and as a result Rev/PAR increases have been drive mostly by rate growth. The robust performance of this gateway market result in continued investment by both domestic and off-shore buyers. While the market faces supply pipeline of 15,000 new rooms through 2016, resulting in annual increase above the long-term average, investor remain condiment in the strength of the market as they continue to the positions in the New York's hotel market.

*Statistics reflect availabilities on 4/1/14

The factors driving demand for retail space in Manhattan's top corridors have not changed greatly. Tourism in the city is still strong, luxury brands are seeking association to select areas, and widely known global brands are looking for visibility in high traffic areas. Another factor that REBNY Advisory Group pointed out was that retailers now are looking for certain locations within these already high demand corridors besides simply corner space or a location near transit. Proximity to a major attraction in or near the corridor, they explained, can have a tremendous effect on desirability and price. For example, the available spaces on West 34th are more expensive closer to Macy's than those on the other end of the block. The same holds true with the Financial District where retailers are looking to be close to The World Trade Center.

Retailers wanting to be a part of the changing city in general and leaving their particular mark on its vibrant retail environment. These companies desire to make an impact in an area that gets them noticed and creates excitement around the brand. Saks moving to Lower Manhattan, Amazon taking space on West 34th, Nordstrom establishing a massive store at the base of the soon to be constructed 225 West 57th Street, and Neiman Marcus taking space at Hudson Yards for their first New York City store.

points from the previous quarter, but just below 10-year average of 7.9%. Large block availability was particular limited with just 10 blocks of space available over 20,000 square feet. Class A availability stood at 4.3%.

Space constrains limited leasing activity in Dumbo/Downtown Brooklyn for the second consecutive quarter. The first quarter total 57,530 square feet of leasing, down from the 1-year average of 81,517 square feet. Leasing activity will jump in the 2nd quarter of 2015, driven by Hillary Clinton's 77,685-square-foot lease at 1 Pierrepoint Plaza in Downtown Brooklyn.

Development level remain high in this tight market with growing demand. Major renovation projects are underway, and these developments will alleviate supply constrain in this market. During the first quarter, Quinlan Development Group and Building & Land Technology purchased 41 Flatbush Avenue, and plan to convert it from storage unit to office a 10-story 270,000 square-foot building. At nearby Navy Yards, 1.8 million square feet of redevelopment is underway in 3 buildings. Industry city in south Brooklyn is prepared for a $1.0 billion renovation. Jamestown LP, plans to convert the 16-story building, 6 million square-foot complex into a contemporary hub for manufacturing and technology tenants and the project also including 900,000 square feet ground-level retail.

The Long Island City office market carried positive momentum into the 1st quarter of 2015, as overall vacancy continued to improve while total net absorption remained firmly positive. Leasing activity in the first quarter topped out at 57,723 square feet, nearly doubling the previous quarter's 23,857 square feet. Average asking rents in Long Island City increased to $30.66/SF, up from 23.82 in the 4th quarter and up from $22.19/SF one year ago. The increase was driven by large, premium-priced blocks that were added to inventory, notably at 30-30 Northern Boulevard and The Silks Buildings, where asking rent have increased more than 50% since 2014.

Commercial tenants and investor continue to invest in Long Island City. Vomado Realty Trust announced the acquisition of 33-00 Northern Boulevard, a 437,000 square-foot office building sold for $142 million and is 98% leased. In 1st quarter of 2015, Regus, the office suite provider inked a 10-year deal totaling 34,000 square feet in the Falchi Building at 31-00 47th Avenue.

Retail

The retail market in New York City has mostly seen positive signs of improvement as asking rents year over year have increased The Manhattan retail leasing market maintained its strength and dynamism through the third quarter of 2014. The *Fall 2014 REBNY Retail Report* showed ground floor asking rents increasing in 13 of 17 corridors surveyed, year over year. Furthermore, despite the increasing rents of recent years, REBNY Retail Advisory Group reported that the market remained active.

While the average asking rent in most corridors increased compared to last year, the increases were not as extreme as previous reports. The average asking price for ground floor space on Fifth Avenue between 49th and 59th increased 8% from last fall to $3,420/SF. In Times Square along Broadway and Seventh Avenue between 42nd and 47th average ground floor asking rents increased 7% from last fall to $2,317/SF. Average asking rents in other prominent corridors increased strongly as well. Madison Avenue between 57th and 72nd streets had an increase of average ground asking rents of 24% to $1,709/SF. The average asking rent in Herald Square along West 34th Street increased 21% from last year to $891/SF.

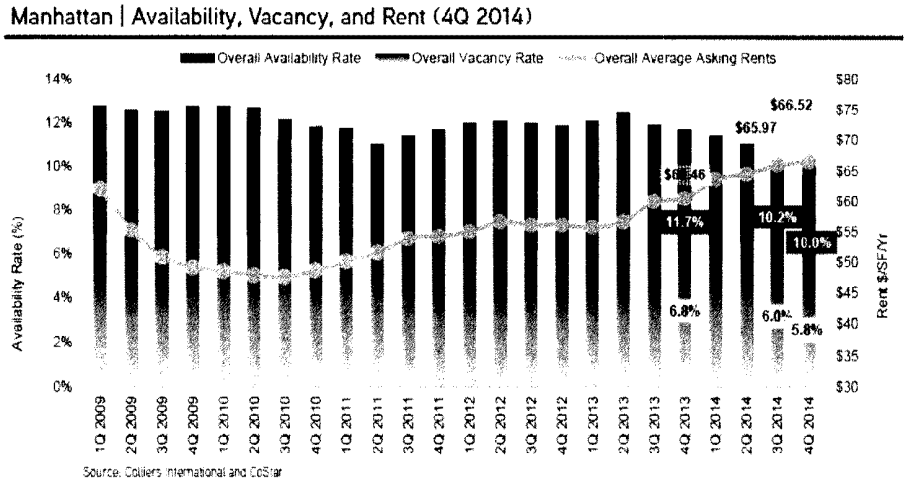
Data Source: Cassidy Turley Manhattan Office Market Reports March 2015

As of 4Q of 2014, Overall New York Office vacancy rate decreased to 5.8% from 6.8% of 4Q of 2013 as availability rate lower to 10% compared to 11.7% of previous year.



Outer Boroughs - Office

According to *Newmark Grubb Knight Frank 1st Quarter* Office Market Research report, continued demand in a tight market pushed average asking rents upward in the Dumbo/Downtown Brooklyn market during the first quarter of 2015. Average asking rents climbed to $39.28, up from $37.15 in the previous quarter, and up from $33.36 one year ago. The availability rate was 7.4% in the first quarter, up 60 basis

Office Market

According to *Cassidy Turley Manhattan Office Market Reports March 2015,* space returns continued to flood the Manhattan office market in February as another 10 office buildings each added 45,000 square feet or more to the available supply. Despite 21 buildings coming to market with significant availabilities this year, the overall availability rate dipped 10 basis points to 9.8%. The bulk of the space returns occurred in Class B buildings, which accounted for eight of the aforementioned 10 buildings and posted the second consecutive month of negative absorption for Manhattan Class B. With many tenants driven towards value over the last four years, the 937,617 square feet of negative absorption posted this year will create more affordable opportunities in the market. After posting over 2 million square feet of negative absorption in January, Class A space bounced back by recording over 889,000 square feet of positive absorption.

Midtown

The Midtown availability rate inched up another 10 basis points to 10.1%, up from a recent low of 9.7% at the end of 2014. Similar to the overall Manhattan market trend in February, Midtown accounted for seven of the 10 large space returns, with six of the seven in Class B buildings. This led to over 677,000 square feet of negative absorption for Class B space, while Class A space absorbed all the space added to the market in January. Class A posted over 606,000 square feet of positive absorption and was fueled mostly by the Bloomberg 152,935-square-foot lease at 919 Third Avenue and the 96,780 square feet of expansion space leased by Public is at 1675 Broadway. Despite Midtown availability rising, asking rents continue to increase, with Class A up $0.17 to $85.14 per square foot and Class B up a mere $0.03 to $61.05 per square foot.

Midtown South

Midtown South continues to outperform the rest of the market, as the availability rate dropped 40 basis points in February to 6.5%. The available supply dipped below 6 million square feet for the first time since 2000. There is only 5.7 million square feet available in Midtown South, which equals one-fifth of the Midtown and one-half of the Downtown available supplies. The Flatiron/Union Square submarket was the only submarket to post negative absorption, as 181,950 square feet came on the market at 50 West 23rd Street, but leasing activity throughout the rest of Midtown South outpaced space returns and led to 338,382 square feet of positive absorption.

Downtown

The Downtown office market was back on track after posting almost 1.5 million square feet of negative absorption in January. The availability rate dipped 20 basis points to 12.2%, as 206,739 square feet of positive absorption was posted in February. This can be mostly attributed to the lease signed by WeWork at 85 Broad Street for 240,000 square feet. In spite of the positive overall trends, the World Trade submarket's availability rate jumped to over 14.0% for the first time in almost a year, as 319,644 square feet of NYMEX space at 1 North End Avenue became available. As new product continues to become available Downtown, asking rents continue to soar. Class A asking rents are up to $61.40 per square foot and have surpassed historical highs from 2008. Class B asking rents are also up, but at $43.76 per square foot, they are still slightly off record levels.

quickly. Construction cranes continue to dot the skyline in these areas, as residential development continues.

Outer borough Sales - Brooklyn

Brooklyn housing prices continued to push higher as robust economy and limited inventory keep the pressure on. According to the *Elliman Report Brooklyn Sales 1Q 2015*, the median sales price increased 17.5% from the prior year quarter to $610,894, the highest result in 12 years the metric has been tracked. Average Sales price rose 10% from the sales period last year. By property type, the largest price gains were seen in the 1-3 family market, up 26.9% from the prior year quarter. Days on market decreased to 112 days from the 131 days of 1st quarter of 2014.

The number of Brooklyn sales declined 4.1% to 1,407 from the prior year quarter and declined year-over-year of the past 3 quarters due to limited inventory. Although inventory expanded 5.8% to 4,331, it remained inadequate to meet demand.

Outer borough Sales - Queens

The housing market of Queens has been rising since last fall due to an improving local economy, low mortgage rates, and low inventory. According to the *Elliman Report Queens Sales Report 1Q 2015,* Median sales price jumped 20.7% to $446,434 from same period last year and 9th increase of the past 11 quarters. Average sales price rising 14.6% over the same period. The number of sales was in sync with the decline in supply, falling 18.7% to 2,567 over the same period.

The combination of falling sales and falling inventory kept the monthly absorption period essentially stable. Days on market, the average number of days between the date of last list price change and contract date, declined to 85 days form 103 over the same period.

had slightly less inventory to choose from during the most recent quarter when compared to a year ago. During the first quarter of 2014, 1.54% of apartments were vacant.

Source: *Citi Habitats 1st Quarter 2015 Residential Report*

When comparing the first quarter of 2015 with the quarter that preceded it, average rents for studio units increased the most, with a relatively substantial 4.2% jump. In addition, one-bedroom homes increased in price by 2.2%, while two bedrooms were, on average, 1.3% more expensive. In contrast, rents for three-bedroom units fell by an average of 0.7%.

Year-over-year, average Manhattan rents increased for smaller apartment sizes, while they declined for larger-sized homes. As was the case when looking quarter-over-quarter, the largest rent increase occurred for studio apartments, with a 4.6% climb. Average rents for one-bedroom homes increased by 3.1% when compared to the first quarter of 2014, while pricing decreased for both two- and three-bedroom apartments. Average rents for these sized homes fell 2.4% and 1.3%, respectively.

Currently, the Manhattan rental market has reached a state of 'equilibrium,' where neither tenant nor landlord has the upper hand, but both are willing to transact. However, it is expect move-in concessions to become less common as we progress through the second quarter of the year, as is to be expected during this time of the year. All-in-all, the market should remain stable in spring. Rents have plateaued at a very high level and as a result, vacancies across the city are up slightly.

However, apartment seekers increasingly are exploring opportunities in the city's outer boroughs, as evidenced by the huge demand for new rental product in areas like Greenpoint and Williamsburg in Brooklyn, and Long Island City and Astoria, Queens. Rental developments introduced in these neighborhoods trade on average at a 20%-30% discount to Manhattan, and typically lease-up very

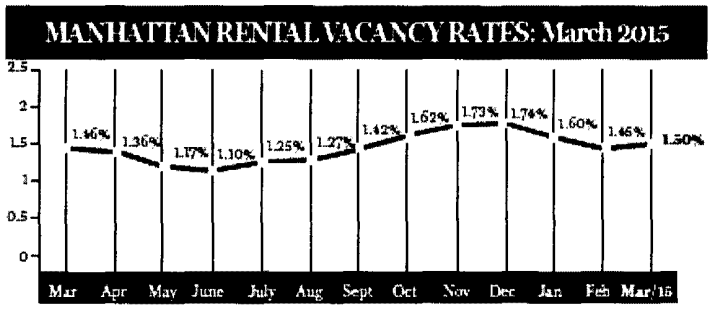
Inventory further tightened with 1% fewer listings than a year ago and days on market dropped 6%. Given these dynamics, the Manhattan market is notably under-supplied. At the rate of sales over the past year, the number of currently listed apartments in Manhattan is equivalent to just 3.8 months of supply, well below the six to nine months considered market equilibrium. Buyer competition, especially for lower priced units, is significant. The median price of studio, one, and two bedroom apartments all increased compared to last year, however three bedroom and larger residences actually decreased over the same period as more sales in this category shifted to the resale co-op market from new developments.

Rental

According to *Citi Habitats 1st Quarter 2015 Residential Report*, the Manhattan rental market vacancy rate increase from 1.46% in March 2014 to 1.50% in 1st Quarter 2015.



The borough's vacancy rate increased slightly, but steadily, each month during the quarter. When compared to the fourth quarter of 2014, overall market conditions have shifted slightly towards the landlord's favor. Average rents increased for all apartment sizes except three bedroom units, where they declined slightly. In addition, the borough-wide vacancy rate declined during the most recent quarter. When examining vacancy rates across Manhattan, we found 1.52% of apartments to be available during the first quarter of 2015, down from 1.72% in the fourth quarter of 2014. In addition, would-be tenants

Residential Market

Sales

Prudential Douglas Elliman 1st Quarter 2015 market report indicated that apartment listings are increasing and the number of days on the market decreased 13% year over year; as compared to the previous quarter the number of days on the market decreased 4.8%. The inventory of apartments is up 5.5% to 5,243 available units compared to 2014. The level of discounting was 4.7% from 2.4% in the prior quarter. The report indicated a decrease in median sales price to $970,000 from $972,428 in 1Q 2014.

Source: *Prudential Douglas Elliman 1st Quarter 2015*

The *Corcoran Group 1st Quarter 2015 Report* (Manhattan) indicated that during this period there were 3,776 market-wide sales, 12% higher than 1st Quarter 2014. Average sale price was 2% higher versus the Q1 2014, median sales price was up 6% and average price per square foot was up 5%. This quarter's strong sales performance resulted in the highest number of closings reported for any first quarter in over 6 years. However, the compared to 4th Quarter of 2014, the median sales price was lower by 3% and average price per square foot was lower than 5%.

There are more than 594,000 full- and part-time students enrolled in more than 110 institutions of higher education in New York City. The City University of New York is the nation's leading urban public university, serving 540,000 students – more than 271,000 degree-credit students and nearly 270,000 in adult, continuing and professional education — at 24 institutions in New York City.

New York City Crime Statistics

The statistics for 2014 reveal that the overall crime rate in New York City has continued to experience a decline. The table presented below is the New York City (citywide) Crime Statistics comparison for the calendar year of 2012, 2013 and 2014.

New York City's International Significance

New York is considered to be the nation's financial and business capital due to the presence of Wall Street and the New York Stock Exchange. It represents the largest number of Fortune 500 companies and global center for arts, technology, media, fashion, advertising, finance and industry.[2] Manhattan's central business district contains the greatest concentration of business activities in the United States, with more than two million jobs generated by the various firms and businesses located here. Many of the nation's largest banks are headquartered in New York City.

New York City's economy continues to secure its stature as the world's leading global location for international business and finance, advanced business services and consulting, bio-medicine, and higher education. As a center of media and the arts, the region is successfully capitalizing on its unique image in popular culture and entertainment, as exemplified by the redevelopment of 42nd Street in Manhattan. The emergence as a modern entertainment complex, including motion picture production and theater development, has augmented the importance of the region as a "must visit" destination for domestic and international tourists. This has led to the further growth of supporting industries, such as hotels and restaurants resulting in an increasing demand for the region's airports and interstate transportation network. To accommodate the many business travelers, as well as tourists and residents, the city has a wide variety of hospitality, cultural and recreational facilities.

In addition to business travelers, New York City's cultural attractions, entertainment, restaurants and retail shopping have helped to make it the number one tourist destination in the country. It is the home of the Statue of Liberty and the United Nations world headquarters. Other attractions include the Empire State Building at West 34th Street and Fifth Avenue and Rockefeller Center on Fifth Avenue between West 48th and West 52nd Streets. The number of international and domestic visitors in 2013 was approximately 54.3 million; of those 11.4 million were international visitors according to NYC Official statistic. In 2013, total visitor spending from New York City tourism was $38.8 billion.

The theaters in the Times Square/Broadway district attract international attention. Lincoln Center, home of the Metropolitan Opera, the New York Philharmonic, the New York City Ballet and Opera and the Juilliard School of Music, is considered to be one of the most important centers for the performing arts in the world. The Metropolitan Museum of Art, the Museum of Modern Art, the American Museum of Natural History, the Cooper-Hewitt Museum, the Guggenheim and many of the city's other museums and galleries are internationally respected. Brooklyn has the Brooklyn Botanical Garden, Museum of Art, and Academy of Music that draw people from all over the world.

New York is also one of the world's leading art centers. The most prominent area for the art devotee is concentrated between East 57th and East 86th Streets between Fifth and Park Avenues. Many galleries and auction houses known throughout the world are located throughout the Upper East Side of the city, as well as in Chelsea, SoHo and Greenwich Village.

Transportation

The majority of the labor force resides outside the Manhattan business districts and is in New York City's remaining four boroughs and the neighboring suburbs of Nassau, Suffolk and Westchester Counties, as well as the States of New Jersey and Connecticut. Many commute to the city via some form of mass transportation.

An extensive highway system extends across the five boroughs and connects New York City to major interstates through various alternative routes. MTA subways, buses, and railroads provide 2.63 billion trips each year to New Yorkers – the equivalent of about one in every three users of mass transit in the United States and two-thirds of the nation's rail riders. MTA bridges and tunnels carry nearly 300 million vehicles a year – more than any bridge and tunnel authority in the nation.

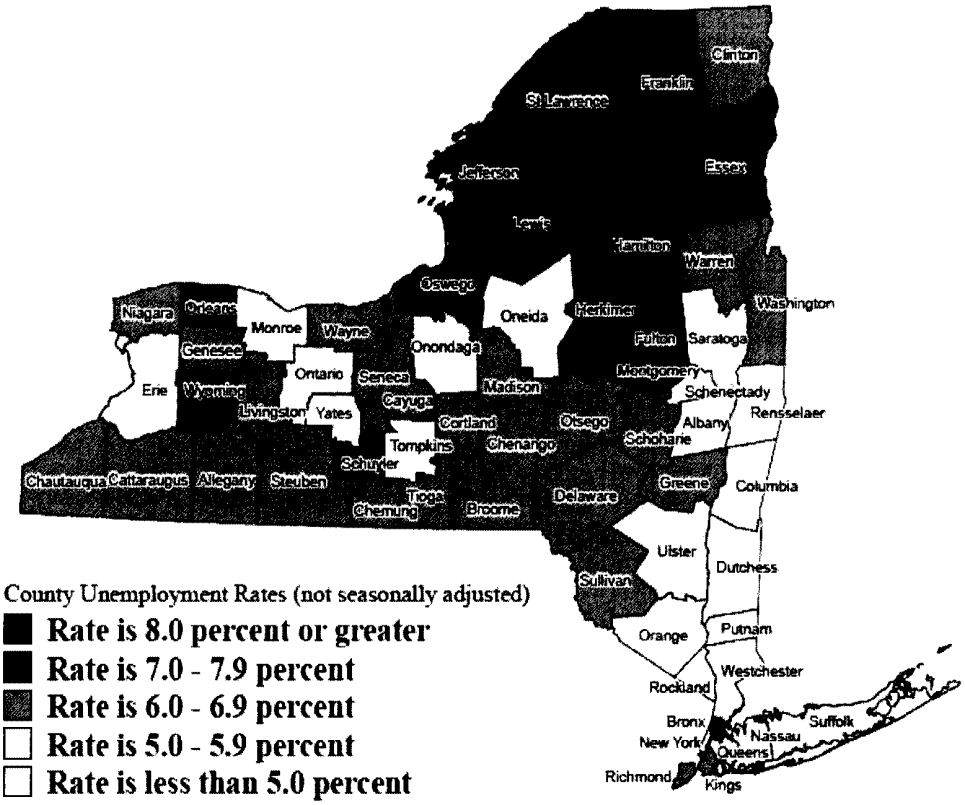
A network of surface and subsurface public transportation grids the city. The New York City Transit Authority and its affiliate, the Staten Island Rapid Transit Operating Authority, operate one of the largest municipal transit systems in the world. This system consists of more than 660 miles of subway tracks and more than 1,871 miles of bus routes, many of which operate 24 hours a day. On a typical business day, more than 7.7 million passengers ride the trains and buses. There were approximately 1.75 billion passengers in 2014 on the subway and almost 667 million passengers on buses according MTA website. In addition, the city operates ferries between Staten Island and lower Manhattan, ferry service is also provided from Yonkers to Battery Park and from New Jersey to Manhattan.

Additionally, the Port Authority Trans-Hudson System (PATH) operates a rapid rail system between New York and several cities in New Jersey. This system provides fast, inexpensive transportation for the many people who commute between New York and New Jersey. Local and express bus service is also available, providing surface transportation to most points within Manhattan and the outer boroughs.

The Port Authority Bus Terminal is located at Eighth Avenue between West 40th and West 42nd Streets, seven blocks north of Madison Square Garden and Pennsylvania Station. The 42nd Street-Times Square area is currently undergoing the Times Square Redevelopment project and the Jacob K. Javits Convention Center is located at Eleventh Avenue between West 34th and 37th Streets.

The three major international airports in the area include LaGuardia and John F. Kennedy Airports in Queens, New York and Newark Liberty Airport in Newark, New Jersey. The annual number of passengers at these airports, ending December 2014, was 117.3 million passengers according to *Monthly Summaries of Airport Activities* of the Port Authority of NY and NJ. This represents an increase of 3.3% over the last 12 months. The region handled 41.9 million internal passengers, breaking the all-time international passenger record set 2013.

Unemployment Rates by County, New York State, March 2015



County Unemployment Rates (not seasonally adjusted)

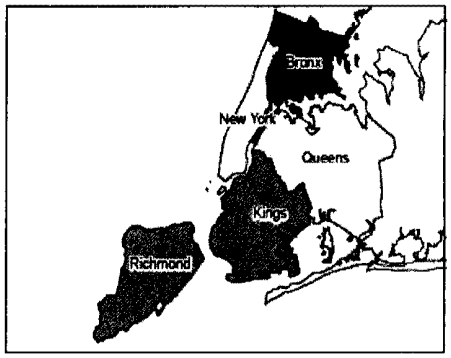
- **Rate is 6.0 - 6.9 percent**
- **Rate is 5.0 - 5.9 percent**
- **Rate is less than 5.0 percent**

New York State rate = 5.8 percent



Employment

The economy in New York City is heavily comprised of employment related to the large finance, media and education sectors. In addition to a large number of finance, insurance and real estate jobs, there are a vast amount of service-oriented jobs that cater to those in the businesses as well as the large tourism industry in New York City.

The New York State Department of Labor released preliminary local area unemployment rates for March 2015, which are calculated following procedures prescribed by the U.S. Bureau of Labor Statistics. The state's unemployment rate relies in part on the results of the Current Population Survey, which contacts approximately of 3,100 households in New York State each month.

Private sector employment in New York City rose by 104,200, or 3%, to 3,609,000 for the 12-month period ending March 2015. Jobs grew in educational and health services (+30,200), professional and business services (+26,300), trade, transportation, and utilities (+14,800), leisure and hospitality (+13,700), financial activities (+8,400), other services (+7,100), information (+3,600) and construction (+1,500). Manufacturing (-1,400) was the only sector to lose jobs. Non-private sector, Government employment rose by 3,100.

NYC Employment by Industry - Not Seasonally Adjusted (000's)				
Industry	**March-15**	**March-14**	**Change #**	**Change %**
Natural Resources, Mining and Constructi	123.5	122.0	1.5	1.2%

Income

According to *US Census Bureau* website, the median household income in New York State was estimated to be $58,003 in 2013. The borough with the highest median household income in 2013 (most recent available information) was Staten Island with a median household income of $72,596; Manhattan was second with a household income of $69,659. The median household income in Queens and Brooklyn are $57,001 and $46,086 respectively. The borough with the lowest median household income is the Bronx, which was estimated to be $34,388.

The *US Department of Labor, Bureau of Labor Statistics* reported that prices in the New York-Northern New Jersey-Long Island area, as measured by the Consumer Price Index for All Urban Consumers (CPI-U), ticked up 0.2% in March, after a 0.3% increase in February 2015, the U.S. Bureau of Labor Statistics reported. Chief Regional Economist Martin Kohli attributed the rise to higher prices for shelter and other expenditures that were largely offset by lower prices for energy.

Over the year, the CPI-U inched down 0.1%, and the index for all items less food and energy advanced 1.6%. The 12-month increase in both indexes was primarily attributable to higher prices for shelter.

Chart 1. Over-the-year percent change in CPI-U, New York-Northern New Jersey-Long Island, March 2012–March 2015

Demographics

Population

New York City is the most populous city in the nation, with over 8 million residents, and one of the largest populations in the world. It makes up over 42% of the population of the entire state of New York. Between 2000 and 2010, New York City's population reached 8,175,133 an increase of 2.1%. During this decade, the borough with the largest population growth was Staten Island while Queens had the smallest population growth.

The chart below depicts New York City's population change during the past decade, and change between 2010 census and 2013 estimate by the US Census Bureau.

New York City's Population 2010 Population: 8,175,133					
Borough	2000	2010	2013	2000-2010 % Change	2010-2013 % Change
Bronx	1,332,650	1,385,108	1,418,733	3.9%	2.4%
Brooklyn	2,465,326	2,504,700	2,592,149	1.6%	3.5%
Manhattan	1,537,195	1,585,873	1,626,159	3.2%	2.5%
Queens	2,229,379	2,230,722	2,296,175	0.1%	2.9%
Staten Island	443,728	468,730	472,621	5.6%	0.8%
NYC Total	**8,008,278**	**8,175,133**	**8,405,837**	**2.1%**	**2.8%**

Source: US Census Bureau, 2013 number is estimated.

Since 2010, the U.S. Census Bureau estimates that New York City's population increased from 8,175,133 in April of 2010 to 8,405,837 in 2013. This is an increase of 230,704 residents or about 2.8% over the 2010 mark. The largest change in the city's population occurred in Brooklyn, growing by 3.5%, followed by Queens 2.9%, Manhattan 2.5%, and the Bronx 2.4%. Staten Island 0.8% showed the smallest gains since 2010.

NEW YORK CITY ANALYSIS

Location

New York City is located in the southern most portion of New York State, the five counties or boroughs, which were incorporated in 1898 into a single entity, which consist of Bronx County, Kings County (Brooklyn), Queens County, Richmond County (Staten Island) and New York County (Manhattan). All of the boroughs are subdivided into various community districts and unofficial areas/neighborhoods.

New York City has 578 miles of waterfront, while the total area is 304.9 square miles. Queens is the largest with 109.7 square miles and Manhattan is the smallest with 22.8 square miles.

New York City Land Area (in square miles)	
Bronx	42.4
Brooklyn	71.5
Manhattan	22.8
Queens	109.7
Staten Island	58.5
Total	**304.9**

26. In this appraisal assignment, the existence of potentially hazardous material used in the construction or routine maintenance such as the presence of urea-formaldehyde foam insulation, asbestos, and/or the existence of toxic waste, which may or may not be present on the property, was not observed by the appraiser(s); nor do we have any knowledge of the existence of such materials on or in the property. The appraiser, however, is not qualified to detect such substances. The existence of urea-formaldehyde foam insulation or other potentially hazardous waste materials may have an effect on the value of the property. The appraiser(s) urge the client to retain an expert in this field if desired.

14. It is assumed that a final approved survey will be submitted, conforming to the sketches and estimates as represented in this appraisal report.

15. It is assumed that the estimated land area as provided by public records and/or property owners is accurate and was utilized as the total land area throughout this appraisal report.

16. It is assumed that the Gross Building Area (inclusive of common areas) as ascertained from the owners of the property, City records, and the architectural floor plans are accurate and was utilized as the total Gross Building Area throughout this appraisal report.

17. If the reader is making a fiduciary or individual investment decision and has any questions concerning the material contained in this appraisal report, it is recommended that the reader contact the undersigned.

18. Projections, as utilized in this appraisal report, are based on certain assumptions and estimates concerning future events and circumstances. Future valuation estimates may be affected by events that are beyond the control of the property. These may be local, national, or international in scope. It must be understood that actual results achieved during projection periods may vary from those indicated and the variations could be material.

19. That this appraisal report is meant to be presented in its entirety. If this report is presented in any form other than its complete form, it becomes invalid.

20. That this appraisal report represents a summary of the findings of the data gathering process and the appropriate appraisal analysis. All input data would be too voluminous to include in this report. The exclusion of the same does not preclude the appraisers from referring to this data at a future date. If the occasion arises, the appraisers reserve the right to refer to any of the source material used in the preparation of this appraisal to further clarify any item contained in this report.

21. That, to the best of my knowledge and belief, the statements of fact contained in this appraisal report upon which the analysis, opinions, and conclusions are based, are true and correct; subject to the statement of Assumptions and Limiting Conditions herein set forth.

22. That this appraisal report sets forth all Limiting Conditions (imposed by the terms of our assignment or by the undersigned) affecting the analysis, opinions, and conclusions expressed herein.

23. Demographic and economic projections used herein may be based in whole or in part on information obtained from outside sources. The undersigned takes no responsibility for the accuracy of this information.

24. Unless agreements have been made previously, the appraiser(s) will not be required to give testimony or appear in court as a result of having made this appraisal with reference to the property in question. Additionally, this appraisal report was not prepared for court submission purposes.

25. Possession of this appraisal report, or a copy thereof, does not carry with it the right of publication. This appraisal may not be used for any other purpose or any person other than the party to whom it is addressed without the written consent of the appraiser(s) and, in any event, only with properly written qualifications and in its entirety.

LIMITING CONDITIONS

1. That no survey of the property has been made by the appraisers and no responsibility is assumed in connection with such matters. Representations in this appraisal report are included only to assist the reader in visualizing the property.

2. That no responsibility is assumed for matters of a legal nature affecting title to the property nor is an opinion of the title rendered.

3. That information furnished by others is assumed to be true, correct and reliable. A reasonable effort has been made to verify such information; however, no responsibility for its accuracy is assumed by the appraisers.

4. That all mortgages, liens, encumbrances, leases, and servitude have been disregarded unless so specified within this appraisal report. The property is appraised as though responsible ownership and competent management are in place.

5. It is assumed that there are no hidden or non-apparent conditions of the property, subsoil, or structures, which would render it more or less valuable. No responsibility is assumed for such conditions or for the engineering that may be required to discover them.

6. It is assumed that there is full compliance with all applicable federal, state, and local environmental regulations and laws unless nonconformity has been stated, defined, and considered in this appraisal report.

7. It is assumed that all applicable zoning and use regulations and restrictions have been complied with, unless nonconformity has been stated, defined, and considered in this appraisal report.

8. It is assumed that all required licenses, consent, or other legislative or administrative authority from any local, state, or national governmental or private entity or organization have been, or can be, obtained or renewed for any use on which the value estimate contained in this appraisal report is based.

9. It is assumed that the utilization of the land and improvements are within the boundaries or property lines of the property described and that there is no encroachment or trespass unless noted within the appraisal report.

10. It is assumed that the existing improvements conform to the Certificate of Occupancy as issued by the appropriate municipal agency.

11. It is assumed that the subject property rental information as furnished to the appraisers is accurate.

12. It is assumed that all of the necessary and required permits and licenses are, or will be, in full force and effect.

13. It is assumed that the forecast income and operating expense estimates are based, in part, upon projections based upon local conditions obtained through contractors, vendors, and those usually in contact with similar apartment project operations.

ESTIMATED MARKETING TIME

According to Statement 6 and Advisory Opinion G-7 of the Appraisal Standards Board of the Appraisal Foundation, marketing time and exposure time are separate and distinct concepts. The estimate of marketing time is separate from the appraisal process and pertains to the period immediately following the effective date of the appraisal.

A review of subject's area and surrounding markets transfer records suggests that the volume of transactions is strong, which confirms the presence of an active investor market for most forms of commercial real estate. The subject property is being valued as a commercial building fully capable of sustaining its current and/or projected rental income. Market activity, as presented within the Sales Comparison Approach section of this report, suggests that there is a demand for such properties and that conventional financing is available. Our appraisal of the subject property reveals no factors that would reasonably suggest that the subject property is not marketable. Accordingly, we believe, that if priced appropriately (that is to say, the appraised value), the subject property could sell within a reasonable period of time, which we consider to be 3-6 months. We acknowledge that in appraising the property to sell within 3-6 months, we must place most emphasis on the buyer's expectations and yield requirements.

The final conclusion of value is well supported by the Sales Comparison Approach and the Income Capitalization Approach, clearly indicating that the investment decisions relied upon the appraisal is market oriented. This further supports the notion that the property has indeed been appraised at a value that could be accomplished within 3-6 months. Therefore, assuming aggressive exposure and realistic asking price, the estimated marketing time for the subject property is also estimated at approximately 3-6 months.

EXTRAORDINARY ASSUMPTIONS

An extraordinary assumption is defined by the Uniform Standards of Professional Appraisal Practice as "an assumption, directly related to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusions. Extraordinary assumptions presume as fact otherwise uncertain information about physical, legal or economic characteristics of the subject property, or about conditions external to the property, such as market conditions or trends; or about the integrity of data used in an analysis". This appraisal assumes the buildings will be constructed according to the architectural plans.

HYPOTHETICAL CONDITIONS

A hypothetical assumption is defined by the Uniform Standards of Professional Appraisal Practice as "that which is contrary to what exists but is supposed for the purpose or analysis. Hypothetical conditions assume conditions contrary to known facts about physical, legal, or economic characteristics of the subject property or about conditions external to the property, such as market conditions or trends; or about the integrity of data used in an analysis." This appraisal employs no hypothetical conditions.

processed in professionally recognized and acceptable approaches to value. The appraiser believes that the data used in this report accurately reflects the market.

DEFINITIONS

Market Value, for the purposes of this appraisal report, can be generally defined as "The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition are the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. Buyer and seller are typically motivated;
2. both parties are well informed or well advised, and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in United States dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale. (USPAP, 2013-14 edition)

EXPOSURE TIME

Exposure Time is defined as: "The estimated length of time the property interest being appraised would have been offered on the market prior to the hypothetical consummation of a sale at market value on the effective date of the appraisal; a retrospective estimate based upon an analysis of past events assuming a competitive and open market."[1]

It should be noted that exposure time varies for different property types and under changing market conditions. Additionally, exposure time is always presumed to proceed the effective date of the appraisal. Finally, in estimating a reasonable exposure period, consideration must be given to price, time and use, and not just an isolated estimate of time.

In estimating exposure time, we have considered information obtained through verification of the comparable sales, interviews with market participants when possible, land published investor surveys. It should be noted that information from the comparable sales was limited. As a result, the appraisers have held discussion with area brokers and property owners in relation to overall marketing time.

Based on these considerations, we have concluded a reasonable exposure for the subject property is three to six months. Local brokers familiar with the subject property indicated a much more optimistic time frame, depending on asking price and terms. Our conclusion is judged reasonable in lieu of the overall market. The market value stated herein assumes the above exposure time.

[1] The Dictionary of Real Estate Appraisal (5th Edition; 2010) Appraisal Institute, page 73.

INTENDED USE OF THE APPRAISAL

This appraisal will be used by 88 Ave Realty, LLC, the intended user, for decision-making purposes with respect to EB5. The intended users of this report is 88 Ave Realty, LLC. All other uses and users are unintended.

SCOPE OF THE APPRAISAL

The services rendered in connection with this appraisal involved a site inspection and inspection of the improvement, field visits to the neighborhood and market area comprising the subject, a study of current market and neighborhood trends and opportunities; and a review of applicable zoning ordinances and real estate assessment per review of City published zoning maps and discussions with City tax personnel.

The Income Approach was used to estimate the value of the subject as an income-producing property. The subject property contains a commercial building and an apartment building. The appraiser has conducted a survey of commercial and residential property rentals in the subject area. The adjusted rentals are utilized to establish market rents for the subject to compare to the current tenant-occupied units, as well as applying the market rent to owner occupied and vacant units as of the effective date. After the potential gross income is determined, estimated expenses are then subtracted to produce a net operating income. Estimated expenses were based on industry standards, expense comparables, expense statement provided by the property owner and on the appraiser's experience with similar properties. A capitalization rate was determined via the Mortgage-Equity technique and by comparison to current competing rates of return. Properties of this type are usually bought and sold on the basis of their income, and it is therefore considered to be a reliable approach.

For the purposes of the Direct Sales Comparison Approach, research was conducted for recently transacted sales of commercial buildings and apartment buildings in the immediate neighborhood. The most appropriate unit of comparison is the price paid per square foot due to the nature of the subject. Appropriate adjustments are made between the sales and the subject after the appraiser has visited each sale. This approach is considered to be a good indication of value since it reflects the motivations of buyers and sellers in the marketplace.

In the Cost Approach, replacement cost estimates from the Marshall & Swift cost manual are usually utilized, along with estimates of land value based on comparable land sales. However, estimating costs and depreciation for a building of the subject's age is often very subjective and inaccurate. In addition, minimal land sales in the area further inhibits this approach. Therefore, this approach is precluded from this appraisal assignment. It must be noted that, although the Cost Approach is not performed in this report due to the fact that it is not applicable in subject property's condition and building age, the appraisal opinion does not invoke the departure from Uniform Standard of Professional Appraisal Practice Standard Rule 1-1. The appraiser already considers the applicability of the approach. Necessary communication has been made to the client to explain that the Cost Approach is not applicable in this appraisal and it does not significantly affect the reliability of the final reconciled estimated market value via the Sales and Income Approach. The client does not require the appraiser to eliminate the performance of this approach and invoke the Departure Rule of USPAP.

Public records, multiple listing service, newspapers and data systems of other appraisal firms, as well as our own, were searched and property owners, managers, developers, and real estate brokers were contacted, in order to obtain rental information and sales data presented in this report. The data is

IDENTIFICATION OF THE PROPERTY

148-44/48 Hillside Avenue is located on a rectangular shaped lot on the south side of Hillside Avenue between 148th Street and 150th Street, in the Jamaica neighborhood of Queens, City and State of New York. The site is identified on the Queens County Tax Maps as Block 9694, Lot 26. The site has a frontage of 45± feet on Hillside Avenue and a depth of 95± feet. The lot size is 4,275± square feet. The subject is located within census tract 0238.00. The site is generally level at grade and improved with all available public utilities including city sewers.

148-31/43 88th Avenue is located on an irregular shaped lot on the north side of 88th Avenue between 148th Street and 150th Street, in the Jamaica neighborhood of Queens, City and State of New York. The site is identified on the Queens County Tax Maps as Block 9694, Lot 49. The site has a frontage of 140± feet on 88th Avenue, a frontage of 10± feet on 150th Street and a depth of 190± feet. The lot size is 24,554± square feet. The subject is located within census tract 0238.00. The site is generally level at grade and improved with all available public utilities including city sewers.

PROPERTY RIGHTS APPRAISED

We have appraised the Leased Fee interest in the subject property. Leased fee interest is defined as "A freehold (ownership interest) where the possessory interest has been granted to another party by creation of a contractual landlord-tenant relationship".

EFFECTIVE DATE OF APPRAISAL

The effective date of this appraisal report is August 15, 2015, the date of the inspection. This report is subject to the property's conformance to all municipal requirements and representations as presented herein.

HISTORY OF THE PROPERTY

The subject property is known as 148-44/48 Hillside Avenue and 148-31/43 88th Avenue, in the Jamaica neighborhood of Queens, City and State of New York. The property was transferred on May 8, 2014 between IKI Associates LLC, as grantor, and 88 Ave Realty LLC, as grantee. The reported sale price was $5,420,000.

PRIOR ASSIGNMENT DISCLOSURES

I have performed no (or the specified) services, as an appraiser or in any other capacity, regarding the subject of this report within the three-year period immediately preceding this assignment.

PURPOSE AND FUNCTION OF THE APPRAISAL

The purpose of this appraisal report is to estimate the Land Value, the Gross Sellout Value Upon Completion and the Fallback Rental Value of the leased fee interest of the subject property. The function of this appraisal is to provide information to 88 Ave Realty, LLC. It does not possess any personal property, fixtures and/or intangibles. Hence the appraisal does not include appraisal of personal property, fixtures or intangibles.

88 Ave Realty, LLC
148-44/48 Hillside Avenue
& 148-31/43 88th Avenue
Jamaica, NY 11435

Re: 88 Ave Realty, LLC
148-44/48 Hillside Avenue
& 148-31/43 88th Avenue
Jamaica, NY 11435

To Whom It May Concern:

At your request, we have completed an Appraisal Report for the above referenced property. The appraisal states the opinion of the property's Market Value subject to the various Assumptions and Limiting Conditions set forth in the accompanying report. The accompanying report includes the pertinent data secured in our investigation, as well as the exhibits and the details of the processes used to arrive at the conclusion of value.

148-44/48 Hillside Avenue is situated on the south side of Hillside Avenue, in the Jamaica neighborhood of Queens, City and State of New York. The sites are identified on the Queens County Tax Map as Block 9694, Lot 26. The subject site is a rectangular shaped 4,275± square feet parcel of land. According to the architectural plans, the subject building will improved with a 6-story plus legal cellar, elevator, commercial building contains 1 retail store, 9 community facilities and 3 offices with a total gross building area of 17,373± square foot. The construction anticipates to be completed on or about September 1, 2017.

148-31/43 88th Avenue is situated on the north side of 88th Avenue, in the Jamaica neighborhood of Queens, City and State of New York. The sites are identified on the Queens County Tax Map as Block 9694, Lot 49. The subject site is an irregular shaped 24,554± square feet parcel of land. According to the architectural plans, the subject building will improved with a 8-story plus cellar, elevator, apartment building contains 109 apartments and 55 parking spaces with a total gross building area of 98,652± square foot. The construction anticipates to be completed on or about September 1, 2017.

We have appraised the Gross Sellout Value Upon Completion and the Fallback Rentals of the leased fee interest in this property for EB5 purpose. This report conforms to the current Uniform Standards of Professional Practice and the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA). As per prior agreement, this is an appraisal report, which is intended to comply with the

Lynn Wei, Director of Marketing and Business Development

Lynn Wei is the CNYCRC's director of marketing and business development. Ms. Wei is responsible for a full spectrum of business development initiatives including creating and overseeing international marketing strategies for all CNYCRC project offerings. She is also involved in managing client relations. Ms. Wei is also a senior business development associate at the Century Development Group. In this capacity, she focuses on creating Request for Proposals and general marketing materials, as well as developing a customer analytical database, and implementing strategic marketing and communication initiatives. Ms. Wei graduated with a Master of Science degree in Economics from Brooklyn College, City University of New York and a Bachelor of Administrative Degree in Marketing from Shanghai Finance University

David Pan, Vice President

David Pan is a vice president of CNYCRC. He has over 15 years of experience in fixed-income securities trading and risk management. Mr. Pan has worked in various roles at Credit Suisse, Citigroup, Deutsche Bank and the hedge fund industry. Formerly a Director at Credit Suisse in the Strategic Risk Management division covering Residential Mortgage Backed Security (RMBS) business, he was instrumental in developing models and methodologies in assessing the firm's risk exposure to the mortgage security market. Prior to his Wall Street career, Mr. Pan spent
10 years as a senior software engineer responsible for the development of the state-of-the-art fixed-income security trading and analytics software systems. He graduated with a Bachelor's degree in Computer Science from Queens College, City University of New York.

Anthea Quan, Accounting Controller

Anthea Quan serves as the director of accounting controller for CNYCRC. She is responsible for the accounting, financial reporting, and audit functions. Ms. Quan also performs management of operating cash flow and financial analysis for development projects and investor distribution. She is passionate about accounting and has experience working with a variety of small businesses. Ms. Quan graduated from Yanbian University in China with a bachelor of mathematics. She is fluent in Chinese, English and Korean.

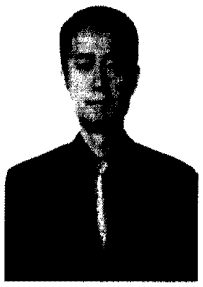
Tracy Law, Director of Project Management

Tracy Law is the director of project management of CNYCRC. Ms. Law is responsible for a full spectrum of the operation to ensure projects are done on time and within budget. Her constant communication with contractors and architects provides a strong network of relationships in the field. She is responsible for supervising and coordinating OS&E and FF&E. She is integral in bringing new hotels to full operation. Ms. Law graduated with a Bachelor of Science degree in Accounting from Queens College, City University of New York.

Qili Li, MD, Regional Center Principal

Qili Li, MD, FACOG, is a principal of CNYCRC. Dr. Li has been in private practice for more than 15 years specializing in the field of Obstetrics and Gynecology in downtown Flushing, Queens County, New York City. Dr. Li attended the Sophie Davis School of Biomedical Education. She graduated Magna Cum Laude. After receiving her Medical Doctor degree from New York Medical College, Dr.Li completed her internship and residency training in Obstetrics/Gynecology at North Shore University Hospital at Manhasset, New York. Dr.Li is board certified in the specialty of Obstetrics/Gynecology. She is also a fellow of the American College of Obstetrics/Gyneoclogy (ACOG). In recent years, Dr. Li has expanded her interest/investment into real estate. She is currently involved in several real estate development projects ranging from high end condominiums to hotel construction.

James Ho, Vice President



James Ho is a vice president of CNYCRC. Mr. Ho's role in the CNYCRC is to provide oversight of operations, maintain cohesion between the project's developer, general contractor, law and accounting firms, and to ensure overall compliance. Mr. Ho has extensive experience in computer programming, securities trading, and security related business. Currently, he is involved in real estate development of several projects in the New York City area. Mr. Ho graduated from Polytechnic University with a major in Electrical Engineering and Computer Science.

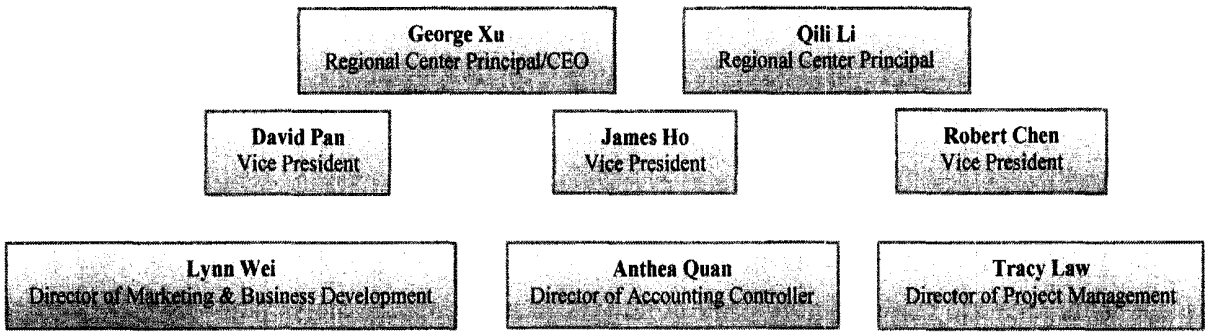
Robert Chen, Vice President

Robert Chen works for CNYCRC as the vice president, who oversees the overall operations of the Regional Center. He's also in charge of due diligence and evaluating potential projects and determining business feasibilities. Prior to joining CNYCRC, Mr. Chen had over 10 years' experience in a senior management position with FedEx. He has owned, managed, and operated companies in computer wholesale and repair business. Mr. Chen received his Bachelor of Science degree in Environmental Health Science from City University of New York.

SECTION VI: MANAGEMENT AND CORPORATE STRUCTURE

The business organizational structure and personnel experiences are as follows:

Business' organizational structure and its personnel's experience



George Xu, CEO/Regional Center Principal

George Xu is the founder and the principal of the Century New York City Regional Center (CNYCRC). Mr. Xu is also the founder and the President of Century Development Group, a real estate development company based in New York City. With nearly 20 years of real estate holding and development experience, he has worked on over a million square feet of real estate developments; mixed-use developments including residential, hospitality, office, and retail. He has also worked in all phases of assembly, acquisition, finance, design, construction, marketing, and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters, and he provides marketing oversight and policy guidance for the Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and Computer Science and a Master of Science degree in Computer Science from Polytechnic University, New York.

CONSTRUCTION AND OPERATION IMPACTS

Construction Impacts

Revised construction costs as provided by the Client are itemized. Please see the Economic Studies for details. Approximately 88% of the project's development budget can be claimed as having an economic impact to the Region. The adjustment was made by excluding debt service reserves, property taxes during construction and a portion of the estimated financing costs.

Annual Operations Impacts

Projected Year 5 operating revenues total [redacted] and represent an impact to final demand. It can be assumed that in the range of 40% to 45% of these annual operating costs for the hotel represent personnel/labor costs.

To sum up, the Jamaica project will create [redacted] jobs, including [redacted] obs from direct and indirect from construction employment, and [redacted] direct and indirect jobs from operation. The project intends to raise [redacted] from [redacted] EB-5 investors.

(b)(4)

Table 9-3 below shows there will be a total of [redacted] jobs created from operations, of which boh direct/indirect jobs.

DIRECT AND INDIRECT JOBS

Table A below presents the job creation associated with the Jamaica Project . Table A shows the annual revenue, the final demand multiplier, and the total number of jobs created by the construction, hotel operations, and rental income of the building. Since the construction will take more than 24 months, the economic impact figures for the hard construction costs and appropriate soft costs include direct as well as indirect and induced jobs. All figures are permanent jobs. The number of jobs created as a result of the Jamaica Project was determined using the RIMS II model. (b)(4)

Table A. Summary of Employment and Revenue Estimates

Activity	Exp/Rev mil cur $	Exp/Rev mil 2010 $	RIMS II Mult	Total Jobs	Direct Jobs
Hard construction costs			13.2149		
Architect & Engineering Svcs			11.9014		
Rental Income			13.0752		
Total					
All figures based on unrounded numbers					

JOBS REQUESTED BY THE EB-5 PROJECT

A. Jobs Arising from Construction Activities

In the case of the Jamaica Project , construction activity lasts for more than two years. Since the construction period will take more than 24 months, direct as well as indirect and induced jobs may be included in the EB-5 job count for hard construction costs (although not for FF&E) for each NAICS activity associated with the project's construction activities.

Table 8-3 below shows there will be a total of [ ] jobs would be created from the hard construction costs of the building. Output would rise about [ ] while household earnings would increase by about [ ] Table 8-4 shows the average output per new worker is about [ ] while average earnings are about [ ]

SECTION V: EMPLOYMENT AND JOB CREATION

(b)(4)

Based on the EB-5 Economic Impact Studies conducted by Evans, Carroll & Associates, Inc., the Jamaica Project will create [redacted] jobs, including [redacted] jobs from direct and indirect from construction employment, and [redacted] jobs from direct and indirect employees. The project intends to raise [redacted] from [redacted] EB-5 investors.

(b)(4)

The project is a mixed-use development. It is complex in terms of estimating its job creation effects. From permanent operations, impacts to final demand include the hotel, a real estate management entity that will lease commercial space, manage the condominium association and parking garage, plus the business operations of retail tenants. The issue of how the community center/space will be operated and whether income projections from that facility will be sufficient to support permanent employment are discussed in the Economic Impact Studies. In addition, the tenant-created employment is not included in the total calculation of the EB-5 capital raise.

The economic impact of the project was assessed and tabulated by Michael K. Evans of Evans, Carroll & Associates, Inc. Dr. Evans, Chairman of the company since 1980, is a specialist in EB-5 immigration analysis and economic impact studies of development projects and new construction. Dr. Evans holds a Ph.D. in Economics from Brown University and was an Assistant and Associate Professor of Economics at Wharton School, University of Pennsylvania. He was also Chief Economist at American Economics Group from 2000-2008. Please see Dr. Evans resume attached at **Exhibit 6**.

THE RIMS II INPUT/OUTPUT MODEL

Economic and job creation impact modeling to determine the likely economic and job creation impacts associated with the EB-5 project was performed using the RIMS II Input/Output model. RIMS II is widely used in both the public and private sector. In the public sector, for example, the Department of Defense uses RIMS II to estimate the regional impacts of military base closings. State transportation departments use RIMS II to estimate the regional impacts of airport construction and expansion. In the private-sector, analysts and consultants use RIMS II to estimate the regional impacts of a variety of projects, such as the development of shopping malls and sports stadiums.

The Project will receive the following permits:

Work Permits Schedule for Holiday Inn		
Permit:	Description:	Estimate Date:
Plan Approval		Oct-15
P-R Plan Review Application Receipt	Tree protection during construction	Nov-15
New Building Permit	To build new construction building	Jan-16
This is a vacant lot, so it's unnecessary to get a demo permit.		

(ii) **Satisfactory Compliance with *Matter of Ho*:**

Mr. George Xu has the appropriate qualifications that validate his position as an expert in the field, he is therefore in a position to be an authority on the construction budget and timeline.

In addition, George Xu's statement satisfactorily complies with the *Matter of Ho* in terms of comparison studies of the business described. On page 9 of the *Matter of Ho*, the submitted documents shall contain *"a comparison of competition's products."* And *"set forth the business' organizational structure and its personnel's experience"*. The letter and professional profile includes Mr. George Xu's previous experience and construction timeline and the attached documentation for Century Construction Group verifies their ability to accurately assess the construction budget based on the comparison studies of similar projects in similar locations.

PERMITS AND LICENSES

In New York City the construction is "as of-right" development which complies with all applicable zoning regulations and does not require any discretionary action (special permit or variance) by the City Planning Commission or Board of Standards and Appeals for approval. Assuming that the project complies with all other Code and Zoning regulations, the NYC Department of Buildings Plan Examiner Plan Examiner will approve the Plans, further to the architect's construction detailed blueprints and renditions.

It is not necessary for the project to seek the additional approvals of the City Planning Commission, or of the Local Community Board, or of any other outside party of interest. If the project complies with the applicable Zoning Laws currently in force, the developer is entitled to build. Therefore building permits are only valid for a limited amount of time and the project will apply for the relevant permits prior to the commencement of the construction activities.

Re: Jamaica Project / Mixed Use Condo, Retail, Medical office Development
148-44/46 Hillside Avenue, Jamaica, NY 11435
148-31/43 88th Avenue, Jamaica, NY 11435

Dear CSC EB-5 Unit Officer:

Century Construction Group was hired by 88th Ave Realty LLC as the general contractor on the above-referenced Project. I am the president of Century Construction Group and have worked in the construction industry for twenty years and have supervised, managed and/or constructed. My experience includes hospitality, commercial interior and residential projects. I have constructed similar projects to the proposed Jamaica Project in term of size, budgets and timeline. These projects include the Marriot Fairfield Inn, the Leavitt Manor Condominium and the Farrington Estate, all located in Flushing. I have been asked by 88th Ave Realty, LLC to provide you with some information concerning the Project in connection with certain funding obtained by EB-5.

Century Construction Group has advised that hard construction cost estimate would be [redacted] (b)(4)
The construction timeline is 27 months. This mixed used building consists of one eight-story residential building and one six-story retail and community/medical office building . The residential building will include 109 units of luxury condominium with exercise room, reading room, parking spaces and laundry room. The retail and community/medical office building will include retail spaces, community facility spaces, medical office spaces and parking spaces. The property is vacant land now and the excavation is scheduled to begin in December of 2015. I attest that the construction budgets and timeline are estimated based on established industry standards.

Very Truly Yours,

George Xu
President

35-06 Leavitt St., Suite CF-A Flushing, NY 11354
Tel: (718) 939 1060 Fax: (718) 939 1036
www.centurygroupdevelopment.com

budget was estimated by **Century Construction Group.** This was based on their previous experience of projects similar in size and nature and scope. [1]

Century Construction Group has worked in the construction industry for twenty (20) years and has supervised, managed and/or constructed similar projects to the Jamaica project, such as the Marriot Fairfield Inn, Leavitt Manor Condominium, and Whitestone Tower Condominium, which are all located in Flushing.

(i) Mr. George Xu is an Expert in the Field.

Founded and headed by George Xu, Century Development Group is an integrated Real Estate Development Company. Since the late 1990's, Mr. Xu has been involved in the developments of residential, commercial, mixed-use and hospitality projects primarily in the borough of Queens, New York. To date, George Xu has worked on over a million square feet of real estate developments; mixed-use developments including residential, hospitality, office, and retail. The total value of his completed projects is calculated to be over [redacted] The net worth of his current and developing projects is anticipated to be over [redacted] The total asset of his projects is over [redacted]

(b)(4) (b)(4) (b)(4)

Mr. George Xu is the owner of the Jamaica project and the owner of the proposed Century New York City Regional Center. With over 20 years of real estate holding and development experience, he has worked on over a million of square feet of real estate developments; mixed-use developments including residential, hospitality, office, retail, and in all phases of assembly, acquisition, finance, design, construction, marketing and sales. Mr. Xu's projects have involved close collaboration with the City of New York, as well as the State of New York on issues including zoning, land use, and environmental matters. Mr. Xu provides marketing oversight and policy guidance for the Century New York City Regional Center's operations. Mr. Xu holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Computer Science from Polytechnic University, New York.

11. MECHANICAL

11.01 HVAC system as per drawings
11.02 Provide and install exhaust & fresh air system as per drawings
11.03 Provide and install LG PTAC unit
11.04 Provide and install all kitchen and bath exhaust duct and fans
11.05 Provide and install HVAC system for lobby, trash storage and rec room Mitsubishi Citi-Multi

12. FIRE SYSTEM

12.01 Sprinkler system as per drawings
12.02 Stand Pipe system as per drawings
12.03 Provide and install sprinkler alarm system as per DOB and FDNY code

13. ELECTRICAL

13.01 Apply and install all electrical meters
13.02 Provide and install electrical panels
13.03 Provide and install lighting fixtures as per plan
13.04 Provide and install emergency exit lights
13.05 Provide and install receptacles
13.06 Provide and install Aiphone color audio / video intercom system
13.07 Provide and install all Verizon, TimeWarner lines
13.08 Provide and install 100 Amp panels in every Apt. unit
13.09 Provide and install 1600 ConEd SEB
13.10 Provide temporary electrical service

14. PLUMBING WORK

14.01 Provide all utility services and meters
14.02 Install copper water supply & no-hub drainage system and all vent pipes
14.03 Supply & install plumbing fixtures as per owner's schedule
14.04 Install new gas main service with meters
14.05 All supply and return water lines
14.06 All kitchen gas pipes to all equipment in buiding
14.07 Provide and install 1 duplex water booster and sewer e
14.08 Provide and install RZP as per design
14.09 Provide and install 3 150 Gal HWH and 1 25 Gal electrical HWH per residential
14.10 Provide and install all incoming water, sewer main as per plans

(A) Total Hard Construction Cost :

(b)(4)

(b)(4)

5. METALS

5.01 Concrete filled metal pan stairs
5.02 Metal framing and gates
5.03 Roof, railing and ladder
5.04 Structural metal framing
5.05 Provide and install steel dunnage
5.06 Omagalite exterior aluminum panel front and 2 sides

6. THERMAL & MOISTURE PROTECTION

6.01 Roof waterproofing
- a. Six-ply rubber roofing
- b. 2" rigid insulation
- c. Vent sheet
- d. Fire Stone 12 year labor and material warranty

6.02 Insulation
- a. Exterior wall insulation close cell sprayed on
- b. Interior wall insulation open cell sprayed on

7. DOORS & WINDOWS

7.01 Doors 1 3/4 " solid core doors, frames and hardware
7.02 Aluminum windows & storefront entrance by crystal or equal
7.03 All window system by crystal or equal per window schedule
7.04 All hollow metal door per schedule
7.05 Thermacore 490 garage door
7.06 Provide and install glass railing as per rendering

8. FINISHES

8.01 Gypsum board ceiling w / paint finished
8.02 Gypsum board wall w / paint finished
8.03 Epoxy paint for areaway, Elec.meter Rm., water meter Rm.
8.04 All apartment interior as per finish schedule
8.05 All hallways as per plan and finish schedule
8.06 All commercial, lobby as per design

9. CONVEYING SYSTEM

9.01 Provide and install Thyssen Krupp MRL 250FPM 2300# elevator
9.02 Standard cab $20,000 allowance

10. EQUIPMENT

10.01 Kitchen cabinets allowance is $5,000 per unit
10.02 All appliances
10.03 Bathroom accessories
10.04 Trash chute and compactor
10.05 Kitchen counter top to be Caesar Stone

"CONSTRUCTION COST DETAIL SHEET"

Project Location : 148-31/43 88th Ave&148-44/46 Hillside Ave, Jamaica, NY 11435

(b)(4)

SCOPE OF WORK:

1. GENERAL

1.01 Mobilization & preparation
1.02 Insurance-general liability 25M & workmen comp
1.03 Sign-offs
1.04 Permit applications
1.05 Provide all necessary SOE inspections
1.06 Provide all necessary TR-2 TR-3
1.07 Provide engineer on site for supervision of all foundation and shoring work
1.08 Provide all necessary surveys
1.09 Provide all necessary shop drawings

2. SITEWORK

2.01 Provide and Install roof protection on adjacent buildings
2.02 Scaffold
a. Provide and install Sidewalk Bridge
b. Provide and install scaffold to roof
c. Provide and install protection net to roof
d. Scaffold reinforcement
2.03 Shoring, Sheeting & Lagging as per SOE
2.04 Temporary Protection Plywood Fence
2.05 Provide and install exterior material hoist
2.06 Excavation and backfill as necessary
2.07 Provide and install sidewalk, trees, curb and curb as per approved BPP

3. MASONRY

3.01 Concrete block as per drawings
3.02 Stucco in rear of building
3.03 Stone on first floor as per rendering

4. CONCRETE

4.01 Foundation wall, straps beams and pile caps
4.02 Concrete Slabs
4.03 Roof Bulkhead
4.04 Sidewalk, curbs and pavement
4.05 Surveys and stakeout
4.06 All waterproofing of exterior foundation walls

(b)(4)

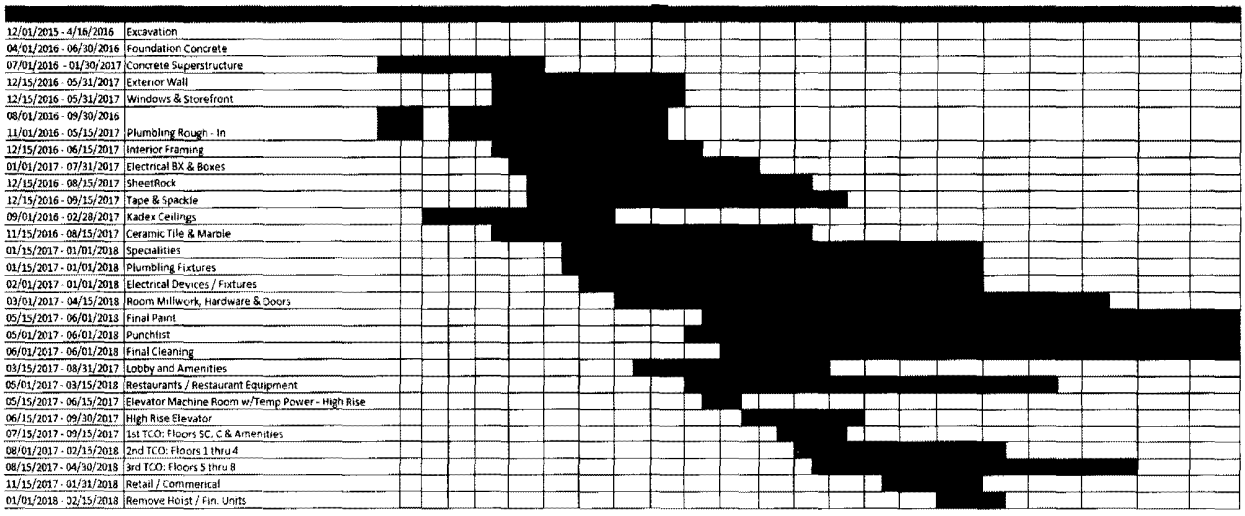
SECTION IV: CONSTRUCTION / PERMITS AND LICENSES

A. PARTICULARS OF THE CONSTRUCTION PHASES

Please refer to the timeline for the construction attached at **Exhibit 9.**
(Snap shot below)

This detailed construction timeline was produced by **Century Construction Group,** the General Contractors for the construction. The General Construction Verification Letter dated September 15, 2015 can be found at **Exhibit 14.**

Snapshot of the Construction Timeline



The construction of the Luxury Condominium project will take approximately 27-months to complete. The submitted schedule at **Exhibit 9.** The building is currently scheduled to start excavation soon.

The developer is scheduled to obtain the permit and licenses for construction and development of the project. The actual construction is expected to take place in December of 2015, and it is anticipated to be completed by February of 2018.

(b)(4)

The Parking Garage has 55 parking spaces. These parking spaces will be used by all the occupants of the building. It will be a paid-garage. At [redacted] per space, the total value upon completion would be [redacted] per space).

Base on the project forecast analysis, the total prospective market value upon completion by adding the completion values of all the sale components will be [redacted]

Profit Forecast:

Total Completion Project Value – Total Project Cost = Total Project Profit

[redacted]

(b)(4)

(b)(4)

Total Project Cost: [redacted]

This project consists of five components: Luxury Condominium, Commercial Retail, Community Facility/Medical Offices, and Parking Garage

Rental Approach:

The Luxury Condominiums will contain a total of 77,016 square feet with 109 condominium units. At [redacted] per square foot (psf), the annual rental income would be [redacted] psf).

The Commercial Retail has 7,174 square feet of space which consists of 6 retail stores. At [redacted] psf, the annual rental income would be [redacted] psf).

The Community Facility has a total square footage of 13,669. At [redacted] psf, the total sales would be [redacted]

The Parking Garage has 55 parking spaces. These parking spaces will be used by all the occupants of the building. It will be a paid-garage. At [redacted] per space rental per year, the total value upon completion would be [redacted] per space).

Based on the project forecast analysis, the total annual rental income will be [redacted]

Sales Approach:

The Luxury Condominiums will contain a total of 77,016 square feet with 109 condominium units. At [redacted] per square foot (psf), the retail sale would be [redacted] psf).

The Commercial Retail has 7,174 square feet of space which consists of 6 retail stores. At [redacted] psf, the retail sale would be [redacted] psf).

The Community Facility has a total square footage of 13,669. At [redacted] psf, the retail sale would be [redacted] psf).

(b)(4)

FINANCIAL PROJECTIONS AND ANALYSIS METHODOLOGY

The financial projection data of the project is provided by an Appraisal Report by Betsy Mak Appraisal Group, LLC. In order to examine the job creation based on the projections, the following analysis methodologies are considered: (1) reviewing Jamaica' Project's operational pro forma; (2) estimating the portion of that budget which would represent labor costs; (3) verifying the estimate for reasonableness by against the corresponding direct effects employment creation multipliers.

The Jamaica Project's forecasted market share and occupancy levels are based upon its anticipated competitive position within the market, as quantified by its penetration rate. The penetration rate is the ratio of a property's market share to its fair share.

The projections, demand capture, and occupancy performance for the Jamaica Project for these types of adjustments to market share within the defined competitive market. Consequently, the actual penetration factors applicable to the project and its competitors for each market segment in each projection year may vary from the penetration factors set out by the industry standards.

PROJECT PROFIT FORECAST

(b)(4)

The Project located at 148-46 Hillside Avenue, Jamaica, NY 11435, and 148-33 88th Avenue, Jamaica, NY 11435 and has an estimated total cost of approximately [redacted] After its total prospective market value upon completion of $[redacted] the project will achieve an anticipated profit of approximately [redacted]

Please see below for the breakdown:

Land Value:	
Hard Construction Costs:	
Soft and Other Costs:	

The figures are derived from the revenue estimates, which are based on a careful assessment of market conditions and likely achievable hotel rates and occupancy. Operating costs are based on industry norms. These costs and projections are supported by the independent Appraisal Report.

The Appraisal Report for the comparable set in the project's market is provided at **Exhibit 8.**

Please see below for the Rental Income Breakdown:

(b)(4)

COMMERCIAL RENT ROLL - SUMMARY

Unit	Lease Term	Market Rent	Square Feet	Annual Rent/S.F.

Annual Rent

RESIDENTIAL RENT ROLL

Type of Unit	# of Units	Monthly Rent	Annually Rent	Total Rent

The total projected annual rental income will be approximately

(b)(4)

It is to be noted that the first year of operations does not reflect anticipated long-term performance of the project. It only reflects the initial operations from the time the project first opens with little business, as it builds to full staffing complement, begins to work "the kinks" out of operations, gets marketing efforts underway and allows time for them to get traction, and builds the market image and place for the project. The term "stabilization" properly reflects the industry experience over most of the past century that after this initial ramp up, the project reaches a stabilized level that will be maintained during its 20 to 30 year economic lifespan.

The JCE Company intends to raise capital to cover the costs using both conventional financing and through business loans by means of a private placement offering to EB-5 investors. Specifically, the NCE will raise a maximum of [redacted] in EB-5 capital, which will be loaned to the JCE. The Company plans to sell EB5 Membership Units, at $500,000 per unit, to qualified foreign investors seeking to obtain permanent residence in the United States through the EB-5 Visa Program. No additional capital contributions are required.

Contingency Plan: As necessary, 88th Avenue Realty, LLC(JCE) may also receive temporary short-term bridge financing or traditional bank financing through lenders in order to commence construction and create jobs in advance of EB-5 funding.

SALES, COST, INCOME, AND INVESTMENT PROJECTIONS

SECTION III: FINANCIAL

VIABILITY OF THE PROJECT; PROJECT FUNDING & CAPITALIZATION EXIT PLAN; INCOME PROJECTIONS & REASONABLE ANALYSIS METHODOLOGY

EXIT PLAN & PROJECT VIABILITY

The loan from 88th Avenue EB5 Capital, LLC will be paid off in full either through the residential condominium sales, refinancing of building, retails and community facility upon stabilization. The project will not be refinanced or sold prior to the adjudication of the I-829 petitions.

The project principal has extensive experience and is confident that the proceeds from either strategy should be more than sufficient to pay off the EB-5 investors in full. However, in the event the above strategy is insufficient to pay off the loan in full, the borrower shall cover the shortfall from its own operating cash flow, or risk foreclosure and loss of its ownership of the Project to the Partnership. This is not a redemption clause. The EB-5 capital is placed "at risk". The developer will make the best efforts that are economically feasible to repay the EB-5 investors.

(b)(4)

USE OF CAPITAL

The Project's total cost is [redacted] which includes land costs estimated at [redacted] and development cost estimated at [redacted] consisting of hard construction costs of approximately [redacted] and soft costs of approximately [redacted] For analysis purposes this equates to a total development budget of [redacted] SF) of gross building area including parking decks. This budget includes hard costs, contingencies, financing, pre-opening and other soft costs, but excludes site acquisition.

media feed, including: Facebook, Linked In, Digg, You Tube, Twitter and more. The project will solicit new clients through postings on Oodle, Zillow and Craig's List.

Print: Driving phone calls, place large building signs, and place professional 25+ page brochures.

Location: Being that everything is close to Jamaica project, there is constant walk-in traffic, and the project is always nearby to assist clients.

Branding: The project will hire reputable and active local agencies with experience.

The project principals own Century Construction Group, an established brand in Flushing, New York. It has successfully completed and marketed similar projects such as Marriot Fairfield Inn., Leavitt Manor Condominium, Farrington Estate, all located in Flushing. The project principals plan to expand its existing midmarket to reach more audience through the Four Points Flushing Hotel project.

reduced interest rates and push to increase credit for consumers to have a positive effect on the overall condominium, cooperative and housing market in the New York metro region. We further expect housing rents to remain stable throughout the remainder of 2015. Please see **Appraisal Report** attached at **Exhibit 8** for more information.

JAMAICA PROJECT'S COMPETITIVE ADVANTAGES AND HIGHLIGHTS

BRANDING:

The Jamaica project anticipates entering into a management agreement with First Management Group. First Management Group is a full-service Real Estate Management firm. They offer hands on property management for residential, cooperative, condominium and commercial properties.

PROJECT HIGHLIGHTS:

- **Close proximity to Manhattan, New York**
- **5-min walk to subway station--E,F trains take only 20mins to Manhattan**
- **Only few minutes to JFK Airport, also very close to LGA**
- **109-unit luxury condominium with full facilities**
- **5 min walk to Jamaica center, close to all the shopping malls**
- **Modern design, very stand out in the neighborhood**
- **Large commercial spaces for all the doctor office, day care center, senior center and retail stores**

COMPETITORS : COMPARABLE SALES

The following residential developments have been identified in the Jamaica, NY area similar to Jamaica's proposed plan. This section focuses on other building sales acompared to the Jamaica project.

Queens Market Matrix	1Q-2015	%Chg (QTR)	1Q-2015	%Chg (YR)	1Q-2014

Inventory further tightened with 1% fewer listings than a year ago and days on market dropped 6%. Given these dynamics, the Manhattan market is notably under-supplied. At the rate of sales over the past year, the number of currently listed apartments in Manhattan is equivalent to just 3.8 months of supply, well below the six to nine months considered market equilibrium. Buyer competition, especially for lower priced units, is significant. The median price of studio, one, and two bedroom apartments all increased compared to last year, however three bedroom and larger residences actually decreased over the same period as more sales in this category shifted to the resale co-op market from new developments.

Rental

Queens - The housing market of Queens has been rising since last fall due to an improving local economy, low mortgage rates, and low inventory. According to the Elliman Report Queens Sales Report 1Q 2015, Median sales price jumped 20.7% to $446,434 from same period last year and 9th increase of the past 11 quarters. Average sales price rising 14.6% over the same period. The number of sales was in sync with the decline in supply, falling 18.7% to 2,567 over the same period.

The combination of falling sales and falling inventory kept the monthly absorption period essentially stable. Days on market, the average number of days between the date of last list price change and contract date, declined to 85 days form 103 over the same period.

Manhattan Market Matrix	1Q-2015	%Chg (qtr)	4Q-2014	%Chg (yr)	1Q-2014

Source: *Prudential Douglas Elliman 1st Quarter 2015*

The Corcoran Group 1st Quarter 2015 Report (Manhattan) indicated that during this period there were 3,776 market-wide sales, 12% higher than 1st Quarter 2014. Average sale price was 2% higher versus the Q1 2014, median sales price was up 6% and average price per square foot was up 5%. This quarter's strong sales performance resulted in the highest number of closings reported for any first quarter in over 6 years. However, the compared to 4th Quarter of 2014, the median sales price was lower by 3% and average price per square foot was lower than 5%.

New York City's Population 2010 Population: 8,175,133					
Borough	2000	2010	2013	2000-2010 % Change	2010-2013 % Change

Source: US Census Bureau, 2013 number is estimated.

Since 2010, the U.S. Census Bureau estimates that New York City's population increased from 8,175,133 in April of 2010 to 8,405,837 in 2013. This is an increase of 230,704 residents or about

2.8% over the 2010 mark. The largest change in the city's population occurred in Brooklyn, growing by 3.5%, followed by Queens 2.9%, Manhattan 2.5%, and the Bronx 2.4%. Staten Island 0.8% showed the smallest gains since 2010.

Residential Market

Sales

Prudential Douglas Elliman 1st Quarter 2015 market report indicated that apartment listings are increasing and the number of days on the market decreased 13% year over year; as compared to the previous quarter the number of days on the market decreased 4.8%. The inventory of apartments is up 5.5% to 5,243 available units compared to 2014. The level of discounting was 4.7% from 2.4% in the prior quarter. The report indicated a decrease in median sales price to $970,000 from $972,428 in 1Q 2014.

Demographics

Population

New York City is the most populous city in the nation, with over 8 million residents, and one of the largest populations in the world. It makes up over 42% of the population of the entire state of New York. Between 2000 and 2010, New York City's population reached 8,175,133 an increase of 2.1%. During this decade, the borough with the largest population growth was Staten Island while Queens had the smallest population growth.

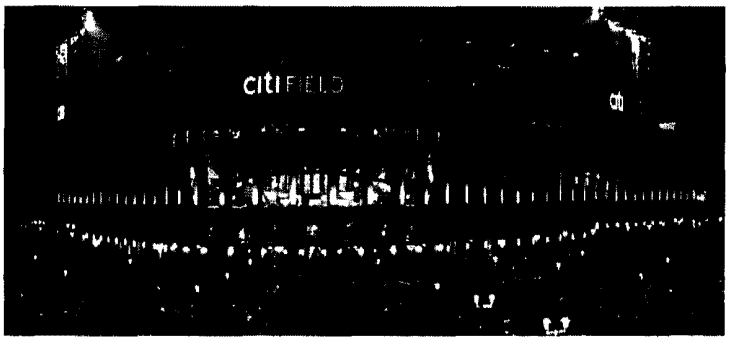
The chart below depicts New York City's population change during the past decade, and change between 2010 census and 2013 estimate by the US Census Bureau.

New York City has 578 miles of waterfront, while the total area is 304.9 square miles. Queens is the largest with 109.7 square miles and Manhattan is the smallest with 22.8 square miles.

New York City Land Area (in square miles)	
Bronx	42.4
Brooklyn	71.5
Manhattan	22.8
Queens	109.7
Staten Island	58.5
Total	**304.9**

The five boroughs land use is varied; the entire New York City is developed with primarily 1- to 2-family homes (564,723 lots), with Queens containing the highest number (246,705) and Manhattan having the least (3,719). The land use of New York City as of 2014 is illustrated in below:

Flushing Town Hall-Concert Hall, Queens Botanical Garden, Louis Armstrong House & Archives, and others.



Queens is one of the most ethnically diverse communities in the U.S. The Borough of Queens is home to more than 34,500 businesses, ranging from small retail outlets to large manufacturing plants. The project area encompasses some of the most commercially active portions of downtown Flushing, including the majority of Chinese and Korean businesses located in Flushing. Located one block from Main Street, the major thoroughfare in Flushing, the hotel is in an area known as "Chinese Flushing." The majority of the area's banking institutions, department stores, and office spaces are located on or near Main Street. A majority of the buildings and businesses are owned and patronized by the Chinese residents of the area; therefore, the neighborhood presents a fairly homogenous Asian image. Consequently, this area is a popular destination for Asian tourists who appreciate these somewhat familiar surroundings.

MARKET DEMANDS AND ANALYSIS METHOD

New York City is located in the southern most portion of New York State, the five counties or boroughs, which were incorporated in 1898 into a single entity, which consist of Bronx County, Kings County (Brooklyn), Queens County, Richmond County (Staten Island) and New York County (Manhattan). All of the boroughs are subdivided into various community districts and unofficial areas/neighborhoods.

associated services makes the area an attractive location for lodging facilities.

While modern-day business is the focus of Lower Manhattan, the market's historic representation makes the area unique. Among the historic attractions are Manhattan's oldest church, Trinity Church/St. Paul's Chapel, a national landmark built in 1766; Fraunces Tavern, which was built in 1719 and is the place where George Washington bade farewell to his officers; and the Federal Hall Memorial, the site where George Washington took the oath as America's first president.

Other points of interest in the Downtown area include the South Street Seaport, Battery Park, and the Federal Reserve Bank, to name a few. Access to the Statue of Liberty and Ellis Island is also provided from Battery Park, and represents some of the most important tourist attractions in New York City.

Lower Manhattan is expected to go through somewhat of a renaissance, fuelled by the redevelopment of the World Trade Center (WTC) site and the construction of a new transit station that will serve the transportation needs of Lower Manhattan.

World Trade Center Redevelopment

The WTC site now includes Tower 7, which was completed in May 2006 and developed by Silverstein Properties. Additional plans for the World Trade Center include the following. Please note that all data presented in relation to the WTC redevelopment has been sourced through the Lower Manhattan Development Corporation (LMDC).

- Four new skyscrapers (1 WTC, Freedom Tower; Towers 2, 3, and 4)
- National September 11 Memorial & Museum at the World Trade Center
- World Trade Center Transportation Hub
- Retail Complex
- Performing Arts Center

<u>Attractions in Flushing, Queens</u>

In addition to the Flushing Tennis Center and CitiField, Queens also hosts Queens Zoo, Aqueduct Racetrack,

ENT

Records, and Hershey's stores, as well as restaurants such as Ruby Foo's, the Bubba Gump Shrimp Company, Planet Hollywood Restaurant and Bar and Carmine's along with a number of multiplex movie theaters. It has also attracted a number of large financial, publishing, and media firms to set up their headquarters in the area including Ernst and Young, Reuters, New York Times, Barclays, Morgan Stanley, among many others.

Jacob K. Javits Convention Center is a large convention center at Eleventh Avenue on the west side of Manhattan. The exhibit space is over 675,000 square feet. On October 16, 2006, a groundbreaking ceremony was held to start construction of an expansion.

New York Cruise Piers is a world-class ship port situated on West 52nd Street, and offers ideal facilities for cruise arrivals and departures. New York Cruise brings the most spectacular—often the fastest, biggest, and most luxurious—passenger ships to the West Side of Manhattan.

Lower (Downtown) Manhattan

The Financial District contains an assortment of businesses, ranging from small retail shops to chain-affiliated department stores to financial houses and educational buildings. The area is primarily commercial in character and is home to the New York and American Stock Exchanges, the WTC Site, and the World Financial Center.

In addition, several large corporations have their headquarters in the area, such as Goldman Sachs, The Bank of New York, Deutsche Bank, the Federal Reserve Bank of New York, and many more. The close proximity of high-grade office space and

OPMENT

Liberty, and the Empire State Building. The theaters in the Broadway district attract international attention. Lincoln Center (the home of the Metropolitan Opera, the New York Philharmonic, the New York City Ballet and Opera, and the Juilliard School) is among the world's most important centers for the performing arts. The Metropolitan Museum of Art, the Museum of Modern Art, the American Museum of Natural History, and a number of the city's other museums and galleries are internationally respected.

In the borough of Queens lies the Flushing Tennis Center, home of the U.S. Open; CitiField, home of the New York Mets baseball team; and Flushing Main Street, a vibrant, bustling district for shopping and restaurants. Brooklyn is also home to some of New York's most famous attractions including Coney Island, the Barclays Center, and the Brooklyn Academy of Music, as well as numerous shops and restaurants in the Williamsburg neighborhood. Directly to the north of midtown Manhattan lays Harlem, home to the world-famous Apollo Theatre as well as numerous renowned educational institutions including Columbia University and City College. Further north is the borough of the Bronx, home to Yankee Stadium, the venue for the New York Yankees baseball team, and numerous concerts and events; and the immensely popular Bronx Zoo.

Major Destinations & Attractions

New York City is one of the most popular and frequently visited destinations in the United States. A few of the major attractions include:

Times Square: a major intersection at the junction of Broadway and Seventh Avenue and stretching from West 42nd to West 47th Streets. It boasts attractions such as ABC's Times Square Studios, where Good Morning America is broadcast live, elaborate Toys "R" Us, Virgin

THE TARGET MARKET & PROSPECTIVE CUSTOMERS

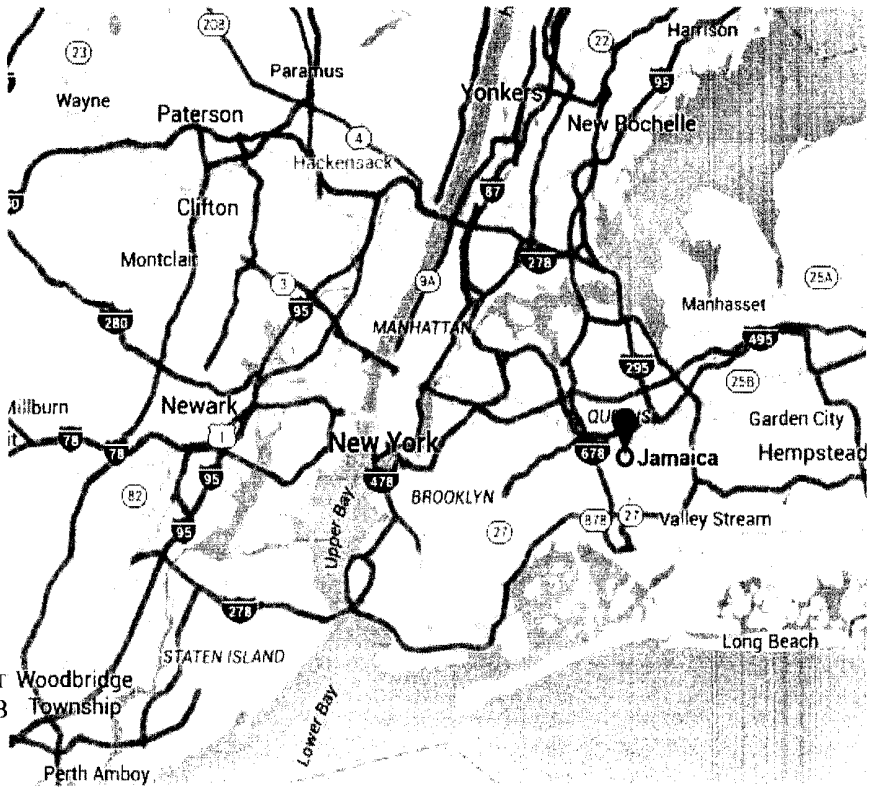
There is high demand of luxury condominium unit in Jamaica area due to its easy access to public transportation. We are targeting young professionals who work in Manhattan and are looking for luxury condos with great amenities, without paying the high rental price such as Long Island City and Manhattan.

Renowned for its cultural attractions, entertainment, restaurants, and retail outlets, New York City is one of the most popular tourist destinations in the country. The city is recognized as an international commercial and cultural center. It is home to the United Nations, the Statue of

Major thoroughfares include Long Island Expressway, Van Wyck Expressway, Clearview Expressway & Grand Central Pkwy. Long Island Expressway, which leads eastward to Long Island and westward to Brooklyn & Manhattan. Grand Central Pkwy, which leads eastward to Long Island and westward to Jackie Robinson Pkwy & Triboro Bridge. Van Wyck Expressway, which leads northward to Whitestone Bridge and southward to John F. Kennedy Airport. Clearview Expressway, which leads northward to Throgs Neck Bridge and southward to Hillside Avenue.

Commercial Use:

The prime commercial thoroughfares in the community are Archer Avenue, Hillside Avenue, Jamaica Avenue, Liberty Avenue, Merrick Boulevard, Parsons Boulevard, Guy R. Brewer Boulevard, Sutphin Boulevard, and Union Turnpike lined with predominantly one- to three-story commercial and mixed-use buildings, with retail space on the ground level. The majority of the shops and services in the area cater to the needs of the local community, including usages such as grocery stores, dry cleaners, bakeries, pharmacies, restaurants, etc.



SECTION II: MARKET ANALYSIS

This section includes the analysis of the target market, perspective customers, market demand and analysis method, and the project's competitive advantages and highlights.

Source of the data: The market analysis is provided by an Appraisal Report by Betsy Mak Appraisal Group, LLC. Betsy Mak Appraisal Group, LLC has been in business for ten years. They have appraisers covering all five boroughs of New York City and Nassau and Suffolk counties on the island. Betsy Mak is a Certified General Appraiser who has the highest level of appraisal licensing and more than ten years of appraisal experience.

Property types include residential, commercial, co-op, condo, and mixed-use; and specialize in estates and trusts. They are approved by many major lenders and FHA. Please see their website at www.betsymak.com for further information.

LOCATION

The Project is located in Jamaica, New York. Located in the Jamaica district of New York City's Queens Borough, the site is readily accessible to a variety of local, county, state, and interstate highways. Major interstates, such as Interstates 278, 495, and 95, connect Jamaica to other major cities – New Haven, Connecticut; Philadelphia, Pennsylvania; and not mention its close proximity to Manhattan, New York. Manhattan, the commercial center of New York City, may be easily accomplished via the Long Island Expressway, the Grand Central Parkway, the New York City Subway, and the Long Island Rail Road. The project's location is in a commercially active area in Jamaica.

Accessibility:

Public transportation in the area is adequate. The "E" & "F" subway line is available at Parsons Blvd Station, corner of Hillside Avenue and Parsons Blvd, two blocks away from subject. Local bus service is found along most major roadways including Hillside Avenue.

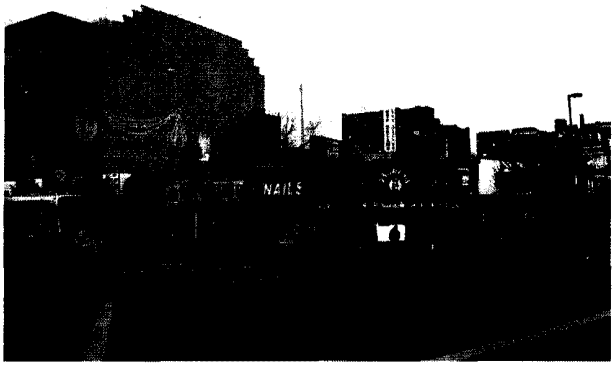
Service Center. The U.S. Food and Drug Administration's Northeast Regional Laboratory as well as the New York District Office are also located in Jamaica. Jamaica Center, the area around Jamaica Avenue and 165th Street, is a major commercial center, as well as the home of the Central Library of the Queens Borough Public Library. The New York Racing Association, based at Aqueduct Racetrack in South Ozone Park, lists its official address as Jamaica (Central Jamaica once housed NYRA's Jamaica Racetrack, now the massive Rochdale Village housing development). John F. Kennedy International Airport and the hotels nearby also use Jamaica as their address.

The following Images show Jamaica, Queens:



ARCHITECTURAL RENDERINGS & SITE PLAN

Below are architectural rendering and floor plans of the Project:

Jamaica is a middle-class neighborhood in the New York City borough of Queens. The neighborhood is part of Queens Community Board 12, which also includes Hollis, St. Albans, Springfield Gardens, Baisley Pond Park, Rochdale Village, and South Jamaica.

It was settled under Dutch rule in 1656 in New Netherland as Rustdorp. Under British rule, Jamaica became the center of the "Town of Jamaica". Jamaica was the county seat of Queens County from the formation of the county in 1683 until March 7, 1788, when the town was reorganized by the state government and the county seat was moved to Mineola (now part of Nassau County). In 1814, Jamaica became the first incorporated village on Long Island. When Queens was incorporated into the City of Greater New York in 1898, both the Town of Jamaica and the Village of Jamaica were dissolved, but the neighborhood of Jamaica regained its role as county seat. Today, some locals group Jamaica's surrounding neighborhoods into an unofficial Greater Jamaica, roughly corresponding to the former Town of Jamaica, including Richmond Hill, Woodhaven, St. Albans, Rosedale, Springfield Gardens, Hollis, Laurelton, Cambria Heights, Queens Village, Howard Beach and Ozone Park.

Jamaica is the location of several government buildings including Queens Civil Court, the civil branch of the Queens County Supreme Court, the Queens County Family Court and the Joseph P. Addabbo Federal Building, home to the Social Security Administration's Northeastern Program

Flood Map (represents locations for both sites)

PROJECT LOCATION AND TARGET EMPLOYMENT AREA

The project is located at 148-44/48 Hillside Avenue & 148-31 88th Avenue in Jamaica, NY 11435.

148-44/48 Hillside Avenue is situated on the south side of Hillside Avenue, in the Jamaica neighborhood of Queens, City and State of New York. The sites are identified on the Queens County Tax Map as Block 9694, Lot 26. The subject site is a rectangular shaped 4,275± square feet parcel of land. The subject will have a 6-story plus legal cellar, elevator, commercial building, and contains 1 retail store, 9 community facilities, and 3 offices with a total gross building area of 17,373± square foot.

148-31/43 88th Avenue is situated on the north side of 88th Avenue, in the Jamaica neighborhood of Queens, City and State of New York. The sites are identified on the Queens County Tax Map as Block 9694, Lot 49. The subject site is an irregular shaped 24,554± square feet parcel of land. The subject will have an 8-story plus cellar, elevator, apartment building, and contains 109 apartments and 55 parking spaces with a total gross building area of 98,652± square foot.

The construction anticipates to be completed on or about September 1, 2017 for both buildings.

The location is in census tract 238 in Queens County, a designated Targeted Employment Area ("TEA") as of August 20, 2015, confirmed by the Empire State Development and New York State Department of Labor. Please see the TEA letters, attached at **Exhibit 4.**

Thus, the project is located in a TEA and shall have a minimum investment requirement by each member of $500,000 USD. Membership units for the EB-5 investors shall be sold a [redacted] (b)(4) USD, of which $500,000 USD shall be utilized towards the construction of the project and [redacted] USD shall go towards an Administrative Fee.

(b)(4)

SECTION I: THE BUSINESS

OVERVIEW OF THE EB-5 PROJECT
DESCRIPTION OF THE BUSINESS; SERVICES & OBJECTIVES

COMMERCIAL & RESIDENTIAL DEVELOPMENT

The Proposed Jamaica EB-5 Project entails a new construction of two mixed-use buidlings, which will consist of a 6 story commercial building containing 1 retail store, 9 community facilities and 3 offices, and an 8 story apartment building containing 109 apartments and 55 parking spaces. Both buildings will be located in Jamaica, Queens, one of the five boroughs of New York City.

The Jamaica Project is located in Jamaica, Queens in New York City. 148-44/48 Hillside Avenue is situated on the south side of Hillside Avenue, and 148-31/43 88th Avenue is situated on the north side of 88th Avenue. The location is a targeted employment area ("TEA") as of August 20, 2015. The proposed Jamaica Project will be further strengthened by rental units, retail spaces, and office spaces.

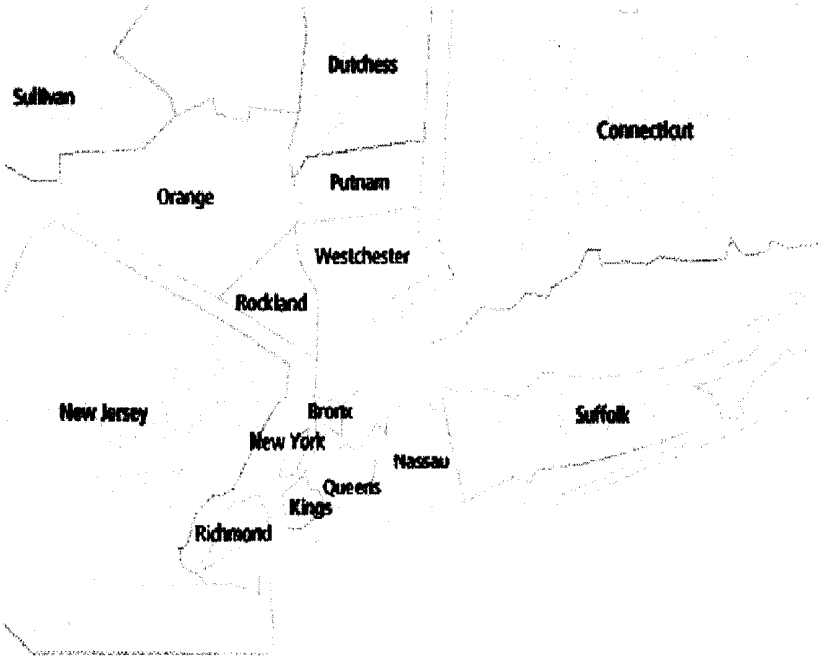
- Other miscellaneous professional and technical services - 5419

88th Avenue EB5 Capital, LLC ("NCE") is managed by Century New York City Regional Center, LLC. The Regional Center was designated as a "regional center" on May 14, 2015. The NCE was organized as a New York Limited Liability Company on August 7, 2015 with the primary business objective to raise EB-5 capital to fund real estate development projects such as the mixed-use development located at 148-44/48 Hillside Avenue & 148-31/43 88th Avenue in Jamaica, NY 11435. The project is owned by the project developer 88th Avenue Realty, LLC where Mr. George Xu is the principal.

GEOGRAPHIC SCOPE:

The Jamaica Project is located in Queens County. The RC includes the following seven (7) counties in the RC's geographic boundaries: Queens County, New York County, Kings County, Bronx County, Richmond County, Westchester County and Nassau County. Please see the County map below.



Pursuant to the Policy Memorandum on EB-5 Adjudications Policy (PM-602-0083), an amendment requirement is not required if investment opportunities arise outside the geographic area referenced above.

NAICS CODES:

The RC development project requests designation in the following industries based on the North America Industry Classification System **("NAICS")** Code:

The NCE is seeking to raise a maximum of [redacted] in investor capital from [redacted] EB-5 investors for the EB-5 Immigrant Investor Program (hereinafter "EB-5") for the Luxury Condominium. According to the Economic Impact Report, the project will create [redacted] jobs, including [redacted] jobs from direct and indirect from construction employment, and [redacted] direct/indirect jobs from operation.

LOCATION – TARGETED EMPLOYMENT AREA

The EB-5 investment within a targeted employment area is calculated at a ratio of $500,000 for every 10 jobs created. The maximum credited foreign investment the [redacted] jobs can support under the EB-5 Program is [redacted] capital raise. The Project is seeking to raise [redacted] from the EB-5 Program.

The project is located at 148-44/48 Hillside Avenue & 148-31/43 88th Avenue in Jamaica, NY 11435. The location is in census tract 238 in Queens County, a designated Targeted Employment Area ("TEA") as of August 20, 2015, confirmed by the Empire State Development and New York State Department of Labor. Please see the TEA letters, attached at **Exhibit 4.**

Thus the project is located in a TEA and shall have a minimum investment requirement by each member of $500,000 USD. Membership units for the EB-5 investors shall be sold at [redacted] USD, of which $500,000 USD shall be utilized towards the construction of the project and [redacted] USD shall go towards an Administrative Fee.

DEVELOPMENT COSTS:

The total cost of the Project is estimated at [redacted] consisting of land costs of approximately [redacted] hard construction costs of approximately [redacted] and soft and other costs of approximately [redacted] The owner's equity is approximately 26.6% of the development costs [redacted] The maximum raise of EB-5 investment funds would be [redacted]

The project developers anticipate receiving traditional bank financing in place for the remainder of the financing. Thus, intermediary short-term bridge financing may used to complete the construction. EB-5 investment may be used to replace a bridge loan from other commercial lenders. As necessary, the JCE may also provide temporary short-term bridge financing through member loans in order to commence construction and create jobs in advance of EB-5 funding. .

REGIONAL CENTER: (b)(4)

EXECUTIVE SUMMARY

The Jamaica Project plans to construct and develop a mixed-use development, which will included two buildings: The first building will be a six-floor commercial space with 17,099 rentable sf. The second building will be an eight-floor residential building with 109 units and 84,709 rentable sf. The total building gross size is 101,808 sf. The buildings will include retail spaces, office spaces, residential spaces, community facilities, and 55 paid parking spaces (the "Project") in Jamaica, Queens, one of the five boroughs of New York City. The project buildings are located at 148-44/46 Hillside Avenue in Jamaica, NY 11435 & 148-31/43 88th Avenue in Jamaica, NY 11435.

88th Avenue EB5 Capital, LLC will be the new commercial enterprise, (hereinafter the "NCE") a newly formed entity for the purpose of raising EB-5 investment capital. 88th Avenue Realty, LLC is the job creating entity (hereinafter "JCE") that owns and operates the project. The NCE will be managed by Mr. George Xu, the developer and owner of the Project. The business entity structure is outlined in the table below.

FUNCTION	ENTITY NAME
New Commercial Enterprise (NCE)	88th Avenue EB5 Capital, LLC
Regional Center (RC)	Century New York City Regional Center, LLC
Job Creating Entity (JCE)	88th Avenue Realty, LLC

The Jamaica Project entails new construction of two mixed-use buildings, which consists of a six-floor commercial space with 17,099 rentable sf, and an eight-floor residential building with 109 units and 84,709 rentable sf. The buildings will include retail spaces, office spaces, residential spaces, community facilities, and parking spaces in Jamaica, Queens, one of the five boroughs of New York City. The construction and operation of the regional base of invested capital, the creation of new jobs, and the associated economic growth effects will be put into effect with the capital raised from immigrant investors through the EB-5 Program.

100% Recycled 30% PCW

Over 30 articles in major academic journals and publications (list on request)

• Estimated the size and economic importance of the fluoropolymer industry, and calculated economic impact of shutting down domestic production.

• Built an econometric model to examine how U.S. tax and regulatory policies help determine whether the gold mining industry would invest in the U.S. or other countries. Testified before Congress to help defeat legislation inimical to the mining industry.

• Built an econometric model to predict consumer bankruptcies, based on recent growth in consumer credit outstanding, the overall economic environment, and recent changes in credit regulations

• Estimated the economic impact of the ethanol subsidy on the U.S. economy and Farm Belt States, including the impact on the balance of payments, employment, and tax receipts. Testified before Congress to help pass legislation to extent subsidies to the ethanol industry.

• Built an econometric model to determine the impact of updating and improving the system of locks on the Upper Mississippi River on corn prices and exports, farm income, and the overall economy.

Economic Impact of the Demand for Ethanol, Diane Publishing Company, 1998

How to Make Your Shrinking Salary Support You in Style for the Rest of Your Life, Random House, 1991

The Truth About Supply-Side Economics. Basic Books, 1983.

A Supply-Side Model of the U. S. Economy, mimeo (prepared for Senate Finance Committee), 1980.

An Econometric Model of the French Economy: A Short-Term Forecasting Model. O.E.C.D, March 1969.

Econometric Gaming (with L. R. Klein and M. J. Hartley). Random House, 1969.

Macroeconomic Activity: Theory, Forecasting and Control. Harper & Row, 1969.

The Wharton Econometric Forecasting Model (with L.R. Klein), Economics Research Unit, Wharton School: University of Pennsylvania Press, 1967. Enlarged edition, 1968.

• Determined the economic impact of the Oneida Indian gaming casino on the Green Bay metropolitan area.

• Estimated the negative economic impact on the Milwaukee area if a new Indian gaming casino were to be built in Kenosha, Wisconsin.

D. Economic Impact of Smoking Bans and Higher Taxes

• Testified on economic impact of smoking bans in Canada; certified as an expert witness by the Court.

• Examined the impact of smoking bans on restaurant sales in several different locations in the U.S. to determine how much sales changed when these bans were imposed, and the differential effects depending on whether these bans were partial or total.

• Determined the cross-border effects on retail sales from differential rates in cigarette, gasoline, and alcohol excise taxes

• Determined the economic impact of higher cigarette taxes on minority group employment.

• Estimated the economic impact and loss of Federal and state tax revenues when higher cigarette prices lead to increased smuggling.

E. Consulting Projects for Travel and Tourism

• Built an econometric model to predict tourism trips and revenues for the major regions of the U.S. economy.

• Constructed econometric models to predict tourism in Las Vegas and Orlando.

• Using the IMPLAN model, predicted economic impact of tourism and travel expenditures for all counties in Pennsylvania.

F. Other Private Sector Consulting Projects

• Calculated the revenue gain at the Federal, state and local level generated by domestic manufacturing of Airbus parts and equipment.

• Calculated the economic impact of proposed EPA bans on fluoropolymer production.

N• Calculated the economic benefits of EB-5 programs for a mixed-used retail shopping center in the New York City metropolitan area.

N• Calculated the economic benefits of EB-5 programs for foreign investors for proposed shopping centers in five separate counties in Southern California, including differential impacts of building the shopping centers in different counties.

B. Projects for State and Local Governments

• Constructed an econometric model for the State of New York and determined the change in employment, labor income, and tax revenues for 43 different tax changes proposed by the Governor's office.

• Constructed a detailed econometric model for the State of Pennsylvania to determine the economic impact of the complete panoply of state taxes levied; the model contains over 1,000 equations. In cooperation with American Economics Group, the model was developed to simulate the effect of changes in any state tax rate on households and businesses by income deciles, household status, age of individuals, size of households, and many other demographic variables. The change in business taxes can also be simulated for detailed industry classifications.

• Determined whether the Washington, D.C. water and sewer authority should accept a high bid for a new waste disposal system. Decision to reject has saved the authority over $200 million, as construction prices turned down sharply as predicted.

• Built an econometric model to determine the "tax gap" caused by Internet sales for the state of Minnesota.

• Determined appropriate levels of shelter grants individual counties in New York State, and for utility allowances in New York City. Reviewed and prepared testimony in ongoing court cases in these areas.

• Calculated the economic impact of the revitalization of downtown Milwaukee, Wisconsin.

C. Economic Impact of Casino Gaming

• Built an econometric model to predict the growth of the gaming industry over the next decade, and the economic impact of that industry on employment and tax revenues at the Federal and state levels.

• Estimated the economic impact of Indian casino gaming nationally and for the State of Wisconsin.

N• Prepared the economic analysis for a proposed EB-5 regional center in the San Francisco Bay area that included calculations for 10 different types of industries.

N• Prepared economic impact calculations for proposed EB-5 regional centers in New York City and Northeastern New Jersey.

• Calculated the economic impact of a rehabilitated office building in Albuquerque, New Mexico, including the increase in high quality jobs.

• Calculated the economic impact of a rehabilitated skilled nursing center in East Los Angeles, California, including the impact on nearby census tracts.

N• Calculated the economic impact of development of warehouse and light industrial manufacturing space in Las Vegas, Nevada.

N• Calculated the economic impact of rehabilitation and expansion of a vacation and health spa in Sharon Springs, New York

N• Calculated economic impact of revitalizing an old resort hotel and adding new facilities for Lake Geneva, WI.

• Calculated the employment and tax effects for a portfolio of projects undertaken under the New Market capital program.

E• Calculated generic employment changes for proposed EB-5 project for an Inland Port in Palm Beach County, FL

N• Calculated the economic impact of construction of El Monte Village in El Monte, CA.

• Calculated the economic impact of moving the Social Security Administration building in Birmingham, AL, and revitalizing the surrounding neighborhood.

• Calculated the economic impact of rehabbing and expanding the Everett Mall in Everett, WA.

• Determined the economic impact of building a new medical center in Charleston, SC

N• Calculated economic impact of expanding Sugarbush resort in VT. Study included expansion of existing facilities and addition of new facilities.

• Calculated economic impact for new market tax credit program in Portsmouth, N.H. Study included both overall economic impact, and the increase in employment and income and the decrease in the unemployment rate and incidence of poverty in individual census tracts.

N• Calculated the economic benefits of EB-5 programs for foreign investors for a mixed-use construction project, including a hotel, retail stores, apartments, and a sports stadium in the Washington, D. C. metropolitan area

N• Determined the nationwide economic impact of a $1 billion investment in Mississippi for a new hybrid motor vehicle plant.

N• Determined the economic impact of expanding a shipyard in Southeastern Louisiana.

N• Calculated the economic impact of a new shopping center in Buena Vista, California, and two other generic shopping centers in Los Angeles and San Bernardino counties.

E• Calculated the economic impact of enhancing resort areas in eight rural counties in Colorado.

N• Calculated the economic impact of the rehabilitation of Fitzsimons Village in Aurora, Colorado, by adding an office building with medical labs, hotel, shopping center, and residences.

E• Determined the economic impact of a mixed-use commercial center for the Kansas City metropolitan area.

N• Calculated the number of jobs created for a film production company in New York City.

N• Calculated economic impact of small-scale rooftop solar panels in various counties in California.

N• Calculated economic impact of 7 different types of proposed businesses for a proposed regional center in the Bay Area of California.

N• Determined the economic impact of a new biological research park, office building, and logistics center in Wooster, Ohio.

E• Calculated the economic effect of a mixed-use urban renewal project in Cleveland, Ohio.

N• Calculated economic impact of dairy farm and cheese processing plant in Northern California.

N• Determined economic impact of a shipyard, food processing plant, and semiconductor plant for a proposed regional center in Louisiana and Mississippi.

N• Calculated the economic impact of a new gaming casino in Natchez, Mississippi.

N• Developed an Input/output Model for Guam, which was then used to calculate the economic impact of several generic projects.

N• Calculated the economic impact of a retail shopping center in suburban Los Angeles County.

N• Prepared an economic impact analysis for the "timber to homes" project for a proposed regional center in Colorado.

N• Calculated the economic impact for a proposed regional center in Baltimore, Maryland that would include the rebuilding of depressed areas in East Baltimore and along the riverfront.

N• Prepared the economic analysis for a proposed EB-5 regional center for the entire state of Florida that included impact calculations for 14 different types of industries.

N• Calculated the economic impact of building and operating a mixed-use facility with medical offices, hotels, and apartments for a proposed EB-5 regional center in Queens, NY.

E• Determined a Targeted Employment Area for Philadelphia, PA as part of a proposed EB-5 regional center for the Philadelphia area.

N• Calculated the economic impact of a proposed office building and mixed-use facility for an EB-5 regional center in Dallas, Texas

N• Calculated the economic impact for various mixed-use projects for a proposed EB-5 regional center in the greater New York City area, including an extended stay hotel, urgent care center, financial lending firm for alternative assets, retail stores, apartments, office space, warehouses, industrial "flex" space, entertainment centers, restaurants, conference and convention centers, nursing home and assisted living facilities, medical offices, medical technology facilities, and high-tech manufacturing.

N• Calculated the economic impact of "green" hotels in 10 counties in Central California.

N• Calculated the economic impact of generic projects in manufacturing, financial services, health services, hotels, and restaurants for a proposed regional center for the state of Florida.

E• Calculated the economic impact of 12 different types of economic activity for an expansion of the Palm Beach Regional Center to five contiguous counties.

N• Calculated the economic impact of a new auto parts plant in Alabama to supply parts to Kia automobiles.

N• Calculated the economic impact of opening fast-food restaurants in Miami/Dade and Broward counties in FL.
N• Calculated the economic impact of a mixed-use commercial center in Flushing, Queens County, NY.

E• Calculated the economic impact of revitalizing and renovating part of the Brooklyn Navy Yard for "green" manufacturing facilities.

E• Calculated the economic impact of 12 different types of economic activity for various counties in Charlotte and Sarasota counties, FL

E• Calculated the economic impact of four new manufacturing and distribution companies in Palm Beach County, FL.

N• Calculated the economic impact of developing a resort area and building residences in rural Tennessee.

N• Calculated the economic impact of developing and operating a resort area in Southern Arizona.

N• Calculated the economic impact of revitalizing the depressed East Side of Cleveland, Ohio, with new commercial and industrial buildings.

N• Calculated the economic impact for a fractional-ownership marina in Port Charlotte, FL, plus office space, retail stores, restaurants, and a home brokerage office.

N• Calculated the economic impact of construction and operation of four retirement homes in Vermont.

E• Calculated the economic impact of an upscale retail shopping center in Vail, CO. and a medical office building in Edwards, CO (both in Eagle County).

E• Calculated economic impact of a wind turbine manufacturing plant in Larimer County, CO

N• Calculated economic impact of a hotel, retail stores, restaurants, office buildings, and bank facilities in Pasadena, CA

N• Calculated economic impact of a luxury hotel and condominiums in Destin, FL

N• Calculated economic impact of constructing and operating a mixed-use commercial project in Jupiter, FL

E• Determined whether 17 possible restaurant locations in Miami/Dade and Broward Counties qualified as Targeted Employment Areas.

E• Determined the economic impact of opening and operating a slot-machine casino in Hanover, MD, as part of a proposed EB-5 regional center for the Baltimore metropolitan area.

N• Calculated the economic impact of renovating and expanding a restaurant on Martha's Vineyard, MA, as part of an EB-5 regional center in that state.

N• Determined the economic impact of assembling and installing solar panels for residences in the state of LA.
E• Determined a Targeted Employment Area for Dallas, TX as part of a proposed EB-5 regional center for the Dallas area.

N• Calculated the economic impact for various mixed used projects for a proposed regional center for the entire State of Texas, including shopping centers, office buildings, restaurants, assisted living centers, medical technology facilities, and other personal and business services.

N• Calculated the economic impact for the construction and operation of several fast-food restaurants in 10 counties in central California.

N• Calculated the economic impact for the renovation and expansion of a shopping mall in Greenville, SC.

E• Calculated the economic impact of buying existing apartment buildings at deep discount prices, renovating and operating them, in 21 counties in FL.

N• Calculated the economic impact of building and operating an institute for proton cancer therapy for a proposed EB-5 regional center in Brooklyn, NY.

E● Calculated the economic impact of building and operating low-income housing in Boston, MA.

N● Calculated the economic impact of constructing and operating assisted living facilities in eight rural Texas counties.

N● Calculated the economic impact of a mixed-use commercial project in Riverside County, CA.

E● Calculated the economic impact of opening a manufacturing plant for "green" motor vehicles in the Detroit, MI area.

E● Calculated the economic impact of constructing and operating hotels and restaurants in Columbus, MS.

E● Calculated the economic impact of operating restaurants in the Hotel W in Hollywood, CA.

N● Calculated the economic impact of a mixed-use commercial project in McCook, IL (suburban Chicago).

N● Calculated the economic impact of constructing and operating a water-based amusement facility in San Diego, CA.

N● Calculated the economic impact of a mixed-use commercial facility in suburban Cincinnati, OH (project is in KY).

E● Calculated the economic impact of constructing and operating a casino, hotel, and restaurant in Las Vegas, NV.

N● Calculated the economic impact of a new academic institution for alternative energy in Santa Clarita, CA.

N● Calculated the economic impact of several mixed-used projects in San Francisco, Alameda County, Santa Clara County, and Fresno County.

N● Calculated the economic impact of a super energy store and solar farm in Riverside County, CA.

N● Calculated the economic impact of a prostate cancer treatment center in South Carolina.
E● Calculated the economic impact of refurbishing and expanding retail space at the George Washington Bridge in New York City.

E● Calculated the economic impact of building Atlantic Yards, new stadium for the New York Nets, in Brooklyn, NY

N● Calculated the economic impact of an assisted living center and several mixed-use commercial facilities in the Reno, NV area.

E● Calculated the economic impact of buying residential properties at deep discount prices, refurbishing and selling them, in South Florida.

E● Calculated the economic impact of a wastewater treatment plant in Victorville, CA

N● Calculated the economic impact of drilling for geothermal energy and constructing and operating power plants in several counties in Nevada

E● Calculated the economic impact of a vacation club operation in Orlando, FL

E● Calculated the economic impact of constructing and operating an extended-stay hotel in Boston, MA

E● Calculated the economic impact of constructing and operating an assisted living facility in Walton County, FL

N● Calculated the economic impact of manufacturing and constructing residential and commercial steel modular buildings in Lee County, FL

E● Calculated the economic impact of a chain of yogurt and juice stores and restaurants in southern Florida

E● Calculated the economic impact of two mixed-use commercial developments in Orange County, CA.

E● Calculated a Targeted Employment Area by census tracts for six counties in the Houston, TX metropolitan area

E● Calculated the expansion of new hybrid car manufacturing facility from Mississippi to Tennessee and Virginia.

E● Calculated the economic impact of construction and operation of a skilled nursing facility in Las Vegas, NV.

N● Calculated the economic impact of construction and operation of a proton cancer treatment center and medical offices buildings in Los Angeles County, CA.

E● Determined the economic impact of improving facilities at the Port of Baltimore in order to attract more shipping from the Panama Canal when the locks are widened.

N● Calculated the economic impact of a major hotel and resort area in Ft. Lauderdale, FL.

N● Calculated the economic impact of building steel homes in South Florida, including the local manufacture of steel fabricated parts.

E● Calculated the economic impact of constructing and operating a hotel at Times Square in New York City.

N● Calculated the economic impact of a mixed-used residential and commercial project in Atlanta, GA.
E● Calculated the economic impact of expanding and opening new restaurants in Dallas, TX. In a separate project, calculated the economic impact of renovating, refurbishing, and operating a boutique hotel in Dallas, TX.

E● Calculated the economic impact of developing and operating a chain of children's playrooms and party facilities in South Florida

E● Calculated the economic impact of developing a new stadium for the Nets basketball team, to be located in Brooklyn, NY

E● Calculated the economic impact of developing a Marriott hotel in Washington, D.C.

E● Calculated the economic impact of developing and operating a casino for foreign patrons in Las Vegas, NV

E● Calculated the economic impact of operating a series of yogurt fast-food restaurants in South Florida

E● Calculated the economic impact of constructing steel homes and commercial buildings in South Florida

N● Calculated the economic impact of construction and operation of a farm distillery in Vermont

N● Calculated the economic impact of purchase and renovation of deeply discounted residential properties in South Florida

N● Calculated the economic impact of a hotel to be built near LaGuardia Airport in Queens, NY

N● Calculated the economic impact for several mixed-use commercial and residential properties for a regional center covering southern Wisconsin and northern Illinois.

N● Calculated the economic impact for mixed-use commercial project in Flushing, NY

E● Calculated the economic impact for major new hotel near the Washington, D. C. conference center

N● Calculated the economic impact of an assisted living center in suburban Atlanta, GA

N● Calculated the economic impact of an office tower in mid-town Manhattan for the diamond trade

N● Calculated the economic impact of three mixed-use commercial and residential projects in Santa Clara County, CA

N● Calculated the economic impact of six mixed-use commercial and residential projects in Los Angeles, Orange, Riverside, and San Bernardino counties

N● Calculated the economic impact of operating a chain of pizza restaurants in southern Florida.

N● Calculated the economic impact of constructing and operating an assisted living facility in Atlanta, GA

E● Calculated the economic impact of constructing and operating an expansion of University Hospital in Cleveland, OH

N ● Calculated the economic impact of a new business to store and process field crops in Madison, MS

N● Calculated the economic impact of operating food service establishments and assisted living centers in 40 counties in Texas.

E● Calculated the economic impact of developing a mixed-use commercial center in Miami, FL

N● Calculated the economic impact of renovating a theater in New York City to show film highlights of previous Broadway hits.

N● Calculated the economic impact of renovating and operating distressed buildings in the San Francisco Bay area.

E● Calculated the economic impact of a mixed-use commercial center in Montgomery County, TX

E● Calculated the economic impact of expanding a manufacturing facility to produce more energy-efficient lighting in Sarasota, FL

N● Calculated the economic impact of developing facilities for amateur sporting events in northern GA

N● Calculated the economic impact of developing a mixed-use commercial center in Missoula, MT

N● Calculated the economic impact of operating call centers in Las Vegas, NV, and other western Nevada counties

E● Calculated the economic impact of constructing and operating a proton cancer treatment center in Boca Raton, FL

E● Calculated the economic impact of constructing and operating a "Green Box" facility in Detroit to process waste material on a pollution-free basis.

E● Calculated the economic impact of renovating and expanding commercial property in Lower Manhattan

N● Calculated the economic impact of constructing student housing and retail stores in Davie, FL

E● Calculated the economic impact of constructing residential housing near Harvard University

E● Calculated the economic impact of developing mixed-use commercial centers in Broward County, FL

E● Calculated the economic impact of renovating a Dallas apartment building

E● Calculated the economic impact of renovating and operating a nursing home in Las Vegas, NV

E● Calculated the economic impact of constructing a hotel and shopping center in Miami, FL

E● Calculated the economic impact of developing a design center in Miami/Dade county, FL

N● Calculated the economic impact of constructing and operating a company for manufacturing dental implants in Cuyahoga County, OH

N● Calculated the economic impact of constructing and operating a mixed-use commercial facility in Brooklyn, NY

N● Calculated the economic impact of constructing and operating an office building for financial services in downtown Manhattan, NY

N● Calculated the economic impact of constructing and operating a mixed-use facility in Southern California

N● Calculated the economic impact of constructing and operating a retail shopping center in Tampa, FL

N● Calculated the economic impact of constructing and operating a retail shopping center in Tampa, FL

N● Calculated the economic impact of constructing and operating a mixed-use commercial building in Seattle, WA

N● Calculated the economic impact of constructing and operating a charter school in Arizona

N● Calculated the economic impact of constructing and operating a resort in northeastern Utah

N● Calculated the economic impact of operating an online video game company

N● Calculated the economic impact of constructing and operating a hotel in New York City

N● Calculated the economic impact of constructing and operating a fashion mall in South Florida

E● Calculated the economic impact of construction and operation of a new automobile assembly plant in Petersburg, VA

N● Calculated the economic impact of operating a call center for the U.S. government in Muskogee, OK

N● Calculated the economic impact of developing a mixed-use commercial and residential center in Scottsdale, AZ

N● Calculated the economic impact of constructing and operating a "Green Box" facility in New Jersey to process waste material on a pollution-free basis.

N● Calculated the economic impact of constructing and operating a "Green Box" facility in Washington State to process waste material on a pollution-free basis.

E● Calculated the economic impact of constructing and operating a new hotel in Coral Gables, FL

E● Calculated the economic impact of developing a new residential community in Brevard County, and retail stores and restaurants in St. Lucie County, FL

E● Calculated the economic impact of constructing and operating a mixed-use commercial building in Queens, NY

E● Calculated the economic impact of operating a livery service in Queens, NY

N● Calculated the economic impact of constructing and operating residential properties in Southern California

N● Calculated the economic impact of operating a film and TV production studio in Los Angeles, CA

N● Calculated the economic impact of drilling oil wells in Montana

N● Calculated the economic impact of constructing and operating various residential and commercial buildings for 43 counties in Texas

E● Calculated the economic impact of constructing and operating a restaurant and dinner theater in Guam

N● Constructed an input/output model for the Commonwealth of the Northern Mariana Islands, and used it to calculated the economic impact of constructing and operating a restaurant in Saipan.

E● Calculated the economic impact of constructing and operating a new hotel in Miami, FL

E● Calculated the economic impact of constructing and operating a resort and wellness center in South Florida

N● Calculated the economic impact of expanding and operating a ski resort in Vermont.

N● Calculated the economic impact of constructing and operating residential and commercial buildings in 20 counties in South Central Texas

N● Calculated the economic impact of constructing and operating a hotel near the Newark, NJ airport

E● Calculated the economic impact of constructing and operating a company to process health insurance benefits in South Florida

E● Calculated the economic impact of constructing and operating a veterinary hospital in Palm Beach County, FL

N● Calculated the economic impact of constructing and operating various residential and commercial buildings for all counties in MA, CT, RI, and NH

N● Calculated the economic impact of constructing and operating a residential construction company in Maryland

N● Calculated the economic impact of constructing and operating various residential and commercial buildings for the entire state of Oklahoma

N● Calculated the economic impact of constructing and operating hotels, assisted living centers, and mixed-use commercial buildings in 8 counties in Southern California

N● Calculated the economic impact of constructing and operating a charter school in Broward County, FL

N● Calculated the economic impact of renovating a former public housing project in Chicago, IL

N● Calculated the economic impact of starting a high-tech company for optical displays in Orlando and Gainesville, FL

N● Calculated the economic impact of constructing and operating luxury hotels in four Southern California counties

E● Calculated the economic impact of expanding a manufacturing company in Ann Arbor, MI

N● Calculated the economic impact of reconverting an old mill building into offices and other commercial uses in Bristol County, MA

N● Calculated the economic impact of a film and TV production studio in Los Angeles, CA

N● Calculated the economic impact of constructing and operating various residential and commercial buildings in 35 Texas counties.

N● Calculated the economic impact of constructing and operating the world's tallest residential structure in Chicago, IL

N● Calculated the economic impact of constructing and operating a mixed-use commercial and residential building in Seattle, WA

N● Calculated the economic impact of constructing and operating a hotel in Cleveland, OH

N● Calculated the economic impact of a research facility in Jupiter, FL

N● Calculated the economic impact of constructing and operating an assisted living center in Horry County, SC

N● Calculated the economic impact of constructing and operating a chain pharmacy in Chicago, IL

E● Calculated the economic impact of constructing and operating a high-end hotel and resort in Aspen, CO

N● Calculated the economic impact of constructing and operating an assisted living center in Dallas, TX

E● Calculated the economic impact of constructing and operating an medical assistance company in Bronx, NY

N • Calculated the economic impact of producing movies in New Mexico

N • Calculated the economic impact of developing and operating a chain of child learning centers in Houston, TX

N • Calculated the economic impact of developing and operating a chain of medical research and supply centers in Houston.

N • Calculated the economic impact of developing and operating a chain of frozen yogurt stores in a wide area along the Gulf of Mexico, including locations in Florida, Alabama, Mississippi, Louisiana, and Texas

N • Calculated the economic impact of developing and operating assisted living centers and ancillary activities for several locations in Northeast Florida.

N • Calculated the economic impact of the construction and operation of an assisted living center in Santa Ana, CA

N • Calculated the economic impact of the construction and operation of several BBQ restaurants in South Florida.

N • Calculated the economic impact of the drilling oil wells in 8 counties in Texas and Louisiana.

N • Calculated the economic impact of operating coal mines for metallurgical coal in West Virginia.

N • Calculated the economic impact of operating gold mines in Alaska.

N • Calculated the economic impact of constructing and operating a mixed-use commercial center in Flushing, NY

N • Calculated the economic impact of constructing and operating two hotels, one in downtown San Diego, and one in Escondido, CA

N • Calculated the economic impact of expanding and operating an auto racing track in Palm Beach, FL

N• Calculated the economic impact of building and operating mobile housing villages for disaster relief.

N• Calculated the economic impact of operating an "incubator" for research on medical devices, preparations, and services in Houston, TX.

N• Calculated the economic impact of constructing and operating a mixed-use commercial center in Denver, CO.

N• Calculated the economic impact of constructing and operating a charter school in Miami/Dade County, FL

E• Calculated the economic impact of constructing and operating a hotel in Manhattan, NY

E • Calculated the economic impact of several mixed-use commercial projects in Southern California (4 such projects, each one covering 4 to 6 counties, including Clark County, NV)

E • Calculated the economic impact of a hotel in Norwalk, CT

E • Calculated the economic impact of copper mines throughout the state of Arizona

E • Calculated the economic impact of water park and hotel in Arlington Heights, IL (suburban Chicago)

N • Calculated the economic impact of renovation and expansion of Las Vegas casino (3 separate projects)

N • Calculated the economic impact of construction and operation of mixed-use shopping and commercial center in Hollywood Park, FL

N • Calculated the economic impact of development of office building in South Union Lake region of Seattle, WA

E • Calculated the economic impact of Development of mixed-use commercial and residential building in downtown Seattle, WA

N. • Calculated the economic impact of commercial mixed-use projects in New York City, upstate New York, and Northern New Jersey (one project)

N • Calculated the economic impact of developing and operating a major amusement park complex (rival to Disney World) near Lake Okeechobee, FL

N•. Calculated the economic impact of constructing and operating a hotel and conference center in Toledo, Ohio.

N. • Calculated the economic impact of renovating and expanding the New York Military Academy in Newburgh, NY

N • Calculated the economic impact of developing a mixed-use commercial project in downtown Philadelphia, PA (2 separate projects)

N • Calculated the economic impact of a film studio to produce motion pictures and TV programs in Los Angeles, CA.

N • Calculated the economic impact of building student housing in Arlington, TX

N • Calculated the economic impact of developing and operating a manufacturing plant for sports medical devices in suburban Chicago, IL

N • Calculated the economic impact of developing natural gas wells and wind farm in the Pocono Mountains section of Pennsylvania.

N • Calculated the economic impact of an assisted living center, hotel, and water park in Eastern CT.

N • Calculated the economic impact of a series of child day care and learning centers in San Antonio and Austin, TX

N • Calculated the economic impact of a mixed-use commercial and cultural center in Chinatown, Philadelphia

E • Calculated the economic impact of developing and operating charter schools in Florida (4 projects)

N • Calculated the economic impact of developing the Boston Seaport project near the Boston Harbor.

E • Calculated the economic impact of a mixed-use hotel and commercial project in downtown Boston, MA

E • Calculated the economic impact of expanding the Hialeah racetrack, Hialeah, FL

E • Calculated the economic impact of developing and expanding a resort area in Benton Harbor, MI

N • Calculated the economic impact of developing and operating a Holiday Inn near the World Trade Center, Manhattan

N • Calculated the economic impact of developing and operating a Marriott Courtyard hotel in downtown Houston.

N • Calculated the economic impact of building a greenhouse in Central California.

N. Calculated the economic impact of developing an aircraft manufacturing plant in Northeast Arkansas.

N. Calculated the economic impact of developing and operating alternative fuels plant in Clark County, NV.

N • Calculated the economic impact of a destination winery and associated attractions in North Carolina.

E • Calculated the economic impact of building and operating a luxury hotel in Palm Beach, FL

N • Calculated the economic impact of operating a Kosher cheese plant in upstate New York

E • Calculated the economic impact of developing and operating a hotel in Chicago, IL

N • Calculated the economic impact of expanding the operations of a plumbing and HVAC contractor

E • Calculated the economic impact for 4 separate projects in Guam, based on the input/output model previously developed by ECA

E • Calculated the economic impact of a resort in the Commonwealth of the Northern Mariana Islands, based on the input/output model previously developed by ECA.

E • Calculated the economic impact of drilling and extracting oil, natural gas, and natural gas liquids, Oklahoma (2 projects)

E • Calculated the economic impact of expanding a golf and ski resort, and a furniture manufacturing plant, in Northern New Hampshire

E • Calculated the economic impact of constructing and operating a medical facility and student dormitory in Brooklyn, NY

N • Calculated the economic impact of oil drilling and extraction in Marion County, TX

E • Calculated the economic impact of developing and operating mixed-use facilities in Los Angeles

N • Updated an input/output model for Puerto Rico, and used this model to determine the economic impact of constructing and operating a resort in Boqueron Bay

E • Calculated the economic impact of renovating properties for Mississippi State University and adding a hotel

E • Calculated the economic impact of renovating an assisted living facility in Anniston, AL

E • Calculated the economic impact of constructing an apartment tower in Phoenix, AZ

E • Calculated the economic impact of constructing and operating a hotel in Dallas, TX. Also calculated the impact of two assisted living centers in Dallas.

N • Calculated the economic impact of a mixed-use commercial facility in New London, CT.

N • Calculated the economic impact of a mixed-use commercial facility in suburban Chicago, IL

• Calculated the economic impact of a hotel, casino, and commercial mixed-use properties on the island of Matsu, Taiwan Republic (not an EB-5 project but similar methodology was used)

N • Calculated the economic impact of extracting lithium compounds from the Salton Sea in Imperial County, CA

N • Calculated the economic impact of constructing and operating geothermal power plants in southern CA

E • Calculated the economic impact of constructing luxury hotels and condominiums in Manhattan (6 separate projects)

N • Calculated the economic impact of producing motion pictures and TV programs in Miami, FL

E • Calculated the economic impact of constructing and operating a hotel, shopping center, and residences in Boca Raton, FL

E • Calculated the economic impact of developing and operating a time-sharing resort on Lake Tahoe, CA

N • Calculated the economic impact of constructing and operating a medical complex in the Houston, TX metropolitan area.

N • Calculated the economic impact of constructing a new interchange for the Pennsylvania Turnpike and I-95.

E • Calculated the economic impact of constructing and operating a mixed-use commercial facility in Newark, NJ

E • Calculated the economic impact of improving the infrastructure at the waterfront in Oakland, CA

E • Calculated the economic impact of constructing and operating a hotel in San Diego CA.

E • Calculated the economic impact of constructing and operating a hotel in downtown Cleveland, OH

E • Calculated the economic impact of constructing three multi-family residential properties in Austin, TX.

E • Calculated the economic impact of renovating and operating the former Wilshire hotel in Los Angeles.

E • Calculated the economic impact of constructing and operating a luxury hotel in Austin, TX

E • Calculated the economic impact of constructing a mixed-use industrial facility in Pflugerville, TX

E • Calculated the economic impact of constructing and operating charter schools in several different locations in Florida, and in Chicago (5 separate projects).

N • Calculated the economic impact of constructing and operating a manufacturing plant for wood pellets used for heating in Southern Georgia

E • Calculated the economic impact of constructing and operating a wind farm in the Texas panhandle.

E • Calculated the economic impact of constructing several luxury apartment buildings and hotels in Manhattan (4 separate projects)

E • Calculated the economic impact of operating a steel distribution center in Palm Beach County, FL

N • Calculated the economic impact of operating a boat for cleaning and processing fish anchored off the Mississippi River in Kentucky.

E • Calculated the economic impact of constructing and operating hotels in Seattle, WA (2 separate projects)

N • Calculated the economic impact of operation of a facility for bio-science trials, Newark, NJ

N • Calculated the economic impact of building and operating a steel mill in Northeast Arkansas.

E • Calculated the economic impact of expansion of commercial facilities in Cleveland, OH in (a) the area around University Circle, and (b) the downtown Flats area.

N • Calculated the economic impact of constructing and operating a geothermal power plant in Oregon.

E • Calculated the economic impact of constructing and operating a luxury apartment building in downtown Manhattan

E • Calculated the economic impact of constructing and operating a senior living facility in Palm Beach County, FL

E • Calculated the economic impact of constructing several multi-family residential buildings in Texas (3 separate projects)

E • Calculated the economic impact of operating a home insurance company to relieve the burden of Citizens Insurance in the State of Florida.

E • Calculated the economic impact of constructing and operating a restaurant chain specializing in high-quality health foods, Palm Beach County, FL

E • Calculated the economic impact of constructing and operating multi-family residential properties, hotels, and senior living facilities in the Denver metropolitan area.

E • Calculated the economic impact of constructing and operating multi-family residential properties, hotels, and senior living facilities in the Atlanta metropolitan area.

E • Calculated the economic impact of constructing and operating multi-family residential properties, hotels, and senior living facilities in the Atlanta metropolitan area.

E • Calculated the economic impact of constructing and operating multi-family residential properties, hotels, and senior living facilities in the Miami metropolitan area.

E • Calculated the economic impact of producing a series of 10 major motion pictures ($100 million or more each) in the New York City area.

E • Calculated the economic impact of constructing luxury homes on Key Largo, FL

N • Calculated the economic impact of construction and operation of three projects in Puerto Rico: a hotel in San Juan, a condo/hotel village in Arecibo, and a power plant in Loiza. Used Puerto Rico input/output model updated by ECA.

N • Calculated the economic impact of construction and operation of a time-sharing condominium in Hawaii.

E • Calculated the economic impact of constructing and operating a large Ferris Wheel on the Las Vegas strip, including the impact of advertising revenues and ancillary retail space.

E • Calculated the impact of operating an insurance company in South Florida.

N • Calculated the economic impact of construction and operation of sports complex in Attleboro, MA.

E • Calculated the economic impact of construction and operation of sports stadium and related retail ventures in Las Vegas, NV

E • Calculated the economic impact of construction and operation of resort complex in Hawaii

E • Calculated the economic impact of construction and operation of mixed-use commercial and residential property in Emerald Falls, OK

E • Calculated the economic impact of construction and operation of five hotels in rural Texas

N • Calculated the economic impact of developing and operating oil wells in the Bakken Formation in North Dakota.

E • Calculated the economic impact of construction and operation of 4 mixed-use buildings in the New York City metropolitan area.

E • Calculated the economic impact of construction and operation of a hotel in Queens, NYC

E • Calculated the economic impact of constructing and operating a hotel near LaGuardia airport, New York

E • Calculated the economic impact of constructing and operating a restaurant and wine bar on the Las Vegas strip.

E • Calculated the economic impact of constructing a medical complex in the Bronx, NY

E • Calculated the economic impact of constructing and operating a theme park restaurant in Downtown Disney World, Orlando, FL

E • Calculated the economic impact of constructing and operating an oil refinery in the Houston, TX metropolitan area

N • Calculated the economic impact of developing a planned town with single and multi-family residences, commercial space, and solar energy on a ranch in Hendry County, FL

E • Calculated the economic impact of developing a luxury condominium in Miami, FL

E • Calculated the economic impact of constructing and operating a hotel near Times Square, New York City

E • Calculated the economic impact of constructing and operating a hotel in Pascagoula, MS

E • Calculated the economic impact of constructing and operating a hotel in Orlando, FL

E • Calculated the economic impact of constructing and operating a senior living facility in suburban Atlanta, GA

E • Calculated the economic impact of construction and operation of apartment building in Washington, DC.

E • Calculated the economic impact of construction and operation of medical complex in Flushing, Queens, NY.

E • Calculated the economic impact of construction and operation of hotel in Chicago

E • Calculated the economic impact of construction and operation of insurance plan for pets, headquartered in New York City.

E • Calculated the economic impact of construction and operation of hotel in the Gowanus district of Brooklyn.

E • Calculated the economic impact of construction and operation of hotel near Times Square, Manhattan

E • Calculated the economic impact of construction and operation of 3 senior living and residential facilities in Southeast FL.

E • Calculated the economic impact of construction and operation of senior living and residential facilities in Seattle WA.(3 different projects)

E • Calculated the economic impact of construction and operation of charter school in Palm Beach County, FL

E • Calculated the economic impact of construction of mixed-use commercial project and infrastructure in New York City.

N • Calculated the economic impact of construction and operation of pellet mill in Arkansas, used to make fuel pellets mainly for export to Europe.

E • Calculated the economic impact of construction of senior living facilities in Houston, Texas

E • Calculated the economic impact of construction of skilled nursing facility in Las Vegas, NV

E • Calculated the economic impact of construction and operation of hotel in Chicago

E • Calculated the economic impact of construction and operation of wholesale distribution center and retail outlets in Queens, NYC

E • Calculated the economic impact of construction and operation of New Quincy Market in Quincy, MA.

E • Calculated the economic impact of operation of fund for providing capital for production of films in New Orleans, LA

E • Calculated the economic impact of renovation and operation of mixed-use facilities and rebuilding of infrastructure in Harlem, Manhattan, NYC

E • Calculated the economic impact of construction and operation of mixed-use residential and commercial buildings in New York City (2 projects)

E • Calculated the economic impact of construction and operation of "Discovery New York" entertainment center

E • Calculated the economic impact of construction and operation of hotel in Los Angeles (2 projects)

N • Calculated the economic impact of construction and operation of plant for steel fabrication in Alabama.

E • Calculated the economic impact of construction and operation of hotel and condominium in San Bernardino county, CA

N • Calculated the economic impact of construction and operation of a chain of frozen yogurt restaurants in the Gulf Coast area stretching from Florida to Texas

E • Calculated the economic impact of construction and operation of drilling for oil and gas wells in Texas

E • Calculated the economic impact of construction and operation of proton cancer center in Los Angeles County

E • Calculated the economic impact of construction and operation of hotels in Los Angeles (3 projects)

E • Calculated the economic impact of construction and operation former Deauville hotel in Miami Beach, FL

E • Calculated the economic impact of construction and operation of boutique hotel in Ontario, CA.

E • Calculated the economic impact of construction and operation of hotel in mid-town Manhattan.

E • Calculated the economic impact of renovation and operation of a commercial mixed-use building in San Francisco.

E • Calculated the economic impact of construction and operation of luxury condominium building in downtown Manhattan.

E • Calculated the economic impact of construction and rental income of a medical facility in Winston-Salem, NC

E • Calculated the economic impact of construction and rental income of office building in mid-town Manhattan.

E • Calculated the economic impact of construction and rental income of office building in downtown Cleveland, OH.

E • Calculated the economic impact of construction and operation of mixed-use commercial and residential project in Tacoma, WA.

E • Calculated the economic impact of construction and operation of senior living facility in Chicago.

N • Calculated the economic impact of construction and operation of manufacturing plant to produce synthetic coke fuel for steel manufacturing in rural West Virginia.

N • Calculated the economic impact of construction and operation of hotel and resort on the U. S. Virgin Islands

E • Calculated the economic impact of construction and operation of geothermal energy project in Nevada

E • Calculated the economic impact of construction and operation of hotel in Kenosha, WI

E • Calculated the economic impact of construction and operation of hotel in Hudson County, NJ (2 projects)

E • Calculated the economic impact of construction and operation of hospital in Chicago

E • Calculated the economic impact of renovation of old luxury hotel in Yonkers, NY

E • Calculated the economic impact of construction and rental income of apartment in Seattle, WA

E • Calculated the economic impact of construction and operation of restaurant in Las Vegas

E • Calculated the economic impact of construction and operation of bottle cap manufacturing plant

E • Calculated the economic impact of construction and operation of hotel in Michigan

E • Calculated the economic impact of construction and operation of charter school in South Florida (2 projects)

E • Calculated the economic impact of construction and rental income of apartment building in Jersey City

E • Calculated the economic impact of construction and operation of hotel in Brooklyn

E • Calculated the economic impact of construction and operation of hotel in Oakland, CA

E • Calculated the economic impact of construction and operation of hotel in Queens, NY

E • Calculated the economic impact of construction and operation of hotel and resort in the Mariana Islands

E • Calculated the economic impact of renovation and operation of hotel in Adams Morgan section of Washington, DC

E • Calculated the economic impact of construction and operation of hotel in Farmers Market section of Dallas

E • Calculated the economic impact of renovation of old Taystee Baking facility in Harlem, Manhattan, NY

E • Calculated the economic impact of development of master plan project for Treasure Island, San Francisco

E • Calculated the economic impact of construction and operation of hotel and resort in Puerto Rico

E • Calculated the economic impact of construction and operation of hotel in Yonkers, NY

E • Calculated the economic impact of construction and rental income of an apartment building in Hollywood, CA.

E • Calculated the economic impact of development of a sports stadium in Los Angeles

E • Calculated the economic impact of construction and operation of a hotel in Tacoma, WA

E • Calculated the economic impact of construction and operation of a hotel in Nyack, NY

E • Calculated the economic impact of construction and operation of a mixed-use building in Atlanta, GA

E • Calculated the economic impact of construction and operation of a charter school in Palm Beach County, FL

E • Calculated the economic impact of construction and operation of mixed-use buildings in Chicago (2 projects)

N • Calculated the economic impact of construction and operation of a sawmill in Arkansas

E • Calculated the economic impact of construction and operation of a hotel in Miami, FL

E • Calculated the economic impact of construction and operation of a hotel on the West Side of Manhattan

E • Calculated the economic impact of construction and operation of a mixed-use building in Temecula, CA

E • Calculated the economic impact of construction and operation of a charter school in Sarasota, FL

E • Calculated the economic impact of construction and operation of a gold mine in Washoe County, NV

E • Calculated the economic impact of construction of luxury housing development in Northern Virginia

E • Calculated the economic impact of renovating part of the Oakland, CA waterfront

E • Calculated the economic impact of construction and operation of a hotel in Puerto Rico

E • Calculated the economic impact of construction and operation of a warehouse in Chicago

E • Calculated the economic impact of renovation and expansion of the Nassau Coliseum, Nassau County, NY

N • Calculated the economic impact of construction and operation of country and western Music center in Riverside County, CA

E • Calculated the economic impact of construction and operation of mixed-use commercial building, Staten Island, NY

E • Calculated the economic impact of construction and operation of hotel in Queens, NY

E • Calculated the economic impact of renovation and expansion of a Blue Cross Call center in Columbus, GA

E • Calculated the economic impact of construction and operation of the Brooklyn Bridge marina and yacht club

E • Calculated the economic impact of construction and rental income of an apartment building in Houston, TX

E • Calculated the economic impact of construction and operation of a hotel building in Nashville, TN

E • Calculated the economic impact of construction and operation of a hotel in the NoMad district of Manhattan

E • Calculated the economic impact of construction and rental income of a townhouse development in Dublin, CA

E • Calculated the economic impact of construction and rental income of an housing development in Dallas, TX

E • Calculated the economic impact of construction and operation of a Times Square hotel in Manhattan

E • Calculated the economic impact of construction and operation of hotels in various counties in the Permian Basin in West Texas

E • Calculated the economic impact of construction and operation of a hotel building in Houston, TX

E • Calculated the economic impact of construction and rental income of high-rise hotels in downtown Chicago (3 projects)

N • Calculated the economic impact of construction and operation of an amusement park in suburban Phoenix, AZ

E • Calculated the economic impact of construction and operation of a mixed-use building in Stamford, CT

E • Calculated the economic impact of construction and operation of a hotel, resort, and casino in the Commonwealth of the Mariana Islands (CNMI).

E • Calculated the economic impact of construction and operation of a mixed-use building in Stamford, CT

E • Calculated the economic impact of construction and operation of a combined hotel and day care center, Queens, NY

E • Calculated the economic impact of construction and operation of a charter school in Broward County, FL

E • Calculated the economic impact of construction and operation of a mixed-use building in Stamford, CT

E • Calculated the economic impact of construction and operation of boutique hotel in Flushing, Queens, NY

E • Calculated the economic impact of construction and operation of several fast-food seafood restaurants in Miami/Dade County, FL

N • Calculated the economic impact of construction and operation of technology incubator in the Boston, MA area.

E • Calculated the economic impact of construction and operation of various hotels in Brooklyn and Queens, NY (3 projects)

E • Calculated the economic impact of construction and operation of a hotel and restaurants in Rancho Cucamonga, FL (2 projects)

E • Calculated the economic impact of construction and operation of assisted living center in Las Vegas, NV

N • Calculated the economic impact of expansion of a manufacturing plant to produce electric vehicles and parts, Jackson County, OR

E • Calculated the economic impact of construction and operation of residential housing development in South Florida (2 projects)

E • Calculated the economic impact of construction and operation of the Orlando Skypark in Orlando, FL

E • Calculated the economic impact of construction and operation of drilling and operating oil and gas wells in Texas (3 projects)

E • Calculated the economic impact of construction and operation of senior living facility in Flushing, Queens, NY

E • Calculated the economic impact of renovating and expanding the Queen Mary ship and adding various entertainment facilities

E • Calculated the economic impact of construction and operation of a water park in Temecula, CA

E • Calculated the economic impact of construction and operation of a hotel and conference center in Rockford, IL

E • Calculated the economic impact of construction and rental income from an apartment building in Portland, OR, and Glendale, CA (2 projects)

E • Calculated the economic impact of expansion of the Atlantic Yards project in Brooklyn, NY

E • Calculated the economic impact of construction and operation of a luxury office building and a luxury condominium building in mid-town Manhattan (2 projects)

E • Calculated the economic impact of construction and operation of a biofuels plant, converting sugar to fuels in South Florida

Built the first large-scale supply-side model of the U. S. economy

- Consultant, Environmental Protection Agency and Council on Environmental Quality

  Estimated inflationary impact of government regulations

- Consultant, National Aeronautics and Space Administration

  Estimate impact of R&D spending on productivity growth

- Consultant, U. S. Treasury

  Estimated impact of investment tax credit and accelerated depreciation on capital spending by industry

- Consultant, U. S. Department of Agriculture

  Built large-scale econometric model of agricultural sector of U. S. economy

- Consultant, Organization of Economic Cooperation and Development

  Built econometric model of the French economy

SAMPLE OF RECENT CONSULTING PROJECTS

A. Economic Impact of EB-5 Immigrant Investor Programs and New Markets Tax Credits

For more information on these projects, see www.evanseb5.com

Key to symbols: N, new regional center, E, extension of existing center

List is current as of July 20, 2014. There are over 500 projects listed, but while the list is extensive, it is not complete. In cases where the results are very similar, they are either grouped together or omitted entirely

E • Calculated the economic impact of construction and operation of medical college in Sacramento, CA.

E • Calculated the economic impact of construction and operation of mixed-use building in Madison County, AL.

E • Calculated the economic impact of construction and operation of hotels in the Dallas/Fort Worth, Houston, San Antonio, and Austin metropolitan areas as part of the 43-county "Texas Triangle" (2 projects)

PREVIOUS ACTIVITIES AND EDUCATION

- Contributing Editor, *Industry Week*

Wrote a column in each issue on economic and financial trends as they impact the manufacturing sector.

- Editor, *The Evans Report*

Weekly newsletter discussing economic trends and financial markets. Pioneered the concept of the Monthly Tracking Model to incorporate recent economic releases into the overall economic forecast, including methods to predict these economic data.

- Consultant, *National Printing Equipment and Supply Association*

Prepared quarterly forecasts of shipments of printing equipment and graphic arts supplies by product line, based on an econometric model constructed for NPES. Also prepares analysis and forecasts of exports and imports by principal product line.

- Consultant, *APICS -- The Educational Society for Resource Management*,

Designed and developed the *APICS Business Outlook Index*, which used survey data collected by the Evans Group to measure current production, production plans, shipments, employment, new orders, unfilled orders, inventory stocks, and the comparison of the actual to desired inventory/sales ratio to predict short-term changes in manufacturing sector activity. The results of this survey appeared every month in *APICS: The Performance Advantage*

- Consultant, *American Hardware Manufacturing Association*

Wrote a separate weekly edition of the Evans Report analyzing recent trends in the hardware and housing industries, including forecasts of the hardware industry based on an econometric model developed for AHMA.

- Board of Economists, *Los Angeles Times*

Wrote column every 6 weeks (5 other economists on the Board)

- Columnist, *United Press International*

Wrote twice-weekly column, "Dollars and Trends"

- Consultant, Senate Finance Committee,

Appendix: Resume of Dr. Michael K. Evans

mevans@evanscarrollecon.com

CURRENT AND PREVIOUS POSITIONS

• Chairman, *Evans, Carroll & Associates, Inc.*, 1980-present (previously Evans Economics)

Economic consulting firm specializing in EB-5 immigration analysis, economic impact studies of development projects and new construction, models of state and local tax receipts, impact of current and proposed government legislation, and construction of econometric models for individual industries and companies.

• Chief Economist, *American Economics Group*, 2000-2008.

Built a comprehensive state modeling system that provides economic analysis for a variety of consulting projects (see below).

• Clinical Professor of Economics, Department of Managerial Economics and Decision Sciences (MEDS), Kellogg Graduate School of Management, Northwestern University, 1996-99.

Taught courses in macroeconomics and business forecasting. Wrote textbooks for both courses.

• Winner of Blue Chip Economic Indicator Award for most accurate macroeconomic forecasts during the past four years, November 1999

• Founder and President, *Chase Econometric Associates*, 1970-1980

• Assistant and Associate Professor of Economics, Wharton School, University of Pennsylvania, 1964-69. Co-developer of the original Wharton Model.

• Visiting Professor, Radford University, (Radford, VA), 1987

Chairman of Institute for International Economic Competitiveness

• Visiting Lecturer, Hebrew University (Jerusalem), 1966-67

Built econometric model of the Israeli economy

• Ph. D. in Economics, Brown University. Dissertation, "A Postwar Quarterly Model of the United States Economy, 1948-1962". A. B. in Mathematical Economics, Brown University

10. Summary Tables for the Entire Project

The two tables in this section show the combined effects of hard and soft construction costs and rental income for the multi-use commercial and residential project in Jamaica. The sums (or averages) are the aggregates of the tabular results shown in Sections (8) and (9) and are shown here for ease of exposition.

Table 10-1. Increase in Employment, Output, and Earnings for Construction and Rental Income

Annual Rent				

RESIDENTIAL RENT ROLL

Type of Unit	# of Units	Monthly Rent	Annually Rent	Total Rent
Studio				
1-Bedroom				
2-Bedroom				
3-Bedroom				
Total				

The pro forma income statement for rental rates is shown in Table 9-2. This table also appears in the Executive Summary. The figure of [redacted] which is in 2018 dollars, is then deflated by the PPI for Lessors of Real Property, using the actual percentage increase for 2010-2014 and assuming the same rate of increase occurs in 2015-2018. The deflated figure is [redacted] in 2010 dollars. This figure is entered into the RIMS II model and the detailed industry results are shown below in Tables 9-3 and 9-4.

(b)(4)

12/01/2015 - 4/16/2016	Excavation

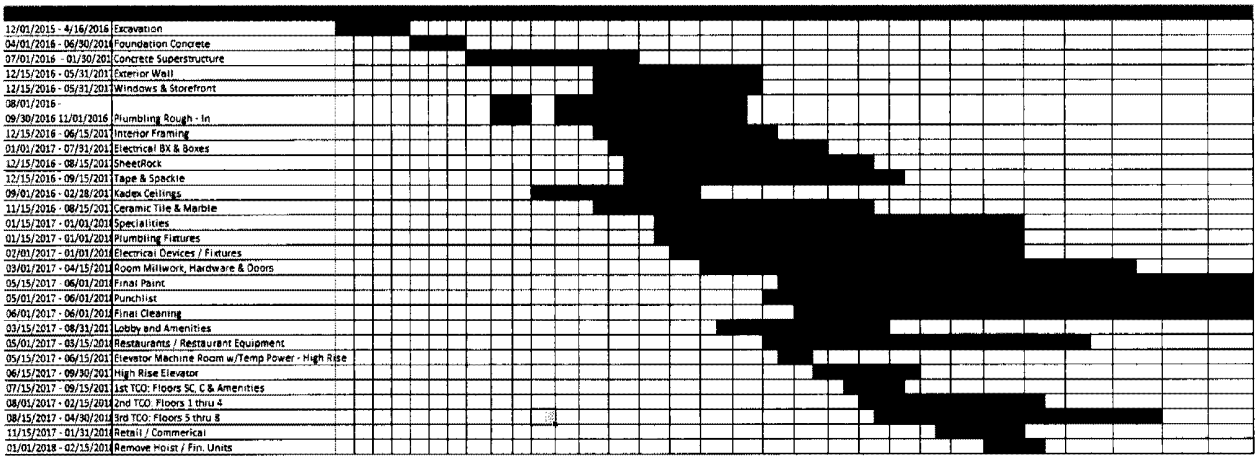
05/15/2017 - 06/15/2017	Elevator Machine Room w/Temp Power - High Ri
06/15/2017 - 09/30/2017	High Rise Elevator
07/15/2017 - 09/15/2017	1st TCO: Floors SC, C & Amenities
08/01/2017 - 02/15/2018	2nd TCO: Floors 1 thru 4
08/15/2017 - 04/30/2018	3rd TCO: Floors 5 thru 8
11/15/2017 - 01/31/2018	Retail / Commerical
01/01/2018 - 02/15/2018	Remove Hoist / Fin. Units

The Gantt Chart for this project is shown below, indicating a total time span of 27 months. Since the numbers on the left are difficult to read, they have been reproduced in a larger format. As seen below, construction is expected to start on 12/01/15 and the building is expected to be completed on 2/15/18, for a period of 27 months.



(b)(4)

assumed the same rate of inflation will continue in 2015. Thus in 2010 dollars, the EB-5 eligible figures would be [redacted] for hard costs and [redacted] for EB-5 eligible soft costs.

The next four tables show the economic impact of hard construction costs and EB-5 eligible soft costs. The tables show the impact for the 20 major industrial classifications in the RIMS II input/output model; because the project will take more than two years, direct as well as indirect and induced impacts are included for hard and soft costs, although not for FF&E. Please note that in these and succeeding tables, output and earnings are in thousands of dollars.

Table 8-3. Increase in Employment, Output, and Earnings for Hard Construction Costs for Building

Industry group	Employment	Output	Earnings
Agriculture, forestry, fishing,	[redacted]

Arts, entertainment, and recreation			
Accommodation			
Food services and drinking places			
Other services			
Household			
Total			

Table 8-3 shows there will be a total of about [redacted] jobs created from the hard construction costs of the building. Output would rise about [redacted] while household earnings would increase by about [redacted] Table 8-4 shows the average output per new worker is about [redacted] while average earnings are about [redacted]

(b)(4)

(b)(4)

Soft Cost :			
Architect & Engineer (including Enviroonmental MTA)			
Admin (Accounting etc.)			
Appraisal			
Bank Engineer			
Permit & Survey			
Real Estate Tax			
Insurance			
Title Insurance			
Bank Legal			
Borrower Legal			
Mortgage Recording Tax			
Bank Fee			
Interest Reserve			
(B)	**Total Soft Cost :**	**S**	
Total Construction Cost (A)+(B) :		**S**	
(C)	**Land Value :**	**S**	
Total Project Cost (A)+(B)+(C) :		**S**	

USCIS has requested information showing these construction costs are consistent with industry standards. Total hard construction cost is [redacted] and there are 135 rooms, which would be about [redacted] per room. However, construction costs in the Queens are 30% above the national average, according to RS Means, Square Foot Costs, 36th Annual Edition (2015), which would reduce this figure to about [redacted] very close to the average of midscale hotels with and without food and beverage, as shown in Table 8-2. The figure for purchases of FF&E is [redacted] for 135 rooms, or about [redacted] which is somewhat below the HVS figure.

As shown above, the total development cost of the project is estimated at [redacted] of which [redacted] is land costs. Of the other [redacted] represents hard costs, which are all EB-5 eligible, and [redacted] represents soft costs, of which [redacted] is EB-5 eligible.

All these figures are given in 2015 dollars, and should be deflated to 2010 dollars, since the input/output data are in 2010 dollars. Using the appropriate PPI indexes, the estimated cost of nonresidential construction would be expected to rise 13.3% over the five-year period and the cost of architectural and engineering fees would rise 7.7%. The actual percentage increases in the PPI for (a) nonresidential construction, and (b) architect and engineering fees are calculated, and it is then

(b)(4)

11. MECHANICAL

11.01 HVAC system as per drawings
11.02 Provide and install exhaust & fresh air system as per drawings
11.03 Provide and install LG PTAC unit
11.04 Provide and install all kitchen and bath exhaust duct and fans
11.05 Provide and install HVAC system for lobby, trash storage and rec room Mitsubishi Citi-Multi

12. FIRE SYSTEM

12.01 Sprinkler system as per drawings
12.02 Stand Pipe system as per drawings
12.03 Provide and install sprinkler alarm system as per DOB and FDNY code

13. ELECTRICAL

13.01 Apply and install all electrical meters
13.02 Provide and install electrical panels
13.03 Provide and install lighting fixtures as per plan
13.04 Provide and install emergency exit lights
13.05 Provide and install receptacles
13.06 Provide and install Aiphone color audio / video intercom system
13.07 Provide and install all Verizon, TimeWarner lines
13.08 Provide and install 100 Amp panels in every Apt. unit
13.09 Provide and install 1600 ConEd SEB
13.10 Provide temporary electrical service

14. PLUMBING WORK

14.01 Provide all utility services and meters
14.02 Install copper water supply & no-hub drainage system and all vent pipes
14.03 Supply & install plumbing fixtures as per owner's schedule
14.04 Install new gas main service with meters
14.05 All supply and return water lines
14.06 All kitchen gas pipes to all equipment in buiing
14.07 Provide and install 1 duplex water booster and sewer e
14.08 Provide and install RZP as per design
14.09 Provide and install 3 150 Gal HWH and 1 25 Gal electrical HWH per residential
14.10 Provide and install all incoming water, sewer main as per plans

(A) Total Hard Construction Cost :

(b)(4)

(b)(4)

5. METALS

5.01 Concrete filled metal pan stairs
5.02 Metal framing and gates
5.03 Roof, railing and ladder
5.04 Structural metal framing
5.05 Provide and install steel dunnage
5.06 Omagalite exterior aluminum panel front and 2 sides

6. THERMAL & MOISTURE PROTECTION

6.01 Roof waterproofing
- a. Six-ply rubber roofing
- b. 2" rigid insulation
- c. Vent sheet
- d. Fire Stone 12 year labor and material warrenty

6.02 Insulation
- a. Exterior wall insulation close cell sprayed on
- b. Interior wall insulation open cell sprayed on

7. DOORS & WINDOWS

7.01 Doors 1 3/4 " solid core doors, frames and hardware
7.02 Aluminum windows & storefront entrance by crystal or equal
7.03 All window system by crystal or equal per window schedule
7.04 All hollow metal door per schedule
7.05 Thermacore 490 garage door
7.06 Provide and install glass railing as per rendering

8. FINISHES

8.01 Gypsum board ceiling w / paint finished
8.02 Gypsum board wall w / paint finished
8.03 Epoxy paint for areaway, Elec.meter Rm., water meter Rm.
8.04 All apartment interior as per finish schedule
8.05 All hallways as per plan and finish schedule
8.06 All commercial, lobby as per design

9. CONVEYING SYSTEM

9.01 Provide and install Thyssen Krupp MRL 250FPM 2300# elevator
9.02 Standard cab $20,000 allowance

10. EQUIPMENT

10.01 Kitchen cabinets allowance is $5,000 per unit
10.02 All appliances
10.03 Bathroom accessories
10.04 Trash chute and compactor
10.05 Kitchen counter top to be Caesar Stone

8. Economic Impact of Construction Expenditures

Table 8-1. Summary of Construction and Development Budget

"CONSTRUCTION COST DETAIL SHEET"

Project Location : 148-31/43 88th Ave&148-44/46 Hillside Ave, Jamaica, NY 11435

(b)(4)

SCOPE OF WORK:

1. GENERAL

- 1.01 Mobilization & preparation
- 1.02 Insurance-general liability 25M & workmen comp
- 1.03 Sign-offs
- 1.04 Permit applications
- 1.05 Provide all necessary SOE inspections
- 1.06 Provide all necessary TR-2 TR-3
- 1.07 Provide engineer on site for supervision of all foundation and shoring work
- 1.08 Provide all necessary surveys
- 1.09 Provide all necessary shop drawings

2. SITEWORK

- 2.01 Provide and Install roof protection on adjacent buildings
- 2.02 Scaffold
  - a. Provide and install Sidewalk Bridge
  - b. Provide and install scaffold to roof
  - c. Provide and install protection net to roof
  - d. Scaffold reinforcement
- 2.03 Shoring, Sheeting & Lagging as per SOE
- 2.04 Temporary Protection Plywood Fence
- 2.05 Provide and install exterior material hoist
- 2.06 Excavation and backfill as necessary
- 2.07 Provide and install sidewalk, trees, curb and curb as per approved BPP

3. MASONRY

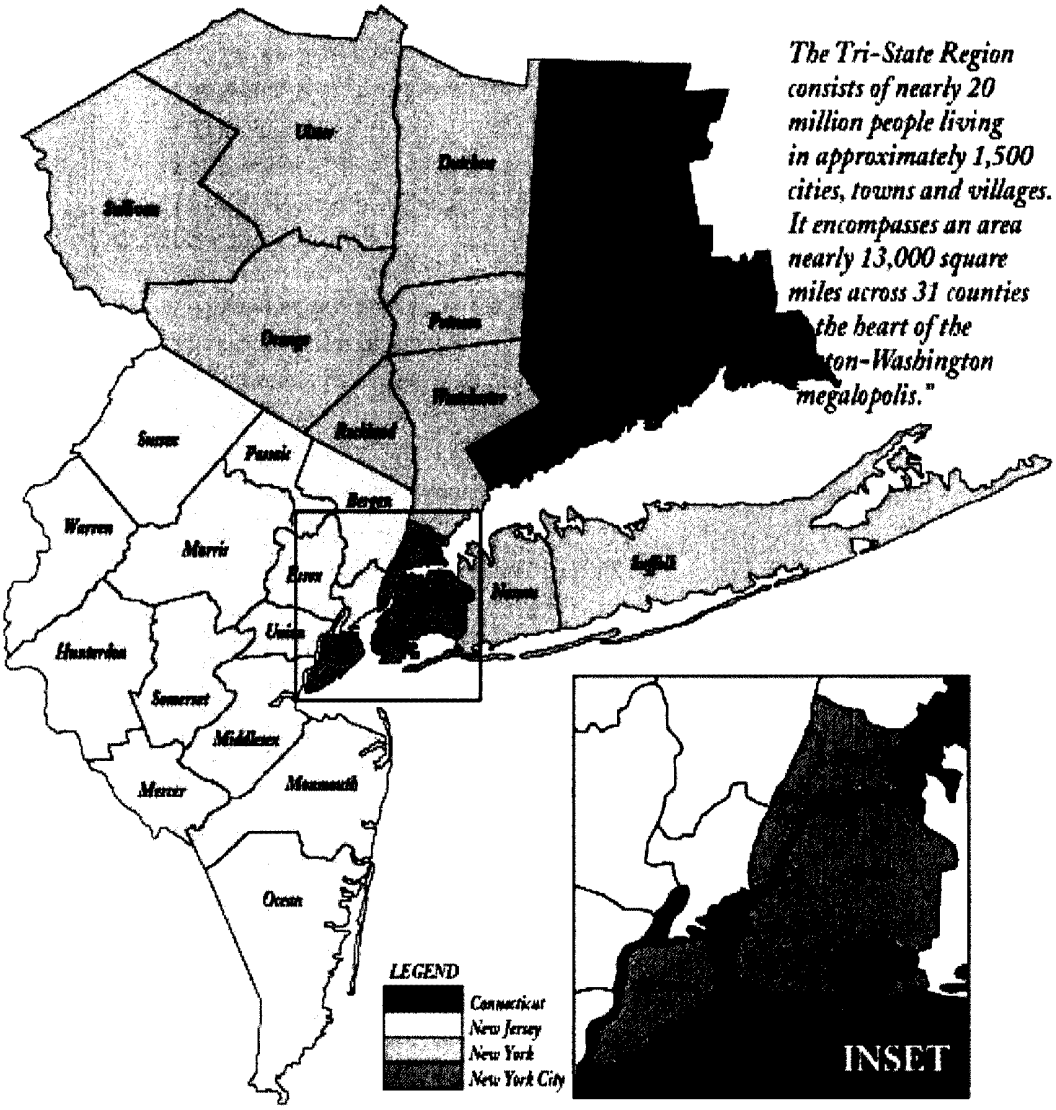
- 3.01 Concrete block as per drawings
- 3.02 Stucco in rear of building
- 3.03 Stone on first floor as per rendering

4. CONCRETE

- 4.01 Foundation wall, straps beams and pile caps
- 4.02 Concrete Slabs
- 4.03 Roof Bulkhead
- 4.04 Sidewalk, curbs and pavement
- 4.05 Surveys and stakeout
- 4.06 All waterproofing of exterior foundation walls

(b)(4)

Figure 7-4. Map of New York Consolidated Statistical Area



Page Blank for TEA Letter

Figure 7-3. Census Tracts near the Building

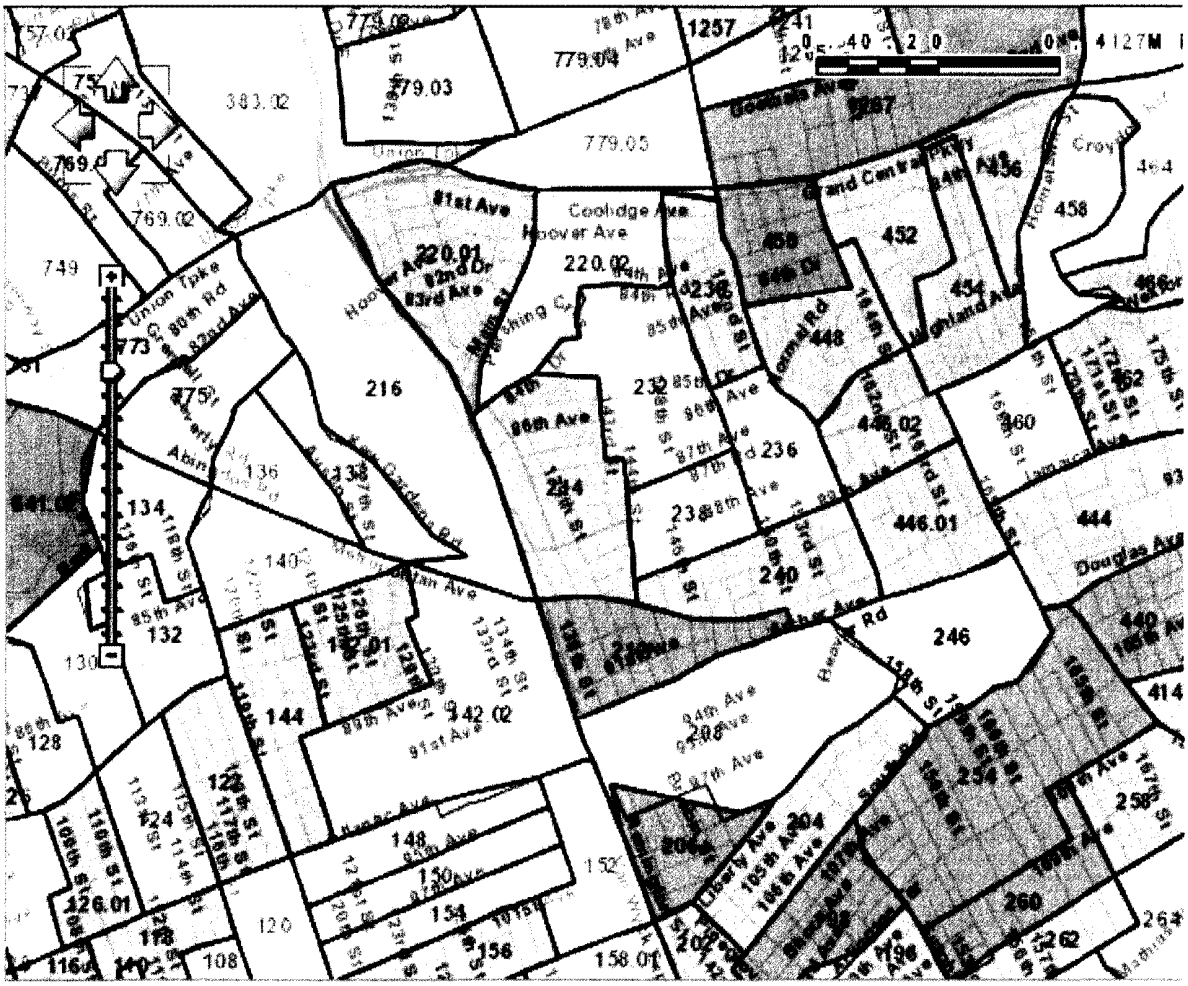


Figure 7-2. Location of Building in the NYC Metropolitan Area

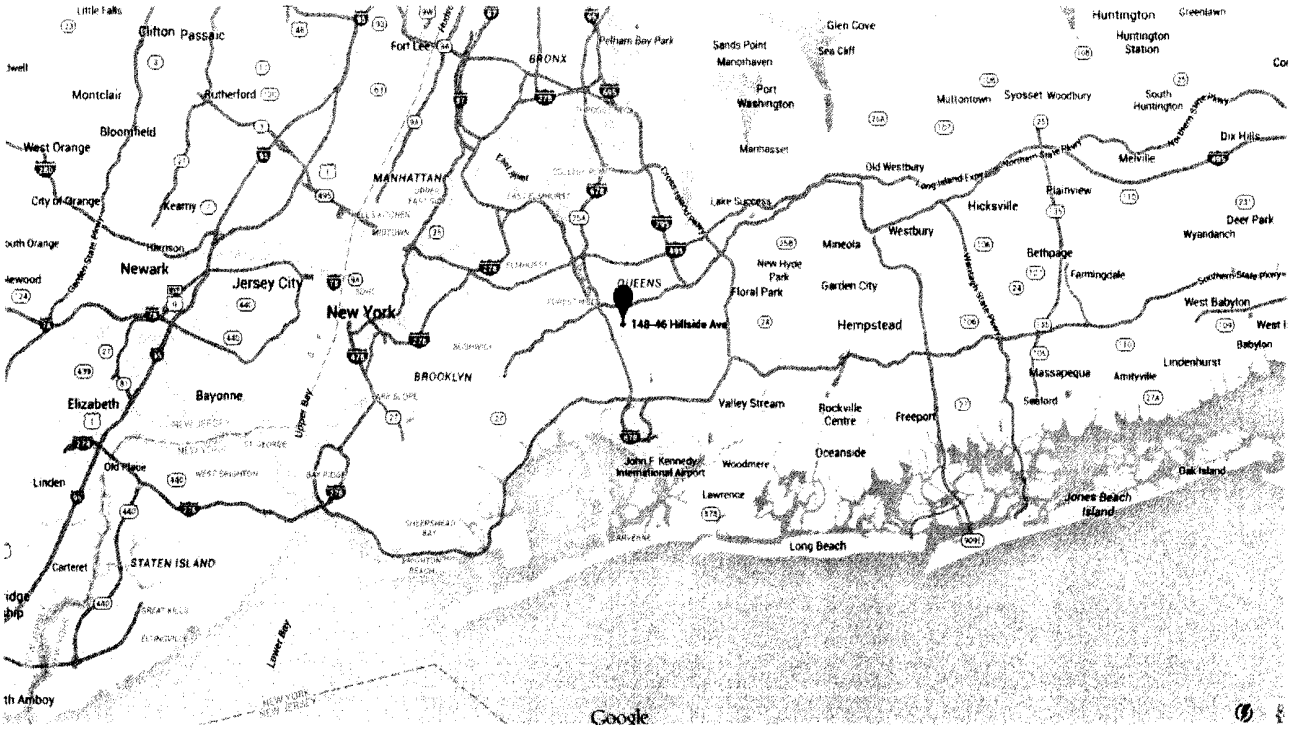

The building is located in Census Tract (CT) 238 in Queens County (see center of map below). When combined with contiguous CTs, a TEA can be formed with an unemployment rate of at least 9.3% in 2014, based on the Census Share method of calculation. A letter of certification from the Empire State Development Agency of New York State will attest to this finding and will be added to the report when it is received.

Figure 7-1. Location of Building at 148-46 Hillside Ave/148-33 88th Ave, Jamaica

1,102	660,315	0.2%	97.4%	Connecticut	Fairfield County
761	661,076	0.1%	97.5%	New Jersey	Passaic County

7. Commuting Patterns, Maps of Area, and TEA Analysis

We now turn to the commuting patterns in this area. In determining the economic impact of new job creation, it is necessary to choose the counties that form the relevant area for analysis. The economic multipliers will be higher as the number of counties included in the area increases. Hence the commuting patterns of the workforce data from the 2006-10 American Community Survey are used to determine the optimal mix of counties to be included in the multiplier calculations. These commuters spend most of their paychecks in the counties where they live, so the economic impact of the new project creates some new induced jobs in bordering counties. Also, some of the goods and services purchased by the new businesses are produced or purchased from establishments in neighboring counties.

The following list includes all the counties included in the New York City metropolitan area, according to the latest figures available from the Census website.

35620 New York-Northern New Jersey-Long Island, NY-NJ-PA
Metropolitan Statistical Area Principal Cities: New York, NY; Newark, NJ; Edison, NJ; White Plains, NY; Wayne, NJ; Union, NJ; New Brunswick, NJ

20764 Edison-New Brunswick, NJ Metropolitan Division *Middlesex County*, *Monmouth County*, *Ocean County*, *Somerset County* 35004 Nassau-Suffolk, NY Metropolitan Division *Nassau County*, *Suffolk County*

35084 Newark-Union, NJ-PA Metropolitan Division *Essex County, NJ*; *Hunterdon County, NJ*; *Morris County, NJ*; *Sussex County, NJ*; *Union County, NJ*; Pike County, PA

35644 New York-White Plains-Wayne, NY-NJ Metropolitan Division *Bergen County, NJ*; *Hudson County, NJ*; *Passaic County, NJ*; *Bronx County, NY*; *Kings County, NY*; *New York County, NY*; *Putnam County, NY*; *Queens County, NY*; *Richmond County, NY*; *Rockland County, NY*; *Westchester County, NY*

The figures shown below are based on the commuting patterns for New York County (Manhattan) and Queens County. Commuting figures for other counties would show different patterns, but in general, these figures indicate that the large New York City metropolitan area not only covers the counties in this report, but additional counties that have not been included in our calculations because of their more tenuous nature to the overall region. In Table 7-1, the first column shows the county where people live who work in New York County; the second column shows the number of people working in New York County. For example, 696,081 people live and work in New York County; 391,008 live in Kings County but work in New York County, and so on; these 23 counties include 94.9% of the New York County workforce. For Queens County, as shown in Table 7-2, the total workforce is 678,019, so these 23 counties include 97.9% of the Queens County workforce.

2011	73.02	9.94	42.27	125.23

2013/04	3.29%	3.17%	3.30%	3.28%

It does not come as any surprise that personal income in Fairfield County nosedived in 2009 along with the financial crash, with a drop almost double the national average rate; Litchfield was also hard hit, as the residents depend on the summer traffic to boost their incomes. However, even excluding 2009, the growth in personal income was below average; strong growth through 2007 disappeared and did not return. For the decade-long averages, all three counties have had almost identical growth rates in income, but Fairfield County has far outpaced the other two counties in recent years.

Table 6-27. Level and Growth Rate of Population, 3 Connecticut Counties in the NYC Area, and the Total of these Counties

Population growth in both the state of Connecticut and this three-county area remained sluggish over the past decade, with growth rates only about 1/3 of the national average. However, there were substantial differences in the individual county patterns. Fairfield County continued to post respectable, if somewhat below-average, increases in population, as hedge funds and other boutique financial organizations continued to thrive (as opposed to the problems encountered by big banks). New Haven and Litchfield County, on the other hand, suffered from the exurban pattern seen throughout this section for other counties in the area, with Litchfield County posting an actual decline in population ever since the recession.

In the 2001 recession, the unemployment rate in Fairfield County rose only to 5%, but in the more recent recession, Wall Street was harder hit, and that rate rose to 8.4%; however, that was the lowest in the three-county area and well below the 9.6% national average. The unemployment rate in Litchfield County rose to 8.6%, while New Haven was harder hit at 10.0%, well above the national average. Yale did not lay anyone off but they did reduce the breakfast portions for the students. The rest of the county was harder hit by the manufacturing slump. Recently, the unemployment rate in these three counties has declined during the recovery, but the reduction has been only from 9.1% to 6.6%, compared to a drop from 9.6% to 6.2% in the national economy from 2010 to 2014

Median earnings for workers	39,566	129.9%	30,454
Median earnings for male full-time	54,809	114.0%	48,099
Median earnings for female full-time	48,500	127.3%	38,097
PERCENTAGE BELOW POVERTY LEVEL			
All families	4.1%	35.3%	11.6%
All people	6.7%	42.4%	15.8%

Litchfield County is perhaps best known for the upscale community of Litchfield, where many wealthy New Yorkers have second homes. However, that represents only a small proportion of the total economic activity, and the rest of the county has only average levels of income. These second-residencers do not bring much to the economy of the county, and most of them have their primary homes elsewhere, so the income figures are not strongly tilted up by these households. In terms of the workforce, the higher than average proportions occur in manufacturing, 14.0% compared to 10.5% nationally, and education and health care, 27.8% compared to 23.0%. By comparison, the proportion of the workforce in tourism and leisure is only 8.0% compared to 9.7% nationally in spite of all those vacationing New Yorkers.

As noted above, there are very few poor people in Litchfield County, so the poverty rate for families is only 35% of the national average, compared to 59% for Fairfield County. There are enough upscale residents to push median household and family income to 136% of the national average; but in sharp contrast with Fairfield County, the mean income figures are about 12% below these levels instead of being substantially higher.

Per capita income (dollars)	36,561	129.7%	28,184	

it fell off sharply during the recession and is now significantly below the 10.5% national average. There are also higher than average proportions of the workforce in information, and in professional services. Offsetting these, there are fewer than average workers in tourism and leisure, and public administration.

The economy of New Haven is dominated by Yale University, as can be seen by the 31.4% of the workforce in education and health care services, compared to 23.0% nationally. Except for that, however, the economy of the rest of the county is not in particularly good shape. There are substantial pockets of poverty scattered throughout the county, which brings the poverty rate for all families up to 82% of the national average; and mean family income is a relatively modest 116% of the national average.

Besides the bulge in employment in educational services, there are proportionately more than the average number in manufacturing, at 11.0% of the workforce, compared to 10.5% nationally. Most of the other industry groups have fewer than proportional numbers of employees, particularly tourism and leisure.

Please note that in these tables, the percentage figures in regular type refer to the overall category in that column, while the figures in red are relative to the U.S. average figures

Fairfield County is sometimes considered the quintessential bedroom community for New York City, and has unusually high incomes. Besides being the home of many wealthy communities, a burgeoning venture capital and hedge fund industry has grown up around Greenwich and Stamford, although it took a severe hit in 2009. Still, there are 3.6 times as many households and families in the top income bracket as is the case nationally. As a result, while median family income is 159% of the national average, mean income is even higher, at 190%; the figures are roughly the same for household income. The poverty rate for families is only about half the national average rate; but there are substantial pockets of poverty in Bridgeport, so the poverty rate is somewhat higher than would ordinarily be expected with such a high a mean income.

In terms of employment by major industry sector, the financial sector scores very strongly, with 11.5% of the workforce, compared to 6.6% nationally. The county also has a relatively robust manufacturing sector, employing 8.7% of the workforce, although

The growth in income for these 7 counties was well below the national and metropolitan average. The more rapid growth in population in Hudson County was also reflected in the growth in income, due to the expansion of jobs in the financial services area. Sussex County posted the lowest growth rates over the decade, reflecting the actual decline in population, while growth in Essex, Morris, and Union counties were all well below average.

In terms of population growth, this is a sluggish section of both the overall economy and the NYC metropolitan area, with average annual growth of only 0.33%. Even so, the population growth follows the pattern for New York City; an actual decline or very sluggish growth in the first half of the previous decade, followed by a significant improvement starting in 2009. The most impressive increase has occurred in Hudson County, as many financial firms move some of their operations across the river to Jersey City. On the other hand, population growth in Morris County has declined, and it has remained negative in Sussex County, once again reinforcing the decline in population in exurban counties in the New York City area.

On balance, the unemployment rate for these 7 counties in Northern New Jersey is close to the national average, but there are significant differences among individual counties. In 2014, Essex (Newark), Hudson (Jersey City) Passaic (Patterson) and Union (Elizabeth) all had unemployment rates well above average, with rates of 7.9%, 6.5%, 8.1% and 6.8% respectively. On the other hand, the unemployment rates in Bergen and Morris Counties were 5.4% and 4.9%, compared to 6.2% nationally.

All people	11.5%	72.8%	15.8%	

Mean household and family income levels in Union County are about one-third higher than the national averages; however, median earnings for male full-time workers ($53,600) are only about 11% higher than the comparable U.S. figure ($48,100). Poverty rates in Union County for both families and households are about 25% lower than the national rates.

The mix of occupations in Union County is relatively similar to the U.S., with slightly more workers in wholesale trade, transportation, information, and finance – and slightly fewer in mining, retail, education, health care, and hospitality.

While both of these are suburban counties in Northern New Jersey, Passaic has significant pockets of poverty, pushing the poverty rate for all families to 121% of the national average even though median and mean household and family income are slightly higher than average. On the other hand, Sussex County has median household and family income that are 169% and 155% of the national average, although the mean income figures are somewhat lower at 143% and 134%; these above-average figures are accompanied by poverty rates that are 39% and 37% of the national level for all families and all people respectively.

The proportions of employment by major industrial sector are generally close to national averages except that manufacturing is higher in both counties, and arts, entertainment and leisure is below average.

Bergen and Morris counties are two of the more affluent counties in New Jersey; mean household and family income levels are 56% above the national figures in Bergen County and 89% above the national figures in Morris County. Along the same lines, the poverty rates in both counties are quite low, at 55% for Bergen County and an unusually low 25% for Morris County.

Consistent with its high-income profile, about half of the workforce is in management and professional jobs – 48% in Bergen and 50% in Morris, well above the national percentage of 36.3%. On the other side of the coin, each county has a smaller mix of workers in service occupations and production and transportation compared to the rest of the nation.

The income distributions in Essex and Hudson Counties can best be described as "fat-tailed", with greater than average percentages in the highest and lowest income brackets. To elaborate, 10% of families in each of the two counties earn less than $15,000 a year, compared to 8% nationally – while 12% of Essex families and 9% of Hudson families earn $200,000 or more, compared to 6.5% for the U.S. This dichotomy can also be seen in the high mean family incomes ($104,300 in Essex and $88,600 in Hudson, versus $86,000 for the U.S.) and large share of families living in poverty (14.2% in Essex and 16.8% in Hudson County, versus 11.6% for the nation).

Turning to the occupation data, both counties have lower than average shares in manufacturing as well as the arts, entertainment, hotel, and food service industries – and higher than average shares in transportation and finance. The counties differ in the mix of workers in the education and health care industries, as Essex (26.1%) has a higher proportion than average and Hudson has a lower proportion at 18.9%.

2013/04	3.56%	3.72%	3.64%

Growth in personal income in these two counties did far better than the national average through 2007 in spite of a decline in population, but that boom came to an abrupt end during the recession. Since then, the percentage increase in personal income has averaged slightly less than 3%, compared to 3.5% for the national economy. Given the lack of any growth in population, the increase in personal income is also likely to remain below average.

In the previous section we noted that the northern counties lost population in 2013 as the charms of exurban living diminished. The same pattern is seen here, with Suffolk County losing population in 2013, while Nassau County posted a 0.25% gain, anemic relative to the nation but about par for the overall region.

2014	766,711	725,918	40,793	5.3

As was generally the case for the New York City suburbs, unemployment rose moderately in the recession but remained well below the national averages. The one anomaly here is that unemployment in Suffolk County inched higher in 2010 as the rest of the economy recovered, but it then fell in line with national averages in 2011. Both counties then posted a 0.2% gain before falling sharply in 2013 and 2014, with the Nassau unemployment rate down from 7.0% to 5.9% and 4.8%; and the Suffolk unemployment rate down from 7.8% to 6.5% and 5.3% in 2013 and 2014 respectively.

Nassau County is another wealthy suburban county of New York City, but the figures are not quite as affluent as for Manhattan (at the upper end) or Westchester. Thus median family income is 175% of the national average, but mean income is a slightly lower 165%, as the income distribution is not as skewed as in Manhattan. The poverty rates are quite low, at 38% for all families and all people. Employment in information, financial, and professional and administrative services are all well above average, while the proportions for manufacturing, and for entertainment and leisure, are below average.

Residents of Suffolk County are not quite as affluent as their neighbors in Nassau County, as mean and median income levels are about 21 percentage points below the Nassau figures in all cases. The distribution of the workforce is quite similar to the national averages, with deviations only in construction (7.7% vs. 6.2% for the U.S.), manufacturing (7.6% vs. 10.5%), and leisure and entertainment (6.9% vs. 9.7%).

The decline in income in 2009 due to the financial plunge was not very serious for these counties, but the rebound was not very robust either, and by 2013, growth in income had also come to a halt, in line with the declining population.

Unlike the growth rate in the 7-county area described above, population growth in these 4 counties tailed off in latter half of the previous decade and then failed to improve at all, with anemic growth rates of 0.2% in 2011 and 2012 followed by an actual decline of 0.2% in 2013; the slump occurred in all four counties. Exurban living lost some of its charms, and tourism to these counties also suffered as cheaper airfares led to more exotic vacation preferences.

2014	88,232	83,136	5,096	5.8

This part of New York State was fairly well insulated from the collapse of the financial sector in late 2008 and was not particularly hard hit by the recession. The unemployment rate for the 4-county region rose to 7.6% in 2009 and 7.8% in 2010 before declining moderately to 7.6% in 2011, but these figures were below the 9.3%, 9.6% and 9.0% figures for the overall U. S. economy. Similar to the pattern for New York City, the unemployment rate for this 4-county region then took an upward bump to 7.9% in 2011 before declining sharply to 6.8% in 2013 and 5.4% in 2014

and a somewhat less impressive 113% for Ulster County. However, the poverty rates in Ulster County are slightly lower than in Orange County, as there are fewer rich and poor people in Ulster.

The employment profile for the two counties is fairly similar, with a smaller than average proportion of the workforce in manufacturing, financial services, and professional services, and a higher than average proportion in education and health care. The only major difference is Ulster County has a higher than average proportion of workers in arts, entertainment and leisure, while the proportion is below average for Orange County.

Orange and Ulster counties are more exurban or rural counties, and have less in common with the big city, although they still supply significant numbers of commuters. The income levels are moderately above the national averages, with mean and median household and family incomes averaging 128% of national levels for Orange County

and a very small manufacturing sector. Dutchess County, on the other hand, has more manufacturing and a below-average proportion of employment in those service industries. Relative to national average figures, the biggest bulge in employment in that county occurs in education and health care.

All people	9.1%	57.6%	4.4%	27.8%	15.8%	

Both these counties are directly north of Westchester, but while Putnam County, which directly borders on Westchester, is essentially a continuation of upscale suburban living, the income levels in Dutchess County are more moderate although still above average. Thus median family income in Putnam is 160% of the national average, compared to 140% for Dutchess. Similarly, the poverty rate for all families is an exceptionally low 28% for Putnam, compared to 51% for Dutchess County.

For the employment distribution by industry, Putnam County is very similar to Westchester, with a preponderance of employees in financial and professional services,

The financial meltdown in New York City put a huge dent in Manhattan income in 2009, but the city bounced back quickly the following year, with the 2010 gain exceeding the 2009 loss; for the overall economy, the percentage increase in personal income in 2010 was the same as the decline in 2009. Growth also remained strong in 2011 and 2012, but then showed almost no gain in 2013, with sharp declines in each of the 7 counties listed above except the Bronx, which failed to share in the 2012 gains. This slowdown occurred even though the stock market rose 30% in 2013; however, financial institution profits were hurt by a variety of other factors, including fewer mega-mergers, foreign weakness, and continuing attacks on bank profits through various Federal lawsuits and Dodd-Frank legislation designed to curb trading excesses. As a result, many bonuses were smaller, and hence the growth in income was curtailed.

Population growth in New York City was quite sluggish over the past decade, but starting in 2008 has picked up sharply, with growth rates for the past six years averaging about 0.8%, only slightly less than the 0.93% national average growth rate. Growth peaked in 2011, as it slightly exceeded the national average, although it has backed off slightly. However, growth in Kings and Queens has remained strong throughout 2013, due in part to increased immigration and in part to the overall strength bolstered by the recovery in the stock market. For the next few years, population growth for this 7-county area will probably remain close to, but slightly below, the expected national average gain of about 0.9% per year.

New York City and the close-in suburbs were not particularly hard hit by the financial collapse in spite of Wall Street being the epicenter of that meltdown. However, the unemployment rate in the 7-county region rose only to 9.0% in 2009 and 9.2% in 2010, compared to 9.3% and 9.6% nationally; it then fell to 8.8% in 2011, which was also slightly below the 8.9% national average rate. However, it then took a surprising jump up in 2012, when the rest of the economy continued to improve; the 7-county average rose from 8.8% to 9.1%, with a rise in each county in this group. The rate then fell proportionately with the national average in 2013 and 2014. The unemployment rate in the Bronx remained high at 9.8% in 2014, however, meaning that the entire county qualified as a TEA.

Rockland County is to the west of Westchester, and while the section of Rockland County that is closest to Westchester – and the Hudson River – maintains the same upscale characteristics, the western part of the county has a much lower level of income and higher incidence of poverty. Hence we find that mean family income is 153% of the national average, compared to over 182% in Westchester, and the poverty rate for all families is 91%, compared to 62%.

In terms of employment distribution, the proportion of workers in most sectors is close to the national average except for education and health care services, which employ 32.4% of the workforce, compared to 23.0% nationally. Offsetting that, the proportions in other industry sectors except construction are all slightly lower, with the biggest decrement occurring in manufacturing.

Westchester County is a very affluent, white-collar suburban county; 46.6% of its workforce is in management and professional jobs, compared to 36.3% for the nation, while only 7.9% work in production and transportation, versus 12.2% nationally. Median income levels are 61% to 64% above the national figures, with mean income levels are 77 to 82% higher. Consistent with this, 21.7% of the families in Westchester County earn over $200,000 per year, well above the U.S. average of 6.5%.

Richmond County (Staten Island) has a disproportionately high share of its workforce in health care, finance, and public administration; this is offset by lower than average shares in manufacturing and leisure. Median household and family income levels are 33% above the comparable national figures; mean income levels are about 22% higher. Richmond County has 27.8% of the workforce in education and healthcare services, compared to 23.0% nationally, which is largely offset by only 2.4% in manufacturing, compared to 10.5% nationally.

All people	18.9%	119.6%	30.9%	195.6%	15.8%	

It is not surprising to find that in New York County (Manhattan), the proportion of the workforce engaged in financial services is more than twice the national average, standing at 16.7% compared to 6.6% nationally. Similarly, the proportion of the workforce in professional and administrative services is 19.6%, compared to 11.1% nationally, and the proportion in information services is 6.4%, compared to 2.1% nationally. Offsetting these sharp divergences on the positive side, there are a far smaller proportion of workers in construction, manufacturing, retail trade, and transportation services.

New York County has the greatest skewed income distribution of any county at the upper end, with 25.4% of families with incomes of over $200,000, compared to 6.5% nationally. As a result, mean family income is 207% of the national average; median family income is a far more moderate 138% of the average. However, there are also a higher than average proportion of households and families in the two lowest income brackets, with the result that the poverty levels are above average, at 128% of the national average for all families and 120% for all people. The "fat tails" of the income distribution at both ends leads to a shortfall in the middle of the distribution, with only 10.4% of the families with income between $50,000 and $75,000 per year, compared to 19% nationally.

The stark comparison between New York and Bronx counties can be seen by noting that whereas 25.4% of the families in New York County have incomes of over $200,000, the figure is only 2.1% for the Bronx. The Bronx also has a preponderance of households and families in the lower income brackets, with the result that the poverty rates are twice the national average. In terms of occupational distribution, nearly one-third of the workforce is employed in education and health care services, compared to 23% nationally; the major shortfall is in manufacturing.

entertainment and leisure, and other private services. The major shortfall is in manufacturing, with only 4.5% of the workforce engaged, compared to 10.5% nationally.

In terms of income distribution, Queens is the quintessential "middle class" county, with median and mean household and family income narrowly straddling the national average; the average of the median household and family income is 3% higher, while the average of the mean household and family income is 3% below the average. Also, the poverty rate for all families is 106% of the national average, while the rate for all people is 97% of that average. The income distribution is also very similar to the national average.

The occupational distribution in Kings County is similar in many ways to Queens except that there are proportionately more employees in health care and information services, which includes newspapers, the Internet, and movie production. It also has a higher proportion in professional services, reflecting the large number of professionals who live "across the bridge" in Brooklyn. The proportions are lower than Queens and the U.S. for manufacturing and wholesale and retail trade; they are lower than Queens but higher than the U.S. average for transportation and other private services.

While Kings County has close to the average proportion of individuals and families in the upper income brackets, it has far more than average in the lower brackets. As a result, the poverty rate is well above the national average, at 168% for all families and 148% for all people. The larger proportions at the lower end of the income scale means that while all broad-based levels of income are below average, the figures are lower for median incomes than for mean incomes.

INCOME AND BENEFITS						

6. Economic Parameters for 23 Counties in the New York Metropolitan Area

This section contains information about employment, income distribution, labor market parameters, the level and growth rate of population and personal income, and commuting patterns around New York City for 23 counties in the New York metropolitan area. This list is similar to, although not exactly the same as the NYC metro area as defined by Census, but it is smaller than the Consolidated Statistical Area or the BEA Economic Area for NYC. For ease of exposition we have divided the tables, commentary, and analysis into the five sub-groups. These subgroups are as follows:

A. NYC and Nearby Northern Suburbs — New York, Bronx, Richmond, Kings, Queens, Westchester, and Rockland
B. Upstate New York—Putnam, Dutchess, Orange, Ulster
C. Long Island—Nassau, Suffolk
D. New Jersey North—Bergen, Essex, Hudson, Morris, Passaic, Sussex, Union
E. Connecticut—Litchfield, New Haven, Fairfield

The analysis thus proceeds as follows. For each of these 5 subgroups, the following tables are presented:

1. Employment by major industrial classification, income distribution by household and families, mean and median levels of income and poverty rates. In general, there are 2 to 3 counties in each table, so there are anywhere from 1 to 4 tables for each subgroup in this category.

2. Labor market statistics: size of labor force, number of employed and unemployed, and unemployment rate

3. Level and growth rate of population

4. Level and growth rate of personal income

Other professional services: This category includes employees in consulting, scientific research and development, advertising, and management, as well as several other smaller, specialized categories. In general, consulting, management, and the all other category each account for about 1% of total employment, and R&D and advertising account for about ½% of total employment, for a total of about 4% of total employment. This figure will vary widely depending on the degree to which consultants and R&D are used by the new business.

Employment services: On a national average basis, 1 out of every 45 people is employed by this industry. Here again, the figures will vary widely depending on (a) the proportion of people who are hired through employment agencies, and (b) the proportion of the work that is outsourced to employment services.

Business support services include office management, travel arrangement, security, credit bureaus, telemarketing, and back-office jobs that are outsourced, such as direct mail, copying, and duplicating services. The back-office services would vary widely depending on the type of new business; retail stores, for example, would print and distribute more advertising brochures than a manufacturing operation. On a national average basis, these jobs account for about 2% of total employment.

Building support services, which includes janitorial services, lawn maintenance, and waste management. For an office building of 80,000 square feet, the cost would be approximately $2/sq ft per year for maintenance, or $160,000, which would support about 4 new jobs; here again, the figure would be lower for industrial buildings.

Restaurants: This category reflects business meals. Of course the number of business meals depends greatly on the type of business; lawyers, accountants, and consultants will have more business meals than manufacturing plants or water treatment facilities. On a national average basis, Commerce Department figures show that total restaurant sales in 2007 were $580 billion, while consumer expenditures at restaurants were $500 billion. However, that figure also includes tips, which are not included in restaurant sales. After subtracting 15% for tips, that indicates about $425 billion in food and beverage purchases by consumers, indicating about $155 billion for business expenses. With a labor force of approximately 140 million, that is equivalent to about $1,100 per employee. Hence if 200 new jobs were created, business meal expenses would rise an average of $221,000, which would imply about 4.5 new indirect jobs in the restaurant industry. These figures are likely to be somewhat higher when direct jobs are created for office buildings and hotels.

Government: The increase in public sector employees represents the amount funded by increased real estate taxes. For a construction project with $10 million in hard costs, the total value is likely to be between $15 and $20 million when one includes furniture, fixtures, equipment, and land values. Using a national average property tax rate of 1%, that would raise $150,000 to $200,000, which would create 1 to 2 new jobs in the public sector.

costs are usually about 5% to 9% of the total job. According to the national input/output file, the figures are 9.2% for commercial construction and 4.5% for industrial construction.

To summarize to this point, the number of indirect jobs as a proportion of direct jobs depends on (a) the national relationships, and (b) the regional purchase coefficients. In our presentation for the businesses in this report, we provide further discussion of those industries with the largest number of indirect jobs. However, there are a few industries that produce relatively large numbers of jobs in almost all cases, and these can be generally discussed at this stage in order to avoid repeating this information several times. The industries discussed here include banking, real estate, legal and accounting, architects and engineers, other professional services, employment services, other business services, restaurants, and government. In all of these cases, the vast majority of workers are hired locally. Our comments for the rest of this section are based on the assumption of a $10 million investment; the results are linear.

Banking and credit: On an aggregate basis, for every $10 million in deposits, very broadly defined (M3), there is about 1 new banking employee. As a rough rule of thumb, the size of M3 is roughly equal to the size of GDP. Hence we would expect about 1 new banking employee for every $10 million increase in output, as calculated from the RIMS II model.

Real estate: Additional real estate employees are based on two factors. One is the leasing activity of the new building, and the other is the increase in residential real estate activity as people get new jobs, either within the area or by moving into the area. On a lease basis, a $10 million investment is likely to result in a building of 80,000 square feet. If it leases for $40/square foot, that would be $3.2 million in annual lease payments, and with a 6% commission would generate $192,000 in revenues, which would account for about 2 new real estate employees (the figure would be less for industrial buildings). The increase in employment would also result in some real estate activity as workers moved into better housing in the same location, or moved in from other areas. In a normal year, there are about 7 million sales of new and existing homes for a labor force of about 140 million, or 5%. Hence if the total increase in employment were 200, that would imply 10 real estate transactions; if they average $200,000 at a 6% commission, that would be $12,000 per home or a total of $120,000, which would support approximately 1 new real estate job.

Legal & Accounting: Each of these accounts for about 1% of total employment; so if there were a total increase of 200 jobs, we would expect an average of 4 new employees in this classification.

Architects & Engineers: almost all of these jobs stem from the new construction activity. This category has already been discussed above; for a $10 million construction project, which would create about 80 new construction jobs, we would expect about 7 new jobs in architects and engineers for a commercial project and 3 to 4 new jobs for an industrial project.

spend for attorneys, and so on. These figures are based on information contained in the various Economic Censuses. The national coefficients would also determine, for example, how many architects and engineers would be hired for a construction project of a given scope and size, and how many new employees at financial institutions would be required to handle the additional cash flow generated by the new business. Both of these are discussed below in greater detail.

Even after these coefficients are determined, however, the regional purchase coefficients (RPC) must still be estimated. If, for example, a trucking firm spends 1% of its revenue on accountants, how much of that money is spent on local firms, and how much is spent outside the region?

That answer depends on various factors. The most important is the amount of the good or service produced within the region. If a trucking firm, for example, were located in a small county with no accountants, obviously it would not spend any of that money locally. That sets a lower limit but is not generally the case. Instead, a balancing algorithm is used.

Suppose, for example, that all the firms producing, distributing, or selling goods and services in a given county spent $10 million on accounting services. Also, suppose that total billings of all accountants in the county were $20 million. In that case, local accountants could handle all the local business, plus business from neighboring counties. If, on the other hand, total accountant billings in the county were only $5 million, local firms could not spend more than half of the money on local accountants.

Of course it is possible that there are adequate resources in the county but local firms choose to use companies outside the county; perhaps prices or service is better. No input/output model can account for such anomalies. On the other hand, given transportation costs, it would be highly unusual for a firm to be located in a given location and not serve the nearby businesses, instead choosing only those clients who were farther away.

The RIMS II model – and other regional input/output models – assigns regional purchase coefficients (RPCs) in all cases where the local industry purchases goods and services from local firms. This matrix could have as many as 406 * 406 = 164,836 elements, although in practice many of them are zero. Large counties with a wide variety of businesses have more non-zero elements than small counties with relatively few businesses.

In general, the RPCs tend to be close to zero for most manufactured goods, and close to unity for most services. While there are many exceptions to this rule, most firms will use financial, professional, business, and health care services that are located in that county or contiguous areas.

To take just one example of many, consider the number of new jobs created by architects and engineers for a new construction project of any given size. Most construction cost manuals, such as those published by R. S. Means, indicate that those

The direct effect multipliers for employment can be used if the data on the initial changes in employment by industry are available. In the direct effect employment multiplier table, each entry indicates the total change in employment in the region that results from a change of one job in the row industry. The total impact on regional employment is calculated by multiplying the initial change in employment in the row industry by the multiplier for the row.

Choosing a Multiplier

The choice of multiplier for estimating the impact of a project on output, earnings, and employment depends on the availability of estimates of the initial changes in final demand, earnings, and employment. If the estimates of the initial changes in all three measures are available, the RIMS II user can select any of the RIMS II multipliers. In theory, all the impact estimates should be consistent. If the available estimates are limited to initial changes in final demand, the user can select a final demand multiplier for impact estimation. If the available estimates are limited to initial changes in earnings or employment, the user can select a direct effect multiplier.

5. Methodology for Calculating Indirect Job Gains

In spite of the explanation of the RIMS II model given directly above, some USCIS adjudicators have asked for further clarification about how that model is used to determine the increase in the number of indirect jobs. That is an important issue because, unlike the direct job count, which can be verified by USCIS from various payroll and withholding documents, the calculation of indirect jobs cannot be verified directly but depends on mathematical calculations.

The general concept is based on the coefficients in the input/output model itself (the same methodology applies to RIMS II, IMPLAN, or any other generally recognized and accepted input/output model). In any given year, the government calculates how much input is used for a given production of output. The detailed figures are taken from the Economic Censuses taken once every five years; the figures are then updated from various annual supplements.

Basically the process has two steps, each of which is described next in greater detail. The first is to determine the amount of output, and hence the number of jobs, required to produce a given amount (say $1 million) of the final product or service. These are national coefficients. The second is to determine what proportion of those goods and services are purchased within the local region (the regional purchase coefficients, or RPCs).

In the case of a manufacturing process, the national coefficients are based on production functions: how much coke per ton of steel, how much steel per motor vehicle, how much flour for a loaf of bread, and so on. However, most of the jobs are created in the service sector, where Commerce Department data are used to determine, for example, how much restaurants spend on laundry services, how much airlines

of estimating procedures nationwide. Fourth, RIMS II multipliers are updated to reflect the most recent local-area wage-and-salary and personal income data.

Overview of Different Multipliers

RIMS II provides users with five types of multipliers: final demand multipliers for output, for earnings, and for employment; and direct-effect multipliers for earnings and for employment. These multipliers measure the economic impact of a change in final demand, in earnings, or in employment on a region's economy.

The final demand multipliers for output are the basic multipliers from which all other RIMS II multipliers are derived. In this table, each column entry indicates the change in output in each row industry that results from a $1 change in final demand in the column industry. The impact on each row industry is calculated by multiplying the final demand change in the column industry by the multiplier for each row. The total impact on regional output is calculated by multiplying the final demand change in the column industry by the sum of all the multipliers for each row except the household row.

RIMS II provides two types of multipliers for estimating the impacts of changes on earnings: final demand multipliers and direct effect multipliers. These multipliers are derived from the table of final demand output multipliers.

The final demand multipliers for earnings can be used if data on final demand changes are available. In the final demand earnings multiplier table, each column entry indicates the change in earnings in each row industry that results from a $1 change in final demand in the column industry. The impact on each row industry is calculated by multiplying the final demand change in the column industry by the multipliers for each row. The total impact on regional earnings is calculated by multiplying the final demand change in the column industry by the sum of the multipliers for each row.

Employment Multipliers

RIMS II provides two types of multipliers for estimating the impacts of changes on employment: final demand multipliers and direct effect multipliers. These multipliers are derived from the table of final demand output multipliers.

The final demand multipliers for employment can be used if the data on final demand changes are available. In the final demand employment multiplier table, each column entry indicates the change in employment in each row industry that results from a $1 million change in final demand in the column industry. The impact on each row industry is calculated by multiplying the final demand change in the column industry by the multiplier for each row. The total impact on regional employment is calculated by multiplying the final demand change in the column industry by the sum of the multipliers for each row.

users must provide geographically and industrially detailed information on the initial changes in output, earnings, or employment that are associated with the project or program under study. The multipliers can then be used to estimate the total impact of the project or program on regional output, earnings, and employment.

RIMS II is widely used in both the public and private sector. In the public sector, for example, the Department of Defense uses RIMS II to estimate the regional impacts of military base closings. State transportation departments use RIMS II to estimate the regional impacts of airport construction and expansion. In the private-sector, analysts and consultants use RIMS II to estimate the regional impacts of a variety of projects, such as the development of shopping malls and sports stadiums.

RIMS II Methodology

RIMS II uses BEA's benchmark and annual I-O tables for the nation. Since a particular region may not contain all the industries found at the national level, some direct input requirements cannot be supplied by that region's industries. Input requirements that are not produced in a study region are identified using BEA's regional economic accounts.

The RIMS II method for estimating regional I-O multipliers can be viewed as a three-step process. In the first step, the producer portion of the national I-O table is made region-specific by using six-digit NAICS location quotients (LQs). The LQs estimate the extent to which input requirements are supplied by firms within the region. RIMS II uses LQs based on two types of data: BEA's personal income data (by place of residence) are used to calculate LQs in the service industries; and BEA's wage-and-salary data (by place of work) are used to calculate LQs in the non-service industries.

In the second step, the household row and the household column from the national I-O table are made region-specific. The household row coefficients, which are derived from the value-added row of the national I-O table, are adjusted to reflect regional earnings leakages resulting from individuals working in the region but residing outside the region. The household column coefficients, which are based on the personal consumption expenditure column of the national I-O table, are adjusted to account for regional consumption leakages stemming from personal taxes and savings. In the last step, the Leontief inversion approach is used to estimate multipliers. This inversion approach produces output, earnings, and employment multipliers, which can be used to trace the impacts of changes in final demand on and indirectly affected industries.

Advantages of RIMS II

There are numerous advantages to using RIMS II. First, the accessibility of the main data sources makes it possible to estimate regional multipliers without conducting relatively expensive surveys. Second, the level of industrial detail used in RIMS II helps avoid aggregation errors, which often occur when industries are combined. Third, RIMS II multipliers can be compared across areas because they are based on a consistent set

4. Brief Guide to RIMS II Input/Output Model

The following material has been condensed from the RIMS II User Handbook.

Introduction and General Comments

Effective planning for public- and private-sector projects and programs at the State and local levels requires a systematic analysis of the economic impacts of these projects and programs on affected regions. In turn, systematic analysis of economic impacts must account for the inter-industry relationships within regions because these relationships largely determine how regional economies are likely to respond to project and program changes. Thus, regional input-output (I-O) multipliers, which account for inter-industry relationships within regions, are useful tools for conducting regional economic impact analysis.

In the 1970s, the Bureau of Economic Analysis (BEA) developed a method for estimating regional I-O multipliers known as RIMS (Regional Industrial Multiplier System), which was based on the work of Garnick and Drake. In the 1980s, BEA completed an enhancement of RIMS, known as RIMS II (Regional Input-Output Modeling System), and published a handbook for RIMS II users. In 1992, BEA published a second edition of the handbook in which the multipliers were based on more recent data and improved methodology. In 1997, BEA published a third edition of the handbook that provides more detail on the use of the multipliers and the data sources and methods for estimating them.

RIMS II is based on an accounting framework called an I-O table. For each industry, an I-O table shows the industrial distribution of inputs purchased and outputs sold. A typical I-O table in RIMS II is derived mainly from two data sources: BEA's national I-O table, which shows the input and output structure of nearly 500 U.S. industries, and BEA's regional economic accounts, which are used to adjust the national I-O table to show a region's industrial structure and trading patterns.

Using RIMS II for impact analysis has several advantages. RIMS II multipliers can be estimated for any region composed of one or more counties and for any industry, or group of industries, in the national I-O table. The accessibility of the main data sources for RIMS II keeps the cost of estimating regional multipliers relatively low. Empirical tests show that estimates based on relatively expensive surveys and RIMS II-based estimates are similar in magnitude.

BEA's RIMS multipliers can be a cost-effective way for analysts to estimate the economic impacts of changes in a regional economy. However, it is important to keep in mind that, like all economic impact models, RIMS provides approximate order-of-magnitude estimates of impacts. RIMS multipliers are best suited for estimating the impacts of small changes on a regional economy. For some applications, users may want to supplement RIMS estimates with information they gather from the region undergoing the potential change. To use the multipliers for impact analysis effectively,

for each of the categories of economic activity listed in Table A. For repair and maintenance construction office, this figure represents the amount spent times he input/output coefficient showing the total amount of output per $1 million of construction expenditures. The same methodology applies to all the other figures given in Table C. Detailed figures may be found in the tables in Section (8), which provide estimates of employment, output, and household earnings, and output and earnings per new worker, for the 20 major industrial classifications in the RIMS II input/output model.

3. Introduction and Scope of Work

Mona Shah and Associates plans to raise EB-5 funds for the development and operation of a mixed use commercial and residential project, to be located at 148-46 Hillside Ave/148-33 88th Ave, Jamaica, NY 11435. This project consists of four components: Luxury Condominium, Commercial Retail, Community Facility/Medical Offices, and Parking Garage. This study contains the economic impact analysis for hard and soft construction costs and rental income on these four components.

The calculations are based on the RIMS II input/output model for 23 of the 30 counties in the New York Combined Statistical Area (CSA). This area has already been approved by USCIS for a regional center. These counties are as follows:

1. NYC—New York, Bronx, Richmond, Kings, Queens, Westchester, Rockland
2. Upstate New York Suburbs —Putnam, Dutchess, Orange, Ulster
3. Long Island—Nassau, Suffolk
4. Connecticut—Litchfield, New Haven, Fairfield
5. New Jersey —Bergen, Essex, Hudson, Morris, Passaic, Sussex, Union

Section (4) contains a brief description of the RIMS II models and its various multipliers, and Section (5) contains additional information explaining how the indirect jobs are calculated. Section (6) contains and analyzes the key statistics for the 23-county area used to calculate the RIMS II multipliers. It is subdivided into five subsections, corresponding to the five groups shown above. Each subsection contains tables showing the following information: (1) data for employment by major occupation and industrial classification, income distribution by deciles, mean and median household and family income, and poverty rates, with these figures compared to the U.S. totals or averages; (2) key labor market statistics over the past decade for each county and the county group total; and (3) level and growth rate of population and personal income for these same areas. Section (7) shows the commuting patterns for New York City, maps of the area, and TEA analysis.

Section (8) presents the economic impact tables for the hard costs, EB-5 eligible soft costs, and purchases of FF&E. Separate sets of tables are presented for each category of construction for the increase in employment, output, and earnings, and the average level of output and earnings per new worker, for the 20 major industrial classifications in the RIMS II input/output model. Section (9) contains similar tables for rental income. Section (10) contains the summary tables for the project.

per new worker, and the total increase in earnings for construction and rental income. In each case, the RIMS II input/output model has been used to calculate the number of jobs in each major industrial classification, the average earnings per employee, and hence total earnings. The number of jobs by industrial classification is based on calculations imbedded in the RIMS II model for each of the activities as summarized in Table A and documented in detail throughout this report.

Demand for Business Services, Utilities, Maintenance and Construction, and New Supplier/Vendor Relationships Created with Manufacturers

The total economic impact of the regional center from the supplier purchases and business relationships for the construction and rental income would create approximately $8.2 million in additional economic activity across the region for the project. These supplier purchases are calculated from the indirect increase in output generated by the RIMS II model. It should be noted that some of these supplier industries might potentially locate within the regional center, and their economic output is included in this total.

The estimate of supplier purchases is based on the commodity data in the RIMS II input-output model. This data specifies the amount and type of commodity input needed to maintain specific types of business operations. The model estimates the supplier purchases based on the types of jobs and number of jobs that will be created within the regional center. In addition, the model allocates the supplier purchases to businesses within the region, based on trade flow data from the U.S. Bureau of Economic Analysis.

Utilities include services such as electricity, natural gas, and water and sewer facilities. The economic impact on utility services totals about $0.47 million.

Maintenance and repair services include some building and construction activity on existing buildings. The regional center would create an economic impact of about $0.17 million. These expenditures represent permanent, ongoing maintenance on the building after it is completed; they do not reflect the initial construction costs.

New supplier/vendor relationships with manufacturers would create an economic impact of about $3.2 million. This output primarily represents purchases of locally produced materials and parts for the construction of the building.

The regional center will also create demand for various types of business services, including professional and scientific services, management of companies, administrative services, and building support and waste management services. The impact of this activity totals about $4.4 million. This primarily represents payments to architects and engineers for the construction activities.

The figures given in Table C represent only a brief summary of the detailed calculations that have been undertaken and are reported in tabular format throughout the report. The figure for utility output, for example, represents the sum of utility output

Region Definition: Fairfield, CT; Litchfield, CT; New Haven, CT; Bergen, NJ; Essex, NJ; Hudson, NJ; Morris, NJ; Passaic, NJ; Sussex, NJ; Union, NJ; Bronx, NY; Dutchess, NY; Kings, NY; Nassau, NY; New York, NY; Orange, NY; Putnam, NY; Queens, NY; Richmond, NY; Rockland, NY; Suffolk, NY; Ulster, NY; Westchester, NY

*Includes Government enterprises.

1. Each entry in column 1 represents the total dollar change in output that occurs in all industries for each additional dollar of output delivered to final demand by the industry corresponding to the entry.
2. Each entry in column 2 represents the total dollar change in earnings of households employed by all industries for each additional dollar of output delivered to final demand by the industry corresponding to the entry.
3. Each entry in column 3 represents the total change in number of jobs that occurs in all industries for each additional 1 million dollars of output delivered to final demand by the industry corresponding to the entry. Because the employment multipliers are based on 2010 data, the output delivered to final demand should be in 2010 dollars.
4. Each entry in column 4 represents the total dollar change in value added that occurs in all industries for each additional dollar of output delivered to final demand by the industry corresponding to the entry.
5. Each entry in column 5 represents the total dollar change in earnings of households employed by all industries for each additional dollar of earnings paid directly to households employed by the industry corresponding to the entry.
6. Each entry in column 6 represents the total change in number of jobs in all industries for each additional job in the industry corresponding to the entry.

NOTE.–Multipliers are based on the 2002 Benchmark Input-Output Table for the Nation and 2010 regional data. Industry List A identifies the industries corresponding to the entries.

SOURCE.–Regional Input-Output Modeling System (RIMS II), Regional Product Division, Bureau of Economic Analysis.

Table C shows the annual level of household income, and the output for utilities, maintenance and repair construction, manufacturing output, and professional and business support services for the construction of the building and rental income.

Table C. Summary Measures of Economic Impact for Construction and Rental Income

- **Summing these components, there would be a total of [redacted] permanent new jobs created for the mixed use facility located at 148-46 Hillside Ave/148-33 88th Ave, Jamaica, NY, which is located in census tract (CT) 245 in Queens County. When combined with contiguous CTs, an area can be formed with an unemployment rate exceeding 9.3% in 2014, which qualifies as a TEA. Hence up to [redacted] EB-5 investors can each raise $500,000, for a total of up to [redacted] in EB-5 funds for this project.**

(b)(4)

1. Executive Summary

• Mona Shah and Associates plans to raise EB-5 funds for the development and operation of a mixed use commercial and residential project, to be located at 148-46 Hillside Ave/148-33 88th Ave, Jamaica, NY 11435. This project consists of four components: Luxury Condominium, Commercial Retail, Community Facility/Medical Offices, and Parking Garage. This study contains the economic impact analysis for hard and soft construction costs and rental income on these four components.

• The calculations are based on the RIMS II input/output model for 23 of the 30 counties in the New York Combined Statistical Area (CSA). This area has already been approved by USCIS for a regional center. These counties are as follows:

1. NYC—New York, Bronx, Richmond, Kings, Queens, Westchester, Rockland
2. Upstate New York Suburbs —Putnam, Dutchess, Orange, Ulster
3. Long Island—Nassau, Suffolk
4. Connecticut—Litchfield, New Haven, Fairfield
5. New Jersey —Bergen, Essex, Hudson, Morris, Passaic, Sussex, Union

(b)(4)

• The total development cost of the project is estimated at [redacted] of which [redacted] is land costs. Of the other [redacted] represents hard costs, which are all EB-5 eligible, and [redacted] represents soft costs, of which [redacted] is EB-5 eligible. Further details are shown in Section (8).

• All these figures are given in 2015 dollars, and should be deflated to 2010 dollars, since the input/output data are in 2010 dollars. Using the appropriate PPI indexes, the estimated cost of nonresidential construction would be expected to rise 13.3% over the five-year period and the cost of architectural and engineering fees would rise 7.7%; further details are discussed in Section (8). Thus in 2010 dollars, the EB-5 eligible figures would be [redacted] for hard costs and [redacted] for EB-5 eligible soft costs.

• Since the project will take 27 months to construct, direct as well as indirect and induced jobs may be included in the EB-5 job count for hard and soft construction costs. The final demand multipliers are 13.2149 and 11.9014 respectively. For the purchases of FF&E, direct jobs are excluded, so that multiplier would be 5.6974. Hence [redacted] new jobs would be created from hard construction cost, and [redacted] new jobs from soft costs, for a total of [redacted] new jobs from all facets of construction expenditures.

• The pro forma statement contained in the appraisal is shown below. For the first year of operations, total revenues are estimated at [redacted] in 2018 dollars, which would be about [redacted] in 2010 dollars. The final demand multiplier is 13.0752, so that would create another [redacted] jobs. The assumptions used to generate this rental income are discussed in detail in the appraisal and are summarized in Section (9).

J:\Work Other Files\Workfiles\2015\008-Proposal 148-31 88th Avenue Jamaica-George Xu.doc

four story buildings scattered along the east and west sides. Site terrain slopes mildly from Hillside Avenue at elevation around 64' to elevations around 62' along 88th Avenue.

The project consists of constructing an 8-story residential apartment and a 4-story community facility with a full cellar and sub cellar. The 4-story community facility will occupy Lots 26 and 27, and some part of Lot 36. The remaining area will be 8-story.

Preliminary design suggests that the sub cellar floor will extend approximately 20' below existing sidewalk and that both the cellar and sub-cellar floor will be used primarily for parking and house keeping purpose.

As the project is still in a conceptual design stage, no structural loading information was available at the time this report was prepared.

2. FIELD EXPLORATION – Test Borings

To explore the subsurface conditions of the site, a total of ten (10) borings, labeled B-1 through B-10, were performed at locations as shown on drawing G-001, which is attached at the end of this report.

All borings were installed by Craig Test Boring Company of Mays Landing, New Jersey during the period from June 10, 2014 to August 19, 2014. Test boring operation was inspected by GTC's professional engineering staff.

All borings were drilled and advanced with a truck-mounted drill rig using mud rotary method. Soils encountered in the borings were generally sampled at 5' intervals throughout, except for boring B-1 and B-2, which were sampled continuously for the first 12' and then every 5' thereafter. Each soil sample was extracted using a Standard Split-Spoon sampler by performing a Standard Penetration Test (SPT) in accordance with ASTM D1586.

During drilling operations, extracted soil samples were visually examined and classified by our field engineer. The soil samples were then placed in sealed glass jars and later returned to driller's shops for storage.

Detailed descriptions of the soils encountered in the test borings were documented in the boring logs, which are presented on drawing G-001.0 to G-001.2.

3. SUBSURFACE CONDITIONS

The following provides a general description of the soil profile inferred from the test borings. While the borings may indicate that the subsurface conditions appear to be uniform across

the site, it should be recognized that the number of borings was small compared to the size of the site, and that the existence of anomalies cannot be precluded.

3.1 Soil Profile

The boring revealed a soil profile that consists of 5'-10' of miscellaneous fill, followed by all glacial deposit to the maximum depth of the borings, at 102' below grade.

The fill was found to consist mostly of silty sands with trace to some concrete and brick fragments. The fill was generally loose, matching NYC Class 7 material.

The glacial deposit that underlies the fill consists predominantly of coarse-medium-fine sands with trace to some gravel and silt, consistent with SP/SM Group of the Unified Soil Classification System (USCS). The sand soils registered medium dense (blow counts between 10 and 30 blows per foot) to dense (blow counts greater than 30 bpf) compact condition, matching NYC Class 3b/3a material respectively with no specific pattern.

3.2 Groundwater

Groundwater was observed in the deep borings at a depth around 55' below existing grade.

It should be pointed out that groundwater table is known to fluctuate with seasonal, tidal, and climatic conditions.

4. DISCUSSION AND RECOMMENDATIONS

The boring data indicates a general profile of 5'-10' of miscellaneous fill, followed by glacial outwash sands to the maximum depth of the exploration.

4.1 Foundation Support Scheme and Design Criteria

Our analysis of the boring data suggests that the in-situ glacial outwash sands are suitable for the use of spread footing for support of the proposed construction.

Spread footings bearing on competent glacial sands of NYC Class 3b or better may be designed for a maximum allowable bearing capacity up to **3** tsf (tons per square foot).

To prevent from local shear failure, spread footings should have a minimum width of three (3) feet for strip/wall type and five (5) feet for individual/column type.

All new footing subgrade are to be subject to special inspection as required per NYC Building Code by a qualified soil engineer prior to placing steel reinforcement and concrete. At the discretion of the inspecting soil engineer, any unsuitable bearing material encountered

at the footing bottom should be removed and/or replaced with controlled compacted fill (See section 5.3 for fill material specifications and compaction requirement) or ¾" crushed stone as appropriate or as directed by the inspecting soil engineer.

Spread footings designed and installed in accordance with the recommendations described herein can be expected to yield settlements within tolerable limits of the proposed construction.

4.2 Seismic Design Considerations

In accordance with Table 1615.1.1 of the NYC Building Code, the site soil profile as revealed from the borings best matches Site Class D for seismic design purpose. Refer to NYC Building Code Chapter 16 for additional seismic-related criteria for foundation design.

4.3 Liquefaction Potential

In light of the relatively deep-seated groundwater table, liquefaction of the site soils is considered "unlikely" and not be a concern.

4.4 Sub Cellar Slab and Walls

4.4.1 Design groundwater level

Groundwater was observed in the deeper borings at an estimated depth of 55' below existing sidewalk, which is considered to have little effect on the foundation design. For the purpose of this report, however, deign groundwater table can be assumed at a depth of 50' below existing sidewalk.

4.4.2 Cellar Floor Slabs

Sub-Cellar floor slab can be designed as a slab-on-grade, bearing on 6" of ¾" crushed stone over existing glacial sand soil.

Prior to receiving crushed stone course, the slab subgrade should be subject to proof rolling under the observation of a qualified soil engineer. At the discretion of the inspecting soil engineer, any unsuitable bearing material identified should be removed and replaced with controlled compacted fill or crushed stone. Refer to section 5.3 of this report for fill material specification and compaction requirements.

4.4.3 Lateral Earth Pressures

Permanent basement walls should be designed to withstand long-term, at rest equivalent fluid pressures of 60 pounds per cubic foot (pcf) for wall above design groundwater level and 90 pcf for wall below design groundwater level.

Temporary walls, such as excavation shoring, if required, should be designed to withstand equivalent fluid pressure of 40 pcf for walls above groundwater level and 80 pcf for wall below groundwater level.

4.4.4 Foundation Drainage and under-slab drainage

Despite the relatively deep-seated groundwater table, we suggest that foundation drainage system be installed around the sub-cellar foundations, wherever possible, in order to ensure the cellar walls to be free of hydrostatic pressures.

Typical foundation drainage may consist of a 6" diameter perforated filter fabric-lined PVC or other approved pipe or drain tile, which should be covered with 6" of ¾" crushed stone in all directions. Water collected in the foundation drainage system should be directed to ejector pits or sump pits where it can be pumped out and discharged into approved facilities.

Backfilling against the cellar walls should use free-draining material consisting of poorly graded sands and gravel with less than 8% fines (minus 200 sieve size). 3/4" crushed stone can be used as backfill in lieu of the granular sands.

Under-slab drain system is optional but not required.

4.4.5 Waterproofing and Dampproofing

Waterproofing the sub-cellar slab is optional but not required, subject to the discretion of the design architect. As a minimum, however, the cellar floor should receive a vapor barrier and the cellar and sub-cellar walls should be damp proofed the entire height.

4.5 Construction Dewatering

Construction dewatering is not expected except for potential control of surface runoff.

5. CONSTRUCTION MONITORING

5.1 Protection of Adjacent Structures and Sidewalk

The excavation of the proposed cellar and sub cellar foundation may require shoring, bracing, and underpinning of the adjacent structures and sidewalks, which should be designed by a professional structural engineer engaged by the contractor. The design drawings should be submitted to the project engineer for review and approval prior to installation. The installation work shall be subject to control inspection by a qualified professional engineer as required per NYC Code.

5.2 Pre-construction Survey

It is recommended that a pre-construction survey be conducted to document the existing conditions of the adjacent structures and underground utility systems prior to commencement of any construction activities particularly during pile driving.

5.3 Filing and Backfilling

Filling and backfilling against pile caps shall utilize qualified fill material. Qualified fill should meet the grading requirement for control fill as stipulated in the NYC Building Code. Control fill should be placed in maximum 12" loose lifts and each lift should be compacted to at least 95% of its maximum dry density as determined in accordance with ASTM D1557.

6. LIMITATIONS

The conclusions and recommendations contained in this report are based on the subsurface data obtained during this investigation and on the details stated in this report. Should conditions be encountered which differ specifically from those stated in this report, we should be notified immediately so that our recommendations may be reviewed and/or revised, if necessary.

7. CONSTRUCTION CONSULTATION AND INSPECTION

Due to the nature of the soils and subsurface conditions at this site and the recommendations set forth herein, consultation and inspection services by a qualified soil engineer are recommended for the following:

1. Preparation of the site including all clearing, stripping of undesirable material, and initial proofrolling and compaction of the in-situ soils.

2. Placement of all controlled backfill and/or fill, if any.

3. Special inspection of site preparation.

We trust the above information will allow you to proceed with the design of the proposed mixed-use building.

We thank you for the opportunity of providing this service to you. Should you have any questions regarding this report, or if we can be of further assistance, please do not hesitate to contact us.

Respectfully Submitted
Geo Tech Consultants, LLC.

Steve J. J. Lin, P.E.

NOTES

1. SOILS WERE SAMPLED USING SPLIT-SPOON SAMPLER BY MEANS OF A 140 POUNDS HAMMER, FREE FALLING A DISTANCE OF 30 INCHES, AUTOMATIC TRIP (OR CATHEAD) IN ACCORDANCE WITH ASTM D1586.
2. THE TOTAL NUMBER BLOWS FOR THE MIDDLE 12 INCHES OF PENETRATIONS IS TERMED AS STANDARD PENETRATION RESISTANCE (N).
3. UNDISTURBED SOIL SAMPLES WERE OBTAINED BY MEANS OF SHELBY TUBE SAMPLING IN ACCORDANCE WITH ASTM D1587.
4. BEDROCK WAS CORED USING HX OR BX DOUBLE CORE BARRELS IN ACCORDANCE WITH ASTM D2113.
5. SOIL DESCRIPTIONS ARE MADE THROUGH VISUAL EXAMINATION OF SOIL SAMPLES IN ACCORDANCE WITH THE PROCEDURE ESTABLISHED IN NYC CODE.
6. SOIL CLASSIFICATIONS ARE PROVIDED USING UNIFIED SOIL CLASSIFICATION SYSTEM (USCS) AS WELL AS 2008 NYC SOIL CLASSIFICATION SYSTEM.
7. GROUND WATER TABLE INDICATED ON THE LOGS REPRESENTED THE LEVEL OF WATER WHERE IT WAS FIRST ENCOUNTERED DURING THE DRILLING.

BORING INSTALLED BY CRAIG TEST BORING Co, Inc.

SPLIT SPOON SAMPLE | DRILLING THROUGH
CORE DRILLING | SHELBY TUBE
- Penetration resistance per 6"
BORING LOCATION | BORING & WELL
TEST PIT

NOTES:
1. SOILS WERE SAMPLED USING SPLIT-SPOON SAMPLER BY MEANS OF A 140 POUNCE HAMMER, FREE FALLING A DISTANCE OF 30 INCHES, AUTOMATIC TRIP (OR CATHEAD) IN ACCORDANCE WITH ASTM D1586.
2. THE TOTAL NUMBER BLOWS FOR THE MIDDLE 12 INCHES OF PENETRATIONS IS TERMED AS STANDARD PENETRATION RESISTANCE (N).
3. UNDISTURBED SOIL SAMPLES WERE OBTAINED BY MEANS OF SHELBY TUBE SAMPLING IN ACCORDANCE WITH ASTM D1587.
4. BEDROCK WAS CORED USING NX OR BX DOUBLE CORE BARRELS IN ACCORDANCE WITH ASTM D2113.
5. SOIL DESCRIPTIONS ARE MADE THROUGH VISUAL EXAMINATION OF SOIL SAMPLES IN ACCORDANCE WITH THE PROCEDURES ESTABLISHED IN NYC CODE.
6. SOIL CLASSIFICATIONS ARE PROVIDED USING UNIFIED SOIL CLASSIFICATION SYSTEM (USCS) AS WELL AS 2008 NYC SOIL CLASSIFICATION SYSTEM.
7. GROUND WATER TABLE INDICATED ON THE LOGS REPRESENTS THE LEVEL OF WATER WHERE IT WAS FIRST ENCOUNTERED DURING THE DRILLING.

BORING INSTALLED BY: CHAD TEST BORING Co. Inc.

Schedule A

DESCRIPTION OF PREMISES

(to be attached separately and to include tax map designation)

Schedule B

PERMITTED EXCEPTIONS

1. Zoning regulations and ordinances which are not violated by the existing structures or present use thereof and which do not render title uninsurable.

2. Consents by the Seller or any former owner of the Premises for the erection of any structure or structures on, under or above any street or streets on which the Premises may abut.

3 and 4 deleted

5. Unpaid installments of assessments not due and payable on or before the Closing Date.

6. deleted

7. (a) Rights of utility companies to lay, maintain, install and repair pipes, lines, poles, conduits, cable boxes and related equipment on, over and under the Premises, provided that none of such rights imposes any monetary obligation on the owner of the Premises.

(b) Minor Encroachments of stoops, areas, cellar steps, trim cornices, lintels, window sills, awnings, canopies, ledges, fences, hedges, coping and retaining walls projecting from the Premises over any street or highway or over any adjoining property and encroachments of similar elements projecting from adjoining property over the Premises.

(c) Revocability or lack of right to maintain vaults, coal chutes, excavations or sub-surface equipment beyond the line of the Premises.

(d) Any state of facts that an accurate survey or personal inspection of the premises would disclose, provided the same does not render the title uninsurable

Schedule C

PURCHASE PRICE

The Purchase Price shall be paid as follows:

(a) By check subject to collection, the receipt of which is hereby acknowledged by Seller:

(b) By check or checks delivered to Seller at the Closing in accordance with the provisions of §2.02:

(c) By acceptance of title subject to the following Existing Mortgage(s):

(d) By execution and delivery to Seller by Purchaser or its assignee of a note secured by a Purchase Money Mortgage on the Premises, payable as follows:

Purchase Price

Re: Jamaica Project / Mixed Use Condo, Retail, Medical office Development
148-44/46 Hillside Avenue, Jamaica, NY 11435
148-31/43 88th Avenue, Jamaica, NY 11435

Dear CSC EB-5 Unit Officer:

Century Construction Group was hired by 88th Ave Realty LLC as the general contractor on the above-referenced Project. I am the president of Century Construction Group and have worked in the construction industry for twenty years and have supervised, managed and/or constructed. My experience includes hospitality, commercial interior and residential projects. I have constructed similar projects to the proposed Jamaica Project in term of size, budgets and timeline. These projects include the Marriot Fairfield Inn, the Leavitt Manor Condominium and the Farrington Estate, all located in Flushing. I have been asked by 88th Ave Realty, LLC to provide you with some information concerning the Project in connection with certain funding obtained by EB-5.

Century Construction Group has advised that hard construction cost estimate would be [redacted] (b)(4) The construction timeline is 27 months. This mixed used building consists of one eight-story residential building and one six-story retail and community/medical office building . The residential building will include 109 units of luxury condominium with exercise room, reading room, parking spaces and laundry room. The retail and community/medical office building will include retail spaces, community facility spaces, medical office spaces and parking spaces. The property is vacant land now and the excavation is scheduled to begin in December of 2015. I attest that the construction budgets and timeline are estimated based on established industry standards.

Very Truly Yours,

George Xu
President
